BY COURIER

August 28, 2017

Ms. Kirsten Walli
Board Secretary
Ontario Energy Board
Suite 2700, 2300 Yonge Street
P.O. Box 2319
Toronto, ON, M4P 1E4

Dear Ms. Walli,

**EB-2017-0051 - Hydro One Remote Communities Inc. 2018 Revenue Requirement and Rates Application – Application and Prefiled Evidence**

The Hydro One Remote Communities' application and supporting evidence seeking approval of the 2018 revenue requirement and customer rates for the distribution and generation of electricity to be implemented on May 1, 2018, have been submitted using the Ontario Energy Board's Regulatory Electronic Submission System. The application and supporting evidence will be made available on the Hydro One's Regulatory Affairs web page:

https://www.hydroone.com/abouthydroone/RegulatoryInformation/remotecommunities

In addition, a copy of the application and evidence is being provided for public access at Hydro One Remote Communities' Service Centre, located at 680 Beaverhall Place, Thunder Bay, P7E 6G9.

Hydro One Remote Communities' points of contact for service of documents associated with this Application are listed in Exhibit A, Tab 2, Schedule 1.

Sincerely,

ORIGINAL SIGNED BY FRANK D'ANDREA

Frank D'Andrea

**ONTARIO ENERGY BOARD**

IN THE MATTER OF *the Ontario Energy Board Act, 1998*;

AND IN THE MATTER OF an Application by Hydro One Remote Communities Inc. for an Order or Orders approving rates for the distribution of electricity.

# APPLICATION

## THE APPLICANT AND ORDERS REQUESTED

1. The Applicant is Hydro One Remote Communities Inc., a subsidiary of Hydro One Inc. The Applicant, which will hereinafter be referred to as "Remotes", is an Ontario corporation with its head office in Toronto. The Applicant is an integrated generation and distribution company licensed to generate and distribute electricity within 21 isolated communities in northern Ontario. The applicant is not a host or embedded distributor.

2. Remotes hereby applies to the Ontario Energy Board (the "Board"), pursuant to section 78 of the Ontario Energy Board Act, 1998, for an Order or Orders approving its proposed 2018 revenue requirement and customer rates for the distribution and generation of electricity. Remotes requests that the hearing be heard by way of a written hearing.

3. Remotes seeks approval of a revenue requirement of $56,689K for the Test Year 2018, of which $17,612K is proposed to be recovered through customer rates and

$999K from other revenues, leaving $38,078K to be recovered from Rural and Remote Rate Protection (RRRP).

4. Remotes seeks approval to dispose of the 2016 audited balance in the RRRP Variance Account, less a 2017 adjustment for taxes, as described in Exhibit H1, Tab 1, Schedule 1.

5. Remotes seeks approval to continue the RRRP Variance Account as described in Exhibit G1, Tab 4, Schedule 1

6. Remotes seeks approval of a 1.8% increase to customer rates as identified in the proposed Tariff of Rates and Charges in Exhibit G2, Tab 3, Schedule 2, to be effective May 1, 2018.

7. Remotes is not seeking any changes whatever to specific services charges. Rather, Remotes seeks approval to continue to charge customers the same specific service charges identified in the proposed Tariff of Rates and Charges in Exhibit G2, Tab 3, Schedule 2, to be effective May 1, 2018.

8. Remotes is a unique distributor in Ontario and is exempt from a number of the legal and regulatory requirements imposed on most distributors. Remotes generates electricity at diesel generating stations in certain isolated communities in the far north and distributes the electricity to customers in each community. As such, Remotes is neither an embedded distributor nor a host distributor.

9. The written evidence filed with the Board may be amended from time to time prior to the Board's final decision on the Application. Further, the Applicant may seek

meetings with Board staff and intervenors in an attempt to identify and reach agreements to settle issues arising out of this Application.

10. The persons affected by this Application are the ratepayers of Remotes and of RRRP. It is impractical to set out their names and addresses because they are too numerous.

11. Electricity distribution rates as identified in the proposed Tariff of Rates and Charges in Exhibit G2, Tab 3, Schedule 2 to be effective May 1, 2018. These rates are calculated to support Remotes' 2018 base revenue requirement.

12. To reach the largest number of customers in its service territory, Remotes requests that notice of this Application be published on the Wawatay website in English, Cree, Oji Cree and Ojibway, the Thunder Bay Chronicle Journal and the Sudbury Star.

13. There are no rates and charges linked in the Conditions of Service that are not in Remotes' Tariff of Rates and Charges. The current Conditions of Service can be found on Hydro One's website at:

https://www.hydroone.com/abouthydroone/RegulatoryInformation/remotecommunities

14. Remotes requests that a copy of all documents filed with the Board by each party to this Application be served on the Applicant and the Applicant's counsel as follows:

a) The Applicant:

Ms Eryn MacKinnon
Sr. Regulatory Coordinator - Regulatory Affairs
Hydro One Networks Inc.

Address for personal service: 8th Floor, South Tower
483 Bay Street

Toronto, ON M5G 2P5

Mailing Address: 8th Floor, South Tower

# CERTIFICATION OF EVIDENCE

TO: ONTARIO ENERGY BOARD

---

The undersigned, being Hydro One Remote Communities Inc. Managing Director, Kraemer Coulter hereby certifies for and on behalf of Hydro One Remote Communities Inc. that:

1. I am a senior officer of Hydro One Remote Communities Inc.;
2. This certificate is given pursuant to the Ontario Energy Board's *Filing Requirements for Electricity Distribution Rate Applications* (last revised on July 14, 2016); and
3. The evidence submitted in support of Hydro One Remote Communities Inc. 2018 distribution application (EB-2017-0051) filed with the OEB is accurate, consistent and complete to the best of my knowledge.

DATED this 28th day of August, 2017.

KRAEMER COULTER

# COMPLIANCE WITH LICENCE AND OEB FILING REQUIREMENTS FOR ELECTRICITY DISTRIBUTORS

## 1.0 INTRODUCTION

This Application by Remotes is substantially consistent with the requirements of the 2016 Electricity Distribution Rate Handbook ("the Handbook") issued by the Board on October 13, 2016, and with the Filing Requirements for Transmission and Distribution Applications (the "Filing Requirements") issued by the Board on November 14, 2006 and updated on July 20, 2016.

Hydro One Remotes Distribution Application follows and incorporates improvements made to the filing format. Remotes' Application satisfies the Filing Requirements and Handbook requirements except where it was not practical or appropriate to do so based on previous comments and direction from the Board, or as a result of specific government regulation.

### 1.1 Compliance with Licence

<u>Exemptions from the Electricity Act, 1998</u>

Remote is exempt from the following sections of the *Electricity Act, 1998*:

- Subsection 26(1), non-discriminatory access
- Subsection 26(3), to the extent that a contract entered into by Ontario Hydro contains liabilities, rights or obligations that have been transferred to Remotes
- Section 28, distributor's obligation to connect.

Exemptions from the *Ontario Energy Board Act, 1998*

Remotes is exempt from the following sections of the *Ontario Energy Board Act, 1998*:

- Section 70(2)(e), specifying methods or techniques to be applied in determining the licensee's rates
- Section 71, restriction on business activity
- Section 80, prohibition, generation by transmitters or distributors
- Section 81, prohibition, transmission or distribution by generators

None of Remotes' customers is prescribed under Sections 79.16 under the *Ontario Energy Board Act, 1998*.

Exemptions from Licence Conditions

Remotes is exempt from the entire Standard Supply Service Code and the entire Retail Settlement Code, and from various sections of the Distribution System Code per Schedule 3 of its Distribution Licence ED-2003-0037 filed at Exhibit A, Tab 2, Schedule 2, Attachment 1.

Conservation & Demand Management Code for Electricity Distributors

Remotes is not subject to the Conservation & Demand Management Code for Electricity Distributors and has not been assigned targets under that Code.

## 2.0 COMPLIANCE WITH LICENCE AND OEB FILING REQUIREMENTS

Most of Remotes' customers are eligible for Remote Rate Protection under Section 79 of the *Ontario Energy Board Act, 1998*. O. Reg. 442/01 under that statute requires the

Board to calculate Rate Protection for these customers. This legislation requires that Remotes charge rates that are not based on the cost of service. In view of this legislative requirement, Remotes did not undertake a cost allocation study as required by Board guidelines prior to filing this application. A cost allocation study requires substantial effort and would have provided no benefit, as customers cannot be charged the cost of supplying power to them without changes to the legislation.

Remotes provides both generation and distribution services outside of the competitive market. Its rates and revenue requirement include both of these cost categories. Accordingly, information on all of Remotes' activities is included to ensure that generation and distribution costs can be examined in this proceeding.

Remotes has not provided a PEG Benchmarking Exhibit in this filing. Remotes is an integrated generation company with unique financing and operations. The Board has previously recognized that Remotes is not directly comparable to other Ontario distributors. In its Decision in proceeding EB-2014-0084, the Board noted that, "Hydro One Remotes is excluded from the Board's benchmarking analysis because of its unique circumstances. As noted in Hydro One Remotes' 2014 Price Cap Incentive Rate application (proceeding EB-2013-0142), Hydro One Remotes is unique in terms of its operating characteristics and cost recovery due to the Rural or Remote Electricity Rate Protection."

The filing requirements indicate that a forward test-year methodology is to be utilized when a distributor is seeking the Board's approval for rebasing its rates. Remotes' Application has been filed using a forward test year and provides three years of historical data. As such, this Application includes written evidence and supporting schedules for the following:

- 2018 test year;
- 2017 bridge year;
- 2013, 2014, 2015 and 2016 historical years;
- 2013 Board-approved historical year.

## 3.0 DISTRIBUTION SYSTEM PLAN

Remotes contracted with METSCO to assist with the development of a Distribution System Plan ("DSP"). METSCO is a company with experience assisting Distributors in developing these plans to meet OEB requirements. The DSP can be found at Exhibit B1.

## 4.0 RATE BASE

The Filing Requirements, past direction from the Board, and a number of specific government regulations influence the determination of Remotes' rate base and associated capital costs, as well as influencing the rate base information provided in the Application.

### 4.1 Depreciation Rates and Amortization

Remotes 2013 Revenue Requirement includes the depreciation and amortization rates based on a depreciation study conducted in 2011 by Foster Associates that was accepted by the Board and intervenors in EB-2012-0137.

Remotes recognizes a liability for estimated future expenditures required to remediate past environmental contamination associated with the assessment and remediation of contaminated lands, based on the net present value of these estimated future expenditures. Since these expenditures are expected to be recoverable in future rates, Remotes has recognized an equivalent amount as a regulatory asset. This balance is amortized on a basis consistent with the pattern of actual expenditures expected to be incurred each year. Expenditures related to this remediation are discussed in Exhibit D1, Tab 6, Schedule 1.

### 4.2 Working Capital Allowance

Remotes' calculation for working capital is consistent with the default allowance as set out in the 2017 Filing Requirements and is shown in Exhibit C1, Schedule 1, Tab 1.

### 4.3 Interest Rates for Construction Work in Progress

The interest rate used for construction work in progress ("CWIP") reflects the adoption of United States generally accepted accounting principles ("US GAAP") per the Board's decision in EB-2011-0427. Under US GAAP, a utility capitalizes interest on qualifying capital programs and projects using its effective rate of its outstanding debt used to finance the capital expenditures made, unless the regulator requires the use of a specific allowance for funds used during construction rate ("AFUDC"). Consistent with its decisions in EB-2008-0408, effective January 1, 2012, no AFUDC is specified for use by Remotes. The construction work in progress evidence for the historical years, bridge year, and test year is filed in Exhibit C2, Tab 4, Schedule 3.

### 4.4 Capital Projects and Programs

Details for all capital projects and programs that exceed $283K in net capital costs (0.5% of revenue requirement) are provided in Investment Summary Documents ("ISD"s). The ISDs for these projects and programs are filed at Exhibit B1, Tab 1, Schedule 1, Appendix A.

### 4.5 In-Service Additions

Remotes continues to plan, manage and perform its internal and external reporting on a work basis using its general ledger accounts, as these are reflective of the way in which Remotes manages its operations. A schedule showing in-service additions by OEB-specified USofA accounts for 2018 test year, 2017 bridge year and 2013- 2016 historical years is filed in Exhibit C2, Tab 6, Schedule 1.

## 5.0 COST OF CAPITAL

Remotes' cost of capital is based on a 100% debt financing structure, consistent with the Board's Decision in RP-1999-001. As Remotes operates as a break-even company, it does not plan to seek a return on capital.

## 6.0 OPERATING (OM&A) COST OF SERVICE

Remotes' OM&A evidence has been filed on a USofA basis. Information for the 2018 test year, 2017 bridge year, and 2013-2016 historical years is filed at Exhibit D2, Tab 2, Schedule 1.

## 7.0 OPERATING REVENUE AND REVENUE SUFFICIENCY/DEFICIENCY

The revenue sufficiency/deficiency for 2018 Remotes is shown in Exhibit F and through the calculation of the annual RRRP, in Exhibit G1, Tab 4, Schedule 1.

## 1 Definitions

In this Licence:

"**Accounting Procedures Handbook**" means the handbook, approved by the Board which specifies the accounting records, accounting principles and accounting separation standards to be followed by the Licensee;

"**Act**" means the *Ontario Energy Board Act, 1998*, S.O. 1998, c. 15, Schedule B;

"**Affiliate Relationships Code for Electricity Distributors and Transmitters**" means the code, approved by the Board which, among other things, establishes the standards and conditions for the interaction between electricity distributors or transmitters and their respective affiliated companies;

"**distribution services**" means services related to the distribution of electricity and the services the Board has required distributors to carry out, including the sales of electricity to consumers under section 29 of the Act, for which a charge or rate has been established in the Rate Order;

"**Distribution System Code**" means the code approved by the Board which, among other things, establishes the obligations of the distributor with respect to the services and terms of service to be offered to customers and retailers and provides minimum, technical operating standards of distribution systems;

"**Electricity Act**" means the *Electricity Act, 1998*, S.O. 1998, c. 15, Schedule A;

"**Licensee**" means Hydro One Remote Communities Inc.

"**Market Rules**" means the rules made under section 32 of the Electricity Act;

"**Performance Standards**" means the performance targets for the distribution and connection activities of the Licensee as established by the Board in accordance with section 83 of the Act;

"**Rate Order**" means an Order or Orders of the Board establishing rates the Licensee is permitted to charge;

"**regulation**" means a regulation made under the Act or the Electricity Act;

"**Retail Settlement Code**" means the code approved by the Board which, among other things, establishes a distributor's obligations and responsibilities associated with financial settlement among retailers and consumers and provides for tracking and facilitating consumer transfers among competitive retailers;

"**service area**" with respect to a distributor, means the area in which the distributor is authorized by its licence to distribute electricity;

"**Standard Supply Service Code**" means the code approved by the Board which, among other things, establishes the minimum conditions that a distributor must meet in carrying out its obligations to sell electricity under section 29 of the Electricity Act;

## 2 Interpretation

2.1 In this Licence, words and phrases shall have the meaning ascribed to them in the Act or the Electricity Act. Words or phrases importing the singular shall include the plural and vice versa. Headings are for convenience only and shall not affect the interpretation of the Licence. Any reference to a document or a provision of a document includes an amendment or supplement to, or a replacement of, that document or that provision of that document. In the computation of time under this Licence, where there is a reference to a number of days between two events, they shall be counted by excluding the day on which the first event happens and including the day on which the second event happens and where the time for doing an act expires on a holiday, the act may be done on the next day that is not a holiday.

## 3 Authorization

3.1 The Licensee is authorized, under Part V of the Act and subject to the terms and conditions set out in this Licence:

a) to own and operate a distribution system in the service area described in Schedule 1 of this Licence; and

b) to retail electricity for the purposes of fulfilling its obligation under section 29 of the Electricity Act in the manner specified in Schedule 2 of this Licence.

## 4 Obligation to Comply with Legislation, Regulations and Market Rules

4.1 The Licensee shall comply with all applicable provisions of the Act and the Electricity Act and regulations under these Acts, except where the Licensee has been exempted from such compliance by regulation.

4.2 The Licensee shall comply with all applicable Market Rules.

## 5 Obligation to Comply with Codes

5.1 The Licensee shall at all times comply with the following Codes (collectively the "Codes") approved by the Board, except where the Licensee has been specifically exempted from such compliance by the Board. Any exemptions granted to the licensee are set out in Schedule 3 of this Licence. The following Codes apply to this Licence:

a) the Affiliate Relationships Code for Electricity Distributors and Transmitters; and

b) the Distribution System Code.

5.2 The Licensee shall:

a) make a copy of the Codes available for inspection by members of the public at its head office and regional offices during normal business hours; and

b) provide a copy of the Codes to any person who requests it. The Licensee may impose a fair and reasonable charge for the cost of providing copies.

**6 Obligation to Sell Electricity**

6.1 The Licensee shall fulfill its obligation under section 29 of the Electricity Act to sell electricity in accordance with the requirements established in the Licensee's Rate Order as approved by the Board.

**7 Obligation to Maintain System Integrity**

7.1 The Licensee shall maintain its distribution system in accordance with the standards established in the Distribution System Code and Market Rules, and have regard to any other recognized industry operating or planning standards adopted by the Board.

**8 Market Power Mitigation Rebates**

8.1 The Licensee shall comply with the pass through of Ontario Power Generation rebate conditions set out in Appendix A of this Licence.

**9 Distribution Rates**

9.1 The Licensee shall not charge for connection to the distribution system, the distribution of electricity or the retailing of electricity to meet its obligation under section 29 of the Electricity Act except in accordance with a Rate Order of the Board.

**10 Separation of Business Activities**

10.1 The Licensee shall keep financial records associated with distributing electricity separate from its financial records associated with transmitting electricity or other activities in accordance with the Accounting Procedures Handbook and as otherwise required by the Board.

**11 Expansion of Distribution System**

11.1 The Licensee shall not construct, expand or reinforce an electricity distribution system or make an interconnection except in accordance with the Act and Regulations, the Distribution System Code and applicable provisions of the Market Rules.

11.2 In order to ensure and maintain system integrity or reliable and adequate capacity and supply of electricity, the Board may order the Licensee to expand or reinforce its distribution system in accordance with Market Rules and the Distribution System Code, or in such a manner as the Board may determine.

**12 Provision of Information to the Board**

12.1 The Licensee shall maintain records of and provide, in the manner and form determined by the Board, such information as the Board may require from time to time.

12.2 Without limiting the generality of paragraph 14.1, the Licensee shall notify the Board of any material change in circumstances that adversely affects or is likely to adversely affect the business, operations or assets of the Licensee as soon as practicable, but in any event no more than twenty (20) days past the date upon which such change occurs.

## 13 Restrictions on Provision of Information

13.1 The Licensee shall not use information regarding a consumer, retailer, wholesaler or generator obtained for one purpose for any other purpose without the written consent of the consumer, retailer, wholesaler or generator.

13.2 The Licensee shall not disclose information regarding a consumer, retailer, wholesaler or generator to any other party without the written consent of the consumer, retailer, wholesaler or generator, except where such information is required to be disclosed:

a) to comply with any legislative or regulatory requirements, including the conditions of this Licence;

b) for billing, settlement or market operations purposes;

c) for law enforcement purposes; or

d) to a debt collection, band council or government agency for the processing of past due accounts of the consumer or generator.

13.3 The Licensee may disclose information regarding consumers, retailers, wholesalers or generators where the information has been sufficiently aggregated such that their particular information cannot reasonably be identified.

13.4 The Licensee shall inform consumers, retailers, wholesalers and generators of the conditions under which their information may be released to a third party without their consent.

13.5 If the Licensee discloses information under this section, the Licensee shall ensure that the information provided will not be used for any other purpose except the purpose for which it was disclosed.

## 14 Customer Complaint and Dispute Resolution

14.1 The Licensee shall:

a) have a process for resolving disputes with customers that deals with disputes in a fair, reasonable and timely manner;

b) publish information which will make its customers aware of and help them to use its dispute resolution process;

c) make a copy of the dispute resolution process available for inspection by members of the public at each of the Licensee’s premises during normal business hours;

d) give or send free of charge a copy of the process to any person who reasonably requests it; and

e) subscribe to and refer unresolved complaints to an independent third party complaints resolution service provider selected by the Board. This condition will become effective on a date to be determined by the Board. The Board will provide reasonable notice to the Licensee of the date this condition becomes effective.

15 **Term of Licence**

15.1 This Licence shall take effect on December 24, 2003 and expire on December 23, 2023. The term of this Licence may be extended by the Board.

16 **Fees and Assessments**

16.1 The Licensee shall pay all fees charged and amounts assessed by the Board.

17 **Communication**

17.1 The Licensee shall designate a person that will act as a primary contact with the Board on matters related to this Licence. The Licensee shall notify the Board promptly should the contact details change.

17.2 All official communication relating to this Licence shall be in writing.

17.3 All written communication is to be regarded as having been given by the sender and received by the addressee:

a) when delivered in person to the addressee by hand, by registered mail or by courier;

b) ten (10) business days after the date of posting if the communication is sent by regular mail; and

c) when received by facsimile transmission by the addressee, according to the sender=s transmission report.

18 **Copies of the Licence**

18.1 The Licensee shall:

a) make a copy of this Licence available for inspection by members of the public at its head office and regional offices during normal business hours; and

b) provide a copy of this Licence to any person who requests it. The Licensee may impose a fair and reasonable charge for the cost of providing copies.

19 **Pole Attachments**

19.1 The Licensee shall provide access to its distribution poles to all Canadian carriers, as defined by the Telecommunications Act, and to all cable companies that operate in the Province of Ontario. For each attachment, with the exception of wireless attachments, the Licensee shall charge the rate approved by the Board and included in the Licensee’s tariff.

19.2 The Licensee shall:

a) annually report the net revenue, and the calculations used to determine that net revenue, earned from allowing wireless attachments to its poles. Net revenues will be accumulated in a deferral account approved by the Board;

b) credit that net revenue against its revenue requirement subject to Board approval in rate proceedings; and

c) provide access for wireless attachments to its poles on commercial terms normally found in a competitive market.

## 20 Winter 2016/17 Disconnection, Reconnection and Load Limiter Devices

20.1 Subject to paragraph 20.4, the Licensee shall not, during the period commencing February 24, 2017 and ending at 11:59 pm on April 30, 2017:

a) disconnect an occupied residential property solely on the grounds of non-payment;

b) issue a disconnection notice in respect of an occupied residential property solely on the grounds of non-payment; or

c) install a load limiter device in respect of an occupied residential property solely on the grounds of non-payment.

Nothing in this paragraph shall preclude the Licensee from (i) disconnecting an occupied residential property in accordance with all applicable regulatory requirements, including the required disconnection notice; or (ii) installing a load limiter device in respect of an occupied residential property, in each case if at the unsolicited request of the customer given in writing on or after February 24, 2017.

20.2 Subject to paragraph 20.4, if the Licensee had disconnected a residential property on or before February 23, 2017 solely on the grounds of non-payment, the Licensee shall reconnect that property, if an occupied residential property, as soon as possible. The Licensee shall waive any reconnection charge that might otherwise apply in respect of that reconnection.

Nothing in this paragraph shall require the Licensee to reconnect an occupied residential property if the customer gives unsolicited notice to the Licensee not to do so in writing on or after February 24, 2017.

20.3 Subject to paragraph 20.4, if the Licensee had installed a load limiter device in respect of an occupied residential property on or before February 23, 2017 either for non-payment or at the customer's request, the Licensee shall remove that device and restore full service to the property as soon as possible. The Licensee shall waive any charge that might otherwise apply in respect of such removal.

Nothing in this paragraph shall: (i) require the Licensee to remove a load limiter device if the customer gives unsolicited notice to the Licensee not to do so in writing on or after February 24, 2017; or (ii) prevent the Licensee from installing or maintaining a load limiter device at the unsolicited request of customer given in writing on or after February 24, 2017.

20.4 Nothing in paragraphs 20.1 to 20.3 shall:

a) prevent the Licensee from taking such action in respect of an occupied residential property as may be required to comply with any applicable and generally acceptable safety requirements or standards; or

b) require the Licensee to act in a manner contrary to any applicable and generally accepted safety requirements or standards.

20.5 The Licensee shall waive any collection of account charge that could otherwise be charged in relation to an occupied residential property during the period referred to in paragraph 20.1.

20.6 The Licensee shall provide the Board with periodic reports on its progress in complying with paragraphs 20.2 and 20.3. The first such report shall be filed with the Board no later than March 3, 2017, and reports shall be provided every 7 calendar days thereafter until such time as no further action remains to be taken by the Licensee under those paragraphs.

20.7 For the purposes of paragraphs 20.1 to 20.4:

"load limiter device" means a device that will allow a customer to run a small number of electrical items in his or her premises at any given time, and if the customer exceeds the limit of the load limiter, then the device will interrupt the power until it is reset; and

"occupied residential property" means an account with the Licensee:

a) that falls within the residential rate classification as specified in the Licensee's Rate Order; and
b) that is:

i) inhabited; or
ii) in an uninhabited condition as a result of the property having been disconnected by the Licensee or of a load limiter device having been installed in respect of the property on or before February 23, 2017.

20.8 Paragraphs 20.1 to 20.5 apply despite any provision of the Distribution System Code to the contrary.

**SCHEDULE 1 DEFINITION OF DISTRIBUTION SERVICE AREA**

This Schedule specifies the area in which the Licensee is authorized to distribute and sell electricity in accordance with paragraph 6.1 of this Licence.

1. Armstrong
2 Bearskin Lake
3. Big Trout Lake
4. Biscotasing
5. Collins
6. Deer Lake
7. Fort Severn
8 Gull Bay
9 Hillsport
10. Kasabonika Lake
11. Kingfisher Lake
12. Landsdowne House
13. Oba
14. Sachigo Lake
15. Sandy Lake
16. Sultan
17. Wapakeka
18. Weagamow
19. Webequie
20 Whitesand
21 Marten Falls (operated by the Licensee, owned by Marten Falls First Nation)

**SCHEDULE 2 PROVISION OF STANDARD SUPPLY SERVICE**

This Schedule specifies the manner in which the Licensee is authorized to retail electricity for the purposes of fulfilling its obligation under section 29 of the Electricity Act.

The Licensee is authorized to retail electricity directly to consumers within its service area in accordance with paragraph 6.1 of this Licence, any applicable exemptions to this Licence, and at the rates set out in the Rate Orders.

**SCHEDULE 3 LIST OF CODE EXEMPTIONS**

This Schedule specifies any specific Code requirements that are not applicable to the Licensee.

1. The entire Retail Settlement Code

2. The entire Standard Supply Service Code

3. Sections 2.7.1.2; 2.7.1.3; 2.7.2; 2.8.1; 2.8.2; 4.2.2.3; 4.2.3.1(a); 6.1.2.1; 6.1.2.2 and 7.10 of the Distribution System Code.

**APPENDIX A**

**MARKET POWER MITIGATION REBATES**

## 1. Definitions and Interpretations

In this Licence

"embedded distributor" means a distributor who is not a market participant and to whom a host distributor distributes electricity;

"embedded generator" means a generator who is not a market participant and whose generation facility is connected to a distribution system of a distributor, but does not include a generator who consumes more electricity than it generates;

"host distributor" means a distributor who is a market participant and who distributes electricity to another distributor who is not a market participant.

In this Licence, a reference to the payment of a rebate amount by the IESO includes interim payments made by the IESO.

## 2. Information Given to IESO

a Prior to the payment of a rebate amount by the IESO to a distributor, the distributor shall provide the IESO, in the form specified by the IESO and before the expiry of the period specified by the IESO, with information in respect of the volumes of electricity withdrawn by the distributor from the IESO-controlled grid during the rebate period and distributed by the distributor in the distributor's service area to:

i consumers served by a retailer where a service transaction request as defined in the Retail Settlement Code has been implemented; and

ii consumers other than consumers referred to in clause (i) who are not receiving the fixed price under sections 79.4, 79.5 and 79.16 of the *Ontario Energy Board Act, 1998.*

b Prior to the payment of a rebate amount by the IESO to a distributor which relates to electricity consumed in the service area of an embedded distributor, the embedded distributor shall provide the host distributor, in the form specified by the IESO and before the expiry of the period specified in the Retail Settlement Code, with the volumes of electricity distributed during the rebate period by the embedded distributor's host distributor to the embedded distributor net of any electricity distributed to the embedded distributor which is attributable to embedded generation and distributed by the embedded distributor in the embedded distributor's service area to:

i consumers served by a retailer where a service transaction request as defined in the Retail Settlement Code has been implemented; and

ii consumers other than consumers referred to in clause (i) who are not receiving the fixed price under sections 79.4, 79.5 and 79.16 of the *Ontario Energy Board Act, 1998*.

c Prior to the payment of a rebate amount by the IESO to a distributor which relates to electricity consumed in the service area of an embedded distributor, the host distributor shall provide the IESO, in the form specified by the IESO and before the expiry of the period specified by the IESO, with the information provided to the host distributor by the embedded distributor in accordance with section 2.

The IESO may issue instructions or directions providing for any information to be given under this section. The IESO shall rely on the information provided to it by distributors and there shall be no opportunity to correct any such information or provide any additional information and all amounts paid shall be final and binding and not subject to any adjustment.

For the purposes of attributing electricity distributed to an embedded distributor to embedded generation, the volume of electricity distributed by a host distributor to an embedded distributor shall be deemed to consist of electricity withdrawn from the IESO-controlled grid or supplied to the host distributor by an embedded generator in the same proportion as the total volume of electricity withdrawn from the IESO-controlled grid by the distributor in the rebate period bears to the total volume of electricity supplied to the distributor by embedded generators during the rebate period.

## 3. Pass Through of Rebate

A distributor shall promptly pass through, with the next regular bill or settlement statement after the rebate amount is received, any rebate received from the IESO, together with interest at the Prime Rate, calculated and accrued daily, on such amount from the date of receipt, to:

a retailers who serve one or more consumers in the distributor’s service area where a service transaction request as defined in the Retail Settlement Code has been implemented;

b consumers who are not receiving the fixed price under sections 79.4, 79.5 and 79.16 of the *Ontario Energy Board Act, 1998* and who are not served by a retailer where a service transaction request as defined in the Retail Settlement Code has been implemented; and

c embedded distributors to whom the distributor distributes electricity.

The amounts paid out to the recipients listed above shall be based on energy consumed and calculated in accordance with the rules set out in the Retail Settlement Code. These payments may be made by way of set off at the option of the distributor.

If requested in writing by OPGI, the distributor shall ensure that all rebates are identified as coming from OPGI in the following form on or with each applicable bill or settlement statement:

“ONTARIO POWER GENERATION INC. rebate”

Any rebate amount which cannot be distributed as provided above or which is returned by a retailer to the distributor in accordance with its licence shall be promptly returned to the host distributor or IESO as applicable, together with interest at the Prime Rate, calculated and accrued daily, on such amount from the date of receipt.

Nothing shall preclude an agreement whereby a consumer assigns the benefit of a rebate payment to a retailer or another party.

Pending pass-through or return to the IESO of any rebate received, the distributor shall hold the funds received in trust for the beneficiaries thereof in a segregated account.

**ONTARIO POWER GENERATION INC. REBATES**

For the payments that relate to the period from May 1, 2006 to April 30, 2009, the rules set out below shall apply.

**1. Definitions and Interpretations**

In this Licence

"embedded distributor" means a distributor who is not a market participant and to whom a host distributor distributes electricity;

"embedded generator" means a generator who is not a market participant and whose generation facility is connected to a distribution system of a distributor, but does not include a generator who consumes more electricity than it generates;

"host distributor" means a distributor who is a market participant and who distributes electricity to another distributor who is not a market participant.

In this Licence, a reference to the payment of a rebate amount by the IESO includes interim payments made by the IESO.

**2. Information Given to IESO**

a Prior to the payment of a rebate amount by the IESO to a distributor, the distributor shall provide the IESO, in the form specified by the IESO and before the expiry of the period specified by the IESO, with information in respect of the volumes of electricity withdrawn by the distributor from the IESO-controlled grid during the rebate period and distributed by the distributor in the distributor's service area to:

i consumers served by a retailer where a service transaction request as defined in the Retail Settlement Code has been implemented and the consumer is not receiving the prices established under sections 79.4, 79.5 and 79.16 of the *Ontario Energy Board Act, 1998*; and

ii consumers other than consumers referred to in clause (i) who are not receiving the fixed price under sections 79.4, 79.5 and 79.16 of the *Ontario Energy Board Act, 1998*.

b Prior to the payment of a rebate amount by the IESO to a distributor which relates to electricity consumed in the service area of an embedded distributor, the embedded distributor shall provide the host distributor, in the form specified by the IESO and before the expiry of the period specified in the Retail Settlement Code, with the volumes of electricity distributed during the rebate period by the embedded distributor's host distributor to the embedded distributor net of any electricity distributed to the embedded distributor which is attributable to embedded generation and distributed by the embedded distributor in the embedded distributor's service area to:

i consumers served by a retailer where a service transaction request as defined in the Retail Settlement Code has been implemented; and

ii consumers other than consumers referred to in clause (i) who are not receiving the fixed price under sections 79.4, 79.5 and 79.16 of the *Ontario Energy Board Act, 1998*.

c Prior to the payment of a rebate amount by the IESO to a distributor which relates to electricity consumed in the service area of an embedded distributor, the host distributor shall provide the IESO, in the form specified by the IESO and before the expiry of the period specified by the IESO, with the information provided to the host distributor by the embedded distributor in accordance with section 2.

The IESO may issue instructions or directions providing for any information to be given under this section. The IESO shall rely on the information provided to it by distributors and there shall be no opportunity to correct any such information or provide any additional information and all amounts paid shall be final and binding and not subject to any adjustment.

For the purposes of attributing electricity distributed to an embedded distributor to embedded generation, the volume of electricity distributed by a host distributor to an embedded distributor shall be deemed to consist of electricity withdrawn from the IESO-controlled grid or supplied to the host distributor by an embedded generator in the same proportion as the total volume of electricity withdrawn from the IESO-controlled grid by the distributor in the rebate period bears to the total volume of electricity supplied to the distributor by embedded generators during the rebate period.

**3. Pass Through of Rebate**

A distributor shall promptly pass through, with the next regular bill or settlement statement after the rebate amount is received, any rebate received from the IESO, together with interest at the Prime Rate, calculated and accrued daily, on such amount from the date of receipt, to:

a retailers who serve one or more consumers in the distributor’s service area where a service transaction request as defined in the Retail Settlement Code has been implemented and the consumer is not receiving the prices established under sections 79.4, 79.5 and 79.16 of the *Ontario Energy Board Act, 1998*;

b consumers who are not receiving the fixed price under sections 79.4, 79.5 and 79.16 of the *Ontario Energy Board Act, 1998* and who are not served by a retailer where a service transaction request as defined in the Retail Settlement Code has been implemented; and

c embedded distributors to whom the distributor distributes electricity.

The amounts paid out to the recipients listed above shall be based on energy consumed and calculated in accordance with the rules set out in the Retail Settlement Code. These payments may be made by way of set off at the option of the distributor.

If requested in writing by OPGI, the distributor shall ensure that all rebates are identified as coming from OPGI in the following form on or with each applicable bill or settlement statement:

“ONTARIO POWER GENERATION INC. rebate”

Any rebate amount which cannot be distributed as provided above or which is returned by a retailer to the distributor in accordance with its licence shall be promptly returned to the host distributor or IESO as applicable, together with interest at the Prime Rate, calculated and accrued daily, on such amount from the date of receipt.

Nothing shall preclude an agreement whereby a consumer assigns the benefit of a rebate payment to a retailer or another party.

Pending pass-through or return to the IESO of any rebate received, the distributor shall hold the funds received in trust for the beneficiaries thereof in a segregated account.

## 1 Definitions

In this Licence:

"**Act**" means the *Ontario Energy Board Act, 1998*, S.O. 1998, c. 15, Schedule B;

"**Electricity Act**" means the *Electricity Act, 1998*, S.O. 1998, c. 15, Schedule A;

"**generation facility**" means a facility for generating electricity or providing ancillary services, other than ancillary services provided by a transmitter or distributor through the operation of a transmission or distribution system and includes any structures, equipment or other things used for that purpose;

"**Licensee**" means Hydro One Remote Communities Inc.;

"**regulation**" means a regulation made under the Act or the Electricity Act;

## 2 Interpretation

2.1 In this Licence words and phrases shall have the meaning ascribed to them in the Act or the Electricity Act. Words or phrases importing the singular shall include the plural and vice versa. Headings are for convenience only and shall not affect the interpretation of this Licence. Any reference to a document or a provision of a document includes an amendment or supplement to, or a replacement of, that document or that provision of that document. In the computation of time under this Licence where there is a reference to a number of days between two events, they shall be counted by excluding the day on which the first event happens and including the day on which the second event happens. Where the time for doing an act expires on a holiday, the act may be done on the next day that is not a holiday.

## 3 Authorization

3.1 The Licensee is authorized, under Part V of the Act and subject to the terms and conditions set out in this licence:

a) to generate electricity or provide ancillary services for sale through the IESO-administered markets or directly to another person subject to the conditions set out in this Licence. This Licence authorizes the Licensee only in respect of those facilities set out in Schedule 1;

b) to purchase electricity or ancillary services in the IESO-administered markets or directly from a generator subject to the conditions set out in this Licence; and

c) to sell electricity or ancillary services through the IESO-administered markets or directly to another person, other than a consumer, subject to the conditions set out in this Licence.

## 4 Obligation to Comply with Legislation, Regulations and Market Rules

4.1 The Licensee shall comply with all applicable provisions of the Act and the Electricity Act, and regulations under these acts, except where the Licensee has been exempted from such compliance by regulation.

4.2 The Licensee shall comply with all applicable Market Rules.

## 5 Obligation to Maintain System Integrity

5.1 Where the IESO has identified, pursuant to the conditions of its licence and the Market Rules, that it is necessary for purposes of maintaining the reliability and security of the IESO-controlled grid, for the Licensee to provide energy or ancillary services, the IESO may require the Licensee to enter into an agreement for the supply of energy or such services.

5.2 Where an agreement is entered into in accordance with paragraph 5.1, it shall comply with the applicable provisions of the Market Rules or such other conditions as the Board may consider reasonable. The agreement shall be subject to approval by the Board prior to its implementation. Unresolved disputes relating to the terms of the Agreement, the interpretation of the Agreement, or amendment of the Agreement, may be determined by the Board.

## 6 Restrictions on Certain Business Activities

6.1 Neither the Licensee, nor an affiliate of the Licensee shall acquire an interest in a transmission or distribution system in Ontario, construct a transmission or distribution system in Ontario or purchase shares of a corporation that owns a transmission or distribution system in Ontario except in accordance with section 81 of the Act.

## 7 Provision of Information to the Board

7.1 The Licensee shall maintain records of and provide, in the manner and form determined by the Board, such information as the Board may require from time to time.

7.2 Without limiting the generality of paragraph 7.1 the Licensee shall notify the Board of any material change in circumstances that adversely affects or is likely to adversely affect the business, operations or assets of the Licensee, as soon as practicable, but in any event no more than twenty (20) days past the date upon which such change occurs.

## 8 Term of Licence

8.1 This Licence shall take effect on October 20, 2003 and expire on October 19, 2023. The term of this Licence may be extended by the Board.

## 9 Fees and Assessments

9.1 The Licensee shall pay all fees charged and amounts assessed by the Board.

## 10 Communication

10.1 The Licensee shall designate a person that will act as a primary contact with the Board on matters related to this Licence. The Licensee shall notify the Board promptly should the contact details change.

10.2 All official communication relating to this Licence shall be in writing.

10.3 All written communication is to be regarded as having been given by the sender and received by the addressee:

a) when delivered in person to the addressee by hand, by registered mail or by courier;

b) ten (10) business days after the date of posting if the communication is sent by regular mail; or

c) when received by facsimile transmission by the addressee, according to the sender's transmission report.

## 11 Copies of the Licence

11.1 The Licensee shall:

a) make a copy of this Licence available for inspection by members of the public at its head office and regional offices during normal business hours; and

b) provide a copy of this Licence to any person who requests it. The Licensee may impose a fair and reasonable charge for the cost of providing copies.

**SCHEDULE 1 LIST OF LICENSED GENERATION FACILITIES**

The Licence authorizes the Licensee only in respect to the following:

1. Armstrong Generation Station, owned and operated by the Licensee at Armstrong, Ontario.

2. Bearskin Lake Generation Station, owned and operated by the Licensee at Bearskin Lake, Ontario.

3. Big Trout Lake Generation Station, owned and operated by the Licensee at Big Trout Lake, Ontario.

4. Biscotasing Generation Station, owned and operated by the Licensee at Biscotasing, Ontario.

5. Dear Lake Generation Station, owned and operated by the Licensee at Dear Lake, Ontario.

6. Fort Severn Generation Station, owned and operated by the Licensee at Fort Severn, Ontario.

7. Gull Bay Generation Station, owned and operated by the Licensee at Gull Bay, Ontario.

8. Hillsport Generation Station, owned and operated by the Licensee at Hillsport, Ontario.

9. Kasabonika Generation Station, owned and operated by the Licensee at Kasabonika Lake, Ontario.

10. Kingfisher Lake Generation Station, owned and operated by the Licensee at Kingfisher Lake, Ontario.

11. Lansdowne House Generation Station, owned and operated by the Licensee at Lansdowne House, Ontario.

12. Oba Generation Station, owned and operated by the Licensee at Oba, Ontario.

13. Sachigo Lake Generation Station, owned and operated by the Licensee at Sachigo Lake, Ontario.

14. Sandy Lake Generation Station, owned and operated by the Licensee at Sandy Lake, Ontario.

15. Sultan Generation Station, owned and operated by the Licensee at Sultan, Ontario.

16. Wapekeka Generation Station, owned and operated by the Licensee at Wapekeka, Ontario.

17 Weagamow Lake Generation Station, owned and operated by the Licensee at Weagamow Lake, Ontario.

18. Webequie Generation Station, owned and operated by the Licensee at Webequie, Ontario.

19. Deer Lake Mini Hydel Generation Station, owned and operated by the Licensee at Deer Lake, Ontario.

20. Sultan Hydel Generation Station, owned and operated by the Licensee at Sultan, Ontario.

21. Marten Falls Generation Station, operated by the Licensee at Marten Falls, Ontario.

| **17** | Bill Impacts - total impacts ($ and %) for all classes for typical customers | **Yes** | Exhibit A, Tab 3, Schedule 1 and Exhibit G2, Tab 3, Schedule 3 |
| *Customer Engagement* | | | |
| **17** | Overview of customer engagement activities; description of plans and how customer needs, preferences and expectations have bee reflected in the application. | **Yes** | Exhibit A, Tab 4, Schedule 1 and Exhibit B1, Tab 1, Schedule 1, section 4.1.5 |
| **17** | Discussion on how customers were informed of the proposals being considered for inclusion in the application and the value of those proposals to customers i.e. costs, benefits, and the impact on rates | **Yes** | Exhibit A, Tab 4, Schedule 1 |
| **17** | Discussion of any feedback provided by customers and how the feedback shaped the final application | **Yes** | Exhibit A, Tab 4, Schedule 1 |
| **17** | Reference to any other communication sent to customers about the application i.e. bill inserts, town hall meetings or other forms of out reach and the feedback received from customers through these engagement activities | **Yes** | Exhibit A, Tab 4, Schedule 1 and Exhibit B1, Tab 1, Schedule 1, section 4.1.5 |
| **17** | Complete Appendix 2-AC Customer Engagement Activities Summary - explicit identification of the outcomes of customer engagement in terms of the impacts on the distributor's plans, and how that information has shaped the application | **Yes** | Exhibit A, Tab 4, Schedule 1, attachment 1 |
| **17** | All responses to matters raised in letters of comment filed with the OEB | **N/A** | No letters of comment were filed with the OEB in regards to this application. |
| *Performance Measurement* | | | |
| **17 & 18** | Discussion of performance for each of the distributor's scorecard measures over the last five years; drivers for its performance, plans for continuous improvement, identify performance improvement targets, forecast of efficiency assessment using the PEG forecasting model for the test year, discussion on how the results obtained from the PEG model has informed the business plan and application | **Yes** | Exhibit A, Tab 5, Schedule 1 |
| *Financial Information* | | | |
| **18** | Non-consolidated Audited Financial Statements for 2 most recentyears (i.e. 3 years of historical actuals) | **Yes** | Exhibit A, Tab 8, Schedule 3, attachments 1 to 4 |
| **18** | Detailed reconciliation of AFS with regulatory financial results filed in the application, with identification of any deviations that are beir proposed | **Yes** | Exhibit A, Tab 8, Schedule 4 |
| **18** | Annual Report and MD&A for most recent year of distributor and parent company, if applicable | **Yes** | Exhibit A, Tab 8, Schedule 6, attachments 1 to 4 |
| **18** | Rating Agency Reports, if available; Prospectuses, etc. for recent and planned public issuances | **Yes** | The rating agency reports are performed at the holding company level. Remotes does not impact these reports. |
| **19** | Any change in tax status | **N/A** | No change in tax status |
| **19** | Existing accounting orders and departures from the accounting orders and USoA | **Yes** | Exhibit A, Tab 8, Schedule 4 |
| **19** | Accounting Standards used for financial statements and when adopted | **Yes** | Exhibit A, Tab 8, Schedule 1 |
| **19** | Confirmation that accounting treatment of any non-utility business has segregated activities from rate regulated activities | **N/A** | Remotes does not have any non-utility business |
| *Distributor Consolidation* | | | |
| **19** | If a distributor has acquired or amalgamated with another distributor, identify any incentives that formed part of the acquisition or amalgamation transaction if the incentive represents costs that are being proposed to remain or enter rate base and/or revenue requirement. A distributor must specify whether any commitments made to shareholders are to be funded through rates | **N/A** | Remotes has not nor expects to participate in any acquisition or amalgamation activities within the historic, bridge or test years of this application. |
| **19** | Description of actual savings as a result of consolidation compared to what was in the approved consolidation application and explanation of how savings are sustainable and the efficacy of any rate plan approved as part of the MAADs application | **N/A** | Remotes has not nor expects to participate in any acquisition or amalgamation activities within the historic, bridge or test years of this application. |

| **EXHIBIT 2 - RATE BASE** | | | |
| *Overview* | | | |
| **20** | Completed Fixed Asset Continuity Schedule (Appendix 2-BA) - in Application and Excel format | **Yes** | Exhibit C2, Tab 2, Schedule 1, attachments 1 to 6 |
| **20** | Opening and closing balances, average of opening and closing balances for gross assets and accumulated depreciation (discussion of methodology if applicant uses an alternative method); working capital allowance (historical actuals, bridge and test year forecast) | **Yes** | Exhibit C1, Tab 1, Schedule 1 |
| **20** | Continuity statements (year end balance, including interest during construction and overheads).<br>Explanation for any restatement (e.g. due to change in accounting standards)<br>Year over year variance analysis; explanation where variance greater than materiality threshold<br>Hist. OEB-Approved vs Hist. Actual<br>Hist. Act. vs. preceding Hist. Act.<br>Hist. Act. vs. Bridge<br>Bridge vs. Test | **Yes** | Exhibit C1, Tab 1, Schedule 1 and Exhibit C2, Tab 2 , Schedule 1, Attachments 1 to 5 (App.2-BA) |
| **20 & 21** | Opening and closing balances of gross assets and accumulated depreciation must correspond to fixed asset continuity statements. If not, an explanation must be provided (e.g.. WIP, ARO). Reconciliation must be between net book value balances reported on Appendix 2-BA and balances included in rate base calculation | **Yes** | Exhibit C1, Tab 1, Schedule 1 and Exhibit C2, Tab 2 , Schedule 1, Attachments 1 to 5 (App.2-BA) |
| *Gross Assets - PP&E and Accumulated Depreciation* | | | |
| **21** | Breakdown by function and by major plant account; description of major plant items for test year | **Yes** | Exhibit C2, Tab 2 , Schedule 1, Attachment 6 |
| **21** | Summary of approved and actual costs for any ICM(s) and/ or ACM approved in previous IRM applications | **N/A** | Remotes has not requested any ICM or ACM in its IRM applications |
| **21** | Continuity statements must reconcile to calculated depreciation expenses and presented by asset account | **Yes** | Exhibit C2, Tab 2 , Schedule 1, Attachments 1 to 5 (App.2-BA) and Exhibit E1, Tab 6, Schedule 1 |
| **21** | All asset disposals clearly identified in the Chapter 2 Appendices for all historical, bridge and test years and if any amounts related to gains or losses on disposals have been included in Account 1575 IFRS - CGAAP Transitional PP&E Amount | **Yes** | Exhibit C2, Tab 2 , Schedule 1, Attachments 1 to 5 (App.2-BA) |
| *Allowance for Working Capital* | | | |
| **22** | Working Capital - 7.5% allowance or Lead/Lag Study or Previous OEB Direction | **Yes** | Exhibit C1, Tab 1, Schedule 1 |
| **22** | Lead/Lag Study - leads and lags measured in days, dollar-weighted | **N/A** | Remotes is using the default allowance |
| **22** | Cost of Power must be determined by split between RPP and non-RPP customers based on actual data, use most current RPP (TOU) price, use current UTR. Should include SME charge. | **N/A** | Remotes' customers are not part of the Regulated Price Plan. (Rates are bundled and established through RRRP Regulation) |

## EB-2017-0051

Date: August 28, 2017

| Filing Requirement Page # Reference | | Yes/No/N/A | Evidence Reference, Notes |
|---|---|---|---|
| *Capital Expenditures* | | | |
| 23 | DSP filed as a stand-alone document; a discrete element within Exhibit 2 | Yes | Remotes stand alone DSP has been filed as Exhibit B1, Tab 1, Schedule 1 |
| 23 | Complete Appendix 2-AB - four historical years must be actuals, forecasts for the bridge and test years; at a minimum, for historical years, applicants must provide actual totals for each DSP category. If no previous plan has been filed, applicants are only required to enter their planned total capital budget in the "plan" column for each historical year and for the bridge year including the OEB-approved amount for the last rebasing year | Yes | Exhibit C2, Tab 2, Schedule 3 for years 2013 to 2022 |
| 23 & 24 | Complete Appendix 2-AA along with: explanation for variances, including that of actuals v. OEB-approved amounts for last OEB-approved CoS application; for capital projects that have a project life cycle greater than one year, the proposed accounting treatment including the treatment of the cost of funds for construction work-in-progress | Yes | Exhibit C2, Tab 2, Schedule 2 for years 2013 to 2022 |
| 24 | Statement that there are no non-distribution activities in the applicant's budget | N/A | Both generation and distribution activities are regulated and included as part of this application. See Exhibit A, Tab 2, Schedule 3 |
| 24 | If applicable, details of any capital contributions made or forecast to be made to a transmitter with respect to a Connection and Cost Recovery Agreement. Details to be provided include, initial forecast used to calculate contribution, amount of contribution (if any), true up dates and potential true-up payments | N/A | Remotes is not connected to the transmission system and has not been required to pay capital contributions for transmission build |
| 24 | Discussion outlining capital and operating efficiencies realized as a result of the deployment and operationalization of smart meters and related technologies (e.g., AMI communications networks, ODS) in its networks. Qualitative and quantitative description and support should be provided as applicable | Yes | Exhibit B1 (DSP), Sections 2 and 4 |
| 24 | Description of how incremental conservation initiatives have been considered in order to defer or avoid future infrastructure projects as part of distribution system planning processes | Yes | Exhibit B1 (DSP), Section 1.4.4 |
| 24 & 25 | If applying for funding through distribution rates to pursue activities such as energy efficiency programs, demand response programs energy storage programs etc. the application must include a consideration of the projected affects to the distribution system on a long term basis and the projected expenditures. Distributors should explain the proposed program in the context of the distributors five year Distribution System Plan or explain any changes to its system plans that are pertinent to the program | Yes | Exhibit B1 (DSP), Section 1.4.4 |
| 26 | Changes to capitalization policy since its last rebasing application as a result of the OEB's letter dated July 17, 2012 or for any other reasons, the applicant must identify the changes and the causes of the changes. | N/A | No changes to capitalization policy. |
| 27 | Appendix 2-D complete; identification of burden rates and burden rates prior to changes, if any | Yes | Exhibit C2, Tab 7, Schedule 1 |
| 27 | Generation Facilities - If applicable, proposal to divide the costs of eligible investments between the distributor's ratepayers and all Ontario ratepayers per O.Reg. 330/09. Request for rate protection exceeds the materiality threshold in section 2.0.8 of the Filing Requirements<br>- Appendices 2-FA through 2-FC identifying all eligible investments for recovery | N/A | Remotes recovers all costs through INAC. See Exhibit A, Tab 3, Schedule 3 for details of the REINDEER program. |
| *New Policy Options for the Funding of Capital* | | | |
| 28 | Distributor may propose ACM capital project coming into service during Price Cap IR (a discrete project documented in DSP). Provide cost and materiality calculations to demonstrate ACM qualification | N/A | Remotes is not proposing ACM capital treatment for any capital projects |
| 28 | Distributor must establish need for and prudence of these projects based on DSP information; identification that distributor is proposing ACM treatment for these future projects, preliminary cost information | Yes | See Exhibit B (DSP) Section 4 and DSP Attachment A |
| 28 | Complete Capital Module Applicable to ACM and ICM | N/A | Remotes is not proposing ACM capital treatment for any projects |
| *Addition of ICM Assets to Rate Base* | | | |
| 29 | Distributor with previously approved ICM(s) - schedule of ICM amounts proposed to be incorporated into rate base, variances and explanation | N/A | Remotes has not requested ACM capital treatment in its IRM applications |
| 29 | Balances in Account 1508 sub-accounts, reconciliation with proposed rate base amounts; recalculated revenue requirement should be compared with rate rider revenue | N/A | Remotes does not have a balance in Account 1508 sub-accounts. |
| *Service Quality and Reliability Performance* | | | |
| 29 & 30 | 5 historical years of ESQRs, explanation for any under-performance vs standard and actions taken | Yes | Exhibit A, Tab 5, Schedule 2 |
| 30 | 5 historical years of SAIDI and SAIFI - for all interruptions, all interruptions excluding loss of supply, and all interruptions excluding major events. The applicant should also provide a summary of major events that occurred since last rebasing. For each interruption set out in section 2.1.4.2.5 of the RRR, for the last 5 years, a distributor must report on the following data: name of the Cause of Interruption, number of interruptions that occurred as a result of the Cause of Interruption, Number of Customer Interruptions that occurred as a result of the Cause of Interruption, and the Number of customer-hours of Interruptions that occurred as a result of the Cause of Interruption | Yes | Exhibit A, tab 5, Schedule 2 |
| 30 | Explanation for any under-performance vs 5 year average and actions taken | Yes | Exhibit A, Tab 5, Schedule 2 |
| 30 | Distributors may propose SAIDI and SAIFI benchmarks different than 5 year average; provide rationale | N/A | Remotes is not proposing different benchmarks |
| 30 | Completed Appendix 2-G | Yes | Exhibit A, Tab 5, Schedule 2, attachment 1 |

Filing Requirement
Page # Reference

Date: August 28, 2017

| Filing Requirement Page # Reference | | Yes/No/N/A | Evidence Reference, Notes |
|---|---|---|---|
| Ch 5 p9 | Where applicable, explanation for section headings other than Chapter 5 headings; cross reference table | Yes | Exhibit B1, Tab 1, Schedule 1, section 1.2 |
| Ch 5 p9-10 | Distribution System Plan Overview - key elements, sources of cost savings, period covered, vintage of information on investment drivers, changes to asset management process since last DSP filing, dependencies | Yes | Exhibit B1, Tab 1, Schedule 1, section 2.1 |
| Ch 5 p10-11 | Coordinated Planning with 3rd parties - description of consultations<br>- deliverables of the Regional Planning Process, or status of deliverables<br>- OPA letter in relation to REG investments (Ch 5 p8&9) and Dx response letter | Yes | Exhibit B1, Tab 1, Schedule 1, section 2.2 |
| Ch 5 p11 | Performance Measurement - identify and define methods and measures used to monitor DSP performance<br>- summary of performance and trends over historical period. Must include SAIFI and SAIDIfor all interruptions and all interruptions excluding loss of supply<br>- explain how information has affected DSP | Yes | Exhibit B1, Tab 1, Schedule 1, section 2.3 |
| Ch5 p12 | Asset Management Process Overview - description of AM objectives/corporate goals and how Dx ranks objectives for prioritizing investments | Yes | Exhibit B1, Tab 1, Schedule 1, section 3.1 |
| Ch5 p12 | Inputs/Outputs of the AM process and information flow for investments; flowchart recommended | Yes | Exhibit B1, Tab 1, Schedule 1, section 3 |
| Ch 5 p13 | Overview of Assets Managed - description of service area (including evolution of features in forecast period affecting DSP),<br>- description of system configuration<br>- service profile and condition by asset type (tables and/or figures) - date data compiled<br>- assessment of degree the capacity of system assets is utilized | Yes | Exhibit B1, Tab 1, Schedule 1, section 3.2 |
| Ch 5 p13-14 | Asset Lifecycle Optimization - description of asset lifecycle optimization policies and practices, including asset replacement and refurbishment, maintenance planning criteria and assumptions<br>- description of asset life cycle risk management policies and practices, assessment methods and approaches to mitigation | Yes | Exhibit B1, Tab 1, Schedule 1, section 3.3 |
| Ch 5 p14-15 | Capital Expenditure Plan Summary for significant projects and activities to be undertaken - capability to connect new load or Gx customers, total annual capex over forecast period by investment category, description of how AMP and Capex planning have affected capital expenditures for each category<br>- list, description and total capital cost of material capital expenditures sorted by category (table recommended)<br>- information related to Regional Planning Process (Needs Assessment Report, Regional Planning Status Letter, Regional Infrastructure Plan - as appropriate)<br>- description of customer engagement<br>- Dx expectations of system development over next 5 years<br>- list, description and total capital cost of projects planned in response to customer preferences, to take advantage of technology based opportunities, to study innovative processes (table recommended) | Yes | Exhibit B1, Tab 1, Schedule 1, section 4.1 |
| Ch 5 p15 | Capital Expenditure Planning Process Overview - description of capex planning objectives/criteria/ assumptions, relationship with AM objectives, policy on consideration of non-distribution alternatives, processes used to identify projects in each investment category, customer feedback and impact on plan, method and criteria used to prioritise REG investments | Yes | Exhibit B1, Tab 1, Schedule 1, section 4.2 |
| Ch 5 p16 | System Capability Assessment for REG - REG applications > 10 kW, number and MW of REG connections for forecast period, capacity of Dx to connect REG, connection constraints | Yes | Exhibit B1, Tab 1, Schedule 1, section 4.3 |
| Ch 5 p16-18<br>Ch 2 p24 | Capital Expenditure Summary by Investment Category - completed Table 2 of Ch 5 for historical and forecast period, explanation of markedly different variances plan vs actual, explanation of markedly different variances year over year<br>Table 2 of Ch 5 is provided in Excel format in Appendix 2-AB (must provide actual totals for historical years, as a minimum) | Yes | Exhibit B1, Tab 1, Schedule 1, section 4.4.<br>OEB Chapter 2, Appendix 2-AB for the years 2013 to 2022 is found in Exhibit C2, Tab 2, Schedule 3. |
| Ch5 p19 | Overall Plan - comparative expenditures by category over historical period, forecast impact of system investment on O&M, drivers of investments by category, information related to Dx system capability assessment | Yes | Exhibit B1, Tab 1, Schedule 1, sections 4.5 and 4.5.1 |
| Ch 5 p19-25 | Material Investments - For each project that meets materiality threshold set in Ch 2 p10<br>- general information - total capital, customer attachments, dates, risks, variances, REG investments<br>- evaluation criteria - may include: efficiency, customer value, reliability, etc.<br>- category specific requirements for each project - system access, system renewal, system service, general plant (as applicable) | Yes | Exhibit B1, Tab 1, Schedule 1, section 4.5.2 and appendix A. |

Filing Requirement Page # Reference

Date: August 28, 2017

| Filing Requirement Page # Reference | | Yes/No/N/A | Evidence Reference, Notes |
|---|---|---|---|
| **EXHIBIT 3 - OPERATING REVENUE** | | | |
| *Load and Revenue Forecasts* | | | |
| 31 | Explanation of causes, assumptions and adjustments for volume forecast. Economic assumptions and data sources for customer and load forecasts | Yes | Exhibit G1, Tab 1, Schedule 1 |
| 31 | Explanation of weather normalization methodology | N/A | Remotes does not normalize its load forecast for weather. |
| 31 | Quantification of any impacts arising from the persistence of historical CDM programs as well as the forecasted impacts arising from new programs in the bridge and test years through the current 6-year CDM framework by customer class | Yes | Exhibit B1, Tab 1, Schedule 1, section 1.4.4 |
| 31 | Completed Appendix 2-IB; the customer and load forecast for the test year must be entered on RRWF, Tab 10 | Yes | Exhibit , Tab 1, Schedule 1 |
| 31 & 32 | Multivariate Regression Model - rationale for choice, regression statistics, explanation of weather normalization methodology, source of data for endogenous and exogenous variables, any binary variables used to either account for individual data points or to account for seasonal or cyclical trends or for discontinuities in the historical data, explanation of any specific adjustments made; data used in load forecast must be provided in Excel format, including derivation of constructed variables | N/A | Remotes does not use a multivariate regression model for load forecast. |
| 32 & 33 | NAC Model - rationale for choice, data supporting NAC variables, description of accounting for CDM including licence conditions, discussion of weather normalization considerations | Yes | Exhibit G1, Tab 1, Schedule 1 |
| 33 | CDM Adjustment - account for CDM in 2018 load forecast. Consider impact of persistence of historical CDM and impact of new programs. Adjustments may be required for IESO reported results which are full year impacts | N/A | Remotes does not adjust the load forecast to account for CDM and will not be applying for an LRAM. |
| 33 | CDM savings for 2018 LRAMVA balance and adjustment to 2018 load forecast; data by customer class and for both kWh and, as applicable, kW. Provide rationale for level of CDM reductions in 2018 load forecast | N/A | Remotes does not adjust the load forecast to account for CDM and will not be applying for an LRAM. |
| 33 | Completed Appendix 2-I | N/A | Remotes does not adjust the load forecast to account for CDM and will not be applying for an LRAM. |
| *Accuracy of Load Forecast and Variance Analyses* | | | |
| 33 | Completed Appendix 2-IB | Yes | Exhibit G2, Tab 1, Schedule 1 |
| 34 | For customer/connection counts - identification as to whether customer/connection count is shown in year end or average format, year-over-year variances in changes of customer/connection counts with explanation of major changes, explanations of bridge and test year forecasts by rate class, for last rebasing variance analysis between last OEB-approved and actuals with explanations for material differences | Yes | Exhibit G2 Tab 1 Schedule 2 |
| 34 | For consumption and demand - explanation to support how kWh are converted to kW for applicable demand-billed classes, year-over-year variances in kWh and kW by rate class and for system consumption overall (kWh) with explanations for material changes in the definition of or major changes over time (should be done for both historical actuals against each other and historical weather-normalized actuals over time), explanations of the bridge and test year forecasts by rate class, variance analysis between the last OEB-approved and the actual and weather-normalized actual results | N/A | Remotes does not have customers who are demand billed. |
| 34 | For revenues - calculation of bridge year forecast of revenues at existing rates, calculation of test year forecasted revenues at existing and proposed rates, year-over-year variances in revenues comparing historical actuals and bridge and test year forecasts | Yes | Exhibit G2, Tab 2, Schedule 2 and Exhibit G2, Tab 1, Schedule 1 |
| 35 | With respect to average consumption, for each rate class, distributors are to provide weather-actual and weather-normalized average annual consumption or demand per customer as applicable for the rate class for last OEB approved and historical, weather normalized average annual consumption or demand per customer for the bridge and test years, explanation of the net change in average consumption from last OEB-approved and actuals from historical, bridge and test years based on year-over-year variances and any apparent trends in data | N/A | Weather data is not available for Remotes service territory |
| *Other Revenue* | | | |
| 35 | Completed Appendix 2-H | Yes | Exhibit G2, Tab 2, Schedule 1 |
| 35 | Variance analysis - year over year, historical, bridge and test | Yes | Exhibit G2, Tab 1, Schedule 3 |
| 35 | Any new proposed specific service charges, or proposed changes to rates or application of existing specific service charges | N/A | Remotes is not proposing any new specific charges. |
| 35 | Revenue from affiliate transactions, shared services, corporate cost allocation. For each affiliate transaction, identification of the service, the nature of the service provided to affiliate entities, accounts used to record the revenue and associated costs (Appendix 2-N) | Yes | Exhibit D2, Tab 4, Schedule 1 |
| 35 | Distributors must identify any discrete customer groups that may be materially impacted by changes to other rates and charges | N/A | An increase of 1.8% is proposed for all customer classes at all levels of consumption |

| Filing Requirement Page # Reference | | Yes/No/N/A | Date: August 28, 2017 Evidence Reference, Notes |
|---|---|---|---|
| **EXHIBIT 4 - OPERATING COSTS** | | | |
| *Overview* | | | |
| **36** | Brief explanation of test year OM&A levels, cost drivers, significant changes, trends, inflation rate assumed, business environment changes | **Yes** | OM&A: Exhibit D1, Tab 1, Schedule 1 to 5; Inflation assumed: Exhibit A, Tab 1, Schedule 1 |
| *Summary and Cost Driver Tables* | | | |
| **36** | Summary of recoverable OM&A expenses; Appendix 2-JA | **Yes** | Exhibit D2 , Tab 3, Schedule 1 |
| **36** | Recoverable OM&A cost drivers; Appendix 2-JB | **Yes** | Exhibit D2, Tab 3, Schedule 2 |
| **36** | Recoverable OM&A Cost per customer and per FTE; Appendix 2-L | **Yes** | Exhibit D2, Tab 3, Schedule 4 |
| **37** | Identification of change in OM&A in test year in relation to change in capitalized overhead. | **Yes** | Exhibit C2, Tab 7, Schedule 1 |
| **36** | OM&A variance analysis for test year with respect to bridge and historical years; Appendix 2-D | **Yes** | Exhibit C2, Tab 7, Schedule 1 |
| *Program Delivery Costs with Variance Analysis* | | | |
| **37** | Completed Appendix 2-JC OM&A Programs Table - completed by program or major functions; include variance analysis limited to variances that are outliers, between test year and last OEB approved and most recent actuals, including an explanation for each significant change whether the change was within or outside the applicant's control and explanation of why | **Yes** | Exhibit D2, Tab 3, Schedule 3 |
| **37** | For each significant change within the applicant's control describe business decision that was made to manage the cost increase/decrease and the alternatives | **Yes** | Exhibit B1, Tab 1, Schedule 1, section 4.1 for Capital and Exhibit D1, Tab 1, Schedules 2 to 5 for OM&A |
| *Workforce Planning and Employee Compensation* | | | |
| **37** | Employee Compensation - completed Appendix 2-K | **Yes** | Exhibit D2, Tab 5, Schedule 2 |
| **38** | Description of previous and proposed workforce plans, including compensation strategy | **Yes** | Exhibit D1, Tab 3, Schedule 1 |
| **38** | Discussion of the outcomes of previous plans and how those outcomes have impacted their proposed plans including an explanation of the reasons for all material changes to headcount and compensation. Explanation for all years includes:<br>- year over year variances<br>- basis for performance pay, eligible employee groups, goals, measures, and review process for pay-for-performance plans,<br>- relevant studies (e.g. compensation benchmarking) | **Yes** | Exhibit D1, Tab 3, Schedule 1 and Exhibit D2, Tab 5, Schedule 1 |
| **38** | Details of employee benefit programs including pensions for last OEB approved, historical, bridge and test; must agree with tax section | **Yes** | Exhibit D2, Tab 5, Schedules 2 to 3 |
| **38** | Most recent actuarial report on employee benefits, pension and OPEBs | **N/A** | The actuarial report is performed at the holding company level. Remotes does not impact the report. An actuarial account is not performed on Remotes. |
| **38** | Accounting method for pension and OPEBs; if cash method, sufficient supporting rationale. If proposing to change the basis in which pension and OPEB costs included in OM&A, quantification of impact of transition | **Yes** | Exhibit E1, Tab 3, Schedule 2 |
| *Shared Services and Corporate Cost Allocation* | | | |
| **39** | Identification of all shared services among affiliates and parent company; identification of the extent to which the applicant is a "virtual utility" | **Yes** | All shared services between the affiliate and parent company are covered by Affiliate Services Agreement Exhibit A, Tab 6, Schedule 1. Details are found in Exhibit D2, Tab 4, Schedule 1 |
| **39** | Allocation methodology for corporate and shared services, list of costs and allocators, including any third party review | **Yes** | Exhibit D2, Tab 4, Schedule 1 |
| **39** | Completed Appendix 2-N for service provided or received for historical, bridge and test; including reconciliation with revenue included in Other Revenue | **Yes** | Exhibit D2, Tab 4, Schedule 1 |
| **39** | Shared Service and Corporate Cost Variance analysis - test year vs last OEB approved and most recent actual | **Yes** | Exhibit E1, Tab 1, Schedule 1 |
| **39** | Identification of any Board of Director costs for affiliates included in LDC costs | **Yes** | Remotes pays for services from HOI that include Board of Director services. See Exhibit E2-04-01 |
| *Non-Affiliate Services, One-Time Costs, Regulatory Costs* | | | |
| **39** | Purchased Non-Affiliated Services - file a copy of procurement policy (signing authority, tendering process, non-affiliate service purchase compliance) | **Yes** | Exhibit A, Tab 6, Schedule 2 and Exhibit A, Tab 6, Schedule 2, attachment 1 |
| **39** | For material transactions that are not in compliance with procurement policy, or that were undertaken pursuant to exceptions contemplated within the policy, an explanation as to why as well as a summary of the nature and cost of the product, and a description of the specific methodology used for selecting the vendor | **Yes** | Exhibit A, Tab 6, Schedule 2 |
| **40** | Identification of one-time costs in historical, bridge, test; explanation of cost recovery in test (or future years). If no recovery of one-time costs is being proposed in the test year and subsequent IRM term, an explanation must be provided | **Yes** | Exhibit D1, Tab 1, Schedule 6 |
| **40** | Regulatory costs - breakdown of actual and forecast, supporting information related to CoS application (e.g. legal fees, consultant fees), proposed recovery (i.e. amortized?) Completed Appendix 2-M | **Yes** | Exhibit D2, Tab 6, Schedule 1 |
| *LEAP, Charitable and Political Donations* | | | |
| **40** | LEAP - the greater of 0.12% of forecasted service revenue requirement or $2,000 should be included in OM&A and recovered from all rate classes | **Yes** | Exhibit D1, Tab 1, Schedule 6 |
| **41** | Detailed information for all contributions that are claimed for recovery | **Yes** | Exhibit D1, Tab 4, Schedule 1 |

| 41 | Charitable Donations - the applicant must confirm that no political contributions have been included for recovery | N/A | Remotes has not requested the recovery of any political donations. |
| *Depreciation, Amortization and Depletion* | | | |
| 41 | Explanations for any useful lives of an asset that are proposed that are not within the ranges contained in the Kinectrics Report | N/A | Remotes is not proposing any changes in depreciation related to useful life of assets |
| 41 | Depreciation, Amortization and Depletion details by asset group for historical, bridge and test years. Include asset amount and rate o depreciation/amortization. Must agree to accumulated depreciation in Appendix 2-BA under rate base | Yes | Exhibit D2, Tab 7, Schedule 1 and Exhibit C2, Tab 1, Schedule 1, attachments 1 to 6, and Exhibit D2, Tab 20, Schedule 1, attachments 1 to 6 |
| 41 | Identification of any Asset Retirement Obligations and associated depreciation, accretion expense | Yes | Remotes has a Land Assessment Remediation (LAR) program. Refer to Exhibit D1, Tab 6, Schedule 1 |
| 41 & 42 | Identification of historical depreciation practice and proposal for test year. Variances from half year rule must be documented and supporting rationale provided | Yes | Exhibit E1, Tab 6, Schedule 1. There are no variances from half year rule. |
| 42 | Copy of depreciation/amortization policy, or equivalent written description; summary of changes to depreciation/amortization policy since last CoS | N/A | Depreciation policy has not changed since 2012 |
| 42 | Explanation of any deviations from the practice of depreciating significant parts or components of PP&E separately | N/A | There were no deviations |
| 42 | For any depreciation expense policy or asset service lives changes since its last rebasing application:<br>- identification of the changes and detailed explanation for the causes of the changes, including any changes subsequent to those made by January 1, 2013<br>-use of Kinectrics study or another study to justify changes in useful life<br>- list detailing all asset service lives tied to USoA, detail differences in TUL from Kinectrics and explain differences outside of minimum and maximum TUL range from Kinectrics; Appendix 2-BB<br>-File applicable depreciation appendices as provided in Chapter 2 MIFRS Appendices (Appendix 2-CA to 2-CK) | N/A | No change from previous rebasing |
| *PILs and Property Taxes* | | | |
| 43 | Completed version of the PILs model (PDF and Excel); derivation of adjustments for historical, bridge, test years | Yes | Remotes prepared its own PILs worksheet at Exhibit D2, Tab 8, Schedules 2 and 3 |
| 43 | Supporting schedules and calculations identifying reconciling items | Yes | Exhibit D2, Tab 8, Schedules 1 and 3 |
| 43 | Most recent federal and provincial tax returns | Yes | Exhibit D2, Tab 9, Schedule 1, attachments 1 to 6 |
| 18 & 43 | Financial Statements included with tax returns if different from those filed with application | N/A | Remotes financial statements were not different |
| 43 | Calculation of Tax Credits; redact where required (filing of unredacted versions is not required) | N/A | No tax credits were estimated in the Remotes Business Plan |
| 43 | Supporting schedules, calculations and explanations for other additions and deductions | Yes | Exhibit D2, Tab 8, Schedules 2 and 4 |
| 43 | Completion of the integrity checks in the PILs Model | N/A | Remotes prepared its own PILs worksheet |
| 41 | Explanation of how taxes other than income taxes or PILS (e.g. property taxes) are derived | Yes | Exhibit D1, Tab 7, Schedule 2 |
| *Non-recoverable and Disallowed Expenses* | | | |
| 43 | Exclude from regulatory tax calculation any non-recoverable or disallowed expenses | N/A | No non-recoverable or disallowed expenses were included in the Remotes' tax calculations. |
| *Conservation and Demand Management* | | | |
| 44 & 45 & 46 | LRAMVA - disposition of balance. Distributors must provide new LRAMVA Work form in a working Excel file and provide the following:<br>- statement identifying the year(s) of new lost revenues and prior year savings persistence claimed in the LRAMVA disposition<br>- statement confirming LRAMVA based on verified savings results supported by the distributors final CDM Report and Persistence Savings Report (both filed in Excel format) and a statement indicating use of most recent input assumptions when calculating lost revenue<br>- summary table with principal and carrying charges by rate class and resulting rate riders<br>- statement providing the disposition period; rationale provided for disposing the balance in the LRAMVA if one or more classes do not generate significant rate riders<br>- statement confirming LRAMVA reference amounts, rationale for the distributors circumstances if LRAMVA threshold not used<br>- rationale confirming how rate class allocations for actual CDM savings were determined by class and program (Tab 3-A of LRAMVA Work form)<br>- statement confirming whether additional documentation was provided in support of projects that were not included in distributors final CDM Annual Report (Tab 8 of LRAMVA Work form as applicable)<br>- for OEB-approved programs prior to 2014, a submission of a third party report that provides a review and verification of the LRAM calculation including: confirmation of use of correct input assumptions and lost revenue calculations, participation amounts, net and gross impacts of each program (kW and kWh) by class by year, and verification of any carrying charges requested | N/A | Remotes does not have an LRAMVA |

| | | | Date: August 28, 2017 |
| **EXHIBIT 5 - COST OF CAPITAL AND CAPITAL STRUCTURE** | | | |
| *Capital Structure* | | | |
| 46 | Statement that LDC adopts OEB's guidelines for cost of capital and confirms that updates will be done. Alternatively - utility specific cost of capital with supporting evidence | Yes | Exhibit E1, Tab 1, Schedule 1 |
| 46 | Completed Appendix 2-OA for last OEB approved and test year | Yes | Exhibit E2, Tab 1, Schedule 1 (2013) and Exhibit E2, Tab 1, Schedule 2 (2018) |
| 46 | Completed Appendix 2-OB for historical, bridge and test years | Yes | Exhibit E2, Tab 2, Schedule 1, attachments 1 to 6 |
| 46 | Explanation for any changes in capital structure | Yes | Exhibit E1, Tab 1, Schedule 1 |
| *Cost of Capital (Return on Equity and Cost of Debt)* | | | |
| 47 | Calculation of cost for each capital component | Yes | Exhibit E2, Tab 1, Schedule 1 (2013) and Exhibit E2, Tab 1, Schedule 2 (2018) |
| 47 | Profit or loss on redemption of debt | N/A | Remotes did not have any redemption of debt |
| 47 | Copies of promissory notes or other debt arrangements with affiliates | N/A | Remotes has no affiliates |
| 47 | Explanation of debt rate for each existing debt instrument | Yes | Exhibit E1, Tab 1, Schedule 1 |
| 47 | Forecast of new debt in bridge and test year - details including estimate of rate | N/A | Remotes is not forecasting new debt in bridge and test years |
| 47 | If proposing any rate that is different from the OEB guidelines, a justification of the proposed rate(s), including key assumptions | N/A | Remotes' rate based on the OEB's Cost of Capital Parameter Updates for 2017 COS Applications for Rates Effective January 1, 2017, dated October 27, 2016. |
| 47 | Notional Debt - difference between actual debt thickness and deemed debt thickness attracts the weighted average cost of actual long-term debt rate (unless 100% equity financed) | Yes | Exhibit E1, Tab 1, Schedule 1. Remotes is 100% debt-financed and is operated as a break-even company. |
| *Not-for-Profit Corporations* | | | |
| 48 | Not for Profit Corporations - evidence that excess revenue is used to build up operating and capital reserves | N/A | Remotes is not a Not-for-Profit Corporation. Remotes is set up under the Business Corporations Act. Exhibit A, Tab 2, Schedule 1 |
| 48 | Detailed calculation for test year revenue requirement based on its Reserve Requirement | N/A | Remotes is not a Not-for-Profit Corporation. Remotes is set up under the Business Corporations Act. Exhibit A, Tab 2, Schedule 1 |
| 48 | The proposed reserves and rationale for the need to establish each reserve, the time period of building up the reserves, and the procedure and policy of each reserve | N/A | Remotes is not a Not-for-Profit Corporation. Remotes is set up under the Business Corporations Act. Exhibit A, Tab 2, Schedule 1 |
| 48 | Description of the governance of the not-for-profit corporation | N/A | Remotes is not a Not-for-Profit Corporation. Remotes is set up under the Business Corporations Act. Exhibit A, Tab 2, Schedule 1 |
| 48 & 49 | If there are approved reserves from previous OEB decisions provide the following:<br>-any changes to the reserve policies and rationale for the changes since last CoS<br>limits of any capital and/or operating reserves as approved by the OEB and identify decisions<br>-current balances of any established capital and/or operating reserves<br>-list withdrawals from capital and operating reserves, identify amounts and purpose of withdrawal<br>-if limits on capital and operating reserves achieved provide a proposal for utilization of amounts<br>-if limits on reserves not achieved provide rationale and the detail for its forecast of the Reserve Requirement for the test year | N/A | Remotes is not a Not-for-Profit Corporation. Remotes is set up under the Business Corporations Act. Exhibit A, Tab 2, Schedule 1 |
| **EXHIBIT 6 - REVENUE DEFICIENCY/SUFFICIENCY** | | | |
| 49 | Calculation of delivery-related Revenue Deficiency/Sufficiency (excluding cost of power and associated costs): net utility income, rate base, actual return on rate base, indicated rate of return, requested rate of return, deficiency/sufficiency, gross deficiency/sufficiency. Deficiency/sufficiency must also be net of other costs (e.g. LV costs, RSVAs, smart meter or MIST meter expenditures/revenues and other DVA balances). | Yes | Exhibit F1, Tab 1, Schedule 1 |
| 49 & 50 | Summary of drivers for test year deficiency/sufficiency, how much each driver contributes; references in application evidence mapped to drivers | Yes | Exhibit F2, Tab 1, Schedules 1 and 2 |
| 50 | Impacts of any changes in methodologies to deficiency/sufficiency | N/A | There has been no change in methodology. |
| *Revenue Requirement Work Form* | | | |
| 50 | RRWF - in PDF and Excel. Revenue requirement, def/sufficiency, data entered in RRWF must correspond with other exhibits | Yes | Exhibit F2, Tab 1, Schedule 2 |
| 50 | If the enhanced RRWF cannot reflect a distributor's proposed rates accurately, the distributor must file its rate generator model | Yes | Exhibit G3, Tab 3, Schedule 4 |

