Independent Electricity System Operator (IESO) INTERROGATORY #4 List 1

Interrogatory

Issue Number: 6.3
Issue: Is it appropriate to create a Wholesale Meter pool and was the establishment of this pool done appropriately? (G1/T5/S1)

Ref G1/T5/S1
H1/T4/S1

Page 5 of 6 at G1/T5/S1 states that "…For this Application, the revenue requirement associated with the default MSP function, with respect to the wholesale revenue meters owned by Hydro One Transmission has been unbundled into a separate Wholesale Meter pool…"

Table 1 of H1/T4/S1 proposes that costs be charged on a $/meter point/year. Please explain how Hydro One will bill and recover those charges.

Response

Hydro One will track the meter points still under the Transitional Arrangement (Ref. Market Rules Chapter 6, Section 3.2) and will invoice the Metered Market Participant (MMP) annually, at the end of the calendar year, on a prorated basis for any whole or part month that Hydro One is registered as the Meter Service Provider (MSP) for that meter point by the IESO. Hydro One will apply the Wholesale Meter Pool rate approved by the OEB.

The MMP will be required to provide a copy of the IESO Site Registration Report (SRR) to demonstrate the end date of the Transitional Arrangement.