# 2018 Cost of Service Checklist

## Hydro One Remote Communities Inc.

## EB-2017-0051

**Date: August 28, 2017**

| Filing Requirement Page # Reference | | Yes/No/N/A | Evidence Reference, Notes |
|---|---|---|---|
| **EXHIBIT 7 - COST ALLOCATION** | | | |
| *Cost Allocation Study Requirements* | | | |
| 51 | Completed cost allocation study using the OEB-approved methodology or a comparable model must be filed reflecting future loads and costs and be supported by appropriate explanations and live Excel spreadsheets. Sheets 11 and 12 of the RRWF must also be completed. Live Excel version of 2017 cost allocation model will be filed (updated load profiles or scaled version of HONI CAIF). Model must be consistent with test year load forecast, changes to customer classes and load profiles. | N/A | The methodology for setting rates for Remotes customers is established under O.Reg 442/01 |
| 51 | Explanation provided if a distributor is unable to update its load profiles and confirm that it intends to put plans in place to update its load profiles the next time a cost allocation model is filed | N/A | The methodology for setting rates for Remotes customers is established under O.Reg 442/01 |
| 52 | Description of weighting factors, and rationale for use of default values (if applicable) | N/A | The methodology for setting rates for Remotes customers is established under O.Reg 442/01 |
| 52 | Hard copy of sheets I-6, I-8, O-1 and O-2 (first page) | N/A | The methodology for setting rates for Remotes customers is established under O.Reg 442/01 |
| 52 & 53 | Host Distributor only<br>- evidence of consultation with embedded Dx<br>- statement regarding embedded Dx support for approach to allocation of costs<br>- if embedded Dx is separate class - class in cost allocation study and RRWF, Sheet 11<br>- if new embedded Dx class - rationale and supporting evidence (cost of serving, load served, asset ownership information, distribution charges); include in cost allocation study and RRWF, Sheet 11<br>- if embedded Dx billed as GS customer - , include with the GS class in cost allocation model and Appendix 2-P. Provide cost of serving, load served, asset ownership information, distribution charges, appropriateness of rate class. File Appendix 2-Q. | N/A | Remotes does not have any embedded distributors |
| 53 | Unmetered Loads (including Street Lighting) - Confirmation of communication with unmetered load customers when proposing changes to the level of the rates and charges or the introduction of new rates and charges | N/A | Remotes has seven street lighting accounts that are unmetered. No changes are requested to unmetered load accounts. Rates are increasing for all customers by 1.8%, less than inflation |
| 53 | micro FIT - if the applicant believes that it has unique circumstances which would justify a certain rate, appropriate documentation must be provided | N/A | Remotes does not have any micro FIT customers and is not proposing changes |
| 53 | Standby Rates - if seeking approval on final basis, provide evidence that affected customers have been advised. If seeking changes to standby charges, provide rationale and evidence that affected customer have been advised. | N/A | Remotes does not charge standby rates |
| 54 | New customer class or eliminated customer class - rationale and restatement of revenue requirement from previous CoS | N/A | No new rate classes are proposed |
| *Class Revenue Requirements* | | | |
| 54 | To support a proposal to rebalance rates, the distributor must provide information on the revenue by class that would apply if all rates were changed by a uniform percentage. Ratios must be compared with the ratios that will result from the rates being proposed by the distributor. | N/A | All rates are proposed to increase by 1.8% |
| *Revenue to Cost Ratios* | | | |
| 55 | If R:C ratios outside deadband based on model - distributors must include cost allocation proposal to bring them within the OEB-approved ranges. In making any such adjustments, distributors should address potential mitigation measures if the impact of the adjustments on the rates of any particular class or classes is significant. | N/A | The methodology for setting rates for Remotes customers is established under O.Reg 442/01 |
| 55 | If Cost Allocation Model other than OEB model used - exclude LV, exclude DVA such as smart meters | N/A | The methodology for setting rates for Remotes customers is established under O.Reg 442/01 |

|---|---|---|---|
| **EXHIBIT 8 - RATE DESIGN** | | | |
| **56** | Monthly fixed charges - 2 decimal places; variable charges - 4 decimal places | **Yes** | Exhibit G1, Tab 1, Schedule 1 |
| *Fixed Variable Proportion* | | | |
| **56** | The following is to be provided in relation to the fixed/variable proportion of proposed rates:<br>-Current F/V with supporting info<br>-Proposed F/V proportion with explanation for any changes (billing determinants from proposed load forecast)<br>-Comparison between current and proposed monthly fixed charges with the floor and ceiling as in cost allocation study<br>Analysis must be net of rate adders, funding adders, and rate riders | **N/A** | The methodology for setting rates for Remotes customers is established under O.Reg 442/01. Because Remotes' rates include both generation and distribution, Remotes is not planning to move to a fixed monthly charge. See Exhibit G1-02-01 |
| *Rate Design Policy* | | | |
| **57** | LDCs must propose changes to residential rates consistent with policy to transition to fully fixed monthly distribution service charge. | **N/A** | The methodology for setting rates for Remotes customers is established under O.Reg 442/01. Because Remotes' rates include both generation and distribution, Remotes is not planning to move to a fixed monthly charge. See Exhibit G1-02-01 |
| **57** | Proposal follows approach set out in Tab 12 of RRWF | **N/A** | The methodology for setting rates for Remotes customers is established under O.Reg 442/01. |
| **57** | If applicable, distributor with seasonal residential class must propose identical rate design treatment for such a class | **N/A** | The methodology for setting rates for Remotes customers is established under O.Reg 442/01. |
| *RTSRs* | | | |
| **58** | Retail Transmission Service Rate Work Form - PDF and Excel | **N/A** | Remotes is not connected to the transmission grid |
| **58** | RTSR information must be consistent with working capital allowance calculation | **N/A** | Remotes is not connected to the transmission grid |
| *Retail Service Charges* | | | |
| **58** | If proposing changes to Retail Service Charges or introduction of new rates and charges - evidence of consultation and notice | **N/A** | Remotes is not proposing changes nor introducing any new rates or charges. |
| *Regulatory Charges* | | | |
| **58 & 59** | Wholesale Market Service Rate - reflect current approved rate in application or justify otherwise | **N/A** | This does not apply to Remotes. |
| *Specific Service Charges* | | | |
| **59** | Specific Service Charge description/purpose/reason for new and revised SSC; calculations to support charges | **N/A** | Remotes is not proposing new or revised SSC |
| **59** | Identification in the Application Summary all proposed changes that will have a material impact on customers, including charges that may affect a discrete group. | **Yes** | Exhibit G1, Tab 2, Schedule 1 and supporting schedules |
| **59** | Identification of any rates and charges in Conditions of Service that do not appear on tariff sheet. Explain nature of costs, provide schedule outlining revenues or capital contributions 2012-2015, bridge and test years.<br>Whether these charges should be included on tariff sheet | **N/A** | All rates and charges appear on the Tariff Sheet. |
| **59** | Ensure revenue from SSCs corresponds with Operating Revenue evidence | **Yes** | Exhibit G1, Tab 3, Schedule 1 and Exhibit G1, Tab 4, Schedule 1 |
| *Low Voltage Service Rates* | | | |
| **60** | Forecast of LV cost, sum of host distributors charges | **N/A** | Remotes is not a host nor an embedded distributor. |
| **60** | Low Voltage Cost (historical, bridge, test), variances and explanations for substantive changes | **N/A** | Remotes is not a host nor an embedded distributor. |
| **60** | Support for forecast LV, e.g. Hydro One Sub-Transmission charges | **N/A** | Remotes is not a host nor an embedded distributor. |
| **60** | Allocation of LV cost to customer classes (typically proportional to Tx connection revenue) | **N/A** | Remotes is not a host nor an embedded distributor. |
| **60** | Proposed LV rates by customer class | **N/A** | Remotes is not a host nor an embedded distributor. |

## Hydro One Remote Communities Inc.

## EB-2017-0051

**Date: August 28, 2017**

| Filing Requirement Page # Reference | | Yes/No/N/A | Evidence Reference, Notes |
|---|---|---|---|
| *Loss Factors* | | | |
| 60 | Proposed SFLF and Total Loss Factor for test year | N/A | Remotes is an integrated generation and distribution utility |
| 60 | Statement as to whether LDC is embedded including whether fully or partially | Yes | Exhibit A, Tab 2, Schedule 1, Legal Form of Application |
| 60 | Study of losses if required by previous decision | N/A | Remotes has not been directed to complete a study of losses in a previous decision. |
| 60 | 3-5 years of historical loss factor data - Completed Appendix 2-R | N/A | Remotes has no approved loss factors. |
| 60 | If proposed loss factor >5%, explanation and action plan to reduce losses going forward | N/A | Remotes has no approved loss factors. |
| 60 | Explanation of SFLF if not standard | N/A | Remotes has no approved loss factors. |
| *Tariff of Rates and Charges* | | | |
| 60 & 61 | Current and proposed Tariff of Rates and Charges filed in the Tariff Schedule/Bill Impacts Model - each change must be explained and supported in the appropriate section of the application | Yes | Exhibit G1, Tab 2, Schedule 1 and Exhibit G2, Tab 3, Schedules 1 to 2 |
| 61 | Explanation of changes to terms and conditions of service if changes affect application of rates | N/A | Remotes has not proposed any changes. |
| *Revenue Reconciliation* | | | |
| 61 | Calculations of revenue per class under current and proposed rates; reconciliation of rate class revenue and other revenue to total revenue requirement (i.e. breakout volumes, rates and revenues by rate component etc.) | Yes | Exhibit G2, tab 1, Schedule 1 |
| 61 | Completed RRWF - Sheet 13 - rates and charges entered on this sheet should be rounded to the same decimal places as tariff | N/A | Remotes has provided its own version of the RRWF at Exhibit F2, Tab 1, Schedule 2 |
| *Bill Impact Information* | | | |
| 61 | Completed Tariff Schedule and Bill Impacts Model. Bill impacts must identify existing rates, proposed changes to rates, and detailed bill impacts (including % change in distribution excluding pass through costs - Sub-Total A, % change in distribution - Sub-Total B, % change in delivery - Sub-Total C, and $ change in total bill) | N/A | Remotes' rates are set by Regulation. A rate model is provided at Exhibit G, Tab 3, Schedule 4. |
| 61 | Impact of changes resulting from the as-filed application on representative samples of end-users (i.e. volume, % rate change and revenue). Commodity and regulatory charges held constant | Yes | Exhibit G1, Tab 2, Schedule 1 |
| 61 & 62 | Rates and charges input in the tariff schedule and Bill Impacts Model rounded to the decimal places as shown on the existing tariff | Yes | Exhibit G1, Tab 2, Schedule 1 and Exhibit G, Tab 3, Schedule 4 |
| 62 | Bill impacts provided for typical customers and consumption levels. Must provide residential 750 kWh, residential at the lowest 10th percentile and GS<50 2,000 kWh. Bill impacts must be provided for a range of consumption levels relevant to the service territory. | Yes | Exhibit G1, Tab 2, Schedule 1 |
| 62 | If applicable, for certain classes where one or more customers have unique consumption and demand patterns, the distributor must show a typical impact and provide an explanation | N/A | Remotes is proposing a 1.8% increase for all customers. See Exhibit G1, Tab 2, Schedule 1 |
| *Rate Mitigation* | | | |
| 62 | Evidence showing that the monthly service charge would not rise by more than $4 per year due only to the rate design change, and that the total bill impact, reflecting all proposed changes in the application, will not exceed 10%. If either of these criteria is not met, some form of mitigation may be required (i.e. extending transition period). | Yes | Exhibit G1, Tab 5, Schedule 1 |
| 63 | Evaluation of bill impact for residential customer at 10th consumption percentile. Describe methodology for determination of 10th consumption percentile. File mitigation plan for whole residential class if impact >10% for these customers. | N/A | All proposed increases are les than 10% for all classes at all levels of consumption |
| 63 | Mitigation plan if total bill increase for any customer class is >10% including: specification of class and magnitude of increase, description of mitigation measures, justification, revised impact calculation. The Tariff Schedule and Bill Impacts Model must reflect any mitigation plan proposed. | N/A | All proposed increases are les than 10% for all classes. |
| 64 | Rate Harmonization Plans, if applicable - including impact analysis | N/A | Remotes is not proposing any rate harmonization. |

|---|---|---|---|
| **EXHIBIT 9 - DEFERRAL AND VARIANCE ACCOUNTS** | | | |
| **64** | List of all outstanding DVA and sub-accounts; provide description of DVAs that were used differently than as described in the APH | **Yes** | Exhibit H1, Tab 1, Schedule 1 |
| **64** | Completed DVA continuity schedule for period following last disposition to present - live Excel format | **Yes** | Exhibit H2, Tab 1, Schedule 1, attachments 1 to 4 |
| **64** | Confirm use of interest rates established by the OEB by month or by quarter for each year | **N/A** | Remotes does not apply interest |
| **64** | Explanation if account balances in continuity schedule differs from trial balance in RRR and AFS | **N/A** | Account balances reflect the trial balance |
| **64** | Identification of Group 2 accounts that will continue/discontinue going forward, with explanation | **N/A** | Remotes does not have Group 2 accounts |
| **64** | Statement as to any new accounts, and justification. | **N/A** | Remotes is not requesting new accounts |
| **65** | Statement whether any adjustments made to DVA balances previously approved by OEB on final basis; explanation, amount of adjustment and supporting documents | **N/A** | There were no adjustments made to account balances previously approved by the Board |
| **65** | Breakdown of energy sales and cost of power by USoA - as reported in AFS mapped and reconciled to USoA. Provide explanation if making a profit or loss on commodity. | **N/A** | Exhibit A, Tab 8, Schedule 5. Remotes operates as a break even business. |
| **65** | Statement confirming that IESO GA charge is pro-rated into RPP and non-RPP; provide explanation if not pro-rated. | **N/A** | Remotes does not pay Global Adjustment as Remotes is not connected to the grid. |
| *One-Time Incremental IFRS Costs* | | | |
| **65 & 66** | Request for disposition of Account 1508 sub-account IFRS Transition Costs if balances are still in account and not previously requested for disposition:<br>- completed Appendix 2-YA<br>-statement whether any one time IFRS transition costs are embedded in 2018 revenue requirement, where and why it is embedded, and the quantum<br>- if Account 1508 sub-accounts have been approved for disposition in a prior year, a statement indicating whether prior disposition included forecasted costs<br>-explanation for material variances in Account 1508 sub-account IFRS Transition Costs Variance<br>- explanation on why costs incurred after adoption of IFRS, if any, and the nature of the costs<br>- statement that no capital costs, ongoing IFRS compliance costs are recorded in 1508 sub-account; provide explanation if this is not the case | **N/A** | Consistent with the Board's Decision in EB-2011-0427, Remotes uses US GAAP as its accounting standard |
| *Account 1575, IFRS-CGAAP Transitional PP&E Amounts* | | | |
| **66 & 67** | 1575 IFRS-CGAAP PP&E account<br>- Account 1575 and 1576 can't be used interchangeably<br>- breakdown of balance, including explanation for each accounting change; Appendix 2-EA<br>- listing and quantification of drivers<br>- volumetric rate rider to clear 1575; separate rider must be on a fixed basis for the residential class;<br>- rate of return component is to be applied to 1575 but not recorded in 1575<br>- statement confirming no carrying charges applied to 1575<br>- explanation for the basis of the proposed disposition period to clear Account 1575 rate rider<br>- show the balance in DVA continuity schedule | **N/A** | Consistent with the Board's Decision in EB-2011-0427, Remotes uses US GAAP as its accounting standard |
| *Account 1576, Accounting Changes under CGAAP* | | | |
| **67 & 68** | Changes to depreciation and capitalization in 2012 or 2013 - Account 1576 IFRS-CGAAP PP&E<br>- Appendix 2-BA must not be adjusted for 1576<br>- breakdown of balance related to 1576, Appendix 2-EB or 2-EC<br>drivers of change in closing net PP&E identified and quantified<br>- volumetric rate rider to clear 1576; the rider for the residential class must be on a fixed basis<br>- rate of return component is to be applied to 1576 but not recorded in 1576<br>- statement confirming no carrying charges applied to 1576<br>- explanation for the basis of the proposed disposition period to clear Account 1576 rate rider<br>- show the balance in DVA continuity schedule | **N/A** | Consistent with the Board's Decision in EB-2011-0427, Remotes uses US GAAP as its accounting standard |
| *Retail Service Charges* | | | |
| **68** | Retail Service Charges - material balance in 1518 or 1548 -<br>- confirm variances are incremental costs of providing retail services; identify drivers for balances<br>- provide schedule identifying all revenues and expenses listed by USoA for 2013, actual/forecast for bridge and test year<br>- state whether Article 490 of APH has been followed; explanation if not followed | **N/A** | Remotes does not have activity in 1518 or 1548 as Remotes is exempt from the Retail Service Code. |
| **69** | Retail Service Charges - zero balance in 1518 or 1548 - state whether Article 490 of APH has been followed; explanation if not followed | **N/A** | Remotes is exempt from the Retail Service Code. |

## EB-2017-0051

**Filing Requirement Page # Reference**

**Date: August 28, 2017**

| Filing Requirement Page # Reference | | Yes/No/N/A | Evidence Reference, Notes |
|---|---|---|---|
| *Disposition of Deferral and Variance Accounts* | | | |
| 69 | Identify all accounts for which LDC is seeking disposition; identify DVA for which LDC is not proposing disposition and the reasons why | Yes | Exhibit H1, Tab 1, Schedule 1 |
| 69 | Statement whether DVA balances before forecasted interest match the last AFS; explain any variances | Yes | Exhibit H2, Tab 1, Schedule 1 |
| 69 | Provide an explanation of variance > 5% between amounts proposed for disposition and amounts reported in RRR for each account. | Yes | Exhibit H2, Tab 1 and supporting schedules |
| 69 | Provide explanations if variances are < 5% threshold if the variances in question relate to: (1) matters of principle (i.e. conformance with the APH or prior OEB decisions, and prior period adjustments); and/or, (2) the cumulative effect of immaterial differences over several accounts total to a material difference between what is proposed for disposition in total before forecasted interest and what is recorded in the RRR filings | Yes | Exhibit H2, Tab 1 and supporting schedules |
| 69 | For any utility specific accounts requested for disposition, supporting evidence showing how balance is derived and relevant accounting order | Yes | Exhibit H2, Tab 1 and supporting schedules |
| 69 | Disposition of residual balances for vintage Account 1595 are only done once - distributors expected to seek disposition of the balance a year after a rate rider's sunset date has expired. No further dispositions of these accounts are generally expected unless justified by the distributor | N/A | Remotes has no activity in 1595 |
| 69 & 70 | Proposed mechanisms for disposition with all relevant calculations: allocation of each account (including rationale), billing determinants for recovery purposes in accordance with Rate Design Policy | Yes | Exhibit H2, Tab 1 and supporting schedules |
| 70 | Rate riders where volumetric rider is $0.0000 for one or more classes not included in the tariff for those classes | N/A | Remotes rates currently have no riders |
| 70 | Propose rate riders for recovery or refund of balances that are proposed for disposition. The default disposition period is one year; if the applicant is proposing an alternative recovery period must provide explanation. | N/A | Exhibit H1, Tab 1, Schedule 1 |
| 70 | Establish separate rate riders to recover balances in the RSVA's from Market Participants who must not be allocated the RSVA balances related to charges for which the MP's settle directly with the IESO. | N/A | Remotes is not connected to the grid. |
| 70 | Proposed disposition of Account 1580 sub-account CBR Class B in accordance with the CBR Accounting Guidance.<br>- embedded distributors who are not charged CBR (therefore no balance in sub-account CBR Class B) must indicate this is the case for them<br>- In the DVA continuity schedule, applicants must indicate whether they serve any Class A customers during the period where Account 1580 CBR Class B sub-account balance accumulated.<br>- Account 1580 sub-account CBR Class A is not to be disposed through rates proceedings but rather follow the OEB's accounting guidance.<br>- The DVA continuity schedule will allocation the portion of Account 1580 sub-account CBR Class B allocated to customers who transitioned between Class A and Class B based on consumption levels | N/A | Remotes is not connected to the grid. |
| *Global Adjustment* | | | |
| 71 | Establishment of a separate rate rider included in the delivery component of the bill that would apply prospectively to Non-RPP Class B customers when clearing balances from the GA Variance Account | N/A | Remotes customers do not pay Global Adjustment |
| 71 | RPP Settlement True-Up - distributors to follow guidance in May 23, 2017 letter pertaining to the period that is being requested for disposition for Accounts 1588 and 1589 | N/A | Remotes customers do not pay Global Adjustment |
| 71 | GA Analysis Work form in live Excel format- complete GA Analysis Work form; explain discrepancies | N/A | Remotes customers do not pay Global Adjustment |
| 72 | Description of settlement process with IESO or host distributor, specify GA rate used for each rate class, itemize process for providing estimates and describe true-up process, details of method for estimating RPP and non-RPP consumption, treatment of embedded generation/distribution.<br><br>If distributor uses the actual GA rate to bill non-RPP Class B customers, a proposal must be made to exclude these customer classes from the allocations of the balance of Account 1589 and the calculation of the resulting rate riders | N/A | Remotes customers do not pay Global Adjustment |
| 72 | Certification by the CEO, CFO or equivalent that distributor has robust processes and internal controls in place for the preparation, review, verification and oversight of account balances being proposed for disposition | Yes | Exhibit H1, Tab 1, Schedule 1, Attachment 1 |
| *Establishment of New Deferral and Variance Accounts* | | | |
| 72 & 73 | New DVA - information provided which addresses that the requested DVA meets the following criteria: causation, materiality, prudence; include draft accounting order. | N/A | Remotes is not requesting a new DVA |
| | **TOTAL "NO"** | **0** | |

# EXECUTIVE SUMMARY OF APPLICATION

## 1.0 INTRODUCTION

Hydro One Remote Communities Inc. ("Remotes") is an integrated generation and distribution company licensed to generate and distribute electricity within twenty-one isolated communities in northern Ontario. Consistent with the Board's Decision in RP-1998-0001, Remotes is 100% debt-financed and is operated as a break-even company with no return on equity. This Exhibit and attached Schedules offer an overview of Remotes' business, its corporate vision, values and objectives, and the approvals it is seeking through this Application.

## 2.0 APPLICATION

Remotes is making this application in accordance with the requirements of the Ontario Energy Board *Filing Requirements for Transmission and Distribution Applications* issued November 14, 2006, and updated on July 20, 2017. The proposed revenue requirement and rates included in this Application have been prepared on the basis of a forward-looking 2018 test year.

Consistent with the Board's Decision in EB-2011-0427, Remotes uses US GAAP as its accounting standard.

## 3.0 REVENUE REQUIREMENT

Remotes is seeking approval of a revenue requirement of $56,689K: comprised of $17,612K from its customers (1.80% rate increase over 2017 rates), $999K from Other Revenues, and $38,078K from the Rural and Remote Rate Protection ("RRRP") fund for the 2018 test year. Other Revenues consist of external work, late payment and miscellaneous revenue. Higher revenues from external work in 2018 are expected to include assessments of Independent Power Authority distribution systems in Pikangikum and Wawakapewin and higher miscellaneous generation revenues reflect the anticipated large number of investments from Indigenous and Northern Affairs Canada ("INAC"). Calculation of the revenue requirement appears in the evidence at Exhibit F2, Tab 1, Schedule 1. Table 1 shows the breakdown of the revenue requirement and the change from the request made in proceeding EB-2012-0137 that used 2013 as the forward test year.

**Table 1**
**Breakdown of Revenue Requirement (in $K)**

| | Approved in EB-2012-0137 | In this Application | $ Change | % Change |
|---|---|---|---|---|
| Revenue Requirement | $52,284 | $56,689 | $4,405 | 8.4% |
| Recovered through rates | $17,260 | $17,612 | $352 | 2.0% |
| Recovered by other revenues | $514 | $999 | $485 | 99.4% |
| Recovered by RRRP | $34,510 | $38,078 | $3,568 | 10.3% |

## 4.0 OPERATIONS, MAINTENANCE AND ADMINISTRATION

Remotes' Operations, Maintenance and Administration ("OM&A") expenditures have been determined on the basis of an examination of required work programs to ensure that appropriate and cost-effective solutions are implemented. A description of Remotes' planning process is provided at Exhibit A, Tab 7, Schedule 3. The proposed OM&A expenditures are $50,143K and include $27,600K for diesel fuel required to generate electricity.

These expenditures are itemized at Exhibit D2, Tab 1, Schedule 1 and discussed in written direct evidence at Exhibit D1, Tab 1, Schedule 1 with an assumed inflation of 1.9%. The total compensation below includes all Regular staff.

**Table 2**

**Breakdown of OM&A Expenditures (in $K)**

| | Approved in EB-2012-0137 | In this Application | $ Change | % Change |
|---|---|---|---|---|
| OM&A | $43,483 | $50,143 | $6,660 | 15.3% |
| Fuel Costs | $24,067 | $27,600 | $3,533 | 14.7% |
| Total Compensation | $6,609 | $7,892 | $1,283 | 19.4% |

## 5.0 RATE BASE

Remotes' proposed Rate Base of $44,445K is discussed at Exhibit C1, Tab 1, Schedule 1.

Remotes has calculated working capital based on the formula-based methodology described in the Board's Filing Guidelines for Transmitters and Distributors issued July 14, 2017. The calculation of 2018 working capital, filed at Exhibit C2, Tab 5, Schedule 1, incorporates generation-related OM&A accounts as Remotes provides integrated generation and distribution services.

Depreciation expense for Remotes' submission for the 2018 revenue requirement is based on the methodology in an independent study conducted by Foster Associates in 2012 and approved in EB-2012-0137. Depreciation expense of $3,576K has been determined based on this study. These costs are described in written evidence at Exhibit D1, Tab 6, Schedule 1 and shown in detail in Exhibit D2, Tab 7, Schedules 1 and 2.

Remotes recognizes a liability for estimated future expenditures associated with the assessment and remediation of contaminated lands, based on the net present value of these estimated future expenditures. Consistent with the Board Decision in EB-2012-0137, this regulatory asset is amortized consistent with the actual expenditures incurred each year. Remotes forecasts assessment and remediation costs of $1,032K in the 2018 Test Year. Land Assessment and Remediation is discussed in Exhibit D1, Tab 6, Schedule 1.

Major drivers of the capital expenditures in the Distribution System Plan ("DSP") include customer service requests, asset failure, assets at the end of their service life due to failure risk, system capacity, system reliability and operational efficiency and non-system physical plant, which are discussed at Exhibit B1, Tab 1, Schedule 1, Section 1.3. Remotes is proposing capital expenditures, net of contributed capital of $3,236K in the test year.

**Table 3**

**Rate Base and Net Capital Expenditures (in $K)**

| | **Approved in EB-2012-0137** | **In this Application** | **$ Change** | **% Change** |
|---|---|---|---|---|
| Rate Base | $41,090 | $44,445 | $3,355 | 7.5% |
| Capital Expenditures (Net) | $6,135 | $3,236 | ($2,899) | (47.3%) |

## 6.0 COST OF CAPITAL

Remotes is 100% debt-financed, consisting of 4% deemed short-term debt and 96% long-term debt. Remotes' evidence in support of its cost of capital appears at Exhibit E1, Tab 1, Schedule 1.

## 7.0 RURAL AND REMOTE RATE PROTECTION VARIANCE ACCOUNT

In accordance with standard regulatory practice, Remotes has incurred prior costs for which it is requesting approval in this submission. The December 2016 audited Rural and Remote Rate Protection ("RRRP") variance balance is $1,644K and is primarily related to increased diesel fuel costs and required maintenance. Remotes is proposing to recover $962K in the 2018 test year, which is the audited 2016 RRRP variance balance of $1,644K, offset by a 2017 income tax adjustment of $682K as described in Exhibit D1, Tab 7, Schedule 1, resulting in a total RRRP amount of $39,040K. Remotes' evidence regarding these account balances and proposed disposition appears at Exhibit H1, Tab 1, Schedule 1.

## 8.0 CUSTOMER RATE IMPACTS

Remotes is seeking approval for a 1.8% increase in customer rates for all its customer rate classes at all levels of consumption. Details on the proposed rate increase can be found in Exhibit G1, Tab 2, Schedule 1. Calculation of the rate revenue requirement appears in the evidence at Exhibit G2, Tab 3, Schedule 2.

**Table 4**

**Load Forecast Summary**

| | Approved in EB-2012-0137 | In this Application | Change | % Change |
|---|---|---|---|---|
| Load (MWhs) | 56,431 | 62,565 | 6,134 | 10.9% |
| Customer Numbers | 3,529 | 3,652 | 123 | 3.5% |

As discussed in Exhibit A, Tab 2, Schedule 1 and in the Summary of Remotes' Business attached as Schedule 2 to this exhibit, Remotes' customers do not pay rates based on cost. Rates are set based on rules prescribed by O. Reg 442/01. Remotes has not performed a cost allocation study and has not provided evidence related to cost allocation in this application.

## 9.0 BUSINESS CONTEXT

Most of Remotes' work is on reserve and the capital required to meet community load growth is funded by the federal government. Consequently, work is planned and executed in close collaboration with the First Nation communities, their Tribal Councils and Indigenous and Northern Affairs Canada ("INAC"). Further information on Remotes' service territory and these funding agreements can be found in Schedule 2 of this Exhibit.

The communities' isolation means that when the generating plant reaches its capacity, no new electrical load can be connected to the distribution system. Curtailing the connection of new houses and other community buildings can result in lower levels of customer satisfaction and a deterioration in service reliability and, if frustrated community members construct and connect unauthorized services to the distribution systems, can pose a serious risk to public safety. At the time of Remotes' last cost of service application in 2012 and during the intervening years, eight communities were in connection restrictions. Over the past five years, Remotes has worked with INAC and First Nation communities to address the need for community growth. Only one community is currently facing restrictions and a project is planned, starting in 2018, to remove the connection restriction in that community. The complexity of Remotes' funding arrangements and federal funding constraints requires planning flexibility as both the timing for funding approvals and amounts of funding available are uncertain. Further discussion of these funding agreements, the capital contributions expected from funded INAC during the Test Year and the subsequent years are discussed in the DSP filed at Exhibit B1, Tab 1, Schedule 1, Section 4.0. Investment summaries (business cases) associated with material capital projects are shown in Appendix A to that Exhibit.

Under the funding agreements Remotes is responsible for capital replacements and improvements that are not associated with load growth. As discussed above, Remotes is proposing capital expenditures, net of contributed capital of $3,236K in the test year. Evidence related to these expenditures is included in the DSP in Exhibit B1.

## 10.0 CUSTOMER ENGAGEMENT

Remotes' vision is to be a trusted partner to the communities it serves and has consequently established positive working relationships with its communities and customers. Projects, work in the community and electricity service are ongoing aspects of regular discussions with communities. Remotes believes that its proposed investments and the proposed rate increase respond to its customers' needs and preferences. Details on Remotes' engagement with customers and customer feedback from its most recent biennial survey can be found in Exhibit A, Tab 4, and in the supporting Schedules to that Exhibit. Further information on customer engagement and on coordinated planning with Third Parties can be found in the DSP, Sections 2 and 4.

## 11.0 PERFORMANCE MANAGEMENT

Information on Remotes' internal performance management can be found at Exhibit A, Tab 5, Schedule 1. Information on its historic service quality and reliability can be found at Exhibit A, Tab 5, Schedules 1 and 2, and also in Section 2.3 of the DSP, in Exhibit B1.

Over the past five years, Remotes has continued to implement several strategies to improve productivity, including a continued focus on coordination of work and flights to transport staff and equipment; more competitive fuel supply contracts; planning and purchasing processes to maximize winter road usage; improved project management; improved customer collections; and customer-focused renewable initiatives. As fuel continues to be Remotes' single highest cost, fuel management remains a key concern. As part of this application, Remotes is investing in maintaining fuel efficiency and in the building blocks needed to modernize an off-grid electricity system. Further information on Remotes' productivity initiatives can be found in Sections 2.1.2 and 2.3 of the DSP (Exhibit B1), in Exhibit A, Schedule 5 and Exhibit D1, Tab 1.

## 12.0 REMOTES BUSINESS PLAN

The Board of Directors of Remotes and Hydro One Inc. have approved the 2017 business plan on which this Application is based. An executive summary of the business plan is included as Exhibit A, Tab 3, Schedule 2, Attachment 1. The planning process and economic assumptions underlying the business plan are included at Exhibit A, Tab 7, Schedule 3. Remotes' governance and control framework and project approval and control framework are described in Exhibit A, Tab 7, Schedules 2 and 4.

## 13.0 SPECIFIC APPROVALS REQUESTED

This application seeks approval for a service revenue requirement of $56,689K for Remotes based on a 2018 test year. Calculation of the service revenue requirement can be found in Exhibit F2, Tab 1, Schedule 1.

Remotes is seeking approval for a 1.8% increase in customer rates for all its customer rate classes at all levels of consumption. Details on the proposed rate increase can be found in Exhibit G1, Tab 2, Schedule 1. Calculation of the rates revenue requirement appears in the evidence at Exhibit G2, Tab 1, Schedule 1.

Remotes is seeking approval for specific service charges as outlined in the proposed Rate Tariffs in Schedule G2, Tab 3, Schedule 2.

Remotes is seeking annual Rural and Remote Rate Protection of $38,078K. Calculation of this amount can be found in Exhibit G1, Tab 4, Schedule 1.

Remotes is seeking approval to recover $962K to recover the 2016 audited balance in the Rural and Remote Rate Protection Variance Account. This amount Remotes proposes to recover is comprised of the 2016 audited balance of $1,644K, less a 2017 adjustment for income tax of $682K explained in Exhibit D1, Tab 7, Schedule 1.

Remotes is also seeking approval to continue the Rural and Remote Rate Protection Variance Account to record differences between its costs and revenues. This is further discussed in Exhibit H1, Tab 1, Schedule 1.

These approvals requested can also be found in Exhibit A, Tab 3, Schedule 1, Attachment 1.

# Appendix 2-A
# List of Requested Approvals

The distributor must fill out the following sheet with the complete list of specific approvals requested and relevant section(s) of the legislation must be provided. All approvals, including accounting orders (deferral and variance accounts) new rate classes, revised specific service charges or retail service charges which the applicant is seeking, must be separately identified, as well being clearly documented in the appropriate sections of the application.

Additional requests may be added by copying and pasting blank input rows, as needed.

If additional requests arise, or requested approvals are removed, during the processing of the application, the distributor should update this list.

**is seeking the following approvals in this application:**

| | | |
|---|---|---|
| 1 | | This application seeks approval for a service revenue requirement of $56,689K for Remotes based on a 2018 forward test year. Calculation of the service revenue requirement can be found in Exhibit F2, Tab 1, Schedule 1. This request is made in accordance with section 78 of the Ontario Energy Board Act, 1998. |
| 2 | | Remotes is seeking approval for a 1.8% increase in customer rates for all its customer rate classes at all levels of consumption. Details on the proposed rate increase can be found in Exhibit G1, Tab 2, Schedule 1. This request is made in accordance with section 78 of the Ontario Energy Board Act, 1998.Calculation of the rates revenue requirement appears in the evidence at Exhibit G2, Tab 1, Schedule 1. |
| 3 | | Remotes is seeking approval for specific service charges as outlined in the proposed Rate Tariffs in Schedule G2, Tab 3, Schedule 2. This request is made in accordance with section 78 of the Ontario Energy Board Act, 1998. |
| 4 | | Remotes is seeking annual Rural and Remote Rate Protection of $38,078K. Calculation of this amount can be found in Exhibit G1, Tab 4, Schedule 1. This request is made in accordance with section 78 of the Ontario Energy Board Act, 1998. |
| 5 | | Remotes is seeking approval to recover $962 K to recover the 2016 audited balance in the Rural and Remote Rate Protection Variance Account. This amount Remotes proposes to recover is comprised of the 2016 audited balance of $1,644 K, less a 2017 adjustment for income tax of $682 K explained in Exhibit D1, Tab 7, Schedule 1. This request is made in accordance with section 78 of the Ontario Energy Board Act, 1998. |
| 6 | | Remotes is also seeking approval to continue the Rural and Remote Rate Protection Variance Account to record differences between its costs and revenues. This is further discussed in Exhibit H1, Tab 1, Schedule 1. This request is made in accordance with section 78 of the Ontario Energy Board Act, 1998. |

# SUMMARY OF REMOTES BUSINESS

## 1.0 INTRODUCTION

Remotes is an integrated generation and distribution company licensed to generate and distribute electricity within 21 isolated communities in northern Ontario (EG-2003-0138 and ED-2003-0037). A list of the communities served and a map of Remotes' distribution service territory can be found in Exhibit B1, Tab 1, Schedule 1, section 1.4.1. Remotes is 100% debt-financed and operates as a break-even business.

Remotes is driven by its corporate vision, mission and business values. Together, they provide the basis to deliver on targeted performance objectives.

### 1.1 Corporate Vision

"We will be a leading remote community generation and distribution utility measured on performance in safety, environment and customer loyalty".

### 1.2 Corporate Mission

"We are a remote community electrical generation and distribution company focused on customer satisfaction and on using management systems to achieve operational excellence."

### 1.3 Corporate Values

We value:

- Safe work environment
- Customers and community relationships
- Environmental sustainability
- Consistent, fair, treatment of customers and staff
- Financial responsibility and accountability
- Business integrity
- Employee engagement
- Innovation and continuous improvement

## 2.0 REMOTES' BUSINESS ENVIRONMENT

Remotes functions in a unique environment. Extremely low customer densities, a harsh climate, logistical challenges related to transportation, along with the absence of an integrated transmission system and complex funding arrangements with third parties, set Remotes apart from other Ontario electricity distributors. This unique operating environment has a profound impact on operations and costs throughout Remotes' service area.

The communities served by Remotes are isolated and are scattered across the far north of the Province. Thirteen communities are not accessible by year-round road and can be accessed only by aircraft, winter road or, in the case of one community, also by barge. The size and isolation of Remotes' service territory also means that the transportation and accommodation of staff, fuel, and equipment is a key driver of Remotes' costs. The use and viability of winter roads to reach these communities is a major cost variable within

Remotes' operations. If a winter road cannot be built in a given year, fuel costs, equipment costs and overall maintenance costs increase.

Industry, government and First Nations are currently examining the potential for the development in the remote north, including the development of a transmission grid. In 2010, the Ontario Government amended the *Electricity Act, 1998* (the "Electricity Act") to require Remotes to serve grid-connected communities in accordance with government regulation. The decision to permit Remotes to serve these customers was made to give geographically remote communities that are currently connected to the grid and those considering connecting to the grid the option of being served by an established electricity distribution company and in anticipation that these customers will qualify for rate protection if served by Remotes. Remotes has been working with the IESO, Wataynikaneyap Power ("Watay") and with Opiikapawin Services LP ("OSLP"), a limited partnership company to discuss grid connections, talk to communities served by Independent Power Authorities about service from a licenced distributor, and to help communities prepare for grid service. No new communities are expected to join Remotes' service territory before the end of 2018.

Remotes inherited Ontario Hydro's obligations to provide electricity to off-grid communities, which were originally negotiated with the federal and provincial governments. Under these arrangements, the federal and provincial governments funded the original capital installation of facilities. In First Nation communities, the arrangements with the federal government, through Indigenous and Northern Affairs Canada ("INAC"), remain in place. These Agreements specify that Remotes is responsible for funding ongoing operation and maintenance of the system and that INAC is responsible for funding capital related to system expansions and capital upgrades.

During the 1990s, INAC devolved its responsibility for community infrastructure to First Nation communities. INAC now transfers funding directly to First Nations, who are responsible for administering approximately 85 percent of the Department's program funds. As a result of these funding arrangements, the process for capital upgrades is complex and not completely within Remotes' control.

In 2011 INAC informed Remotes that no funding for generation upgrades was included in its 2012-2016 capital plan due to funding constraints. Because the isolation of the communities puts a hard cap on the services, the lack of funding led to community connection restrictions in eight communities. Following extensive engagements with INAC and local First Nations, INAC agreed to fund partial upgrades. Through this revised process, INAC pays Remotes to install a larger generator and to replace the engine auxiliary equipment as required. Several successful projects have been completed through this process. At this time, only two communities remain in connection restrictions. A project is currently underway in Kingfisher Lake to increase generation capacity and a project is planned to build a distribution line to connect Big Trout Lake and Wapekeka that will increase available capacity to Big Trout Lake. INAC funding for capital upgrades is discussed in more detail in the Distribution System Plan (Exhibit B).

## 3.0 DISTRIBUTION

Remotes operates nineteen isolated distribution systems to serve the twenty-one communities. Within each system, Remotes is responsible for transformation, voltage regulation, delivery and metering of power. Because the communities are far from each other, the distribution systems are isolated, distinct and stand-alone. These distribution systems operate at distribution voltages ranging from 4.16 kV to 27.6 kV.

The fixed distribution assets in service include approximately 242 kilometers of line and transformers distributed throughout the system, which are used for voltage transformation. Billing meters are used to measure energy consumption at customer supply points.

## 4.0 GENERATION

Due to the lack of grid connection, Remotes is a generator of electricity to meet its obligations under section 29 of the Electricity Act. Diesel generation is currently the prime source of electricity within the communities. Remotes also owns and operates two run-of-the-river mini-hydroelectric generating facilities and has four demonstration project windmills. The feasibility of using further renewable technologies is continually examined as new technologies evolve, but diesel is currently the most reliable and cost-effective technology.

There are presently 57 diesel generators in service, ranging in size from 60kW to 1500kW. Most stations have three generators, sized to meet community load at different times of the day. Automated operation ensures that the generation units are run to maximize fuel efficiency by matching the generator size to the community load. Depending on electrical demand, Remotes handles over 17 million litres of diesel fuel each year.

## 5.0 ENVIRONMENTAL MANAGEMENT SYSTEM

Remotes developed an Environmental Management System (“EMS”) in 1999 to help address a history of spills and to improve environmental performance. In the course of developing and implementing the EMS, Remotes has transformed itself into an environmental leader, recognized provincially and nationally for its environmental record. In 2001, Remotes was awarded the Canadian Council of Ministers of the Environment National Pollution Prevention award for small business in Canada. In 2002, Remotes achieved ISO 14001 registration of its EMS. In 2017, Remotes registered its system to the new ISO 14001-2015 standard, one of the first companies in Canada to achieve this milestone.

Remotes has achieved operating efficiency improvements through installation of automated Programmable Logic Controller ("PLC") controls, Supervisory Control and Data Acquisition ("SCADA") systems, upgraded engines and redesigned generating and fuel-handling software to support its PLC programs, all of which have resulted in improved efficiency, reduced use of diesel fuel and lower atmospheric emissions.

In 2003, Remotes developed and adopted an Emission Reduction Strategy and submitted an application and Action Plan for Reducing Greenhouse Gases to the Environment Canada Voluntary Challenge Registry (now known as "Clean Start"). Remotes continues to report, monitor and reduce its emissions.

## 6.0 GOVERNMENT REGULATION AND REMOTE COMMUNITY RATES

Remotes serves approximately 3,600 customers. Most customers within Remotes pay rates below the cost of service. Historically, rates for these Residential and General Service customers have been financially supported through a cross-subsidy from government customers within Remotes who historically have paid rates above cost (Standard A Rates), also through INAC capital contributions and Rural or Remote Rate Protection (RRRP). RRRP funding is currently set at $32,259K per year. This amount is funded through a $0.0003 per kWh charge to all grid-connected customers in Ontario that is set by the Ontario Energy Board to fund rate protection in rural and remote areas of the province.

# Executive Summary of Hydro One Remote Communities Inc. ("Remotes") Business Plan 2017 to 2022

| Remotes (USGAAP) $M | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 |
|---|---|---|---|---|---|---|
| RRRP | $ 37 | $ 38 | $ 39 | $ 43 | $ 45 | $ 44 |
| OM&A | $ 48 | $ 50 | $ 52 | $ 57 | $ 59 | $ 60 |
| Capital Exp | $ 4 | $ 3 | $ 5 | $ 5 | $ 5 | $ 4 |

Hydro One Remotes generates and distributes electricity to customers in 21 off grid communities. It is 100% debt financed and is operated as a break-even company, with a net income of zero in all years over the budget period, with adjustments to the system wide RRRP to recover variances in net income each year.

Due to government regulation, customer rates are not set to cost. Most customers pay rates far below the cost of service. Customer rates are expected to increase by inflation each year through IRM applications, and by 4% through a COS application in 2018.

## Corporate Vision

"We will be the leading electrical utility and a trusted partner to remote communities in Ontario's north."

## Corporate Mission

"We supply safe, reliable and affordable electricity to remote communities by focusing on continuous improvement, operational excellence and outstanding customer service."

## Business Context

Fifteen of the communities we serve are First Nation communities, isolated and scattered across Ontario's far north. The communities are economically disadvantaged. Most work is on reserve and the capital required to meet community load growth is funded by the federal government. Consequently, work is planned and executed in close collaboration with the First Nations communities, their Tribal Councils, and Indigenous and Northern Affairs Canada (INAC). We involve First Nations in our business as employees, contractors, local operators[1] and meter readers. Most of our suppliers are First Nation enterprises or have a First Nation component to

[1] Operators: Employees of the First Nation Band Council who perform minor maintenance in Remotes' generating stations.

their business. We listen to our customers through community meetings, consultations with Chiefs and Band Councils and our Customer Advisory Board.

The communities we serve are named in provincial legislation. The provincial government has received requests from Cat Lake, Pikangikum and Wunnumin to join Remotes' service territory. Revenues and costs to service these communities are built in to the business plan in 2018, 2019 and 2020 respectively.

## Major Initiatives

The isolation of our communities means that when generation limits reach capacity, no new electrical services can connect to the distribution system. Federal funding constraints led to connection restrictions in eight communities. To overcome this problem, we developed a collaborative process with the federal government and local First Nations to fund incremental upgrade projects, that reduce federal costs allowing for federal investment in a greater number of projects, defer the need for Remotes investments in capital and maintenance, and allow communities to grow. Two major upgrade projects are planned over the period, a fully recoverable project in Kingfisher Lake and a multi-year tie line between the communities of Wapekeka and Big Trout Lake. Once these projects are complete all eight constrained communities will be able to grow. We plan to monitor and measure the net benefit of the 2017 Kingfisher Lake project to ensure that the project is on time, on budget, and that the maximum benefit to the community of Kingfisher Lake and to ratepayers is realized.

We are engaging in a multi-year project to replace our SCADA/PLC systems over the plan period. The investments in SCADA/PLC and in telecommunications will improve our ability to diagnose system issues, improve reliability and, potentially, reduce costs by avoiding flights and field visits.

We handle over 17 million litres of fuel each year. Remotes' Environmental Management System (EMS) has been registered to the ISO standard since 2002 and has driven a culture of continuous improvement throughout the business. We integrated our safety management into our EMS in 2006 and have reduced safety risks and improved our overall safety performance as a result. In 2017, we plan to register our EMS to the new ISO standard. We monitor, measure and report our environmental performance, especially with regard to spills. We also monitor, measure and report our employee and public safety performance.

We are collaborating with Ontario Power Generation and the Gull Bay First Nation to develop a solar/battery micro grid in Gull Bay. The project is expected to be in-service in 2018 and to reduce our greenhouse gas emissions, in response to government policy.

## Efficiency and Productivity Measures

Fuel is our largest single cost. We expect to save $1.2 million annually ($7.2 million over the plan period) in fuel costs by focusing on winter road transportation and fuel purchase/storage agreements with local First Nations.

## Customer Measures

Because most of our customers are First Nations, strong relationships are key to our success. We measure and report the number of meetings the Managing Director has with Band and Tribal Councils.

We hire an independent research company to perform a biennial telephone survey of customer satisfaction. Our target for 2017 is to retain a satisfaction level of 90%.

# RENEWABLE ENERGY REINDEER PROGRAM

## 1.0 INTRODUCTION

Customers in Remotes' service territory are committed to environmental protection and are interested in developing renewable energy resources to replace diesel generation in their communities. Remotes developed a small renewable energy program called the REINDEER (**R**enewable **E**nergy **IN**novation **D**i**E**sel **E**mission **R**eduction) Program that allows customers to generate electricity and sell it to Remotes based on the avoided price of diesel fuel.

## 2.0 REINDEER PROGRAM

In OEB proceeding EB-2008-0232, the Board accepted Remotes' proposal to establish a program to purchase electricity from renewable energy based on the avoided cost of diesel fuel. Due to the high cost of construction in the north and a lack of experience developing renewable resources, few First Nations were initially able to take advantage of the program. In 2011, the federal government began offering First Nations and their private sector partners, ECO-Energy grants to install photo voltaic panels. The provincial government established policies to encourage Indigenous involvement in the electricity sector, building knowledge and experience. The IESO and the federal government also began funding community energy plans that allowed communities to develop energy plans within their own communities, including assessing options for alternative sources of energy. The IESO also assisted the three First Nation communities that are not included in the Remote Community Connection Plan to assess renewable technologies that will help the communities reduce diesel usage.

In response to growing interest from communities in developing renewable generation, Remotes developed a Standard Guideline for the program. The integration of renewable energy into isolated distribution systems must be carefully managed to ensure that the electricity is controlled and power quality maintained for end-use customers. To limit the time and cost required for engineering review of each project, the guideline establishes sizes based on the smallest diesel generator in each community. This approach ensures that electricity can be controlled by the diesel generation ensuring end-use power quality and also limits the cost to review each application. Larger projects require addition engineering design to ensure safe, reliable electricity in the communities.

First Nations and their partners expressed concerns about the volatility of diesel fuel costs and the need to have some price stability to get private sector loans. In response to these concerns, Remotes decided to calculate and offer the community specific avoided cost of diesel fuel based on a three year rolling average. This approach is administratively simple and is based on audited values for fuel, reflects the actual cost in each community and reduces price volatility for developers.

As a result of these efforts and government funding to support projects in the north, communities have now started to take advantage of the program. Eleven small net metering projects (10kW-110kW) are currently in place and four 10 kW solar power purchase agreements are also in place.

Medium to high penetration projects are planned in the three First Nation communities that the IESO does not expect to connect to the grid, Fort Severn, Gull Bay and Whitesand (Armstrong). Gull Bay First Nation (Kiashke Zaaging Anishinaabek) is working with Ontario Power Generation and other collaborators on a Photo Voltaic solar installation with battery storage and controller. The project is currently in the design stages and is supported by grants from the Ministry of Energy. Whitesand First Nation is planning an ambitious project to develop a pellet plant to make use of its forest resources, along with a large cogeneration project that will provide steam and electricity to the plant and electricity to the communities of Whitesand, Collins and Armstrong. The project has benefitted from federal funding for studies and project initiation. The proposed project is 4 MW and too large for Remotes' REINDEER program. The Minister of Energy directed the IESO to enter into a 20 year agreement to purchase electricity from the cogeneration project to service community load. The IESO was also directed to pay for the electricity sold to the pellet plant. Remotes has provided technical assistance to the project and expects to assist the IESO and Whitesand with settlement and to purchase the electricity related to the community load from the project based on the price of diesel fuel once the project is built. Last year, the IESO and Whitesand entered into an agreement related to this direction. Given the complexity of the project, Whitesand First Nation has up to ten years to build the project and put it into service. Detailed design and construction of the project has not started. None of the larger projects are expected to be in service within the test year (2018). The REINDEER Standard Guideline and other materials describing the program in detail are shown at Exhibit A, Tab 3, Schedule 3, Attachments 1 and 2.

Remote Communities Inc.

# Hydro One Remote Communities Inc. **R**enewable **E**nergy **IN**novation **D**i**E**sel **E**mission **R**eduction (**REINDEER**) Guideline – (Effective March 23, 2017)

## 1.0 Background

Hydro One Remote Communities Inc. (Remotes) is a subsidiary of Hydro One Inc. From its service centre in Thunder Bay, Ontario, provides energy services primarily through diesel generation to approximately 3500 customers in 21 remote northern communities that are not connected to the provincial electricity grid.

The Independent Electricity System Operator (IESO) FIT or MicroFIT program does not currently extend to Remotes' service territory. Potential REINDEER providers are encouraged to review both IESO programs at www.ieso.ca as they may be better suited to participant needs.

Remotes is interested in enabling the connection of renewable energy projects to reduce the impact of diesel fuel on the environment within its service territory. The Remotes' **R**enewable **E**nergy **IN**novation **D**i**E**sel **E**mission **R**eduction (REINDEER) program was developed for projects of this nature. The REINDEER guidelines are provided below.

## 2.0 REINDEER Guidelines:

There are two (2) types of REINDEER projects: The "Standalone" type project and the "Net Metering" type project. The "Standalone" projects will get paid for production, while the "Net Metering" projects will receive a reduced monthly bill, and in some situations a credit that expires after 12 months. The standard general guidelines for a REINDEER project as well as the details of the two types of connections are outlined hereafter.

### 2.1 Standard General Guidelines:

- REINDEER provider builds, owns, operates and maintains all assets up to and including point of connection to Remotes' distribution system.
- Hydro One Remotes provides connection access to the distribution system or generation station as applicable provided that the REINDEER project meets technical and metering specifications.
- Remotes' service reliability, customer power quality and existing assets must not be negatively impacted by the connection of the generation facility.
- REINDEER projects must be sized according to the electricity needs of the community and according to the kW size of the existing generation in the community.
- Hydro One Remotes reserves the right to determine the connection point and configuration to its distribution system.
- Contract is terminated when the distribution system is connected to the transmission grid. Proponents should contact the OPA for pricing and eligibility for OPA grid connected power purchase programs.
- 10 year term, renewable thereafter in 5 year contracts.
- Consultation with First Nation communities may be required as directed by Hydro One Remotes.
- All projects must meet the technical requirements set out in Sections 6.2.25, 6.2.26 and 6.2.27 of the Distribution System Code.

**Hydro One Remote Communities Inc.**
**680 Beaverhall Place**
**Thunder Bay ON P7E 6G9**
**Toll Free: 1-888-825-8707**
**Telephone: 1-807-474-2800**
**Fax: 1-807-475-3127**

**www.HydroOne.com**

- All projects are subject to a technical review. The proponent is responsible for paying for the cost of this technical review. Generally, larger projects will require a more comprehensive engineering review.
- REINDEER project providers must enter into a connection agreement with Remotes.
- All contracts are subject to legal review and must be approved by President& C.E.O. of Hydro One Remotes.

## 2.2 Standalone Projects:

Hydro One Remotes considers a project a “Standalone” type project if the installation’s primary purpose is to provide additional generation to the community and will feed all of the power produced into Remotes’ system.

Remotes offers to pay the 3 year historical average cost of fuel per kWh produced/avoided cost of fuel specific to that community. The proposed rates as of January, 2017 (based on 2014-2016 annual data) are as follows. All amounts will be paid to the provider quarterly.

| REINDEER Standalone Rates 2017 | |
|---|---|
| **Community** | **$/kWh** |
| **ARMSTRONG** | 0.230 |
| **BEARSKIN** | 0.397 |
| **BIG TROUT (KI)** | 0.437 |
| **BISCO** | 0.346 |
| **DEER LAKE** | 0.395 |
| **FORT SEVERN** | 0.667 |
| **GULL BAY** | 0.277 |
| **HILLSPORT** | 0.364 |
| **KASABONIKA** | 0.403 |
| **KINGFISHER** | 0.376 |
| **LANDSDOWNE** | 0.342 |
| **MARTEN FALLS** | 0.476 |
| **OBA** | 0.356 |
| **SACHIGO** | 0.372 |
| **SANDY LAKE** | 0.388 |
| **SULTAN** | N/A[1] |
| **WAPEKEKA** | 0.484 |
| **WEAGAMOW** | 0.342 |
| **WEBEQUIE** | 0.406 |

[1] Standalone Projects not required in Sultan

**Toll Free: 1-888-825-8707**
**Telephone: 1-807-474-2800**
**Fax: 1-807-475-3127**

**www.HydroOne.com**

Hydro One Remotes recognizes that its operating environment is unlike any other and the above guideline may not match the unique circumstances of each situation.

As such:

- Hydro One Remotes is willing to commit labour and equipment resources, to install, operate and maintain any Standalone project, provided that the offered rate is reduced accordingly.
- Hydro One Remotes will NOT provide up-front financing or capital contribution at this time.
- Hydro One Remotes will also consider asset purchase clauses, during or at expiry of the contract term.
- Preference is given to proven technology. Remotes may consider research or innovation projects provided the contract terms are adjusted accordingly. Hydro One Remotes reserves the right to assess each project on its own merit and may consider variations of standard terms, provided regulatory and business requirements are met.
- Hydro One Remotes reserves the right to withdraw this guideline at any time.

## 2.3 Net Metering Guideline

Hydro One Remotes encourages proponents to consider working with First Nations to develop Net Metering projects as an alternative to Standalone generating projects. Net Metering enables customers to generate their own electricity to reduce the per kWh cost of electricity paid to Hydro One Remotes.

In order for a project to be considered a Net Metering project, the electricity must be generated primarily for use within the metered facility and meet the following criteria:

1) Electricity must be generated from a renewable source.
2) Projects must be sized according to the facility's load and may not exceed 50% of the current annual energy consumption.
3) Project must be sized according to the current locations electrical service capacity. Remotes will not modify the current electrical service to accommodate the renewable technology.

An engineering review of the connection is required in order to qualify for connection to Hydro One Remotes' distribution system and for the purchase of stand-by power from Hydro One Remotes.

From time to time, Net Metering projects may send excess generation into Hydro One Remotes' distribution system. Hydro One Remotes will credit the customer's bill for this excess electricity. The bill credits for electricity beyond the customer's own needs will expire after 12 months.

## 2.4 Additional Notes

Potential REINDEER providers looking for additional information are to contact Customer Service Department, Hydro One Remote Communities Inc. at 807-474-2805 or RemotesCustomerService@HydroOne.com.

# REINDEER RENEWABLE ENERGY PROGRAM
## @Hydro One Remotes

- **Must use a renewable resource**
- **Must have First Nation participation/support (if in a First Nation community)**

## TWO TYPES OF RENEWABLE PROJECTS AVAILABLE

- **Project must be sized according to the electrical needs of the community and to the kW size of existing generation in the community**

### “Net” Metering

- Production of renewable energy “nets” or offsets building energy use
- Customer/owner enjoys lower energy bills
- Currently a typical net metering installation is on a Standard ‘A’ Community-owned building (school, water treatment plant, etc.) as these buildings offer the highest rates

As of May 1, 2016, over 250 kWh:
- Air Access – 97.69 cents/kWh
- Road/Rail – 67.56 cents/kW

- Projects must be sized according to the facility’s load and may not exceed 50% of annual energy consumption

### Stand-alone

- Payments are made for kWh injected into Remotes’ system
- kWh rate is based on 3 year historical average cost of fuel per kWh (avoided cost of fuel) specific to that community
- 2016 rates range from 24.8 cents/kWh to 70.7 cents/kWh with most communities in the 40 cent range
- Customer/owner gets paid quarterly

**FOR MORE INFORMATION CONTACT REMOTES CUSTOMER SERVICE AT 1 888 825 8707 OR RemotesCustomerService@HydroOne.com**

# CUSTOMER SERVICE AND ENGAGEMENT STRATEGY

## 1.0 INTRODUCTION

The communities Remotes serves are small and isolated, scattered across roughly half of Ontario's land mass. Fifteen of the communities are First Nations reserves, and the other six are provincial communities, located mainly along the national rail lines. The smallest communities have fewer than forty customers, the largest just over five hundred. The communities' isolation limits economic opportunities for residents. Most of Remotes' customers are economically disadvantaged and are low income. Unemployment is high and, for community members in the work force, employment opportunities are mainly part-time or seasonal. The inaccessibility of the communities means that the cost of goods for residents is high. Gasoline, construction materials for homes, cars and groceries must all be transported over winter roads or by plane. Remotes' customers continue to have a close attachment to the land, and rely on the traditional spring and fall hunts for much of their food.

Remotes' vision is to be a trusted partner to these communities, taking account of local priorities, listening to customers, and treating customers with sensitivity and flexibility. Remotes operates in all of the communities it serves at their request and believes that all of its communities have a choice of service provider, a belief demonstrated by the large numbers of Independent Power Authorities operating in the north. Consequently, Remotes works hard to establish and maintain long-term relationships with Band Councils, customers and other stakeholders.

## 2.0 WORKING RELATIONSHIPS WITH BAND COUNCILS

Customers living on reserve comprise the majority of Remotes' customer base, about 87% of total customers. Remotes' Managing Director and other employees meet regularly with Band Councils and Band Administrators both in Thunder Bay and in the communities. Field staff stop by the Band Office to visit when they are on site and Band Councils are notified when crews will be in the community for planned work. Remotes' staff also talk to Band Council members and staff regularly by phone. By working closely with Band Councils and by establishing positive working relationships, Remotes hears about community needs and also helps communities understand what to expect in terms of reliability, customer, work program execution and programs for customers.

In First Nation communities, capital projects related to load growth are undertaken collaboratively with the Band Council, as the projects are funded and conducted only if requested by the First Nations. As part of planning for local and electrical infrastructure, Remotes meets with Band Councils to discuss peak load and the likely timing when an upgrade would be required, if the community is approaching restrictions. To forecast load and fuel deliveries, Remotes talks to Band Councils to understand community plans for housing and other infrastructure. Regular engagement also includes discussion on power outages including the root causes of events, discussions on fuel purchases and fuel levels at the plants, and discussions about the kind of work that is planned and required in their communities.

As permitted by Section 13.2(d) of its Distribution licence, Remotes works closely with local Band Councils when planning and undertaking collection trips. Working with the Band Council is required, as Band Councils have the legal right to bar outside parties from reserve. Working closely with the Band Council also ensures that customers have opportunities and time to access available community support and OEB programs such as the Low-Income Emergency Assistance Program (LEAP) and the Ontario Electricity Support Program (OESP), and so that the local government can advise Remotes of sensitive situations such as Elders or cases of particular hardship. Remotes believes that its collection practices respond to the needs of Band Councils and its customers.

Remotes also works with Band Councils on customer service issues. Remotes ensures that customers are set up correctly and recorded accurately in the Customer Information System by liaising with the local Band Council staff. This practice ensures that customers who are eligible for HST exemption benefit from that exemption and the First Nation Delivery Credit. It also helps to ensure that customer data is kept up-to-date if customers move.

Remotes' customers have a connection to the land and see environmental protection as a priority. Remotes understands this priority and made a commitment to reducing the impact of its operations on the environment. In 2017, Remotes registered to the new, rigorous, ISO 14001-2015 standard. Remotes invests in plant improvements to reduce the risk of spills, to reduce the severity of spills by investing in spill-alarm systems and to remediate contaminated lands. Projects to remediate lands require First Nations support and commitment. If available, equipment and materials such as gravel or biocells are rented or purchased from the First Nations. Remotes plans these projects with Band Councils and works together with them to carry them out.

## 3.0 SUPPORTING THE LOCAL ECONOMY

From discussions with customers and Band Councils, Remotes sees and hears the need for economic development in the north and tries to address this need as part of the way it conducts business. First Nations are involved in Remotes' business as employees, contractors and labourers. Most suppliers are First Nation enterprises or have a strong

First Nation component to their businesses. To take advantage of cost savings related to winter road transportation and to improve opportunities for local businesses, Remotes enters into mutually beneficial contracts to purchase fuel from five First Nations-owned fuel storage tank farms.

Given the inaccessibility of Remotes' service territory and the cost to transport staff and equipment, Remotes relies on local community members to work in its plants, respond to emergencies and read meters. Remotes' operators, in particular, are eyes and ears on the ground, offering information and advice on a wide range of community and customer issues. Operators have enormous responsibility for the safety and reliability of the electrical systems. Remotes' operations team work closely with these community members to train and support them in their day-to-day work.

As part of conservation programs established by the federal government and IESO, many communities Remotes serves undertook Community Energy Plans. Through these plans, communities identified renewable energy development opportunities. Remotes' REINDEER program (**R**enewable **E**nergy **IN**novation **D**i**E**sel **E**mission **R**eduction) was established to respond to the desire of its customers to reduce diesel use in their communities and to create opportunities for First Nations to share the economic benefits of renewable energy projects. Remotes' most recent customer survey shows that 64.7% of Remotes customers support investments in renewable energy (Exhibit A, Tab 4, Schedule 1, Attachment 3). Fifteen small customer-owned installations are now in service. Further projects are also planned and are discussed in Exhibit A3, Tab 3, Schedule 3 and in the DSP.

## 4.0 ENGAGEMENT WITH END USE CUSTOMERS

From time-to-time, Remotes holds community meetings with end-use customers. These meetings can be discussions of a project, a general information session about services or a celebration of a completed project such as a generation upgrade. Remotes also offers presentations to schools (about two a year) when staff are in the community doing other work, to teach local children about electrical safety. Remotes also participates in career fairs in the north to inform students about opportunities in the electrical field.

Remotes has a Customer Advisory Board (CAB) that usually meets twice a year. Starting in 2006, the CAB has offered advice from the perspective of ordinary residential and business customers on a wide range of business activities, including improvements to operator and meter reader training, job opportunities in the electrical field, expansions to the operator role (operator switching), conservation programs, ways to increase renewable energy use, reliability improvements, the need for celebrations of new generation projects/opportunities for community members to see inside generating stations, and the real life impact of customer connection constraints. The CAB has had a positive impact on Remotes' business, in particular, on training programs for local operators and meter readings, on the decision to train and qualify operators to perform switching, and on the integration of renewable energy resources. Further information on CAB engagement sessions is included in Exhibit A, Tab 4, Schedule 1, Attachment 1.

Remotes surveys its customers once every two years to determine overall customer satisfaction with its services and to get feedback on programs. Remotes uses a few of the survey questions to ask about specific ways that service can be improved and to identify customer knowledge of available programs and services. Based on the survey results, action plans are developed to ensure services reflect customer expectations and improve customer knowledge of programs such as LEAP and OESP are in place.

Further information about Remotes' outreach to customers and, in particular, about customer feedback on priorities, can be found in Exhibit A, Tab 4, Schedule 1, Attachments 1, 2, and 3, and in the Distribution System Plan, Sections 2 and 4.

| Provide a list of customer engagement activities | Provide a list of customer needs and preferences identified through each engagement activity | Actions taken to respond to identified needs and preferences.<br>If no action was taken, explain why. |
|---|---|---|
| | **Billing**<br>1. Inaccurate bills: estimates, in particular for seasonal customers<br>2. Inaccurate bills: meter reader errors | **Billing**<br>1. Working toward fewer estimated bills for seasonal customers, but access to seasonal properties can be an issue<br>2. Improved training for meter readers<br>3. Moved to digital meters |
| | **Local Training/Employment**<br>1. High unemployment in communities and the need for more opportunities for community members in electricity sector | **Local Training/Employment**<br>1. Hydro One now supports a pre-apprenticeship program at Confederation College to improve access for First Nation members seeking to enter apprenticeship programs. Remotes toured its communities to let customers know about the program and its benefits<br>2. Remotes now participates in career fairs at local schools |
| | **Generation Constraints**<br>1. Houses in Deer Lake cannot connect<br>2. Communities not able to grow<br>3. Concerns about INAC funding constraints | **Generation Constraints**<br>Because of the isolation of the communities, when load grows beyond the generation station capacity, communities are unable to connect new services to the distribution system. INAC did not have funding to increase generation and connections of new services were restricted in eight communities. Remotes developed a process with INAC and First Nations for incremental generation upgrades to relieve supply constraints in communities. Since developing this approach, upgrades were made in six communities, with two more planned |

| Provide a list of customer engagement activities | Provide a list of customer needs and preferences identified through each engagement activity | Actions taken to respond to identified needs and preferences.<br>If no action was taken, explain why. |
|---|---|---|
| | **Customer New Connections**<br>1. Band Councils pay for the housing construction and new connections. The CAB suggested an allocation of costs to Residents through rates. | **Customer New Connections**<br>No change. Under the federal-provincial funding agreements with INAC, new customer connections are a federal responsibility. Increases to Remote customer rates are set by regulation |
| | **Reliability**<br>1. An unplanned distribution outage due to a house fire resulted in the cancellation of the Santa Claus parade in a community. Operators should be able to respond to these issues.<br>2. Unplanned generation outages | **Reliability**<br>1. Developed training program for operators to become qualified under the Electrical Safety rules so that they can respond to certain line outages. Program also has the benefit of reducing trouble costs.<br>2. Several investments are proposed to maintain generation reliability |
| | **Environment**<br>1. Spills response<br>2. Spill events<br>3. Environmental Management System | **Environment**<br>1. Remotes gave a presentation on management of spills, training for spills response, the installation of spill alarms and other initiatives to reduce the environmental footprint. |
| **Band Council Engagement**<br><br>**Regular, Ongoing Meetings, Emails, Letters, Phone Conversations. Engagement is grouped under major topics.** | **Discussions/Engagement with Work Activities:**<br>1. Connections, collections, work in community<br>2. Winter road conditions: Update<br>3. Environmental – Site remediation<br>4. Community emergencies and interruptions | **Discussions/Engagement with Work Activities:**<br>1. Work with First Nations to set schedule for activities in the communities and to respond to service requests<br>2. First Nations build and operate winter roads<br>3. First Nations are partners in site remediation projects<br>4. Notify First Nations and discuss root causes of unplanned outages |

| Provide a list of customer engagement activities | Provide a list of customer needs and preferences identified through each engagement activity | Actions taken to respond to identified needs and preferences.<br>If no action was taken, explain why. |
|---|---|---|
| | **Discussions/Engagement Economic Development/Partnership Opportunities**<br>1. Renewables – Desire to be involved<br>2. Gravel—purchase arrangements<br>3. Winter road tolls—pricing for use of road<br>4. Equipment rental—availability, rates<br>5. Temporary labour—opportunities for community members<br>6. Meter reading—contract negotiation<br>7. Operators—contract negotiation<br>8. Forestry line clearing—opportunities, timing<br>9. Fuel purchase agreements | **Discussions/Engagement Economic Development/Partnership Opportunities**<br>1. Established REINDEER program<br>2. Gravel is purchased from the First Nations<br>3. Remotes pays First Nations for the use of winter roads<br>4. Remotes rents equipment from the First Nations<br>5. Remotes hires local members to work on projects<br>6. Meter readers are community members, employed by the First Nation<br>7. Operators are community members, employed by the First Nations<br>8. Remotes contracts brush work to the First Nations<br>9. Remotes purchases fuel from First Nations who have fuel storage facilities in communites |
| | **Discussions/Engagement on community planning**<br>1. Planned housing<br>2. Community energy overview, load, peak, assets<br>3. Energy forecast and housing, community development | **Discussions/Engagement on community planning**<br>Annually, Remotes works with First Nations on forecasting electrical requirements |

# Watay Community Workshop

**Date: November 23 and 24, 2016**

**Location: Sioux Lookout**

# Table of Contents

# Summary of Workshop

On November 23-24, 2016 a two day workshop was held in Sioux Lookout with seven remote First Nation communities that are currently served by Hydro One Remotes. These seven communities are also part of the Watay Power project which is comprised of twenty-two First Nation communities that have majority ownership of the project. The seven communities are Bearskin Lake First Nation, North Caribou Lake First Nation, Kingfisher Lake First Nation, Kasabonika Lake First Nation, Sachigo Lake First Nation, Kitchenuhmaykoosib Inninuwug First Nation, and Wapekeka First Nation. The purpose of the workshop was to have discussions with the Hydro One communities that would be connecting to the provincial grid to provide information and identify issues and concerns. Hydro One Remotes provided a lot of information to the participants with regards to their operations.

On Day 2, OEB staff made a presentation on behalf of the Ontario Energy Board regarding the Development of a First Nations Rate for On-Reserve First Nations Electricity Customers as directed by the Minister of Energy. After the presentation the community participants (three from each First Nation) divided into three groups and provided feedback on issues within their communities regarding electricity cost and service and on the proposed First Nation Energy Rate and the ability of First Nation band members to pay their hydro bills.

A high level summary of those discussions is as follows and represents the feedback transcribed from the flip charts from the community participants that were in attendance. The information on the “flip chart” summary is from the discussions with the participants after the OEB presentation. There is information referencing the OEB presentation as well as the information provided by Hydro One Remotes. This information was gathered in an informal group setting and has not been altered.

# Attendance

| | |
|---|---|
| Kevin Mann | Hydro One Remote Communities Inc. (Remotes) |
| Laura Sayers | Shibogama First Nation Council |
| Elijah Begg | Kingfisher Lake |
| Noah Chapman | Kitchenuhmaykoosib Inninuwug First Nation (KI/Big Trout Lake) |
| David Jeremiah | North Caribou Lake First Nation (Weagamow) |
| Ernest Quequish | North Caribou Lake First Nation (Weagamow) |
| Dan Chikane | North Caribou Lake First Nation (Weagamow) |
| Mitchell Diabo | Kasabonika Lake First Nation |
| Vincent Ostberg | Bearskin Lake First Nation |
| Robert Kamenawajamin | Bearskin Lake First Nation |
| Lott Sainnawap | Kingfisher Lake First Nation |
| Isaac Sainnawap | Kingfisher Lake First Nation |
| Linda Kamenawatami | Bearskin Lake First Nation |
| Charlie Barkman | Sachigo Lake First Nation |
| Brian Thunder | Sachigo Lake First Nation |
| Mandy Wirta | Indigenous and Northern Affairs Canada (INAC) |
| Kraemer Coulter | Hydro One Remote Communities Inc. (Remotes) |
| Oli Laskujarvi | Hydro One Remote Communities Inc. (Remotes) |
| Ralph Falcioni | Hydro One Remote Communities Inc. (Remotes) |
| Una O’Reilly | Hydro One Remote Communities Inc. (Remotes) |
| Josie Anderson | Kasabonika Lake First Nation |
| Geoffrey McKay | Kitchenuhmaykoosib Inninuwug First Nation (KI/Big Trout Lake) |
| Roopa Rakshit | KORI-LU |
| Breann Brunton | Windigo First Nations Council |
| Tom Semple | Kasabonika Lake First Nation |
| Mary Barkman | Sachigo Lake First Nation |
| Georgina Winter | Wapekeka |
| Helen Winter | Wapekeka |
| Donna Brunton | Shibogama First Nation Council |
| Lenore Robson | Ontario Energy Board ($24^{th}$ only) (OEB) |
| Mary Anne Aldred | Ontario Energy Board ($24^{th}$ only) (OEB) |
| Richard Habinski | Windigo First Nation Council |
| Franz Seibel | Keewaytinook Okimakanak (KO/Northern Chiefs) |
| Richard Chukra | Independent First Nations Alliance (IFNA) |

# Minutes of the Workshop

## <u>Day One</u>

The meeting started at 9:00 am with introductions around the table.

## Presentation #1:  Watay/Opiikapawin Project

Richard Habinski (Opiikapawin Services LP) presented the Watay/Opiikapawin project timelines and key accomplishments to date.

<u>Summary</u>:
Huge accomplishment: Watay was designated as a transmitter by the province of Ontario. Transmission line planned in two phases, Pickle Lake to east of Wabagoon and the connection of seventeen communities. The cost is estimated at $1.35B, 770 jobs will be created, 260 in NW Ontario. Watay successfully applied for its transmission licence and through Opiikapawin and the Environmental Assessment has started its planned community engagement on the project. The good news is that the two phases of work are getting closer together. The Leave to Construct efforts started in 2017, and will be filed for Phase 1 (Pickle) in 2018, and for Phase 2, (the community connection) starting in 2019.  By 2023, communities will start being connected.

Many milestones have been met:
- Phase 1 EA now frozen
- Ministry of Environment and Climate Change are reviewing
- Leave to construct filed fall 2017

The project is progressing well.

## Presentation #2:  Hydro One Remote Communities' Operations

Kraemer Coulter (Remotes) gave an overview of Hydro One Remote Communities' operations as an LDC.

Questions regarding Remotes overview**:**

**Question:** **Does INAC offer fuel subsidies to IPAs?**
Answer (INAC): INAC does not have a guaranteed program to subsidize fuel, but assesses need and available resources year to year. INAC does offer operational support to IPAs. If IPAs have issues, they should contact INAC.

**Question:** **Is there support from INAC?**
Answer (INAC): Communities can ask, and if we can find funding, then we help. Funding is not always there.

**Question:** **Shares in Hydro One are being sold. Will this affect rates?**
Answer (Remotes): Rates are set by the OEB. The sale of shares will not affect the way rates are set.

**Question:** **Can IPAs continue to operate and become LDCs?**
Answer (INAC): In Ontario, there are fewer LDCs than there used to be. INAC will work with IPAs to reduce the risk of operating in the short term.

**Question:** **Who pays the A rate?**
Answer (Remotes): Government funded accounts like the Band Office and School.

**Question:** **Why will Standard A rates apply when communities are connected to the grid? Will rates go up at grid connection?**
Answer (Remotes): We do increase our rates by inflation every year. Hydro One Remotes' rates are not set to cost. When we applied for our last cost of service, we asked to keep our existing rates for non-Standard A customers and requested a grid connected Std A rate for our Government funded customers. We can't guarantee that the overall rate structure will stay the same forever, but the rates are based on the information we have now and the rules in place now.

**Question:** **How will the sell-off of Hydro One affect rates and customers?**
Answer (Remotes): Our conditions of service have not changed. Rates will continue to be approved by the OEB under the rules that are in place, regardless of ownership.

**Question:** **Will privatization affect rates?**
Answer (Remotes): We are set up with no return on equity and do not expect that to change. We do not foresee ownership affecting rates.
Answer (INAC): INAC's role is to work with communities to develop solutions to meet their needs. It is up to communities to identify their needs and initiate

early discussions with INAC (and Remotes if relevant). INAC integrates the needs developed locally into the INAC regional process for priority setting.

| | |
|---|---|
| **Question:** | **What is happening with connection restrictions? Will investments go forward now that the grid is planned?** |
| Answer (Remotes): | We gave INAC a 15 year snapshot of requirements. It doesn't make sense to build an $80 million station if the grid is coming, so we are being creative. Our new process shortens the window for new connections, but it is a delicate balance. We have to be safe and reliable. If Watay doesn't happen or happens late, we may be doing a bit of a dance to keep these priorities balanced. We are fortunate to have INAC support and more alignment of our needs.<br>We are working more closely with INAC, trying to innovate and be flexible. I will talk about our new process late this afternoon, but as an example we are working with KI and Wapekeka to build a tie line that will allow the two stations to operate together and that will increase capacity as a result. If the communities connect to the grid, the tie line will already be there. Another example of our approach is that part of our traditional requirements for an upgrade is to build new fuel storage capacity. We are looking at installing solar panels on non-Standard A accounts to off-set diesel use instead. |
| **Question:** | **INAC is working with Hydro. What about First Nation needs?** |
| Answer (Remotes): | This process includes First Nations, who identify needs and who make the decisions on the project for which funding is requested. |
| **Question:** | **How will Watay work with renewable energy? We have been working with Solar Power Network by making an application for a solar grid in Bearskin. We are also looking at other options. Our goal is to develop a run of the river site along the Severn. If Watay does not happen, is there any potential to make a micro grid for Muskrat Dam and Sachigo?** |
| Answer (Remotes): | Under our Reindeer program, we would pay for electricity that reduces our use of diesel fuel, based on the price of diesel. |
| **Question:** | **If Watay goes through, the line will be single circuit and there will be blackouts. Who is responsible for the backup plan?** |
| Answer (Remotes): | The OPA/IESO did a diesel backup study. There is no decision yet on how backup power will be provided. It will likely be on a community by community basis. Each First Nation will need to decide. |

| | |
|---|---|
| **Question:** | **Why not build the line double circuit because it would double the cost of the project? Who is responsible? INAC? Hydro One?** |
| Answer (Remotes): | We are on the sidelines in terms of the Watay design. Our job is to deliver power to our customers. It may not make sense to double up the line because there are a small number of customers with long lines over long distances. |
| **Question:** | **Fiber Optic within the communities is not at full capacity. People are not hooked up.** |
| Answer (Remotes): | The Fiber connection varies from community to community. Some stop at the nursing station, some before town. |
| **Question:** | **Fibre Optic is not very reliable.** |
| Answer (Remotes): | Hydro One is looking at a dedicated line for its operations. For our project in KI-Wapekeka, we are looking at a dedicated line. |
| **Question:** | **Why not use local lines? It is easier to go through a local company. For Wapekeka and KI, you should go through the communities.** |
| Answer (Remotes): | We are rolling out satellite and fibre and are comparing the reliability and costs. Our approach is to go community by community and compare results as we go. |
| **Question:** | **How will you know if there is an outage? Someone needs to call the First Nation so you will know.** |
| Answer (Remotes): | To some extent, our operators are our ears on the ground. Real time monitoring will let us see the detail of what is wrong. |
| **Question:** | **Is this a waste of money? Will that be reflected in community bills?** |
| Answer (Remotes): | Customers need service, and we believe this technology will help us prevent catastrophic failure. |
| **Question:** | **I have been on council for about a month. You say that you have been 14001 registered since 2002. What I've seen is Dyke Water spilling into the roadway. Are they causing problems? There are air emissions in the summer.** |
| Answer (Remotes): | In terms of the Dyke water, the water is clean. It has been sampled and filtered. We test it regularly. |
| **Question:** | **Do you keep emission levels for each station? Do you have targets?** |

Answer (Remotes): To get MOECC permission to operate the plants, they do a technical review of the design. MOECC evaluates the model. We use maintenance practices to keep emissions within guidelines.

**Question: There was black smoke coming from our plant.**

Answer (Remotes): We changed the controls of the plant and adjusted to reduce the black smoke. If this is ongoing, we can potentially install taller stacks.

**Question: We can smell the plant in the summer. Community members hanging clothes on lines can't, because it smells like diesel. The plant is noisy. In other communities the plants are near the airport. Sometimes we see black smoke coming from the plant. What causes that?**

Answer (Remotes): You should not smell the plant. If there is smoke or a smell coming out something is wrong. It is usually temporary on start up or shut down, if it is continuous there is an issue and you should give us a call. The plant located downtown was not our choice. We always request the plants to be located at the airport.

**Question: Do you monitor when connection restrictions come close? We are concerned about our community's ability to grow.**

Answer (Remotes): Government spending constraints affected our ability to connect. Now we have a way to do interim incremental capacity increases.

**Question: We only see Hydro people when they come to the community to connect or disconnect. We would like more community presentations. Young people don't know who Hydro One is.**

Answer (Remotes): We meet with Chief and Council regularly and do Hazard Hamlet/Safety presentations in schools to help young people understand public safety, but we will consider community meetings.

**Question: I want to know about the location of distribution poles in the communities. We recently had some problems with our water in the community. We realized the lineman just put the distribution pole where it's convenient, near the waterline. We had a water crisis and had to dig up the water line. The pole was too close to the waterway and could not dig up the line there.**

Answer (Remotes): Normally utility corridors are shared among water utilities, electric utilities and any other utilities. It tends to be cheaper and helps people determine where to build roads, houses etc. There are clearances that are defined by standards. We will respond to this kind of emergency if you call our emergency number. Someone will come to the community and help locate lines.

**Question:** **How did you resolve the problem?**

Answer (Remotes): We closed up the line further down.

**Question:** **The breaker flipped in the community. Can operators fix that?**

Answer (Remotes): Yes. Operators are trained to respond to emergencies in the plant and on the distribution system. They can refuse transformers, respond to emergencies like house fires and make safe.

**Question:** **When something happens, like a fire, the whole community goes out of power for a while. Why?**

Answer (Remotes): Most operators are not trained to perform live line work. We ask them to shut down the station for a short time to respond some distribution emergencies so they can perform the work safely.

**Question:** **Do operators need assistants?**

Answer (Remotes): In most communities we have backup operators who do some of the work and who work when the operator is sick or on vacation.

**Question:** **The grid is coming. Remotes knows this. The IPAs have to upgrade their systems. Who will foot the bills for this work?**

Answer (Remotes): We have agreed to work with the Tribal Councils and IPAs to perform asset assessments with the ESA to ensure that the assets meet provincial standards for public safety. The federal government (INAC) and Opiikapawin have worked together to fund these assessments and we expect they will fund the work to bring the assets up to standards.

Answer (OSLP): Several IPAs met in Sioux Lookout recently. The IPAs are looking to hear about the relationship with Hydro One. At that meeting, Deer Lake gave a presentation. They said that the relationship is two way. You get what you put into it. The IPAs are also looking to hear from you on the relationship you have with Hydro One.

**Question:** **There is work going on in our community. People are staying at the Hydro house and you rented another house. When you aren't there, you lock the doors. Why is the house only for Hydro One?**

Answer (Remotes): We have a lot of people and not enough beds so had to rent additional accommodation in the community. We rented it including weekends because we have people working seven days a week.

| | |
|---|---|
| **Question:** | **What about jobs when the grid comes? How will they be shared among the communities?** |
| Answer (OSLP): | All the communities want jobs. We are working with Power Tel who will be doing the construction. Some jobs will be local some regional. |

| | |
|---|---|
| **Question:** | **When does the work start?** |
| Answer (OSLP): | 2018. We have put together a training program on various work items that we expect to move forward with in 2017. We do not have information to share as yet on the timing of jobs. |

| | |
|---|---|
| **Question:** | **What about the remediation in our community? There is monitoring by the generation station. What is going on there?** |
| Answer (Remotes): | We cannot remediate under the plant, but we monitor to see if the contamination is moving and to ensure it doesn't get into the water system. |

## Presentation #3: Customer Priorities

Una O'Reilly (Remotes) started her presentation with a priority setting exercise. Each First Nations representative was given six (6) $10 bills and was asked to place them on flip charts. The categories and "spending" were as follows:

| | |
|---|---|
| Community Relations: | 18 |
| Affordable: | 17 |
| Customer Service: | 17 |
| Renewable Energy: | 18 |
| Safety: | 11 |
| Reliability: | 14 |
| Environmental Protection: | 26 |

| | |
|---|---|
| **Question (Remotes):** | **Environmental Protection got the most votes, can someone tell me why they supported this as our first priority for investments?** |
| Community: | My grandfather told me to take care of the land. It's my religion to take care of the land. |

| | |
|---|---|
| **Question (Remotes)**: | **What about renewable energy? Can someone talk about why that is a priority?** |

Community: Climate change is real makes sense to get our electricity and other needs from the earth.

**Question (Remotes)**: **And for Community Relations?**

Community: Hydro One needs to understand what customers want and their reality. Electricity is not affordable. People can't afford it.

Community: Customer Relations and Customer Service are Hydro One's weaknesses. Hydro One is strong technically, but its management of its customer base is week. For example, in the collections process, you wait for people to pay and then the burden shifts to the Chief and Council or to Ontario Works to get it (balances owing) covered. You act like an absentee landlord. You aren't in the community. You need to work in partnership with the community.

Community: On Community Relations, people want to pay their bills but are on the way to the band office and it is too late, people have climbed up the pole and cut them off.

**Remotes Discussion Point: Every month, customers get a bill telling them if their payments are late. When we plan our collection trips we send each customer and the chief and council letters repeated notices letting them know when we will be in the community, and that their accounts may be cut off if they do not call our office to pay or set up a payment plan they will remain on the disconnection list. We work with customers to avoid disconnection. The lesson here is don't wait till the last minute.**

Community: When they disconnect, they just put the meter off then back on.

Community: They just come up when they disconnect.

**Question (Remotes): They should come up and explain what they are doing before they disconnect?**

Community: Is there a possibility for customer education?

Community: Some of the families either choose to put food on the table or pay their bills. That is what is going on in my reserve.

## Presentation #4: OEB Regulation and Programs

Una O'Reilly (Remotes) delivered a presentation designed to determine the knowledge level of participants of the LEAP and OESP programs.

**Question (Remotes): Who administers LEAP and OESP?**
Answer: Ontario Native Welfare Administrators Association. You can reach them by calling their phone number, you can contact the welfare office on reserve or you can go on-line to apply for OESP.

**Question: What is the difference between OESP and LEAP?**
Answer (Remotes): Both programs use the same matrix to determine eligibility. For OESP, you apply and you get a monthly bill credit—your bill is reduced by the amount you qualify for each month. LEAP is a grant that you can get in an emergency. If you do fall behind and could face disconnection, you call ONWAA and they will see if you qualify for emergency help. You can get up to $600 to help you with your outstanding balance.

**Question: Is there a difference if the community is full service or Ontario works?**
Answer (Remotes): No, eligibility is based on household income. You can call ONWAA no matter which social assistance program (federal or provincial/federal shared) is in your community.

**Question: The winter months are the most difficult time. You come in January and disconnect.**
Answer (Remotes): We start sending notices in January, but do not disconnect until late April or May. Call our office early and make a payment plan. Apply for LEAP and OESP. These programs are there to help, but you need to apply.

**Question: How long does it take to apply?**
Answer (Remotes): LEAP approvals happen within 10 days of calling. OESP takes a couple of months.

## Presentation #5: Rates and Billing

Una O'Reilly delivered a presentation on Rates. Here are the questions and answers.

**Question: Why is there a Standard A rate on grid?**
Answer (Remotes): In our last cost of service we proposed grid connected rates based on our existing rates. Currently our rates are not cost based, but are set under a Regulation. Rates are normally based on the actual cost of service. The cost to serve the far north is high, and most customers are economically disadvantaged. The provincial government has recognized this, so rates

are not set to costs. For residential and commercial customers in the north, the rates are actually a bit lower than rates for grid connected customers. The Standard A rates are charged to government customers to share the cost of service between governments and rate payers. The grid connected rates we had approved are much lower than our current standard A rates and are about the same as those charged in the FNEI communities—about 30 cents per kWh—and not much higher than a grid connected customer—about 23 cents per kWh.

**Question:** **How did you get to 30 cents per kWh?**
Answer (Remotes): We took out all of the costs related to diesel generation and added in the cost of power.

**Question:** **If you don't have an exemption and your status number is not showing on the bill does that mean you are paying taxes?**
Answer (Remotes): Yes. If you don't see the status number on the bill, you should call our office. You need to send them a copy of your status card to be exempt from HST.

## Presentation #6: Customer Service (Connections, Collections, Safety and Environment

Kevin Mann (Remotes) delivered a presentation and led a discussion on Connecting to the Distribution System. The following are the questions and answers regarding this presentation.

**Question:** **Why do we have to pay up front?**
Answer (Remotes): We get payment up front to reduce our collection activities, to help us schedule the work, to be sure that the connections are going forward.

**Question:** **Why does it take so long?**
Answer (Remotes): We do our best to connect everyone as soon as our conditions are met. We have limited staff and operate on a first come first serve basis when all requirements are met. The problem is, everyone wants their connections in the late fall.

**Question:** **Some homeowners have poor connections in their homes. Some have circuits that haven't worked for the last two years. Why are these not found by the ESA?**

Answer (Remotes): The ESA checks grounding, spot checks other items. They do not look at the wiring in the entire house. You need to hire qualified electricians.

**Question:** **Does anyone in your office who answers the phone speak the language? It's nice to have someone who speaks the language. For connections, you should take 50% payment instead of 100% December is a hard month, there is a fiscal crunch in December.**

**Question:** **We are building a building in our community. Who do we talk to? If you have to relocate a line, is it expensive?**

Answer (Remotes): Call our office and talk to the customer service staff. If you have to relocate a line to build your building, it may not be the best location.

**Question:** **At one time the band purchased a big generation set. We then had to purchase our own 725 kW unit when the big one failed. Why isn't there a discount for this? Maybe it will just work for a while before the grid comes. There should be a discount of dollars the FN has spent on gensets.**

Answer (Remotes): There is no rebate to customers for this. At the time this was first put in place, the FN decided to build and own a generator rather than to do an official upgrade. We have an agreement to operate and maintain this engine and we buy the fuel. We do not give a discount to the FN because it is harder for us than a normal station would be.

**Question** **Two questions: For a payment plan, is automatic deduction available? We had a power outage yesterday. The meter was still running.**

Answer (Remotes): Yes we can make payment plans that are automatic. When there is a power outage you should call the office.

**Question:** **In terms of collections, someone who is paying every month is still on the disconnection list, while someone else owing a lot was not disconnected. Can a person who was paying get back on the list?**

Answer (Remotes): We don't disconnect people who pay. If you default on a payment plan, you can be disconnected.

**Question:** **Isn't it expensive to disconnect just one to three people?**

Answer Remotes): Our goal with collections is to cancel the trip, to have everyone pay so we don't need to make the trip. We do have people go to a number of communities in a single flight to reduce costs.

**Question:** **Why does the Chief and Council need to know someone's bills?**

Answer (Remotes): Most Councils want to know if someone is going to be disconnected so they can help if needed.

**Question: Safety, when live wires are down in emergency the police need to run around to find the operator.**

Answer (Remotes): Call our office. Someone will answer the phone 24 hours a day, seven days a week and we will track down the operator or back-up operator to make the wires safe. If the incident involves a car or heavy equipment, stay in the car until someone comes. The emergency handbook was delivered. Our linemen knocked on doors and gave these to some emergency responders. Stay 3 meters (10 feet) away from the downed wires.

**Comment (**Remotes)**: Share this handbook with Tribal Councils to ensure it gets to emergency responders.**

**Question: Joint use agreements, do you have them in all communities? Do you charge fees to attach to poles?**

Answer (Remotes): We have agreements in the majority of communities. There is a handful where we don't. We do not charge fees to attach to poles. We have an agreement to protect public and employee safety. Our agreements provide for required clearances and capital sharing if the pole needs to be replaced with a taller pole.

**Question: You have all these programs. If we have ideas would you consider implementing them?**

Answer (Remotes): Yes.

**Question: Would you implement a streetlight program to repair or replace streetlights?**

Answer (Remotes): We have a program to help First Nations pay to replace streetlights if they are energy efficient lights.

# Day 2, November 24, 2017

## Presentation #7: First Nation Energy Rate Options

Lenore Robson (OEB), gave a presentation on the Minister's request to develop options for a First Nation Energy Rate. Comments/Questions:

**Question:** **What about the future? What happens when we are connected?**
Answer (OEB): We are looking at something across the province.

**Comment:** **Is there flexibility in what the OEB can recommend? The province is not one size fits all.**

**Comment:** **The cost of living is much higher in the remote north than in southern First Nations like Lac Seul. Food costs are very high. Income levels are lower. Most people rely on seasonal work. The communities are also facing social problems, difficulty with drugs and opiates. Our communities face poverty.**

**Comment:** **Up to 70% of people in our communities rely on welfare. The cost of living is very high.**

**Question:** **Will privatization affect Hydro One's rates?**
Answer (Remotes): There are no plans to change the way Hydro One is operated (i.e., return on equity). Rates are regulated by the OEB that will continue.

**Comment:** **The other major difference between the remote north and the south is that there are fewer alternatives to electricity. Alternatives to electricity are costly. $1.90 per litre of fuel for heating for those people who have medical needs and can't cut wood or use wood stoves.**

**Comment:** **The federal government has cut back on costs. It is a common problem in reserves. The federal government needs to give more money to reserves. Maybe your report should go to the Prime Minister.**

**Comment:** **The government should look at water power in the north.**

**Comment:** **The program should apply to Standard A rates.**

**Comment:** **The program should not be application based.**

## Presentation #6: Customer Service (continued)

Kevin Mann (Remotes) delivered a presentation and led a discussion on Connecting to the Grid on Day One. The following is an additional questions and answers regarding this presentation.

**Question:** **The REINDEER program is based on the avoided cost of fuel. Can this also reduce costs for residential customers?**
Answer: Yes, but generally solar is expensive to install in the north, so most communities decide to put solar on Standard A services to get the best bang for their buck.

## Presentation #7: Reliability and Generation Asset Investments

Oli Laskujarvi (Remotes) delivered a presentation on reliability and asset investments. There were no questions or comments.

## Presentation #8: Generation Capital Upgrade Process

Ralph Falcioni (Remotes) led a presentation on recent changes to the capital upgrade process. There were no questions or comments.

## BREAKOUT SESSIONS

The rest of the meeting was devoted to breakout group discussions and recommendations for the First Nation energy rate and service improvements in Remotes.

Comments from the three breakout groups from the workshop can be found in Appendix "A". The remote First Nation communities cannot be rolled into a "one solution fits all" category. The realities of living in remote First Nation communities require different solutions than non-remote communities. The issues need to be dealt with separately. Access to goods and services as well as jobs is negatively affecting remote First Nation community members' ability to survive on a day to day basis.

The information on the "flip chart" summary is from the discussions with the participants after the OEB presentation. There is information referencing the OEB presentation as well as the information provided by Hydro One Remotes. This information was gathered in an informal group setting and has not been altered. It indicates that there are still a lot of question and concerns from the group and that there needs to be a lot more follow-up discussion on the topics. Some individuals had very different perspectives on the problems and this alone requires more follow-up and discussions. We are planning on having a follow-up meeting in the New Year with our Independent Power Authority and Hydro One Communities

## Breakout Session Group Flip Chart Notes

The following is the comments and feedback from community members at November 23 and 24, 2016 workshop after the OEB presentation. Also included are comments regarding Remotes service.

**Group 1 Feedback:**

- **Drop Standard A rates for remotes:** The current Standard A rate is 97 Cents/kWh for all the Government funded buildings and with grid connection it will drop to 29 Cents/kWh. It was suggested to consider implementing the 29 Cents/kWh now for a smooth transition to grid connections. OEB could help subsidize that.
- **Drop delivery charges:** Delivery charge was for the grid connected communities in the south that they wanted gone. To consider getting rid of monthly charge on bills for the northern First Nations.
- **Subsidies:** To be cautious on the subsidies during discussions with INAC and to ensure that they need to maintain the current Standard A rate subsidy until the grid connection. Funding cannot be reduced or stalled/when they see cost-savings. (When formulas are calculated for operations and maintenance, the Standard A rates are included and built into the subsidy electric component)
- **Other subsidies:** Construction costs for connections (poles etc.) are much higher in the North than in the South.
- **Breakdown of the bundle rate:** The true cost of the power for North is to be provided towards customer education. The breakdown will facilitate better understanding of revenue sources, and payments made on specific allocations by home owners. Even though community members pay a subsidized cost, the breakdown could serve the purpose of an educational tool for RRRP and residential rate payers.
- **Customer relations and Customer service**: To enhance, the group suggested to tie into processes and structures through local RRRP workers who are closer to the communities and delivers energy programs. To initiate a customer education process on rates, bills etc., as part of customer education-a community-based approach. The conservation program could also be brought back as a behavioral modification on using less power, on using technologies that reduces consumption, bills. (H1RC have an application-based…appliance program)
- H1RC in partnership with the community could engage with the rate payers on conservation, consumer education programs besides the bill collections. **More presence:** Remotes and OEB are asked to have more presence in the community.

- **Late payment charge**: 19.5% on an annual basis is too high and the time frame that kicks in is too short with 20 days. To consider with 60 days' time frame and to be tied to borrowing rates/user rate fees and not market-based rates.
- **Application based programs:** Special consideration is to be made for seniors and elders who find it difficult to navigate through the application process. Try to build/tie into some of the activities showed in the bill and maybe make them "automatic" rather than applying for them.
- **Include an "adder" to off-grid renewable projects:** REINDER programs are not enough, there need to be an "adder" to the REINDEER rate, as an incentive. The "adder" should consider the impact of reduction of the standard A rate. The renewable projects could be made more attractive to find capital/funding for the remotes.

**Community-specific concerns:**

- KIFN: Senior complexes-individual apartments owned by seniors get Hydro bills but there is no funding for common areas.
- Bearskin: 20$% rebate across the board, on everybody's' bills -suggested directing the savings towards employment, childcare, education, lands and resources, restaurant etc.

**<u>Group 2 Feedback:</u>**

- **Electricity rate:** Hydro bill are too high. To consider seasonal rates as lot more electricity is used in the winter. Or, people who don't have woodstoves have higher costs, especially for the elders and seniors. There are cases with high bills and no jobs. To consider percentage reduction of energy bills.
- **Subsidies:** All customers are different. Some have trucked water, and require lots of electricity to run pumps, so, it is not one size fits all when considering subsidies.
  **Power, food, health, Nexus:** Anecdotal references were made to situations when options is not food versus power with both being essential necessities. Junk food is cheaper which leads to health and medical treatment issues that are cost intensive. Profile of a different family sizes can be acquired from community economic development offices to iron out fairness in payments. Single mothers, grandparents caring for grandchildren, mentally-challenged, and disabled patients who are unable/or shy away from the welfare application process, become dependents on regular families stretching family budgets. There are no resources to bridge the application process.
- **Incentives**: Incentives for reduced energy use.
- **North versus South unfounded perspectives:** Decision-makers from the South have to visit the northern communities to see first-hand, ground realities. The communities in the north have to deal with a lot more situations that the south doesn't face. Also, "Thunder Bay is not north or reflective of the TRUE NORTH". Also, get an understanding of family structures and community way of life.

- **Energy Star Program**: To be made available to everyone and not just for low-income group people. The H1RC program swaps old appliances for Energy Star appliances.

**Feedback on the Remotes processes:**

- **Community relations**-To understand community' expectation on building relations-"H1RC version is different from ours". Mostly council members attend meetings in Thunder Bay and sometimes the information flow is restricted or stalls at that level. Suggestion was made to engage with the communities more through community meetings organized for EVERYONE to attend, open houses, FB, radio etc. Also, forward materials that are easily understood by the community. Sending program promotional/marketing pamphlets with bills doesn't always work.
  People who implement programs like OESP and LEAP need to go to communities, help them with the application process.
- **Housing:** Lack of housing leads to overcrowding that lead to high electricity bills (e.g.: North Caribou. Also, with large families, it is very easy to go over the first 1000kwh threshold. To consider up to 2000 kWh before increase.
- **Renewable projects:** Community is interested to invest**,** own and run more renewable options.
- **Standard A** rate on band council building and assets needs to be lower. Shouldn't have to wait for grid connection to get lower standard "A" rate. Don't want rates to change or access to RRRP to go away when grid comes in. Need more than just the $20 service charge off and not make it comparable to the delivery charges of the south.
- **Joint process**: Consult with INAC for cost savings on when the grid comes in. And ensuring that any subsidies that come from OEB does not reflect on a reduced cost saving options from INAC.
- **Subsidies**: Should not be something we have to apply for.
- **Additional concerns:**
  - Lots of power surges with diesel generation or power goes out for a few seconds. Thus, outages should result in lower bills and should be reflected on the bills.
  - Sometimes when they come to communities to do the disconnections, they won't take any cash.
  - Disconnect charges add an extra burden and are varying from 65$-165$ that ensues a long wait to be reconnected once the bill is paid.

**<u>Group 3 Feedback:</u>**

- **Standard A rate:** There are two rates-one for the First Nations and one for the Municipal. So, the community deals with the individual bills and Municipal/Band type accounts. Rates are high that the Band offices have to sometimes pay from other programs. It was suggested that the respective community band offices need to be made aware that with the grid connections, there is a possibility of the reduced/stalling of the INAC funding and subsequent subsidies. This needs clear understanding amongst all of us and we should be on the same page.

- **Understanding realities:** Both, the communities and H1RC want to be treated fairly and so, to approach the system through a holistic lens. There are realities on both sides-to acknowledge and respect. Adding or subtracting services without realizing the ground realities leads to misunderstanding and lack of expectations.
- **Time of Use rates:** Do not want time of use rates as there are unemployed people and energy consumptions to consider. Using the time of use rate will only hurt us.
- **Cost of living:** To take into account the cost of living and all costs including freight as they are significantly higher. Everything costs double in remote Northern Stores even with a subsidized rate.

  Need to help seniors and Elders who cannot keep up with the costs of living. Reference was made of the 700+ OESP applications that are stuck in the systems process. This is not acceptable when community members rely on these programs. OEB could address the issue with the Ministry of Finance.

  Also single parents, some are too young to apply and get into the system. Grandparents are playing the roles of the parents and have extended responsibilities.

  Welfare is $400/month/person. How much can it be stretched to in a typical size family?

- Need to keep **"entrench"** RRRP and Standard A subsidies on a long-term basis irrespective of change in Governments. To ask the Province to approach INAC.
  Rates cannot go up (increase) with connection to the Provincial grid. If that happens then there is no value in being connected to grid. We cannot burden communities with additional payments-a principal used for guidance with grid connecting.
- **Customer Services:** Place someone in our community that can help with applications/Forms. Also, need help within the communities with arrear management and not just a 1-800 number. To include management of bills, when trying to decide how to pay all bills-food, fuel or electricity.
  Reliability is a problem. Need someone in the community to keep the lights on. To explore solutions, H1RC need to visit the communities and talk to community members. Or the community can set a program and appoint someone in the community in partnership with H1RC. The group stressed on **education and communication**. Reference was made of initiating financial management skills.
  The group echoed that we are "remote" and have unique set of challenges. All FNs cannot be treated the same. Comparisons between the North and South should not be made. Reference was made with Land-Fill sites as an example.
- **Renewable Energy:** Walk hand in hand in renewable projects.
- **Watay Power:** To have discussions on bills and payments post grid connection. It is important to prepare the community.

- **Conservation:** Stressed on H1RC conservation programs, appliances and light bulb replacement etc.
- Payments: Payments upfront
- **Back up generation**: A must for any catastrophe for basic services. No compromise on that. To consider portable units by H1RC. It is not only a back-up system, there are financial implications too.
- Quick response time, especially in the winter-someone on standby 24/7. Faster service.

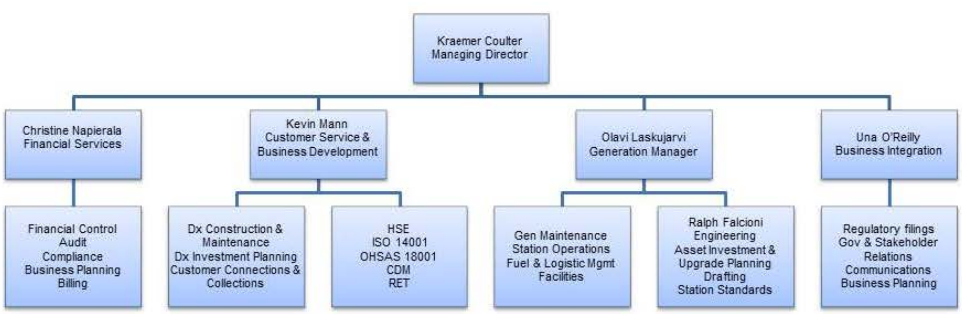
# PRESENTATION MATERIAL

The following are the presentations delivered during the workshop.

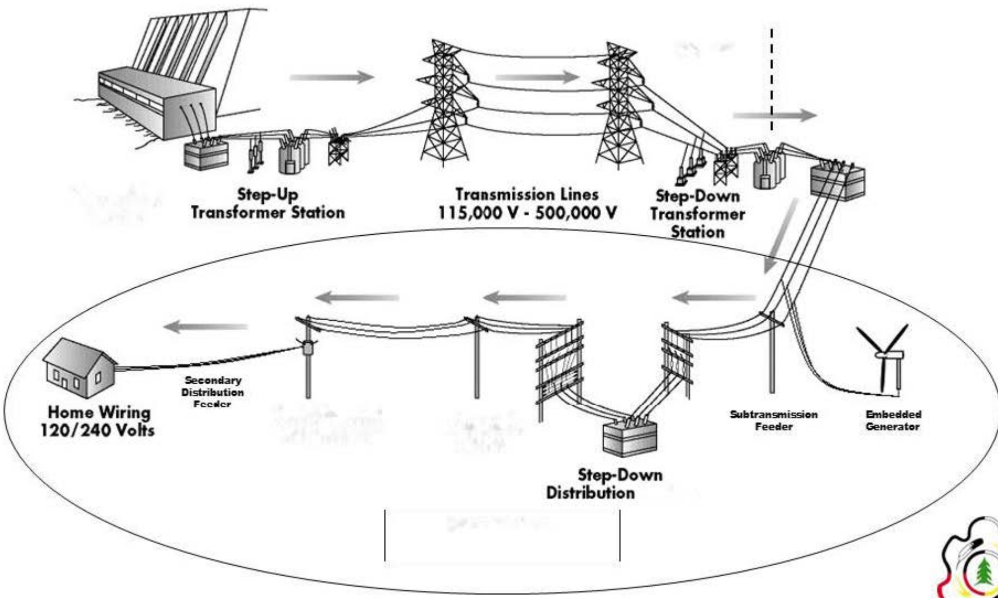
## Agenda:

- Overview of H1RC
  - Who are we?
  - What do we provide?
  - What are our rates?
  - What do our bills look like?
  - How do we collect?
  - How do stations get upgraded?
  - How do you get connected?
  - How do we plan investments?
  - How will transmission change things?
  - What makes us different than an IPA?
- Q & A

## Our Organization



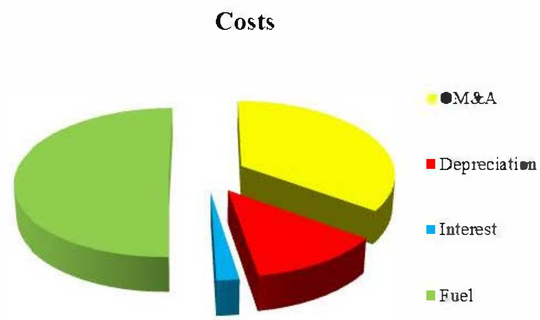
## Typical



## Our Costs

- We all know that the costs to serve the remote north is high
- Fuel is our largest single cost: 17M Litres
- Our business is operated to break-even … We do not make a profit!

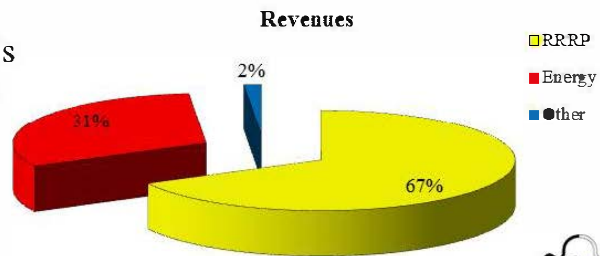
- Any $ differences between our revenues and costs are recorded for future consideration by the OEB
- Costs must be prudent to be recovered



## Our Revenues

- Rates for residential and business customers are set below the cost of service and actually the cheapest in Ontario – even grid connected!
- Standard A (Government) customers pay rates slightly above cost
- Together, customer rates provide about 31% of our revenues
- The shortfall is made up through the provinces Rural or Remote Rate Protection Program (RRRP)

- Approval of this funding is determined through a rate hearing at the OEB
- OEB staff and other ratepayers challenge our budget and revenue plans



## H1RC – Licenced Full Service Provider

Services:

- Manage all aspects of the Dx and Gen systems including system planning, design, construction, joint use, mtce scheduling and execution
- Provide a full complement of skilled generation and distribution staff - Linemen, Technicians, Mechanical, Electrical, Civil maintainers, P&C Techs, Engineering and Operations coordination all centred in Thunder Bay.
- Provide training and support for Operators and meter readers
- Internet monitoring of all systems at our Thunder Bay facility
  … currently leveraging new fibre network to have 24/7 real time monitoring

## H1RC – Full Service Provider

Services:

- Toll free Emergency Number with 24/7 coverage for generation or distribution issues … any customer or the plant Operators just need to pick up the phone for service and support
- Provide specialized equipment like RBDs, line mtce and gen tools
- Perform load balancing and fuse coordination to ensure the system works as designed
- Monitor community load and work with the First Nation and INAC on capacity concerns and upgrade options
- Provide mechanism for the purchase of renewable energy

## Community Benefits

Provide all aspects of Fuel Management

- Tank farms and fuel systems meet all code requirements
- Fuel systems are maintained, tanks are cleaned, and levels are monitored (locally and remotely) to ensure there are no leaks
- We are registered to ISO 14001 and take environmental protection very seriously and hold contractors and ourselves to a high standard
- We specify and monitor fuel for quality, order, arrange for transportation, and pay for all fuel
  - significant reduction in burden to the community compared to an IPA!
    … not only on management effort but on the financial side!

## Community Benefits

### Full Logistics Management

- Distribution and Generation equipment and material is ordered and delivered as needed
  - No need to worry about hiring a contractor, ordering poles, transformers, wire, to maintain the distribution system or connect houses
  - No need to worry about hiring a contractor to maintain the generation station or ordering oil, filters, batteries, or other supplies for the station

    … the Operator deals directly with us, we pay for his time and materials
  - No need to worry about what to do with the waste oil

    … it is removed from the community!

    … not the case in IPA communities.

## Community Benefits

### Partnerships

- Mutually beneficial agreements to purchase fuel
- Shoulderblade Falls partnership: agreement to own and operate hydro electric plant and share benefits

### Customer and Community Support

- Customer Advisory Board
- Public Safety information and presentations
- Conservation programs and funding
- Power Play and Community Sponsorships
- Student Scholarships and college program support

## Community Benefits

### Lifetime Warranty

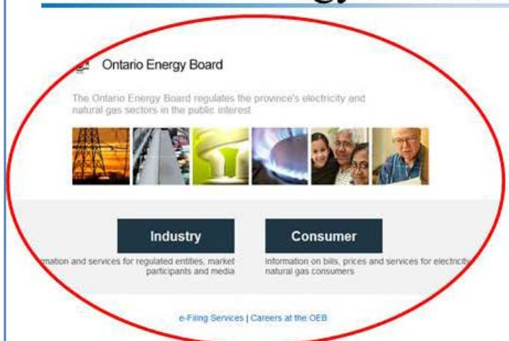
- On all like for like replacements!
  - All transformers, poles, wires, generators, engines, auxiliary systems, etc.
  - Plus provide many system upgrades at no cost so that we can provide the service and power quality that all of our customers deserve

### Safe Reliable Power

- 24/7 coverage for generation or distribution issues … only a phone call is needed and we look after the rest
- System generation **reliability** was **99.998%** in 2015

  … top 25% performance compared to our peers across Canada

## Ontario Energy Board



***Decides:***

which customers we serve

what prices we charge

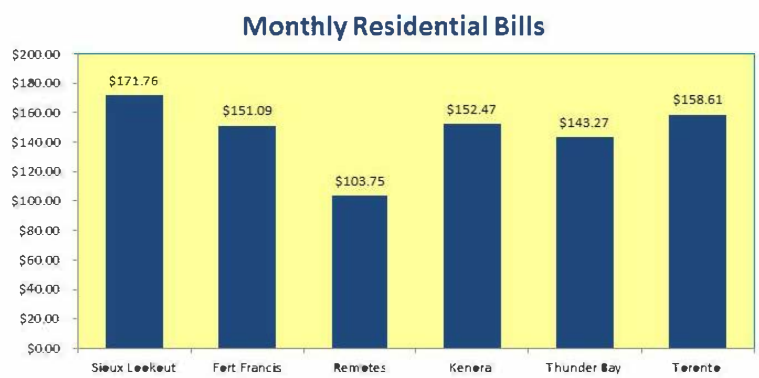
Low Income Emergency Assistance Program (LEAP)

## Our Rates

| Residential | |
|---|---|
| Monthly Service Charge | $19.09 |
| Energy Charges (Cents/kWh) | |
| • First 1000 | 8.98 |
| • Next 1,500 | 11.98 |
| • All Additional | 18.06 |

| Standard A General Service Energy Charge (Cents/kWh) | |
|---|---|
| Off-Grid Diesel | 97.69 |
| On-Grid | 30.61 |

## Our Bills



All Bill amounts include HST, NOT charged to First Nations on Reserve.

- Our Residential and Commercial customer's bills are lower than rates in the rest of the province
- Government-funded off-grid (Std A) customers pay higher rates.

## Here's what you owe

| | |
|---|---|
| Balance forward that is past due | $26.01 |
| Your new charges | $113.36 |
| Adjustments | $2.24 |
| **Total amount you owe** | **$141.61** |

The total amount you owe, as indicated on this bill, is due on the billing date. Your payment for this invoice is due on **April 11, 2016** (the Required Payment Date).

If payment is not received by April 11, 2016 (the Required Payment Date), a late payment charge of 1.5% compounded monthly (19.56% per year) will be calculated from the billing date and applied to your next bill.

This is a reminder that your bill has a past due balance. If this amount has been paid, please accept our thanks and pay only your new charges. If you are having trouble paying your bill, please call us.

## Connecting to our distribution system

- In Ontario, customers pay to connect to their distribution system.
- In our service territory, the Band normally requests and pays for new connections.
- We charge actual costs, but combine this work with other work in the community to keep costs down.
- We cannot proceed through the connection process without the right information and invoiced amounts.

*So how do I connect?*

## Connecting to our distribution system

- Planning for Service (Can you connect?)
- Request Service (What are you doing? What's being built? and where?)

  1-888-825-8707 or RemotesCustomerService.com
- Layout (Engineering Design) (Let's determine the plan)
- Account Set-up (Who is moving in or responsible?)
- Electrical Safety Authority (ESA) Inspection (Is it safe for the occupants and connection?)
- Construction & Connection (Let us built and connect it)
- Welcome….You're Connected (Yahoo!)

*When in doubt call 1-888-825-8707 (Customer Service)*

## Why does it cost so much to connect?

- Full cost recovery of labour, TWE, materials, flights, etc. (Logistics)
- The connection cost depends on the work required.
  - Install meter only $385 per service
  - Connection at Pole or Mast $885 per service
  - Connection at Mast and Pole $1,755 per service
  - Or more!

- Distribution systems are built to last and must comply with Ontario Regulation 22/04 Distribution Safety Standard
- We try our best to bundle work!

Remember that all material left in service comes with a lifetime warranty!

## Collections & Service

- The use of electricity and the payment for consumption is a business relationship between the utility and the customer
- It is not a political or personal….its just business relationship
- It is no different than going to a store where you are offered credit … if you don't pay you are not offered any more goods until you pay your bill

## Collections

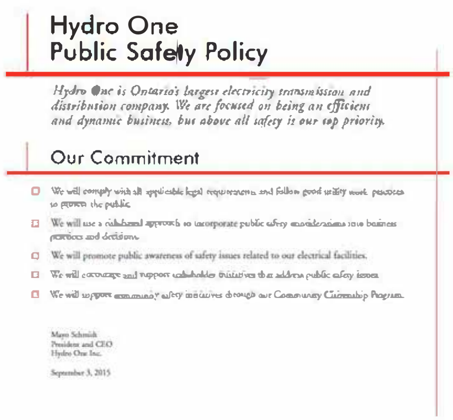
Collections Principles:

- Fair, consistent treatment of customers
- Communicate, communicate, communicate!

Process:

- Monthly bills sent to individual customers
- We do not disconnect customers in the winter
- Trips are planned months in advance.
- We communicate regularly with individual customers, FN Chief & Council and welfare offices.
- We encourage customers who fall behind to contact us and make payment arrangements or apply for LEAP or OESP
- Paying regularly is the best way to manage costs.
- Lowest rates in the Province

## Public Safety



Hydro One
Public Safety Policy

*Hydro One is Ontario's largest electricity transmission and distribution company. We are focused on being an efficient and dynamic business, but above all safety is our top priority.*

Our Commitment

- We will comply with all applicable legal requirements and follow good utility work practices to protect the public.
- We will use a risk-based approach to incorporate public safety considerations into business practices and decisions.
- We will promote public awareness of safety issues related to our electrical facilities.
- We will encourage and support stakeholder initiatives that address public safety issues.
- We will support community safety initiatives through our Community Citizenship Program.

Mayo Schmidt
President and CEO
Hydro One Inc.

September 3, 2015

We regularly communicate our commitment to public safety and are always willing to come to the community to present! (ie. Schools, Community Center, etc.)

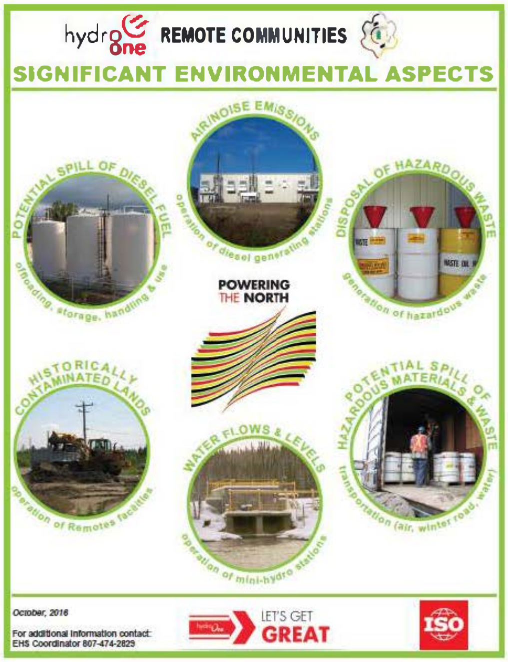
## Joint Use (Bell, Community Services, etc.)

- Poles have multiple uses. (Telephone, Cable, Internet, etc.)
- As owner/operator of the poles we have to ensure safe and proper use.
- Regulation 22/04 must be met. – Distribution Safety Standards
- All communities must have a joint use agreement in place in order to use poles.
- Joint use agreements set out the term and conditions related to standards, installation, maintenance and operation, emergency conditions, safety, etc.

## Environmental Commitment

- We are registered to ISO 14001 and take environmental protection very seriously
- The ISO 14001 Environment Management System (EMS) standard is an internationally recognized environmental management standard which is a systematic framework to manage the immediate and long term environmental impacts of an organization's products, services and processes.
- Our Environmental, Health, Safety, Management System (EHSMS) is integrated into all business operations.
- We also strive to the OHSAS 18001 Health and Safety standard.
- External, Internal and Compliance Audits are regular and independent of our business.

# Environmental Commitment



# Remotes - CaRE Program Initiatives

## Conservation and Renewable Energy Program

- Commercial Lighting Retrofit Program
- Mail-in Rebate Program
- Street Light Retrofit Program
- Renewable Energy Innovation DiEsel Emission Reduction (Reindeer) Initiative

## Renewable Energy - REINDEER

- Remotes is interested in enabling the connection of renewable energy projects to reduce the impact of diesel fuel on the environment within its service territory.
- In late 2012, the Remotes' **R**enewable **E**nergy **IN**novation **D**i**E**sel **E**mission **R**eduction (REINDEER) program was developed for projects of this nature.
- There are two (2) types of REINDEER projects:
  - "Standalone" projects will get paid for production
  - "Net Metering" projects will receive a reduced monthly bill.

## Renewable Energy: REINDEER in Action

Fort Severn

Wapekeka

Kingfisher

Kasabonika

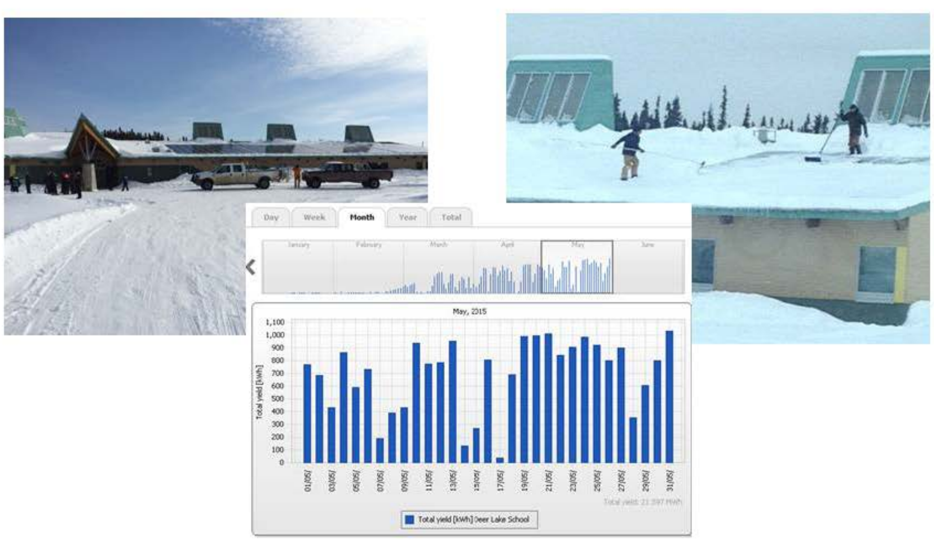
Armstrong

Weagamow

## Renewable Energy: REINDEER in Action

Deer Lake School – 130 kW

## Renewable Energy: REINDEER in Action



Net metering on the Deer Lake School saved $115,000 in the first year of operation.

## ROC – Remotes Outage Committee

## ROC – Why?

- Safe <u>Reliable</u> Power
- OEB and internal reliability targets
- Asset information
- Maintenance and planning
- Take a second look

## ROC – Who is involved

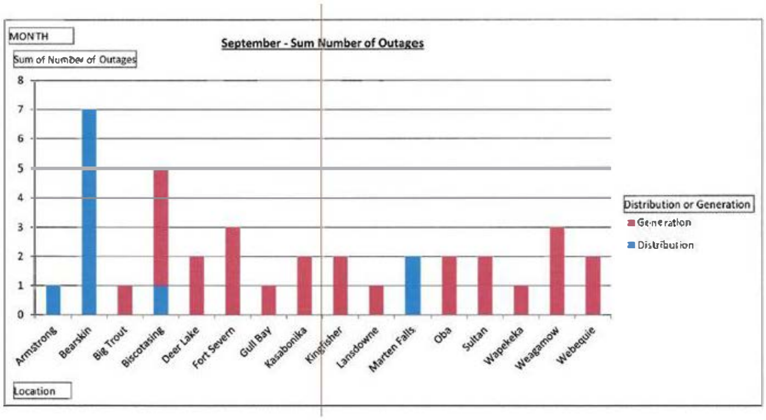
- Manager, Generation
- Manager, Customer Service
- Supt, DCAM (Engineering)
- FLM, Generation Mtce and Operations
- FLM, Lines and Customer Service
- Special guests

## ROC – What we do

- Review monthly performance
- Review significant outages – frequency/duration
- Discuss and troubleshoot
- Investigate and/or take action if required

## ROC – What we do

- Review monthly performance - SQI



## ROC – What we do

- Get to the details

## Questions

---

Capital Planning and Upgrades

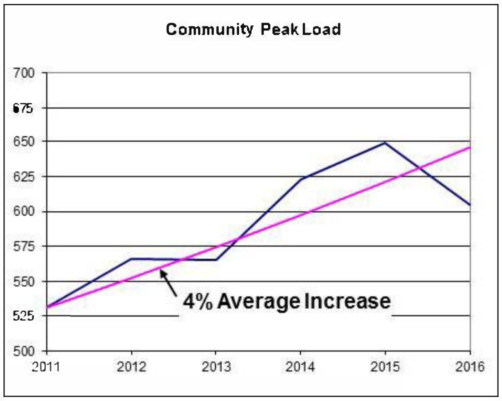
Ralph Falcioni
November 23, 2016

## Introduction

- Generation Overview
  - 19 Diesel Generating Stations
    - 14 serve First Nation communities
  - Supplemental Generation
    - 2 Hydroelectric Generating Stations
    - 4 Windmills

## Introduction Cont'd

- First Nation communities have steady load growth
- Growth varies community to community (1% to 6%)
- Upgrades required every 7-10 years



## Capital Planning

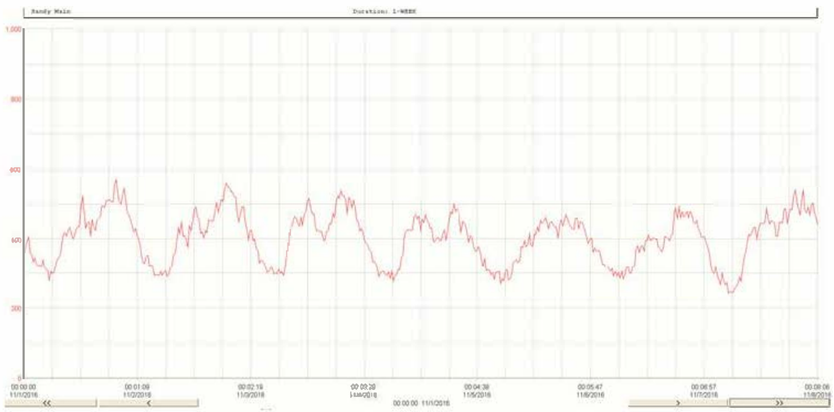
- Station Rating
- Community Demand Data

## Station Rating

- Stations have either 3 or 4 generators
- Determine the station capacity – formulas and operational experience
- Capable of supplying community with at least one major failure

## Community Demand Data

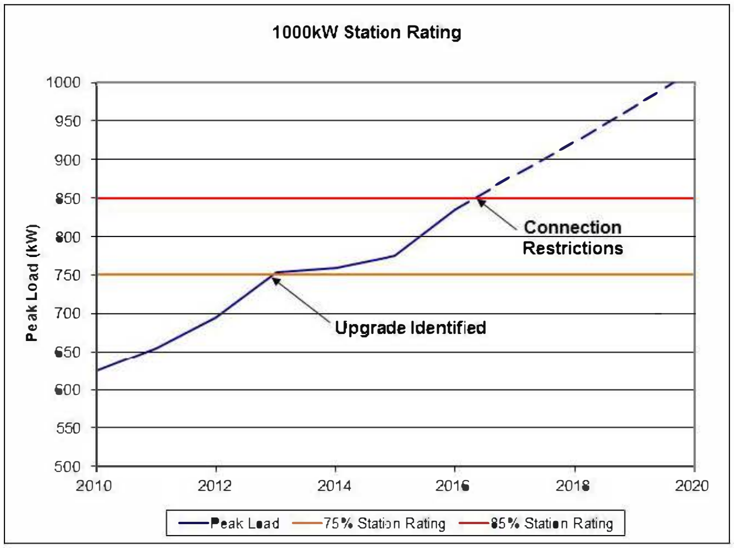
- SCADA system records main breaker output
- Peak load is compared to station rating



## Community Demand Data Cont'd

- At 75% of station rating, First Nation is informed about future need for capacity increase.
- At 85% of station rating, connection restrictions are imposed to protect the reliability of electrical supply to existing customers
  - New and upgraded connections are not allowed until station is upgraded

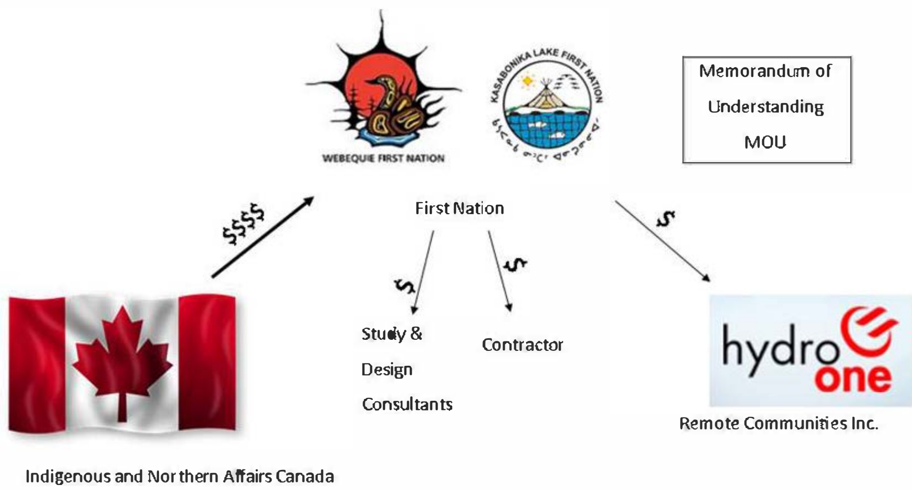
## Typical Load Growth & Thresholds



## Upgrades

- Old Process
- New Process
- Station Design Overview
- Station Guidelines
- Current and Future Upgrades

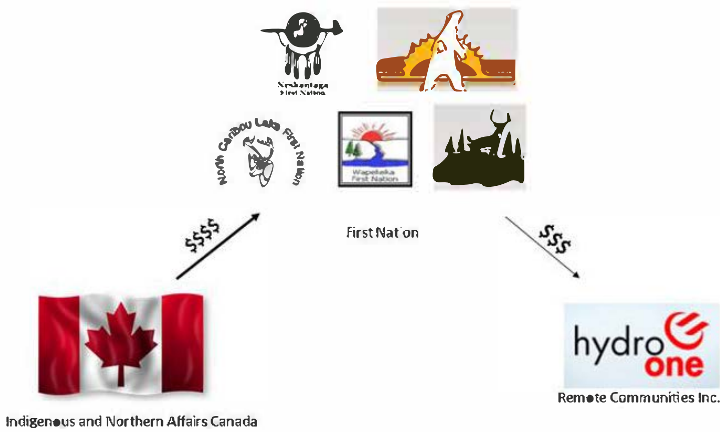
## Old Process



## Old Process Cont'd

- Upgrade can be completed in as little as 7 years
- Duplication of some work done by consultant and contractor

## New Process



## New Process Cont'd

- Upgrade can be completed in as little as 1 year
- Work more closely with community to find innovative solutions (i.e. tie-line, net metered solar)
- Design standardization in controls

## New Process Cont'd

## New Process Success

Completed Upgrades

- Neskantaga 2014
- Fort Severn 2015
- Deer Lake 2015
- Wapekeka 2015
- North Caribou 2016

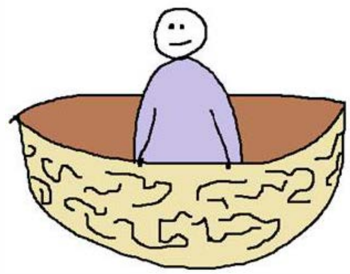
## New Process Success

Planned Upgrades

- Kingfisher Lake – 2017
- KI – Wapekeka – 2018
- North Caribou Phase 2 - 2019

## Questions?

## In a nutshell …



## Recap

Total System Management Everything is looked after … the operation, maintenance, logistics, regulatory and financial aspects of the Distribution and Generation systems, including fuel!

Seamless transition to Transmission

- We will look after everything
- We even have a backup solution readily available, unlike the IPAs

Customer and Community Programs

- Provide conservation, public safety, and community sponsorship programs

Operator and Meter Readers

– Pay for and train

## Recap

### Collections

- OEB and rate payers demand it, and so would any store owner
- IPAs have to collect in order to pay for fuel and maintenance
- Rate payers put in $2 for every $1 collected

### Safe Reliable Power

- 24/7 coverage for generation or distribution issues
- Canadian top quartile generation reliability - **99.998%** in 2015

### Lifetime Warranty

- On all in-service equipment i.e. engines, transformers, poles, etc.

### Lowest residential energy rates in Ontario

# Report on Customer Service Research

*Prepared for Hydro One Remote Communities*

August 2017

**Viewpoints Research**
Winnipeg, Manitoba
(204) 988-9253
www.viewpoints.ca

# TABLE OF CONTENTS

# EXECUTIVE SUMMARY

On behalf of Hydro One Remote Communities, Viewpoints Research conducted a telephone survey of 150 of its residential, business and government-supported organization customers from May 3 to June 24, 2017.

Where possible, the survey tracks findings from six previous waves of customer surveys conducted approximately every two years since 2003.

## Satisfaction with Electricity Service

Overall satisfaction with the electricity service customers receive from Hydro One Remotes, is 90%, similar to levels recorded in 2015, 2011 and 2009 but down from 97% recorded in 2013.

## Reasons for Customer Satisfaction

Among customers who are satisfied with their electricity service, having electricity available when they want it, and having had no problems with their Hydro service, continues to be the main driver of satisfaction with Hydro One electricity service (71%).

Approximately one in four customers attributed their satisfaction to good or improved service (14%) or improved reliability (12%). Satisfaction with customer service is mentioned by 7% of customers.

## Reasons for Customer Dissatisfaction

There were 11 dissatisfied customers in this research. At least eight customers mentioned that rates are high (73%), rates are discriminatory or unfair (9%) or that their bill is confusing (9%) as reasons they are not satisfied. Three customers mentioned service-related reasons, including power not being reliable (18%) and brownouts and problems with appliance (9%). Other reasons given are: the service is bad for the environment, smelly or dirty (18% or 2 mentions) and their community is hurt by the service (9% or 1 mention).

## Billing Accuracy

Two thirds of the customers interviewed were the person in their household who usually pays the Hydro bill (67%), while 3% said sometimes and 31% said no.

Of those who pay the bill usually or sometimes, perceptions regarding the overall accuracy of Hydro One's billing has dropped somewhat over the past two waves of research.

In total, 7% of customers said their bills were either not correct very often (4%) or never correct (3%). One in four respondents were unsure how to answer this question (25%).

## Rates vs. Rest of Ontario

Two thirds of Hydro One Remotes customers believe their Hydro rates are either the same as the rest of Ontario (30%) or higher (35%), while three in ten are unsure (29%). Just 7% of customers believe their rates are lower.

## Preferred Bill Payment Method

Customers were presented with five ways they could pay their Hydro bill and asked to select their one preferred method. A majority of respondents did not select any one of the responses. One in four said ‘none of the above’ (25%), 21% offered another means of payment or said ‘more than one’ and 7% were unsure.

Of the five options presented, a money gram or money order is the choice of 16% of customers, 14% chose a pre-paid credit card, 9% prefer paying online using a credit card, 5% like to use a cheque and 4% prefer to pay cash.

## Incidence of Customer Contact

Almost half of customers said they contacted Hydro One in the past year (49%). As in previous years, the most common reason customers contacted the utility was to discuss their bill (31%). Other reasons for contact include customers needing information (17%) and the power being out (15%).

## Satisfaction with Customer Contact

Among customers who called Hydro One Remotes, satisfaction with how the utility handled their contact rebounded to 85%, falling just short of 2013’s record high of 88%. This includes almost half of customers who said they were very satisfied with their contact with Hydro One (45%).

## Drivers of Service Satisfaction

This research tested customers’ agreement with three statements related to customer service, to explore customers’ experiences and perceptions in key service areas. Hydro One Remote Communities scored best at *dealing with emergencies* (82% agree overall) and *staff being polite and friendly* (79%). Customers were less likely to agree that *when they call the Hydro One office someone usually answers quickly.*

## Number of Calls Needed

Of those who remember calling the office, a majority of customers said their question or concern was resolved the first time they called Hydro, while 18% said an additional call was required..

## Awareness of Local Operators

Two thirds of customers know who their local Hydro One operator is (65%), at its second highest level since tracking began. One third do not know who their operator is (35%).

## Awareness of Meter Readers

Seven in ten respondents know who their meter reader is (70%), its second highest level over five waves of tracking. One in three customers admitted they do not know their local meter reader (30%).

## Contact During Outages

A majority of customers do not call anyone when there is an outage (54%). One in eight call the emergency hotline (13%), while fewer call the operator (11%) or the Band Council Office (9%). Six percent (6%) call the phone number on their bill and 5% call the meter reader.

## Local Environmental Protection

About six in ten Hydro One Remotes customers said the utility takes environmental protection in the community seriously (58%). About one in ten said Hydro One does not take it seriously (10%). One third of respondents were unsure (32%).

## Renewable Electricity Generation

About three in ten customers were aware communities like theirs can generate renewable electricity through solar, wind or small hydro water projects and sell it back to Hydro One Remotes (31%), while 69% were not aware of this potential or were unsure.

## Investment in Renewable Energy

Two thirds of customers hold the view that Hydro should invest more in renewable energy (65%), while 11% said no or were unsure and 25% declined to answer the question.

## Electricity Rebates & Programs

Most Hydro One Remotes customers were not aware of various electricity-related rebates and programs available to them.

### *Appliance Rebates*

More than one third of customers are aware they can receive rebates up to $200 when they buy energy-efficient appliances (35%).

### *LEAP & OESP*

Awareness has jumped regarding the Low-Income Emergency Assistance Program (LEAP) to 33%, while one in four is aware of the Ontario Electricity Support Program (OESP) (25%).

# GOALS & METHODOLOGY

## Goals

On behalf of Hydro One Remote Communities, Viewpoints Research conducted telephone interviews with the utility's residential, commercial and government-supported organization customers from May 3 to June 24, 2017. Many of the questions included in this survey have been tracked from earlier customer surveys administered about every two years since 2003. The research explored the following:

- Customers' views on the accuracy of their bills,
- Recent contact with Hydro One and satisfaction with the contact,
- General perceptions of Hydro responsiveness and customer service,
- Customers' preferred method of bill payment,
- Awareness of local Hydro One staff,
- Perception of Hydro rates compared to elsewhere in Ontario,
- Awareness of electricity-related rebates and programs,
- Perceptions of Hydro One's commitment to environmental protection in their communities,
- Views on local generation of renewable electricity sources and Hydro's role in the development of renewable energy sources, and
- Overall satisfaction with the electricity service provided by Hydro One, and reasons for their satisfaction or dissatisfaction,

## Methodology

Sample was drawn from listed and unlisted telephone numbers in the Hydro One Remote Communities' service area. Hydro One Remote Communities has about 3,500 customers in 21 communities. This year 150 customers were interviewed, including 147 residential customers, 2 business customers and 1 government-supported organization. The survey has an overall confidence level of ±7.8%, nineteen times out of twenty.

The findings of this research were cross tabulated by the following demographic and attitudinal variables:

- Community,
- Main heat source,

- Type of service (residential, commercial or government-supported organization),
- Satisfaction with electrical service,
- Whether or not customers have contacted Hydro One in the last year,
- Gender, and
- Age.

## Reporting

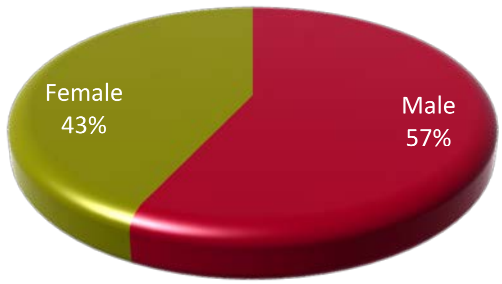
This report highlights the overall views and perceptions of Hydro One Remote Communities customers. When the attitudes of a particular set of customers is statistically different from customers overall, this will be noted in the report in a bulleted point. The report also compares the findings to results from seven previous waves of research conducted every two years since 2003.

There are significant differences of opinion among residents of the different communities served by Hydro One Remote Communities, however these results should be interpreted with caution since the number of respondents in most communities is very small. Caution should be applied, generally, when considering differences among sub-groups with fewer than 100 respondents.

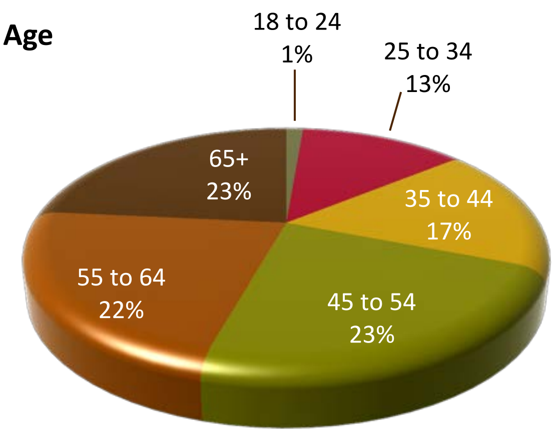
# RESPONDENT PROFILE

The following charts provide an overview of respondents interviewed for this wave of research.

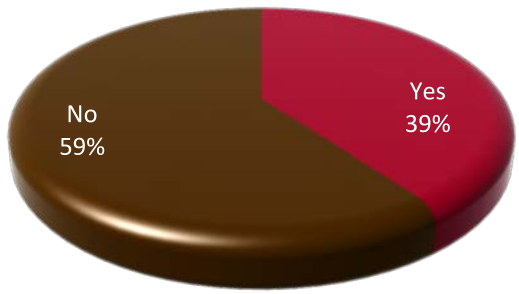
**Gender**



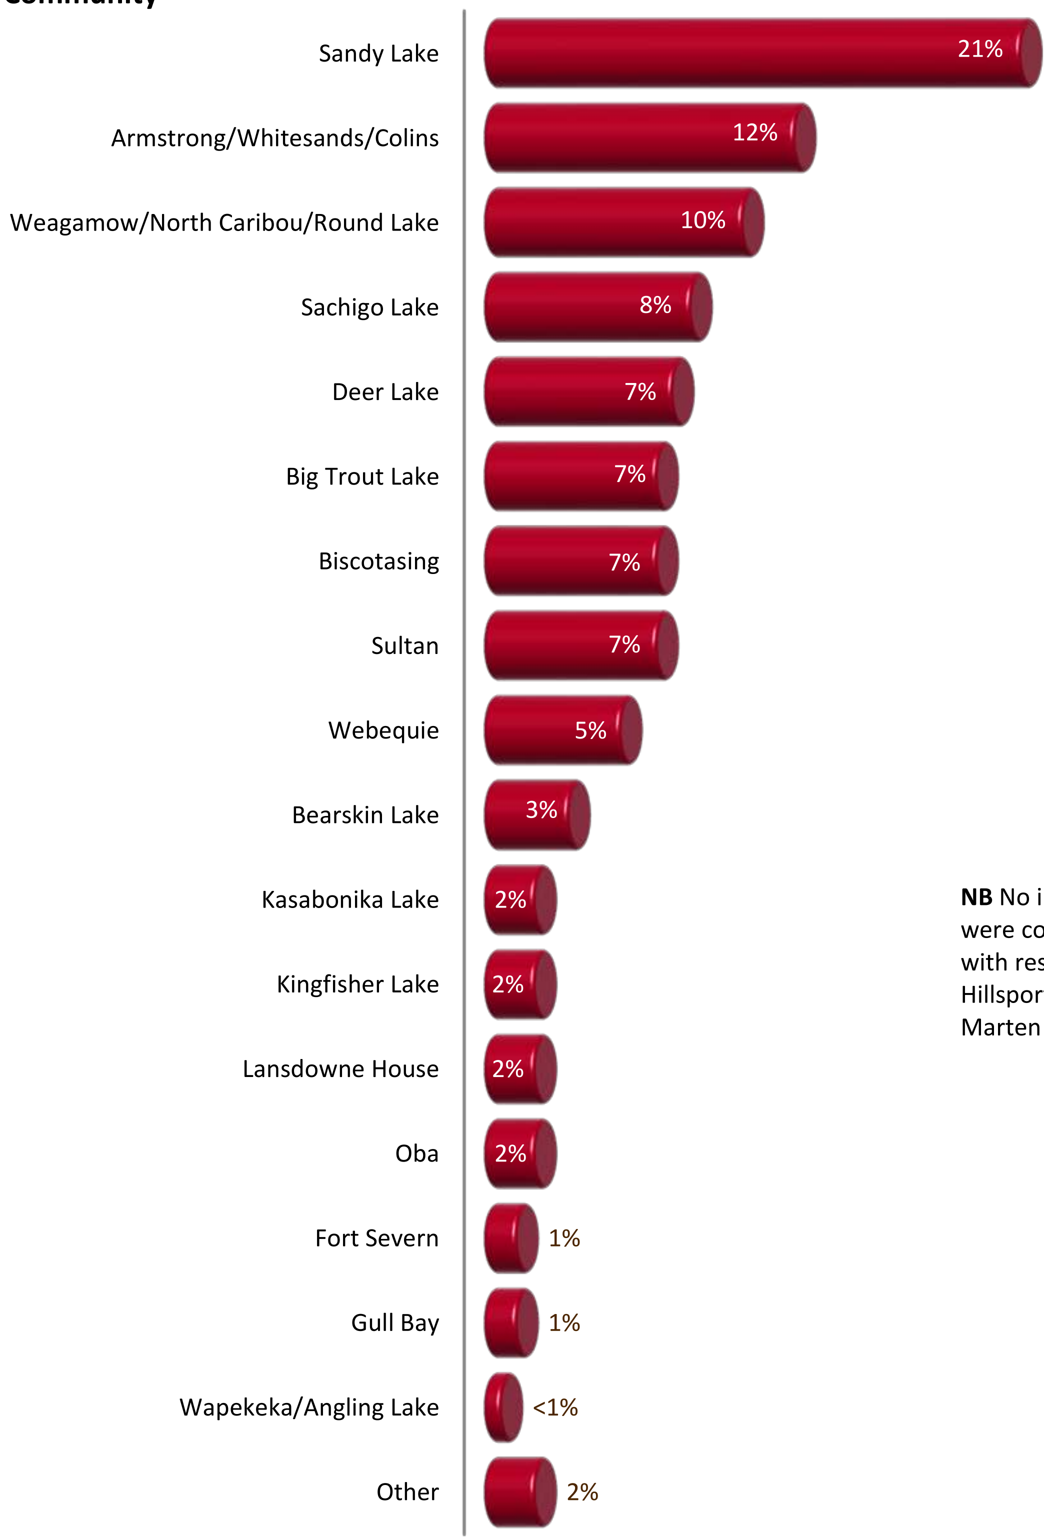
**Age**



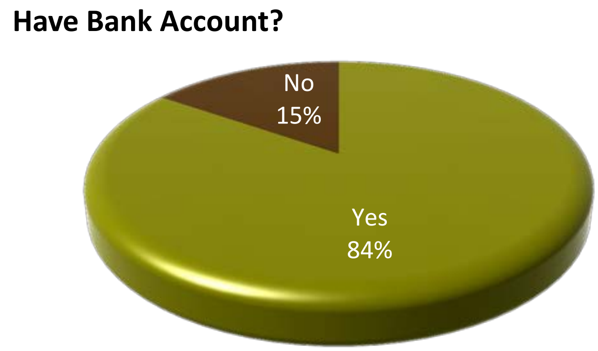
**Heat with Electricity?**



## Community



**NB** No interviews were completed with residents in Hillsport or Marten Falls.



## Respondents Over Time

The following table summarizes the demographic attributes of all respondents participating in the research since 2003. The characteristics of customers participating in this research have generally remained consistent over time.

**Respondent Over Time**

| Respondent Profile | 2017 | 2015 | 2013 | 2011 | 2009* | 2007 | 2005 | 2003 |

*Research conducted in 2009/2010 is reported as 2009 in this document.

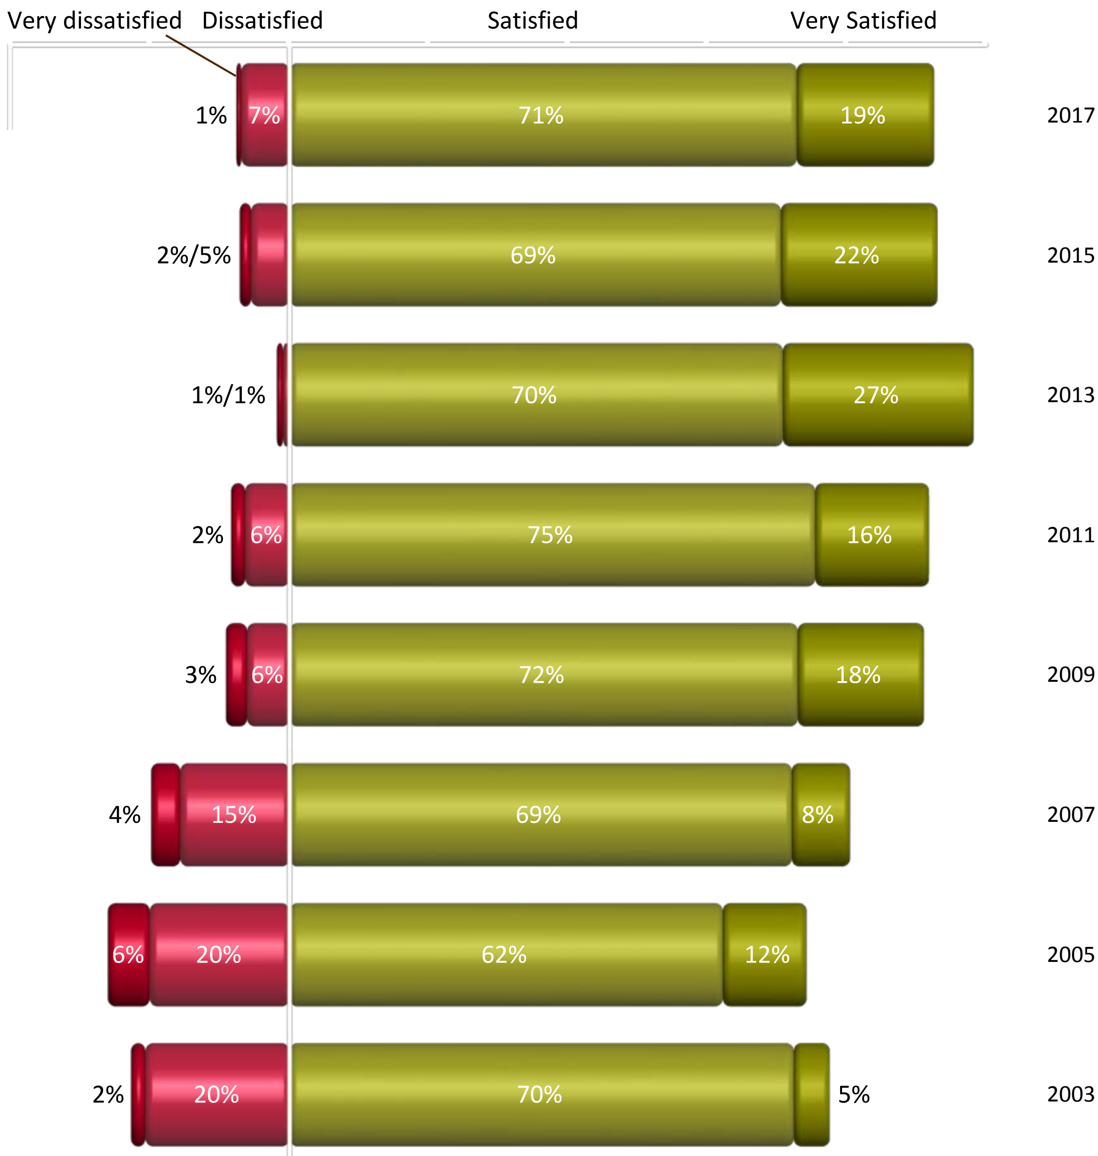
# RESEARCH FINDINGS

## Satisfaction with Electricity Service

### *Overall Satisfaction with Service (Q23)*

Overall satisfaction with the electricity service they receive from Hydro One Remotes, is 90%, similar to levels recorded in 2015 (91%), 2011 (90%) and 2009 (91%) but down from 97% recorded in 2013.

Chart 1: **Satisfaction with Electricity Service**



### *Reasons for Customer Satisfaction* (Q24)

Among those who are satisfied with their electricity service (n=135), having electricity available when they want it, combined with customers who indicate they have had no problems with their Hydro service, continues to be the main driver of satisfaction with Hydro One electrical service (71%) up 6 points since 2015, 11 points since 2013 (51%) and 25 points since 2009 (40%).

Approximately one in four customers attributed their satisfaction to good or improved service (14%) or improved reliability (12%). Satisfaction with customer service is mentioned by 7% of customers.

Chart 2 displays all the reasons for satisfaction mentioned by customers and Table 1 compares this year's results to past waves of research.

Chart 2: **Reason for Customer Satisfaction** (n=135)

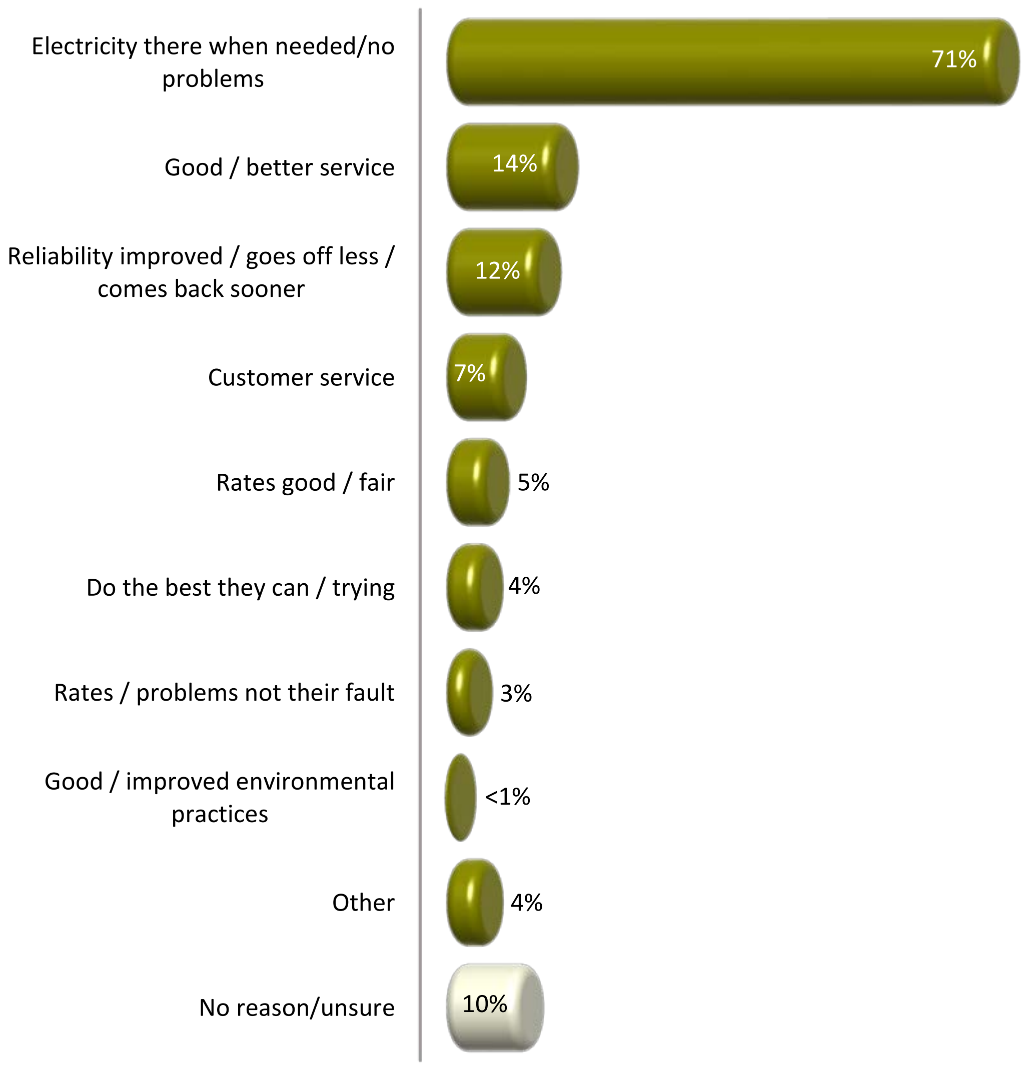


Table 1: **Reasons for Customer Satisfaction**

| Reason | 2017 | 2015 | 2013 | 2011 | 2009 | 2007 | 2005 | 2003 |

Percentages do not total 100% because customers were permitted more than one response.

### *Reasons for Customer Dissatisfaction* (Q25)

There were 11 dissatisfied customers in this research. Ten customers mentioned that rates are high (73%), rates are discriminatory or unfair (9%) or that their bill is confusing (9%) as reasons they are not satisfied. Three customers mentioned service-related reasons, including power not being reliable (18%) and brownouts and problems with appliance (9%). Other reasons given are: the service is bad for the environment, smelly or dirty (18%, 2 mentions) and their community is hurt by the service (9%, 1 mention). One customer offered another reason (9%) and one did not provide a response (9%).

Chart 3 displays the reasons for dissatisfaction mentioned by customers and Table 2 compares this year's results to past waves of research.

Percentages do not total 100% because customers were permitted more than one response.

## Hydro Billing & Rates

### *Billing Accuracy (Q3 & Q4)*

Two thirds of the customers interviewed were the person who usually pays the Hydro bill (67%), while 3% said sometimes and 31% said no.

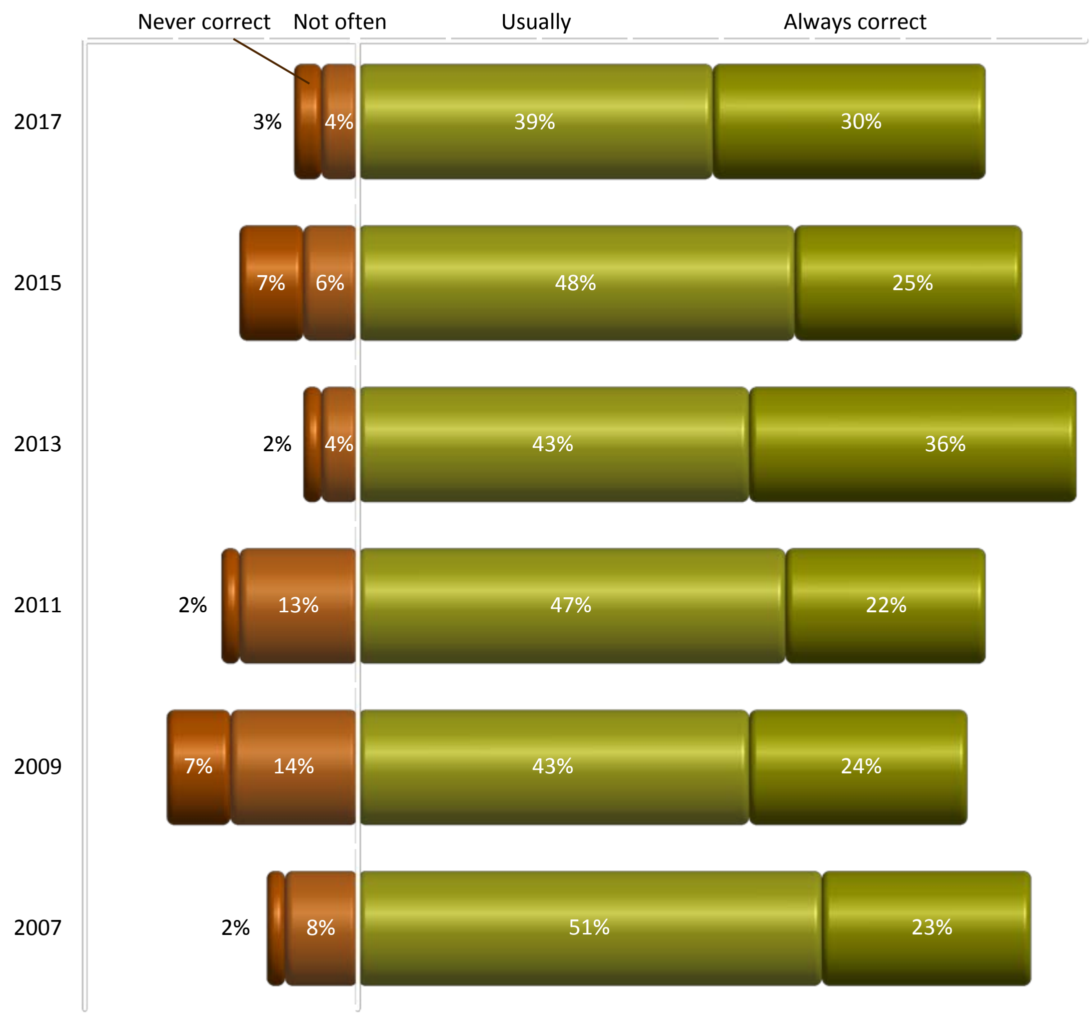
- The likelihood of paying the Hydro bill increases with age from 33% of 18 to 34-year-olds (21N) to 84% of those 55+ (68N).

Of those who pay the bill usually or sometimes (n=104), perceptions regarding the overall accuracy of Hydro One's billing has dropped somewhat over the past two waves of research to levels last seen in 2009 and 2011.

In this wave 30% said their Hydro One bill is always correct, up 5 points since 2015 and the second highest 'always correct' responses since tracking began. In addition, 39% of respondents said their bill is usually correct, down 9 points since 2015. In total, 7% of customers said their bills were either not correct very often (4%) or never correct (3%), down 6 points since 2015 and similar to 2013 results.

One in four respondents were unsure how to answer this question (25%), up 10 points since 2015.

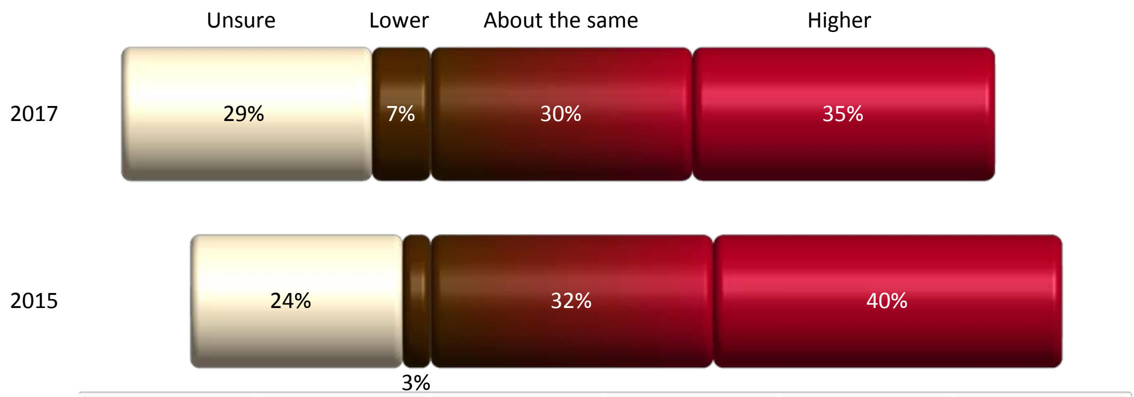
Chart 4: **Billing Accuracy**



### *Rates vs. Rest of Ontario* (Q16)

Two thirds of Hydro One Remotes customers believe their Hydro rates are either the same as the rest of Ontario (30%) or higher (35%), while three in ten are unsure (29%). Just 7% of customers believe their rates are lower. The perception that their rates are higher has dropped 5 points since 2015.

Chart 5: **Rates vs. Rest of Ontario**

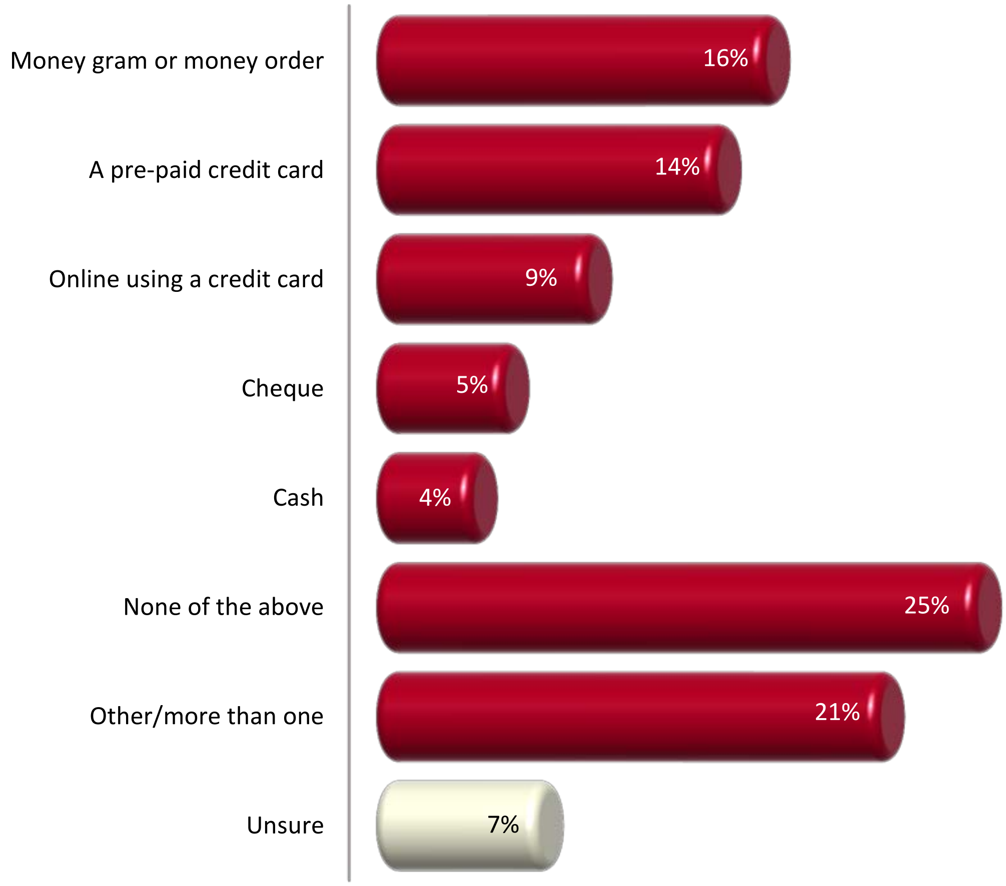


### *Preferred Bill Payment Method* (Q12)

Customers were presented with five ways they could pay their Hydro bill and asked to select their one preferred method. A majority of respondents did not select any of the responses. One in four said 'none of the above' (25%), 21% offered another means of payment or said 'more than one' and 7% were unsure.

Of the five options presented, a money gram or money order is the choice of 16% of customers, 14% chose a pre-paid credit card, 9% prefer paying online using a credit card, 5% use a cheque and 4% pay cash.

Chart 6: **Preferred Bill Payment Method**



## Customer Contact

### *Incidence of Contact (Q5)*

Almost half of customers said they contacted Hydro One in the past year (49%) compared to 42% in 2015, 38% in 2013 and 44% in 2011. As in previous years, the most common reason customers contacted the utility was to discuss their bill (31%, up 5 points since 2015). Other reasons for contact include customers needing information (17%, as in 2015) and the power being out (15%, up 6 points).

Chart 7 summarizes 2017 responses and Table 3 compares current responses to previous waves of research.

Chart 7: **Incidence of Contact**

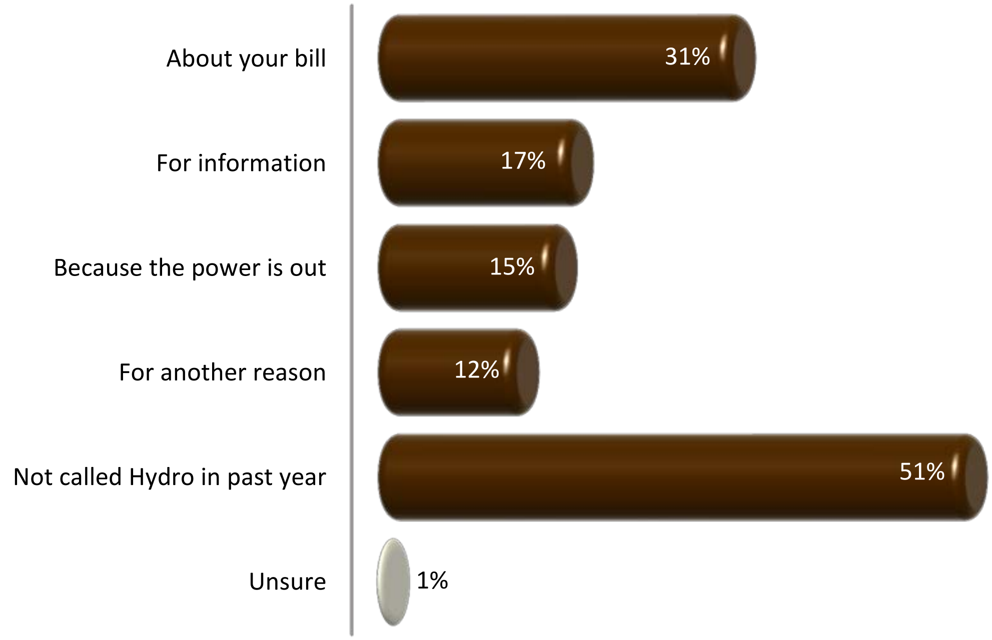


Table 3: **Incidence of Contact Over Time**

| Nature of Inquiry | 2017 | 2015 | 2013 | 2011 | 2009 |
|---|---|---|---|---|---|
| About your bill | **31%** | 26% | 19% | 24% | 20% |
| For information | **17%** | 17% | 12% | 13% | 18% |
| Because power was out | **15%** | 9% | 11% | 15% | 15% |
| Another reason | **12%** | 13% | 9% | 10% | 9% |
| Have not called Hydro One in past year | **51%** | 58% | 62% | 54% | 57% |
| Don't recall | **1%** | 0% | 1% | 2% | 2% |

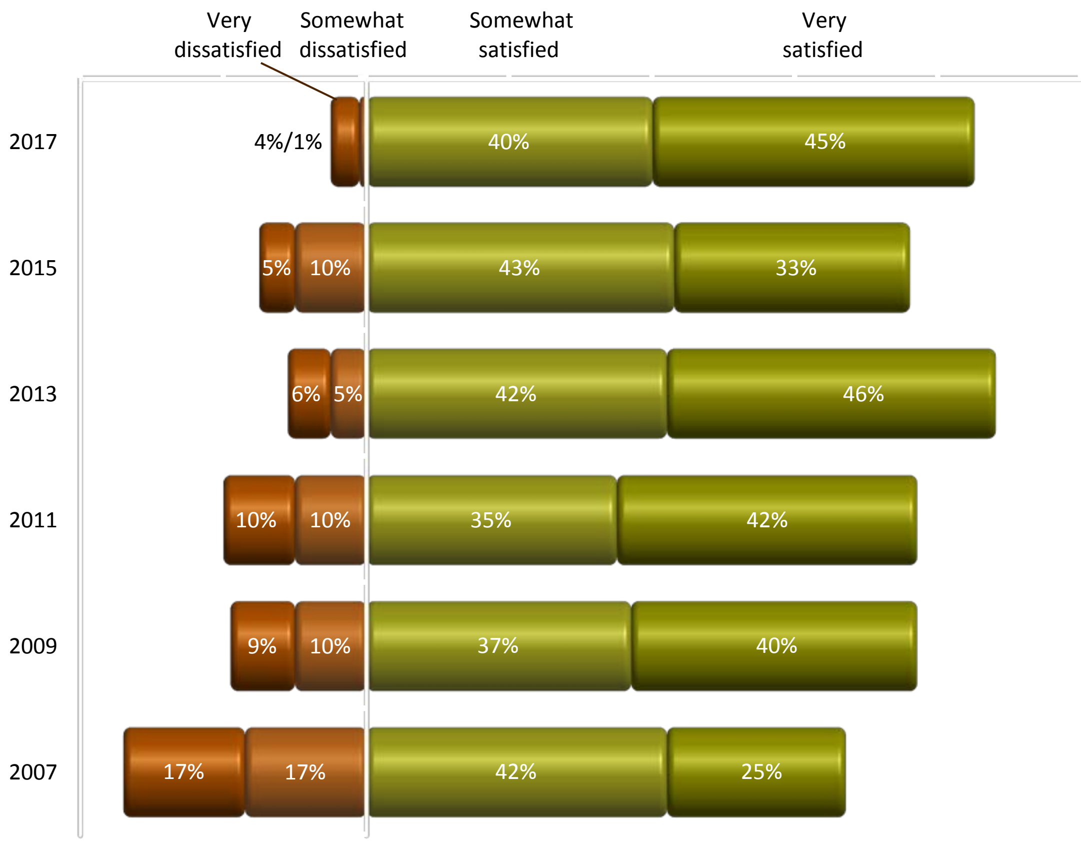
Percentages do not total 100% because customers were permitted more than one response

### *Satisfaction with Customer Contact (Q6)*

Among customers who called Hydro One Remotes (n=73), satisfaction with how the utility handled their contact rebounded to 85%, up 9 points over 2015 results, falling just short of 2013's record high of 88%. This includes almost half of customers who said they were very satisfied with their contact with Hydro One (45%, up 12 points since

2015). Current results represent the second highest satisfaction rating since tracking this question began in 2007.

Chart 8: **Satisfaction with Customer Contact**



- Overall satisfaction with Hydro Remotes correlates with customers' satisfaction with their recent contact.

### ***Drivers of Service Satisfaction*** *(Q7 - Q9)*

This research tested customers' agreement with three statements related to customer service, to explore customers' experiences and perceptions in key service areas. Hydro One Remote Communities scored best at *dealing with emergencies* (82% agree overall) and *staff being polite and friendly* (79%). Customers were less likely to agree that *when they call the Hydro One office someone usually answers quickly,* though a majority still agree (60%).

Agreement with these statements rebounded somewhat but still remains among the lowest ratings recorded since 2009.

Chart 9 summarizes 2017 responses and Table 4 compares current responses with past waves of research.

Chart 9: **Drivers of Service Satisfaction**

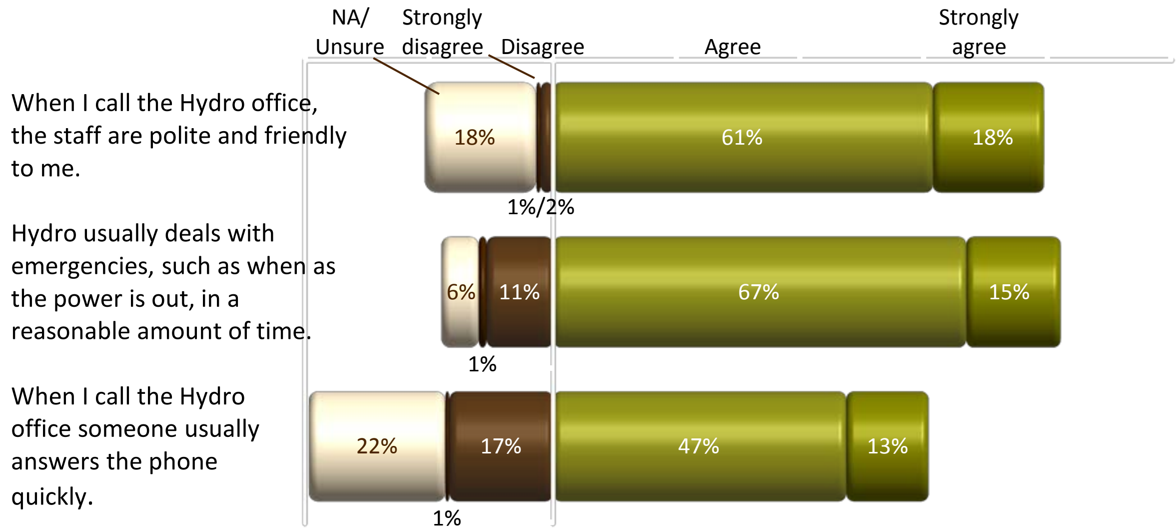


Table 4: **Drivers of Service Satisfaction**

| Statement | 2017 | 2015 | 2013 | 2011 | 2009 |
|---|---|---|---|---|---|
| Hydro One usually deals with emergencies, such as when the power is out, in a reasonable amount of time. | **82%* (15%)** | 80% (15%) | 88% (18%) | 85% (20%) | 86% (18%) |
| When I call the Hydro One office, the staff are polite and friendly to me. | **79% (18%)** | 75% (17%) | 80% (20%) | 80% (18%) | 80% (20%) |
| When I call the Hydro One office someone usually answers the phone quickly. | **60% (13%)** | 62% (11%) | 65% (11%) | 61% (12%) | 68% (12%) |

*Unbracketed percentages combine agree and strongly agree responses, bracketed percentages are strongly agree responses only.

Percentages do not total 100% because those who were unsure are not included.

- Among communities with 10 or more respondents, Biscotasing (100%) and Sultan (90%) are most likely to agree that Hydro deals with emergencies in a reasonable amount of time, while Big Trout Lake/KI are least likely to (70%).

### ***Number of Calls Needed*** *(Q10)*

Of those who remember calling the office, a majority of customers said their question or concern was resolved the first time they called , while 18% said an additional call was required.

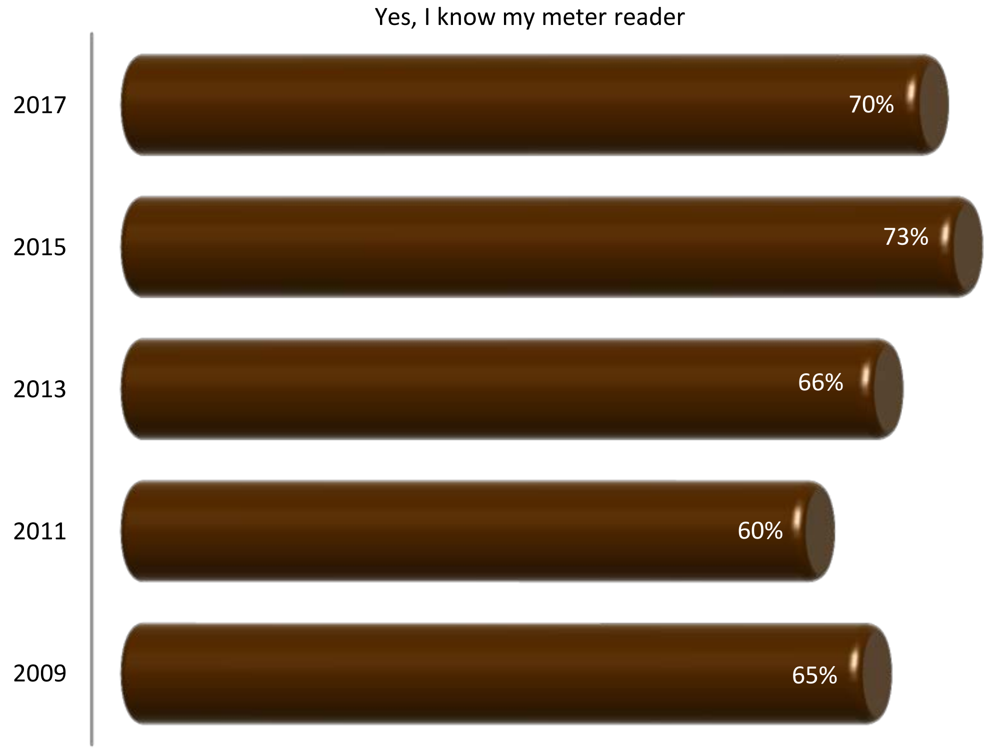
### *Awareness of Meter Readers (Q14)*

Seven in ten respondents know who their meter reader is (70%), down 3 points from 2015 and at its second highest level over five waves of tracking. One in three customers admitted they do not know their local meter reader (30%), up 3 points.

Chart 12: **Awareness of Hydro Meter Readers**

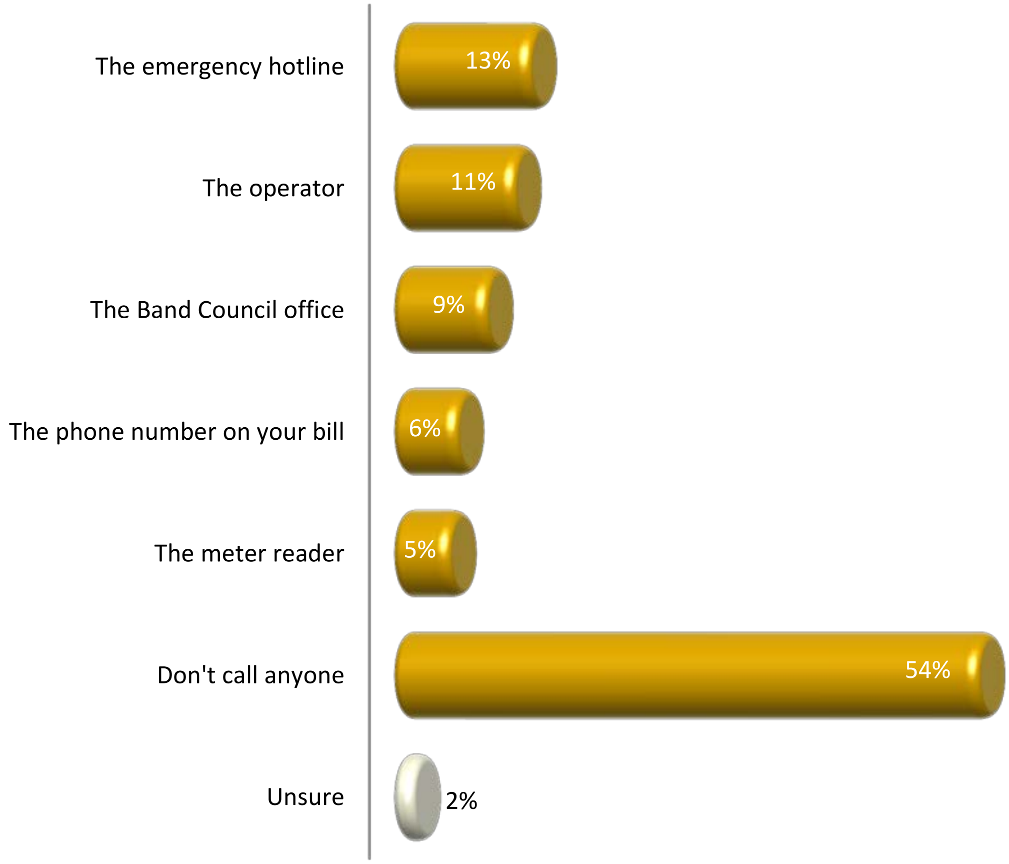


- Among communities with 10 or more respondents, Sultan (100%) and Big Trout Lake/KI (90%) are most likely to know their meter reader, and Armstrong/Whitesands/Collins is least likely to (33%).

### *Contact During Outages (Q15)*

A majority of customers do not call anyone when there is an outage (54%). One in eight call the emergency hotline (13%), while fewer call the operator (11%) or the Band Council Office (9%). Six percent (6%) call the phone number on their bill and 5% call the meter reader. Two percent (2%) are unsure.

Chart 13: **Contact During Outages**

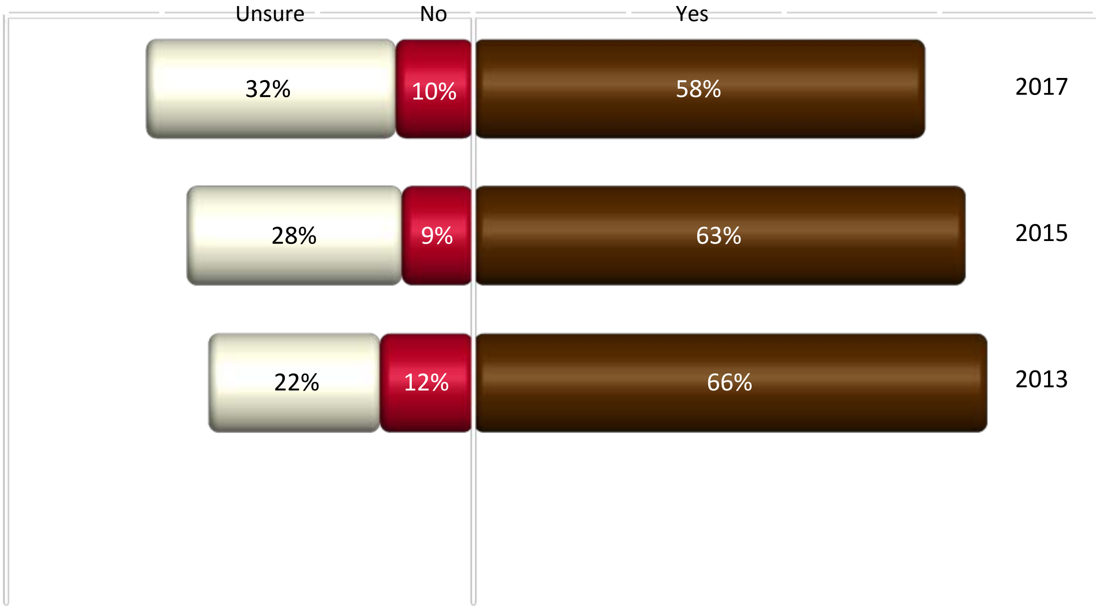


## Hydro One Remotes & the Environment

### *Local Environmental Protection* *(Q17)*

About six in ten Hydro One Remotes customers said the utility takes environmental protection in the community seriously (58%), down 5 points since 2015 and 8 points since 2013. About one in ten said Hydro One does not take it seriously (10%), similar to the last two waves of research. One third of respondents were unsure (32%), up 4 points.

Chart 14: **Does Hydro Take Local Environmental Protection Seriously?**

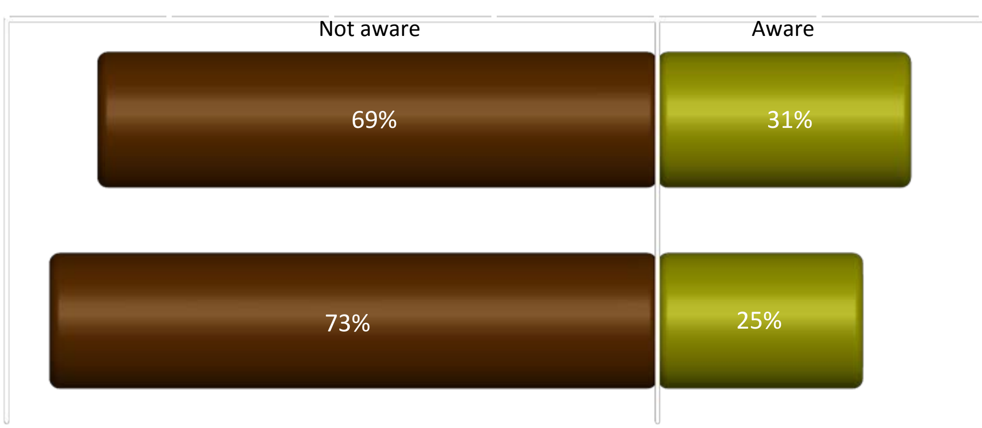


- In communities with 10 or more respondents, Biscotasing (90%), Deer Lake and Sultan (each 73%) are most likely to say Hydro takes this seriously, and Big Trout Lake/KI is least likely to (10%).

### ***Renewable Electricity Generation*** *(Q21)*

About three in ten customers were aware communities like theirs can generate renewable electricity through solar, wind or small hydro water projects and sell it back to Hydro One Remotes (31%, up 6 points since 2015), while 69% were not aware of this potential or were unsure.

Chart 15: **Renewable Electricity Generation**

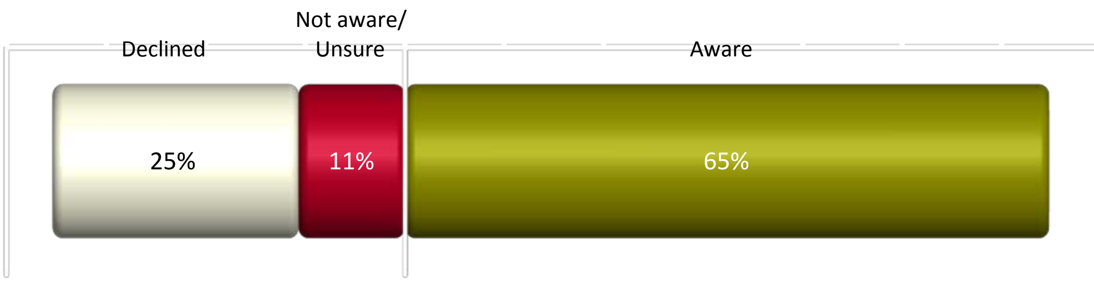


- Men are much more likely to be aware that their communities can generate electricity and sell it back to Hydro (43%) than women (16%).

### *Investment in Renewable Energy (Q22)*

Two thirds of customers hold the view that Hydro should invest more in renewable energy (65%), while 11% said no or were unsure and 25% declined to answer the question.

Chart 16: **Investment in Renewable Energy**



- Men are also more likely than women to think Hydro should invest more in renewable energy (70% vs. 58%).

## Electricity Rebates & Programs

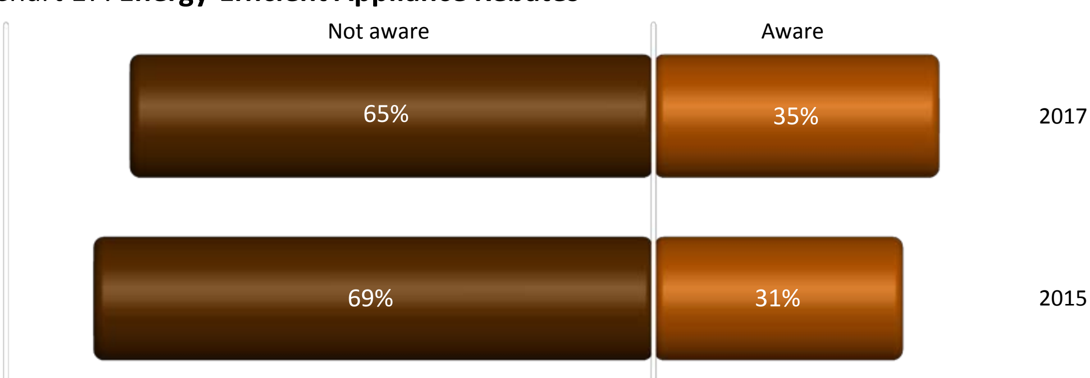
A minority of Hydro One Remotes customers is aware of various electricity-related rebates and programs available to them.

### *Appliance Rebates (Q18)*

More than one third of customers are aware they can receive rebates up to $200 when they buy energy-efficient appliances (35%), up 4 points since 2015.

- The likelihood of being aware of this rebate increases with age, from 10% of 18 to 34-year-olds to 46% of those 55+.

Chart 17: **Energy-Efficient Appliance Rebates**



### ***LEAP & OESP*** *(Q19 & Q20)*

Awareness has jumped regarding the Low-Income Emergency Assistance Program (LEAP) (33%, up 15 points), while one in four is aware of the Ontario Electricity Support Program (OESP) (25%).

- In communities with 10 or more respondents, Sachigo Lake (75%) and Sultan (55%) are most likely to know about LEAP, while Big Trout Lake/KI (10%) and Deer Lake (18%) are least likely to.
- Customers who contacted Hydro in the past year are more than twice as likely to know about LEAP (45%) than those who did not contact Hydro (21%).

Chart 18: **LEAP Program**

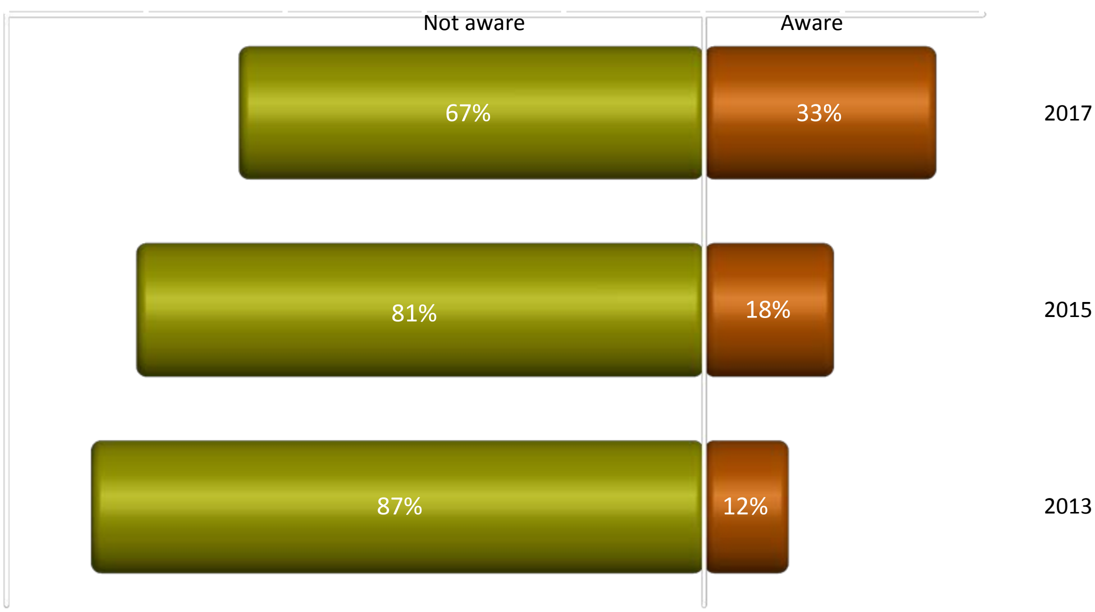


Chart 19: **OESP Program**

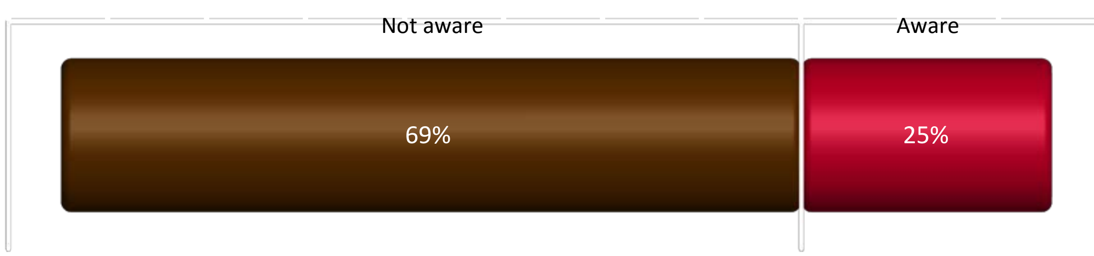

# PERFORMANCE MANAGEMENT

"We supply safe, reliable and affordable electricity to remote communities by focusing on continuous improvement, operational excellence and outstanding customer service."

## 1.0 INTRODUCTION

The Board has established specific measures and four key areas of performance for Electrical Distribution Utilities. The key performance areas are:

- Customer focus;
- Operational effectiveness;
- Public policy and responsiveness; and
- Financial performance.

Remotes manages its business based on the principles of continuous improvement established under the ISO framework, taking a disciplined approach to continuous improvement in all aspects of its operations. Based on its business model and mission, priority areas of concern are safety, reliable and affordable electricity, operational excellence and customer service. Objectives that Remotes believes align well with the Board's key performance areas. To measure and monitor its performance, Remotes sets annual targets and plans for improvement in the areas of financial strength, customer relations, operational excellence, productivity, environmental stewardship and health and safety. The progress made in achieving these targets is monitored through an internal scorecard. Copies of the internal scorecards from 2013 to July 2017 can be found as Attachment 1 of this exhibit. The Remotes' Electricity Scorecard can found as Attachment 2.

## 2.0 CUSTOMER RELATIONSHIPS

Annually, Remotes establishes targets to improve its customer relationships and overall customer service. Since 2011, Remotes has established targets and tracked the number of Band Council meetings its Director has with First Nation Band Councils and Tribal Councils. Remotes conducts a biennial random sample customer survey, and in those years also establishes a target of 90% satisfaction, based on previous survey results. In order to improve performance on specific areas of customer service, Remotes will, from time to time, increase the profile of various transactional customer service measures. Over the five year period, those areas included meeting the Ontario Energy Board Reconnection Standard and answering telephone calls within thirty seconds. In 2016, Remotes decided to begin tracking a range of customer initiatives in a way similar to the ISO framework, where Remotes staff and management thought improvements of the customer experience could be made. Since 2016 is the first year for this metric, no year over year comparisons are available. Activities under this initiative included activities to improve bill accuracy, customer awareness of the LEAP and OESP programs, public safety activities, improvements to various customer letters and other customer communications.

<u>Band/Tribal Council Meetings</u>

Previous customer surveys indicated that community members and in particular community leaders like to know people in the company personally. Being able to put a face to a name builds trust on both sides. To ensure that community leaders and the Director know one another, Remotes decided, starting in 2011, to track the number of Band Council and Tribal Council that the Director attends. The target for this initiative is to meet with the Band or Tribal Council at least eight times per year. Here are the actuals achieved for 2013 to July 2017 inclusive:

- 2013 – actual achieved 8 meetings;
- 2014 - actual achieved 9 meetings;
- 2015 - actual achieved 8 meetings;
- 2016 - actual achieved 13 meetings; and
- July 2017 - actual achieved 17 meetings with the Director's First Nation/Tribal Council meetings.

As this metric is an important aspect of building relationships with communities, Remotes will continue to track this metric.

## 3.0 ENVIRONMENTAL STEWARDSHIP

The following are metrics on the Remotes' internal scorecard regarding environmental stewardship.

<u>Environmental Containment</u>

Remotes' customers and the provincial and federal governments are all concerned about the environment. Because Remotes uses diesel fuel it establishes various metrics to drive improvements to fuel handling, spill reporting and compliance with fuel regulations. Since 2001 Remotes has tracked fuel spills, starting with a target of less than or equal to 300 litres per year lost to the environment. The target is now less than or equal to 100 litres per year. This new target was achieved in each of the last five years with the total spills being zero in four of those years. The achieved results are as follows:

- 2013 – actual achieved 0 litres spilled;
- 2014 – actual achieved 10 litres - Two small spills in garages in Sandy Lake and Deer Lake went directly into the ground. Although both spills were cleaned-up, small amounts of containment were lost to the environment.

- 2015 - actual achieved 0 litres spilled;
- 2016 - actual achieved 0 litres spilled; and
- July 2017 - actual achieved 0 litres spilled.

<u>Environmental Management System ("EMS") Objectives and Achievements</u>

Each year, the Remotes Steering Committee ("RSC") establishes objectives and achievements to base the ISO model (plan, do, check, act), which is designed to drive continuous improvement in a company's environmental objectives. The current key environmental objectives are preventing pollution, reducing noise emissions and reducing air emissions. Programs are developed annually to meet these objectives. The target for acceptable performance is the completion of 80% of planned deliverables. Results for the last three and half years are illustrated in Figure 1 below.

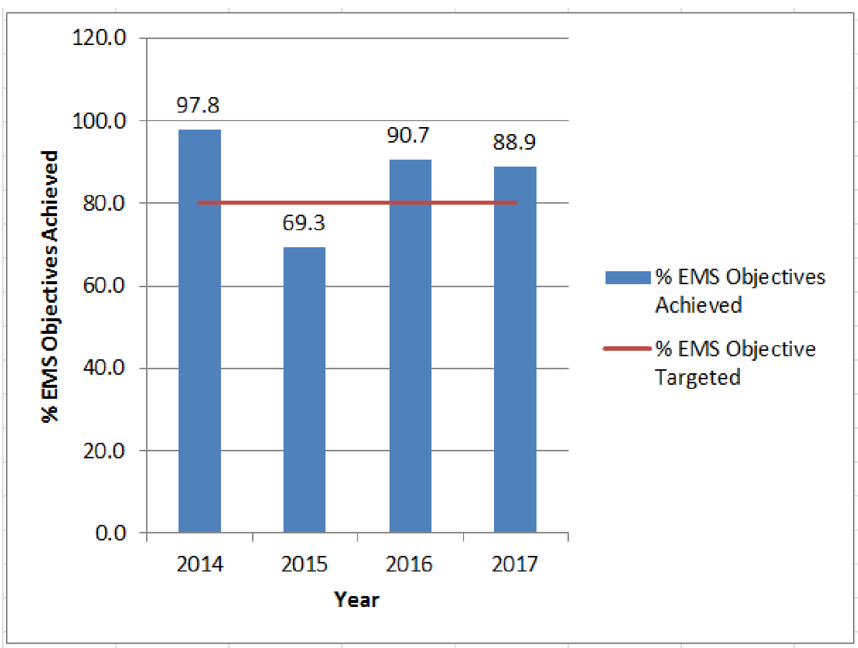

**Figure 1 - Achievement of Environmental Management System Objectives**

*2017 result only covers to the end of July

In 2015, some targets that required First Nations' involvement were not completed as communities focused on other priorities, resulting in a lesser performance than targeted.

## 4.0 FINANCIAL STRENGTH

Each year, depending on business priorities and results from previous years, Remotes establishes specific annual targets to improve its financial performance. Due to Remotes' break-even business model, targets such as net income or financial ratios are not appropriate measures of performance. Consequently, Remotes establishes annual priorities that reduce its costs or improve the efficiency of its operations under this performance bucket.

Reducing Residential Arrears

For the past decade, Remotes has focused on ways to reduce overall customer arrears and, in particular, ways to improve residential bill collection while continuing to maintain high levels of customer satisfaction and positive relationships with its First Nation communities. For the purposes of the internal report card, Remotes tracked this metric in three of the past five years 2014, 2015 and 2016 with a target to reduce arrears by 5% in each of those years. Historical year achievements include:

- 2014 – actual achieved a 6% reduction;
- 2015 – actual achieved a 23% reduction; and
- 2016 – actual achieved a 5% reduced despite $1.64 million in higher billings due to the removal of the Ontario Clean Energy Benefit.

Although the scorecard only shows residential arrears, Remotes focuses on reducing outstanding balances for all customer classes, as it improves Remotes financial performance, is less costly for its direct customers and less costly for the customers who fund RRRP. Since 2006, Remotes has reduced outstanding accounts receivable for all classes of customers by 82%, as shown in Figure 2.

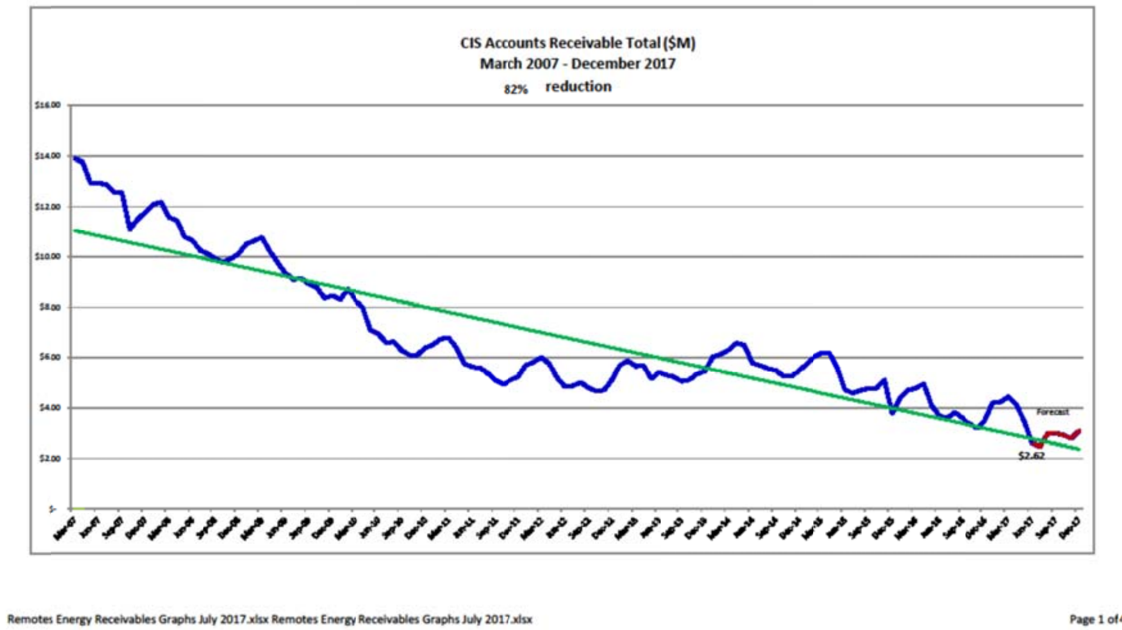

**Figure 2 - CIS Accounts Receivable**

In 2013, customer collections activity was reduced as a result of the implementation of a new billing system. In that year, Remotes chose targets expected to reduce its overall operating costs. Targets included negotiating a new agreement with Deer Lake First Nation related to the Shoulderblade Falls hydroelectric station as the station provides financial benefits to Remotes and to the First Nation. That year, Remotes also focused on winter road planning milestones to ensure that fuel and equipment would be transported in the most cost effective way to the communities. In 2015, Indigenous and Northern Affairs Canada ("INAC") agreed to fund three large generation capital projects. To ensure maximum benefit to both ratepayers and INAC, Remotes decided to also track the project delivery times and budgets as a financial measure. In 2017, Remotes decided to track milestones related to the preparation of its first Distribution System Plan and its preparation of the cost of service filing as its financial measures.

## 5.0 HEALTH AND SAFETY

The following are Health and Safety metrics that Remotes tracks and monitors.

<u>Mandatory Training</u>

Remotes understands the importance of creating a culture focused on the health and safety of all employees and the public. To create this culture, Remotes chose to measure the level of completion of all Health and Safety mandatory training. The results are shown in Figure 3.

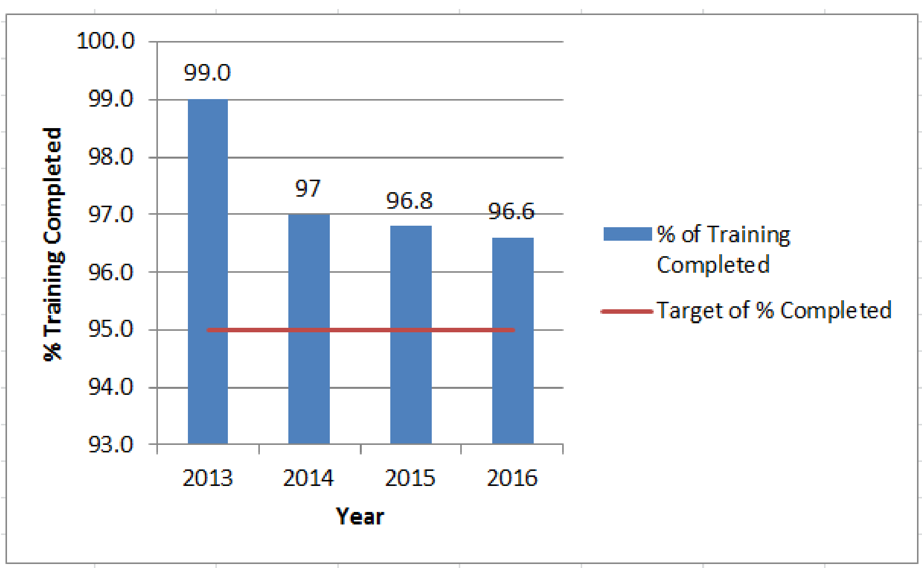

**Figure 3 - Completion of Mandatory Training**

As Remotes met this metric consistently, it was dropped at year end in 2016 to focus its internal reporting on other areas requiring improvement.

Lost Time Injuries

From 2013 to July 2017, the Remotes have had zero lost time injuries.

Health and Safety Management System (“HSMS”) Objectives and Achievements

Each year, the RSC establishes objectives and achievements to control safety risks and improve health and safety performance based on the ISO model, which is designed to drive continuous improvement. As part of this process, the RSC develops a number of deliverables that improve safety performance. Many of these improvements, such as snow clearing, improved walkways on site and ensuring that required equipment is on site also have efficiency benefits. The target for acceptable performance is the completion of 80% of planned deliverables. The results are shown in Figure 4.

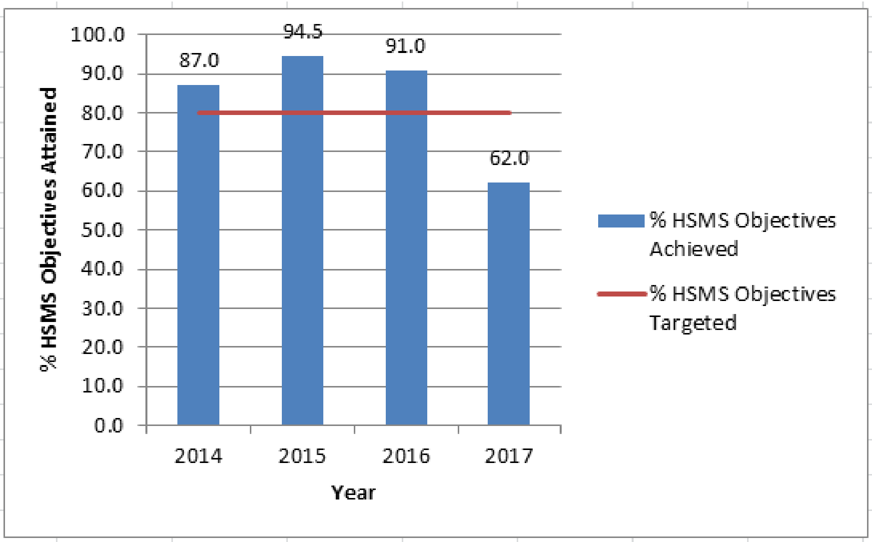

**Figure 4 - Achievement of Health and Safety Management System Objectives**

*2017 result only covers to the end of July

## 6.0 OPERATIONAL EXCELLENCE

Remotes sets annual targets for its reliability performance, using the Board reliability measures and also by establishing a measure for generation availability. In terms of the Board measures, Remotes aims to meet or improve on its five year average for System Average Interruption Duration Index ("SAIDI") and System Average Interruption Frequency Index ("SAIFI") including loss of supply. For the purposes of internal reporting, Remotes excludes events that meet its own definition of major events. Remotes internal standard excludes outages beyond Remotes' control, that result in widespread system damage affecting an entire community; or an outage that affects an entire community for duration of at least twelve hours because staff cannot access the community due to circumstances beyond the control of the company (i.e. as a result of adverse weather that prevents a plane from landing). This does not meet the test of the IEEE standard required by the Board. SAIDI performance in 2016 and 2017 reflects adjustments for major events.

The measure for generation availability is based on the minutes of station outages. For internal purposes, this is different from the calculation in the Distribution System Plan (Exhibit B, Schedule 1, Section 2.3) as the internal goal established was to assume that the generation is a single system, rather than nineteen separate generating stations. Major events as described above and planned generation outages related to capacity upgrades are excluded from this internal performance measurement.

<u>SAIDI and SAIDI Results</u>

The Remotes' SAIDI and SAIFI results using the metric on the internal scorecard are illustrated in Figures 5 and 6.

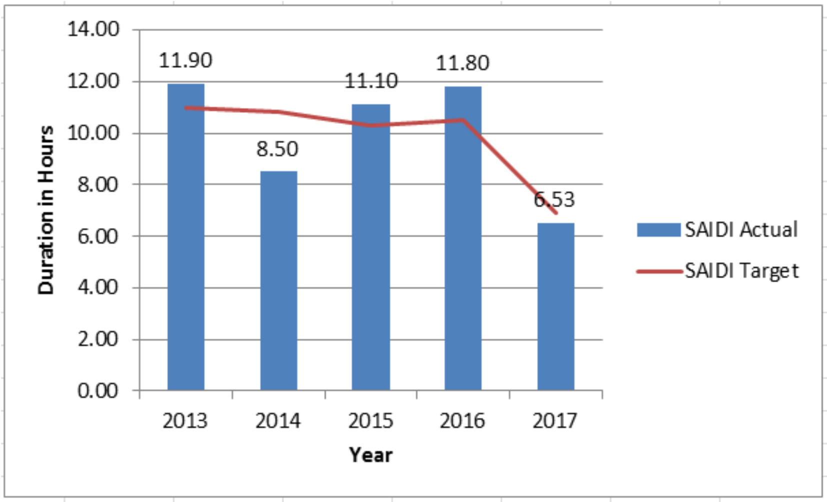

**Figure 5 - Remotes' SAIDI Performance**

*2017 result only covers to the end of July

In 2013, the SAIDI target was missed by 8.4%, mainly related to unplanned engine failures and defective equipment, including an outage in Wapekeka related to a faulty main breaker, a generation trip in Kasabonika Lake and problems with the Programmable Logic Controller ("PLC") in Sachigo Lake. In 2015, an increase in planned outages related to generation upgrades and distribution system improvements, resulted in customer disruptions that were longer than the historical trend. In 2016, the duration of outages was longer than in 2014 and 2015 due to increased planned outages that were required for distribution system improvements. Planned distribution outages accounted for 35% of SAIDI. The 2017 result excludes two major storm events in March and April.

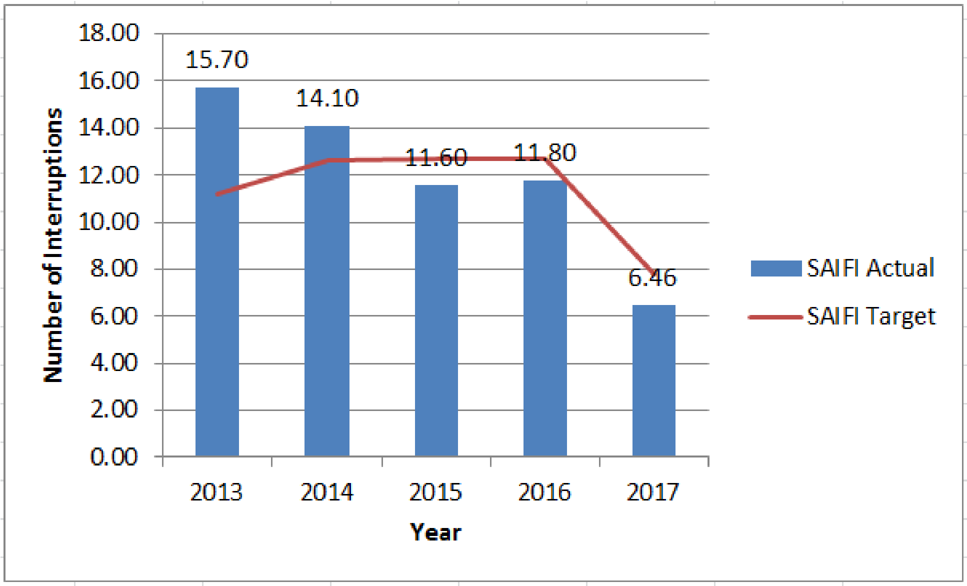

**Figure 6 - Remotes' SAIFI Performance**

*2017 result only covers to the end of July

In 2013, Remotes exceeded the SAIFI year-end frequency performance target by 40%, due to problems with the C unit in Marten Falls, under voltage engine trips in Big Trout Lake and various plant and engine problems in Weagamow. In 2014, SAIFI was slightly under the average performance due to PLC issues in Sandy Lake.

<u>Generation Availability</u>

This internal metric is measured differently from the one discussed in the Distribution System Plan as it assumes all outages occur at one station. The results attained for this metric are shown in Figure 7 below.

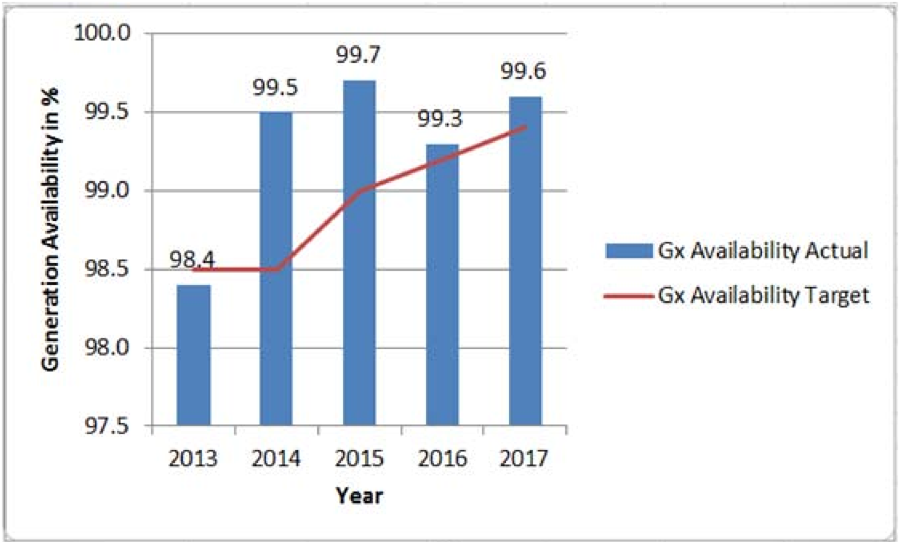

**Figure 7 - Percentage of Generation Availability**

*2017 result only covers to the end of July

In 2013, wiring and control problems with the largest unit in Kasabonika Lake caused the community to lose power. Cold weather and difficulties with cold load pickup meant the local operator was unable to restore power with the remaining capacity. Due to plane availability and the timing of the outage, crews were not able to get to site until the next morning to restore power. To avoid further problems with cold load pickup, Remotes is making multi-year investments to install viper switches in its distribution systems.

## 7.0 EFFICIENCY OF OPERATIONS

The inaccessibility of Remotes' service territory makes it difficult to establish metrics for productivity and efficiency improvements. The cost to transport staff and equipment can mask efficiency improvements on site. As part of its business planning process in 2012, Remotes determined that improvements to its management of projects would likely yield the best results in terms of efficiency improvements, because careful planning of equipment purchases, staff time on site and project staging are all required to ensure that transportation costs are kept to budget. As each capital project has unique characteristics it is hard to directly compare them. Instead Remotes identifies the milestones of one major project a year and sets the timelines and budget for the project accordingly. Remotes then monitors how well the project stays on track according to these milestones and documents any deficiencies. This process also aids in identifying any areas, efficiency can be introduced and realized in subsequent projects. Table 1 below identifies the projects tracked for this metric.

**Table 1**

**Major Project Milestones**

| Year | Project | Achieved Milestones | Target Milestones |
|---|---|---|---|
| 2013 | Sandy Lake Engine Project On Time | 17 | 17 |
| 2014 | Lansdowne House Engine Replacement | 8 | 9 |
| 2015 | Wapekeka Engine Replacement Project Milestones | 16 | 16 |
| 2016 | Bearskin Engine Replacement Project Milestones (on time, on budget) | 14 | 14 |
| 2017 | Kingfisher Upgrade Milestones (on time, on budget) | 7 | 7 |

In 2014, increased electrical work related to the engine replacement in Lansdowne House delayed the post-commissioning/deficiency meeting, the final milestone for this metric. In 2016, The Bearskin Engine project was under budget and therefore better than planned.

<u>Fuel Efficiencies</u>

The cost and delivery of fuel is Remotes single largest cost. To increase efficiency and lower costs, Remotes has:

- Issued competitive bid contracts through the tendering process for fuel and delivery;
- Maximized cheaper winter road deliveries through supplier relationships and improved management of existing storage;
- Entered in to contracts with First Nations who own storage tanks to increase the supply of winter road fuel;
- Offered customers conservation opportunities; and
- Invested in more fuel efficient engines.

Fuel initiatives are discussed further in Exhibit D1, Tab 1, Schedule 2.

# HYDRO ONE REMOTE COMMUNITIES INC.

**DECEMBER 2013**

## SCORECARD

| Strategic Objective | | Performance Measure | Actual | Year End | |
|---|---|---|---|---|---|
| | | | Actual | Target | Result |
| Financial | Financial Strength | Negotiate Shoulderblade Falls Agreement & Restore Operating Condition | 8 | 6 | ★ |
| | | 2013 Winter Road Planning Milestones | 6 | 5 | ★ |
| Innovation | Environmental Stewardship | Litres lost to the environment | 0 | ≤100 | ● |
| | | Number of Category A spills | 0 | 0 | ● |
| Customer | Inspire Customer Loyalty and Improve Customer Relationships | Customer Satisfaction Survey | 98% | ≥90% | ★ |
| | | Band Council Meetings | 8 | 8 | ● |
| Business Excellence | Maintain/Improve System Reliability | System Duration of Total Interruptions (SAIDI) Hours interruption per delivery point[1] | 11.9 | 11.0 | ▲ |
| | | System Frequency of Total Interruptions (SAIFI) Interruptions per delivery point[2] | 15.7 | 11.2 | ▲ |
| | | Percentage of Generation Availability[3] | 98.4% | 98.5% | ● |
| | Improve Compliance | Weagamow Tank Farm Replacement | 6 | 6 | ● |
| | | Improve site conditons | 7 | 7 | ● |
| Productivity | Improve efficiency of operations | Sandy Lake Engine Project On Time | 17 | 17 | ● |
| | | EMS Objectives and Achievements | $1.6M | $1.8M | ★ |
| Organizational Strength | Injury Free Workplace | Lost Time Injury | 0 | 0 | ● |
| | | Medical Attention Injury[4] | 3 | ≤2 | ▲ |
| | | Completion of mandatory training | 99% | 95% | ★ |
| | Workforce Engagement | Employee Engagement Survey Results | N/A | 3.66 | N/A |
| **Legend** | | ★ Better than plan | ● On plan | ▲ Worse than plan | |

[1] Year-end duration performance is 11.9 hours, which exceeds the target of 11.0 by 8.4%, mainly related to planned distribution outages that will improve future reliability.
[2] Year-end frequency performance is 15.7, which exceeds the target of 11.2 by 40%. Our larger communities experienced a higher than normal number of bird strikes and voltage-related generation outages during the summer months.
[3] Wiring and control problems with the largest unit in Kasabonika Lake caused the community to lose power. Brutally cold weather and difficulties with cold load pickup meant we were unable to restore power with the remaining capacity. Due to plane availability and the timing of the outage, crews were not able to get to site until the next morning to restore power.
[4] Unfortunately employees experienced two exertion injuries and one slip trip and fall that required medical attention.

## SCORECARD

| Strategic Objective | | Performance Measure | Actual | Year End | |
|---|---|---|---|---|---|
| | | | Actual | Target | Result |
| Business Excellence | Financial Strength | Reduce Residential Arrears by 5% | -6% | -5% | ★ |
| Customer Relations | Inspire Customer Loyalty and Improve Community Relationships | Band/Tribal Council Meetings | 9 | 8 | ★ |
| | | Meet OEB Reconnection Standard | 100% | ≥85% | ★ |
| Operational Excellence | Maintain/Improve System Reliability | System Duration of Total Interruptions (SAIDI) Hours of interruption per delivery point | 8.5 | 10.8 | ★ |
| | | System Frequency of Total Interruptions (SAIFI) Interruptions per delivery point[1] | 14.1 | 12.6 | ▲ |
| | | Percentage of Generation Availability | 99.5% | 98.5% | ★ |
| Productivity | Improve Efficiency of Operations | Bearskin Engine Replacement Project Milestones (on time, on budget)[2] | 8 | 9 | ▲ |
| Environmental | Environmental Protection | Litres lost to the Environment | 10 | ≤100 | ★ |
| | | Category A Spills | 0 | 0 | ● |
| | | Spills outside of containment | 2 | ≤4 | ★ |
| | Continuous Improvement | EMS Objectives and Achievements | 44 | 36 | ★ |
| Health & Safety | Injury Free Workplace | Lost Time Injury | 0 | 0 | ● |
| | | Total Recordable Injury | 0 | ≤2 | ★ |
| | | Completion of Health & Safety Training | 96.6% | 95% | ★ |
| | Continuous Improvement | HSMS Objectives and Achievements | 33 | 29 | ★ |
| **Legend** | | ★ Better than plan | ● On plan | ▲ Worse than plan | |

[1] SAIFI was worse than plan due to short-term generation and distribution outages mainly related to PLC issues with generation switching and controls, and a higher than usual number of bird strikes in our largest community.
[2] The Bearskin Engine project was under budget and therefore better than plan.

## SCORECARD

| | Strategic Objective | Performance Measure | Actual | Year End Target | Year End Result |
|---|---|---|---|---|---|
| Business Excellence | Financial Strength | Reduce Residential Arrears by 5% | -23% | -5% | ★ |
| | Maximize Net Benefit | Recoverable generation projects on-time and on-budget[1] | $6.6M | $6.9M | ★ |
| Customer Relations | Inspire Customer Loyalty and Improve Community Relationships | Band/Tribal Council Meetings | 8 | 8 | ● |
| | | Telephone Answered within 30 seconds | 91.4% | ≥90% | ★ |
| Operational Excellence | Maintain/Improve System Reliability | System Duration of Total Interruptions (SAIDI) Hours of interruption per delivery point[2] | 11.1 | 10.3 | ▲ |
| | | System Frequency of Total Interruptions (SAIFI) Interruptions per delivery point | 11.6 | 12.7 | ★ |
| | | Percentage of Generation Availability | 99.7% | 99% | ★ |
| Productivity | Improve Efficiency of Operations | Wapekeka Engine Replacement Project Milestones | 16 | 16 | ★ |
| Environmental Stewardship | Environmental Protection | Litres lost to the Environment | 0 | ≤100 | ● |
| | | Category A Spills | 0 | 0 | ● |
| | | Spills outside of containment | 0 | ≤1 | ★ |
| | Continuous Improvement | EMP Initiatives[3] | 26 | 30 | ▲ |
| Health & Safety | Injury Free Workplace | Lost Time Injury | 0 | 0 | ● |
| | | Total Recordable Injury | 1 | ≤2 | ★ |
| | | Completion of Mandatory Training | 96.8% | 95% | ★ |
| | Continuous Improvement | HSMP Initiatives | 65 | 55 | ★ |
| Legend | | ★ Better than plan | ● On plan | ▲ Worse than plan | |

[1] The three generation projects are now all in service. The Fort Severn project was slightly over budget due to freight costs; Deer Lake and Wapekeka were both under budget. INAC and Wapekeka First Nation agreed to allow Remotes to recover costs associated with Phase 1 of the Wapekeka and Big Trout Lake Tie Line and the former Big Trout Lake DGS upgrade, thereby reducing Remotes' non-energy receivables.

[2] Due to an increase in planned outages related to generation upgrades and distribution system improvements, customer disruptions are longer than the historical trend.

[3] Several targets that require First Nation involvement were not completed as communities focused on other priorities.

## SCORECARD

| Strategic Objective | | Performance Measure | Actual | Year End | |
|---|---|---|---|---|---|
| | | | Actual | Target | Result |

| **Legend** | | ★ Better than plan | ● On plan | ▲ Worse than plan | |

[1] We are successfully managed customer arrears to lower levels than last year despite $1.64M in higher billings due to the removal of the Ontario Clean Energy Benefit.
[2] SAIDI is lower than prior years due to increased planned distribution outages that were required due to distribution system improvements. Planned distribution outages account for 35% of SAIDI.
[3] The Bearskin Engine project was under budget and therefore better than plan.

# 2015 Scorecard Management Discussion and Analysis ("2015 Scorecard MD&A")

The link below provides a document titled "Scorecard - Performance Measure Descriptions" that has the technical definition, plain language description and how the measure may be compared for each of the Scorecard's measures in the 2015 Scorecard MD&A: **http://www.ontarioenergyboard.ca/OEB/_Documents/scorecard/Scorecard_Performance_Measure_Descriptions.pdf**

## Scorecard MD&A - General Overview

Hydro One Remote Communities Inc. ("Remotes") is an integrated generation and distribution company serving 3,600 customers in 21 off-grid communities. These communities are isolated and scattered across Ontario's north. As compared to other Ontario distributors Remotes has unique financial, operational and geographical attributes.

Remotes is 100% debt financed and conducts its operations under a cost recovery model to achieve a breakeven result of operations. Any surplus or deficiency in revenues is added to or drawn from the Rural or Remote Rate Protection Variance Account for future disposition by the Ontario Energy Board ("OEB"). Fifteen of the communities are First Nations, which are served under agreements with the federal government. In these communities, the federal government funds capital associated with load growth. Replacement capital, operations, maintenance and administrative costs are funded through Remotes' revenue requirement.

Due to the lack of grid connection, most of the electricity that Remotes generated is from diesel technology, which is currently the most feasible smaller-scale generation technology for the communities served by Remotes. Remotes also operates two small run of the river hydroelectric plants and, at the end of 2015, had 6 customer/community-owned solar installations connected to its distribution systems. Fuel is Remotes' single largest cost. Fuel costs are inherently volatile, related to changes in commodity price, method of delivery and volumes required to generate electricity.

Thirteen communities are not accessible by year-round road and can only be reached by aircraft, winter road or, in the case of one community, barge. The size and isolation of Remotes' service territory means that transportation of fuel, equipment and staff are key cost drivers. Construction and project risk are high due to the lack of transportation infrastructure.

2015 marks Remotes' first scorecard. Because Remotes is an integrated generation company with unique financing and operations, some metrics are not included in the results. The Ontario Energy Board has recognized that Remotes is not directly comparable to other Ontario distributors. In its Decision in proceeding EB-2014-0084, the Board noted that, "Hydro One Remotes is excluded from the Board's benchmarking analysis because of its unique circumstances. As noted in Hydro One Remotes' 2014 Price Cap Incentive Rate application (proceeding EB-2013-0142), Hydro One Remotes is unique in terms of its operating characteristics and cost recovery due to the Rural or Remote Electricity Rate Protection."

## Service Quality

- **New Residential/Small Business Services Connected on Time**

In 2015, Remotes processed 100 new connection requests for residential and small business low-voltage customers (those with service less than 750 Volts). 100% of these requests were completed within five business days (or as agreed to by the customer and the distributor), The industry target is 90%.

- **Scheduled Appointments Met On Time**

Because of high transportation costs and uncertainty about flight availability/ability to land, Remotes does not schedule appointments with customers. Work is generally organized through Band Councils or contractors since most customers do not have telephones. As a result, no appointments are missed or rescheduled.

- **Telephone Calls Answered On Time**

Remotes' billing and customer service staff received 9,952 phone calls from customers in 2015, answering 98.7% of these calls on time, as prescribed in the Ontario Energy Board's (OEB) Distribution System Code (DSC). The DSC requires call centre staff to answer calls within 30 seconds, 65%of the time, whenever the customer reaches an agent either directly or by means of a transfer. Remotes does not use an automated Interactive Voice Response (IVR) system.

## Customer Satisfaction

- **First Contact Resolution**

First Contact Resolution (FCR) reports the success of the distributor in resolving a customer's issue during the first contact. In 2015, Remotes designed a process to track FCR and will report 2016 performance next year. Remotes measures FCR based on the number of issues that can be resolved by the billing agent as compared to those that must be brought to a supervisor for resolution.

- **Billing Accuracy**

In 2015, Remotes issued 40,479 bills, with an accuracy rate of 96.46%. Remotes does not meet the industry standard of 98.00%. This is largely due to the fact that Remotes has not installed smart meters and relies on manual readings. Manual readings are more likely to result in higher planned and unplanned estimates. Remotes generally contracts with local community members to read the meters, and the readings are then faxed to the office and entered into the system by the billing team. If the faxed readings are late, they result in an unplanned estimate. There were 688 unplanned estimates in 2015. Remotes also has approximately 140 seasonal customers whose premises are generally difficult to access in the winter and who are billed quarterly with one physical meter read per year. In 2015, there were 413 planned estimates related to these customers.

- **Customer Satisfaction Survey Results**

Remotes engaged a professional research company with the ability to speak First Nation languages to conduct a random telephone survey of its customers in 2015. When asked “Overall, are you very satisfied, somewhat satisfied, dissatisfied or very dissatisfied with the electricity service you get from Hydro One Remotes,” 91.4% reported being satisfied or very satisfied. The major reasons for satisfaction were that ‘electricity is there when needed’ (64.5%) and ‘good/better services’ (19.5%). Dissatisfied customers said that expensive rates/bills were the major reason for dissatisfaction. As part of the survey, Remotes tested customer awareness of its programs, and asked customers for their opinions on how service could be improved. Actions are being taken to improve awareness of programs to reduce bills (Low-Income Emergency Assistance Program and Ontario Electricity Support Program) and to address the service improvements that customers identified. Along with asking customers service-related questions, information was also sought on the penetration of electric heat and air conditioning and customer access to the internet to help Remotes plan its programs. Remotes conducts biennial surveys of its customers to help it plan work and respond to customer priorities.

## Safety

- **Public Safety**

In April 2015, the Electrical Safety Authority (ESA) made recommendations to the OEB for a scorecard public safety measure that includes three main components: A) Public Awareness of Electrical Safety, B) Compliance with Ontario Regulation 22/04, and C) the Serious Electrical Incident Index. Components B and C were reported in previous years and results for *Component A – Public Awareness of Electrical Safety* were tracked for the first time in 2015, for reporting in 2016.

- **Component A – Public Awareness of Electrical Safety**

In the spring of 2016, Remotes engaged a professional research company with the ability to speak First Nation languages to conduct a random phone survey to gauge electrical safety awareness among people living in its service territory. The survey was designed by the ESA and assessed participants’ safety awareness in six core areas: the likelihood to call before digging, the impacts of touching a power line, safe distances when around power lines, safe distances when around downed power lines, danger of tampering with electrical equipment, and actions to be taken when an occupied vehicle is in contact with a power line. For 2015, the Company reported an overall index score of 69.25%. The score was determined by applying the index score to each response in the categories mentioned above, where "best answers" received a score of 1 and "incorrect answers" received a score of 0. Most respondents understood the danger of touching an overhead wire (84%) and tampering with electrical equipment (81.5%), but fewer were able to correctly identify in feet or meters how close they could come to an overhead line (17%). About the same number (18%) said they would call before digging (there are very few underground cables in Remotes' service territory). To improve the public's awareness of hazards, an ad campaign was launched on Wawatay radio during the summer of 2016 focusing on proximity to overhead wires. Remotes is also putting up safety hazard posters in central locations in communities, identifying common hazards, and plans an electrical safety poster contest in community schools for fall 2016. Previous (and ongoing) educational efforts included warning signs at hydroelectric and diesel generating stations, school presentations and information on electrical hazards in bill inserts.

- **Component B – Compliance with Ontario Regulation 22/04**

Remotes was assessed by the ESA as Compliant (C) to Ontario Regulation 22/04. Ontario Regulation 22/04 was introduced in early 2004 following recommendations from the ESA to ensure electrical safety and to track and report the safety records and compliance of electricity distributors. Distribution companies are required to submit declarations of compliance on the design, construction, and maintenance of distribution systems in accordance with the regulation, on an annual basis. An external auditor reviews and submits a final report, along with a signed declaration of compliance by an officer of the company, to the ESA for review and to establish a final result. The performance target for compliance with Ontario Regulation 22/04 is for the distributor to be fully compliant, and is recorded as Compliant (C), Non-Compliant (NC), or Needs Improvement (NI).

- **Component C – Serious Electrical Incident Index**

For 2015, the ESA identified no recordable serious public incidents, resulting in an index value of 0.0 for Remotes. The Serious Electrical Incident Index was designed to track and help improve public electrical safety on the distribution systems over time. Based on the distributor's total kilometers of line, the measure normalizes serious electrical incidents per 10, 100, or 1,000km of line reporting both the actual number and rate of incidents per kilometer – for Remotes, the index is normalized per 238 km of line. The distributor and any of its contractors or operators are required to report any serious electrical incident within 48 hours to the ESA. A serious electrical incident is defined as any electrical contact or any fire or explosion that caused or may have caused injury or death in any part of the distribution system operating at greater than 750 Volts (except if caused by lightning strikes). Remotes maintains a policy of reporting all public safety incidents to the ESA.

## System Reliability

- **Average Number of Hours that Power to a Customer is Interrupted**

For 2015, Remotes reported an average distribution outage duration of 10.08 hours, representing an increase of about 4 hours from 2014. Performance was worse due primarily to an increase in planned outages (76% increase year over year). Planned outages were required to make improvements to the distribution systems, including pole replacement projects, the installation of viper switches (switches which allow us to sectionalize load within the distribution system) and bird protection. Community-wide outages were also required to increase transformer size and other distribution equipment in order to in-service Indigenous and Northern Affairs funded generation upgrades. Equipment failure also contributed to the poorer result. Bad weather prevented staff from flying into the community of Wapekeka to replace a burnt transformer, leading to a longer than normal outage (23.5 hours). We also experienced a longer than normal outage in one of our largest communities, Big Trout Lake (6.4 hours), related to a burnt switch at the station, which was compounded by a delay in securing a plane to the community. Finally, a lightning strike in Sultan resulted in a 26.1 hour outage as staff was not able to fix the problem due to the ongoing lightning storm. Remotes notes that, although not reflected on the scorecard, 2015 showed improvement in overall generation availability across its system. Planned distribution outages are expected to be higher in the next few years and are expected to improve reliability in the longer term. In particular, viper switches will improve cold load pickup related to loss of generation, will help reduce community-wide outages associated with catastrophic failure of a generation unit and will permit sectionalizing load to reduce the impact of community-wide distribution outages. Because the size of the generation in communities can limit the opportunity for new customers to connect to the systems, planned outages related to Indigenous and Northern Affairs Canada funded generation upgrades allow communities to grow and new services to connect to the distribution systems.

- **Average Number of Times that Power to a Customer is Interrupted**

Frequency of customer distribution outages was reported at 4.39 outages per customer for 2015, an increase of 30% compared to the previous year. Planned outages are expected to be higher in the next few years as increased work is required on the distribution systems to improve reliability in the longer-term. Planned outages were the major contributor to the increased frequency of interruptions to customers.

## Asset Management

- **Distribution System Plan Implementation Progress**

For 2015, the company exceeded its planned project expenditures by 13%, reflecting an increase in distribution system improvements. The Distribution System Plan (DSP) implementation progress is a distributor-defined performance metric. For Remotes, the DSP is the Company's forecasted distribution capital expenditures required to maintain and improve the distribution system over the next five years.

## Cost Control

The OEB has recognized that Remotes is not directly comparable to other Ontario distributors. In its decision in proceeding EB-2014-0084, the Board noted that, "Hydro One Remotes is excluded from the Board's benchmarking analysis because of its unique circumstances. As noted in Hydro One Remotes' 2014 Price Cap Incentive Rate application (proceeding EB-2013-0142), Hydro One Remotes is unique in terms of its operating characteristics and cost recovery due to the Rural or Remote Electricity Rate Protection."

## Conservation & Demand Management

- **Net Cumulative Energy Savings (Percent of target achieved)**

The Conservation First Framework is focused on reducing peak demand on the grid and is not related to Remotes' operations. As such, Remotes is excluded from the province-wide targets. Federal and provincial conservation programs that are designed to meet the unique needs of customers living in isolated communities in the far north are available to customers in Remotes' service territory. Remotes also has a small conservation program that focuses on energy efficient products and customer education about energy usage.

## Connection of Renewable Generation

- **Renewable Generation Connection Impact Assessments Completed on Time**

Due to technical challenges associated with integrating renewable generation in isolated distribution systems, the IESO FIT (Feed-in-Tariff) programs are not available to customers in Remotes' service territory. Remotes does offer a program to allow renewable generation to connect to its distribution systems, but, when they occur, most of the installations are smaller than 10 kW and do not require a Connection Impact Assessment (CIA).

- **New Micro-embedded Generation Facilities Connected On Time**

No installations were reported in 2015. This metric measures the company's success in connecting micro-embedded generation facilities (less than 10kW) 95% of the time within a five business day window.

## Financial Ratios

Remotes is 100% debt-financed and is operated as a break-even company with no meaningful return on equity. Therefore, given its financial structure, along with its unique operating characteristics, financial ratios are not comparable with those of other Ontario distribution utilities.

## Note to Readers of 2015 Scorecard MD&A

The information provided by distributors on their future performance (or what can be construed as forward-looking information) may be subject to a number of risks, uncertainties and other factors that may cause actual events, conditions or results to differ materially from historical results or those contemplated by the distributor regarding their future performance. Some of the factors that could cause such differences include legislative or regulatory developments, financial market conditions, general economic conditions and the weather. For these reasons, the information on future performance is intended to be management's best judgement on the reporting date of the performance scorecard, and could be markedly different in the future.

*FORWARD-LOOKING STATEMENTS AND INFORMATION*

Words such as "expect," "anticipate," "intend," "attempt," "may," "plan," "will", "can", "believe," "seek," "estimate," and variations of such words and similar expressions are intended to identify such forward-looking statements. These statements are not guarantees of future performance and involve assumptions and risks and uncertainties that are difficult to predict. Some of the factors that could cause such differences include legislative or regulatory developments, an unexpected increase in call centre volumes, financial market conditions, general economic conditions and the weather. We do not intend, and we disclaim any obligation to update any forward-looking statements, except as required by law.

# SERVICE QUALITY AND RELIABILITY INDICATORS

## 1.0 INTRODUCTION

Subject to the exceptions and modifications noted below, Remotes currently monitors and records service quality indicators as required in Chapter 15 of the Ontario Energy Board 2006 Electricity Distribution Rate Handbook, dated May 11, 2005.

## 2.0 CUSTOMER SERVICE INDICATORS

Due to the distances between communities and the associated cost to transport staff and equipment, Remotes bundles work to reduce costs. Work is performed when staff have sufficient work in the community, or when they are in a nearby community. Planes are can often delayed flying into the communities, especially in the shoulder seasons of spring and fall. Remotes does not therefore make morning or afternoon appointments with customers or reschedule missed appointments. New connections are usually paid for and organized through the Band Offices. Therefore the Service Quality Index ("SQI") for new connections includes the bundling of work.

The Customer service indicators that Remotes is able to track are as follows:

<u>Connection of New Services:</u>
The percentage of customer connections of new services completed within five working days from the day on which all conditions of service are satisfied, including being able to schedule sufficient work in the community or in a nearby community to reduce the transportation costs as described above.

Emergency Response:

The percentage of responses to emergency trouble calls (including fire, ambulance, police) met within 120 minutes for rural utilities. The elapsed time is measured from the call to the arrival of qualified Remotes' service personnel, and includes Remotes' operators.

Written Response to Inquiries:

The percentage of responses to customers' (or an agent of the customer) requests for written information regarding their accounts that are met within ten working days of the request.

Telephone Accessibility

The percentage of incoming calls answered within thirty seconds by billing/customer service staff.

Telephone Call Abandon Rate

The percentage of incoming calls abandoned before being answered following the thirty second period described in Telephone Accessibility.

Reconnection Performance Standard

The percentage of reconnections of disconnected customers that are completed within two working weeks after the customer has made full payment of overdue amounts or has entered into a payment arrangement with Remotes.

Table 1 shows the customer service results for the historic years.

**Table 1**

**Customer Service Indicators**

| Performance Measure | *OEB* Target | 2012 Actual | 2013 Actual | 2014 Actual | 2015 Actual | 2016 Actual |
|---|---|---|---|---|---|---|
| **Connection of New Services** (% completed in ≤ 5 days) | **≥ 90%** | 100% | 100% | 98.4% | 100% | 100% |
| **Emergency Response** (% responded to in ≤ 120 min ) | **≥ 80%** | 95.4% | 99.1% | 98.9% | 99.1% | 99.3% |
| **Written Response to Inquiries** (% responded to in ≤ 10 days) | **≥ 80%** | 100% | 100% | 100% | 100% | 99.9% |
| **Telephone Accessibility** (% answered within 30 seconds) | **≥ 65%** | - | - | 95.1% | 99.9% | 100% |
| **Telephone Call Abandon Rate** (% of calls abandoned) | **≤10%** | - | - | 1.3% | 0.5% | 0.0% |
| **Reconnection of Services on Time** (% of customers reconnected within 2 weeks of payment)[1] | **≥ 85%** | - | 100% | 100% | 93.2% | 94.9% |

Remotes has met the OEB targets in all of the metrics it is able to track. Remotes' phone system was not able to track call abandon rates or the time to answer calls until 2014, when a new phone system was installed. Remotes has tracked this indicator since the new system was installed.

## 3.0 SERVICE RELIABILITY INDICATORS

Interruption data is collected and recorded in Remotes' Thunder Bay Service Centre, through communications with plant operators and field staff involved in the interruption restoration, and through the SCADA system, which records generation related outages. The data on outages and service quality is used to analyze performance, and drive strategy and business investment decisions. Interruption data is used to calculate OEB

[1] This standard was determined through EB-2011-0021

reliability indices (including loss of supply) monthly, which are reported internally throughout the year. Line Managers and Supervisors meet monthly to review and analyze outages, identify patterns and look for solutions.

The two Service Reliability Indicators are as follows:

System Average Interruption Frequency Index (SAIFI):

The average number of times that customers served by Remotes were interrupted in the year. Due to the inherent lack of generation redundancy in an isolated system, service interruptions are more frequent in remote communities than in a grid connected context. Very short outages may be experienced when different generators are dispatched by the automated system.

System Average Interruption Duration Index (SAIDI):

The average numbers of hours that customers served by Remotes were without power in the year.

The above reliability indices measure all interruptions caused by planned and unplanned interruptions of 1 minute or more.

### 3.1 Major Event

For the purposes of OEB reporting, Remotes follows the IEEE standard for major events. The standard is derived by statistical analysis on the SAIDI value from each outage day over the past five years. If any daily SAIDI in the year exceeds that threshold, it is considered a major event day. The threshold is recalculated at the end of every year for the subsequent year. No major events have occurred over the past five years using that standard.

For the purposes of internal reporting, Remotes deems a major event to have occurred when a major catastrophic event beyond Remotes' control occurs that affects an entire community and 1) results in widespread system damage; or 2) an outage of at least twelve hours due to circumstances beyond the control of the company, (for example, as a result of adverse weather that prevents a plane from landing). A catastrophic event may be a storm or fire or any other problem that interrupts an entire community and causes a change in the normal restoration business processes. Results shown in Exhibit A, Tab 5, Schedule 1 are the results reported internally.

## 4.0 RELIABILITY SUMMARY RESULTS

Table 2 shows the service reliability over the periods 2012 to 2016 and the 5 year average including loss of supply. Table 3 shows outages related to the loss of supply and Table 4 shows outages related to distribution.

**Table 2**

**Service Reliability Indicators Including Loss of Supply**

| Index | Including outages caused by loss of supply | | | | | |
|---|---|---|---|---|---|---|
| | 2012 | 2013 | 2014 | 2015 | 2016 | Average |
| SAIDI | 16.116 | 11.932 | 8.486 | 13.303 | 12.170 | 12.401 |
| SAIFI | 11.193 | 15.685 | 14.021 | 11.691 | 13.059 | 13.130 |

### 4.1 Customer Hours of Interruption

In 2012, SAIDI performance including loss of supply was worse than average mainly because of multiple supply outages directly related to poor quality bio-diesel fuel. An in-depth tank cleaning and fuel filtering program were undertaken to reduce the impact to reliability and fuel suppliers were required to inspect and test fuel and equipment throughout all stages. This requirement is now a contract term. SAIDI performance was also adversely affected by several unplanned distribution outages described in more detail under Table 4 below.

In 2013 and 2014 SAIFI performance including loss of supply was worse than average mainly due to generation performance, discussed in more detail under Table 4 below.

**Table 3**

**Service Reliability Indicators Loss of Supply Only**

| Index | Outages caused by loss of supply | | | | | |
|---|---|---|---|---|---|---|
| | **2012** | **2013** | **2014** | **2015** | **2016** | **Average** |
| **SAIDI** | 8.167 | 7.724 | 2.418 | 3.220 | 3.063 | 4.918 |
| **SAIFI** | 7.552 | 11.467 | 10.649 | 7.304 | 8.114 | 9.017 |

As discussed above, 2012 SAIDI loss of supply performance was worse than average mainly related to multiple supply outages directly related to poor quality bio-diesel fuel as discussed above.

In 2013, SAIDI was worse than the five year average due to unplanned engine failures and defective equipment. A major outage occurred in Wapekeka related to a faulty main breaker that had to be replaced. In Kasabonika Lake, all three generators tripped when the A unit was put on line, leading to an extended outage as crews tried to get the power back on. Outages due to problems with the Programmable Logic Controller (“PLC”) in Sachigo Lake and an engine failure in Sandy Lake also contributed to the worse than average result.

In 2013, SAIFI was worse than average mainly due to problems with the C unit in Marten Falls, under voltage engine trips in Big Trout Lake, and various plant and engine issues in

Weagamow. In 2014, SAIFI was slightly worse than average mainly due to PLC issues with generation switching and controls in Sandy Lake.

**Table 4**
**Service Reliability Indicators Excluding Loss of Supply**

| Index | Excluding outages caused by loss of supply | | | | | |
|---|---|---|---|---|---|---|
| | **2012** | **2013** | **2014** | **2015** | **2016** | **Average** |
| **SAIDI** | 7.949 | 4.208 | 6.068 | 10.083 | 9.107 | 7.483 |
| **SAIFI** | 3.641 | 4.218 | 3.372 | 4.387 | 4.945 | 4.113 |

SAIDI excluding loss of supply was worse than average in 2012 due to a house fire in Sandy Lake that required the local operator to shut down the generating station to make the area safe for emergency personnel, and because of a defective switch on the hard-to-reach line along the rail tracks from Armstrong to Collins that led to two long outages. The first outage caused by the defective switch was handled by the local operator, but the switch went out again a couple of weeks later, requiring a line crew to address the problem. A lightning strike in Webequie that blew the fuse at the step-up transformer, three switches in Big Trout Lake that opened for an undetermined cause, and a planned outage to replace a broken cross arm in Webequie also led to longer than average outages.

In 2015, SAIDI excluding loss of supply increased by about four hours from 2014 and about three hours compared to the average. Performance was worse than average primarily due to an increase in planned outages (76% increase year over year). Planned outages were required to make improvements to the distribution systems, including pole replacement projects, the installation of viper switches (switches which improve cold load pickup after a generation outage) and bird protection. Community-wide outages were also required to increase transformer size and other distribution equipment in order to in-service Indigenous and Northern Affairs funded generation upgrades. Equipment failures also contributed to the poorer result. Bad weather prevented staff from flying into the community of Wapekeka to replace a burnt transformer, leading to a longer than normal outage (23.5 hours). There was also a longer than normal outage in one of the largest communities, Big Trout Lake (6.4 hours), related to a burnt switch at the station, which was compounded by a delay in securing a plane to fly to the community. Finally, a lightning strike in Sultan resulted in a 26.1 hour outage as staff was not able to fix the problem and restore power due to the ongoing lightning storm.

In 2016, SAIDI performance was worse than the five year average but better than 2015 mainly related to a continued emphasis on planned outages and because of equipment failure. Planned outages contributed slightly less to the SAIDI result than in 2015, but were higher than average over the period and related to a pole replacements, installation of viper switches and installation of bird protection. Defective equipment also contributed to the worse than average result, but was better than performance in 2015. In Armstrong, there was a long outage caused by the failure of the potential transformers located on the station transformer. The length of outage was compounded by bad weather that delayed the crew from getting to site. In Weagamow, the operator took a station outage in the middle of the night related to a fire on the step up structure outside the plant caused by leaking insulators. The power was temporarily turned back on to allow the air ambulance to land and was turned off again. A crew was dispatched to replace the insulators the same night.

In 2013, SAIFI was slightly above average due to a relatively higher number of bird strikes. In 2015 and 2016, higher SAIFI relates to the increase in planned outages and to equipment failure.

## 5.0 OUTAGES BY CAUSE CODE BY YEAR AND MONTH

The following figures demonstrate the customer interruptions sustained on an annual basis by cause code.

<u>2012 Customer Interruptions</u>

Figures 1 to 4 illustrate the customer interruptions sustained in 2012 by cause code.

**2012 Number of Customers Interrrupted**

| Cause of Interruption | Total Outages | Percent |
|---|---|---|
| 0 - Unknown/Other | 1,109 | 2.8% |
| 1 - Scheduled Outage | 7,880 | 20.0% |
| 2 - Loss of Supply | 26,169 | 66.5% |
| 3 - Tree Contacts | 338 | 0.9% |
| 4 - Lightning | 552 | 1.4% |
| 5 - Defective Equipment | 1,569 | 4.0% |
| 6 - Adverse Weather | 11 | 0.0% |
| 7 - Adverse Environment | 1,715 | 4.4% |
| 8 - Human Element | 0 | 0.0% |

|---|---|---|---|
| SAIDI | 12.401 | 7.483 | 12.401 |
| SAIFI | 13.130 | 4.113 | 13.130 |

SAIDI = System Average Interruption Duration Index
SAIFI = System Average Interruption Frequency Index

## Service Quality

| Indicator | OEB Minimum Standard | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| Low Voltage Connections | 90.0% | 100.0% | 100.0% | 98.4% | 100.0% | 100.0% |
| High Voltage Connections | 90.0% | | | | | |
| Telephone Accessibility | 65.0% | N/A | N/A | 95.1% | 99.9% | 100.0% |
| Appointments Met | 90.0% | | | | | |
| Written Response to Enquires | 80.0% | 100.0% | 100.0% | 100.0% | 100.0% | 99.9% |
| Emergency Urban Response | 80.0% | | | | | |
| Emergency Rural Response | 80.0% | 95.4% | 99.1% | 98.9% | 99.1% | 99.3% |
| Telephone Call Abandon Rate | 10.0% | N/A | N/A | 1.3% | 0.5% | 0.0% |
| Appointment Scheduling | 90.0% | | | | | |
| Rescheduling a Missed Appointment | 100.0% | | | | | |
| Reconnection Performance Standard | 85.0% | N/A | 100.0% | 100.0% | 93.2% | 94.9% |

Remotes does not have high voltage connections.
Remotes does not make appointments with customers. Due to the inaccessibiity of its service territory, work is bundled and performed when a crew is in the community.
Remotes' telephone system was not able to track telephone calls. In 2014, the system was replaced and this metric has since been tracked.
As determined in EB-2011-0021, the reconnection performance standard for Remotes is 2 weeks, to allow for work to be bundled and performed when a crew is in the community.
Connection of new services low voltage does not include connection of micro-embedded generation facilities.
Reconnection Performance Standard was not tracked until 2013, when the Board issued its Decision on EB-2011-0021

# AFFILIATE SERVICE AGREEMENTS

## 1.0 INTRODUCTION

In accordance with the Affiliate Relationships Code ("ARC"), when Remotes provides services to or purchases services from affiliates, it does so in accordance with service agreements that meet the ARC requirements. This Exhibit describes the current agreements between Remotes and its affiliates, and the pricing for these services.

## 2.0 COMMON CORPORATE COSTS

Hydro One has identified certain Common Corporate Functions and Services ("CCF&S") that provide common benefits to all business units while minimizing costly and unnecessary duplication.

Costs provided under the shared services model include CCF&S (e.g. legal, finance and human resources), Telecommunications Services (telephone, fax and internet services for the Thunder Bay service centre and at each of the remote community sites); Enterprise Technology Services (outsourced services provided by Inergi LP related to IT systems, accounts payable, payroll, billing and financial IT systems and desk side support); Supply Management Services, and Customer System Operations (customer billing) and the use of shared SAP assets.

Common corporate functions and services include Corporate Management, Finance, Internal Audit, Tax, Legal, Corporate Secretariat, Regulatory, Corporate Communications and Services, First Nation and Metis Relations, Security, Human Resources and Labour Relations.

In 2004, Black & Veatch ("B&V") was engaged by Hydro One to recommend a best practice methodology to distribute Common Corporate Costs to Hydro One and its subsidiaries and partnerships. The methodology is based on clearly articulated shared services and an established cost allocation approach based on cost causality and benefit principles. This Common Corporate Cost Allocation is supported by a recent B&V Review of Common Corporate Costs in 2015 prepared for Hydro One Networks Transmission (EB-2016-0160) and a later Review of Common Corporate Costs prepared for Hydro One Networks Distribution (EB-2017-0049).

To allocate the cost, Networks:

- Identifies the functions and services included in the common costs;
- Identifies the activities performed to provide each of the tasks;
- Determines the budgeted costs; and
- Distributes the cost of each activity based on cost drivers when direct assignment is not possible.

Information on the costs for these services can be found in Exhibit D1, Tab 1, Schedule 6 and in the supporting schedules.

**Table 1**

**Service Level Agreements – 2017**

| Services Provider | Services Recipient(s) | Description of Services |
|---|---|---|
| Hydro One Inc. | Networks<br><br>Telecom<br><br>Remotes<br><br>Sault Ste. Marie | a) **General Counsel & Secretary Services –** Professional legal advice and input as well as guidance on business ethics and support in the form of a business code of conduct.<br>b) **President / CEO / Chairman Services –** Strategic direction and management.<br>c) **Chief Financial Officer Services –** Review of policies and procedures, investment decisions, treasury operations and tax planning, financial control and reporting.<br>d) **General Counsel and Secretary Services –** Professional legal advice and input and services regarding the protection of assets and management of security risks.<br>e) **Financial Services –** Financial information, business planning, budgeting and financial reporting as well as other financial services such as treasury/pension/investor relations, taxation, financial systems and services, cost and inventory accounting, decision support, transaction processing (accounts payable and receivable), and fixed asset and general accounting.<br>f) **Corporate Services –** provides services related to human resource and labour relations, protection of assets, information management, leadership and consultation support related to First Nations and Metis communities and corporate communications.<br>g) **Telecommunications Services –** Field and engineering, logistics, corporate, construction, telecommunication and information technology services.<br>h) **Other Services –** Customer services operation and information management services.<br>i) **System Services –** use of the Services Provider's core business systems.<br>j) **Lease of Computer Equipment used to provide System Services –** leases from the Service Provider computer servers which house the Systems. |

## 3.0 UTILITY SERVICES PERFORMED BY NETWORKS

Remotes also purchases services from Networks related to utility operations. Costs for these services are purchased based on the hourly labour rate and the cost of materials and include lines and forestry work, drafting, environmental and engineering support, technical training and flight safety services.

| Services Provider | Services Recipient(s) | Description of Services |
|---|---|---|
| Networks | Remotes | **Utility Operations services** – Provincial lines, forestry, drafting, environmental compliance reviews and support, certificate of approval amendments, legislative review, support for land assessment and remediation, fleet management, maintenance repair and rental, flight safety, technical/trades training and support, safety, meter services, approval of plans, drawings and specification of installation work, and engineering and construction services. |
| Networks | Remotes | **Supply Chain Services** – Implementation of demand planning, management and procurement, process development, data management and warehousing. |

Utility services are demand-based and vary with the work program and the availability of Networks staff to perform work. The costs for utility services are built into the work programs and are based on time and materials. Costs for the historic, bridge and test years are shown in Appendix 2-N at Exhibit D2, Tab 4, Schedule 1.

## 4.0 UTILITY SERVICES PERFORMED BY REMOTES FOR NETWORKS

Remotes performs work for Networks based on demand and staff availability. Work includes lines work, lines training and metering work. Costing for this work is described in Exhibit D1, Tab 5, Schedule 1 the specific revenues for this work are shown in Exhibit G2, Tab 2, Schedule 1.

| Services Provider | Services Recipient(s) | Description of Services |
|---|---|---|
| Remotes | Networks | Metering and Lines Services – Metering/Technician/Lines work including meter installation, smart meter changes, line layout, estimating and staking, voltage/current surveys, power line maintenance, construction and repair, trouble call response, storm damage repairs, apprenticeship program instruction services. |

# GENERAL COUNSEL AND SECRETARY SERVICES, PRESIDENT/CEO/CHAIRMAN SERVICES/CHIEF FINANCIAL OFFICER

To be filed at a later date.

# GENERAL COUNSEL AND SECRETARY SERVICES, FINANCIAL SERVICES, CORPORATE SERVICES, TELE-COMMUNICATIONS-RELATED SERVICES, OTHER

To be filed at a later date.

**THIS AGREEMENT** made in duplicate as of the 1st day of January, 2017 (the "Effective Date").

**BETWEEN:**

**HYDRO ONE NETWORKS INC.**
**(the "Services Provider")**

**- and -**

**HYDRO ONE REMOTE COMMUNITIES INC.**
**(the "Services Recipient")**

## 1.0 PREFACE

This Agreement is intended to identify the services that are to be provided to the Services Recipient by the Services Provider in accordance with the terms and conditions herein. Except as otherwise specified, the term of this Agreement shall be for a period of 1 year commencing on the Effective Date.

## 2.0 SERVICES

The Services Provider shall provide the following types of services to the Services Recipient, which collectively constitute the Services and which are more particularly described in Schedule "A" attached hereto, as may be required by the Services Recipient from time to time during the term of this Agreement:

- Forestry services
- Metering services
- Work Methods and Training services
- Provincial Lines services
- Safety services
- Fleet services
- Environmental services
- Engineering Services
- Flight safety services
- Distribution Planning Technical services
- Joint Use services
- Health and Safety Services

## 3.0 DEFINITIONS

In this Agreement, including the recitals and Schedules hereto, in addition to terms defined elsewhere in this Agreement, unless there is something in the subject matter or context inconsistent therewith, the following words shall have the following meanings:

(a) "**Agreement**" means this Agreement between the Services Recipient and the Services Provider and shall include Schedules "A", "B", "C", "D", "E" and "F" attached hereto and any amendments to the body of this Agreement and to the Schedules.

(b) **"Substantial Performance of the Services"** means the point at which the Services are ready for use or are being used by the Services Recipient for the purpose intended.

## 4.0 FEES PAYABLE

(a) The price for the performance of the Services described in Schedule "C" hereto shall be as specified in the said Schedule "C" and shall be exclusive of any sales and use taxes as may be applicable. In the event that the parties agree that the Services Recipient shall pay the Services Provider for the Services on a time and materials basis, such time and materials basis shall be in accordance with the Services Provider's 2017-2018 hourly rates by job category and fleet rates, which hourly rates and fleet rates may be amended from time to time by mutual agreement of the parties. The parties acknowledge and agree that the Services Recipient has received the Services Provider's 2017-2018 hourly and fleet rates from the Services Provider.

The parties agree that the price for the Services shall be paid by the Services Recipient to the Services Provider by means of monthly electronic journal transfers which shall be reflected in the applicable books and records of each party or by direct time reporting through Hydro One Inc.'s payroll system.

(b) The parties acknowledge and agree that they qualify as specified members of a closely related group under subsection 156(1) of the *Excise Tax Act (Canada)*, as amended (the "Act") and have jointly executed a Form GST25, to make an election under subsection 156(2) of the Act to deem the purchase and sale of the Services to be made for nil consideration for purposes of HST. For the purposes of this Agreement, "HST" means the federal Harmonized Sales Tax chargeable in accordance with Part IX of the Act, as amended, or any similar value-added tax that may be applicable during the term of this Agreement to the Services to be provided hereunder.

## 5.0 REPRESENTATIONS AND WARRANTIES

(a) The Services Provider represents and warrants that:

(i) it has all the necessary corporate power, authority and capacity to enter into this Agreement and to perform its obligations hereunder;

(ii) the execution of this Agreement and compliance with and performance of the terms, conditions, and covenants contemplated herein have been duly authorized by all necessary corporate action on the part of the Services Provider;

(iii) all staff employed in the performance of the Services shall have the qualifications, expertise and experience which could reasonably be expected of staff of a services provider performing work similar to the Services; and

(iv) all material, tools, machinery and equipment provided by the Services Provider to the Services Recipient as part of the Services shall be new and of a quality best suited to the purpose required and their use subject to the approval of the Services Recipient.

(b) The Services Recipient represents and warrants that:

(i) it has all the necessary corporate power, authority and capacity to enter into this Agreement and to perform its obligations hereunder; and

(ii) the execution of this Agreement and compliance with and performance of the terms, conditions, and covenants contemplated herein have been duly authorized by all necessary corporate action on the part of the Services Recipient.

## 6.0 PERFORMANCE OF THE SERVICES

(a) **Access to Site:** For each type of Services to be performed, the Services Recipient shall provide the Services Provider with an opportunity to visit and examine the site at which the said type of Services are to be performed prior to commencement of the performance of the said type of Services. Upon commencement of performance of the said type of Services, the Services Provider shall be deemed to have represented and warranted, along with the representations and warranties in Section 5.0(a) above, that the Services Provider has visited and examined the site at which the said type of Services are to be performed and that the Services Provider has satisfied itself as to the form and nature of the site, the quantities and nature of the Services to be performed, the labour conditions existing in the area for the Services involved, facilities present on site, access to the site, the seasonal conditions limiting access to the site, the materials necessary for the performance of the Services, and any restrictions or barriers present at the site that would impact the performance of the Services and which the Services Provider was able to reasonably detect upon examination of the site.

(b) **Compliance with Standards, Specifications and Applicable Law:** The Services Provider shall perform the Services in a diligent and professional manner and shall comply with the Services Recipient's computer data management and data access protocols contained in the Services Recipient's documents entitled document entitled "Security Policy" (SP 1686 R1) dated December 2016 and any amendments thereto which may be made from time to time by the Services Recipient. The Services Provider shall comply at all times with all statutes, regulations, by-laws, standards and codes as may be applicable to the Services Provider in respect of the Services and the performance of its obligations hereunder and it shall, at its own expense, obtain and maintain in good standing all permits and licences required by any authorities having jurisdiction to perform the Services.

The Services Provider shall also comply with the General Standards and Specifications set out in Schedule "A" attached hereto and the service levels identified in Schedule "C", as may be applicable, in its performance of the Services.

The Services Provider shall be responsible for coordinating all related work activities to be performed.

(c) **Input from Services Recipient:** The Services Recipient shall cooperate and provide any required input as might be requested by the Services Provider, on a timely basis, to facilitate the performance of the Services by the Services Provider. In addition, the Services Recipient shall disclose to the Services Provider on a timely basis any information within the Services Recipient's possession or control which may reasonably affect the ability of the Services Provider to meet its obligations under this Agreement.

(d) **Constructor:** The parties acknowledge and agree that the Services Provider shall be the "Constructor" of the Services performed within the meaning of the *Occupational Health and Safety Act*, R.S.O. 1990, c. 0.1, as amended and the regulations thereunder and shall have all of the responsibilities and liabilities of a "Constructor".

(e) **Safety and Security Measures:** When any part of the Services is to be performed at the Services Recipient's premises, all of the Services Provider's staff engaged in the performance of the Services at the said premises shall comply with the safety and security requirements and measures in effect at the said premises.

(f) **Cleanup:** The Services Provider shall maintain the location at which the Services are performed in a tidy condition and free from the accumulation of waste products and debris, other than that caused by the Services Recipient, its contractors or their respective employees. Upon completion of the Services, the Services Provider shall remove the material, tools, machinery and equipment and waste products and debris, other than those resulting from the work of the Services Recipient, its contractors and their respective employees.

(g) **Review and Inspection of the Services:** The Services Recipient shall have access to the Services at all times. The Services Provider shall provide sufficient, safe, and proper facilities at all times for the review of the Services by the Services Recipient. The Services Recipient may order any portion or portions of the Services to be examined to confirm that such work is in accordance with the requirements of this Agreement. If the work is not in accordance with the requirements of this Agreement, the Services Provider shall correct the work and pay the cost of examination and correction. If the work is in accordance with the requirements of this Agreement, the Services Recipient shall pay the cost of examination and restoration. No payment by the Services Recipient shall constitute an acceptance of any portion of the Services which are not in accordance with the requirements of this Agreement.

(h) **Defective Services:** The Services Provider shall promptly remove from the site at which the Services have been performed and replace or re-execute defective work that has been rejected by the Services Recipient as failing to conform to this Agreement whether or not the defective work has been incorporated in the Services and whether or not the defect is the result of poor workmanship, use of defective products, or damage through carelessness or other act or omission of the Services Provider. The Services Provider shall promptly make good other contractors' work destroyed or damaged by such removals or replacements at the Services Provider's expense. If, in the reasonable opinion of the Services Recipient it is not expedient to correct defective work or work not performed as provided in this Agreement, the Services Recipient may deduct from the amount otherwise due to the Services Provider the difference in value between the work as performed and that called for by this Agreement. If the Services Provider and Services Recipient do not agree on the difference in value, they shall follow the dispute resolution procedures outlined in Section 8.0 herein.

(i) **Meetings:** The parties agree to meet quarterly after the Effective Date to review performance, quality and timeliness of the Services provided by the Services Provider.

(j) **Emergency Priority:** Upon determination by the Services Recipient that the Services Recipient is in an emergency situation, the Services Provider shall give first priority to responding to the said emergency, in priority over any emergency response commitments that the Services Provider may have to a third party.

## 7.0 CHANGES TO SERVICES

Either party may request a change to the scope of work including work already in progress in accordance with this Section.

If either party desires a change in the work described in the Services, it shall complete and submit to the other party, a Change Notification Form (the "CNF") in the form attached hereto as Schedule "B". The CNF shall identify the reasons and impact (cost and schedule) of the change. The other party shall respond to the CNF no later than 10 business days after receipt thereof. In the event that the parties agree with the change in the scope of work, price and/or time for completion, the parties shall execute the CNF and the executed CNF shall be attached to this Agreement.

In the event that the parties agree on the change in the scope of work but do not agree on a revised price for the changed scope of work, the price shall be fixed on a time and materials basis in accordance with the Services Provider's 2017-2018 hourly rates as may be amended pursuant to this Agreement and the CNF shall be executed by the parties accordingly. The Services Provider shall provide the Services Recipient with an invoice for the said changed scope of work that is payable on a time and materials basis and the invoice shall include a description of the work performed, a breakdown of the number of hours worked and applicable hourly rates. The Services Provider shall also provide to the Services Recipient such other information and supporting documentation as the Services Recipient may reasonably require. Such invoices, information and supporting documentation shall at all reasonable times be open to audit, inspection and copying by the Services Recipient and shall be preserved and kept available by the Services Provider for audit by the Services Recipient until the expiration of two years from the completion date of the changed scope of work.

The Services Provider shall not be obligated to carry out any change in the scope of work and the Services Recipient shall not be obligated to pay for any change in the scope of work unless and until the relevant CNF has been executed.

## 8.0 DISPUTE RESOLUTION PROCEDURES

Any controversy, dispute, difference, question or claim arising between the parties in connection with the interpretation, performance, construction or implementation of this Agreement that cannot be resolved by a Director from each party (collectively "Dispute"), other than a Dispute regarding any change to the scope of work activities processed under Section 7.0 above, shall be settled in accordance with this Section. The aggrieved party shall send the other party written notice identifying the Dispute, the amount involved, if any, and the remedy sought, and invoking the procedures of this Section. A director-level employee from each party (as chosen by each party respectively) shall confer in an effort to resolve the Dispute. If the director-level employees are unable to resolve the Dispute within 5 business days after receipt of the written notice of the Dispute, then the parties shall submit the Dispute in writing to the President of Hydro One Limited for resolution.

## 9.0 CONFIDENTIALITY AND INTELLECTUAL PROPERTY

(a) **Confidentiality**: Each party (the "Receiving Party") shall maintain in strict confidence all information, analysis, conclusions, drawings, reports, specifications or other information, proprietary or otherwise, whether transmitted orally, electronically or in written form, and received in furtherance of this Agreement from the other party (the "Disclosing Party") or any of the Disclosing Party's directors, officers, employees, consultants, agents or legal, financial or professional advisors (the "Disclosing Party Representatives") (collectively the "Confidential Information"). Except as permitted herein, the Receiving Party shall not publish, reproduce, or disclose, either directly or indirectly, the said Confidential Information to any third party and shall not use the said Confidential Information for any purpose other than for purposes of this Agreement without the prior written consent of the Disclosing Party. The Receiving Party may disclose the Confidential Information only to its shareholder, directors, officers, employees, consultants, agents or professional advisors (the "Receiving Party Representatives") having a need to know same and who have undertaken a like obligation to maintain its confidentiality.

For greater certainty, Confidential Information includes any and all personal information (as that term is defined in the *Personal Information Protection and Electronic Documents Act* (Canada), as they may be amended) and any and all information regarding a consumer, retailer, wholesale buyer, wholesale supplier, or a generator, provided by the Disclosing Party to the Receiving Party for purposes of this Agreement, whether or not such information was initially provided prior to the Effective Date.

The Receiving Party undertakes to protect and safeguard all Confidential Information in its possession or under its control and received by the Disclosing Party, in the manner described in Schedule "F" attached hereto. The Disclosing Party may, on reasonable notice, and during regular business hours, audit the information management practices of the Receiving Party to confirm compliance with the terms and conditions of this Section 9.0 and all applicable statutes, regulations, by-laws, standards and codes, as amended.

The Receiving Party undertakes to notify the Disclosing Party immediately upon discovery of any unauthorized use and/or disclosure of any of the Disclosing Party's Confidential Information, to co-operate with the Disclosing Party to help regain possession of such Confidential Information, and to prevent its further unauthorized use and/or disclosure.

The foregoing obligations with respect to confidentiality, use, reproduction, dissemination, publication and non-disclosure herein shall not apply to any information that:

(i) is previously known to or lawfully in the possession of the Receiving Party prior to the date of disclosure as evidenced by the Receiving Party's written record;

(ii) is independently known to or discovered by the Receiving Party, without any reference to the information or material;

(iii) is obtained by the Receiving Party from an arm's length third party having a bona fide right to disclose same and who was not otherwise under an obligation of confidence or fiduciary duty to the Disclosing Party or the Disclosing Party Representatives;

(iv) is or becomes public knowledge through no fault or omission of, or breach of this Agreement by, the Receiving Party or the Receiving Party Representatives; or

(v) is required to be disclosed pursuant to a final judicial or governmental order or other legal process, including, without limitation, an order of or legal process involving a regulatory authority such as the Ontario Energy Board.

The parties acknowledge and agree that the Confidential Information shall remain the sole and exclusive property of the Disclosing Party that has disclosed the Confidential Information, and the Disclosing Party shall retain all right, title and interest in and to the Confidential Information it has disclosed to the Receiving Party.

The Receiving Party agrees that it shall keep a record of written Confidential Information furnished to it by the Disclosing Party in a location separate from those locations where the Receiving Party has stored information in respect of other third parties for which it performs work and it shall advise the Disclosing Party of such location.

All Confidential Information furnished by the Disclosing Party, including that portion of the Confidential Information which is contained in analyses, compilations, studies or other documents prepared by the Receiving Party or by the Receiving Party Representatives, is the Disclosing Party's property and will be returned immediately to the Disclosing Party upon its request.

(b) **Intellectual Property:** Unless otherwise agreed, the Services Recipient shall obtain all rights, title and interests, including copyright ownership, to any reports and any other deliverable that is to be produced and delivered to the Services Recipient by the Services Provider in accordance with this Agreement and, subject to applicable legislation, and notwithstanding clause 9.0(a) above, the Services Recipient may use, disclose or modify such reports or deliverable in any manner it deems appropriate. The Services Provider shall not do any act which may compromise or diminish the Services Recipient's interest as aforesaid.

(c) **Survival of Obligations:** The obligations in this Section 9.0 shall forever survive the termination or expiration of this Agreement.

## 10.0 INSURANCE

The Services Provider shall maintain in full force and effect during the term of this Agreement and with financially responsible insurance carriers, the following insurance coverage and the insurance coverage specified in Schedule "E" attached hereto as may be applicable for any and all Services:

(i) Workers Compensation as required by the Ontario *Workplace Safety and Insurance Act, 1997,* S.O. 1997, c.16, Schedule A, as amended or similar applicable legislation covering all persons employed by the Services Provider for the Services performed under this Agreement. For U.S. employees, appropriate State Workers Compensation must be carried including Employer's Liability for a minimum limit of $5,000,000 U.S., with a Foreign Coverage Endorsement and, to the extent applicable, Jones Act and U.S. Longshoreman's and Harbor Workers coverage and FELA. To achieve the desired limit, umbrella or excess liability insurance may be used. A waiver of subrogation shall be provided by the insurers to the Services Recipient.

(ii) Automobile Liability Insurance, covering all licensed motor vehicles owned, rented or leased and used in connection with the Services to be performed by the Services Provider under this Agreement covering Bodily Injury and Property Damage Liability to a combined inclusive minimum limit of $5,000,000 and mandatory Accident Benefits. To achieve the desired limit, umbrella or excess liability insurance may be used.

(iii) Commercial General and Excess Liability Insurance with limits of $5,000,000 inclusive for both bodily injury, including death, personal injury and damage to property, including loss of use thereof, for each occurrence. To achieve the desired limit, umbrella or excess liability insurance may be used. This coverage shall specifically include, but not be limited to, the following:

a. Blanket Contractual Liability;
b. Damage to property of the Owner including loss of use thereof;
c. Pollution Liability coverage on at least a Sudden and Accidental basis;
d. Products & Completed Operations to be continuously maintained through the operational liability insurance.
e. Employer's Liability;
f. Non-Owned Automobile Liability; and
g. Broad Form Property Damage

Prior to the commencement of the performance of the Services under this Agreement, the Services Provider shall provide to the Services Recipient's representative and address noted immediately below, evidence of the minimum coverages required under this Section 10.0 in the form attached hereto as Schedule "D", noting the policy number and term and executed by a duly authorized representative of their respective insurers.

**Manager, Risk and Insurance, Hydro One Networks Inc. 483 Bay Street, South Tower TCT 07, Toronto, Ontario M5G 2P5**

With the exception of subparagraph (ii) above, all insurance coverages noted above shall specify that it is primary coverage and not contributory with or in excess of any other insurance that may be maintained by the Services Recipient.

The Services Recipient shall be included as a Named Insured subject to the Sole Agent provision under coverages noted in subparagraph (iii) above, but only to the extent to which the Services

Provider is liable to the Services Recipient for breach of its obligations under this Agreement. In addition, the parties acknowledge and agree that the insurance coverages noted in subparagraph (iii) above shall contain a cross liability clause and a severability of interests clause.

The parties further acknowledge and agree that the Insurance coverage described in this Section and provided for the Services Provider shall not be invalidated by actions or inactions of others.

## 11.0 LIABILITY

Unless otherwise agreed in writing, each party shall indemnify the other party and that other party's successors and assigns, directors, officers, employees, contractors and agents from and against all direct costs or damages attributable to the indemnifying party's performance and/or non-performance of its obligations under this Agreement and any amendments or additions thereto that are mutually agreed to in writing, whether arising from or based on breach of contract, tort, negligence, strict liability or otherwise. Notwithstanding any other provision of this Agreement, neither party shall be liable for any special, indirect or consequential damages or for economic loss, incurred by the other or by any third party claiming through or under the other.

The foregoing paragraph shall forever survive the termination or expiration of this Agreement.

## 12.0 AUTHORIZED REPRESENTATIVES

The authorized representatives of the parties hereto for purposes of this Agreement are the following:

**HYDRO ONE REMOTE COMMUNITIES INC.**
483 Bay St.
North Tower, 12th Floor
Toronto, Ontario
M5G 2P5
Attention: Una O'Reilly
Telephone: (416) 345-6698
Telecopier: (416) 345-6356

**HYDRO ONE NETWORKS INC.**
483 Bay St.
South Tower, 7th Floor
Toronto, Ontario
M5G 2P5
Attention: Scot Hutchinson
Telephone: (416) 345-5569
Telecopier: (416) 345-6833

All correspondence, reports, documents and/or other communication concerning this Agreement, the Schedules attached hereto or any of the Services shall be directed to the attention of the authorized representatives noted above. Any notice permitted or required to be given hereunder shall be deemed to be sufficiently given if delivered personally, mailed or transmitted by fax to the attention of the authorized representatives at the addresses above, and any notice so given shall be deemed to have been made and received on the date of delivery or on the 5th business day following the day of mailing of same or on the day of transmission if transmitted during normal business hours, otherwise on the next business day, as the case may be.

## 13.0 FORCE MAJEURE

Except for the payment of any monies required hereunder, neither party shall be deemed to be in default of this Agreement where the failure to perform or the delay in performing any obligation is due to a cause beyond its reasonable control, including, but not limited to, an act of God, act of any federal, provincial, municipal or government action, or order of court or administrative or regulatory authority, civil commotion, strikes, lockouts and other labour disputes, fires, floods, sabotage, earthquakes, storms, ice storms and epidemics. As soon as a party anticipates that a force majeure event may occur which will delay or prevent it from performing any of its obligations under this Agreement, it shall promptly notify the other party and shall exercise all reasonable efforts to mitigate or limit the effect on the other party.

Once a party becomes subject to such an event of force majeure, it shall promptly notify the other party of its inability to perform, or of any delay in performing, due to an event of force majeure and shall provide an estimate, as soon as practicable, as to when the obligation will be performed. The party subject to the force majeure event shall also continue to furnish timely reports to the other party with respect to the force majeure event during the continuation of the said event and the said party shall exercise all reasonable efforts to mitigate or limit damages to the other party. The party subject to the force majeure event shall use its best efforts to continue to perform its obligations under this Agreement, as the case may be, and to correct or cure the event or condition excusing performance and when the said party is able to resume performance of its obligations thereunder, it shall give the other party written notice to that effect and shall promptly resume performance thereunder. The time for performing the obligation shall be extended for a period equal to the time during which the party was subject to the event of force majeure. The parties shall explore all reasonable avenues available to avoid or resolve events of force majeure in the shortest time possible.

Notwithstanding the two preceding paragraphs, the settlement of any strike, lockout, restrictive work practice or other labour disturbance constituting a force majeure event shall be within the sole discretion of the party involved in such strike, lockout, restrictive work practice or other labour disturbance and nothing in the two preceding paragraphs shall require the said party to mitigate or alleviate the effects of such strike, lockout, restrictive work practice or other labour disturbance.

## 14.0 ASSIGNMENT

Neither this Agreement nor any the rights and obligations hereunder may be assigned by either party hereto without the prior written consent of the other, which consent shall not be unreasonably withheld; provided, however, that a party may assign this Agreement or any rights, remedies or liabilities to any of its affiliates (as this term is defined in the Ontario *Business Corporations Act*, as amended) without the need for prior consent, in which case the assignor shall provide the other party with written notice of the assignment within 30 days after the effective date thereof. Subject to the foregoing, this Agreement shall enure to the benefit of the parties hereto and their respective successors and permitted assigns.

10

## 15.0 AMENDMENTS

Any amendment, modification or supplement to this Agreement shall not be valid or binding unless set out in writing and executed by the parties with the same degree of formality as the execution of this Agreement. Notwithstanding the foregoing, the parties acknowledge and agree that the Services Recipient shall be entitled to unilaterally change the General Standards and Specifications attached hereto as Schedule "A" provided however that the parties shall negotiate in good faith the effect of any such changes to the scope of work, time for completion of the said scope of work and the price therefor, in accordance with the process outlined in Section 7.0 above.

## 16.0 ENTIRE AGREEMENT

This Agreement, together with Schedules "A", "B", "C", "D", "E" and "F" attached hereto, represents the entire agreement between the parties hereto respecting the subject matter hereto and supersedes all prior agreements, understandings, discussions, negotiations, representations and correspondence made by or between them respecting the subject matter hereto.

## 17.0 CONFLICTS

In the event of any conflict between this Agreement and Schedules "A", "B", "C", "D", "E" and "F", the provisions of the former shall prevail. In the event of any conflict amongst the Schedules, then the Schedules shall take precedence in the following order: (i) Schedule "C", (ii) Schedule "D"; (iii) Schedule "B"; (iv) Schedule "A"; (v) Schedule "E" and (vi) Schedule "F".

## 18.0 GOVERNING LAW

This Agreement shall be governed by and construed in accordance with the laws of the Province of Ontario and the laws of Canada applicable therein.

## 19.0 SCHEDULES

Schedules "A", "B", "C", "D", "E" and "F" attached hereto are to be read with and form part of this Agreement.

## 20.0 RELATIONSHIP OF PARTIES

Nothing in this Agreement creates the relationship of principal and agent, employer and employee, partnership or joint venture between the parties. The parties agree that they are and will at all times remain independent and are not and shall not present themselves to be the agent, employee, partner or joint venturer of the other. No representations will be made or acts taken by either party which could establish any apparent relationship of agency, employment, joint venture or partnership and neither party shall be bound in any manner whatsoever by any agreements, warranties or representations made by the other party to any other person nor with respect to any other action of the other party.

## 21.0 COUNTERPARTS

This Agreement may be executed in counterparts and the counterparts together shall constitute an original.

**IN WITNESS THEREOF** the parties hereto have caused this Agreement to be executed by their respective representatives duly authorized in that behalf.

## TABLE OF CONTENTS

## GSS #1 USED, REUSABLE AND WASTE MATERIALS

### 1.1 DEFINITIONS

#### 1.1.1 Reusable Material

Where practical, the Services Provider shall reuse and re-deploy all material that is removed from service, provided such material is still in good operating condition and satisfies the criteria indicated in this GSS #1.

#### 1.1.2 Waste Material

All other material that is removed from service will be considered to be waste material.

#### 1.1.3 Recycling

Recycling means using waste material for purposes other than those for which the material was originally intended: it does not include destruction (such as incineration or burning as a supplementary fuel) or use as land fill.

### 1.2 EXPECTATIONS

Costs for the management of used material that is associated with capital projects, including the disposition of such material for re-deployment, re-use and/or disposal, shall be identified in Schedule "C", where applicable (e.g. the cost to pickup, transport and dispose of PCB fluids and contaminated waste).

The Services Provider shall handle all reusable material removed from service in a manner that is consistent with Schedule "C" (where identified) and in accordance with applicable legislation, statutes, by-laws, codes, guidelines, regulations, and Hydro One procedures. Such material shall be stored in a safe and secure manner to minimize any risk of physical damage and/or of environmental or health and safety impacts associated with such damage, pending re-deployment or shipment to storage.

The Services Provider shall manage and dispose of waste material in a manner that is consistent with Schedule "C" (where identified) and in accordance with applicable legislation, statutes, by-laws, codes, guidelines, regulations, and Hydro One procedures. Preference will be given, where practical, to disposal options that maximize the potential for recycling.

### 1.3 CRITERIA FOR USED MATERIALS

| Material | Criteria and Action |
|---|---|
| Poles | • Distribution poles shall be less than 16 years old<br>• Transmission poles shall be less than 12 year old<br>• Penta-treated poles shall not be reused<br>• All wood poles no longer required by the Services Recipient shall be returned to the appropriate service/operations centre.<br>• All wood poles no longer required by the Services Recipient shall be disposed of appropriately. |

| Material | Criteria and Action |
|---|---|
| Pole-Mounted Transformers | • Must be no older than 1974<br>• If less than 200ppm PCB, a pole-mounted transformer shall be drained, refilled and re-tested after 2 years<br>• If bushings are side-mounted they shall be recycled<br>• Pole-Mounted Transformers shall be visually inspected (remove cover). If the inspection indicates no damage to the coil, they shall be returned for repair<br>• If a transformer fails inspection and is over 50ppm PCB, it shall be scrapped as PCB-contaminated waste |
| Pad-mount Transformers | • All such transformers shall be returned for repair<br>• If less than 200ppm PCB, a pad-mounted transformer shall be drained, refilled and re-tested after 2 years<br>• Pad-mounted transformers shall be visually inspected. If the inspection indicates no damage to the coil, they shall be returned for repair<br>• If a transformer fails inspection and is over 50ppm PCB, it shall be scrapped as PCB-contaminated waste |
| Line Voltage Regulators | • This includes any 50A line regulator retained for parts; all others shall be returned for repair<br>• If less than 200ppm PCB, line voltage regulators shall be drained, refilled and re-tested after 2 years<br>• Line voltage regulators shall be visually inspected (remove cover). If the inspection indicates no damage to the coil, they shall be returned for repair<br>• If a regulators fails inspection and is over 50ppm PCB, it shall be scrapped as PCB-contaminated waste |
| Oil Circuit Reclosers | • If less than 200ppm PCB, the reclosers shall be drained, refilled, and re-tested after 2 years<br>• Reclosers shall be visually inspected (remove cover). If the inspection indicates that there is no damage, they shall be returned for repair<br>• If a recloser fails inspection and is over 50ppm PCB, it shall be scrapped as PCB-contaminated waste |
| Metering Transformers / Units | • If less than 200ppm PCB, the units shall be drained, refilled and re-tested after 2 years<br>• The units shall be visually inspected (remove cover). If the inspection indicates no damage to the coil, it shall be returned for repair<br>• If a unit fails inspection and is over 50ppm PCB, it shall be scrapped as PCB-contaminated waste |
| Capacitors | • No PCB or Dielektrol I- or II-filled capacitors shall be reused<br>• Capacitors shall not have an unknown PCB content unless permission is obtained from the Services Recipient. Some capacitors manufactured before January 1981 may contain PCB over 50 ppm. |
| Primary Conductors | • If less than 3/0, primary conductors shall be reused for extensions where the main line is of the same size<br>• Before reusing, #2 shall be inspected for deterioration in the core<br>• All other conductors shall be reused |
| Secondary Conductors/ Underground Cable | • Secondary Conductors/Underground Cables shall be reused if they pass an asset condition test<br>• The units must contain no splices (in the underground cable) that test greater than 50 mg/kg PCB. In addition, end sections must not have come from terminations that test greater than 50 mg/kg PDB.<br>• All secondary conductors shall be reused<br>• No underground cables shall be reused if they are more than 10 years old |
| Submarine Cable | • No submarine cable shall be used if it is more than 5 years old |

| Material | Criteria and Action |
|---|---|
| Insulators | • All single piece porcelain pin insulators shall be reused (not other porcelain insulators): the intent is to replace insulators with silicone (polymer) types on 115 kv and 230 kv, where practical<br>• Epac insulators shall not be reused<br>• Cob porcelain post insulators shall not be reused |
| Cross-arms | ***Distribution:***<br>• Cross-arms shall be reused if no apparent cracking or excessive aging is evident |
| | ***Transmission:***<br>• All wooden cross-arms shall be removed and disposed<br>• All steel cross-arms shall be reused |
| Spool Bolts | • All spool bolts shall be reused |
| Switches | ***Distribution:***<br>• No Kearney switches nor rigid polymeric insulator-type switches shall be reused |
| | ***Transmission:***<br>• All shall be 115 kV & 230 kV in-line polymeric switches<br>• Only those switches that have tested satisfactorily shall be reused |
| Insulating Oil | • All insulating oil is required to meet specification for Voltesso 35 Category "B" oil OR have the potential to be upgraded to meet this specification<br>• Insulating oil must contain less than 50 mg/kg PCB by laboratory test |

## 1.4 FINANCIAL TREATMENT OF USED MATERIAL

The Services Provider shall report all units removed from service. When used materials are reused for capital or maintenance work, the materials shall be charged to the work as if the material was new.

## 1.5 INFORMATION REQUIREMENTS

The Services Provider shall record and report the following information to the Services Recipient according to a schedule specified in the description of Services in Schedule "C" to the Agreement.

- Transformer Units by MVA/kVA and voltage, whether installed, salvaged or disposed as waste (new or used material)
- Regulator/Rabbit Units by kVA and voltage, whether installed, salvaged or disposed as waste (new or used material)
- Recloser Units by voltage and interrupting rating
- Switches by manufacturer type and voltage rating
- Capacitor Units by total MVA/kVAR, including voltage, number of phases and control type, whether installed, salvaged or disposed as waste (new or used material)
- Transmission line structures and distribution pole units by type (steel or wood pole), height, age, ownership (Hydro/Bell Canada/MEU), Bell Canada I.D. (exchange, route and pole number), structure number
- Conductor Units by size, type and length, whether installed, salvaged or disposed as waste (new or used material)
- Cable size, type, length and voltage, whether installed, salvaged or disposed as waste (new or used material)
- Record or retained material, including volumes scrapped, reused or repaired and reused.

(1) Note: The information listed above is required for accounting purposes at the plant.

## 1.6 WASTE MATERIAL

For waste material that is classified as either hazardous or as liquid industrial, the Services Provider shall follow specific requirements. These requirements are detailed in the appropriate legislation (e.g., *Environmental Protection Act, Occupational Health & Safety Act*) and internal policies/standards/procedures (e.g., Waste Management Manual). Records of hazardous waste volumes shipped to disposal shall be reported to the Services Recipient and such records shall be maintained according to established records management. All hazardous waste material shall be handled and managed with due regard for worker and public health and safety.

## GSS #2 ENVIRONMENT, HEALTH & SAFETY REQUIREMENTS

### 2.1 GENERAL STATEMENT OF COMPLIANCE AND REQUIREMENTS

The Services Recipient expects to receive the same level of compliance, where applicable, for services provided under the Agreement. As a minimum, the Services Provider shall comply with the following:

- Federal and Provincial legislation;
- Municipal by-laws;
- The Services Recipient's Safety Rules and Policies;
- All legacy Ontario Hydro policies, procedures and standards still applicable to the Services Recipient;
- Policies approved by the Services Recipient's Board of Directors;
- The Services Recipient's Environment, Health & Safety Management policies, procedures and associated standards; and
- The Services Recipient's Policy for Health & Safety Incident Management.

### 2.2 ENVIRONMENTAL REQUIREMENTS

#### 2.2.1 General Requirements for Management of the Environment

For managing the environment, the Services Provider shall abide by the following:

a) The Services Provider shall design, construct, operate, maintain and decommission the Services Recipient's facilities in accordance with standards to be developed by the Services Recipient and made available to the Services Provider.

b) The Services Provider shall perform all work on behalf of the Services Recipient in a manner that is consistent with the principles of an environmental management system including, as a minimum:
   - Assigning and communicating individual accountability and responsibility for the environment;
   - Engaging qualified employees and agents (i.e. with respect to knowledge, training and experience to perform the work assigned) to perform the work;
   - Having emergency preparedness and response capability suitable to the range of issues that could be encountered during the course of the work detailed in Schedule "C" to the Agreement;
   - Inspecting, maintaining and monitoring equipment, facilities and employees during the course of providing the Services;
   - Reporting environmental incidents, performing incident investigations and implementing corrective actions in response to an incident; and
   - Periodically reviewing environmental management processes and making improvements, as necessary.

c) The Services Provider shall consider the environmental implications of all work and integrate environmental considerations into its plans for all work that could have an adverse effect on the environment.

d) In performing the services, the Services Provider shall:
   - Use materials, products and equipment that are government-approved, industry-accepted and sustainable (i.e., from environmental, economical, social perspectives). The Services provider shall give preference, where practical, to materials and products that have low toxicity and do not contain substances that are included on Schedule 1 (List of Toxic Substances) of the *Canadian Environmental Protection Act* or on the Priority Substances Lists 1 and 2.
   - Maximize the efficient use of resources;
   - Be energy efficient; and
   - Conserve heritage resources.

e) The Services Provider shall, when included in the project scope, prepare and implement project-specific environmental specifications when the prevention or mitigation of predicted environmental impacts can only be assured by the application of a specific damage prevention or mitigation approach. Such environmental management specifications will be consistent with applicable standards.

f) The Services Provider shall prepare and provide to the Services Recipient, project-specific, As-Constructed Reports for all projects that require any one or more of the following, where the Services Recipient and the Services Provider shall mutually determine which environmental authorities or industry or legislative standards shall be used in developing such reports:

- Environmental permits;
- Environmental considerations or special commitments;
- Access agreements, construction property agreements and special conditions that contain a record of the final environmental state of the project;
- Documentation of significant environmental situations or activities; and
- Property rights summaries.

g) The Services Provider shall provide to the Services Recipient, the records identified in (b), (e) and (f).

### 2.2.2 Environmental Incident Management

The Services Provider shall consistently respond and report environmental incidents and ensure that all such incidents involving Distribution or Transmission assets and lands are managed effectively. Included as "environmental incidents" are:

- Vandalism, natural events (such as lightning, ice, and wind) and animal activity;
- Accidental or inadvertent public contact with electrical system assets or equipment (such as motor vehicle accidents, ladders into lines);
- Mechanical/electrical failure for no apparent reason or unknown cause;
- Asset management standards that are subsequently shown to have contributed to the incident; and
- Operation or maintenance activities in accordance with accepted standards that would not normally be expected to cause leaking, equipment failure or malfunction.

The Services Provider shall document all environmental incidents (such as spills and fires) involving the Services Recipient's assets and/or lands (owned or easement) (e.g., complete a Hydro One Environmental Incident Report). The Services provider shall enter this information into the Web Environmental Incident Collector (WebEIC) database and/or any other similar database, as directed by the Services Recipient.

The Services Provider shall consistently respond to, and report, environmental incidents. The Services Provider shall also ensure that all environmental incidents involving the Services Recipient's assets and land are managed effectively.

## 2.3 HEALTH & SAFETY

### 2.3.1 Potential Hazards

There are two significant hazards associated with work on the Services Recipient's assets:

- Hazards inherent to working in proximity to electrical equipment; and
- Hazards inherent to working at heights.

The Services Provider may also work in buildings or at sites where hazardous substances are present. Inventories and assessments of potentially hazardous or hazardous substances have been completed for the majority of the Services Recipient's sites; they are available to the Services Provider on request. All requests should be made locally.

The Services Provider shall manage all hazards associated with all Services with the Services Recipient.

### 2.3.2 General Requirements for the Management of Health & Safety

The Services Provider shall perform all work on behalf of the Services Recipient in a manner that is consistent with the principles of a health and safety management system including, as a minimum:

(a) Assigning and communicating individual accountability and responsibility for health and safety;
(b) Engaging qualified employees and agents (i.e. with respect to knowledge, training and experience to perform the work assigned) to perform the work;
(c) Having emergency preparedness and response capability suitable to the range of issues that could be encountered during the course of the work detailed in Schedule "C" to the Agreement;
(d) Inspecting, maintaining and monitoring equipment, facilities and employees during the course of providing the Services;

(e) Reporting safety events, performing event investigations and implementing corrective actions in response to an event;

(f) Periodically reviewing health and safety management processes periodically and making improvements, as necessary; and

(g) Submitting the records identified in (e) and (f) to the Services Recipient.

The Services Provider shall ensure the protection of the public in the performance of all work for the Services Recipient.

### 2.3.3 Health & Safety Event Management

The Services Provider shall consistently respond and report all health and safety events involving the Services Recipient staff and/or members to the Services Recipient. Included as health and safety events are:

- Vandalism, natural events (such as lightning, ice, and wind) and animal activity;
- Accidental or inadvertent public contact with electrical system assets or equipment (such as motor vehicle accidents, ladders into lines);
- Mechanical/electrical failure for no apparent reason or unknown cause;
- Asset management standards that are subsequently shown to have contributed to the event; and
- Operation or maintenance activities in accordance with accepted standards that would not normally be expected to cause leaking, equipment failure or malfunction.

**Description of Services**

**FORESTRY SERVICES:**

**A. Description of Services:**

The Services Provider shall provide the Services Recipient with the following forestry services:

1. Upon the Services Recipient's request, perform condition assessments of the Services Recipient's distribution systems, and prepare a proposed multi-year forestry maintenance cycle for the Services Recipient.

2. Upon the Services Recipient's request, perform condition assessments of the Services Recipient's assets, and prepare cost estimates depicting at a minimum: labour hours and type (Technician, Supervisory, Maintainer, HH, etc.), TWE rates and requirements, material costs, board and lodging expenses, transportation costs excluding air charters, and applicable sundries in sufficient detail necessary for work scheduling and business planning purposes. As well, the amount of joint use right of way and associated clearing costs shall be identified by the Services Provider within the estimates.

3. Site monitoring of line clearing and/or brush control performed by third party contractors retained by the Services Recipient for servicing its rights of way in First Nation Communities as identified by the Services Recipient's representative. As required, the Services Provider shall clear lines and remove brush within the limits of approach to make it safe for First Nation Community contractors to clear lines and control brush outside the limits of approach.

4. Perform line-clearing in all communities within the Services Recipient's designated territory and brush control on all assets located on provincial land as identified by the Services Recipient. As well, from time to time as requested by the Services Recipient, the Services Provider will perform brush control activities on First Nation lands when the First Nation is unable to unwilling to perform the task to meet applicable standards.

5. Perform brush control measures including herbicide application where applicable in all station yards within the Services Recipient's territory.

6. Assist with the development of the line clearing and brush control specifications and standards necessary for negotiations with third party contractors and First Nations Administration.

7. Assist in providing notification of forestry services to communities and attaining necessary permissions from property owners or custodians.

8. Obtain various work permits such as cutting rights and stumpage fees on Crown Land or from companies with assigned cutting rights, fuel wood and stream crossing permits from the Ministry of Natural Resources, or transportation/crossing arrangements with the Canadian National Railway or Canadian Pacific Railway for the performance of the forestry services.

9. Provide forestry support for emergency line clearing and trouble calls.

10. Provide forestry support for line clearing and brush control as required for work driven by extensions, connections, betterments and upgrades to distribution facilities.

11. Provide documentation and support to enable the Services Recipient to obtain Purchase Service Agreements (PSA) with the Power Workers Union (PWU) for line clearing in First Nation communities, as well as, necessary sole source and procurement documentation.

12. Prepare and provide detail cost estimates of identified planned work to the Services Recipient by April 15, 2017 in order to facilitate business planning for the following year as may be needed. The Services Recipient shall identify the work to be estimated by March 1, 2017. Other estimates that may be required throughout the year and will be prepared and provided 15 days after the request is received by Forestry Services Scheduling.

13. The Services Provider shall prepare and provide necessary PSA and procurement documentation for First Nation brushing contracts by April 15, 2017. The Services Recipient will be responsible for managing and completing PSA negotiations with the PWU and approve procurement documents as it deems necessary.

14. The Services Provider shall complete 100% of the annual planned line clearing and brush control operations by December 15' 2017. The details of the annual plan will be discussed at a meeting between the Services Recipient's Customer Service Manager or delegate and the Services Provider's Forestry Superintendent - Northern Zone or Territory Manager delegate and shall be held before the end of February, 2017 where the parties will confirm activities and expectations for the year.

## B. Price and Terms of Payment:

The Services Recipient shall pay the Services Provider for the forestry services on a time and materials basis in accordance with the wage schedules of the Services Provider.

The above fees payable excludes all airfares and lodging and contractual obligations as required under the collective agreement for the Services Provider's costs while working at the Services Recipient's facilities, which shall be paid directly by the Services Recipient. The Services Recipient will arrange and pay for the scheduling of charter flights to the Services Recipient's sites.

## C. Service Levels:

The Services Provider shall report the following information in writing to the Services Recipient by December 15, 2017:

- Kilometers of line controlled / treated in each community
- Number of helicopter landing sites cleared
- Total actual cost of the forestry services in each community
- Instances of customer objection to use of herbicides and/or treatment of vegetation by any method; such customer disputes shall be resolved by the Services Recipient if resolution could not be attained through the Services Provider's regular procedures
- Detailed work completion reports of line clearing and brush control in each community upon completion of project.

## METERING SERVICES:

### A. Description of Services

The Services Provider shall provide the Services Recipient with the following metering services:

- manage the Services Recipient's annual Meter Reverification and Sample Program : issuing (Change Meter Orders – CMOs) work orders to the Services Recipient's field forces for meter change-outs of recalled (due meters), seal expired (overdue), sample and failed meters;
- verify/reverify and seal meters to meet the Services Recipient's field demand for meter change-outs;
- manage a physical meter inventory by maintaining adequate stock of metering equipment to meet the needs for annual meter reverification, new services, service upgrades and replacement of failed or defective/damaged meters;
- acquire / provide data to the Services Recipient as required by the Services Recipient to resolve meter disputes and customer complaints, including, as required, metering documentation and documentation about hardware;
- manage meter requirements for change-outs of reported damaged or defective meters (i.e. defective replacements) and disputed meters. The Services Provider shall issue meter equipment (pending equipment availability) within 7 working days of a field request therefor from the Services Recipient;
- audit/review physical meter and instrument transformer records in compliance with the requirements in the federal *Electricity and Gas Inspection Act* as amended;
- develop metering specifications/standards and provide engineering support to the Services Recipient;
- provide access to training and conferences (including, where appropriate, training provided by third parties (for e.g. . the Electricity Distributors Association (formerly, the Municipal Electric Association) and training provided by the Services Provider's Training and Development Services staff) ;
- liaise with Measurement Canada on behalf of the Services Recipient including with respect to audit and metering installation reporting.

The Services Provider shall provide the Services Recipient with a written report by no later than December 15, 2017 wherein it shall specify the cost and accomplishments of the metering services provided by its personnel for the said year.

### B. Price and Terms of Payment:

The Services Recipient shall pay to the Services Provider for these metering services on a time and materials basis. The payment terms are as specified in the Agreement.

### C. Service Levels:

All metering services will be provided by the Services Provider in accordance with the requirements in ISO 9001:2008 as revised by ISO 9001:2015.

## WORK METHODS AND TRAINING SERVICES:

### A. Description of Services:

The Services Provider shall provide the Services Recipient, as required by the Services Recipient, with the following services related to specific job procedures outlining sequence, tools, resources, safety precautions, and hazards relating to job tasks (collectively, the "Work Methods") and trades/technical training support for distribution lines, customer service and station maintenance trades in accordance with the specific terms and conditions noted therein:

**1. Training Delivery**

- The Services Provider will provide requested trades training for the Services Recipient.
- The Services Recipient will provide the names of all employees working for the Services Recipient on a continual basis (i.e. new employees/apprentices) to the Services Provider.
- The Services Provider shall schedule the training in such manner so as to meet the Services Recipient's reasonable needs. In order for the Services Provider to meet these needs, the Services Recipient shall submit a "Request for Training" form 30 days in advance of the training requested, which form may be amended from time to time by the Services Provider. The "Request for Training" form is posted, and can be accessed, electronically at the Hydro One Plugin Website>HSE>Training>Forms (http://hydronet.hydroone.com/Pages/default.aspx).
- The Services Recipient shall determine and notify the Services Provider as to whether or not training will be delivered in a centralized or decentralized manner.
- The Services Recipient will also notify the Services Provider with as much time as possible in the event there is a need for Training course cancellation, but in any event no less than 10 Business Days' prior written notice. The Services Recipient acknowledges and agrees that if it does not provide the Services Provider with a minimum 10 Business Days prior written notification of training course cancellation, the Services Recipient will bear all costs that may have been incurred by the Services Provider for training development, scheduling, travel, and accommodations related to said training course.

The Services Provider and the Services Recipient shall comply with the following accountability matrix:

| **Accountabilities Matrix** | |
|---|---|
| **Task** | **Accountability** |
| Approval of Course Content | Services Recipient |
| Course Participants | Services Recipient |
| Course Instructors | Services Provider |
| Course Scheduling | Services Provider |
| Development of Course Material | Services Provider |
| Quarterly Report of all training activities to Services Recipient | Services Provider |

**2. Records Maintenance**

- The Services Provider shall input all of the Services Recipient's training data into the Services Provider's centralized database within ***(10) ten*** Business Days after the Services Provider's receipt from the Services Recipient of the completed "Training Record Input Form", which form may be amended from time to time by the Services Provider. The "Training Record Input Form" is posted, and can be accessed, electronically at the Hydro One Plugin Website>HSE>Training>Forms (http://hydronet.hydroone.com/Pages/default.aspx).

- The training record maintained by the Services Provider will include all legislated, Corporate-mandated and trade specific training. Other topics will be included at the request of the Services Recipient.
- All training records/information shall be accessible via the Hydro One Learning Management System (view only – HOLMs on the Hydro One Plugin Website - (http://hydronet.hydroone.com/Pages/default.aspx) by the Services Recipient.

**3. Training Material Development**

- The Services Recipient will identify to the Services Provider the skill sets required, including all mandatory-training requirements. The Services Recipient shall inform the Services Provider requests to develop new training material by completing the "WM&T Creation of New Projects" Form, which form may be amended from time to time by the Services Provider. The "WM&T Creation of New Projects" Form is posted, and can be accessed, electronically at the Hydro One Plugin Website>HODS>SP-0699 (http://hydronet.hydroone.com/Pages/default.aspx).
- The Services Provider will produce and maintain all course materials as directed by the Services Recipient, including a list of Subject Matter Experts participating and/or completing the project.
- The modification of training packages will be developed by the Services Provider within a timeframe agreed to by both parties, after the Services Provider's receipt of signed terms of reference from the Services Recipient. The Services Provider shall ensure that the modifications shall include such items as new equipment, legislative changes, performance requirements and new procedures as requested by the Services Recipient.

**4. Communication**

- The Services Recipient's training contact will be identified to the Services Provider by no later than October 30, 2017 and will speak with the Services Provider's representative identified in the body of the Agreement on a quarterly basis to review the Services Provider's performance of the work methods and training services as required by the Services Recipient. The Agenda for these quarterly meetings will be developed by the Services Recipient and forwarded to the Services Provider.
- A course catalogue and availability of training courses for the coming year will be provided by the Services Provider to the Services Recipient on an ongoing basis. This is currently available to the Services Recipient through HOLMs.

**5. Work Methods and Procedures Development**

- The Services Provider will provide assistance to the Services Recipient in the development of new Work Methods and/or procedures as required by the Services Recipient.
- The development and assessment of new work procedures/tools will be a joint effort between the parties based on a terms of reference document which shall be provided by the Services Recipient to the Services Provider with timeframes for completion established by both parties.
- The Services Provider will provide the Services Recipient with access to all work procedures and bulletins developed by the Services Provider.

### B. Price and Terms of Payment:

The Services Recipient shall pay the Services Provider for the Work Methods services on a time and materials basis in accordance with the wage schedules of the Services Provider.

In addition, the Services Recipient will pay the cost of all material, travel and per diem costs incurred by the Services Provider related to the provision of these work methods and training services. The scheduling of charter flights to the Services Recipient's sites will be arranged and paid for by the Services Recipient. The Training Specialist/officer's time includes development and scheduling and shall be paid by the Services Recipient. The Training Manager's costs, including managing these work methods and training services, shall be paid by the Services Recipient in accordance with the hours in the chart above.

### C. Service Levels:

- Training schedules/course availabilities for all required training (which are currently provided/available through the Services Provider's HOLMS database) shall be issued by the Services Provider within 90 days after the date first written above.
- The Services Provider shall provide the Services Recipient with post-course assessments of trainee accomplishment/performance to ensure employee competencies in areas trained.
- The Services Provider shall ensure that 95% of the scheduled training shall be provided to the Services Recipient prior to expiry of the term of the Agreement.

## PROVINCIAL LINES SERVICES:

### A. Description of Services:

Demand Work and Trouble Repairs:

Subject to the Services Provider's availability of personnel and resources which shall be determined by the Services Provider in its sole discretion, the Services Provider shall, in accordance with the Services Recipient's request from time to time, maintain the Services Recipient's distribution system (which distribution system supplies customers in remote communities at voltages of less than 50kV) by providing the following activities, as may be requested by the Services Recipient:

- Customer connection/disconnection to/from the primary distribution system
- Trouble Call Response, power restoration and storm damage repairs
- Line layout, estimating and staking
- Service Layouts and Collections
- Power line maintenance, construction and repair
- Distribution system operation including application of the Work Protection Code
- ADET/Metering Technician technical trouble support

For the performance of the above-referenced provincial lines services, the Services Provider shall provide:

1. subject to staff availability, short duration (six weeks or less) release of up to a maximum of 2 Regional Line Maintainers (RLMs) to cover absence/augment crew size. The Services Recipient will contact the Services Provider (Customer and Business Service Manager) as soon as practical to identify the need for all resources;

2. trouble Call Response: provide work crew(s) from appropriate geographical locations (Thunder Bay, Ear Falls, Dryden, Kenora, Timmins) in response to customer trouble calls dispatched by either the Services Recipient's First Line Manager/Union Trades Supervisor lines or the Services Provider's Supervisor on call. Trouble Calls crews shall be provided by the Services Provider on short notice and are subject to availability;

3. subject to staff availability, Customer Demand Work: Provide work crew(s) from appropriate geographical locations (Thunder Bay, Ear Falls, Dryden, Kenora, Timmins) in response to customer connection/ minor line construction requests from the Services Recipient's First Line Manager;

4. subject to staff availability, Lines Technical Work: Provide an Area Distribution Engineering Technician, (ADET)/Metering Technician, or Line Technician for short duration (six weeks or less) work assignments upon request from the Services Recipient's First Line Manager;

5. respond to requests for distribution system technical services and engineering approval(s).

Planned Work:

The Services Provider will work with the Services Recipient's First Line Manager to include in the Services Provider's plans the availability and supply of personnel and resources to meet the requirements for planned work in the Services Recipient's service territory. The Services Provider shall, in accordance with the Services Recipient's work plans respond to the Services Recipient's requests, from time to time, to maintain the Services Recipient's distribution system (which distribution system supplies customers in remote communities at voltages of less than 50kV) by providing the following activities, as may be requested by the Services Recipient:

- Line layout, estimating and staking
- Service Layouts and Collections
- Power line maintenance, construction and repair
- Sentinel light installation, repair or removal
- Distribution system operation including application of the Work Protection Code
- Meter Installation and reverification and sample meter changes
- Processing requests for railway and water crossing approvals
- Joint Use Consultation/Technical support
- Technical services in support of the Hydro One distribution line standards
- Engineering approval(s) and updates to the Distribution line standards
- MDx (Distribution system) data collection training and assistance
- Training and technical support for implementation and maintenance of ArcFM.

For the performance of the above-referenced provincial lines services, the Services Provider shall:

1. include in the Services Provider's plans, and make available, staff for short durations (6 weeks or less) release of up to a maximum of 2 RLMs to cover absence/augment crew size;

2. include in the Services Provider's plans, and make available, staff for short durations (6 weeks or less) work crew(s) from appropriate geographical locations (Thunder Bay, Ear Falls, Dryden, Kenora, Timmins) in response to customer connection/ minor line construction, MDX data collection requests from the Services Recipient's First Line Manager;

3. include in the Services Provider's plans, and make available, staff for short durations (6 weeks or less), Area Distribution Engineering Technician, (ADET)/Metering Technician and Line Technician upon request from the Services Recipient's First Line Manager;

4. respond to requests for distribution system technical services and engineering approval(s).

Supervision, Administration, Health and Safety

The Services Provider shall comply with the following supervision, administration, health and safety, and work management conditions in its performance of the provincial lines services:

1. All training, supervision and administration costs associated with staff on rotation shall be accounted for within the Services Recipient's work program. Core/mandatory training shall be scheduled within the regular work location whenever possible.

2. Whenever possible, the Services Provider will provide advice for all Lines and Technician training requirements. Also, whenever possible, the Services Provider will provide

notification for all Lines and Technician training that will be delivered at the local Hydro One Thunder Bay office. It is agreed that the Services Recipient will pay for all costs incurred by its staff to attend this training. Costs associated per Services Recipient employee will be agreed to prior to the Services Recipient employee attending the training.

3. Health and Safety incidents involving crews under the Services Provider's direct supervisory control shall be the responsibility of the Services Provider's lines operations centres.

Transport and Work Equipment (TWE) Provision

1. The Services Recipient will provide TWE at all fly-in sites for types of work, i.e. Trouble Calls, other Line work, Technician work.
2. For demand work at road access sites, trouble calls and new connects, the Services Provider will supply TWE, the cost of which will be included in the fees payable by the Services Recipient.
3. For Technician work at road access sites, the Services Provider will supply TWE and the costs of TWE will be included in the fees payable by the Services Recipient.

**B. Price and Terms of Payment:**

Except as specifically provided herein, the Services Recipient shall pay the Services Provider for the Provincial Lines Services on a time and material basis, including overtime.

The Services Recipient will pay for all costs associated with fly-in work.

Planned Work

- Time and Materials including any required overtime.
- The Services Recipient shall pay all incremental travel/overtime costs for the assignment of personnel from locations other than Thunder Bay for Lines, Technician and Customer Service personnel.
- In addition, the Services Recipient will pay the Services Provider's costs of the administration and reporting in respect of these Provincial Lines Services, material, transport and work equipment, travel and per diem costs related to the provision of these provincial line services other than trouble call response services.

## C. Service Levels:

Service Level for Demand Work:

The Services Recipient will contact the Services Provider's relevant Zone Business Manager when demand work is required. The Services Provider's Business Manager will inform the Services Recipient of staff availability within 48 hours of being contacted by the Servies Recipient. For short duration (six weeks or less) demand work requiring one staff member, the Services Recipient must provide the Services Provider with at least 4 business days' notice of a need for such work. For short duration (six weeks or less) demand work requiring four staff members, the Services Recipient must provide the Services Provider with at least two weeks' notice of a need for such work.

100% of requests shall be satisfied within 14 days' after receipt of the request

For short duration (six weeks or less) Line and Technician work – an email request will be provided by the Services Recipient to the Services Provider for all planned work assignments. Fourteen days prior written notice is required to be provided by the Services Recipient to the Services Provider for cancellation/withdrawal of staff/crews committed to short duration (six weeks or less) assignments. The Services Recipient may request personnel and resources of up to 2 RLMs and 2 Distribution Line/Metering Technicians.

Trouble Response – 24/7

Service Level for Trouble Call Response:

Subject to the immediately proceeding sentence, the Services Provider shall restore service to customer and/or community within 24 hours after receipt by the Services Provider of the Trouble Call from the Services Recipient. The Services Recipient acknowledges and agrees that during major storm events, the Services Provider's staff may not be available to meet the 24-hour response timeframe, however, staff not involved in emergency work will be dispatched immediately and other staff will be dispatched as soon as conditions allow.

Scope of Trouble Calls that will be responded to by the Services Provider:

- approximately 24-30 calls/year
- Work is mainly transformer re-fusing and switch re-fusing
- Each call is typically 3-4 hours of work and 6-8 hours of travel

For trouble repairs that are required immediately, the Services Recipient will contact the Services Provider's on-call supervisor and the Services Provider's on-call supervisor shall inform the Services Recipient of staff availability within 1 hour of being contacted by the Services Recipient.

Planned Work

The Services Recipient will contact the Services Provider's Business Manager when planned work is required. The Services Provider's Business Manager will inform the Services Recipient of staffing availability within 72 hours of being contacted by the Services Recipient. For planned work requiring more than 1 individual for periods in excess of three weeks, the Services Recipient must contact the Services Recipient at least three weeks in advance. .

The Services Provider will meet with the Services Recipient's FLM annually and include the Services Recipient's personnel and resource needs in the Services Provider's personnel and resource planning and scheduling. In order to facilitate integration of resource requirements, a meeting will be held during the first quarter of the term with the Services Provider's Zone 7 contact person where the Services Recipient will make known all major planned work for the year. Planned work not identified during this meeting will be subject to staff availability; however, efforts will be made to accommodate and may include resourcing from other parts of the Province.

The Services Recipient's contact person for work assignments is First Line Manager (FLM) Customer Service/Lines and Scheduling.

The Services Provider's contact person for work assignments in Zone 7 is the Business Manager; for other Zones, it will be the Superintendent, his delegate or scheduling group as agreed by the parties. Special requirements, scheduling conflicts and service level performance concerns will be discussed with the respective Zone Superintendent.

## SAFETY SERVICES:

### A. Description of Services:

The Services Provider shall provide the Services Recipient with following services related to safety:

**1. Incident Reporting**

The Services Provider shall assist the Services Recipient's Line Management with the proper and timely notification of safety related incidents for:

- Corporate reporting requirements
- Workplace Safety and Insurance Board
- Ministry of Labour

**2. Incident Investigation**

The Services Provider shall provide assistance/leadership for the investigation of high MRPH (Maximum Reasonable Potential for Harm) incidents and other lower incidents as requested by the Services Recipient's Line Management, the scope of which activities shall include, but not be limited to, the following:

- Prepare an initial bulletin notice of incident occurrence
- Assist with the Terms of Reference for incident investigations
- Being an investigation team member/leader
- Review/present the final report of the incident investigations to the Services Recipient's Line Management
- Assist with the development of an action plan to implement investigation recommendations

**3. Health and Safety Management**

The Services Provider shall assist the Services Recipient's Line Management with the development and maintenance of the Services Recipient's Health and Safety Activities, in support of their Environmental Health and Safety Management System (EHSMS) which may include the following:

- conduct an annual review of the Services Recipient's EHSMS, provide analysis and make recommendations for improvements;
- identify Hydro One safety requirements and provide information/advice on legal and other requirements applicable to the Services Recipient's business;
- Prepare/issue a quarterly newsletter of recent H/S legislative changes and developments affecting the Services Recipient.

**4. Compliance Reviews**

In consultation with the Services Recipient's Line Management, coordinate and conduct an annual compliance review of the Services Recipient's legal and other requirements that pertain to health and safety. Where required, the Services Provider shall develop appropriate protocols for the evaluation of health and safety compliance, in accordance with the Services Recipient's EHSMS procedures. The Services Provider shall also prepare and provide to the Services Recipient a written report summarizing the findings of the compliance review within 3 weeks of the field visits.

**5. Miscellaneous Services**

The Services Provider shall:

- attend Safety Meeting presentations given by both parties and provide support on urgent items or significant rule and regulation changes
- provide Job Planning Assistance including site visits, upon request
- review quality of work process inspections performed by the Services Recipient and recommend improvements, upon request
- perform work process inspections upon request and provide results to the Services Recipient
- provide the Services Recipient with a monthly written report at the end of each month during the term of the Agreement wherein it will describe the costs and accomplishments of these miscellaneous services provided by its personnel for the said month.

**B. Price and Terms of Payment**:

The Services Recipient shall pay to the Services Provider for the safety services, based on actual time and expenses incurred, in accordance with the hourly rates referred to in the Agreement.

In addition, the Services Recipient will pay the cost of the administration and reporting in respect of the safety services, material, travel and per diem costs related to the provision of the safety services. The Services Recipient will arrange and pay for the scheduling of charter flights to the Services Recipient's sites.

**C. Service Levels:**

None.

## FLEET SERVICES:

### A. Description of Services:

The Services Provider shall provide the Services Recipient with the following fleet management, maintenance, repair and rental services relating to the use of transport and work equipment:

a) Inspections, maintenance and repair of fleet transport and work equipment. The identification and completion of minor repairs and maintenance will be the Services Recipient's responsibility and at the Services Recipient's expense.

b) Supply of fleet licensing and provision of insurance as per Hydro One Inc. requirements.

c) Advise on fleet planning and acquisition as per the Services Recipient's evolving requirements. Increase or decrease of fleet compliment will be reviewed annually and fees paid adjusted accordingly.

d) Supply the current transport and work equipment complement for the fee specified,

e) Co-ordinate the replacement program including assistance with justifications for additions and replacements to current complement.

### B. Price and Terms of Payment:

The Services Recipient shall pay to the Services Provider the depreciation costs of the Services Recipient's vehicles and the Services Recipient's costs for fuel, labour and external repairs. The scheduling of charter flights to the Services Recipient's sites will be arranged and paid for directly by the Services Recipient.

### C. Service Levels:

The Services Provider shall, on a monthly basis during the term of the Agreement, provide the Services Recipient with a written summary of the total fleet costs by transport and work equipment unit and a written monthly fuel usage report for any equipment, spare parts, material and fuel purchases made by the Services Recipient from the Services Provider using the fleet credit card.

## ENVIRONMENTAL SERVICES:

### A. Description of Services:

The Services Provider shall provide the Services Recipient with the following environmental services as required:

- Quarterly Legislative Review
- Compliance Reviews and compliance support
- Emission Calculations and verification
- Certificate of Approval Amendments
- Support for remediation projects
- Investigations of diesel fuel alternatives
- Waste Management support
- Emergency response support

### B. Price and Terms of Payment:

The Services Recipient shall pay to the Services Provider the cost of time and materials required to perform these services.

### C. Service Levels:

All environmental services will be provided by the Services Provider in accordance with a jointly agreed work plan. Quarterly reviews of progress to be performed.

## ENGINEERING SERVICES:

### A. Description of Services:

The Services Provider shall provide the Services Recipient with the following engineering services:

**Drawing Services**

- Modify contractor drawings for designated stations as required and incorporate them into Meridian
- Make up connection and elementary wiring diagrams, mechanical layout and architectural drawings as required
- Develop connection wiring and elementary wiring diagrams for switchgear design that resembles the standards used by the Services Provider

**Technical Support**

- Assist in the development of Distributed Generation Connection Requirements
- Provide technical analysis of station transformer equipment and arcflash requirements for switchgear
- Assist with fuse co-ordination analysis

### B. Price and Terms of Payment:

The Services Recipient shall pay to Services Provider for these engineering services on a time and materials basis.

### C. Service Levels:

None.

**FLIGHT SAFETY SERVICES:**

**A. Description of Services:**

The Services Provider shall provide the Services Recipient with the following services related to flight safety:

1. Monitor all aviation occurrences between the Services Recipient and the commercial passenger charter companies with which it contracts, which occurrences shall include but not be limited to the following:

   - Accidents, incidents or occurrences as defined in GEN 3.3 of the Aeronautical Information Publication and the Canadian Aviation Regulations

   - Non-airworthiness defects (*cosmetic repairs*) and airworthiness defects (*that would result in the aircraft being grounded until repaired*)

   - Feedback from the Flight Evaluation Report *(internal report used to provide feedback from passengers and pilots to the Services Recipient to identify aircraft and contract problems*)

   - All incidents deemed to be High MRPH (*High Maximum Reasonable Potential for Harm*)

   - occurrences of a lesser risk, low MRPH, and occurrences handled at the Services Recipient's local operations level in Thunder Bay; the Services Provider shall track these occurrences and the Services Recipient when the number of these occurrences becomes of concern.

2. Assess, control and respond to occurrence reports.

3. Provide Team Lead/key resource for all High MRPH incident investigations.

4. Provide charter contract administration of all technical job specifications along with liaison representation with the Services Recipient's Superintendent of Operations and maintenance for new pilot interviews as well as current pilot presentations.

5. Assist with the planning of and participate in the annual Flight Safety Staff Meeting which shall be arranged by the Services Recipient at a date and time to be mutually agreed upon by the Services Recipient and the Services Provider. The Services Provider will arrange for its "Flight Safety Officer" to attend and present new and current information relevant to flight charter contracts and the aviation industry including a presentation of related flight safety information, approved pilot and aircraft lists, audit and monitoring results, and corrective action feedback.

6. Perform pre-award audits and provide a summary report on any fixed wing charter carriers prior to the award of any contract for passenger charter air service.

### B. Price and Terms of Payment:

The Services Recipient shall pay to Services Provider for these flight safety services on a time and materials basis.

In addition, the Services Recipient will pay the cost of the administration and reporting in respect of this Contract, material, travel and per diem costs related to the provision of the Services described in this Contract. The scheduling of charter flights to the Services Recipient's sites will be arranged and paid for by the Services Recipient.

### C. Service Levels:

The Services Provider will report on a monthly basis the cost and accomplishment of the Services provided by its personnel.

**DISTRIBUTION PLANNING TECHNICAL SERVICES:**

**A. Description of Services:**

The Services Provider shall provide the Services Recipient with the following services related to distribution planning:

- conduct fuse co-ordination studies;
- carry out distribution system modeling;
- conduct short circuit/fault analyses;
- conduct tingle voltage studies;
- produce engineering drawings for unique situations/requirements;
- conduct voltage irregularity analyses;
- distribution Lines and Metering construction standards support;
- special distribution engineering standard support;
- GIS data maintenance and migration support;
- distribution design technology and tool support;
- distribution metering technical support;
- distribution lines technical support; and
- support with ESA Regulation 22/04.

**B. Price and Terms of Payment:**

The Services Recipient shall pay to Services Provider for the distribution planning technical services on a time and materials basis.

**C. Service Levels:**

None.

## JOINT USE SERVICES:

### A. Description of Services:

The Services Provider shall provide the Services Recipient with the following services in order to assist the Services Recipient with its Joint Use Program:

(a) Support and participate with the Services Recipient's staff in drafting, negotiating, tracking and arranging for execution of joint use agreements for the Services Recipient as required and requested by the Services Recipient;
(b) add, remove and change permits or similar authorizations and update and/or remove documents as required by the Services Recipient;
(c) issue invoices to tenants/licensee for the Services Recipient in accordance with the Services Recipient's joint use agreements and manage the related accounts receivables accordingly;
(d) manage and input information concerning the Services Recipient's joint use agreements into the Services Provider's "Joint Use" database and maintain said information separate from the Services Provider's own joint use information;
(e) liaise with the Services Provider's "Joint Use" database on behalf of the Services Recipient; and
(f) provide training to the Services Recipient's staff with regard to the Database, joint use agreements and other joint use activities, all as requested by the Services Recipient.

### B. Price and Terms of Payment:

The annual price for the performance of the Services for the Services Recipient shall be $15,000.00, exclusive of any sales and use taxes, as may be applicable.

### C. Service Levels:

None.

## HEALTH AND SAFETY SERVICES:

**A. Description of Services:**

The Services Provider shall provide the Services Recipient with the following services in order to assist the Services Recipient with its health and safety program:

**(i) WSIB Claims Management**

- support the supervisor in WSIB reporting and early and safe return to work;
- provide guidance and interpretation of WSIB policy and legislation to the Services Recipient's line management;
- manage the financial impact of the WSIB claim cost statement and submit monthly premium remittance the Workplace Safety and Insurance Board on behalf of the Services Recipient.

**(ii) Care Management**

- support the Services Recipient's sick leave program that deals with sick leaves greater than 5 days and that is medically supported;
- support (via the Services Provider's Disability Management Consultant, the affected supervisor and employee through a third party provider while the employee is absent from work due to a major medical absence with a view to assisting in providing the right care at the right time for the right outcome

**(iii) Long Term Disability (LTD)**

- provide the Services Recipient with LTD case management services including application assignment to LTD payroll and ongoing case management and rehabilitation activities through a third party provider

**(iv) Audiometric Testing**

- support the Services Recipient's supervisors to carry out an Audiometric Program through the Health, Safety and Environment Management System (HSEMS) that establishes the requirement to implement operational controls to minimize a health and safety risk

**(v) Respiratory Screening Program**

- support the Services Recipient's supervisors in determining how respirators will be managed at the Services Provider's premises

**(vi) Ergonomic Assessments**

- support the workplace parties through the Workstation or Vehicle Ergonomic Assessment process.

**(vii) Physical Demands Analysis (PDAs)**

- develop and maintain Physical Demand Analyses to assist with the Services Recipient's employees fitness to return to work

**B. Price and Terms of Payment:**

The Services Recipient shall pay to Services Provider for these health and safety services on a time and materials basis.

**C. Service Levels:**

None.

## Schedule "E"

## ADDITIONAL INSURANCE COVERAGES

1.01 Commercial General Liability and Excess Liability Insurance on an occurrence basis in an amount not less than $5,000,000 inclusive for both bodily injury, including death, personal injury and damage to property, including loss of use thereof, for each occurrence. To achieve the desired limit, umbrella or excess liability insurance may be used.

Coverage shall specifically include, but not be limited to, the following

- i) Blasting, pile driving, caisson work, underground work;
- ii) Products & Completed Operations including a provision that such coverage to be maintained for a period not less than 24 months post Final Performance;
- iii) Errors and omissions integral to the operation of the Insured;
- iv) Tenant's Legal Liability;
- iv) Pesticide Liability; and
- v) Rail Liability.

1.02 Contractor's Equipment Insurance covering equipment and tools, owned, rented or leased for the full replacement cost of such equipment on an "All Risks" basis including marine based risk subject to normal exclusions.

1.03 Pollution Liability Insurance: When remediation or abatement is included in the work, the Services Provider shall purchase a policy with limits of not less than $5,000,000 per occurrence covering bodily injury and property damage claims, including cleanup costs as a result of pollution conditions arising from the Services Provider's and/or its subcontractors' operations and completed operations. Completed operations coverage will remain in effect for no less than 3 years after final completion. The policy will have a retroactive date before the start of the work. To achieve the desired limit, umbrella or excess liability insurance may be used.

1.04 Errors & Omissions Insurance: Engineering, Architectural, Design or other Professionals or Consultants and the EPCM (Engineering, Procurement, Construction and Maintenance). The Services Provider shall, at all times, maintain in full force and effect professional liability insurance in an amount not less than $10,000,000 aggregate limit covering the period from start of conceptual design through to completion of the project and for a further discovery period of 5 years from the issuance of the certificate of Final Completion.

1.05 Transit insurance (including loading, unloading and storage during the course of transit including storage at secondary processing facilities) against All Risks of physical damage to the property of the Services Recipient in the Services Provider's care, custody and control until such property is received on the Services Recipient's site.

1.06 Aircraft and watercraft liability insurance with respect to owned or non-owned aircraft and watercraft if used directly or indirectly in the performance of the Services, including use of additional premises, shall be subject to limits of not less than $5,000,000.00 inclusive per occurrence for bodily injury, death and damage to property including loss of use thereof and limits of not less than $5,000,000.00 for aircraft passenger hazard. Such insurance shall be in a form acceptable to the Services Recipient. The policies shall be endorsed to provide the Services Recipient with not less than 15 days' notice in writing in advance of cancellation, change, or amendment restricting coverage. To achieve the desired limit, umbrella or excess liability insurance may be used.

1.07 Such other insurance as is mutually agreed upon between the Services Recipient and the Services Provider.

Where any of the above coverages are required for any of the Services, the Services Provider shall be bound by and comply with the following:

1. Prior to the commencement of the performance of the Services, the Services Provider shall provide the Services Recipient with a certificate of insurance completed by a duly authorized representative of its insurer certifying that at least the minimum coverages required here are in effect and that the coverages will not be cancelled, nonrenewed, or materially changed by endorsement or otherwise so as to restrict or reduce coverage, without 30 days' advance written notice by registered mail, or courier, receipt required, to:

    Manager, Risk & Insurance Department, Hydro One Remote Communities Inc. 483 Bay Street, TCT7, South Tower, Toronto, Ontario. M5G 2P5

    If any of the coverages are required to remain in force after final payment, an additional certificate evidencing continuation of such coverage will be submitted with the Services Provider's final invoice.

2. All deductibles shall be to the account of the Services Provider.

3. All insurance noted above shall specify that it is primary coverage and not contributory with or in excess of any other insurance that may be maintained by the Services Recipient.

4 A waiver of subrogation shall be provided by the insurers to the Services Recipient for coverages 1.02 (Contractor's Equipment).

6. The Services Recipient shall be included as a Named Insured under coverages noted in 1.03 (Pollution Liability) subject to Sole Agent provisions.

7. Coverages noted in 1.03 (Pollution Liability) shall contain a Cross Liability clause and a Severability of Interests clause.

8. Coverage provided for shall not be invalidated by actions or inactions of others.

## **Schedule "F"**

Receiving Party Security Safeguards Regarding Confidential Information Received from the Disclosing Party

*The Receiving Party shall protect the Confidential Information by security safeguards appropriate to the sensitivity of the information.*

1) The Receiving Party shall protect the Confidential Information against such risks as loss or theft, unauthorized access, disclosure, copying, use, modification or destruction, through appropriate security measures, regardless of the format in which it is held.

2) All of the Receiving Party's Representatives with access to the Confidential Information shall be contractually required to respect the confidentiality of that information.

3) The Receiving Party acknowledges and agrees that the nature of the safeguards will vary depending on the sensitivity, amount, distribution and format of the information, and the method of storage. The Receiving Party shall ensure that more sensitive information will be safeguarded by a higher level of protection.

4) The Receiving Party shall ensure that methods of protection will include:

(a) physical measures, for example, locked filing cabinets and restricted access to offices;

(b) organizational measures, for example, controlling entry to data centers and limiting access to information on a "need-to-know" basis;

(c) technological measures, for example, the use of passwords and encryption; and

(d) investigative measures, in cases where the Receiving Party has reasonable grounds to believe that the Confidential Information is being inappropriately collected, used or disclosed by anyone whom in law the Receiving Party is responsible.

**THIS AGREEMENT** made in duplicate this 1st day of January, 2017 (the "Effective Date").

**BETWEEN:**

**HYDRO ONE NETWORKS INC.**
**(the "Services Provider")**

**- and -**

**HYDRO ONE REMOTE COMMUNITIES INC.**
**(the "Services Recipient")**

## 1.0 PREFACE

This Agreement is intended to identify the services that are to be provided to the Services Recipient by the Services Provider in accordance with the terms and conditions herein. Except as otherwise specified, the term of this Agreement shall be for a period of 1 year commencing on the Effective Date.

## 2.0 SERVICES

The Services Provider shall provide supply chain services to the Services Recipient, which collectively constitute the Services and which are more particularly described in Schedule "A" attached hereto, as may be required by the Services Recipient from time to time during the term of this Agreement.

## 3.0 FEES PAYABLE

(a) The annual price for the performance of the Services for the Services Recipient shall be $76,000, exclusive of any sales and use taxes, as may be applicable. The said annual price for the Services shall be paid by the Services Recipient to the Services Provider by means of monthly electronic journal transfers which shall be reflected in the applicable books and records of each party. In addition, the Services Recipient shall pay for any material costs which the Services Provider, acting reasonably, incurs as a result of resources, services and products that the Services Provider must purchase and that are in addition to the Services Provider's existing resources, services and products, in order to provide the said Services Recipient with specific services it requires and requests.

(b) If at any time during the performance of the Services, the Services Recipient is of the opinion that there are deficiencies in the Services provided to it and/or that the price payable is in any way inaccurate, the Services Recipient shall pay the entire relevant price payable by it in full and its sole remedy shall be to follow the dispute resolution procedures outlined in Section 6.0 herein to determine what amount, if any, shall be refunded to the Services Recipient and/or what Services, if any, shall be rectified or redone by the Services Provider.

c) The parties acknowledge and agree that they qualify as specified members of a closely related group under subsection 156(1) of the Excise Tax Act (Canada), as amended (the "Act") and have jointly executed a Form GST25, to make an election under subsection 156(2) of the Act to deem the purchase and sale of the Services to be made for nil consideration for purposes of HST. For the purposes of this Agreement, "HST" means the federal Harmonized Sales Tax chargeable in accordance with Part IX of the *Excise Tax Act* (Canada), as amended, or any similar value-added tax that may be applicable during the term of this Agreement to the Services to be provided hereunder.

## 4.0 REPRESENTATIONS AND WARRANTIES

(a) The Services Provider represents and warrants that:

(i) it has all the necessary authority and capacity to enter into this Agreement and to perform its obligations hereunder;

(ii) the execution of this Agreement and compliance with and performance of the terms, conditions, and covenants contemplated herein have been duly authorized by all necessary corporate action on the part of the Services Provider; and

(iii) all staff employed in the performance of the Services shall have the qualifications, expertise and experience which could reasonably be expected of staff of a services provider performing work similar to the Services.

(b) The Services Recipient represents and warrants that:

(i) it has all the necessary authority and capacity to enter into this Agreement and to perform its obligations hereunder; and

(ii) the execution of this Agreement and compliance with and performance of the terms, conditions, and covenants contemplated herein have been duly authorized by all necessary corporate action on the part of the Services Recipient.

## 5.0 PERFORMANCE OF THE SERVICES

(a) **Compliance with Standards and Applicable Law**: The Services Provider shall perform the Services in a diligent and professional manner and shall comply with the Services Recipient's computer data management and data access protocols contained in the Services Recipient's document entitled "Security Policy" (SP 1686 R1) dated December 2016 and any amendments thereto which may be made from time to time by the Services Recipient. The Services Provider shall comply at all times with the statutes, regulations, by-laws, standards and codes, as amended, as may be applicable to the Services Provider in respect of the Services and the performance of its obligations hereunder and it shall, at its own expense, obtain and maintain in good standing all permits and licences required by any authorities having jurisdiction to perform the Services.

(b) **Safety and Security Measures**: When any part of the Services is to be performed at any of the Services Recipient's premises, all of the Services Provider's staff engaged in the performance of the Services at the said premises shall comply with the safety and security requirements and measures in effect at the said premises.

(c) **Meetings**: The parties shall, after the Effective Date, meet at least twice a year during the term of this Agreement to review performance, quality and timeliness of the Services provided by the Services Provider pursuant to this Agreement.

## 6.0 DISPUTE RESOLUTION PROCEDURES

Any controversy, dispute, difference, question or claim arising between the parties in connection with the interpretation, performance, construction or implementation of this Agreement that cannot be resolved by a director or manager from each of the said parties (collectively "**Dispute**") shall be settled in accordance with this Section. The aggrieved party shall send the other party written notice identifying the Dispute, the amount involved, if any, and the remedy sought, and invoking the procedures of this Section. A director-level employee of each party (as chosen by each party respectively) shall confer in an effort to resolve the Dispute. If the director-level employees are unable to resolve the Dispute within 5 business days after receipt of the written notice of the Dispute, then the parties shall submit the Dispute to the President of Hydro One Limited for resolution.

## 7.0 CONFIDENTIALITY AND INTELLECTUAL PROPERTY

### (a) Confidentiality:

Each party (the "**Receiving Party**") shall maintain in strict confidence all information, analysis, conclusions, drawings, reports, specifications or other information, proprietary or otherwise, whether transmitted orally, electronically or in written form, and received in furtherance of this Agreement from the other party (the "Disclosing Party") or any of the Disclosing Party's directors, officers, employees, consultants, agents or legal and other advisors (the "**Disclosing Party Representatives**") (collectively the "**Confidential Information**"). Except as permitted herein, the Receiving Party shall not publish, reproduce, or disclose, either directly or indirectly, the said Confidential Information to any third party and shall not use the said Confidential Information for any purpose other than for purposes of this Agreement without the prior written consent of the Disclosing Party. The Receiving Party may disclose the Confidential Information only to its shareholder, directors, officers, employees, consultants, agents or professional advisors (the "**Receiving Party Representatives**") having a need to know same and who have undertaken a like obligation to maintain its confidentiality.

For greater certainty, Confidential Information includes any and all personal information (as this term is defined in the *Personal Information Protection and Electronic Documents Act* (Canada), as it may be amended, and any and all information regarding a consumer, retailer, wholesale buyer, wholesale supplier, or a generator, provided by the Disclosing Party to the Receiving Party for purposes of this Agreement, whether or not such information was initially provided prior to the Effective Date.

The Receiving Party undertakes to protect and safeguard all Confidential Information in its possession or under its control and received by the Disclosing Party, in the manner described in Schedule "B" attached hereto. The Disclosing Party may, on reasonable notice, and during regular business hours, audit the information management practices of the Receiving Party to confirm compliance with the terms and conditions of this Section 7.0 and all applicable statutes, regulations, by-laws, standards and codes, as amended.

The Receiving Party undertakes to notify the Disclosing Party immediately upon discovery of any unauthorized use and/or disclosure of any of the Disclosing Party's Confidential Information, to co-operate with the Disclosing Party to help regain possession of such Confidential Information, and to prevent its further unauthorized use and/or disclosure.

The foregoing obligations with respect to confidentiality, use, reproduction, dissemination, publication and non-disclosure herein shall not apply to any information that:

(i) is previously known to or lawfully in the possession of the Receiving Party prior to the date of disclosure as evidenced by the Receiving Party's written record;
(ii) is independently known to or discovered by the Receiving Party, without any reference to the information or material;
(iii) is obtained by the Receiving Party from an arm's length third party having a bona fide right to disclose same and who was not otherwise under an obligation of confidence or fiduciary duty to the Disclosing Party or the Disclosing Party Representatives;
(iv) is or becomes public knowledge through no fault or omission of, or breach of this Agreement by the Receiving Party or the Receiving Party Representatives; or
(v) is required to be disclosed pursuant to a final judicial or governmental order or other legal process.

Confidential Information shall remain the sole and exclusive property of the Disclosing Party that has disclosed the Confidential Information, and the Disclosing Party shall retain all right, title and interest in and to the said Confidential Information.

The Receiving Party shall keep a record of written Confidential Information furnished to it by the Disclosing Party in a location separate from those locations where the Receiving Party has stored information in respect of other third parties for which it performs work and it shall advise the Disclosing Party of such location.

All Confidential Information furnished by the Disclosing Party, including that portion of the Confidential Information which is contained in analyses, compilations, studies or other documents prepared by the Receiving Party or by the Receiving Party Representatives, is the Disclosing Party's property and will be returned immediately to the Disclosing Party upon its request.

**(b) Intellectual Property:**

The Services Recipient shall obtain all rights, title and interests, including copyright ownership, to any reports and any other deliverable that is to be produced and delivered to it by the Services Provider and, subject to applicable legislation and notwithstanding clause 7.0(a) above, the said Services Recipient may use, disclose or modify such reports or deliverable in any manner it deems appropriate. The Services Provider shall not do any act which may compromise or diminish the Services Recipient's interest as aforesaid.

**(c) Survival of Obligations:**

The obligations in this Section 7.0 shall forever survive the termination or expiration of this Agreement.

## 8.0 LIABILITY

Unless otherwise agreed in writing, each party shall indemnify the other party and that other party's successors and assigns, directors, officers, employees, contractors and agents from and against all direct costs or damages attributable to the indemnifying party's performance and/or non-performance of its obligations under this Agreement and any amendments or additions thereto that are mutually agreed to in writing, whether arising from or based on breach of contract, tort, negligence, strict liability or otherwise. Notwithstanding any other provision of this Agreement, neither party shall be liable for any economic loss, loss of goodwill, loss of profit or for any special, indirect or consequential damages, where the said losses or damages are incurred by the other or by any third party claiming through or under the other.

This Section 8.0 shall forever survive the termination or expiration of this Agreement.

## 9.0 AUTHORIZED REPRESENTATIVES

The authorized representatives of the parties hereto for purposes of this Agreement are the following:

**HYDRO ONE REMOTE COMMUNITIES INC.**
483 Bay Street,
South Tower, 8th Floor
Toronto, Ontario M5G 2P5
Attention: **Una O'Reilly**
TCT 12
Telephone: 416-345-6698
Telecopier: 416-345-6356

**HYDRO ONE NETWORKS INC.**
483 Bay St.
South Tower, 6th Floor Toronto, Ontario M5G 2P5
Attention: **Rob Berardi**
Telephone: (416) 345-4277
Telecopier: (416) 345-6833

All correspondence, reports, documents and/or other communication concerning this Agreement and the Schedule attached hereto shall be directed to the attention of the authorized representatives noted above and shall be deemed to be sufficiently given if delivered personally, mailed or transmitted by fax to the attention of the authorized representatives at the addresses above, and any notice so given shall be deemed to have been made and received on the date of delivery or on the 5th business day following the day of mailing of same or on the day of transmission if transmitted during normal business hours, otherwise on the next business day, as the case may be.

## 10.0 ASSIGNMENT

Neither this Agreement nor any rights and obligations shall be assigned by either party without the prior written consent of the other party, which consent shall not be unreasonably withheld; provided, however, that a party may assign this Agreement or any rights, remedies or liabilities to any of its affiliates (as this term is defined in the Ontario *Business Corporations Act*, as amended) without the need for prior consent, in which case the assignor shall provide the other party with written notice of the assignment within 10 days after the effective date thereof. Subject to the foregoing, this Agreement shall enure to the benefit of the parties hereto and their respective successors and permitted assigns.

**11.0 RELATIONSHIP OF PARTIES:**

Nothing in this Agreement creates the relationship of principal and agent, employer and employee, partnership or joint venture between the parties. The parties agree that they are and will at all times remain independent and are not and shall not present themselves to be the agent, employee, partner or joint venturer of the other. No representations will be made or acts taken by either party which could establish any apparent relationship of agency, employment, joint venture or partnership and neither party shall be bound in any manner whatsoever by any agreements, warranties or representations made by the other party to any other person nor with respect to any other action of the other party.

**12.0 SCHEDULES**

Schedules "A" and "B" attached hereto are to be read with and form part of this Agreement.

**13.0 COUNTERPARTS**

This Agreement may be executed in counterparts and the counterparts together shall constitute an original.

**IN WITNESS THEREOF** the parties hereto have caused this Agreement to be executed by their respective representatives duly authorized in that behalf.

## Schedule “A”

**DESCRIPTION OF SERVICES:**

The Services Provider shall provide the Services Recipient with the following supply chain services:

- management and procurement;
- vendor management;
- process development;
- data management;
- investment recovery.

**<u>Schedule "B"</u>**

Receiving Party Security Safeguards Regarding Confidential Information Received from the Disclosing Party

The Receiving Party shall protect the Confidential Information by security safeguards appropriate to the sensitivity of the information.

1) The Receiving Party shall protect the Confidential Information against such risks as loss or theft, unauthorized access, disclosure, copying, use, modification or destruction, through appropriate security measures, regardless of the format in which it is held.

2) All of the Receiving Party Representatives with access to the Confidential Information shall be contractually required to respect the confidentiality of that information.

3) The Receiving Party acknowledges and agrees that the nature of the safeguards will vary depending on the sensitivity, amount, distribution and format of the information, and the method of storage. The Receiving Party shall ensure that more sensitive information will be safeguarded by a higher level of protection.

4) The Receiving Party shall ensure that methods of protection will include:

(a) physical measures, for example, locked filing cabinets and restricted access to offices;

(b) organizational measures, for example, controlling entry to data centers and limiting access to information on a "need-to-know" basis;

(c) technological measures, for example, the use of passwords and encryption; and

(d) investigative measures, in cases where the Receiving Party has reasonable grounds to believe that the Confidential Information is being inappropriately collected, used or disclosed by anyone whom in law the Receiving Party is responsible.

**THIS AGREEMENT** made in duplicate this 1st day of January, 2017 (the "Effective Date").

**BETWEEN:**

**HYDRO ONE REMOTE COMMUNITIES INC.**
**(the "Services Provider")**

**- and -**

**HYDRO ONE NETWORKS INC.**
**(the "Services Recipient")**

## 1.0 PREFACE

This Agreement is intended to identify the services that are to be provided to the Services Recipient by the Services Provider in accordance with the terms and conditions herein. Except as otherwise specified, the term of this Agreement shall be for a period of 1 year commencing on the Effective Date.

## 2.0 SERVICES

Subject to the Services Provider's availability of personnel and resources, which availability shall be determined by the Services Provider in its sole discretion, the Services Provider shall provide metering work, lines work and training for lines work to the Services Recipient, which collectively constitute the Services and which are more particularly described in Schedule "A" attached hereto, as may be required by the Services Recipient from time to time during the term of this Agreement.

## 3.0 FEES PAYABLE

(a) The price for the performance of the Services shall be on a time and materials basis in accordance with the Services Provider's 2017-2018 hourly rates by job category, which rates may be amended from time to time by mutual agreement of the parties. The parties acknowledge and agree that the Services Recipient has received the Services Provider's 2017-2018 hourly rates from the Services Provider.

(b) The parties agree that the price for the Services shall be paid by the Services Recipient to the Services Provider by direct time reporting through Hydro One Inc.'s payroll system.

(c) In addition, the Services Recipient shall pay for any material costs which the Services Provider, acting reasonably, incurs as a result of resources, services and products that the Services Provider must purchase and that are in addition to the Services Provider's existing resources, services and products, in order to provide the said Services Recipient with specific services it requires and requests.

(d) If at any time during the performance of the Services, the Services Recipient is of the opinion that there are deficiencies in the Services provided to it and/or that the price payable is in any way inaccurate, the Services Recipient shall pay the entire relevant price payable by it in full and its sole remedy shall be to follow the dispute resolution procedures outlined in Section 6.0 herein to determine what amount, if any, shall be refunded to the Services Recipient and/or what Services, if any, shall be rectified or redone by the Services Provider.

(e) The parties acknowledge and agree that they qualify as specified members of a closely related group under subsection 156(1) of the Excise Tax Act (Canada), as amended (the "Act") and have jointly executed a Form GST25, to make an election under subsection 156(2) of the Act to deem the purchase and sale of the Services to be made for nil consideration for purposes of HST. For the purposes of this Agreement, "HST" means the federal Harmonized Sales Tax chargeable in accordance with Part IX of the *Excise Tax Act* (Canada), as amended, or any similar value-added tax that may be applicable during the term of this Agreement to the Services to be provided hereunder.

## 4.0 REPRESENTATIONS AND WARRANTIES

(a) The Services Provider represents and warrants that:
  (i) it has all the necessary authority and capacity to enter into this Agreement and to perform its obligations hereunder;
  (ii) the execution of this Agreement and compliance with and performance of the terms, conditions, and covenants contemplated herein have been duly authorized by all necessary corporate action on the part of the Services Provider; and
  (iii) all staff employed in the performance of the Services shall have the qualifications, expertise and experience which could reasonably be expected of staff of a services provider performing work similar to the Services.

(b) The Services Recipient represents and warrants that:
  (i) it has all the necessary authority and capacity to enter into this Agreement and to perform its obligations hereunder; and
  (ii) the execution of this Agreement and compliance with and performance of the terms, conditions, and covenants contemplated herein have been duly authorized by all necessary corporate action on the part of the Services Recipient.

## 5.0 PERFORMANCE OF THE SERVICES

(a) **Compliance with Standards and Applicable Law**: The Services Provider shall perform the Services in a diligent and professional manner and shall comply with the Services Recipient's computer data management and data access protocols contained in the Services Recipient's document entitled " Security Policy" (SP 1686 R1) dated December 2016 and any amendments thereto which may be made from time to time by the Services Recipient. The Services Provider shall comply at all times with the statutes, regulations, by-laws, standards and codes, as amended, as may be applicable to the Services Provider in respect of the Services and the performance of its obligations hereunder and it shall, at its own expense, obtain and maintain in good standing all permits and licences required by any authorities having jurisdiction to perform the Services.

(b) **<u>Safety and Security Measures</u>**: When any part of the Services is to be performed at any of the Services Recipient's premises, all of the Services Provider's staff engaged in the performance of the Services at the said premises shall comply with the safety and security requirements and measures in effect at the said premises.

(c) **<u>Meetings</u>**: The parties shall, after the Effective Date, meet at least once during the term of this Agreement to review performance, quality and timeliness of the Services provided by the Services Provider pursuant to this Agreement.

## 6.0 DISPUTE RESOLUTION PROCEDURES

Any controversy, dispute, difference, question or claim arising between the parties in connection with the interpretation, performance, construction or implementation of this Agreement that cannot be resolved by a director or manager from each of the said parties (collectively "Dispute") shall be settled in accordance with this Section. The aggrieved party shall send the other party written notice identifying the Dispute, the amount involved, if any, and the remedy sought, and invoking the procedures of this Section. A director-level employee of each party (as chosen by each party respectively) shall confer in an effort to resolve the Dispute. If the director-level employees are unable to resolve the Dispute within 5 business days after receipt of the written notice of the Dispute, then the parties shall submit the Dispute to the President of Hydro One Limited for resolution.

## 7.0 CONFIDENTIALITY AND INTELLECTUAL PROPERTY

### (a) Confidentiality:

Each party (the "Receiving Party") shall maintain in strict confidence all information, analysis, conclusions, drawings, reports, specifications or other information, proprietary or otherwise, whether transmitted orally, electronically or in written form, and received in furtherance of this Agreement from the other party (the "Disclosing Party") or any of the Disclosing Party's directors, officers, employees, consultants, agents or legal and other advisors (the "Disclosing Party Representatives") (collectively the "Confidential Information"). Except as permitted herein, the Receiving Party shall not publish, reproduce, or disclose, either directly or indirectly, the said Confidential Information to any third party and shall not use the said Confidential Information for any purpose other than for purposes of this Agreement without the prior written consent of the Disclosing Party. The Receiving Party may disclose the Confidential Information only to its shareholder, directors, officers, employees, consultants, agents or professional advisors (the "Receiving Party Representatives") having a need to know same and who have undertaken a like obligation to maintain its confidentiality.

For greater certainty, Confidential Information includes any and all personal information (as this term is defined in the *Personal Information Protection and Electronic Documents Act* (Canada), as it may be amended, and any and all information regarding a consumer, retailer, wholesale buyer, wholesale supplier, or a generator, provided by the Disclosing Party to the Receiving Party for purposes of this Agreement, whether or not such information was initially provided prior to the Effective Date.

The Receiving Party undertakes to protect and safeguard all Confidential Information in its possession or under its control and received by the Disclosing Party, in the manner described in Schedule "B" attached hereto. The Disclosing Party may, on reasonable notice, and during regular business hours, audit the information management practices of the Receiving Party to confirm compliance with the terms and conditions of this Section 7.0 and all applicable statutes, regulations, by-laws, standards and codes, as amended.

The Receiving Party undertakes to notify the Disclosing Party immediately upon discovery of any unauthorized use and/or disclosure of any of the Disclosing Party's Confidential Information, to co-operate with the Disclosing Party to help regain possession of such Confidential Information, and to prevent its further unauthorized use and/or disclosure.

The foregoing obligations with respect to confidentiality, use, reproduction, dissemination, publication and non-disclosure herein shall not apply to any information that:

(i) is previously known to or lawfully in the possession of the Receiving Party prior to the date of disclosure as evidenced by the Receiving Party's written record;
(ii) is independently known to or discovered by the Receiving Party, without any reference to the information or material;
(iii) is obtained by the Receiving Party from an arm's length third party having a bona fide right to disclose same and who was not otherwise under an obligation of confidence or fiduciary duty to the Disclosing Party or the Disclosing Party Representatives;
(iv) is or becomes public knowledge through no fault or omission of, or breach of this Agreement by the Receiving Party or the Receiving Party Representatives; or
(v) is required to be disclosed pursuant to a final judicial or governmental order or other legal process.

Confidential Information shall remain the sole and exclusive property of the Disclosing Party that has disclosed the Confidential Information, and the Disclosing Party shall retain all right, title and interest in and to the said Confidential Information.

The Receiving Party shall keep a record of written Confidential Information furnished to it by the Disclosing Party in a location separate from those locations where the Receiving Party has stored information in respect of other third parties for which it performs work and it shall advise the Disclosing Party of such location.

All Confidential Information furnished by the Disclosing Party, including that portion of the Confidential Information which is contained in analyses, compilations, studies or other documents prepared by the Receiving Party or by the Receiving Party Representatives, is the Disclosing Party's property and will be returned immediately to the Disclosing Party upon its request.

**(b) Intellectual Property:**

The Services Recipient shall obtain all rights, title and interests, including copyright ownership, to any reports and any other deliverable that is to be produced and delivered to it by the Services Provider and, subject to applicable legislation and notwithstanding clause 7.0(a) above, the said Services Recipient may use, disclose or modify such reports or deliverable in any manner it deems appropriate. The Services Provider shall not do any act which may compromise or diminish the Services Recipient's interest as aforesaid.

**(c) Survival of Obligations:**

The obligations in this Section 7.0 shall forever survive the termination or expiration of this Agreement.

## 8.0 LIABILITY

Unless otherwise agreed in writing, each party shall indemnify the other party and that other party's successors and assigns, directors, officers, employees, contractors and agents from and against all direct costs or damages attributable to the indemnifying party's performance and/or non-performance of its obligations under this Agreement and any amendments or additions thereto that are mutually agreed to in writing, whether arising from or based on breach of contract, tort, negligence, strict liability or otherwise. Notwithstanding any other provision of this Agreement, neither party shall be liable for any economic loss, loss of goodwill, loss of profit or for any special, indirect or consequential damages, where the said losses or damages are incurred by the other or by any third party claiming through or under the other.

This Section 8.0 shall forever survive the termination or expiration of this Agreement.

## 9.0 AUTHORIZED REPRESENTATIVES

The authorized representatives of the parties hereto for purposes of this Agreement are the following:

**HYDRO ONE REMOTE COMMUNITIES INC.**
483 Bay Street,
South Tower, 8th Floor
Toronto, Ontario M5G 2P5
Attention: **Una O'Reilly**
TCT 12
Telephone: 416-345-6698
Telecopier: 416-345-6356

**HYDRO ONE NETWORKS INC.**
483 Bay St.
South Tower, 7th Floor
Toronto, Ontario M5G 2P5
Attention: **Ryan Lee**
Telephone: (416) 345-5158
Telecopier: (416) 345-5063

All correspondence, reports, documents and/or other communication concerning this Agreement and the Schedule attached hereto shall be directed to the attention of the authorized representatives noted above and shall be deemed to be sufficiently given if delivered personally, mailed or transmitted by fax to the attention of the authorized representatives at the addresses above, and any notice so given shall be deemed to have been made and received on the date of delivery or on the 5th business day following the day of mailing of same or on the day of transmission if transmitted during normal business hours, otherwise on the next business day, as the case may be.

## 10.0 ASSIGNMENT

Neither this Agreement nor any rights and obligations shall be assigned by either party without the prior written consent of the other party, which consent shall not be unreasonably withheld; provided, however, that a party may assign this Agreement or any rights, remedies or liabilities to any of its affiliates (as this term is defined in the Ontario *Business Corporations Act*, as amended) without the need for prior consent, in which case the assignor shall provide the other party with written notice of the assignment within 10 days after the effective date thereof. Subject to the foregoing, this Agreement shall enure to the benefit of the parties hereto and their respective successors and permitted assigns.

## 11.0 RELATIONSHIP OF PARTIES:

Nothing in this Agreement creates the relationship of principal and agent, employer and employee, partnership or joint venture between the parties. The parties agree that they are and will at all times remain independent and are not and shall not present themselves to be the agent, employee, partner or joint venturer of the other. No representations will be made or acts taken by either party which could establish any apparent relationship of agency, employment, joint venture or partnership and neither party shall be bound in any manner whatsoever by any agreements, warranties or representations made by the other party to any other person nor with respect to any other action of the other party.

## 12.0 SCHEDULES

Schedules "A" and "B" attached hereto are to be read with and form part of this Agreement.

## 13.0 COUNTERPARTS

This Agreement may be executed in counterparts and the counterparts together shall constitute an original.

**IN WITNESS THEREOF** the parties hereto have caused this Agreement to be executed by their respective representatives duly authorized in that behalf.

## Schedule "A"

**DESCRIPTION OF SERVICES:**

Subject to the Services Provider's availability of personnel and resources, which availability shall be determined by the Services Provider in its sole discretion, the Services Provider shall provide the Services Recipient with the following services as may be required by the Services Recipient from time to time during the term of this Agreement:

a. Metering/Technician Work:

- update, install, reverify and sample meters
- Smart meter change-outs
- line layout, estimating and staking
- voltage/current surveys and responding to voltage/current complaints
- update Emergency Site Plans

b. Lines Work:

- maintain the Services Recipient's transmission and distribution system in Northwestern Ontario by providing the following activities, as may be requested by the Services Recipient:
- power line maintenance, construction and repair
- trouble Call Response, power restoration and storm damage repairs

c. Training:

- Provide lines apprenticeship program instruction services

## Schedule "B"

Receiving Party Security Safeguards Regarding Confidential Information Received from the Disclosing Party

*The Receiving Party shall protect the Confidential Information by security safeguards appropriate to the sensitivity of the information.*

1) The Receiving Party shall protect the Confidential Information against such risks as loss or theft, unauthorized access, disclosure, copying, use, modification or destruction, through appropriate security measures, regardless of the format in which it is held.

2) All of the Receiving Party Representatives with access to the Confidential Information shall be contractually required to respect the confidentiality of that information.

3) The Receiving Party acknowledges and agrees that the nature of the safeguards will vary depending on the sensitivity, amount, distribution and format of the information, and the method of storage. The Receiving Party shall ensure that more sensitive information will be safeguarded by a higher level of protection.

4) The Receiving Party shall ensure that methods of protection will include:

(a) physical measures, for example, locked filing cabinets and restricted access to offices;

(b) organizational measures, for example, controlling entry to data centers and limiting access to information on a "need-to-know" basis;

(c) technological measures, for example, the use of passwords and encryption; and

(d) investigative measures, in cases where the Receiving Party has reasonable grounds to believe that the Confidential Information is being inappropriately collected, used or disclosed by anyone whom in law the Receiving Party is responsible.

# PURCHASE OF NON-AFFILIATE GOODS AND SERVICES

## 1.0 INTRODUCTION

This Exhibit describes how Remotes purchases goods and services from third parties other than its affiliates.

## 2.0 THE PROCUREMENT OF GOODS AND SERVICES FROM NON-AFFILIATES

In compliance with the Supply Chain Policy set out as Attachment 1 to this Exhibit, Remotes acquires materials and services from non-affiliates by using one or more of the following processes: request for information, request for proposals, request for quotes, request for pre-qualification, contract harmonization, direct negotiation (single sourcing) and sole sourcing process.

Remotes works with buyers in Hydro One Networks' procurement group when making purchases. Large purchases such as contracts for fuel and flights are conducted through extensive RFP processes, where potential suppliers are ranked based on pricing, proof of ability (resources, service, experience and quality), safety performance and Indigenous involvement in the business. Remotes leverages the bulk buying power of Hydro One and the existing Supply Chain infrastructure to secure routine purchases of materials, such as line supplies.

For services within communities Remotes routinely supports local Indigenous business and local employment opportunities for services such as meter reading, operator services, fuel handling, forestry services and equipment rentals. Remotes enters into mutually beneficial fuel purchase agreement with local First Nation businesses that are able to secure and store winter road fuel.

All purchases of goods and services go through a rigorous quality control process and are reviewed by Law and Supply Chain to ensure value for money and adherence to Hydro One policies.

Purchases are authorized by the appropriate position identified in Hydro One’s Expenditure Authority Register (“EAR”). The EAR defines approval authorities assigned to employees within Hydro One and it is a key element of the internal control framework. Employees, as stewards of the Company’s assets, are expected to exercise prudent business judgment when delegating and exercising the authority limits in the EAR.

# Supply Chain Policy

## Purpose and Scope

The primary purpose of the Supply Chain Policy is to communicate and reinforce desired values and expectations of the supply chain activities of Hydro One Limited, its subsidiaries and the affiliates it controls (referred to in this document as 'Hydro One' or the 'Corporation').

This policy applies to Hydro One and its outsourcing partner.

## Revision Statement

Guiding principles have been updated to reflect a more commercial mindset regarding linkage of procurement to outcomes. Reference to the Requisitioner's and the Purchasing Procedures have been replaced with the Requisitioner's and Buyer's Guide respectively. References to the Consultants and Professional Services Policy (SP0707) have been removed.

## Principles

Supply Chain will:

- Acquire materials and services through a process that drives value for money, transparency to its internal customers, and builds mutually valuable relationships with key suppliers.
- Ensure the right materials and services are delivered to the right place at the right time in a cost effective manner.
- Source materials and services with consideration to health, safety and the environment and corporate social responsibility.
- Promote business and workforce development for Aboriginal Businesses.
- Achieve operational excellence through continuous improvement in collaboration with Supply Chain's Customers and Suppliers.
- Manage its outsourcing partner to align with these principles.

## 1.0 Requirements

The key requirements of each Supply Chain function are as follows:

Strategy and Oversight:

- Provide a strategic, cost effective, data driven and analytical planning approach to Supply Chain processes.
- Direct continuous improvement initiatives to achieve operational excellence and cost effectiveness.
- Ensure an effective governance process is in place to manage change.

Sourcing:

- Develop and execute a strategic procurement plan to identify materials and services needed to meet business requirements at the best value for money.
- Employ a mix of procurement processes, including sole source, direct negotiation, and bidding processes that provide the best business outcome.

- Identify and attract qualified suppliers that provide quality products and services.
- Provide opportunity for increased Aboriginal Business participation in the provision of products and services.

Purchasing:

- Process Purchase Requisitions on a timely basis to ensure that customer's needs are met.
- Promote improved requisitioning through effectively documented processes and education.

Inventory Management:

- Align to the Inventory Policy (SP0732).
- Manage inventory at optimal levels and locations to satisfy operations.
- Monitor and control the accuracy of inventory data.
- Re-deploy, return or dispose of material to maximize cost savings considering environmental impact.

Logistics:

- Determine the most efficient and economical method to store and distribute materials from Suppliers to Customers.
- Facilitate the movement of returnable containers to Suppliers.

Accounts Payable:

- Remit authorized and timely payments to suppliers in accordance with the terms and conditions of the respective contracts.
- Capture payments accurately and completely in Hydro One systems, and ensure accurate account distributions.

Customer Service:

- Provide centralized support to customers and suppliers so interactions with Supply Chain are seamless. Data Management
- Utilize business applications, information management methods, and data management tools to implement procedures and an infrastructure to support the integration and shared use of accurate, timely, consistent and complete Supply Chain Master Data.

# CORPORATE ORGANIZATION CHARTS

## 1.0 INTRODUCTION

This schedule describes the current organization of Remotes' business, beginning with an overview of the parent company (Hydro One Ltd Inc.) and a brief summary of Hydro One Ltd.'s principle subsidiary businesses.

## 2.0 COMMON CORPORATE COSTS

Hydro One Inc. was incorporated under Ontario's Business Corporations Act and was incorporated on December 1, 1998 and was wholly owned by the Province of Ontario. On October 31, 2015, Hydro One Limited, a wholly owned subsidiary of the Province, acquired all issued and outstanding shares of Hydro One from the Province. The principle businesses of Hydro One are the transmission and distribution of electricity to customers within Ontario.

Figure 1 below shows Hydro One Ltd.'s principal subsidiaries. Information on financial transactions between Remotes and its Hydro One Ltd affiliates can be found in Exhibit A, Tab 6, Schedule 1, Attachments 1 to 5 inclusive.

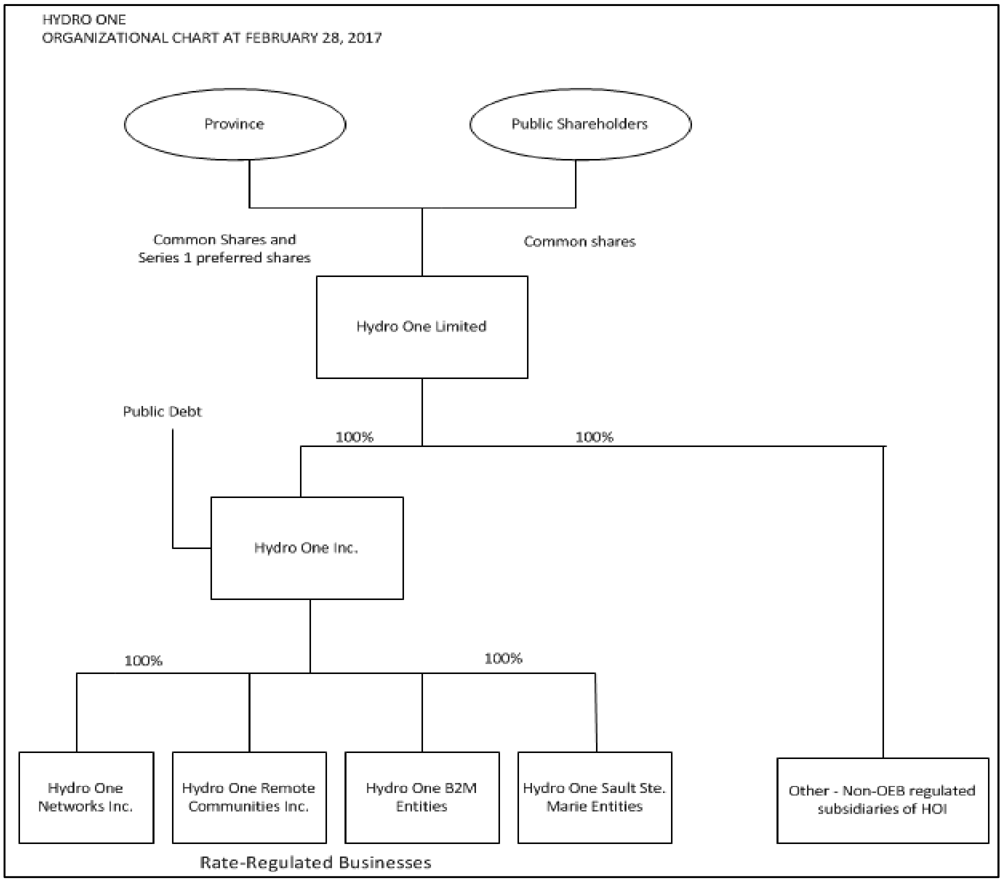

**Figure 1**

**Hydro One Ltd.**

## 3.0 HYDRO ONE REMOTE COMMUNITIES ORGANIZATIONAL CHART

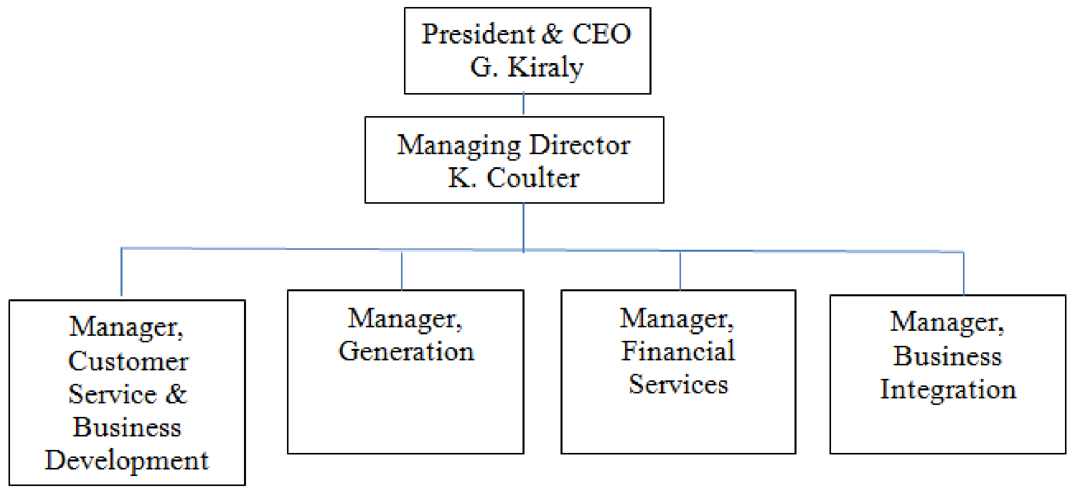

**Figure 2**

**Hydro One Remote Communities Inc. Organizational Chart**

# GOVERNANCE AND CONTROL FRAMEWORK

## 1.0 CORPORATE ORGANIZATION

The Corporate Governance structure and Internal Control Framework of Hydro One Inc. provide reasonable assurance regarding Remotes' effective and efficient operations, reliable financial reporting, and compliance with applicable laws and regulations. Hydro One Inc. is the parent and sole shareholder of Remotes, and Hydro One Limited is the parent and sole shareholder of Hydro One Inc.

Figure 1 in Exhibit A, Tab 7, Schedule 1 shows the organizational structure of Hydro One Limited as of February 28, 2017. This chart is simplified and does not include all legal entities within Hydro One Limited's organizational structure.

Corporate governance is the mechanism by which a corporation ensures independent oversight of management activities on behalf of the shareholder(s). For Hydro One Inc., the Board of Directors and its associated committees fulfill this objective and provide direction and accountability to senior officers to prudently and ethically manage the company's business and affairs, as well as the review and/or approval of mission, goals and business objectives, organizational authorities and business plans.

Hydro One Inc.'s internal organization is led by its President and Chief Executive Officer whose direct reports include: the Chief Financial Officer; the Chief Operating Officer; the Executive Vice-President and Chief Legal Officer; the Executive Vice-President of Customer and Corporate Affairs; the Executive Vice-President and Chief Human Resources Officer; Executive Vice-President of Strategy and Corporate Development; and the Vice-President of the Office of the President & CEO.

Remotes has two officers and three directors. The Chair of Remotes' Board of Directors is the Chief Operating Officer of Hydro One Inc. The accountabilities and responsibilities of Remotes' officers and directors include the approval and adoption of a business plan that is included in Hydro One Inc.'s consolidated plan, oversight of risk management, and review of Remotes' overall business performance.

## 2.0 INTERNAL CONTROL FRAMEWORK

Internal controls ensure that Hydro One Inc. achieves its mission and goals, by enabling management to deal with rapidly changing economic and competitive environments, customer demands and priorities, and restructuring for future growth. Internal controls promote efficiency, reduce risk of asset loss, and help ensure the integrity and reliability of financial statements and compliance with laws and regulations. These controls of Hydro One Inc. extend to the operations of Remotes, as a wholly-owned subsidiary of Hydro One Inc.

Hydro One Inc.'s Internal Control Framework has five components: (1) Control Environment, (2) Risk Assessment, (3) Control Activities, (4) Information and Communication, and (5) Monitoring. The framework further addresses the appropriate elements of each component at the entity (Board) level, corporate (senior management) level and operational (local) level. The framework is consistent with accepted external standards and control criteria set out by such standard setting bodies as the Chartered Professional Accountants and the U.S. Committee of Sponsoring Organizations of the Treadway Commission. Key components of the framework are described in more detail below.

The "Control Environment" refers to direction and oversight from the top of the organization. The control environment component in the framework captures the notion of ethical and prudent financial management as established by the Board of Directors and senior management, and sets the tone for all financial and project management policies and practices established at lower levels. Regular education sessions on policies, processes and practices/procedures are also provided to all staff.

Hydro One Inc. has a formal Code of Business Conduct and a Whistle Blower Policy which have been issued to and must be complied with by all staff. The Code of Business Conduct requires all management employees to sign an annual compliance form to document that they have read, understood and complied with the Code, and that all conflicts or potential conflicts of interest have been disclosed. The Corporate Ethics Officer ensures that this process is performed on a timely basis and that a compliance register is maintained and submitted to the President and CEO of Hydro One Inc. Lastly, individual performance contracts of management employees are intended to capture the understanding between a manager and a direct report as to the results expected and the means by which such performance results will be achieved.

"Risk Assessment" involves the identification and analysis by management of the key risks to achieving the company's business objectives. Such an assessment is performed, at least, annually, and provides the basis for business planning decisions. Programs that mitigate existing risks to acceptable residual levels, or provide mitigation for emerging risks, are captured in business plans. Projects and programs underway are regularly assessed for new and changing risks. Moreover, at the operational level, extensive emergency and contingency plans exist and are regularly tested and updated.

"Control Activities" refers to the systems, policies and procedures that ensure that management’s objectives are achieved and risk mitigation plans are carried out. Policies and procedures exist to govern annual, monthly and day to day operations at the business unit and local levels. Each revised policy has an issue date and last review date and are available on an internal web site.

One of the foundations of good control is the establishment of appropriate levels of authority for spending and other business decisions. The delegation and exercise of authorities are governed by 'Guiding Principles', the Code of Business Conduct, and policies and procedures. The approval of the business plans and budgets establish authorized spending levels.

The budgeting and business planning process is also a critical element of effective internal controls. Annually a budget and business plan are prepared and submitted to the Board for approval. The budget and business plan set the parameters of the company's activities for a specific fiscal period. Remotes' corporate business plan may be found in Exhibit A, Tab 3, Schedule 2, Attachment 1.

The Executive Authorities Register (EAR) delegates authorities from the Board to senior management. Organizational Authority Registers (OARs) exist at subsidiary and business unit levels to delegate authorities from senior management to business unit and local levels.

"Information and Communication" supports all other control components. Pertinent information must be identified, captured and communicated in a form and timeframe that enables staff to carry out their responsibilities. Communication occurs to all staff from the Executive Vice President and Chief Financial Officer and from the Vice President, Corporate Controller with respect to new or changed policies and procedures. Communications on various internal control matters also occur regularly. And, as noted previously, policies and procedures can be found on internal websites at most locations or are available in other formats.

"Monitoring" covers the oversight of internal controls by management or independent parties outside the process; or the application of independent methodologies, such as customized procedures or standard checklists, by employees within a process. Monitoring also includes assessing the quality of internal controls over time and implementing required changes.

Management provides assurance with respect to internal controls and the validity of financial statements. This includes information on legal claims, changes in accounting policies, practices, systems, and procedures that have occurred in the period, and financial accounting matters that could have a significant impact on financial statements. Management also provides assurance that internal control systems, policies and procedures are in place and functioning properly and financial statements are a true representation of the business.

Every month, Remotes and every other line of business is required to conduct a detailed review of financial results by comparing operating results to budgets and responding to variances. Project details with major accounts are reconciled monthly to source sub-systems and suspense accounts are also explained and reconciled. Monthly control reports related to key aspects of operations financial and project activity are prepared centrally and delivered to managers for review and follow-up action as appropriate. A month-end close schedule is established to ensure timely production of financial statements. In addition, compliance testing of key financial activities is performed.

Compliance monitoring with respect to codes and policies is performed by multiple groups. Regulatory compliance is monitored by Regulatory Affairs. Internal Audit uses a risk-based audit approach for prioritizing audits and performs audits of areas of highest risk based on an annual program approved by the Hydro One Board’s Audit and Finance committee. Internal controls are reviewed on a recurring cycle, again linked to level of risk. Furthermore, regular review of all outstanding items from past audits is performed. Annual year-end audits are also conducted by Hydro One Inc.'s external auditor.

# PLANNING PROCESS AND ECONOMIC ASSUMPTIONS

## 1.0 INTRODUCTION

Business planning is performed annually and focuses on the development of a six year plan which comprises a detailed plan for the first three years in the planning cycle and a less detailed outlook for the remaining three-year period. The planning cycle in 2016 pertained to the 2017-2022 period. The results as they apply to 2018 (the test year) form the basis for the rate submission.

The typical annual business planning process consists of six stages:

1. Strategic direction and goals established;
2. Risk review and investment requirements;
3. Confirmation of strategic direction and goals with Hydro One Limited;
4. Development of economic outlook and forecast assumptions;
5. Development of plans and work programs; and
6. Approval by Hydro One Limited Senior Management and Board of Directors.

### 1.1 Strategic Direction and Goals Established by Senior Management

Remotes' strategic direction and goals are reviewed and established by its management team and are confirmed by Hydro One. The strategic goals are used by planners as the business plan is being developed. Remotes' corporate vision and strategic objectives are shown in Exhibit A, Tab 3, Schedule 2.

## 1.2 Risk Review and Investment Requirements

Annually, required investments are determined based on asset condition, engine hours, load growth and external factors (INAC funding, winter roads). Investments are then ranked against financial, operational, environmental, safety, regulatory and legal requirements and risks. The outcome of this process is a list of investments that is consistent with Remotes' strategic goals and takes into account levels of investment and associated risk mitigation against financial, operational, environmental, safety, regulatory and legal considerations. A final investment plan is then endorsed and confirmed by the Hydro One Inc. senior management team. The investment plan prepared during 2016 provides the basis for the 2018 plan.

## 1.3 Development of Economic Outlook and Planning Assumptions

To facilitate the preparation of the business plan, an economic outlook is developed and included with the planning instructions issued. This includes forecasts of key economic statistics, interest rates, labour escalation rates, income tax rates, and cost rates for benefits.

### 1.3.1 Consumer Price Index

Remotes uses the Consumer Price Index (CPI) as a planning tool to forecast expenditure level changes. The CPI provides a broad measure of the cost of living. Through the monthly CPI, Statistics Canada tracks the change in retail price of a representative shopping basket of about 600 goods and services from an average household's expenditures: food, housing transportation, furniture, clothing and recreation.

CPI-Ontario exhibits the inflationary environment in which Remotes operates. The CPI forecast is from IHS Global Insight June 2016 forecast.

For 2018, Hydro One assumed 2.0% annual inflation and cost escalators for construction and OM&A expense growth of 2.5% and 2.2%, respectively.

**Table 1**
**Ontario Consumer Price Index**

| % | Historical Years | | | | | Bridge Year | Test Years | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| | **2012** | **2013** | **2014** | **2015** | **2016** | **2017** | **2018** | **2019** | **2020** | **2021** | **2022** |
| **CPI-Ontario*** | 1.4 | 1.1 | 2.3 | 1.2 | 2.1 | 1.9 | 2.0 | 2.0 | 2.0 | 2.0 | 2.0 |

### 1.3.2 Cost of Capital

Remotes cost of capital is as described in Exhibit E1, Tab1, Schedule 1.

### 1.3.3 Interest Capitalized and Capitalization of Overheads

Remotes' interest capitalized rates and capitalization of overheads are as described in Exhibit C1, Tab 2, Schedule 1.

### 1.3.4 Labour Escalation

Specific details on annual labour escalation are provided below.

**a) Society Staff**

The Society of Energy Professionals Collective Agreement has reached an agreement to March 31, 2019. Economic increases are assumed to be 0.75% for the 2017-2022 business plan term and are slightly different from the Collective Agreement as it was not yet ratified when the business plan was finalized.

**b) PWU Staff**

The Power Workers' Union Collective Agreement has reached an agreement to March 31, 2018. Economic increases are assumed to be 1.0% for the 2017-2022 business plan term and are slightly different from the Collective Agreement as it was not yet ratified when the business plan was finalized.

**c) MCP Staff**

It is anticipated that a 2% annual increase per year in base pay for the 2017-2022 period.

**d) Incentive Plan Payouts**

All incentive plans have been discontinued, with exception of the MCP Short Term Incentive Plan. Payout under this plan is assumed to be 10% for the 2017-2022 business plan term.

#### 1.3.5 Income Tax Rates

Remotes' calculation of income taxes is as described in Exhibit D1, Tab 7, Schedule 1.

### 1.4 Development of Plans and Work Programs

During the planning process, plans and work programs are further refined consistent with the economic and forecast assumptions. As part of this process, sufficient detail is provided to facilitate preparation of the 2018 Rate Application. At the end of this process, senior management provides direction as necessary in order to balance the various factors under consideration including legal requirements, customer service levels, rate impacts and impacts on RRRP.

The operations, maintenance and administration ("OM&A") budget and the capital budget that result from this planning process are discussed at Exhibit D1, Tab 1, Schedule 1 and Exhibit B1, Tab 1, Schedule 1 respectively. Refer to Exhibit A, Tab 7, Schedule 4 for an overview of Remotes' project approval process.

The financial plan is prepared, incorporating OM&A and capital work program levels consistent with the investment plan, as well as forecasts of revenue, fuel, depreciation and amortization expense, financing charges, income tax, and working capital.

The resulting plan is reviewed by Remotes' Board. As necessary, underlying assumptions are modified and the results finalized and presented for approval of the consolidated plan to the Hydro One Board of Directors. The 2017-2022 Budget and Outlook was approved by the Board of Directors at its December 2017 meeting and the updated plan was approved by the Board of Directors at its January 2018 meeting.

# PROJECT AND PROGRAM APPROVAL AND CONTROL

## 1.0 INTRODUCTION

As described in Exhibit A, Tab 7, Schedule 3, there are a number of key steps within the overall business planning cycle that are typically completed prior to the development of the detailed project and program assessments. These prerequisite steps include needs identification, project/program prioritization and the development of preliminary work programs, based on estimates of project and program costs and benefits.

## 2.0 PROJECT AND PROGRAM APPROVAL

Once the preliminary plans have been accepted at the proof-of-concept stage, an analysis of costs, proposed accomplishments, benefits and risk is completed for each program and for individual projects.

For work programs of an ongoing nature (such as engine replacements), the analysis associated with each program are included in Asset Planning Documents for review and approval. Programs are reviewed annually, considering factors such as regulatory requirements, business efficiencies, impacts on customers, reliability, environment and safety along with any other relevant information. For specific improvement and facilities projects business cases are only completed during the detailed budgeting process in November of each year, when specific project scope can be determined.

For projects that are not routine and do not occur annually, Business Case Summaries ("BCS") for individual project proposals are developed and assessed. Similar analysis is undertaken for these projects, but in more detail than for routine work. Factors such as the need for the investment including the implications of not doing the work, the anticipated results and the recommended solution and its cost are all considered. In determining the recommended solution, alternative approaches and project risks are considered. The factors considered include regulatory requirements, business efficiencies, impacts on customers, reliability, environment and safety and any other relevant information. The proposals are reviewed in a series of steps at the senior management and executive levels, depending on the dollar limit and the significance of the investment. The proposals are then approved consistent with the provisions of the Expenditure Authority Register ("EAR"), described in Exhibit A, Tab 6, Schedule 2. For programs, this analysis and approval is completed as part of the investment planning process. Strategic investments are reviewed and approved by the Hydro One Board of Directors. The BCS documents provided in the Distribution System Plan summarize the proposed projects and programs with expenditures exceeding $283 thousand in the test year.

Projects funded by INAC are all subject to the Hydro One internal approvals described above. INAC-funded projects must also be approved by the local Band Council, and are also approved following INAC's own internal funding processes. INAC's funding processes consider alternative solutions, impacts on communities, and are reviewed and approved in a series of steps at INAC's senior management/executive level. Depending on the scale of the project, INAC-funded projects are subject to different steps, including design approval, Requests for Proposals and monthly monitoring by INAC and the individual First Nation. INAC-funded projects are described in more detail in the DSP, in Exhibit B.

## 3.0 MONITORING AND CONTROL

Each month, management monitors year-to-date expenditures and accomplishments as well as projected year-end expenditures and work accomplishments. Deviations from plan are identified and corrective action taken.

In the event that significant changes in cost, schedule and/or scope of a project is forecasted, an Interim Review of Variance ("IROV") is prepared. An IROV is essentially an amended business case that is reviewed and approved based on the revised set of circumstances (cost, scope or schedule). The IROV approval is in accordance with the limits set out in the EAR. Projects which cannot be re-justified are either scaled back, cancelled or otherwise adjusted to conform to the new situation.

# ACCOUNTING INFORMATION

## 1.0 ACCOUNTING STANDARD

On April 3, 2012, the Board issued its Decision with Reasons in EB-2011-0427, granting Remotes' request to use United States Generally Accepted Accounting Principles for regulatory purposes. Based on this decision, Remotes adopted this accounting standard for regulatory purposes.

Remotes confirms that its accounting treatment segregates any non-utility business it conducts from its rate-regulated activities.

## 2.0 CHANGES TO ACCOUNTING POLICIES

In keeping with good corporate governance, Hydro One reviews and, if appropriate, revises its policies and procedures from time to time. These policies are applicable to Remotes. No financial accounting policy changes have been made that impact the 2018-2022 rate base or revenue requirement since the Board's review of Remotes' distribution revenue requirements and rates for 2013-2017 (EB-2012-0137) other than as specified in this section.

On November 5, 2015, Hydro One adopted "Accounting Standards Codification 718 – Compensation – Stock Compensation" to address the accounting of stock-based compensation. Adoption of this accounting policy has no impact on revenue requirement.

According to this policy, Hydro One measures share grant plans based on the fair value of the grants, which is determined by the share price on the grant date. The costs are recognized in the financial statements using the graded-vesting attribution method for share grant plans that have both a performance condition and a service condition. Hydro One records a regulatory asset equal to the accrued costs of share grant plans recognized in each period, as management considers it probable that such costs will be recovered in rates in the future.

# FINANCIAL SUMMARY

## 1.0 INTRODUCTION

Remotes is making this application in accordance with the requirements of the Ontario Energy Board *Filing Requirements for Transmission and Distribution Applications* issued November 14, 2006, and updated on July 14, 2016. The proposed revenue requirement and rates included in this Application have been prepared on the basis of a forward-looking 2018 test year. This submission also includes information for a 2017 bridge year, historical information for 2013, 2014, 2015 and 2016, and Board-approved information for 2013. Given that Remotes' previous Cost of Service rate submission was based on a 2013 test year, there is a five-year timing difference between test years. This timing lag should be kept in mind when making comparisons.

Remotes is proposing to recover a total revenue requirement of $56,689K: $17,612K from its customers (1.80% rate increase over 2017 rates), $999K from other revenues, and $38,078K from the Rural and Remote Rate Protection (RRRP) fund for the 2018 test year. Calculation of the revenue requirement appears in the evidence at Exhibit G2, Tab 1, Schedule 1.

Remotes' Operations, Maintenance and Administration ("OM&A") expenditures have been determined on the basis of an examination of required work programs to ensure that appropriate and cost-effective solutions are implemented. A description of Remotes' planning process is provided at Exhibit A, Tab 14, Schedule 1. The proposed OM&A expenditures are $50,143K and include $27,600K for diesel fuel required to generate electricity.

The overall proposed OM&A expenditures are driven by the need to meet customer, regulatory and statutory requirements regarding service and reliability as well as to repair, maintain and replace aging assets. These expenditures are itemized at Exhibit 2, Tab 1, Schedule 1 and discussed in written direct evidence at Exhibit E1, Tab 1, Schedule 1.

Remotes' proposed Rate Base of $44,445K is discussed at Exhibit C1, Tab 1, Schedule 1.

Remotes has calculated working capital based on the formula-based methodology described in the Board's Filing Guidelines for Transmitters and Distributors issued July 14, 2017. The calculation of working capital, filed at Exhibit C2, Tab 5, Schedule 1, incorporates generation-related OM&A accounts as Remotes provides integrated generation and distribution services.

Depreciation expense for Remotes' submission for the 2018 revenue requirement is based on the methodology in an independent study conducted by Foster Associates in 2012 and approved in EB-2012-0137. Depreciation expense of $3,576K has been determined based on this study. These costs are described in written evidence at Exhibit D1, Tab 6, Schedule 1 and shown in detail in Exhibit D2, Tab 7, Schedule 1.

Remotes recognizes a liability for estimated future expenditures associated with the assessment and remediation of contaminated lands, based on the net present value of these estimated future expenditures. Consistent with the Board Decision in EB-2012-0137, this regulatory asset is amortized consistent with the actual expenditures incurred each year. Remotes forecasts assessment and remediation costs of $1,032K in the 2018 Test Year. Land Assessment and Remediation is discussed in Exhibit E1, Tab 6, Schedule 1.

Remotes is 100% debt-financed, consisting of 4% deemed short-term debt and 96% long-term debt. Remotes' evidence in support of its cost of capital appears at Exhibit E1, Tab 1, Schedule 1.

Under the terms of the Electrification Agreements, INAC is responsible for funding generation capital upgrades and service connections associated with load growth in the First Nations Communities served by Remotes. Remotes is responsible for funding capital replacements, and for capital improvements not associated with load growth. The requested revenue requirement reflects the costs, net of expected capital contributions from INAC, for Remotes' plan to invest in generation and distribution assets to meet its objectives regarding public and employee safety; environmental responsibility; regulatory and legislative compliance; and service quality and reliability. The capital project and program approval and control policy is presented at Exhibit A, Tab 7, Schedule 4. Remotes is forecasting total capital expenditures of $3,236K, net of contributed capital. Details of Remotes' capital budget are illustrated in schedules filed in the DSP at Exhibit B1, Tab 1, Schedule 1, Section 4.1.2.

Remotes receives less than 6% of its revenues from external sources ($999K in 2018). External revenues are discussed at Exhibit G1, Tab 3, Schedule 1.

Rural and Remote Rate Protection for customers in Remotes' service area is currently set at $32,259K per year. Remotes is requesting to increase annual RRRP revenue subsidies to $38,078K.

In accordance with standard regulatory practice, Remotes has incurred prior costs for which it is requesting approval in this submission. The December 2016 audited Rural and Remote Rate Protection Variance balance is $1,644K and is primarily related to increased diesel fuel costs and required maintenance. Remotes is proposing to recover $962K in the

2018 test year, which is the audited 2016 Rural and Remote Rate Protection Variance balance of $1,644K, offset by a 2017 income tax adjustment of $682K as described in Exhibit D1, Tab 7, Schedule 1, resulting in a total RRRP amount of $39,040K. Remotes' submission regarding these account balances and proposed disposition appears at Exhibit H1, Tab 1, Schedule 1.

Appendix 2-Y: Summary of Impacts to Revenue Requirement from Transition to MIFRS does not apply as Hydro One, including Remotes, moved to US GAAP.

Attachment 4: Hydro One Remote Communities Inc. Financial Statements 2016

# HYDRO ONE REMOTE COMMUNITIES INC.

## FINANCIAL STATEMENTS

## DECEMBER 31, 2013

**HYDRO ONE REMOTE COMMUNITIES INC.**
**INDEPENDENT AUDITORS' REPORT**

To Directors of Hydro One Remote Communities Inc.

We have audited the accompanying financial statements of Hydro One Remote Communities Inc., which comprise the balance sheet as at December 31, 2013, the statements of operations and comprehensive income, changes in shareholder's deficit and cash flows for the year then ended, and notes, comprising a summary of significant accounting policies and other explanatory information.

*Management's Responsibility for the Financial Statements*

Management is responsible for the preparation and fair presentation of these financial statements in accordance with United States Generally Accepted Accounting Principles, and for such internal control as management determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

*Auditors' Responsibility*

Our responsibility is to express an opinion on these financial statements based on our audit. We conducted our audit in accordance with Canadian generally accepted auditing standards. Those standards require that we comply with ethical requirements and plan and perform the audit to obtain reasonable assurance about whether the financial statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the financial statements. The procedures selected depend on our judgment, including the assessment of the risks of material misstatement of the financial statements, whether due to fraud or error. In making those risk assessments, we consider internal control relevant to the entity's preparation and fair presentation of the financial statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management, as well as evaluating the overall presentation of the financial statements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

*Opinion*

In our opinion, the financial statements present fairly, in all material respects, the financial position of Hydro One Remote Communities Inc. as at December 31, 2013, and its results of operations and its cash flows for the year then ended in accordance with United States Generally Accepted Accounting Principles.

## 1. DESCRIPTION OF THE BUSINESS

Hydro One Inc. (Hydro One) was incorporated on December 1, 1998, under the *Business Corporations Act* (Ontario) and is wholly owned by the Province of Ontario (Province). The principal businesses of Hydro One are the transmission and distribution of electricity to customers within Ontario.

Hydro One Remote Communities Inc. (Hydro One Remote Communities or the Company) was incorporated on August 18, 1998 under the *Business Corporations Act* (Ontario), and is a wholly owned subsidiary of Hydro One. Hydro One Remote Communities operates 19 small electrical, generation and distribution systems in remote communities in northern Ontario that are not connected to the Province’s electricity grid. The Company's business is regulated by the Ontario Energy Board (OEB).

## 2. SIGNIFICANT ACCOUNTING POLICIES

### Basis of Accounting

These Financial Statements are prepared and presented in accordance with United States (US) Generally Accepted Accounting Principles (GAAP) and in Canadian dollars.

The Company uses a cost recovery model applied to achieve breakeven net income and are for the specific use of the OEB. Certain amounts presented in these Financial Statements represent allocations from Hydro One that are subject to review and approval by the OEB. Consolidated Financial Statements of Hydro One for the year ended December 31, 2013 have been prepared and are publicly available.

Hydro One Remote Communities performed an evaluation of subsequent events through to March 26, 2014, the date these Financial Statements were available to be issued, to determine whether any events or transactions warranted recognition and disclosure in these Financial Statements. No such events or transactions were identified.

### Use of Management Estimates

The preparation of financial statements requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting periods. Management evaluates these estimates on an on-going basis based upon: historical experience; current conditions; and assumptions believed to be reasonable at the time the assumption is made with any adjustments being recognized in results of operations in the period they arise. Significant estimates relate to regulatory assets and regulatory liabilities, environmental liabilities, post-retirement and post-employment benefits, asset impairment, contingencies, unbilled revenue, allowance for doubtful accounts and deferred income tax assets and liabilities. Actual results may differ significantly from these estimates, which may be impacted by future decisions made by the OEB or the Province.

### Rate Setting

On April 3, 2012, the OEB approved the Company’s request to use US GAAP as the basis for rate setting and regulatory accounting and reporting, effective January 1, 2012.

In November 2011, Hydro One Remote Communities filed an Incentive Regulation Mechanism (IRM) application with the OEB for 2012 rates. In March 2012, the OEB approved an increase of approximately 1.1% to basic rates for the distribution and generation of electricity, with an effective date of May 1, 2012. In September 2012, Hydro One Remote Communities filed a cost of service application for 2013 distribution rates. The application requested an increase of 3.45% to customer rates for generation and distribution and an increase of approximately $7 million to annual Rural and Remote Rate Protection (RRRP). In September, 2013, the OEB approved the proposed rate increase and annual RRRP of approximately $32.3 million.

### Regulatory Accounting

The OEB has the general power to include or exclude costs, revenues, losses or gains in the rates of a specific period, resulting in a change in the timing of accounting recognition from that which would have applied in an unregulated company. Such change in timing involves the application of rate-regulated accounting, giving rise to the recognition of regulatory assets and liabilities. The Company's regulatory assets represent certain amounts receivable from future customers and costs that have been deferred for accounting purposes because it is probable that they will be recovered in future rates. In addition, the Company has recorded regulatory liabilities that generally represent amounts that are refundable to future electricity customers. The Company continually assesses the likelihood of recovery of each of its regulatory assets and continues to believe that it is probable that the OEB will factor its regulatory assets and liabilities into the setting of future rates. If, at some future date, the Company judges that it is no longer probable that the OEB will include a regulatory asset or liability in setting future rates, the appropriate carrying amount will be reflected in results of operations in the period that the assessment is made.

Hydro One Remote Communities is regulated under a cost recovery model applied to achieve breakeven net income, after consideration of the recovery of / provision for payments in lieu of corporate income taxes (PILs). Any excess or deficiency in RRRP amounts necessary to lead to breakeven net income is added to, or drawn from, the Remote Rate Protection Revenue (RRPR) variance account. The balance in the RRPR variance account is subject to future review and disposition by the OEB.

### Revenue Recognition

Revenues are recognized on an accrual basis and include billed and unbilled revenues. Revenues attributable to the generation and delivery of electricity are based on OEB-approved distribution rates and are recognized as electricity is delivered to customers. The Company estimates monthly revenue for a period based on wholesale electricity purchases because customer meters are not generally read at the end of each month. At the end of each month, the electricity delivered to customers, but not billed, is estimated and revenue is recognized. The unbilled revenue estimate is affected by energy demand, weather, line losses and changes in the composition of customer classes.

Distribution revenue also includes RRRP which is an amount relating to rate protection for remote customers received from the Independent Electricity System Operator (IESO) based on a standardized customer rate that is approved by the OEB. Current legislation provides RRRP for prescribed classes of rural, residential and remote consumers by reducing the electricity rates that would otherwise apply.

Revenues are recorded net of indirect taxes.

### Accounts Receivable and Allowance for Doubtful Accounts

Billed accounts receivable are recorded at the invoiced amount and overdue amounts related to regulated billings bear interest at OEB approved rates. The allowance for doubtful accounts reflects the Company's best estimate of losses on accounts receivable balances. The allowance is based on accounts receivable aging, historical experience and other currently available information. The Company estimates the allowance for doubtful accounts on customer receivables by applying internally developed loss rates to the outstanding receivable balances by risk segment. Risk segments represent groups of customers with similar credit quality indicators and are computed based on various attributes, including number of days receivables are past due, delinquency of balances and payment history. Loss rates applied to the accounts receivable balances are based on historical average write-offs as a percentage of accounts receivable in each risk segment. An account is considered delinquent if the amount billed is not received within 120 days from the bill due date. Accounts receivable are written off against the allowance when they are deemed uncollectible. The existing allowance for uncollectible accounts will continue to be affected by changes in volume, prices and economic conditions.

### Corporate Income Taxes

Under the *Electricity Act, 1998,* Hydro One Remote Communities is required to make (recover) PILs to (from) the Ontario Electricity Financial Corporation (OEFC). These payments are calculated in accordance with the rules for computing income and other relevant amounts contained in the *Income Tax Act* (Canada) and the *Taxation Act, 2007* (Ontario), as modified by the *Electricity Act, 1998*, and related regulations.

Current and deferred income taxes are computed based on the tax rates and tax laws enacted at the balance sheet date. Tax benefits associated with income tax positions taken, or expected to be taken, in a tax return are recorded only when the "more-likely-than-not" recognition threshold is satisfied and are measured at the largest amount of benefit that has a greater than 50% likelihood of being realized upon settlement. Management evaluates each position based solely on the technical merits and facts and circumstances of the position, assuming the position will be examined by a taxing authority having full knowledge of all relevant information. Significant management judgement is required to determine recognition thresholds and the related amount of tax benefits to be recognized in the Financial Statements. Management re-evaluates tax positions each period in which new information about recognition or measurement becomes available.

***Current Income Taxes***

The recovery of or the provision for current taxes and the assets and liabilities recognized for the current and prior periods are measured at the amounts receivable from, or payable to, the OEFC.

***Deferred Income Taxes***

Deferred income taxes are provided for using the liability method. Deferred income taxes are recognized based on the estimated future tax consequences attributable to temporary differences between the carrying amount of assets and liabilities in the Financial Statements and their corresponding tax bases.

Deferred income tax liabilities are generally recognized on all taxable temporary differences. Deferred tax assets are recognized to the extent that it is more-likely-than-not that these assets will be realized from taxable income available against which deductible temporary differences can be utilized.

Deferred income taxes are calculated at the tax rates that are expected to apply in the period when the liability is settled or the asset is realized, based on the tax rates and tax laws that have been enacted at the balance sheet date. Deferred income taxes that are not included in the rate-setting process are charged or credited to the Statements of Operations and Comprehensive Income.

If management determines that it is more-likely-than-not that some or all of a deferred income tax asset will not be realized, a valuation allowance is recorded against the deferred income tax asset to report the net balance at the amount expected to be realized. Previously unrecognized deferred income tax assets are reassessed at each balance sheet date and are recognized to the extent that it has become more-likely-than-not that the tax benefit will be realized.

The Company records regulatory assets and liabilities associated with deferred income taxes that will be included in the rate-setting process.

The Company uses the flow-through method to account for investment tax credits (ITCs) earned on eligible scientific research and experimental development expenditures, and apprenticeship job creation. Under this method, only non-refundable ITCs are recognized as a reduction to income tax expense.

**Inter-company Demand Facility**

Hydro One maintains pooled bank accounts for its use and for the use of its subsidiaries, including Hydro One Remote Communities. The balance in the inter-company demand facility represents the cumulative net effect of all deposits and withdrawals made by the Company to and from the pooled cash accounts. Interest is earned on positive inter-company balances based on the average of the bankers' acceptance rate at the beginning and end of the month, less 0.02%. Interest is charged on overdraft inter-company balances based on the same bankers' acceptance rate, plus 0.15%.

**Fuel, Materials and Supplies**

Fuel is used in the generation of electricity. Materials and supplies represent consumables, small spare parts and construction materials held for internal construction and maintenance of property, plant and equipment. These assets are carried at average cost less any impairments recorded.

### Property, Plant and Equipment

Property, plant and equipment is recorded at original cost, net of customer contributions received in aid of construction and any accumulated impairment losses. The cost of additions, including betterments and replacements of asset components, is included on the Balance Sheets as property, plant and equipment.

The original cost of property, plant and equipment includes direct materials, direct labour (including employee benefits), contracted services, attributable capitalized financing costs, and direct and indirect overheads that are related to the capital project or program. Indirect overheads include a portion of corporate costs such as finance, treasury, human resources, information technology and executive costs. Overhead costs, including corporate functions and field services costs, are capitalized on a fully allocated basis, consistent with an OEB-approved methodology.

Property, plant and equipment in service consists of generation, distribution, and administration and service assets. Property, plant and equipment also includes future use assets, such as major components and spare parts and capitalized project development costs associated with deferred capital projects.

#### *Generation*

Generation assets are used in the generation of electricity, including hydroelectric equipment, wind turbines, diesel generators, and tank farms.

#### *Distribution*

Distribution assets include assets related to the distribution of low-voltage electricity, including lines, poles, switches, transformers, protective devices, and metering systems.

#### *Administration and Service*

Administration and service assets include administrative buildings, personal computers, transport and work equipment, tools, and other minor assets.

### Capitalized Financing Costs

Capitalized financing costs represent interest costs attributable to the construction of property, plant and equipment. The financing cost of attributable borrowed funds is capitalized as part of the acquisition cost of such assets. The capitalized portion of financing costs is a reduction to financing charges recognized in the Statements of Operations and Comprehensive Income. Capitalized financing costs are calculated using the Company’s weighted average effective cost of debt.

### Construction in Progress

Construction in progress consists of the capitalized cost of constructed assets that are not yet complete and which have not yet been placed in service.

### Depreciation

The cost of property, plant and equipment is depreciated on a straight-line basis based on the estimated remaining service life of each asset category, except for transport and work equipment, which is depreciated on a declining balance basis.

The Company periodically initiates an external independent review of its property, plant and equipment depreciation rates, as required by the OEB. Any changes arising from such a review are implemented on a remaining service life basis, consistent with their inclusion in electricity rates. The last review resulted in changes to rates effective January 1, 2013.

A summary of average service lives and depreciation and amortization rates for the various classes of assets is included below:

| | Average Service Life | Rate (%) Range | Average |
|---|---|---|---|
| Generation | 22 years | 3% – 7% | 5% |
| Distribution | 36 years | 1% – 7% | 3% |
| Administration and service | 20 years | 3% – 20% | 3% |

In accordance with group depreciation practices, the original cost of property, plant and equipment, or major components thereof, that are normally retired, is charged to accumulated depreciation with no gain or loss being reflected in results of operations. Where a disposition of property, plant and equipment occurs through sale, a gain or loss is calculated based on proceeds and such gain or loss is included in depreciation expense. Depreciation expense also includes the costs incurred to remove property, plant and equipment assets where no asset retirement obligation has been recorded.

**Long-Lived Asset Impairment**

When circumstances indicate the carrying value of long-lived assets may not be recoverable, the Company evaluates whether the carrying value of such assets has been impaired. For such long-lived assets, impairment exists when the carrying value exceeds the sum of the future estimated undiscounted cash flows expected to result from the use and eventual disposition of the asset. When alternative courses of action to recover the carrying amount of a long-lived asset are under consideration, a probability-weighted approach is used to develop estimates of future undiscounted cash flows. If the carrying value of the long-lived asset is not recoverable based on the estimated future undiscounted cash flows, an impairment loss is recorded, measured as the excess of the carrying value of the asset over its fair value. As a result, the asset's carrying value is adjusted to its estimated fair value. As at December 31, 2013, no asset impairment had been recorded.

**Costs of Arranging Debt Financing**

For financial liabilities classified as other than held-for-trading, the Company defers the external transaction costs related to obtaining debt financing and presents such amounts as deferred debt costs on the Balance Sheets. Deferred debt costs are amortized over the contractual life of the related debt on an effective-interest rate basis and the amortization is included within financing charges in the Statements of Operations and Comprehensive Income. Transaction costs for items classified as held-for-trading are expensed immediately.

**Comprehensive Income**

Comprehensive income is comprised of net income and other comprehensive income (OCI). OCI includes the amortization of net unamortized hedging losses on the Company's proportionate share of Hydro One's discontinued cash flow hedges. The Company amortizes its net unamortized hedging losses on discontinued cash flow hedges to financing charges using the effective interest method over the term of the associated hedged debt. Hydro One Remote Communities presents OCI and net income in a single continuous Statement of Operations and Comprehensive Income.

**Financial Assets and Liabilities**

All financial assets and liabilities are classified into one of the following five categories: held-to-maturity investments; loans and receivables; held-for-trading; other liabilities; or available-for-sale. Financial assets and liabilities classified as held-for-trading are measured at fair value. All other financial assets and liabilities are measured at amortized cost, except accounts receivable which are measured at the lower of cost or fair value. Accounts receivable are classified as loans and receivables. The Company considers the carrying amount of accounts receivable to be a reasonable estimate of fair value because of the short time to maturity of these instruments. Provisions for impaired accounts receivable are recognized as adjustments to the allowance for doubtful accounts and are recognized when there is objective evidence that the Company will not be able to collect amounts according to the original terms.

The Company determines the classification of its financial assets and liabilities at the date of initial recognition. The Company designates certain of its financial assets and liabilities to be held at fair value, when it is consistent with the Company's risk management policy disclosed in Note 11 – Fair Value of Financial Instruments and Risk Management.

Transaction costs associated with financial assets and liabilities that are designated as held-for-trading are recognized immediately in results of operations. All financial instrument transactions are recorded at trade date.

**Derivative Instruments and Hedge Accounting**

The Company currently does not engage in derivative trading or speculative activities and had no derivative instruments outstanding at December 31, 2013. OCI includes the amortization of net unamortized hedging losses on the Company's proportionate share of Hydro One's discontinued cash flow hedges.

**Employee Future Benefits**

Employee future benefits provided by Hydro One include pension, post-retirement and post-employment benefits. The costs of Hydro One's pension, post-retirement and post-employment benefit plans are recorded over the periods during which employees render service.

Hydro One recognizes the funded status of its pension, post-retirement and post-employment plans on its Consolidated Balance Sheets and subsequently recognizes the changes in funded status at the end of each reporting year. Pension, post-retirement and post-employment funds are considered to be underfunded when the projected benefit obligation exceeds the fair value of the plan assets. Liabilities are recognized in the Consolidated Balance Sheets of Hydro One for any net underfunded projected benefit obligation. The net underfunded projected benefit obligation may be disclosed as a current liability, long-term liability, or both. The current portion is the amount by which the actuarial present value of benefits included in the benefit obligation payable in the next 12 months exceeds the fair value of plan assets. If the fair value of plan assets exceeds the projected benefit obligation of the plan, an asset is recognized equal to the net overfunded projected benefit obligation. The post-retirement and post-employment benefit plans are unfunded because there are no related plan assets. For the year ended December 31, 2013, the measurement date for the Plans was December 31.

***Pension benefits***

Hydro One has a contributory defined benefit pension plan covering all regular employees of Hydro One and its subsidiaries, including Hydro One Remote Communities, but not including Hydro One Brampton Inc. The Hydro One pension plan does not segregate assets in a separate account for individual subsidiaries, nor is the obligation of the pension plan allocated to, or funded separately by, entities within the consolidated group. Accordingly, for purposes of these Financial Statements, the pension plan is accounted for as a defined contribution plan and no pension benefit asset or liability is recorded.

A detailed description of Hydro One pension benefits is provided in Note 15 – Pension and Post-Retirement and Post-Employment Benefits, to the Consolidated Financial Statements of Hydro One for the year ended December 31, 2013.

***Post-retirement and post-employment benefits***

Hydro One has post-retirement and post-employment benefit plans covering all regular employees of Hydro One and its subsidiaries, including Hydro One Remote Communities. The benefit obligations of the these post-retirement and post-employment benefit plans are not segregated, or funded separately, for Hydro One Remote Communities. Accordingly, for purposes of these Financial Statements, the post-retirement and post-employment benefit obligations are allocated to the Company based on base pensionable earnings.

The Company records a regulatory asset equal to its allocated share of Hydro One's incremental net unfunded projected benefit obligation for post-retirement and post-employment plans at each year end based on annual actuarial reports. The regulatory asset for the incremental net unfunded projected benefit obligation for post-retirement and post-employment plans, in absence of regulatory accounting, would be recognized in accumulated OCI (AOCI). A regulatory asset is recognized because management considers it to be probable that post-retirement and post-employment benefit costs will be recovered in the future through the rate-setting process.

Post-retirement and post-employment benefits, are recorded and included in rates on an accrual basis. Costs are determined by independent actuaries using the projected benefit method prorated on service and based on assumptions that reflect management's best estimates. Past service costs from plan amendments are amortized to results of operations based on the expected average remaining service period.

For post-retirement benefits, all actuarial gains or losses are deferred using the "corridor" approach. The amount calculated above the "corridor" is amortized to results of operations on a straight-line basis over the expected average remaining service lives of active Hydro One employees in the plan and over the remaining life expectancy of inactive Hydro One employees in the plan. The post-retirement benefit obligation is remeasured to its fair value at each year end based on an annual actuarial report, with an offset to associated regulatory asset, to the extent of the remeasurement adjustment.

For post-employment obligations, the actuarial gains and losses that are incurred during the year are recognized immediately to results of operations. The post-employment benefit obligation is remeasured to its fair value at each year end based on an annual actuarial report, with an offset to associated regulatory asset, to the extent of the remeasurement adjustment.

All post-retirement and post-employment future benefit costs are attributed to labour and are either charged to results of operations or capitalized as part of the cost of property, plant and equipment and intangible assets.

A detailed description of Hydro One post-retirement and post-employment benefits is provided in Note 15 – Pension and Post-Retirement and Post-Employment Benefits, to the Consolidated Financial Statements of Hydro One for the year ended December 31, 2013.

**Loss Contingencies**

Hydro One Remote Communities is involved in certain legal and environmental matters that arise in the normal course of business. In the preparation of its Financial Statements, management makes judgements regarding the future outcome of contingent events and records a loss for a contingency based on its best estimate when it is determined that such loss is probable and the amount of the loss can be reasonably estimated. When a range estimate for the probable loss exists and no amount within the range is a better estimate than any other amount, the Company records a loss at the minimum amount within the range.

Management regularly reviews current information available to determine whether recorded provisions should be adjusted and whether new provisions are required. Estimating probable losses may require analysis of multiple forecasts and scenarios that often depend on judgements about potential actions by third parties, such as federal, provincial and local courts or regulators. Contingent liabilities are often resolved over long periods of time. Amounts recorded in the Financial Statements may differ from the actual outcome once the contingency is resolved. Such differences could have a material impact on future results of operations, financial position and cash flows of the Company.

Provisions are based upon current estimates and are subject to greater uncertainty the longer the projection period. A significant upward or downward trend in the number of claims filed, the nature of the alleged injury, and the average cost of resolving each such claim could change the estimated provision, as could any substantial adverse or favorable verdict at trial. A federal or provincial legislative outcome or structured settlement could also change the estimated liability. Legal fees are expensed as incurred.

**Environmental Liabilities**

Environmental liabilities are recorded in respect of past contamination when it is determined that future environmental remediation expenditures are probable under existing statute or regulation and the amount of the future expenditures can be reasonably estimated. Hydro One Remote Communities records a liability for the estimated future expenditures associated with the contaminated land assessment and remediation (LAR) based on the present value of these estimated future expenditures. The Company determines the present value with a discount rate equal to its credit-adjusted risk-free interest rate on financial instruments with comparable maturities to the pattern of future environmental expenditures. As the Company anticipates that the future expenditures will continue to be recoverable in future rates, an offsetting regulatory asset has been recorded to reflect the future recovery of these environmental expenditures from customers. Hydro One Remote

Communities reviews its estimates of future environmental expenditures annually or more frequently if there are indications that circumstances have changed.

## 3. NEW ACCOUNTING PRONOUNCEMENTS

### Recently Adopted Accounting Pronouncements

In December 2011, the Financial Accounting Standards Board (FASB) issued Accounting Standards Update (ASU) 2011-11, Balance Sheet (Topic 210): Disclosures about Offsetting Assets and Liabilities. This ASU requires an entity to disclose both gross and net information about financial instruments and transactions eligible for offset on the Balance Sheets as well as financial instruments and transactions executed under a master netting or similar arrangement and was issued to enable users of financial statements to understand the effects or potential effects of those arrangements on its financial position. This ASU was required to be applied retrospectively and was effective for fiscal years, and interim periods within those years, beginning on or after January 1, 2013. The adoption of this ASU did not have a significant impact on the Company's Financial Statements.

In February 2013, the FASB issued ASU 2013-02, Comprehensive Income (Topic 220): Reporting of Amounts Reclassified Out of Accumulated Other Comprehensive Income. This ASU requires an entity to provide information about the amounts reclassified out of accumulated other comprehensive income by component. In addition, an entity is required to present, either on the face of the statement where net income is presented or in the notes, significant amounts reclassified out of accumulated other comprehensive income by the respective line items of net income, but only if the amount reclassified is required under US GAAP to be reclassified to net income in its entirety in the same reporting period. For other amounts that are not required under US GAAP to be reclassified in their entirety to net income, an entity is required to cross-reference to other disclosures required under US GAAP that provide additional detail about those amounts. This ASU was required to be applied prospectively and was effective for fiscal years, and interim periods within those years, beginning after December 15, 2012. The adoption of this ASU did not have a significant impact on the Company's Financial Statements.

### Recent Accounting Guidance Not Yet Adopted

In July 2013, the FASB issued ASU 2013-11, Income Taxes (Topic 740): Presentation of an Unrecognized Tax Benefit When a Net Operating Loss Carryforward, a Similar Tax Loss, or a Tax Credit Carryforward Exists. This ASU provides guidance on the presentation of unrecognized tax benefits. This ASU is effective for fiscal years, and interim periods within those years, beginning after December 15, 2013, and should be applied prospectively to all unrecognized tax benefits that exist at the effective date. Retrospective application is permitted. The adoption of this ASU is not anticipated to have a significant impact on the Company's Financial Statements.

## 4. DEPRECIATION AND AMORTIZATION

| *Year ended December 31 (thousands of dollars)* | **2013** | **2012** |
|---|---|---|
| Depreciation of property, plant and equipment | 2,564 | 2,946 |
| Asset removal costs | 589 | 560 |
| Gain on disposition of property, plant and equipment | – | (2) |
| Amortization of regulatory assets | 1,656 | 2,515 |
| | 4,809 | 6,019 |

## 5. FINANCING CHARGES

| *Year ended December 31 (thousands of dollars)* | **2013** | **2012** |
|---|---|---|
| Interest on long-term debt | 1,237 | 1,237 |
| Interest on inter-company demand facility | 216 | 83 |
| Amortization of hedging losses | 13 | 12 |
| Other | 14 | 5 |
| Less: Interest capitalized on construction in progress | (376) | (321) |
| | 1,104 | 1,016 |

## 6. PROVISION FOR PILS

The provision for PILs differs from the amount that would have been recorded using the combined Canadian Federal and Ontario statutory income tax rate. The reconciliation between the statutory and the effective tax rates is provided as follows:

| *Year ended December 31 (thousands of dollars)* | **2013** | **2012** |
|---|---|---|
| Loss before recovery of PILs | (1,091) | (1,436) |
| Canadian Federal and Ontario statutory income tax rate | 26.50% | 26.50% |
| Recovery of PILs at statutory rate | (289) | (381) |
| | | |
| Increase (decrease) resulting from: | | |
| | | |
| Net temporary differences included in amounts charged to customers: | | |
| Depreciation and amortization in excess of capital cost allowance | 469 | 913 |
| Environmental expenditures | (439) | (667) |
| Overheads capitalized for accounting but deducted for tax purposes | (82) | (102) |
| Interest capitalized for accounting but deducted for tax purposes | (100) | (85) |
| Post-retirement and post-employment benefit expense in excess of cash payments | 135 | 74 |
| RRPR variance account | (318) | (1,029) |
| Pension contribution in excess of pension expense | (90) | (107) |
| Other | 56 | (15) |
| Net temporary differences | (369) | (1,018) |
| Prior year adjustments | (332) | – |
| Rate difference on loss carryback | (110) | – |
| Other permanent differences | 9 | (37) |
| Total recovery of PILs | (1,091) | (1,436) |
| | | |
| Current recovery of PILs | (1,091) | (1,436) |
| Deferred recovery of PILs | – | – |
| Total recovery of PILs | (1,091) | (1,436) |
| | | |
| Effective income tax rate | 100% | 100% |

The recovery of payments in lieu of current income taxes of $1,091 thousand (2012 – $1,436 thousand) represents the amount that is recoverable from the OEFC with respect to current year income. The balance receivable from the OEFC at December 31, 2013 was $2,697 thousand (2012 – $1,589 thousand).

**Deferred Income Tax Assets**

Deferred income tax assets and liabilities arise from differences between the carrying amounts and tax bases of the Company's assets and liabilities. At December 31, 2013 and 2012, deferred income tax assets and liabilities consisted of the following:

| *December 31 (thousands of dollars)* | **2013** | **2012** |
|---|---|---|
| **Deferred income tax assets** | | |
| Environmental expenditures | 4,840 | 4,283 |
| Post-retirement and post-employment benefits expense in excess of cash payments | 4,466 | 4,266 |
| Depreciation and amortization in excess of capital cost allowance | 1,845 | 2,263 |
| Regulatory amounts not recognized for tax | (6,615) | (5,726) |
| Debt costs and hedging losses recognized for tax but not for accounting purposes | (189) | (245) |
| Total deferred income tax assets | 4,347 | 4,841 |
| Less: current portion | 108 | 108 |
| | 4,239 | 4,733 |

During 2013, there was no change in the rate applicable to future taxes (2012 – a change in rate applicable to future rates resulted in a $464 thousand increase to deferred tax liability).

## 7. ACCOUNTS RECEIVABLE

| *December 31 (thousands of dollars)* | Current accounts receivable | Long-term accounts receivable | Total |
|---|---|---|---|
| **2013** | | | |
| Accounts receivable – billed | 3,887 | 674 | 4,561 |
| Accounts receivable – unbilled | 1,404 | – | 1,404 |
| Accounts receivable, gross | 5,291 | 674 | 5,965 |
| Allowance for doubtful accounts | (296) | – | (296) |
| Accounts receivable, net | 4,995 | 674 | 5,669 |
| | | | |
| **2012** | | | |
| Accounts receivable – billed | 2,963 | 423 | 3,386 |
| Accounts receivable – unbilled | 1,527 | – | 1,527 |
| Accounts receivable, gross | 4,490 | 423 | 4,913 |
| Allowance for doubtful accounts | (297) | (5) | (302) |
| Accounts receivable, net | 4,193 | 418 | 4,611 |

The following table shows the movements in the total allowance for doubtful accounts for the years ended December 31, 2013 and 2012:

| *Year ended December 31 (thousands of dollars)* | **2013** | **2012** |
|---|---|---|
| Allowance for doubtful accounts – January 1 | (302) | (658) |
| Write-offs | 95 | 222 |
| Adjustments to allowance for doubtful accounts | (89) | 134 |
| Allowance for doubtful accounts – December 31 | (296) | (302) |

## 8. PROPERTY, PLANT AND EQUIPMENT

| *December 31 (thousands of dollars)* | Costs | Accumulated Depreciation | Construction in Progress | Total |
|---|---|---|---|---|
| **2013** | | | | |
| Generation | 41,616 | 19,517 | 2,716 | 24,815 |
| Distribution | 8,394 | 1,748 | 596 | 7,242 |
| Administration and Service | 10,545 | 1,991 | 161 | 8,715 |
| | 60,555 | 23,256 | 3,473 | 40,772 |
| **2012** | | | | |
| Generation | 38,803 | 22,056 | 6,764 | 23,511 |
| Distribution | 7,757 | 1,785 | 315 | 6,287 |
| Administration and Service | 9,803 | 1,938 | 171 | 8,036 |
| | 56,363 | 25,779 | 7,250 | 37,834 |

Financing charges capitalized on property, plant and equipment under construction were $376 thousand in 2013 (2012 – $321 thousand).

## 9. REGULATORY ASSETS AND LIABILITIES

Regulatory assets and liabilities arise as a result of the rate-making process. Hydro One Remote Communities has recorded the following regulatory assets and liabilities:

| *December 31 (thousands of dollars)* | **2013** | **2012** |
|---|---|---|
| **Regulatory assets:** | | |
| Environmental | 13,426 | 11,880 |
| Post-retirement and post-employment benefits | 2,939 | 3,144 |
| RRPR variance account | 1,985 | 787 |
| IFRS transition cost variance | – | 72 |
| Total regulatory assets | 18,350 | 15,883 |
| Less: current portion | 2,427 | 1,823 |
| | 15,923 | 14,060 |
| **Regulatory liabilities:** | | |
| Deferred income tax regulatory liability | 4,347 | 4,841 |
| Total regulatory liabilities | 4,347 | 4,841 |
| Less: current portion | 108 | 108 |
| | 4,239 | 4,733 |

### Environmental

The Company records a liability for the estimated future expenditures required to remediate environmental contamination. Management considers it probable that such expenditures will be recovered in the future through the rate-setting process, and as such, the Company has recorded an equivalent amount as a regulatory asset. In 2013, this regulatory asset increased by $2,872 thousand (2012 – decreased by $583 thousand) to reflect related changes in the Company’s environmental liabilities. The environmental regulatory asset is amortized to results of operations based on the pattern of actual expenditures incurred and charged to environmental liabilities. The OEB has the discretion to examine and assess the prudency and the timing of recovery of all of the Company’s actual environmental expenditures. In the absence of rate-regulated accounting, 2013 operation, maintenance and administration expenses would have been higher by $2,872 thousand (2012 – lower by $583 thousand). In addition, 2013 amortization expense would have been lower by $1,656 thousand (2012 – $2,515 thousand), and 2013 financing charges would have been higher by $330 thousand (2012 – $399 thousand).

**Post-Retirement and Post-Employment Benefits**

The Company recognizes the net unfunded status of post-retirement and post-employment obligations on the Balance Sheets with an incremental offset to the associated regulatory assets. A regulatory asset is recognized because management considers it to be probable that post-retirement and post-employment benefit costs will be recovered in the future through the rate-setting process. The post-retirement and post-employment benefit obligation is remeasured to its fair value at each year end based on an annual actuarial report, with an offset to the associated regulatory asset, to the extent of the remeasurement adjustment. In the absence of rate-regulated accounting, 2013 OCI would have been higher by $205 thousand (2012 – lower by $1,941 thousand).

**RRPR Variance Account**

Hydro One Remote Communities receives RRRP amounts from the IESO. At December 31, 2013, the Company has recognized a regulatory asset representing the amounts required to achieve breakeven net income, as regulated under the cost recovery model, in excess of net RRRP amounts received. At December 31, 2012, net RRRP amounts received were also lower than amounts required to achieve breakeven net income, and as such, a regulatory asset was also recognized. In the absence of rate-regulated accounting, 2013 revenue would have been lower by $1,198 thousand (2012 – $3,957 thousand).

**IFRS Transition Costs Variance**

Hydro One Remote Communities recorded an asset for the variance between its one-time incremental costs incurred in its uncompleted transition to IFRS and amounts included in rates in respect of this project. In 2013, the company decided not to seek recovery of this amount from rate payers and it was included in the Statement of Operations.

**Deferred Income Tax Regulatory Liability**

Deferred income taxes are recognized on temporary differences between the carrying amount of assets and liabilities in the financial statements and the corresponding tax bases used in the computation of taxable profit. The Company has recognized regulatory assets and liabilities that correspond to deferred income taxes that flow through the rate-setting process. In the absence of rate-regulated accounting, the Company's provision for PILs would have been recognized using the liability method and there would be no regulatory accounts established for taxes to be recovered through future rates. As a result, the 2013 recovery of PILs would have been lower by approximately $367 thousand (2012 – $771 thousand).

## 10. LONG-TERM DEBT

Long-term debt represents a note payable to Hydro One. The note was issued on May 19, 2005, with a carrying value of $23,000 thousand and interest at a rate of 5.38% per annum. The note matures on May 20, 2036. The note was issued on maturity of a previous note in the same principal amount that was issued on April 1, 1999 in consideration of the purchase price of Hydro One Remote Communities' net assets.

On issuance of this note, $115 thousand of transaction costs and a $31 thousand debt discount incurred by Hydro One were allocated to Hydro One Remote Communities, based on its proportionate share of Hydro One's related debt issue.

## 11. FAIR VALUE OF FINANCIAL INSTRUMENTS AND RISK MANAGEMENT

Fair value is considered to be the exchange price in an orderly transaction between market participants to sell an asset or transfer a liability at the measurement date. The fair value definition focuses on an exit price, which is the price that would be received in the sale of an asset or the amount that would be paid to transfer a liability.

Hydro One Remote Communities classifies its fair value measurements based on the following hierarchy, as prescribed by the accounting guidance for fair value, which prioritizes the inputs to valuation techniques used to measure fair value into three levels:

Level 1 inputs are unadjusted quoted prices in active markets for identical assets or liabilities that Hydro One Remote Communities has the ability to access. An active market for the asset or liability is one in which transactions for the asset or liability occurs with sufficient frequency and volume to provide ongoing pricing information.

Level 2 inputs are those other than quoted market prices that are observable, either directly or indirectly, for an asset or liability. Level 2 inputs include, but are not limited to, quoted prices for similar assets or liabilities in an active market, quoted prices for identical or similar assets or liabilities in markets that are not active and inputs other than quoted market prices that are observable for the asset or liability, such as interest rate curves and yield curves observable at commonly quoted intervals, volatilities, credit risk and default rates. A Level 2 measurement cannot have more than an insignificant portion of the valuation based on unobservable inputs.

Level 3 inputs are any fair value measurements that include unobservable inputs for the asset or liability for more than an insignificant portion of the valuation. A Level 3 measurement may be based primarily on Level 2 inputs.

**Non-Derivative Financial Assets and Liabilities**

At December 31, 2013 and 2012, the Company's carrying amounts of accounts receivable, inter-company demand facility, and accounts payable are representative of fair value because of the short-term nature of these instruments.

**Fair Value Hierarchy**

The fair value hierarchy of financial assets and liabilities at December 31, 2013 and 2012 are as follows:

| *December 31, 2013 (thousands of dollars)* | Carrying Value | Fair Value | Level 1 | Level 2 | Level 3 |
|---|---|---|---|---|---|
| **Liabilities:** | | | | | |
| Inter-company demand facility | 18,031 | 18,031 | 18,031 | – | – |
| Long-term debt | 23,000 | 25,450 | – | 25,450 | – |
| | 41,031 | 43,481 | 18,031 | 25,450 | – |

| *December 31, 2012 (thousands of dollars)* | Carrying Value | Fair Value | Level 1 | Level 2 | Level 3 |
|---|---|---|---|---|---|
| **Liabilities:** | | | | | |
| Inter-company demand facility | 11,212 | 11,212 | 11,212 | – | – |
| Long-term debt | 23,000 | 28,486 | – | 28,486 | – |
| | 34,212 | 39,698 | 11,212 | 28,486 | – |

The fair value of the long-term debt is based on unadjusted period-end market prices for the same or similar debt of the same remaining maturities.

There were no significant transfers between any of the levels during the years ended December 31, 2013 and 2012.

**Risk Management**

Exposure to market risk, credit risk and liquidity risk arises in the normal course of the Company's business.

***Market Risk***

Market risk refers primarily to the risk of loss that results from changes in commodity prices, foreign exchange rates and interest rates. The Company does not have commodity risk. The foreign exchange risk is currently not significant, although Hydro One could in the future decide to issue and allocate foreign currency-denominated debt to the Company, along with an allocation of the resulting foreign exchange gains and losses. The Company is exposed to fluctuations in interest rates related

to the interest charges passed on by Hydro One on the outstanding inter-company demand facility. The Company is charged interest on overdraft inter-company balances based on the bankers' acceptance rate, plus 0.15%.

***Credit Risk***

Financial assets create a risk that a counterparty will fail to discharge an obligation, causing a financial loss. At December 31, 2013 and 2012, there were no significant concentrations of credit risk with respect to any class of financial assets. The Company's revenue is earned from a broad base of customers. As a result, Hydro One Remote Communities did not earn a significant amount of revenue from any individual customer. At December 31, 2013 and 2012, there was no significant accounts receivable balance due from any single customer.

At December 31, 2013, the Company's total provision for bad debts was $296 thousand (2012 – $302 thousand). Adjustments and write-offs are determined on the basis of a review of overdue accounts, taking into consideration historical experience. At December 31, 2013, approximately 47% of the Company's current accounts receivable were aged more than 60 days (2012 – 34%). Sufficient allowances have been recorded to reflect the risk of potential credit losses.

***Liquidity Risk***

Liquidity risk refers to the Company's ability to meet its financial obligations as they come due. Hydro One Remote Communities meets its short-term liquidity requirements through the inter-company demand facility with Hydro One and funds from operations. The short-term liquidity available to the Company should be sufficient to fund normal operating requirements.

At December 31, 2013, accounts payable and accrued liabilities in the amount of $5,657 thousand (2012 – $6,863 thousand) are expected to be settled in cash at their carrying amounts within the next year.

At December 31, 2013, Hydro One Remote Communities had long-term debt in the principal l amount of $23,000 thousand (2012 – $23,000 thousand). No long-term debt matures during the next year. Interest payments for the next 12 months on the Company's outstanding long-term debt amount to $1,237 thousand (2012 – $1,237 thousand). Principal repayments and interest payments are summarized by the number of years to maturity in the following table.

| **Years to Maturity** | **Principal Outstanding on Long-term Debt** *(thousands of dollars)* | **Interest Payments** *(thousands of dollars)* |
|---|---|---|
| 1 year | – | 1,237 |
| 2 years | – | 1,237 |
| 3 years | – | 1,237 |
| 4 years | – | 1,237 |
| 5 years | – | 1,237 |
| | – | 6,185 |
| 6 – 10 years | – | 6,185 |
| Over 10 years | 23,000 | 15,468 |
| | 23,000 | 27,838 |

## 12. PENSION AND POST-RETIREMENT AND POST-EMPLOYMENT BENEFITS

Hydro One has a defined benefit pension plan, a supplementary pension plan, and post-retirement and post-employment benefit plans. The defined benefit pension plan (Pension Plan) is contributory and covers all regular employees of Hydro One and its subsidiaries, except Hydro One Brampton Networks. The supplementary pension plan provides members of the Pension Plan with benefits that would have been earned and payable under the Pension Plan but for the limitations imposed by the *Income Tax Act* (Canada). The supplementary pension plan obligation is included with other post-retirement and post-employment benefit obligations on the Balance Sheets.

### Pension Benefits

The Pension Plan provides benefits based on highest three-year average pensionable earnings. For new management employees who commenced employment on or after January 1, 2004, and for new Society of Energy Professionals represented staff hired after November 17, 2005, benefits are based on highest five-year average pensionable earnings. After retirement, pensions are indexed to inflation.

Company and employees' contributions to the Pension Plan are based on actuarial valuations performed at least every three years. Hydro One's annual Pension Plan contributions for 2013 of $160 million (2012 – $163 million) were based on an actuarial valuation effective December 31, 2011 and the level of 2013 pensionable earnings. Hydro One's estimated annual Pension Plan contributions for 2014 are approximately $160 million, based on the December 31, 2011 valuation and the projected level of pensionable earnings.

At December 31, 2013, based on the December 31, 2011 actuarial valuation, the present value of Hydro One's projected pension benefit obligation was estimated to be $6,576 million (2012 – $6,507 million). The fair value of pension plan assets available for these benefits was $5,731 million (2012 – $4,992 million).

### Post-Retirement and Post-Employment Benefits

During the year ended December 31, 2013, Hydro One Remote Communities charged $775 thousand (2012 – $537 thousand) of post-retirement and post-employment benefit costs to results of operations, and capitalized $250 thousand (2012 – $223 thousand) as part of the cost of property, plant and equipment. Benefits paid by the Company in 2013 were $264 thousand (2012 – $259 thousand). In addition, the associated post-retirement and post-employment benefits regulatory asset was decreased by $205 thousand (2012 – increased by $1,941 thousand) and recorded on the Company's Balance Sheets to reflect the expected regulatory inclusion of this amount in future rates, which would otherwise be recorded in OCI.

The Company presents its post-retirement and post-employment benefit liability on the Balance Sheets within the following line items:

| *December 31 (thousands of dollars)* | **2013** | **2012** |
|---|---|---|
| Accrued liabilities | 300 | 300 |
| Post-retirement and post-employment benefit liability | 12,088 | 11,532 |
| | 12,388 | 11,832 |

## 13. ENVIRONMENTAL LIABILITIES

The Company has accrued the following discounted amounts for environmental liabilities on the Balance Sheets at December 31, 2013 and 2012:

| *December 31 (thousands of dollars)* | **2013** | **2012** |
|---|---|---|
| Environmental liabilities, January 1 | 11,880 | 14,579 |
| Interest accretion | 330 | 399 |
| Expenditures | (1,656) | (2,515) |
| Revaluation adjustment | 2,872 | (583) |
| Environmental liabilities, December 31 | 13,426 | 11,880 |
| Less: current portion | 2,427 | 1,823 |
| | 10,999 | 10,057 |

The following table illustrates the reconciliation between the undiscounted basis of the environmental liabilities and the amount recognized on the Balance Sheets after factoring in the discount rate:

| *December 31 (thousands of dollars)* | **2013** | **2012** |
|---|---|---|
| Undiscounted environmental liabilities, December 31 | 14,014 | 12,503 |
| Less: discounting accumulated liabilities to present value | 588 | 623 |
| Discounted environmental liabilities, December 31 | 13,426 | 11,880 |

Estimated future environmental expenditures for each of the five years subsequent to December 31, 2013 and in total thereafter are as follows: 2014 – $2,427 thousand; 2015 – $2,175 thousand; 2016 – $2,844 thousand; 2017 – $1,261 thousand; 2018 – $1,651 thousand; and thereafter – $3,653 thousand. These expenditures are expected to be incurred over the period from 2014 to 2020.

There are uncertainties in estimating future environmental costs due to potential external events such as changes in legislation or regulations and advances in remediation technologies. All factors used in estimating the Company's environmental liabilities represent management's best estimates of the present value of the cost required to meet existing legislation or regulations. However, it is reasonably possible that numbers or volumes of contaminated assets, cost estimates to perform work, inflation assumptions and the assumed pattern of annual cash flows may differ significantly from the Company's current assumptions. Estimated environmental liabilities are reviewed annually or more frequently if significant changes in regulation or other relevant factors occur. Estimate changes are accounted for prospectively. The Company records a regulatory asset reflecting its expectation that future environmental costs will be recoverable in rates.

In determining the amounts to be recorded as environmental liabilities, the Company estimates the current cost of completing required work and makes assumptions as to when the future expenditures will actually be incurred, in order to generate future cash flow information. A long-term inflation assumption of approximately 2% has been used to express these current cost estimates as estimated future expenditures. Future environmental expenditures have been discounted using factors ranging from 3.57% to 4.87%, depending on the appropriate rate for the period when increases in the obligations were first recorded.

As a result of its annual review of the environmental liabilities, the Company recorded a revaluation adjustment to increase the LAR environmental liability by $2,872 thousand (2012 – decrease by $583 thousand).

## 14. SHARE CAPITAL

### Common Shares

The Company has 2 issued and outstanding common shares. The Company is authorized to issue an unlimited number of common shares.

### Dividends

The Company has no retained earnings and does not pay dividends under its breakeven business model.

## 15. RELATED PARTY TRANSACTIONS

Hydro One Remote Communities is a subsidiary of Hydro One, and Hydro One is owned by the Province. The OEFC, IESO, Ontario Power Authority (OPA), Ontario Power Generation Inc. (OPG) and the OEB are related parties to Hydro One Remote Communities because they are controlled or significantly influenced by the Province. Transactions between these parties and Hydro One Remote Communities are described below.

Hydro One Remote Communities receives amounts for RRRP from the IESO. RRRP amounts received for the year ended December 31, 2013 were $33,046 thousand (2012 – $27,549 thousand). Consistent with its breakeven business model, the Company recognized $34,245 thousand as RRRP revenue in 2013 (2012 – $31,506 thousand). This 2013 revenue exceeded

amounts received by $1,199 thousand (2012 – $3,957 thousand) and the RRPR variance account balance was adjusted by this amount.

The recovery of PILs was received or receivable from the OEFC.

The amounts due to and from related parties as a result of the transactions referred to above are as follows:

| *December 31 (thousands of dollars)* | **2013** | **2012** |
|---|---|---|
| Accounts receivable | 97 | 88 |
| Income tax receivable | 2,697 | 1,589 |

Transactions with related parties occur at normal market prices or at a proxy for fair value based on the requirements of the OEB's Affiliate Relationships Code. Outstanding balances at period end are interest free and settled in cash.

**Hydro One and Subsidiaries**

The Company provides services to, and receives services from, Hydro One and its other subsidiaries. Amounts due to and from Hydro One and its other subsidiaries are settled through the inter-company demand facility.

The Company has entered into various agreements with Hydro One and its other subsidiaries related to the provision of corporate functions and services, such as legal, financial and human resources services, and operational services, such as environmental, forestry, and line services. 2013 revenues include $195 thousand (2012 – $130 thousand) related to the provision of services to Hydro One and its other subsidiaries. 2013 operation, maintenance and administration costs include $3,475 thousand (2012 – $2,607 thousand) related to the purchase of services from Hydro One and its other subsidiaries.

The Company's long-term debt is due to Hydro One. In addition, balances payable or receivable under the inter-company demand facility are due to or from Hydro One and its other subsidiaries. Financing charges include interest expense on the long-term debt in the amount of $1,237 thousand (2012 – $1,237 thousand), and interest expense on the inter-company demand facility in the amount of $216 thousand (2012 – $83 thousand). At December 31, 2013, the Company had accrued interest payable to Hydro One totaling $142 thousand (2012 – $142 thousand).

## 16. STATEMENTS OF CASH FLOWS

The changes in non-cash balances related to operations consist of the following:

| *Year ended December 31 (thousands of dollars)* | **2013** | **2012** |
|---|---|---|
| Accounts receivable | (802) | (258) |
| Materials and supplies | 443 | 638 |
| Income taxes receivable | (1,108) | (1,426) |
| Long-term accounts receivable | (256) | (49) |
| Accounts payable | (284) | (443) |
| Accrued liabilities | (1,526) | 91 |
| Post-retirement and post-employment benefit liability | 760 | 500 |
| | (2,773) | (947) |

| **Supplementary information:** | | |
|---|---|---|
| Net interest paid | 1,453 | 1,320 |

As a result of using the cost recovery model applied to achieve after tax breakeven net income, any PILs paid are fully recovered.

## 17. CONTINGENCIES

### Legal Proceedings

Hydro One Remote Communities is involved in various lawsuits, claims and regulatory proceedings in the normal course of business. In the opinion of management, the outcome of such matters will not have a material adverse effect on the Company's financial position, results of operations or cash flows.

### Transfer of Assets

The transfer orders by which the Company acquired Ontario Hydro's remote communities business on April 1, 1999 did not transfer title to some assets located on lands held for First Nation bands under the *Indian Act* (Canada). Currently, OEFC holds legal title to these assets and the Company manages them until the Company has obtained necessary authorizations to complete the title transfer. To occupy reserve land, the Company must have valid permits issued by Her Majesty the Queen in the Right of Canada. For each permit, the Company must negotiate an agreement (in the form of a Memorandum of Understanding) with the band, OEFC and any First Nation individuals who have occupancy rights. The agreement includes provisions whereby the First Nation band consents to the federal Department of Aboriginal Affairs and Northern Development issuing a permit. It is difficult to predict the aggregate amount that the Company may have to pay, either on an annual or one-time basis, to obtain the required agreements from the First Nation bands. In 2013, the Company paid approximately $2 million (2012 – $1 million) in respect of these consents. OEFC will continue to hold these assets until the Company is able to negotiate agreements with the First Nation bands and occupants. If the Company cannot reach satisfactory agreements and obtain federal permits, the Company may have to relocate these assets from the reserve lands to other locations at a cost that could be substantial. In a limited number of cases, it may be necessary to abandon a line and replace it with diesel generation facilities. The costs relating to these assets could have a material adverse effect on the Company's net income if the Company is not able to recover them in future rate orders.

## 18. COMMITMENTS

### Operating Lease

Hydro One Remote Communities is committed as lessee to an operating lease agreement for use of reserve land to operate a hydro facility for a period of 10 years.

At December 31, 2013, the future minimum lease payments under this operating lease are as follows:

| *Year ended December 31 (thousands of dollars)* | **2013** |
|---|---|
| Within one year | 120 |
| After one year but not more than five years | 510 |
| More than five years | 600 |
| | 1,230 |

During the year ended December 31, 2013, the Company made upfront lease payments totalling $1 million which is being amortized based over the contractual term of the lease.

## FINANCIAL STATEMENTS

## DECEMBER 31, 2014

**HYDRO ONE REMOTE COMMUNITIES INC.**
**INDEPENDENT AUDITORS' REPORT**

To Directors of Hydro One Remote Communities Inc.

We have audited the accompanying financial statements of Hydro One Remote Communities Inc., which comprise the balance sheet as at December 31, 2014, the statements of operations and comprehensive income, changes in shareholder's deficit and cash flows for the year then ended, and notes, comprising a summary of significant accounting policies and other explanatory information.

*Management's Responsibility for the Financial Statements*

Management is responsible for the preparation and fair presentation of these financial statements in accordance with United States Generally Accepted Accounting Principles, and for such internal control as management determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

*Auditors' Responsibility*

Our responsibility is to express an opinion on these financial statements based on our audit. We conducted our audit in accordance with Canadian generally accepted auditing standards. Those standards require that we comply with ethical requirements and plan and perform the audit to obtain reasonable assurance about whether the financial statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the financial statements. The procedures selected depend on our judgment, including the assessment of the risks of material misstatement of the financial statements, whether due to fraud or error. In making those risk assessments, we consider internal control relevant to the entity's preparation and fair presentation of the financial statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management, as well as evaluating the overall presentation of the financial statements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

*Opinion*

In our opinion, the financial statements present fairly, in all material respects, the financial position of Hydro One Remote Communities Inc. as at December 31, 2014, and its results of operations and its cash flows for the year then ended in accordance with United States Generally Accepted Accounting Principles.

## 1. DESCRIPTION OF THE BUSINESS

Hydro One Inc. (Hydro One) was incorporated on December 1, 1998, under the *Business Corporations Act* (Ontario) and is wholly owned by the Province of Ontario (Province). The principal businesses of Hydro One are the transmission and distribution of electricity to customers within Ontario.

Hydro One Remote Communities Inc. (Hydro One Remote Communities or the Company) was incorporated on August 18, 1998 under the *Business Corporations Act* (Ontario), and is a wholly owned subsidiary of Hydro One. Hydro One Remote Communities operates 19 small electrical, generation and distribution systems in remote communities in northern Ontario that are not connected to the Province's electricity grid. The Company's business is regulated by the Ontario Energy Board (OEB).

## 2. SIGNIFICANT ACCOUNTING POLICIES

### Basis of Accounting

These Financial Statements are prepared and presented in accordance with United States (US) Generally Accepted Accounting Principles (GAAP) and in Canadian dollars.

The Company uses a cost recovery model applied to achieve breakeven net income and the financial statements are prepared for the use of the OEB. Certain amounts presented in these Financial Statements represent allocations from Hydro One that are subject to review and approval by the OEB. Consolidated Financial Statements of Hydro One for the year ended December 31, 2014 have been prepared and are publicly available.

Hydro One Remote Communities performed an evaluation of subsequent events through to March 24, 2015, the date these Financial Statements were available to be issued, to determine whether any events or transactions warranted recognition and disclosure in these Financial Statements. No such events or transactions were identified.

### Use of Management Estimates

The preparation of financial statements requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting periods. Management evaluates these estimates on an on-going basis based upon: historical experience; current conditions; and assumptions believed to be reasonable at the time the assumption is made with any adjustments being recognized in results of operations in the period they arise. Significant estimates relate to regulatory assets and regulatory liabilities, environmental liabilities, post-retirement and post-employment benefits, asset impairment, contingencies, unbilled revenue, allowance for doubtful accounts and deferred income tax assets and liabilities. Actual results may differ significantly from these estimates, which may be impacted by future decisions made by the OEB or the Province.

### Rate Setting

In October 2013, Hydro One Remote Communities filed an IRM application with the OEB for 2014 distribution rates, seeking approval for a rate increase of approximately 0.48%. On March 13, 2014, the OEB approved an increase of approximately 1.7% to basic rates for the distribution and generation of electricity, with an effective date of May 1, 2014. The final rate increase was adjusted by the OEB's updated rate adjustment parameters and Hydro One Remote Communities' IRM stretch factor.

In 2012, Hydro One Remote Communities filed a cost-of-service application for 2013 distribution rates. The application requested an increase of 3.45% to customer rates for generation and distribution and an increase of approximately $7 million to annual Rural and Remote Rate Protection (RRRP). In 2013, the OEB approved the proposed rate increase and annual RRRP of approximately $32 million.

**Regulatory Accounting**

The OEB has the general power to include or exclude costs, revenues, losses or gains in the rates of a specific period, resulting in a change in the timing of accounting recognition from that which would have applied in an unregulated company. Such change in timing involves the application of rate-regulated accounting, giving rise to the recognition of regulatory assets and liabilities. The Company's regulatory assets represent certain amounts receivable from future customers and costs that have been deferred for accounting purposes because it is probable that they will be recovered in future rates. In addition, the Company has recorded regulatory liabilities that generally represent amounts that are refundable to future electricity customers. The Company continually assesses the likelihood of recovery of each of its regulatory assets and continues to believe that it is probable that the OEB will factor its regulatory assets and liabilities into the setting of future rates. If, at some future date, the Company judges that it is no longer probable that the OEB will include a regulatory asset or liability in setting future rates, the appropriate carrying amount will be reflected in results of operations in the period that the assessment is made.

Hydro One Remote Communities is regulated under a cost recovery model applied to achieve breakeven net income, after consideration of the recovery of / provision for payments in lieu of corporate income taxes (PILs). Any excess or deficiency in RRRP amounts necessary to lead to breakeven net income is added to, or drawn from, the Remote Rate Protection Revenue (RRPR) variance account. The balance in the RRPR variance account is subject to future review and disposition by the OEB.

**Revenue Recognition**

Revenues are recognized on an accrual basis and include billed and unbilled revenues. Revenues attributable to the generation and delivery of electricity are based on OEB-approved distribution rates and are recognized as electricity is delivered to customers. The Company estimates monthly revenue for a period based on wholesale electricity purchases because customer meters are not generally read at the end of each month. At the end of each month, the electricity delivered to customers, but not billed, is estimated and revenue is recognized. The unbilled revenue estimate is affected by energy demand, weather, line losses and changes in the composition of customer classes.

Distribution revenue also includes RRRP which is an amount relating to rate protection for remote customers received from the Independent Electricity System Operator (IESO) based on a standardized customer rate that is approved by the OEB. Current legislation provides RRRP for prescribed classes of rural, residential and remote consumers by reducing the electricity rates that would otherwise apply.

Revenues are recorded net of indirect taxes.

**Accounts Receivable and Allowance for Doubtful Accounts**

Billed accounts receivable are recorded at the invoiced amount and overdue amounts related to regulated billings bear interest at OEB approved rates. The allowance for doubtful accounts reflects the Company's best estimate of losses on accounts receivable balances. The allowance is based on accounts receivable aging, historical experience and other currently available information. The Company estimates the allowance for doubtful accounts on customer receivables by applying internally developed loss rates to the outstanding receivable balances by risk segment. Risk segments represent groups of customers with similar credit quality indicators and are computed based on various attributes, including number of days receivables are past due, delinquency of balances and payment history. Loss rates applied to the accounts receivable balances are based on historical average write-offs as a percentage of accounts receivable in each risk segment. An account is considered delinquent if the amount billed is not received within 120 days from the bill due date. Accounts receivable are written off against the allowance when they are deemed uncollectible. The existing allowance for uncollectible accounts will continue to be affected by changes in volume, prices and economic conditions.

Long-term accounts receivable are recorded at their invoiced amount and represent amounts due from specified First Nations. The component of long-term accounts receivable that is energy-related does not bear interest. These amounts are reduced by fixed-interval payments, received monthly throughout the term of the agreement. Provision for uncollectible amounts for this component is set at the inception of the balance and is maintained until settlement of those amounts. The provision for this component is monitored and adjusted only if required with management discretion. The component of long-term accounts

receivable that is non-energy related is reduced annually by a fixed incremental amount which is expensed through performance of the associated contract. There is no provision associated with these amounts.

**Corporate Income Taxes**

Under the *Electricity Act, 1998*, Hydro One Remote Communities is required to make (recover) PILs to (from) the Ontario Electricity Financial Corporation (OEFC). These payments are calculated in accordance with the rules for computing income and other relevant amounts contained in the *Income Tax Act* (Canada) and the *Taxation Act, 2007* (Ontario), as modified by the *Electricity Act, 1998*, and related regulations.

Current and deferred income taxes are computed based on the tax rates and tax laws enacted at the balance sheet date. Tax benefits associated with income tax positions taken, or expected to be taken, in a tax return are recorded only when the "more-likely-than-not" recognition threshold is satisfied and are measured at the largest amount of benefit that has a greater than 50% likelihood of being realized upon settlement. Management evaluates each position based solely on the technical merits and facts and circumstances of the position, assuming the position will be examined by a taxing authority having full knowledge of all relevant information. Significant management judgment is required to determine recognition thresholds and the related amount of tax benefits to be recognized in the Financial Statements. Management re-evaluates tax positions each period in which new information about recognition or measurement becomes available.

***Current Income Taxes***

The recovery of or the provision for current taxes and the assets and liabilities recognized for the current and prior periods are measured at the amounts receivable from, or payable to, the OEFC.

***Deferred Income Taxes***

Deferred income taxes are provided for using the liability method. Deferred income taxes are recognized based on the estimated future tax consequences attributable to temporary differences between the carrying amount of assets and liabilities in the Financial Statements and their corresponding tax bases.

Deferred income tax liabilities are generally recognized on all taxable temporary differences. Deferred tax assets are recognized to the extent that it is more-likely-than-not that these assets will be realized from taxable income available against which deductible temporary differences can be utilized.

Deferred income taxes are calculated at the tax rates that are expected to apply in the period when the liability is settled or the asset is realized, based on the tax rates and tax laws that have been enacted at the balance sheet date. Deferred income taxes that are not included in the rate-setting process are charged or credited to the Statements of Operations and Comprehensive Income.

If management determines that it is more-likely-than-not that some or all of a deferred income tax asset will not be realized, a valuation allowance is recorded against the deferred income tax asset to report the net balance at the amount expected to be realized. Previously unrecognized deferred income tax assets are reassessed at each balance sheet date and are recognized to the extent that it has become more-likely-than-not that the tax benefit will be realized.

The Company records regulatory assets and liabilities associated with deferred income taxes that will be included in the rate-setting process.

The Company uses the flow-through method to account for investment tax credits (ITCs) earned on eligible scientific research and experimental development expenditures, and apprenticeship job creation. Under this method, only non-refundable ITCs are recognized as a reduction to income tax expense.

**Inter-company Demand Facility**

Hydro One maintains pooled bank accounts for its use and for the use of its subsidiaries, including Hydro One Remote Communities. The balance in the inter-company demand facility represents the cumulative net effect of all deposits and

withdrawals made by the Company to and from the pooled cash accounts. Interest is earned on positive inter-company balances based on the average of the bankers' acceptance rate at the beginning and end of the month, less 0.02%. Interest is charged on overdraft inter-company balances based on the same bankers' acceptance rate, plus 0.15%.

**Fuel, Materials and Supplies**

Fuel is used in the generation of electricity. Materials and supplies represent consumables, small spare parts and construction materials held for internal construction and maintenance of property, plant and equipment. These assets are carried at average cost less any impairments recorded.

**Property, Plant and Equipment**

Property, plant and equipment is recorded at original cost, net of customer contributions received in aid of construction and any accumulated impairment losses. The cost of additions, including betterments and replacements of asset components, is included on the Balance Sheets as property, plant and equipment.

The original cost of property, plant and equipment includes direct materials, direct labour (including employee benefits), contracted services, attributable capitalized financing costs, and direct and indirect overheads that are related to the capital project or program. Indirect overheads include a portion of corporate costs such as finance, treasury, human resources, information technology and executive costs. Overhead costs, including corporate functions and field services costs, are capitalized on a fully allocated basis, consistent with an OEB-approved methodology.

Property, plant and equipment in service consists of generation, distribution, and administration and service assets. Property, plant and equipment also includes future use assets, such as major components and spare parts and capitalized project development costs associated with deferred capital projects.

***Generation***

Generation assets are used in the generation of electricity, including hydroelectric equipment, wind turbines, diesel generators, and tank farms.

***Distribution***

Distribution assets include assets related to the distribution of low-voltage electricity, including lines, poles, switches, transformers, protective devices, and metering systems.

***Administration and Service***

Administration and service assets include administrative buildings, personal computers, tools, and other minor assets.

**Capitalized Financing Costs**

Capitalized financing costs represent interest costs attributable to the construction of property, plant and equipment. The financing cost of attributable borrowed funds is capitalized as part of the acquisition cost of such assets. The capitalized portion of financing costs is a reduction to financing charges recognized in the Statements of Operations and Comprehensive Income. Capitalized financing costs are calculated using the Company's weighted average effective cost of debt.

**Construction in Progress**

Construction in progress consists of the capitalized cost of constructed assets that are not yet complete and which have not yet been placed in service.

### Depreciation

The cost of property, plant and equipment is depreciated on a straight-line basis based on the estimated remaining service life of each asset category.

The Company periodically initiates an external independent review of its property, plant and equipment depreciation rates, as required by the OEB. Any changes arising from such a review are implemented on a remaining service life basis, consistent with their inclusion in electricity rates. The last review resulted in changes to rates effective January 1, 2013.

A summary of average service lives and depreciation and amortization rates for the various classes of assets is included below:

| | Average Service Life | Rate (%) Range | Rate (%) Average |
|---|---|---|---|
| Generation | 22 years | 3% – 7% | 5% |
| Distribution | 48 years | 1% – 7% | 2% |
| Administration and service | 45 years | 2% – 20% | 4% |

In accordance with group depreciation practices, the original cost of property, plant and equipment, or major components thereof, that are normally retired, is charged to accumulated depreciation with no gain or loss being reflected in results of operations. Where a disposition of property, plant and equipment occurs through sale, a gain or loss is calculated based on proceeds and such gain or loss is included in depreciation expense. Depreciation expense also includes the costs incurred to remove property, plant and equipment assets where no asset retirement obligation has been recorded.

### Long-Lived Asset Impairment

When circumstances indicate the carrying value of long-lived assets may not be recoverable, the Company evaluates whether the carrying value of such assets has been impaired. For such long-lived assets, impairment exists when the carrying value exceeds the sum of the future estimated undiscounted cash flows expected to result from the use and eventual disposition of the asset. When alternative courses of action to recover the carrying amount of a long-lived asset are under consideration, a probability-weighted approach is used to develop estimates of future undiscounted cash flows. If the carrying value of the long-lived asset is not recoverable based on the estimated future undiscounted cash flows, an impairment loss is recorded, measured as the excess of the carrying value of the asset over its fair value. As a result, the asset's carrying value is adjusted to its estimated fair value. As at December 31, 2014, no asset impairment had been recorded.

### Costs of Arranging Debt Financing

For financial liabilities classified as other than held-for-trading, the Company defers the external transaction costs related to obtaining debt financing and presents such amounts as deferred debt issuance costs on the Balance Sheets. Deferred debt issuance costs are amortized over the contractual life of the related debt on an effective-interest rate basis and the amortization is included within financing charges in the Statements of Operations and Comprehensive Income. Transaction costs for items classified as held-for-trading are expensed immediately.

### Comprehensive Income

Comprehensive income is comprised of net income and other comprehensive income (OCI). OCI includes the amortization of net unamortized hedging losses on the Company's proportionate share of Hydro One's discontinued cash flow hedges. The Company amortizes its net unamortized hedging losses on discontinued cash flow hedges to financing charges using the effective interest method over the term of the associated hedged debt. Hydro One Remote Communities presents OCI and net income in a single continuous Statement of Operations and Comprehensive Income.

### Financial Assets and Liabilities

All financial assets and liabilities are classified into one of the following five categories: held-to-maturity investments; loans and receivables; held-for-trading; other liabilities; or available-for-sale. Financial assets and liabilities classified as held-for-

trading are measured at fair value. All other financial assets and liabilities are measured at amortized cost, except accounts receivable which are measured at the lower of cost or fair value. Accounts receivable are classified as loans and receivables. The Company considers the carrying amount of accounts receivable to be a reasonable estimate of fair value because of the short time to maturity of these instruments. Provisions for impaired accounts receivable are recognized as adjustments to the allowance for doubtful accounts and are recognized when there is objective evidence that the Company will not be able to collect amounts according to the original terms.

The Company determines the classification of its financial assets and liabilities at the date of initial recognition. The Company designates certain of its financial assets and liabilities to be held at fair value, when it is consistent with the Company's risk management policy disclosed in Note 11 – Fair Value of Financial Instruments and Risk Management.

Transaction costs associated with financial assets and liabilities that are designated as held-for-trading are recognized immediately in results of operations. All financial instrument transactions are recorded at trade date.

**Derivative Instruments and Hedge Accounting**

The Company currently does not engage in derivative trading or speculative activities and had no derivative instruments outstanding at December 31, 2014. OCI includes the amortization of net unamortized hedging losses on the Company’s proportionate share of Hydro One’s discontinued cash flow hedges.

**Employee Future Benefits**

Employee future benefits provided by Hydro One include pension, post-retirement and post-employment benefits. The costs of Hydro One’s pension, post-retirement and post-employment benefit plans are recorded over the periods during which employees render service.

Hydro One recognizes the funded status of its pension, post-retirement and post-employment plans on its Consolidated Balance Sheets and subsequently recognizes the changes in funded status at the end of each reporting year. Pension, post-retirement and post-employment plans are considered to be underfunded when the projected benefit obligation exceeds the fair value of the plan assets. Liabilities are recognized in the Consolidated Balance Sheets of Hydro One for any net underfunded projected benefit obligation. The net underfunded projected benefit obligation may be disclosed as a current liability, long-term liability, or both. The current portion is the amount by which the actuarial present value of benefits included in the benefit obligation payable in the next 12 months exceeds the fair value of plan assets. If the fair value of plan assets exceeds the projected benefit obligation of the plan, an asset is recognized equal to the net overfunded projected benefit obligation. The post-retirement and post-employment benefit plans are unfunded because there are no related plan assets. For the year ended December 31, 2014, the measurement date for all plans was December 31.

***Pension benefits***

Hydro One has a contributory defined benefit pension plan covering all regular employees of Hydro One and its subsidiaries, including Hydro One Remote Communities, but not including Hydro One Brampton Inc and Norfolk Power Inc. The Hydro One pension plan does not segregate assets in a separate account for individual subsidiaries, nor is the obligation of the pension plan allocated to, or funded separately by, entities within the consolidated group. Accordingly, for purposes of these Financial Statements, the pension plan is accounted for as a defined contribution plan and no pension benefit asset or liability is recorded.

A detailed description of Hydro One pension benefits is provided in Note 15 – Pension and Post-Retirement and Post-Employment Benefits, to the Consolidated Financial Statements of Hydro One for the year ended December 31, 2014.

***Post-retirement and post-employment benefits***

Hydro One has post-retirement and post-employment benefit plans covering all regular employees of Hydro One and its subsidiaries, including Hydro One Remote Communities. The benefit obligations of the these post-retirement and post-employment benefit plans are not segregated, or funded separately, for Hydro One Remote Communities. Accordingly, for

purposes of these Financial Statements, the post-retirement and post-employment benefit obligations are allocated to the Company based on base pensionable earnings.

The Company records a regulatory asset equal to its allocated share of Hydro One's incremental net unfunded projected benefit obligation for post-retirement and post-employment plans at each year end based on annual actuarial reports. The regulatory asset for the incremental net unfunded projected benefit obligation for post-retirement and post-employment plans, in absence of regulatory accounting, would be recognized in accumulated OCI (AOCI). A regulatory asset is recognized because management considers it to be probable that post-retirement and post-employment benefit costs will be recovered in the future through the rate-setting process.

Post-retirement and post-employment benefits, are recorded and included in rates on an accrual basis. Costs are determined by independent actuaries using the projected benefit method prorated on service and based on assumptions that reflect management's best estimates. Past service costs from plan amendments are amortized to results of operations based on the expected average remaining service period.

For post-retirement benefits, all actuarial gains or losses are deferred using the "corridor" approach. The amount calculated above the "corridor" is amortized to results of operations on a straight-line basis over the expected average remaining service lives of active Hydro One employees in the plan and over the remaining life expectancy of inactive Hydro One employees in the plan. The post-retirement benefit obligation is remeasured to its fair value at each year end based on an annual actuarial report, with an offset to associated regulatory asset, to the extent of the remeasurement adjustment.

For post-employment obligations, the actuarial gains and losses that are incurred during the year are recognized immediately to results of operations. The post-employment benefit obligation is remeasured to its fair value at each year end based on an annual actuarial report, with an offset to associated regulatory asset, to the extent of the remeasurement adjustment.

All post-retirement and post-employment future benefit costs are attributed to labour and are either charged to results of operations or capitalized as part of the cost of property, plant and equipment and intangible assets.

A detailed description of Hydro One post-retirement and post-employment benefits is provided in Note 15 – Pension and Post-Retirement and Post-Employment Benefits, to the Consolidated Financial Statements of Hydro One for the year ended December 31, 2014.

**Loss Contingencies**

Hydro One Remote Communities is involved in certain legal and environmental matters that arise in the normal course of business. In the preparation of its Financial Statements, management makes judgements regarding the future outcome of contingent events and records a loss for a contingency based on its best estimate when it is determined that such loss is probable and the amount of the loss can be reasonably estimated. When a range estimate for the probable loss exists and no amount within the range is a better estimate than any other amount, the Company records a loss at the minimum amount within the range.

Management regularly reviews current information available to determine whether recorded provisions should be adjusted and whether new provisions are required. Estimating probable losses may require analysis of multiple forecasts and scenarios that often depend on judgements about potential actions by third parties, such as federal, provincial and local courts or regulators. Contingent liabilities are often resolved over long periods of time. Amounts recorded in the Financial Statements may differ from the actual outcome once the contingency is resolved. Such differences could have a material impact on future results of operations, financial position and cash flows of the Company.

Provisions are based upon current estimates and are subject to greater uncertainty the longer the projection period. A significant upward or downward trend in the number of claims filed, the nature of the alleged injury, and the average cost of resolving each such claim could change the estimated provision, as could any substantial adverse or favorable verdict at trial. A federal or provincial legislative outcome or structured settlement could also change the estimated liability. Legal fees are expensed as incurred.

### Environmental Liabilities

Environmental liabilities are recorded in respect of past contamination when it is determined that future environmental remediation expenditures are probable under existing statute or regulation and the amount of the future expenditures can be reasonably estimated. Hydro One Remote Communities records a liability for the estimated future expenditures associated with the contaminated land assessment and remediation (LAR) based on the present value of these estimated future expenditures. The Company determines the present value with a discount rate equal to its credit-adjusted risk-free interest rate on financial instruments with comparable maturities to the pattern of future environmental expenditures. As the Company anticipates that the future expenditures will continue to be recoverable in future rates, an offsetting regulatory asset has been recorded to reflect the future recovery of these environmental expenditures from customers. Hydro One Remote Communities reviews its estimates of future environmental expenditures annually or more frequently if there are indications that circumstances have changed.

## 3. NEW ACCOUNTING PRONOUNCEMENTS

### Recently Adopted Accounting Pronouncements

In July 2013, the Financial Accounting Standards Board (FASB) issued Accounting Standards Update (ASU) 2013-11, Income Taxes (Topic 740): Presentation of an Unrecognized Tax Benefit When a Net Operating Loss Carryforward, a Similar Tax Loss, or a Tax Credit Carryforward Exists. This ASU provides guidance on the presentation of unrecognized tax benefits. This ASU is effective for fiscal years, and interim periods within those years, beginning after December 15, 2013, and should be applied prospectively to all unrecognized tax benefits that exist at the effective date. The adoption of this ASU did not have a significant impact on the Company's financial statements.

### Recent Accounting Guidance Not Yet Adopted

In May 2014, the FASB issued ASU 2014-09, Revenue from Contracts with Customers (Topic 606). This ASU provides guidance on revenue recognition that depicts the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expects to be entitled in exchange for those goods and services. This ASU is required to be applied retrospectively and is effective for fiscal years, and interim periods within those years, beginning after December 15, 2016. The Company is currently assessing the impact of adoption of ASU 2014-09 on its financial statements.

In August 2014, the FASB issued ASU 2014-15, Presentation of Financial Statements – Going Concern (Subtopic 205-40): Disclosure of Uncertainties about an Entity's Ability to Continue as a Going Concern. This ASU provides guidance about management's responsibility to evaluate whether there is substantial doubt about an entity's ability to continue as a going concern and related disclosures. This ASU is effective for the annual period ending December 31, 2016, and for annual and interim periods thereafter. The adoption of this ASU is not anticipated to have a significant impact on the Company's financial statements.

## 4. DEPRECIATION AND AMORTIZATION

| *Year ended December 31 (thousands of Canadian dollars)* | **2014** | **2013** |
|---|---|---|
| Depreciation of property, plant and equipment | 2,594 | 2,564 |
| Asset removal costs | 430 | 589 |
| Amortization of regulatory assets | 1,599 | 1,656 |
| | 4,623 | 4,809 |

## 5. FINANCING CHARGES

| *Year ended December 31 (thousands of Canadian dollars)* | **2014** | **2013** |
|---|---|---|
| Interest on long-term debt | 1,477 | 1,237 |
| Interest on inter-company demand facility | 187 | 216 |
| Amortization of hedging losses | 13 | 13 |
| Other | 28 | 14 |
| Less: Interest capitalized on construction in progress | (146) | (376) |
| | 1,559 | 1,104 |

## 6. PROVISION FOR PILS

The provision for PILs differs from the amount that would have been recorded using the combined Canadian Federal and Ontario statutory income tax rate. The reconciliation between the statutory and the effective tax rates is provided as follows:

| *Year ended December 31 (thousands of Canadian dollars)* | **2014** | **2013** |
|---|---|---|
| Income (loss) before provision for (recovery of) PILs | 10 | (1,091) |
| Canadian Federal and Ontario statutory income tax rate | 26.50% | 26.50% |
| Provision for (recovery of) PILs at statutory rate | 3 | (289) |
| | | |
| Increase (decrease) resulting from: | | |
| | | |
| Net temporary differences included in amounts charged to customers: | | |
| RRPR variance account | (687) | (318) |
| Environmental expenditures | (424) | (439) |
| Pension contribution in excess of pension expense | (132) | (90) |
| Overheads capitalized for accounting but deducted for tax purposes | (93) | (82) |
| Interest capitalized for accounting but deducted for tax purposes | (39) | (100) |
| Losses carryforward | 846 | – |
| Depreciation and amortization in excess of capital cost allowance | 338 | 469 |
| Post-retirement and post-employment benefit expense in excess of cash payments | 189 | 135 |
| Other | – | 56 |
| Net temporary differences | (2) | (369) |
| Prior year adjustments | 10 | (332) |
| Rate difference on loss carryback | – | (110) |
| Other permanent differences | (1) | 9 |
| Total provision for (recovery of) PILs | 10 | (1,091) |
| | | |
| Current provision for (recovery of) PILs | 10 | (1,091) |
| Deferred provision for (recovery of) PILs | – | – |
| Total provision for (recovery of) PILs | 10 | (1,091) |
| | | |
| Effective income tax rate | 100% | 100% |

The current provision for PILs is remitted to, or received from, the OEFC. At December 31, 2014, the amount receivable from the OEFC was $2,683 thousand (2013 – $2,697 thousand).

**Deferred Income Tax Assets**

Deferred income tax assets and liabilities arise from differences between the carrying amounts and tax bases of the Company's assets and liabilities. At December 31, 2014 and 2013, deferred income tax assets and liabilities consisted of the following:

| *December 31 (thousands of Canadian dollars)* | **2014** | **2013** |
|---|---|---|
| **Deferred income tax assets** | | |
| Post-retirement and post-employment benefits expense in excess of cash payments | 4,762 | 4,466 |
| Environmental expenditures | 4,459 | 4,840 |
| Depreciation and amortization in excess of capital cost allowance | 1,231 | 1,845 |
| Non capital losses | 1,183 | – |
| Regulatory amounts not recognized for tax | (7,060) | (6,615) |
| Other | (242) | (189) |
| Total deferred income tax assets | 4,333 | 4,347 |
| Less: current portion | 120 | 108 |
| | 4,213 | 4,239 |

During 2014 and 2013, there was no change in the rate applicable to future taxes.

## 7. ACCOUNTS RECEIVABLE

| *December 31 (thousands of Canadian dollars)* | Current accounts receivable | Long-term accounts receivable | Total |
|---|---|---|---|
| **2014** | | | |
| Accounts receivable – billed | 3,214 | 1,409 | 4,623 |
| Accounts receivable – unbilled | 1,385 | – | 1,385 |
| Accounts receivable, gross | 4,599 | 1,409 | 6,008 |
| Allowance for doubtful accounts | (145) | (159) | (304) |
| Accounts receivable, net | 4,454 | 1,250 | 5,704 |
| | | | |
| **2013** | | | |
| Accounts receivable – billed | 3,887 | 674 | 4,561 |
| Accounts receivable – unbilled | 1,404 | – | 1,404 |
| Accounts receivable, gross | 5,291 | 674 | 5,965 |
| Allowance for doubtful accounts | (296) | – | (296) |
| Accounts receivable, net | 4,995 | 674 | 5,669 |

The following table shows the movements in the total allowance for doubtful accounts for the years ended December 31, 2014 and 2013:

| *Year ended December 31 (thousands of Canadian dollars)* | **2014** | **2013** |
|---|---|---|
| Allowance for doubtful accounts – January 1 | (296) | (302) |
| Write-offs | 77 | 95 |
| Adjustments to allowance for doubtful accounts | (85) | (89) |
| Allowance for doubtful accounts – December 31 | (304) | (296) |

## 8. PROPERTY, PLANT AND EQUIPMENT

| *December 31 (thousands of Canadian dollars)* | Costs | Accumulated Depreciation | Construction in Progress | Total |
|---|---|---|---|---|
| **2014** | | | | |
| Generation | 44,770 | 20,385 | 1,742 | 26,127 |
| Distribution | 9,488 | 1,906 | 99 | 7,681 |
| Administration and Service | 11,110 | 2,297 | 297 | 9,110 |
| | 65,368 | 24,588 | 2,138 | 42,918 |
| **2013** | | | | |
| Generation | 41,616 | 19,517 | 2,716 | 24,815 |
| Distribution | 8,394 | 1,748 | 596 | 7,242 |
| Administration and Service | 10,545 | 1,991 | 161 | 8,715 |
| | 60,555 | 23,256 | 3,473 | 40,772 |

Financing charges capitalized on property, plant and equipment under construction were $146 thousand in 2014 (2013 – $376 thousand).

## 9. REGULATORY ASSETS AND LIABILITIES

Regulatory assets and liabilities arise as a result of the rate-making process. Hydro One Remote Communities has recorded the following regulatory assets and liabilities:

| *December 31 (thousands of Canadian dollars)* | **2014** | **2013** |
|---|---|---|
| **Regulatory assets:** | | |
| Environmental | 12,369 | 13,426 |
| RRPR variance account | 4,578 | 1,985 |
| Post-retirement and post-employment benefits | 2,637 | 2,939 |
| Total regulatory assets | 19,584 | 18,350 |
| Less: current portion | 1,301 | 2,427 |
| | 18,283 | 15,923 |
| **Regulatory liabilities:** | | |
| Deferred income tax regulatory liability | 4,333 | 4,347 |
| Total regulatory liabilities | 4,333 | 4,347 |
| Less: current portion | 120 | 109 |
| | 4,213 | 4,238 |

### Environmental

The Company records a liability for the estimated future expenditures required to remediate environmental contamination. Management considers it probable that such expenditures will be recovered in the future through the rate-setting process, and as such, the Company has recorded an equivalent amount as a regulatory asset. In 2014, this regulatory asset increased by $180 thousand (2013 – $2,872 thousand) to reflect related changes in the Company's environmental liabilities. The environmental regulatory asset is amortized to results of operations based on the pattern of actual expenditures incurred and charged to environmental liabilities. The OEB has the discretion to examine and assess the prudency and the timing of recovery of all of the Company's actual environmental expenditures. In the absence of rate-regulated accounting, 2014 operation, maintenance and administration expenses would have been higher by $180 thousand (2013 – $2,872 thousand). In addition, 2014 amortization expense would have been lower by $1,598 thousand (2013 – $1,656 thousand), and 2014 financing charges would have been higher by $361 thousand (2013 – $330 thousand).

**RRPR Variance Account**

Hydro One Remote Communities receives RRRP amounts from the IESO. At December 31, 2014, the Company has recognized a regulatory asset representing the amounts required to achieve breakeven net income, as regulated under the cost recovery model, in excess of net RRRP amounts received. At December 31, 2013, net RRRP amounts received were also lower than amounts required to achieve breakeven net income, and as such, a regulatory asset was also recognized. In the absence of rate-regulated accounting, 2014 revenue would have been lower by $2,593 thousand (2013 – $1,198 thousand).

**Post-Retirement and Post-Employment Benefits**

The Company recognizes the net unfunded status of post-retirement and post-employment obligations on the Balance Sheets with an incremental offset to the associated regulatory assets. A regulatory asset is recognized because management considers it to be probable that post-retirement and post-employment benefit costs will be recovered in the future through the rate-setting process. The post-retirement and post-employment benefit obligation is remeasured to its fair value at each year end based on an annual actuarial report, with an offset to the associated regulatory asset, to the extent of the remeasurement adjustment. In the absence of rate-regulated accounting, 2014 OCI would have been higher by $302 thousand (2013 – $205 thousand).

**Deferred Income Tax Regulatory Liability**

Deferred income taxes are recognized on temporary differences between the carrying amount of assets and liabilities in the financial statements and the corresponding tax bases used in the computation of taxable profit. The Company has recognized regulatory assets and liabilities that correspond to deferred income taxes that flow through the rate-setting process. In the absence of rate-regulated accounting, the Company's provision for PILs would have been recognized using the liability method and there would be no regulatory accounts established for taxes to be recovered through future rates. As a result, the 2014 recovery of PILs would have been lower by approximately $2 thousand (2013 – $367 thousand).

## 10. LONG-TERM DEBT

Long-term debt totalling $33,000 thousand is payable to Hydro One and consists of a $23,000 thousand note maturing in 2036 and a $10,000 thousand note maturing in 2044.

The $23,000 thousand note was issued on May 19, 2005, with an interest rate of 5.38% per annum and a maturity date of May 20, 2036. The note was issued on maturity of a previous note in the same principal amount that was issued on April 1, 1999 in consideration of the purchase price of Hydro One Remote Communities' net assets. On issuance of this note, $115 thousand of transaction costs and a $31 thousand debt discount incurred by Hydro One were allocated to Hydro One Remote Communities, based on its proportionate share of Hydro One's related debt issue.

The $10,000 thousand note was issued on June 6, 2014, with an interest rate of 4.19% per annum and a maturity date of June 6, 2044. On issuance of this note, $50 thousand of transaction costs and a $10 thousand debt discount incurred by Hydro One were allocated to Hydro One Remote Communities, based on its proportionate share of Hydro One's related debt issue.

## 11. FAIR VALUE OF FINANCIAL INSTRUMENTS AND RISK MANAGEMENT

Fair value is considered to be the exchange price in an orderly transaction between market participants to sell an asset or transfer a liability at the measurement date. The fair value definition focuses on an exit price, which is the price that would be received in the sale of an asset or the amount that would be paid to transfer a liability.

Hydro One Remote Communities classifies its fair value measurements based on the following hierarchy, as prescribed by the accounting guidance for fair value, which prioritizes the inputs to valuation techniques used to measure fair value into three levels:

Level 1 inputs are unadjusted quoted prices in active markets for identical assets or liabilities that Hydro One Remote Communities has the ability to access. An active market for the asset or liability is one in which transactions for the asset or liability occurs with sufficient frequency and volume to provide ongoing pricing information.

Level 2 inputs are those other than quoted market prices that are observable, either directly or indirectly, for an asset or liability. Level 2 inputs include, but are not limited to, quoted prices for similar assets or liabilities in an active market, quoted prices for identical or similar assets or liabilities in markets that are not active and inputs other than quoted market prices that are observable for the asset or liability, such as interest rate curves and yield curves observable at commonly quoted intervals, volatilities, credit risk and default rates. A Level 2 measurement cannot have more than an insignificant portion of the valuation based on unobservable inputs.

Level 3 inputs are any fair value measurements that include unobservable inputs for the asset or liability for more than an insignificant portion of the valuation. A Level 3 measurement may be based primarily on Level 2 inputs.

**Non-Derivative Financial Assets and Liabilities**

At December 31, 2014 and 2013, the Company's carrying amounts of accounts receivable, inter-company demand facility, and accounts payable are representative of fair value because of the short-term nature of these instruments.

**Fair Value Hierarchy**

The fair value hierarchy of financial assets and liabilities at December 31, 2014 and 2013 are as follows:

| *December 31, 2014 (thousands of Canadian dollars)* | Carrying Value | Fair Value | Level 1 | Level 2 | Level 3 |
|---|---|---|---|---|---|
| **Liabilities:** | | | | | |
| Inter-company demand facility | 6,806 | 6,806 | 6,806 | – | – |
| Long-term debt | 33,000 | 39,226 | – | 39,226 | – |
| | 39,806 | 46,032 | 6,806 | 39,226 | – |

| *December 31, 2013 (thousands of Canadian dollars)* | Carrying Value | Fair Value | Level 1 | Level 2 | Level 3 |
|---|---|---|---|---|---|
| **Liabilities:** | | | | | |
| Inter-company demand facility | 18,031 | 18,031 | 18,031 | – | – |
| Long-term debt | 23,000 | 25,450 | – | 25,450 | – |
| | 41,031 | 43,481 | 18,031 | 25,450 | – |

The fair value of the long-term debt is based on unadjusted period-end market prices for the same or similar debt of the same remaining maturities.

There were no significant transfers between any of the levels during the years ended December 31, 2014 and 2013.

**Risk Management**

Exposure to market risk, credit risk and liquidity risk arises in the normal course of the Company's business.

***Market Risk***

Market risk refers primarily to the risk of loss that results from changes in commodity prices, foreign exchange rates and interest rates. The Company does not have commodity risk. The foreign exchange risk is currently not significant, although Hydro One could in the future decide to issue and allocate foreign currency-denominated debt to the Company, along with an allocation of the resulting foreign exchange gains and losses. The Company is exposed to fluctuations in interest rates related to the interest charges passed on by Hydro One on the outstanding inter-company demand facility. The Company is charged interest on overdraft inter-company balances based on the one-month bankers' acceptance rate, plus 0.15%.

### *Credit Risk*

Financial assets create a risk that a counterparty will fail to discharge an obligation, causing a financial loss. At December 31, 2014 and 2013, there were no significant concentrations of credit risk with respect to any class of financial assets. The Company's revenue is earned from a broad base of customers. As a result, Hydro One Remote Communities did not earn a significant amount of revenue from any individual customer. At December 31, 2014 and 2013, there was no significant accounts receivable balance due from any single customer.

At December 31, 2014, the Company's total provision for bad debts was $304 thousand (2013 – $296 thousand). Adjustments and write-offs are determined on the basis of a review of overdue accounts, taking into consideration historical experience. At December 31, 2014, approximately 36% of the Company's current accounts receivable were aged more than 60 days (2013 – 47%). Sufficient allowances have been recorded to reflect the risk of potential credit losses.

### *Liquidity Risk*

Liquidity risk refers to the Company's ability to meet its financial obligations as they come due. Hydro One Remote Communities meets its short-term liquidity requirements through the inter-company demand facility with Hydro One and funds from operations. The short-term liquidity available to the Company should be sufficient to fund normal operating requirements.

At December 31, 2014, accounts payable and accrued liabilities in the amount of $9,812 thousand (2013 – $5,657 thousand) are expected to be settled in cash at their carrying amounts within the next year.

At December 31, 2014, Hydro One Remote Communities had long-term debt in the principal amount of $33,000 thousand (2013 – $23,000 thousand). No long-term debt matures during the next year. Interest payments for the next 12 months on the Company's outstanding long-term debt amount to $1,656 thousand (2013 – $1,237 thousand). Principal repayments and interest payments are summarized by the number of years to maturity in the following table.

| **Years to Maturity** | **Principal Repayments on Long-term Debt** *(thousands of Canadian dollars)* | **Interest Payments** *(thousands of Canadian dollars)* | **Weighted Average Interest Rate** *(%)* |
|---|---|---|---|
| 1 year | – | 1,656 | 5.019 |
| 2 years | – | 1,656 | 5.019 |
| 3 years | – | 1,656 | 5.019 |
| 4 years | – | 1,656 | 5.019 |
| 5 years | – | 1,656 | 5.019 |
| | – | 8,280 | 5.019 |
| 6 – 10 years | – | 8,280 | 5.019 |
| Over 10 years | 33,000 | 22,405 | 5.019 |
| | 33,000 | 38,965 | 5.019 |

## 12. PENSION AND POST-RETIREMENT AND POST-EMPLOYMENT BENEFITS

Hydro One has a defined benefit pension plan, a supplementary pension plan, and post-retirement and post-employment benefit plans. The defined benefit pension plan (Pension Plan) is contributory and covers all regular employees of Hydro One and its subsidiaries, except Hydro One Brampton Networks. The supplementary pension plan provides members of the Pension Plan with benefits that would have been earned and payable under the Pension Plan but for the limitations imposed by the *Income Tax Act* (Canada). The supplementary pension plan obligation is included with other post-retirement and post-employment benefit obligations on the Balance Sheets.

### Pension Benefits

The Pension Plan provides benefits based on highest three-year average pensionable earnings. For new management employees who commenced employment on or after January 1, 2004, and for new Society of Energy Professionals

represented staff hired after November 17, 2005, benefits are based on highest five-year average pensionable earnings. After retirement, pensions are indexed to inflation.

Company and employees' contributions to the Pension Plan are based on actuarial valuations performed at least every three years. Hydro One's annual Pension Plan contributions for 2014 of $174 million (2013 – $160 million) were based on an actuarial valuation effective December 31, 2013 (2013 – effective December 31, 2011) and the level of 2014 pensionable earnings. Estimated annual Pension Plan contributions for 2015 and 2016 are approximately $174 million and $175 million, respectively, based on an actuarial valuation as at December 31, 2013 and projected levels of pensionable earnings. Future minimum contributions beyond 2016 will be based on an actuarial valuation effective no later than December 31, 2016. Contributions are payable one month in arrears. All of the contributions are expected to be in the form of cash.

At December 31, 2014, based on the December 31, 2013 actuarial valuation, the present value of Hydro One's projected pension benefit obligation was estimated to be $7,535 million (2013 – $6,576 million). The fair value of pension plan assets available for these benefits was $6,299 million (2013 – $5,731 million).

**Post-Retirement and Post-Employment Benefits**

During the year ended December 31, 2014, Hydro One Remote Communities charged $941 thousand (2013 – $775 thousand) of post-retirement and post-employment benefit costs to results of operations, and capitalized $272 thousand (2013 – $250 thousand) as part of the cost of property, plant and equipment. Benefits paid by the Company in 2014 were $91 thousand (2013 – $264 thousand). In addition, the incremental offset to decrease the associated post-retirement and post-employment benefits regulatory assets by $302 thousand (2013 – $205 thousand) was recorded on the Company's Balance Sheets to reflect the expected regulatory inclusion of this amount in future rates, which would otherwise be recorded in OCI.

The Company presents its post-retirement and post-employment benefit liability on the Balance Sheets within the following line items:

| *December 31 (thousands of Canadian dollars)* | **2014** | **2013** |
|---|---|---|
| Accrued liabilities | 346 | 300 |
| Post-retirement and post-employment benefit liability | 12,862 | 12,088 |
| | 13,208 | 12,388 |

## 13. ENVIRONMENTAL LIABILITIES

The Company has accrued the following discounted amounts for environmental liabilities on the Balance Sheets at December 31, 2014 and 2013:

| *December 31 (thousands of Canadian dollars)* | **2014** | **2013** |
|---|---|---|
| Environmental liabilities, January 1 | 13,426 | 11,880 |
| Interest accretion | 361 | 330 |
| Expenditures | (1,598) | (1,656) |
| Revaluation adjustment | 180 | 2,872 |
| Environmental liabilities, December 31 | 12,369 | 13,426 |
| Less: current portion | 1,301 | 2,427 |
| | 11,068 | 10,999 |

The following table illustrates the reconciliation between the undiscounted basis of the environmental liabilities and the amount recognized on the Balance Sheets after factoring in the discount rate:

| *December 31 (thousands of Canadian dollars)* | **2014** | **2013** |
|---|---|---|
| Undiscounted environmental liabilities, December 31 | 12,881 | 14,014 |
| Less: discounting accumulated liabilities to present value | 512 | 588 |
| Discounted environmental liabilities, December 31 | 12,369 | 13,426 |

At December 31, 2014, the estimated future environmental expenditures were as follows:

| *(thousands of Canadian dollars)* | |
|---|---|
| 2015 | 1,301 |
| 2016 | 2,619 |
| 2017 | 2,717 |
| 2018 | 1,851 |
| 2019 | 1,657 |
| Thereafter | 2,736 |
| | 12,881 |

The Company records a liability for the estimated future expenditures for the contaminated LAR when it is determined that future environmental remediation expenditures are probable under existing statute or regulation and the amount of the future expenditures can be reasonably estimated.

There are uncertainties in estimating future environmental costs due to potential external events such as changes in legislation or regulations, and advances in remediation technologies. In determining the amounts to be recorded as environmental liabilities, the Company estimates the current cost of completing required work and makes assumptions as to when the future expenditures will actually be incurred, in order to generate future cash flow information. A long-term inflation rate assumption of approximately 2% has been used to express these current cost estimates as estimated future expenditures. Future expenditures have been discounted using factors ranging from approximately 3.6% to 4.9%, depending on the appropriate rate for the period when expenditures are expected to be incurred. All factors used in estimating the Company's environmental liabilities represent management's best estimates of the present value of costs required to meet existing legislation or regulations. However, it is reasonably possible that numbers or volumes of contaminated assets, cost estimates to perform work, inflation assumptions and the assumed pattern of annual cash flows may differ significantly from the Company's current assumptions.

The Company's best estimate of the total estimated future expenditures to complete its LAR program is $12,881 thousand. These expenditures are expected to be incurred over the period from 2015 to 2020. As a result of its annual review of environmental liabilities, the Company recorded a revaluation adjustment in 2014 to increase the LAR environmental liability by $180 thousand (2013 – $2,872 thousand).

## 14. SHARE CAPITAL

### Common Shares

The Company has 2 issued and outstanding common shares. The Company is authorized to issue an unlimited number of common shares.

### Dividends

The Company has no retained earnings and does not pay dividends under its breakeven business model.

## 15. RELATED PARTY TRANSACTIONS

Hydro One Remote Communities is a subsidiary of Hydro One, and Hydro One is owned by the Province. The OEFC, IESO, Ontario Power Authority (OPA), Ontario Power Generation Inc. (OPG) and the OEB are related parties to Hydro One Remote Communities because they are controlled or significantly influenced by the Province. Transactions between these parties and Hydro One Remote Communities are described below.

Hydro One Remote Communities receives amounts for RRRP from the IESO. RRRP amounts received for the year ended December 31, 2014 were $32,259 thousand (2013 – $33,046 thousand). Consistent with its breakeven business model, the Company recognized $34,852 thousand as RRRP revenue in 2014 (2013 – $34,245 thousand). This 2014 revenue exceeded amounts received by $2,593 thousand (2013 – $1,199 thousand) and the RRPR variance account balance was adjusted by this amount.

PILs are paid to or received from the OEFC.

The amounts due to and from related parties as a result of the transactions referred to above are as follows:

| *December 31 (thousands of Canadian dollars)* | **2014** | **2013** |
|---|---|---|
| Accounts receivable | 106 | 97 |
| Income tax receivable | 2,683 | 2,697 |

Transactions with related parties occur at normal market prices or at a proxy for fair value based on the requirements of the OEB's Affiliate Relationships Code. Outstanding balances at period end are interest free and settled in cash.

### Hydro One and Subsidiaries

The Company provides services to, and receives services from, Hydro One and its other subsidiaries. Amounts due to and from Hydro One and its other subsidiaries are settled through the inter-company demand facility.

The Company has entered into various agreements with Hydro One and its other subsidiaries related to the provision of corporate functions and services, such as legal, financial and human resources services, and operational services, such as environmental, forestry, and line services. 2014 revenues include $109 thousand (2013 – $195 thousand) related to the provision of services to Hydro One and its other subsidiaries. 2014 operation, maintenance and administration costs include $2,958 thousand (2013 – $3,475 thousand) related to the purchase of services from Hydro One and its other subsidiaries.

The Company's long-term debt is due to Hydro One. In addition, balances payable or receivable under the inter-company demand facility are due to or from Hydro One and its other subsidiaries. Financing charges include interest expense on the long-term debt in the amount of $1,477 thousand (2013 – $1,237 thousand), and interest expense on the inter-company demand facility in the amount of $187 thousand (2013 – $216 thousand). At December 31, 2014, the Company had accrued interest payable to Hydro One totaling $172 thousand (2013 – $142 thousand).

## 16. STATEMENTS OF CASH FLOWS

The changes in non-cash balances related to operations consist of the following:

| *Year ended December 31 (thousands of Canadian dollars)* | **2014** | **2013** |
|---|---|---|
| Accounts receivable | 541 | (802) |
| Materials and supplies | (356) | 443 |
| Income taxes receivable | 14 | (1,108) |
| Long-term accounts receivable | (576) | (256) |
| Accounts payable | 173 | (284) |
| Accrued liabilities | 5,105 | (1,526) |
| Accrued interest | 30 | – |
| Post-retirement and post-employment benefit liability | 1,076 | 760 |
| | 6,007 | (2,773) |

| **Supplementary information:** | | |
|---|---|---|
| Net interest paid | 1,447 | 1,453 |

As a result of using the cost recovery model applied to achieve after tax breakeven net income, any PILs paid are fully recovered.

## 17. CONTINGENCIES

### Legal Proceedings

Hydro One Remote Communities is involved in various lawsuits, claims and regulatory proceedings in the normal course of business. In the opinion of management, the outcome of such matters will not have a material adverse effect on the Company's financial position, results of operations or cash flows.

### Transfer of Assets

The transfer orders by which Hydro One acquired certain of Ontario Hydro's businesses as of April 1, 1999 did not transfer title to some assets located on Reserves (as defined in the *Indian Act* (Canada)). Currently, the OEFC holds these assets. Under the terms of the transfer orders, Hydro One is required to manage these assets until it has obtained all consents necessary to complete the transfer of title of these assets to itself. Hydro One cannot predict the aggregate amount that it may have to pay, either on an annual or one-time basis, to obtain the required consents. In 2014, Hydro One paid approximately $1 million (2013 – $2 million) in respect of these consents. If Hydro One or the Company cannot obtain the required consents, the OEFC will continue to hold these assets for an indefinite period of time. If Hydro One cannot reach a satisfactory settlement, it may have to relocate these assets to other locations at a cost that could be substantial or, in a limited number of cases, to abandon a line and replace it with diesel-generation facilities. The costs relating to these assets could have a material adverse effect on Hydro One's and the Company's results of operations if Hydro One is not able to recover them in future rate orders.

## 18. COMMITMENTS

### Operating Lease

Hydro One Remote Communities is committed as lessee to an operating lease agreement for use of reserve land to operate a hydro facility for a period of 10 years.

During the year ended December 31, 2014, the Company made lease payments totalling $120 thousand (2013 – $1 million). At December 31, 2014, the future minimum lease payments under non-cancellable operating leases were as follows: 2015 – $120 thousand; 2016 – $120 thousand; 2017 – $120 thousand; 2018 – $150 thousand; 2019 – $150 thousand; and thereafter – $450 thousand.

# HYDRO ONE REMOTE COMMUNITIES INC.

# FINANCIAL STATEMENTS

## DECEMBER 31, 2015

**HYDRO ONE REMOTE COMMUNITIES INC.**
**INDEPENDENT AUDITORS' REPORT**

To Directors of Hydro One Remote Communities Inc.

We have audited the accompanying financial statements of Hydro One Remote Communities Inc., which comprise the balance sheet as at December 31, 2015, the statements of operations and comprehensive income, changes in shareholder's deficit and cash flows for the year then ended, and notes, comprising a summary of significant accounting policies and other explanatory information.

*Management's Responsibility for the Financial Statements*

Management is responsible for the preparation and fair presentation of these financial statements in accordance with United States Generally Accepted Accounting Principles, and for such internal control as management determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

*Auditors' Responsibility*

Our responsibility is to express an opinion on these financial statements based on our audit. We conducted our audit in accordance with Canadian generally accepted auditing standards. Those standards require that we comply with ethical requirements and plan and perform the audit to obtain reasonable assurance about whether the financial statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the financial statements. The procedures selected depend on our judgment, including the assessment of the risks of material misstatement of the financial statements, whether due to fraud or error. In making those risk assessments, we consider internal control relevant to the entity's preparation and fair presentation of the financial statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management, as well as evaluating the overall presentation of the financial statements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

*Opinion*

In our opinion, the financial statements present fairly, in all material respects, the financial position of Hydro One Remote Communities Inc. as at December 31, 2015 and its results of operations and its cash flows for the year then ended in accordance with United States Generally Accepted Accounting Principles.

## 1. DESCRIPTION OF THE BUSINESS

Hydro One Inc. (Hydro One) was incorporated on December 1, 1998, under the Business Corporations Act (Ontario) and was wholly owned by the Province of Ontario (the Province) until October 31, 2015. On October 31, 2015, Hydro One Limited, a wholly owned subsidiary of the Province, acquired all issued and outstanding shares of Hydro One from the Province. The principal businesses of Hydro One are the transmission and distribution of electricity to customers within Ontario.

Hydro One Remote Communities Inc. (Hydro One Remote Communities or the Company) was incorporated on August 18, 1998 under the *Business Corporations Act* (Ontario) and is a wholly owned subsidiary of Hydro One. Hydro One Remote Communities operates 19 small electrical, generation and distribution systems in remote communities in northern Ontario that are not connected to the Province's electricity grid. The Company's business is regulated by the Ontario Energy Board (OEB).

## 2. SIGNIFICANT ACCOUNTING POLICIES

### Basis of Accounting

These Financial Statements are prepared and presented in accordance with United States (US) Generally Accepted Accounting Principles (GAAP) and in Canadian dollars. The Company uses a cost recovery model applied to achieve breakeven net income and the Financial Statements are prepared for the use of the OEB. Certain amounts presented in these Financial Statements represent allocations from Hydro One that are subject to review and approval by the OEB. Consolidated Financial Statements of Hydro One for the year ended December 31, 2015 have been prepared and are publicly available.

For the year ended December 31, 2015, the Company has reported a net loss due to recognition of tax expense resulting from the Company no longer being exempt from tax under the Federal Tax Regime. This tax is not recovered from ratepayers as it is funded by the Company's shareholder, and therefore, it is not included in the cost recovery model applied to achieve breakeven net income. See Note 6 – Income Taxes.

Hydro One Remote Communities performed an evaluation of subsequent events through to April 22, 2016, the date these Financial Statements were available to be issued, to determine whether any events or transactions warranted recognition and disclosure in these Financial Statements. See Note 20 – Subsequent Event.

### Use of Management Estimates

The preparation of financial statements requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting periods. Management evaluates these estimates on an on-going basis based upon: historical experience; current conditions; and assumptions believed to be reasonable at the time the assumption is made with any adjustments being recognized in results of operations in the period they arise. Significant estimates relate to regulatory assets and regulatory liabilities, environmental liabilities, post-retirement and post-employment benefits, asset impairment, contingencies, unbilled revenue, allowance for doubtful accounts and deferred income tax assets and liabilities. Actual results may differ significantly from these estimates, which may be impacted by future decisions made by the OEB.

### Rate Setting

On September 24, 2014, Hydro One Remote Communities filed an Incentive Regulation Mechanism application with the OEB for 2015 rates, seeking approval for increased base rates for the distribution and generation of electricity of 1.7%. On March 19, 2015, the OEB approved an increase of approximately 1.6% to basic rates for the distribution and generation of electricity, with an effective date of May 1, 2015.

**Regulatory Accounting**

The OEB has the general power to include or exclude costs, revenues, losses or gains in the rates of a specific period, resulting in a change in the timing of accounting recognition from that which would have applied in an unregulated company. Such change in timing involves the application of rate-regulated accounting, giving rise to the recognition of regulatory assets and liabilities. The Company's regulatory assets represent certain amounts receivable from future customers and costs that have been deferred for accounting purposes because it is probable that they will be recovered in future rates. In addition, the Company has recorded regulatory liabilities that generally represent amounts that are refundable to future electricity customers. The Company continually assesses the likelihood of recovery of each of its regulatory assets and continues to believe that it is probable that the OEB will factor its regulatory assets and liabilities into the setting of future rates. If, at some future date, the Company judges that it is no longer probable that the OEB will include a regulatory asset or liability in setting future rates, the appropriate carrying amount will be reflected in results of operations in the period that the assessment is made.

Hydro One Remote Communities is regulated under a cost recovery model applied to achieve breakeven net income, after consideration of income taxes / provision for payments in lieu of corporate income taxes (PILs). Any excess or deficiency in Rural and Remote Rate Protection (RRRP) amounts necessary to lead to breakeven net income is added to, or drawn from, the Remote Rate Protection Revenue (RRPR) variance account. The balance in the RRPR variance account is subject to future review and disposition by the OEB.

**Revenue Recognition**

Revenues attributable to the generation and delivery of electricity are based on OEB-approved distribution rates and are recognized on an accrual basis and include billed and unbilled revenues. Billed revenues are based on electricity delivered as measured from customer meters. Unbilled revenues are based on an estimate of electricity delivered determined by historical trends of consumption and are estimated at the end of each month. The unbilled revenue estimate is affected by energy consumption, weather, and changes in the composition of customer classes.

Distribution revenue also includes RRRP which is an amount relating to rate protection for remote customers received from the Independent Electricity System Operator (IESO) based on a standardized customer rate that is approved by the OEB. Current legislation provides RRRP for prescribed classes of rural, residential and remote consumers by reducing the electricity rates that would otherwise apply.

Revenues are recorded net of indirect taxes.

**Accounts Receivable and Allowance for Doubtful Accounts**

Billed accounts receivable are recorded at the invoiced amount, net of allowance for doubtful accounts. Unbilled accounts receivable are recorded at their estimated value. Overdue amounts related to regulated billings bear interest at OEB-approved rates. The allowance for doubtful accounts reflects the Company's best estimate of losses on billed accounts receivable balances. The Company estimates the allowance for doubtful accounts on customer receivables by applying internally developed loss rates to the outstanding receivable balances by aging category. Loss rates applied to the accounts receivable balances are based on historical overdue balances, customer payments and write-offs. Accounts receivable are written-off against the allowance when they are deemed uncollectible. The existing allowance for doubtful accounts will continue to be affected by changes in volume, prices and economic conditions.

Long-term accounts receivable are recorded at their invoiced amount and represent amounts due from specified First Nation communities. The component of long-term accounts receivable that is energy-related does not bear interest. These amounts are reduced by fixed-interval payments, received monthly throughout the term of the agreement. Provision for uncollectible amounts for this component is set at the inception of the balance and is maintained until settlement of those amounts. The provision for this component is monitored and adjusted only if required with management discretion. The component of long-term accounts receivable that is non-energy related is reduced annually by a fixed incremental amount which is expensed through performance of the associated contract. There is no provision associated with these amounts.

**Income Taxes**

On October 31, 2015, the Company ceased to be exempt from tax under the *Income Tax Act* (Canada) and the *Taxation Act*, 2007 (Ontario) (Federal Tax Regime). Prior to that date, Hydro One Remote Communities was required to make payments in lieu of corporate income taxes (PILs) to the Ontario Electricity Financial Corporation (OEFC) under the *Electricity Act*, 1998

(Ontario) (PILs Regime). These payments were calculated in accordance with the rules for computing income and other relevant amounts contained in the *Income Tax Act* (Canada) and the *Taxation Act, 2007* (Ontario), as modified by the *Electricity Act, 1998,* and related regulations. Upon exiting the PILs Regime, Hydro One Remote Communities is required to make corporate income tax payments to the Canada Revenue Agency (CRA) under the Federal Tax Regime.

Current and deferred income taxes are computed based on the tax rates and tax laws enacted as at the balance sheet date. Tax benefits associated with income tax positions taken, or expected to be taken, in a tax return are recorded only when the “more-likely-than-not” recognition threshold is satisfied and are measured at the largest amount of benefit that has a greater than 50% likelihood of being realized upon settlement. Management evaluates each position based solely on the technical merits and facts and circumstances of the position, assuming the position will be examined by a taxing authority having full knowledge of all relevant information. Significant management judgment is required to determine recognition thresholds and the related amount of tax benefits to be recognized in the Financial Statements. Management re-evaluates tax positions each period in which new information about recognition or measurement becomes available.

***Deferred Income Taxes***

Deferred income taxes are provided for using the liability method. Deferred income taxes are recognized based on the estimated future tax consequences attributable to temporary differences between the carrying amount of assets and liabilities in the Financial Statements and their corresponding tax bases.

Deferred income tax liabilities are generally recognized on all taxable temporary differences. Deferred tax assets are recognized to the extent that it is more-likely-than-not that these assets will be realized from taxable income available against which deductible temporary differences can be utilized.

Deferred income taxes are calculated at the tax rates that are expected to apply in the period when the liability is settled or the asset is realized, based on the tax rates and tax laws that have been enacted as at the balance sheet date. Deferred income taxes that are not included in the rate-setting process are charged or credited to the Statements of Operations and Comprehensive Income (Loss).

If management determines that it is more-likely-than-not that some or all of a deferred income tax asset will not be realized, a valuation allowance is recorded against the deferred income tax asset to report the net balance at the amount expected to be realized. Previously unrecognized deferred income tax assets are reassessed at each balance sheet date and are recognized to the extent that it has become more-likely-than-not that the tax benefit will be realized.

The Company records regulatory assets and liabilities associated with deferred income taxes that will be included in the rate-setting process.

The Company uses the flow-through method to account for investment tax credits (ITCs) earned on eligible scientific research and experimental development expenditures, and apprenticeship job creation. Under this method, only non-refundable ITCs are recognized as a reduction to income tax expense.

### Inter-company Demand Facility

Hydro One maintains pooled bank accounts for its use and for the use of its subsidiaries, including Hydro One Remote Communities. The balance in the inter-company demand facility represents the cumulative net effect of all deposits and withdrawals made by the Company to and from the pooled cash accounts. Interest is earned on positive inter-company balances based on the average of the bankers’ acceptance rate at the beginning and end of the month, less 0.02%. Interest is charged on overdraft inter-company balances based on the same bankers’ acceptance rate, plus 0.15%.

### Fuel, Materials and Supplies

Fuel is used in the generation of electricity. Materials and supplies represent consumables, small spare parts and construction materials held for internal construction and maintenance of property, plant and equipment. These assets are carried at average cost less any impairments recorded.

### Property, Plant and Equipment

Property, plant and equipment is recorded at original cost, net of customer contributions and any accumulated impairment losses. The cost of additions, including betterments and replacements of asset components, is included on the Balance Sheets as property, plant and equipment.

The original cost of property, plant and equipment includes direct materials, direct labour (including employee benefits), contracted services, attributable capitalized financing costs, and direct and indirect overheads that are related to the capital project or program. Indirect overheads include a portion of corporate costs such as finance, treasury, human resources, information technology and executive costs. Overhead costs, including corporate functions and field services costs, are capitalized on a fully allocated basis, consistent with an OEB-approved methodology.

Property, plant and equipment in service consists of generation, distribution, and administration and service assets. Property, plant and equipment also includes future use assets, such as major components and spare parts and capitalized project development costs associated with deferred capital projects.

***Generation***

Generation assets are used in the generation of electricity, including hydroelectric equipment, wind turbines, diesel generators, and tank farms.

***Distribution***

Distribution assets include assets related to the distribution of low-voltage electricity, including lines, poles, switches, transformers, protective devices, and metering systems.

***Administration and Service***

Administration and service assets include administrative buildings, personal computers, tools, and other minor assets.

**Capitalized Financing Costs**

Capitalized financing costs represent interest costs attributable to the construction of property, plant and equipment. The financing cost of attributable borrowed funds is capitalized as part of the acquisition cost of such assets. The capitalized portion of financing costs is a reduction to financing charges recognized in the Statements of Operations and Comprehensive Income (Loss). Capitalized financing costs are calculated using the Company's weighted average effective cost of debt.

**Construction in Progress**

Construction in progress consists of the capitalized cost of constructed assets that are not yet complete and which have not yet been placed in service.

**Depreciation**

The cost of property, plant and equipment is depreciated on a straight-line basis based on the estimated remaining service life of each asset category. The Company periodically initiates an external independent review of its property, plant and equipment depreciation rates, as required by the OEB. Any changes arising from such a review are implemented on a remaining service life basis, consistent with their inclusion in electricity rates. The last review resulted in changes to rates effective January 1, 2013.

A summary of average service lives and depreciation and amortization rates for the various classes of assets is included below:

| | Average Service Life | Rate Range | Rate Average |
|---|---|---|---|
| Generation | 20 years | 3% – 7% | 5% |
| Distribution | 45 years | 1% – 7% | 2% |
| Administration and service | 36 years | 3% – 20% | 4% |

In accordance with group depreciation practices, the original cost of property, plant and equipment, or major components thereof, that are normally retired, is charged to accumulated depreciation with no gain or loss being reflected in results of operations. Where a disposition of property, plant and equipment occurs through sale, a gain or loss is calculated based on proceeds and such gain or loss is included in depreciation expense. Depreciation expense also includes the costs incurred to remove property, plant and equipment assets where no asset retirement obligation has been recorded.

### Long-Lived Asset Impairment

When circumstances indicate the carrying value of long-lived assets may not be recoverable, the Company evaluates whether the carrying value of such assets has been impaired. For such long-lived assets, the Company evaluates whether impairment may exist by estimating future estimated undiscounted cash flows expected to result from the use and eventual disposition of the asset. When alternative courses of action to recover the carrying amount of a long-lived asset are under consideration, a probability-weighted approach is used to develop estimates of future undiscounted cash flows. If the carrying value of the long-lived asset is not recoverable based on the estimated future undiscounted cash flows, an impairment loss is recorded, measured as the excess of the carrying value of the asset over its fair value. As a result, the asset's carrying value is adjusted to its estimated fair value.

The carrying costs of most of Hydro One Remote Communities' long-lived assets are included in rate base where they earn an OEB-approved rate of return. Asset carrying values and the related return are recovered through approved rates. As a result, such assets are only tested for impairment in the event that the OEB disallows recovery, in whole or in part, or if such a disallowance is judged to be probable. As at December 31, 2015 and 2014, no asset impairment had been recorded.

### Costs of Arranging Debt Financing

For financial liabilities classified as other than held-for-trading, the Company defers the external transaction costs related to obtaining debt financing and presents such amounts as deferred debt issuance costs on the Balance Sheets. Deferred debt issuance costs are amortized over the contractual life of the related debt on an effective-interest rate basis and the amortization is included within financing charges in the Statements of Operations and Comprehensive Income (Loss). Transaction costs for items classified as held-for-trading are expensed immediately.

### Comprehensive Income

Comprehensive income is comprised of net income and other comprehensive income (OCI). OCI includes the amortization of net unamortized hedging losses on the Company's proportionate share of Hydro One's discontinued cash flow hedges. The Company amortizes its net unamortized hedging losses on discontinued cash flow hedges to financing charges using the effective interest method over the term of the associated hedged debt. Hydro One Remote Communities presents OCI and net income in a single continuous Statement of Operations and Comprehensive Income (Loss).

### Financial Assets and Liabilities

All financial assets and liabilities are classified into one of the following five categories: held-to-maturity investments; loans and receivables; held-for-trading; other liabilities; or available-for-sale. Financial assets and liabilities classified as held-for-trading are measured at fair value. All other financial assets and liabilities are measured at amortized cost, except accounts receivable which are measured at the lower of cost or fair value. Accounts receivable are classified as loans and receivables. The Company considers the carrying amount of accounts receivable to be a reasonable estimate of fair value because of the short time to maturity of these instruments. Provisions for impaired accounts receivable are recognized as adjustments to the allowance for doubtful accounts and are recognized when there is objective evidence that the Company will not be able to collect amounts according to the original terms.

The Company determines the classification of its financial assets and liabilities at the date of initial recognition. The Company designates certain of its financial assets and liabilities to be held at fair value, when it is consistent with the Company's risk management policy disclosed in Note 11 – Fair Value of Financial Instruments and Risk Management.

### Derivative Instruments and Hedge Accounting

The Company currently does not engage in derivative trading or speculative activities and had no derivative instruments outstanding at December 31, 2015 and 2014. OCI includes the amortization of net unamortized hedging losses on the Company's proportionate share of Hydro One's discontinued cash flow hedges.

### Employee Future Benefits

Employee future benefits provided by Hydro One include pension, post-retirement and post-employment benefits. The costs of Hydro One's pension, post-retirement and post-employment benefit plans are recorded over the periods during which employees render service.

Hydro One recognizes the funded status of its pension, post-retirement and post-employment plans on its Consolidated Balance Sheets and subsequently recognizes the changes in funded status at the end of each reporting year. Pension, post-retirement and post-employment plans are considered to be underfunded when the projected benefit obligation exceeds the fair value of the plan assets. Liabilities are recognized in the Consolidated Balance Sheets of Hydro One for any net underfunded projected benefit obligation. The net underfunded projected benefit obligation may be disclosed as a current liability, long-term liability, or both. The current portion is the amount by which the actuarial present value of benefits included in the benefit obligation payable in the next 12 months exceeds the fair value of plan assets. If the fair value of plan assets exceeds the projected benefit obligation of the plan, an asset is recognized equal to the net overfunded projected benefit obligation. The post-retirement and post-employment benefit plans are unfunded because there are no related plan assets. For the year ended December 31, 2015, the measurement date for all plans was December 31.

***Pension benefits***

Hydro One has a contributory defined benefit pension plan covering most regular employees of Hydro One and its subsidiaries, including Hydro One Remote Communities. The Hydro One pension plan does not segregate assets in a separate account for individual subsidiaries, nor is the obligation of the pension plan allocated to, or funded separately by, entities within the consolidated group. Accordingly, for purposes of these Financial Statements, the pension plan is accounted for as a defined contribution plan and no pension benefit asset or liability is recorded.

A detailed description of Hydro One pension benefits is provided in Note 15 – Pension and Post-Retirement and Post-Employment Benefits, to the Consolidated Financial Statements of Hydro One for the year ended December 31, 2015.

***Post-retirement and post-employment benefits***

Hydro One has post-retirement and post-employment benefit plans covering all regular employees of Hydro One and its subsidiaries, including Hydro One Remote Communities. The benefit obligations of the these post-retirement and post-employment benefit plans are not segregated, or funded separately, for Hydro One Remote Communities. Accordingly, for purposes of these Financial Statements, the post-retirement and post-employment benefit obligations are allocated to the Company based on base pensionable earnings.

The Company records a regulatory asset equal to its allocated share of Hydro One's incremental net unfunded projected benefit obligation for post-retirement and post-employment plans at each year end based on annual actuarial reports. The regulatory asset for the incremental net unfunded projected benefit obligation for post-retirement and post-employment plans, in absence of regulatory accounting, would be recognized in accumulated OCI (AOCI). A regulatory asset is recognized because management considers it to be probable that post-retirement and post-employment benefit costs will be recovered in the future through the rate-setting process.

Post-retirement and post-employment benefits, are recorded and included in rates on an accrual basis. Costs are determined by independent actuaries using the projected benefit method prorated on service and based on assumptions that reflect management's best estimates. Past service costs from plan amendments are amortized to results of operations based on the expected average remaining service period.

For post-retirement benefits, all actuarial gains or losses are deferred using the "corridor" approach. The amount calculated above the "corridor" is amortized to results of operations on a straight-line basis over the expected average remaining service lives of active Hydro One employees in the plan and over the remaining life expectancy of inactive Hydro One employees in the plan. The post-retirement benefit obligation is remeasured to its fair value at each year end based on an annual actuarial report, with an offset to associated regulatory asset, to the extent of the remeasurement adjustment.

For post-employment obligations, the actuarial gains and losses that are incurred during the year are recognized immediately to results of operations. The post-employment benefit obligation is remeasured to its fair value at each year end based on an annual actuarial report, with an offset to associated regulatory asset, to the extent of the remeasurement adjustment.

All post-retirement and post-employment future benefit costs are attributed to labour and are either charged to results of operations or capitalized as part of the cost of property, plant and equipment.

A detailed description of Hydro One post-retirement and post-employment benefits is provided in Note 15 – Pension and Post-Retirement and Post-Employment Benefits, to the Consolidated Financial Statements of Hydro One for the year ended December 31, 2015.

**Stock-Based Compensation**

Hydro One measures share grant plans based on fair value of share grants as estimated based on the grant date Hydro One Limited share price. The costs are recognized in the financial statements using the graded-vesting attribution method for share grant plans that have both a performance condition and a service condition. The Company records a regulatory asset equal to the accrued costs of share grant plans recognized in each period, as management considers it to be probable that such costs will be recovered in the future through the rate-setting process.

**Loss Contingencies**

Hydro One Remote Communities is involved in certain legal and environmental matters that arise in the normal course of business. In the preparation of its Financial Statements, management makes judgments regarding the future outcome of contingent events and records a loss for a contingency based on its best estimate when it is determined that such loss is probable and the amount of the loss can be reasonably estimated. When a range estimate for the probable loss exists and no amount within the range is a better estimate than any other amount, the Company records a loss at the minimum amount within the range.

Management regularly reviews current information available to determine whether recorded provisions should be adjusted and whether new provisions are required. Estimating probable losses may require analysis of multiple forecasts and scenarios that often depend on judgments about potential actions by third parties, such as federal, provincial and local courts or regulators. Contingent liabilities are often resolved over long periods of time. Amounts recorded in the Financial Statements may differ from the actual outcome once the contingency is resolved. Such differences could have a material impact on future results of operations, financial position and cash flows of the Company.

Provisions are based upon current estimates and are subject to greater uncertainty the longer the projection period. A significant upward or downward trend in the number of claims filed, the nature of the alleged injury, and the average cost of resolving each such claim could change the estimated provision, as could any substantial adverse or favorable verdict at trial. A federal or provincial legislative outcome or structured settlement could also change the estimated liability. Legal fees are expensed as incurred.

**Environmental Liabilities**

Environmental liabilities are recorded in respect of past contamination when it is determined that future environmental remediation expenditures are probable under existing statute or regulation and the amount of the future expenditures can be reasonably estimated. Hydro One Remote Communities records a liability for the estimated future expenditures associated with the contaminated land assessment and remediation (LAR) based on the present value of these estimated future expenditures. The Company determines the present value with a discount rate equal to its credit-adjusted risk-free interest rate on financial instruments with comparable maturities to the pattern of future environmental expenditures. As the Company anticipates that the future expenditures will continue to be recoverable in future rates, an offsetting regulatory asset has been recorded to reflect the future recovery of these environmental expenditures from customers. Hydro One Remote Communities reviews its estimates of future environmental expenditures annually or more frequently if there are indications that circumstances have changed.

## 3. NEW ACCOUNTING PRONOUNCEMENTS

**Recent Accounting Guidance Not Yet Adopted**

In January 2015, the Financial Accounting Standards Board (FASB) issued Accounting Standards Update (ASU) 2015-01, Income Statement – Extraordinary and Unusual Items (Subtopic 225-20): Simplifying Income Statement Presentation by Eliminating the Concept of Extraordinary Items. This ASU eliminates the requirements for reporting entities to consider whether an underlying event or transaction is extraordinary and to show the item separately in the income statement. This ASU is effective for fiscal years, and interim periods within these years, beginning after December 15, 2015. The adoption of this ASU is not anticipated to have an impact on the Company’s financial statements.

In April 2015, the FASB issued ASU 2015-03, Interest – Imputation of Interest (Subtopic 835-30): Simplifying the Presentation of Debt Issuance Costs. This ASU requires that debt issuance costs related to a recognized debt liability be presented in the balance sheet as a direct deduction from the carrying amount of that debt liability. The recognition and measurement guidance for debt issuance costs are not affected. This ASU is effective for fiscal years, and interim periods within those years, beginning after December 15, 2015. Upon adoption of this ASU in the first quarter of 2016, the Company's deferred debt issuance costs that are currently presented under other long-term assets will be reclassified as a deduction from the carrying amount of long-term debt.

In April 2015, the FASB issued ASU 2015-05, Intangibles – Goodwill and Other – Internal-Use Software (Subtopic 350-40): Customer's Accounting for Fees Paid in a Cloud Computing Arrangement. This ASU provides guidance to customers about whether a cloud computing arrangement includes a software license, as well as the related accounting for the arrangement. This ASU is effective for fiscal years, and interim periods within these years, beginning after December 15, 2015. The Company is currently assessing the impact of adoption of this ASU on its financial statements.

In August 2015, the FASB issued ASU 2015-14, Revenue from Contracts with Customers (Topic 606): Deferral of the Effective Date. This ASU defers by one year the effective date of ASU 2014-09, Revenue from Contracts with Customers (Topic 606) issued by the FASB in May 2014. ASU 2014-09 provides guidance on revenue recognition that depicts the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expects to be entitled in exchange for those goods and services. The guidance in ASU 2014-09 is now effective for fiscal years, and interim periods within those years, beginning after December 15, 2017. The Company is currently assessing the impact of adoption of ASU 2014-09 on its financial statements.

In November 2015, the FASB issued ASU 2015-17, Income Taxes (Topic 740): Balance Sheet Classification of Deferred Taxes. The amendments in this ASU require that all deferred tax assets and liabilities be classified as noncurrent on the balance sheet. This ASU is effective for fiscal years, and interim periods within those years, beginning after December 15, 2016. Upon adoption of this ASU in the first quarter of 2017, the current portions of the Company's deferred income tax assets and liabilities will be reclassified as noncurrent assets and liabilities on the Balance Sheets.

## 4. DEPRECIATION AND AMORTIZATION

| **Year ended December 31** *(thousands of Canadian dollars)* | **2015** | **2014** |
|---|---|---|
| Depreciation of property, plant and equipment | 2,711 | 2,594 |
| Asset removal costs | 968 | 430 |
| Amortization of regulatory assets | 1,223 | 1,599 |
| | 4,902 | 4,623 |

## 5. FINANCING CHARGES

| **Year ended December 31** *(thousands of Canadian dollars)* | **2015** | **2014** |
|---|---|---|
| Interest on long-term debt | 1,655 | 1,477 |
| Interest on inter-company demand facility | 65 | 187 |
| Amortization of hedging losses | 14 | 13 |
| Other | 41 | 28 |
| Less: Interest capitalized on construction in progress | (97) | (146) |
| | 1,678 | 1,559 |

## 6. INCOME TAXES

Income taxes / provision for PILs differs from the amount that would have been recorded using the combined Canadian federal and Ontario statutory income tax rate. The reconciliation between the statutory and the effective tax rates is provided as follows:

| **Year ended December 31** *(thousands of Canadian dollars)* | **2015** | **2014** |
|---|---|---|
| Income taxes / provision for PILs at statutory rate | 166 | 3 |
| Increase (decrease) resulting from: | | |
| Net temporary differences included in amounts charged to customers: | | |
| Depreciation and amortization in excess of capital cost allowance | 1,112 | 338 |
| RRPR variance account | 482 | (687) |
| Post-retirement and post-employment benefit expense in excess of cash payments | 201 | 189 |
| Losses carryforward | (870) | 846 |
| Environmental expenditures | (324) | (424) |
| Overheads capitalized for accounting but deducted for tax purposes | (141) | (93) |
| Pension contribution in excess of pension expense | (119) | (132) |
| Interest capitalized for accounting but deducted for tax purposes | (26) | (39) |
| Other | 72 | – |
| Net temporary differences | 387 | (2) |
| Net tax expense resulting from transition from PILs Regime to Federal Tax Regime | 5,000 | – |
| Prior year adjustments | (3) | 10 |
| Other permanent differences | (9) | (1) |
| Total income taxes / provision for PILs | 5,541 | 10 |
| | | |
| Current income taxes / provision for PILs | 5,541 | 10 |
| Deferred income taxes / provision for PILs | – | – |
| Total income taxes / provision for PILs | 5,541 | 10 |
| | | |
| Effective income tax rate | 882% | 100% |

The provision for PILs / current income taxes is remitted to, or received from, the OEFC (PILs Regime) and the CRA (Federal Tax Regime), respectively. At December 31, 2015, the Company had $327 thousand (2014 – $2,683 thousand) receivable from the OEFC, and $37 thousand (2014 – $nil) payable to the CRA.

### Departure Tax

On October 31, 2015, the Company's exemption from tax under the Federal Tax Regime ceased to apply. Under the PILs Regime, the Company was deemed to have disposed of its assets immediately before it lost its tax exempt status under the Federal Tax Regime, resulting in Hydro One Remote Communities making payments in lieu of tax (Departure Tax) totaling $5,000 thousand. To enable Hydro One Remote Communities to make the Departure Tax payment, Hydro One subscribed for 64 common shares of Hydro One Remote Communities for $5,000 thousand. The Company used the proceeds of this share subscription to pay the Departure Tax.

For the year ended December 31, 2015, Hydro One Remote Communities' income taxes include tax expense relating to payment of Departure Tax of $5,000 thousand (2014 – $nil) and income tax recovery of $87 thousand (2014 – $nil) relating to the partial utilization of the deferred tax asset generated upon the transition from the PILs Regime to the Federal Tax Regime.

The following table presents a reconciliation of net income (loss) to net income under the cost recovery model to achieve breakeven net income:

| **Year ended December 31** *(thousands of Canadian dollars)* | **2015** | **2014** |
|---|---|---|
| Net income before income taxes | 628 | 10 |
| Income taxes under cost-recovery model | 628 | 10 |
| Net income under cost-recovery model | – | – |
| Tax expense – Departure Tax | 5,000 | – |
| Tax recovery | (87) | – |
| Net income (loss) | (4,913) | – |

### Deferred Income Tax Assets

Deferred income tax assets and liabilities arise from differences between the carrying amounts and tax bases of the Company's assets and liabilities. At December 31, 2015 and 2014, deferred income tax assets and liabilities consisted of the following:

| **Year ended December 31** *(thousands of Canadian dollars)* | **2015** | **2014** |
|---|---|---|
| **Deferred income tax assets** | | |
| Post-retirement and post-employment benefits expense in excess of cash payments | 5,038 | 4,762 |
| Environmental expenditures | 3,984 | 4,459 |
| Depreciation and amortization in excess of capital cost allowance | 926 | 1,231 |
| Non capital losses | – | 1,183 |
| Regulatory amounts not recognized for tax | (5,803) | (7,060) |
| Other | (215) | (242) |
| Total deferred income tax assets | 3,930 | 4,333 |
| Less: current portion | 125 | 120 |
| | 3,805 | 4,213 |

During 2015 and 2014, there was no change in the rate applicable to future taxes. The Company has recorded a valuation allowance in the amount of $6,622 thousand (2014 – $nil) in respect of capital property.

## 7. ACCOUNTS RECEIVABLE

| **December 31, 2015** *(thousands of Canadian dollars)* | **Current accounts receivable** | **Long-term accounts receivable** | **Total** |
|---|---|---|---|
| Accounts receivable – billed | 3,514 | 1,181 | 4,695 |
| Accounts receivable – unbilled | 1,077 | – | 1,077 |
| Accounts receivable, gross | 4,591 | 1,181 | 5,772 |
| Allowance for doubtful accounts | (156) | (111) | (267) |
| Accounts receivable, net | 4,435 | 1,070 | 5,505 |

| **December 31, 2014** *(thousands of Canadian dollars)* | **Current accounts receivable** | **Long-term accounts receivable** | **Total** |
|---|---|---|---|
| Accounts receivable – billed | 3,214 | 1,409 | 4,623 |
| Accounts receivable – unbilled | 1,385 | – | 1,385 |
| Accounts receivable, gross | 4,599 | 1,409 | 6,008 |
| Allowance for doubtful accounts | (145) | (159) | (304) |
| Accounts receivable, net | 4,454 | 1,250 | 5,704 |

The following table shows the movements in the total allowance for doubtful accounts for the years ended December 31, 2015 and 2014:

| **December 31** *(thousands of Canadian dollars)* | **2015** | **2014** |
|---|---|---|
| Allowance for doubtful accounts – January 1 | (304) | (296) |
| Write-offs | 67 | 77 |
| Adjustments to allowance for doubtful accounts | (30) | (85) |
| Allowance for doubtful accounts – December 31 | (267) | (304) |

## 8. PROPERTY, PLANT AND EQUIPMENT

| **December 31, 2015** *(thousands of Canadian dollars)* | **Property, Plant and Equipment** | **Accumulated Depreciation** | **Construction in Progress** | **Total** |
|---|---|---|---|---|
| Generation | 45,779 | 21,150 | 826 | 25,455 |
| Distribution | 9,780 | 2,049 | 312 | 8,043 |
| Administration and Service | 11,716 | 2,594 | 50 | 9,172 |
| | 67,275 | 25,793 | 1,188 | 42,670 |

| **December 31, 2014** *(thousands of Canadian dollars)* | **Property, Plant and Equipment** | **Accumulated Depreciation** | **Construction in Progress** | **Total** |
|---|---|---|---|---|
| Generation | 44,770 | 20,385 | 1,742 | 26,127 |
| Distribution | 9,488 | 1,906 | 99 | 7,681 |
| Administration and Service | 11,110 | 2,297 | 297 | 9,110 |
| | 65,368 | 24,588 | 2,138 | 42,918 |

Financing charges capitalized on property, plant and equipment under construction were $97 thousand in 2015 (2014 – $146 thousand).

## 9. REGULATORY ASSETS AND LIABILITIES

Regulatory assets and liabilities arise as a result of the rate-making process. Hydro One Remote Communities has recorded the following regulatory assets and liabilities:

| **December 31** *(thousands of Canadian dollars)* | **2015** | **2014** |
|---|---|---|
| **Regulatory assets:** | | |
| Environmental | 11,051 | 12,369 |
| RRPR variance account | 2,760 | 4,578 |
| Post-retirement and post-employment benefits | 2,285 | 2,637 |
| Share-based compensation | 99 | – |
| Total regulatory assets | 16,195 | 19,584 |
| Less: current portion | 1,483 | 1,301 |
| | 14,712 | 18,283 |
| | | |
| **Regulatory liabilities:** | | |
| Deferred income tax regulatory liability | 3,930 | 4,333 |
| Total regulatory liabilities | 3,930 | 4,333 |
| Less: current portion | 125 | 120 |
| | 3,805 | 4,213 |

### Environmental

The Company records a liability for the estimated future expenditures required to remediate environmental contamination. Because such expenditures are expected to be recovered in future rates, the Company has recorded an equivalent amount as a regulatory asset. In 2015, the environmental regulatory asset decreased by $448 thousand (2014 – increased by $180 thousand) to reflect related changes in the Company's environmental liabilities. The environmental regulatory asset is amortized to results of operations based on the pattern of actual expenditures incurred and charged to environmental liabilities. The OEB has the discretion to examine and assess the prudency and the timing of recovery of all of the Company's actual environmental expenditures. In the absence of rate-regulated accounting, 2015 operation, maintenance and administration expenses would have been lower by $448 thousand (2014 – higher by $180 thousand). In addition, 2015 amortization expense would have been lower by $1,222 thousand (2014 – $1,598 thousand), and 2015 financing charges would have been higher by $352 thousand (2014 – $361 thousand).

**RRPR Variance Account**

Hydro One Remote Communities receives RRRP amounts from the IESO. At December 31, 2015, the Company recognized a regulatory asset representing the amounts required to achieve breakeven net income, as regulated under the cost recovery model, in excess of cumulative RRRP amounts received. In 2015, RRRP amounts received were higher than amounts required to achieve breakeven net income, and as such, the regulatory asset was reduced by $1,818 thousand. In the absence of rate-regulated accounting, 2015 revenue would have been higher by $1,818 thousand (2014 – lower by $2,593 thousand).

**Post-Retirement and Post-Employment Benefits**

The Company recognizes the net unfunded status of post-retirement and post-employment obligations on the Balance Sheets with an incremental offset to the associated regulatory assets. A regulatory asset is recognized because management considers it to be probable that post-retirement and post-employment benefit costs will be recovered in the future through the rate-setting process. The post-retirement and post-employment benefit obligation is remeasured to its fair value at each year end based on an annual actuarial report, with an offset to the associated regulatory asset, to the extent of the remeasurement adjustment. In the absence of rate-regulated accounting, 2015 OCI would have been higher by $352 thousand (2014 – $302 thousand).

**Share-based Compensation**

The Company recognizes costs associated with stock-based compensation in a regulatory asset as management considers it probable that stock-based compensation costs will be recovered in the future through the rate-setting process. At December 31, 2015 the stock-based compensation costs relate to the share grant plans, are measured at fair value estimated based on grant date Hydro One Limited share price and recognized using the graded-vesting attribution method. In the absence of rate-regulated accounting, 2015 operation, maintenance and administration expenses would have been higher by $69 thousand (2014 – $nil).

**Deferred Income Tax Regulatory Liability**

Deferred income taxes are recognized on temporary differences between the carrying amount of assets and liabilities in the financial statements and the corresponding tax bases used in the computation of taxable profit. The Company has recognized regulatory assets and liabilities that correspond to deferred income taxes that flow through the rate-setting process. In the absence of rate-regulated accounting, the Company's income tax expense would have been recognized using the liability method and there would be no regulatory accounts established for taxes to be recovered through future rates. As a result, the 2015 income tax expense would have been lower by approximately $387 thousand (2014 – higher by $2 thousand).

## 10. LONG-TERM DEBT

Long-term debt totalling $33,000 thousand is payable to Hydro One and consists of a $23,000 thousand note maturing in 2036 and a $10,000 thousand note maturing in 2044.

The $23,000 thousand note was issued on May 19, 2005, with an interest rate of 5.38% per annum and a maturity date of May 20, 2036. On issuance of this note, $115 thousand of transaction costs and a $31 thousand debt discount incurred by Hydro One were allocated to Hydro One Remote Communities, based on its proportionate share of Hydro One's related debt issue.

The $10,000 thousand note was issued on June 6, 2014, with an interest rate of 4.19% per annum and a maturity date of June 6, 2044. On issuance of this note, $50 thousand of transaction costs and a $10 thousand debt discount incurred by Hydro One were allocated to Hydro One Remote Communities, based on its proportionate share of Hydro One's related debt issue.

## 11. FAIR VALUE OF FINANCIAL INSTRUMENTS AND RISK MANAGEMENT

Fair value is considered to be the exchange price in an orderly transaction between market participants to sell an asset or transfer a liability at the measurement date. The fair value definition focuses on an exit price, which is the price that would be received in the sale of an asset or the amount that would be paid to transfer a liability.

Hydro One Remote Communities classifies its fair value measurements based on the following hierarchy, as prescribed by the accounting guidance for fair value, which prioritizes the inputs to valuation techniques used to measure fair value into three levels:

Level 1 inputs are unadjusted quoted prices in active markets for identical assets or liabilities that Hydro One Remote Communities has the ability to access. An active market for the asset or liability is one in which transactions for the asset or liability occurs with sufficient frequency and volume to provide ongoing pricing information.

Level 2 inputs are those other than quoted market prices that are observable, either directly or indirectly, for an asset or liability. Level 2 inputs include, but are not limited to, quoted prices for similar assets or liabilities in an active market, quoted prices for identical or similar assets or liabilities in markets that are not active and inputs other than quoted market prices that are observable for the asset or liability, such as interest rate curves and yield curves observable at commonly quoted intervals, volatilities, credit risk and default rates. A Level 2 measurement cannot have more than an insignificant portion of the valuation based on unobservable inputs.

Level 3 inputs are any fair value measurements that include unobservable inputs for the asset or liability for more than an insignificant portion of the valuation. A Level 3 measurement may be based primarily on Level 2 inputs.

### Non-Derivative Financial Assets and Liabilities

At December 31, 2015 and 2014, the Company's carrying amounts of accounts receivable, inter-company demand facility, and accounts payable are representative of fair value because of the short-term nature of these instruments.

### Fair Value Hierarchy

The fair value hierarchy of financial assets and liabilities at December 31, 2015 and 2014 are as follows:

| **December 31, 2015** *(thousands of Canadian dollars)* | **Carrying Value** | **Fair Value** | **Level 1** | **Level 2** | **Level 3** |
|---|---|---|---|---|---|
| **Liabilities:** | | | | | |
| Inter-company demand facility | 6,056 | 6,056 | 6,056 | – | – |
| Long-term debt | 33,000 | 37,957 | – | 37,957 | – |
| | 39,056 | 44,013 | 6,056 | 37,957 | – |

| **December 31, 2014** *(thousands of Canadian dollars)* | **Carrying Value** | **Fair Value** | **Level 1** | **Level 2** | **Level 3** |
|---|---|---|---|---|---|
| **Liabilities:** | | | | | |
| Inter-company demand facility | 6,806 | 6,806 | 6,806 | – | – |
| Long-term debt | 33,000 | 39,226 | – | 39,226 | – |
| | 39,806 | 46,032 | 6,806 | 39,226 | – |

The fair value of the long-term debt is based on unadjusted period-end market prices for the same or similar debt of the same remaining maturities.

There were no significant transfers between any of the levels during the years ended December 31, 2015 and 2014.

### Risk Management

Exposure to market risk, credit risk and liquidity risk arises in the normal course of the Company's business.

#### *Market Risk*

Market risk refers primarily to the risk of loss that results from changes in commodity prices, foreign exchange rates and interest rates. The Company does not have commodity risk. The foreign exchange risk is currently not significant, although Hydro One could in the future decide to issue and allocate foreign currency-denominated debt to the Company, along with an allocation of the resulting foreign exchange gains and losses. The Company is exposed to fluctuations in interest rates related to the interest charges passed on by Hydro One on the outstanding inter-company demand facility. The Company is charged interest on overdraft inter-company balances based on the one-month bankers' acceptance rate, plus 0.15%.

***Credit Risk***

Financial assets create a risk that a counterparty will fail to discharge an obligation, causing a financial loss. At December 31, 2015 and 2014, there were no significant concentrations of credit risk with respect to any class of financial assets. The Company's revenue is earned from a broad base of customers. As a result, Hydro One Remote Communities did not earn a significant amount of revenue from any individual customer. At December 31, 2015 and 2014, there was no significant accounts receivable balance due from any single customer.

At December 31, 2015, the Company's total provision for bad debts was $267 thousand (2014 – $304 thousand). Adjustments and write-offs are determined on the basis of a review of overdue accounts, taking into consideration historical experience. At December 31, 2015, approximately 44% (2014 – 36%) of the Company's current accounts receivable were aged more than 60 days. Sufficient allowances have been recorded to reflect the risk of potential credit losses.

***Liquidity Risk***

Liquidity risk refers to the Company's ability to meet its financial obligations as they come due. Hydro One Remote Communities meets its short-term liquidity requirements through the inter-company demand facility with Hydro One and funds from operations. The short-term liquidity available to the Company should be sufficient to fund normal operating requirements.

At December 31, 2015, accounts payable and accrued liabilities in the amount of $5,721 thousand (2014 – $9,812 thousand) are expected to be settled in cash at their carrying amounts within the next 12 months.

At December 31, 2015, Hydro One Remote Communities had long-term debt in the principal amount of $33,000 thousand (2014 – $33,000 thousand). Principal repayments and weighted average interest rates are summarized by the number of years to maturity in the following table.

| **Years to Maturity** | **Long-term Debt Principal Repayments** *(thousands of Canadian dollars)* | **Weighted Average Interest Rate** *(%)* |
|---|---|---|
| 1 year | – | 5.0 |
| 2 years | – | 5.0 |
| 3 years | – | 5.0 |
| 4 years | – | 5.0 |
| 5 years | – | 5.0 |
| | – | 5.0 |
| 6 – 10 years | – | 5.0 |
| Over 10 years | 33,000 | 5.0 |
| | 33,000 | 5.0 |

Interest payments on long-term debt are summarized by year in the following table:

| **Year** | **Interest Payments** *(thousands of Canadian dollars)* |
|---|---|
| 2016 | 1,656 |
| 2017 | 1,656 |
| 2018 | 1,656 |
| 2019 | 1,656 |
| 2020 | 1,656 |
| | 8,280 |
| 2021-2025 | 8,282 |
| 2026 + | 20,744 |
| | 37,306 |

## 12. PENSION AND POST-RETIREMENT AND POST-EMPLOYMENT BENEFITS

Hydro One has a defined benefit pension plan, a supplementary pension plan, and post-retirement and post-employment benefit plans. The defined benefit pension plan (Pension Plan) is contributory and covers most regular employees of Hydro One and its subsidiaries. The supplementary pension plan provides members of the Pension Plan with benefits that would have been earned and payable under the Pension Plan but for the limitations imposed by the *Income Tax Act* (Canada). The supplementary pension plan obligation is included with other post-retirement and post-employment benefit obligations on the Balance Sheets.

### Pension Benefits

The Pension Plan provides benefits based on highest three-year average pensionable earnings. For new management employees who commenced employment on or after January 1, 2004, and for new Society of Energy Professionals represented staff hired after November 17, 2005, benefits are based on highest five-year average pensionable earnings. After retirement, pensions are indexed to inflation.

Company and employee contributions to the Pension Plan are based on actuarial valuations performed at least every three years. Hydro One's annual Pension Plan contributions for 2015 of $177 million (2014 – $174 million) were based on an actuarial valuation effective December 31, 2013 and the expected level of pensionable earnings. Estimated annual Pension Plan contributions for 2016 are approximately $180 million, based on the actuarial valuation as at December 31, 2013 and projected levels of pensionable earnings. Future minimum contributions beyond 2016 will be based on an actuarial valuation effective no later than December 31, 2016. Contributions are payable one month in arrears. All of the contributions are expected to be in the form of cash.

At December 31, 2015, based on the December 31, 2013 actuarial valuation, the present value of Hydro One's projected pension benefit obligation was estimated to be $7,683 million (2014 – $7,535 million). The fair value of pension plan assets available for these benefits was $6,731 million (2014 – $6,299 million).

### Post-Retirement and Post-Employment Benefits

During the year ended December 31, 2015, Hydro One Remote Communities charged $759 thousand (2014 – $941 thousand) of post-retirement and post-employment benefit costs to results of operations, and capitalized $326 thousand (2014 – $272 thousand) as part of the cost of property, plant and equipment. Benefits paid by the Company in 2015 were $51 thousand (2014 – $91 thousand). In addition, the incremental offset to decrease the associated post-retirement and post-employment benefits regulatory assets by $352 thousand (2014 – $302 thousand) was recorded on the Company's Balance Sheets to reflect the expected regulatory inclusion of this amount in future rates, which would otherwise be recorded in OCI.

The Company presents its post-retirement and post-employment benefit liability on the Balance Sheets within the following line items:

| **December 31** *(thousands of Canadian dollars)* | **2015** | **2014** |
|---|---|---|
| Accrued liabilities | 373 | 346 |
| Post-retirement and post-employment benefit liability | 13,517 | 12,862 |
| | 13,890 | 13,208 |

## 13. ENVIRONMENTAL LIABILITIES

The Company has accrued the following discounted amounts for environmental liabilities on the Balance Sheets at December 31, 2015 and 2014:

| **Year ended December 31** *(thousands of Canadian dollars)* | **2015** | **2014** |
|---|---|---|
| Environmental liabilities, January 1 | 12,369 | 13,426 |
| Interest accretion | 352 | 361 |
| Expenditures | (1,222) | (1,598) |
| Revaluation adjustment | (448) | 180 |
| Environmental liabilities, December 31 | 11,051 | 12,369 |
| Less: current portion | 1,483 | 1,301 |
| | 9,568 | 11,068 |

The following table shows the reconciliation between the undiscounted basis of the environmental liabilities and the amount recognized on the Balance Sheets after factoring in the discount rate:

| **December 31** *(thousands of Canadian dollars)* | **2015** | **2014** |
|---|---|---|
| Undiscounted environmental liabilities | 11,474 | 12,881 |
| Less: discounting accumulated liabilities to present value | 423 | 512 |
| Discounted environmental liabilities | 11,051 | 12,369 |

At December 31, 2015, the estimated future environmental expenditures were as follows:

| *(thousands of Canadian dollars)* | |
|---|---|
| 2016 | 1,483 |
| 2017 | 1,960 |
| 2018 | 1,891 |
| 2019 | 2,429 |
| 2020 | 3,711 |
| | 11,474 |

The Company records a liability for the estimated future expenditures for the contaminated LAR when it is determined that future environmental remediation expenditures are probable under existing statute or regulation and the amount of the future expenditures can be reasonably estimated.

There are uncertainties in estimating future environmental costs due to potential external events such as changes in legislation or regulations, and advances in remediation technologies. In determining the amounts to be recorded as environmental liabilities, the Company estimates the current cost of completing required work and makes assumptions as to when the future expenditures will actually be incurred, in order to generate future cash flow information. A long-term inflation rate assumption of approximately 2% has been used to express these current cost estimates as estimated future expenditures. Future expenditures have been discounted using a rate of 3.6%. All factors used in estimating the Company's environmental liabilities represent management's best estimates of the present value of costs required to meet existing legislation or regulations. However, it is reasonably possible that numbers or volumes of contaminated assets, cost estimates to perform work, inflation assumptions and the assumed pattern of annual cash flows may differ significantly from the Company's current assumptions.

The Company's best estimate of the total estimated future expenditures to complete its LAR program is $11,474 thousand. These expenditures are expected to be incurred over the period from 2016 to 2020. As a result of its annual review of environmental liabilities, the Company recorded a revaluation adjustment in 2015 to decrease the LAR environmental liability by $448 thousand (2014 – increase of $180 thousand).

## 14. SHARE CAPITAL

### Common Shares

The Company has 267 issued and outstanding common shares. The Company is authorized to issue an unlimited number of common shares.

The following table presents the movement in common shares during the year ended December 31, 2015. There was no movement in common shares during the year ended December 31, 2014.

| *(number of common shares)* | |
|---|---|
| Number of common shares – January 1, 2015 | 2 |
| Share split *(a)* | 200 |
| Common shares issued *(b)* | 64 |
| Common shares issued *(c)* | 1 |
| Number of common shares – December 31, 2015 | 267 |

(a) On November 2, 2015, all of the issued and outstanding common shares of Hydro Once Remote Communities were changed into 202 issued and outstanding common shares of the Company.

(b) On November 4, 2015, Hydro One Remote Communities issued 64 common shares to Hydro One for proceeds of $5 million.

(c) On November 3, 2015, Hydro One Remote Communities declared a stock dividend on its common shares, which due to the number of shares issued and the resulting effect on the price per share was treated as a stock split. On November 5, 2015, Hydro One Remote Communities effected a reverse split and issued as consideration one common share to Hydro One. There was no impact to the capital structure of Hydro One Remote Communities as a net result of the stock dividend and the reverse split.

### Dividends

The Company does not pay dividends under its breakeven business model.

## 15. STOCK-BASED COMPENSATION

The following compensation plans were established by Hydro One Limited, however they represent components of compensation costs of Hydro One and its subsidiaries, including Hydro One Remote communities, in current and future periods.

### Share Grant Plans

At December 31, 2015, Hydro One Limited had two share grant plans, one for the benefit of certain members of the Power Workers' Union (the PWU Share Grant Plan) and one for the benefit of certain members of The Society of Energy Professionals (the Society Share Grant Plan). Hydro One and Hydro One Limited entered into an intercompany agreement, such that Hydro One will pay Hydro One Limited for the compensation costs associated with these plans. The agreement requires Hydro One Remote Communities to reimburse Hydro One for the value of shares granted to the Company's eligible employees relating to these plans.

The PWU Share Grant Plan provides for the issuance of common shares of Hydro One Limited from treasury to certain eligible members of the Power Workers' Union annually, commencing on April 1, 2017 and continuing until the earlier of April 1, 2028 or the date an eligible employee no longer meets the eligibility criteria of the PWU Share Grant Plan. To be eligible, an employee must be a member of the Pension Plan on April 1, 2015, be employed on the date annual share issuance occurs and continue to have under 35 years of service. The requisite service period for the PWU share grant plan begins on July 3, 2015, which is the date the share grant plans were ratified by the PWU. The number of common shares issued annually to each eligible employee will be equal to 2.7% of such eligible employee's salary as at April 1, 2015, divided by $20.50, being the price of the common shares of Hydro One Limited in the IPO. The aggregate number of Hydro One Limited common shares issuable under the PWU Share Grant Plan shall not exceed 3,981,763 common shares. In 2015, 38,541 Hydro One Limited common shares were granted under the PWU Share Grant Plan to employees of Hydro One Remote Communities.

The Society Share Grant Plan provides for the issuance of common shares of Hydro One Limited from treasury to certain eligible members of The Society of Energy Professionals annually, commencing on April 1, 2018 and continuing until the earlier of April 1, 2029 or the date an eligible employee no longer meets the eligibility criteria of the Society Share Grant Plan. To be eligible, an employee must be a member of the Pension Plan on September 1, 2015, be employed on the date annual share issuance occurs and continue to have under 35 years of service. Therefore the requisite service period for the Society Share Grant Plan begins on September 1, 2015. The number of common shares issued annually to each eligible employee will be equal to 2.0% of such eligible employee's salary as at September 1, 2015, divided by $20.50, being the price of the common shares of Hydro One Limited in the IPO. The aggregate number of Hydro One Limited common shares issuable under the Society Share Grant Plan shall not exceed 1,434,686 common shares. In 2015, 14,655 Hydro One Limited common shares were granted under the Society Share Grant Plan to employees of Hydro One Remote Communities.

The fair value of the Hydro One Limited share grants is estimated based on the grant date Hydro One Limited share price of $20.50 and is recognized using the graded-vesting attribution method as the share grant plans have both a performance condition and a service condition. Total fair value of shares granted to employees of Hydro One Remote Communities in 2015 is $1,091 thousand (2014 – $nil). Total share based compensation recognized during 2015 by Hydro One Remote Communities was $99 thousand (2014 – $nil) and was recorded as a regulatory asset. The historical turnover rate relating to members of the Power Workers' Union and The Society of Energy Professionals is not believed to be reflective of a future turnover rate due to benefits conferred by the share grant plans. At December 31, 2015, the Company expects all eligible employees to receive the share grants until such time that they no longer meet the eligibility criteria and therefore, a forfeiture rate of 0% is assumed in amounts recognized during 2015. The Company will reevaluate this assumption in subsequent periods based on actual experience.

A summary of Hydro One Remote Communities' share grant activity under the Share Grant Plans as of December 31, 2015 is presented below:

| Year ended December 31, 2015 | Share Grants *(Number)* | Weighted-Average Price |
|---|---|---|
| **Outstanding – beginning of year** | – | – |
| Granted (non-vested) | 53,196 | $20.50 |
| **Outstanding – end of year** | 53,196 | – |

### Employee Share Ownership Plan

Effective December 15, 2015, Hydro One Limited established an Employee Share Ownership Plan (ESOP). Under the ESOP, certain eligible management and non-represented employees may contribute between 1% and 6% of their base salary towards purchasing common shares of Hydro One Limited. The Company will match 50% of the employee's contributions, up to a maximum Company contribution of $25,000 per calendar year. No contributions were made under the ESOP during 2015.

### Long-term Incentive Plan

Effective August 31, 2015, the Board of Directors of Hydro One Limited adopted a Long-term Incentive Plan (LTIP). Under the LTIP, long-term incentives will be granted to certain executive and management employees of Hydro One Limited and its subsidiaries, and all equity-based awards will be settled in newly-issued shares of Hydro One Limited from treasury, consistent with the provisions of the plan. The aggregate number of shares issuable under the LTIP shall not exceed 11,900,000 shares of Hydro One Limited.

The LTIP provides flexibility to award a range of vehicles, including restricted share units, performance share units, stock options, share appreciation rights, restricted shares, deferred share units and other share-based awards. The mix of vehicles is intended to vary by role to recognize the level of executive accountability for overall business performance. No long-term incentives were awarded during 2015.

## 16. RELATED PARTY TRANSACTIONS

Hydro One Remote Communities is a subsidiary of Hydro One. Hydro One is owned by Hydro One Limited, and the Province is the majority shareholder of Hydro One Limited. The OEFC and IESO are related parties to Hydro One Remote Communities because they are controlled or significantly influenced by the Province. Transactions between these parties and Hydro One Remote Communities are described below.

### IESO

- Hydro One Remote Communities receives amounts for RRRP from the IESO. RRRP amounts received for the year ended December 31, 2015 were $32,259 thousand (2014 – $32,259 thousand). Consistent with its breakeven business model, the Company recognized $30,441 thousand as RRRP revenue in 2015 (2014 – $34,852 thousand), with the difference recorded in the RRPR variance account.

### OEFC

- In 2015, Hydro One Remote Communities made a Departure Tax payment to the OEFC totaling $5 million (2014 – $nil).

The amounts due to and from related parties as a result of the transactions referred to above are as follows:

| **December 31** *(thousands of Canadian dollars)* | **2015** | **2014** |
|---|---|---|
| Accounts receivable | 95 | 106 |
| Income tax receivable | 327 | 2,683 |

Transactions with related parties occur at normal market prices or at a proxy for fair value based on the requirements of the OEB's Affiliate Relationships Code. Outstanding balances at period end are interest free and settled in cash.

### Hydro One and Subsidiaries

- The Company provides services to, and receives services from, Hydro One and its other subsidiaries. Amounts due to and from Hydro One and its other subsidiaries are settled through the inter-company demand facility.

  The Company has entered into various agreements with Hydro One and its other subsidiaries related to the provision of corporate functions and services, such as legal, financial and human resources services, and operational services, such as environmental, forestry, and line services. Revenues in 2015 include $213 thousand (2014 – $109 thousand) related to the provision of services to Hydro One and its other subsidiaries. Operation, maintenance and administration costs in 2015 include $2,973 thousand (2014 – $2,958 thousand) related to the purchase of services from Hydro One and its other subsidiaries.
- The Company's long-term debt is due to Hydro One. In addition, balances payable or receivable under the inter-company demand facility are due to or from Hydro One and its other subsidiaries. Financing charges include interest expense on the long-term debt in the amount of $1,655 thousand (2014 – $1,477 thousand), and interest expense on the inter-company demand facility in the amount of $65 thousand (2014 – $187 thousand). At December 31, 2015, the Company had accrued interest payable to Hydro One totaling $172 thousand (2014 – $172 thousand).
- On November 4, 2015, Hydro One Remote Communities issued 64 common shares to Hydro One for proceeds of $5 million.
- In 2015, Hydro One Limited established certain stock-based compensation plans, however they represent components of costs of Hydro One and its subsidiaries, including Hydro One Remote Communities in current and future periods. Hydro One and Hydro One Limited entered into an intercompany agreement, such that Hydro One will pay Hydro One Limited for the compensation costs associated with the share grant plans. The agreement requires Hydro One Remote Communities to reimburse Hydro One for the value of shares granted to the Company's eligible employees relating to these plans. At December 31, 2015, Hydro One Remote Communities had a payable of $99 thousand (2014 – $nil) to Hydro One associated with these plans. See Note 15 – Stock-based Compensation.

## 17. STATEMENTS OF CASH FLOWS

The changes in non-cash balances related to operations consist of the following:

| **Year ended December 31** *(thousands of Canadian dollars)* | **2015** | **2014** |
|---|---|---|
| Accounts receivable | 19 | 541 |
| Fuel, materials and supplies | (648) | (356) |
| Income taxes receivable | 2,356 | 14 |
| Long-term accounts receivable | 180 | (576) |
| Accounts payable | 468 | 173 |
| Accrued liabilities | (4,741) | 5,105 |
| Accrued interest | – | 30 |
| Income taxes payable | 37 | – |
| Post-retirement and post-employment benefit liability | 907 | 1,076 |
| | (1,422) | 6,007 |
| **Supplementary information:** | | |
| Net interest paid | 1,655 | 1,447 |
| Taxes paid | 5,000 | – |

As a result of using the cost recovery model applied to achieve after tax breakeven net income, any income tax expense paid are fully recovered.

## 18. CONTINGENCIES

### Legal Proceedings

Hydro One Remote Communities is involved in various lawsuits, claims and regulatory proceedings in the normal course of business. In the opinion of management, the outcome of such matters will not have a material adverse effect on the Company’s financial position, results of operations or cash flows.

In September 2015, Hydro One and three of its subsidiaries, including Hydro One Remote Communities, were served with a class action suit in which the representative plaintiff is seeking up to $125 million in damages related to allegations of improper billing practices. Hydro One intends to defend the action. Due to the preliminary stage of legal proceedings, an estimate of a possible loss related to this claim cannot be made.

### Transfer of Assets

The transfer orders by which Hydro One acquired certain of Ontario Hydro’s businesses as of April 1, 1999 did not transfer title to some assets located on Reserves (as defined in the *Indian Act* (Canada)). Currently, the OEFC holds these assets. Under the terms of the transfer orders, Hydro One is required to manage these assets until it has obtained all consents necessary to complete the transfer of title of these assets to itself. Hydro One cannot predict the aggregate amount that it may have to pay, either on an annual or one-time basis, to obtain the required consents. In 2015, Hydro One paid approximately $1 million (2014 – $1 million) in respect of these consents. If Hydro One or the Company cannot obtain the required consents, the OEFC will continue to hold these assets for an indefinite period of time. If Hydro One cannot reach a satisfactory settlement, it may have to relocate these assets to other locations at a cost that could be substantial or, in a limited number of cases, to abandon a line and replace it with diesel-generation facilities. The costs relating to these assets could have a material adverse effect on Hydro One’s and the Company’s results of operations if Hydro One is not able to recover them in future rate orders.

## 19. COMMITMENTS

### Operating Lease

Hydro One Remote Communities is committed as lessee to an operating lease agreement for use of reserve land to operate a hydro facility for a period of 10 years.

During the year ended December 31, 2015, the Company made lease payments totalling $120 thousand (2014 – $120 million). At December 31, 2015, the future minimum lease payments under non-cancellable operating leases were as follows: 2016 – $120 thousand; 2017 – $120 thousand; 2018 – $150 thousand; 2019 – $150 thousand; 2020 – $150 thousand; and thereafter – $300 thousand.

## 20. SUBSEQUENT EVENT

### Long-term Debt

On February 24, 2016, Hydro One Remote Communities issued a $10,000 thousand note with a maturity date of February 24, 2026 and a coupon rate of 2.79%. The note is payable to Hydro One Inc.

## FINANCIAL STATEMENTS

### DECEMBER 31, 2016

**HYDRO ONE REMOTE COMMUNITIES INC.**
**INDEPENDENT AUDITORS' REPORT**

To Directors of Hydro One Remote Communities Inc.

We have audited the accompanying financial statements of Hydro One Remote Communities Inc., which comprise the balance sheet as at December 31, 2016, the statements of operations and comprehensive income, changes in shareholder's equity (deficit) and cash flows for the year then ended, and notes, comprising a summary of significant accounting policies and other explanatory information.

*Management's Responsibility for the Financial Statements*

Management is responsible for the preparation and fair presentation of these financial statements in accordance with United States Generally Accepted Accounting Principles, and for such internal control as management determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

*Auditors' Responsibility*

Our responsibility is to express an opinion on these financial statements based on our audit. We conducted our audit in accordance with Canadian generally accepted auditing standards. Those standards require that we comply with ethical requirements and plan and perform the audit to obtain reasonable assurance about whether the financial statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the financial statements. The procedures selected depend on our judgment, including the assessment of the risks of material misstatement of the financial statements, whether due to fraud or error. In making those risk assessments, we consider internal control relevant to the entity's preparation and fair presentation of the financial statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management, as well as evaluating the overall presentation of the financial statements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

*Opinion*

In our opinion, the financial statements present fairly, in all material respects, the financial position of Hydro One Remote Communities Inc. as at December 31, 2016 and its results of operations and its cash flows for the year then ended in accordance with United States Generally Accepted Accounting Principles.

## 1. DESCRIPTION OF THE BUSINESS

Hydro One Inc. (Hydro One) was incorporated on December 1, 1998, under the Business Corporations Act (Ontario) and was wholly owned by the Province of Ontario (the Province) until October 31, 2015. On October 31, 2015, Hydro One Limited, a wholly owned subsidiary of the Province, acquired all issued and outstanding shares of Hydro One from the Province. The principal businesses of Hydro One are the transmission and distribution of electricity to customers within Ontario.

Hydro One Remote Communities Inc. (Hydro One Remote Communities or the Company) was incorporated on August 18, 1998 under the *Business Corporations Act* (Ontario) and is a wholly owned subsidiary of Hydro One. Hydro One Remote Communities operates 19 small electrical, generation and distribution systems in remote communities in northern Ontario that are not connected to the Province's electricity grid. The Company's business is regulated by the Ontario Energy Board (OEB).

## 2. SIGNIFICANT ACCOUNTING POLICIES

### Basis of Accounting

These Financial Statements are prepared and presented in accordance with United States (US) Generally Accepted Accounting Principles (GAAP) and in Canadian dollars. The Company uses a cost recovery model applied to achieve breakeven net income and the Financial Statements are prepared for the use of the OEB. Certain amounts presented in these Financial Statements represent allocations from Hydro One that are subject to review and approval by the OEB. Consolidated Financial Statements of Hydro One for the year ended December 31, 2016 have been prepared and are publicly available.

For the year ended December 31, 2015, the Company has reported a net loss due to recognition of tax expense resulting from the Company no longer being exempt from tax under the Federal Tax Regime. This tax is not recovered from ratepayers as it is funded by the Company's shareholder, and therefore, it is not included in the cost recovery model applied to achieve breakeven net income. See note 6 – Income Taxes.

Hydro One Remote Communities performed an evaluation of subsequent events through to April 27, 2017, the date these Financial Statements were available to be issued, to determine whether any events or transactions warranted recognition and disclosure in these Financial Statements. No such events or transactions were identified.

### Use of Management Estimates

The preparation of financial statements requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities at the date of the financial statements and the reported amounts of revenues, expenses, gains and losses during the reporting periods. Management evaluates these estimates on an ongoing basis based upon historical experience, current conditions, and assumptions believed to be reasonable at the time the assumptions are made, with any adjustments being recognized in results of operations in the period they arise. Significant estimates relate to regulatory assets and regulatory liabilities, environmental liabilities, post-retirement and post-employment benefits, asset impairments, contingencies, unbilled revenues, allowance for doubtful accounts, and deferred income tax assets and liabilities. Actual results may differ significantly from these estimates.

### Rate Setting

On March 17, 2016, the OEB approved an increase of 2.10% to Hydro One Remote Communities' basic rates for the distribution and generation of electricity, with an effective date of May 1, 2016.

### Regulatory Accounting

The OEB has the general power to include or exclude revenues, costs, gains or losses in the rates of a specific period, resulting in a change in the timing of accounting recognition from that which would have been applied in an unregulated company. Such change in timing involves the application of rate-regulated accounting, giving rise to the recognition of regulatory assets and liabilities. The Company's regulatory assets represent certain amounts receivable from future customers and costs that have been deferred for accounting purposes because it is probable that they will be recovered in future rates. In addition, the Company has recorded regulatory liabilities that generally represent amounts that are refundable to future customers. The Company continually assesses the likelihood of recovery of each of its regulatory assets and continues to believe that it is probable that the OEB will include its regulatory assets and liabilities in setting of future rates. If, at some future date, the Company judges that it is no longer probable that the OEB will include a regulatory asset or liability in setting future rates, the appropriate carrying amount would be reflected in results of operations in the period that the assessment is made.

Hydro One Remote Communities is regulated under a cost recovery model applied to achieve breakeven net income, after consideration of income taxes / provision for payments in lieu of corporate income taxes (PILs). Any excess or deficiency in Rural and Remote Rate Protection (RRRP) amounts necessary to lead to breakeven net income is added to, or drawn from, the Remote Rate Protection Revenue (RRPR) variance account. The balance in the RRPR variance account is subject to future review and disposition by the OEB.

The departure tax recovery is not recoverable from ratepayers and therefore is not included in the cost recovery model applied to achieve breakeven net income.

### Revenue Recognition

Revenues attributable to the generation and delivery of electricity are based on OEB-approved distribution rates and are recognized on an accrual basis and include billed and unbilled revenues. Billed revenues are based on electricity delivered as measured from customer meters. At the end of each month, electricity delivered to customers since the date of the last billed meter reading is estimated, and the corresponding unbilled revenue is recorded. The unbilled revenue estimate is affected by energy consumption, weather, and changes in the composition of customer classes.

Distribution revenue also includes RRRP which is an amount relating to rate protection for remote customers received from the Independent Electricity System Operator (IESO) based on a standardized customer rate that is approved by the OEB. Current legislation provides RRRP for prescribed classes of rural, residential and remote consumers by reducing the electricity rates that would otherwise apply.

Revenues are recorded net of indirect taxes.

### Accounts Receivable and Allowance for Doubtful Accounts

Billed accounts receivable are recorded at the invoiced amount, net of allowance for doubtful accounts. Unbilled accounts receivable are recorded at their estimated value. Overdue amounts related to regulated billings bear interest at OEB-approved rates. The allowance for doubtful accounts reflects the Company's best estimate of losses on billed accounts receivable balances. The Company estimates the allowance for doubtful accounts on billed accounts receivable by applying internally developed loss rates to the outstanding receivable balances by aging category. Loss rates applied to the billed accounts receivable balances are based on historical overdue balances, customer payments and write-offs. Accounts receivable are written-off against the allowance when they are deemed uncollectible. The allowance for doubtful accounts is affected by changes in volume, prices and economic conditions.

Long-term accounts receivable are recorded at their invoiced amount and represent amounts due from specified First Nation communities. The component of long-term accounts receivable that is energy-related does not bear interest. These amounts are reduced by fixed-interval payments, received monthly throughout the term of the agreement. Provision for uncollectible amounts for this component is set at the inception of the balance and is maintained until settlement of those amounts. The provision for this component is monitored and adjusted only if required with management discretion. The component of long-term accounts receivable that is non-energy related is reduced annually by a fixed incremental amount which is expensed through performance of the associated contract. There is no provision associated with these amounts.

### Income Taxes

On October 31, 2015, the Company ceased to be exempt from tax under the *Income Tax Act* (Canada) and the *Taxation Act*, 2007 (Ontario) (Federal Tax Regime). Prior to that date, Hydro One Remote Communities was required to make payments in lieu of corporate income taxes (PILs) to the Ontario Electricity Financial Corporation (OEFC) under the *Electricity Act*, 1998 (Ontario) (PILs Regime). These payments were calculated in accordance with the rules for computing income and other relevant amounts contained in the *Income Tax Act* (Canada) and the *Taxation Act, 2007* (Ontario), as modified by the *Electricity Act, 1998*, and related regulations. Upon exiting the PILs Regime, Hydro One Remote Communities is required to make corporate income tax payments to the Canada Revenue Agency (CRA) under the Federal Tax Regime.

Current and deferred income taxes are computed based on the tax rates and tax laws enacted as at the balance sheet date. Tax benefits associated with income tax positions taken, or expected to be taken, in a tax return are recorded only when the "more-likely-than-not" recognition threshold is satisfied and are measured at the largest amount of benefit that has a greater than 50% likelihood of being realized upon settlement. Management evaluates each position based solely on the technical merits and facts and circumstances of the position, assuming the position will be examined by a taxing authority having full knowledge of all relevant information. Significant management judgment is required to determine recognition thresholds and the related amount of tax benefits to be recognized in the Financial Statements. Management re-evaluates tax positions each period using new information about recognition or measurement as it becomes available.

<u>Deferred Income Taxes</u>

Deferred income taxes are provided for using the liability method. Deferred income taxes are recognized based on the estimated future tax consequences attributable to temporary differences between the carrying amount of assets and liabilities in the Financial Statements and their corresponding tax bases.

Deferred income tax liabilities are recognized on all taxable temporary differences. Deferred tax assets are recognized to the extent that it is more-likely-than-not that these assets will be realized from taxable income available against which deductible temporary differences can be utilized.

Deferred income taxes are calculated at the tax rates that are expected to apply in the period when the liability is settled or the asset is realized, based on the tax rates and tax laws that have been enacted as at the balance sheet date. Deferred income taxes that are not included in the rate-setting process are charged or credited to the Statements of Operations and Comprehensive Income (Loss).

If management determines that it is more-likely-than-not that some or all of a deferred income tax asset will not be realized, a valuation allowance is recorded against the deferred income tax asset to report the net balance at the amount expected to be realized. Previously unrecognized deferred income tax assets are reassessed at each balance sheet date and are recognized to the extent that it has become more-likely-than-not that the tax benefit will be realized.

The Company records regulatory assets and liabilities associated with deferred income taxes that will be included in the rate-setting process.

The Company uses the flow-through method to account for investment tax credits (ITCs) earned on eligible scientific research and experimental development expenditures, and apprenticeship job creation. Under this method, only non-refundable ITCs are recognized as a reduction to income tax expense.

**Inter-company Demand Facility**

Hydro One maintains pooled bank accounts for its use and for the use of its subsidiaries, including Hydro One Remote Communities. The balance in the inter-company demand facility represents the cumulative net effect of all deposits and withdrawals made by the Company to and from the pooled cash accounts. Interest is earned on positive inter-company balances based on the average of the bankers' acceptance rate at the beginning and end of the month, less 0.02%. Interest is charged on overdraft inter-company balances based on the same bankers' acceptance rate, plus 0.15%.

**Fuel, Materials and Supplies**

Fuel is used in the generation of electricity. Materials and supplies represent consumables, small spare parts and construction materials held for internal construction and maintenance of property, plant and equipment. These assets are carried at average cost less any impairments recorded.

**Property, Plant and Equipment**

Property, plant and equipment is recorded at original cost, net of customer contributions, and any accumulated impairment losses. The cost of additions, including betterments and replacement asset components, is included on the Balance Sheets as property, plant and equipment.

The original cost of property, plant and equipment includes direct materials, direct labour (including employee benefits), contracted services, attributable capitalized financing costs, and direct and indirect overheads that are related to the capital project or program. Indirect overheads include a portion of corporate costs such as finance, treasury, human resources, information technology and executive costs. Overhead costs, including corporate functions and field services costs, are capitalized on a fully allocated basis, consistent with an OEB-approved methodology.

Property, plant and equipment in service consists of generation, distribution, and administration and service assets. Property, plant and equipment also includes future use assets, such as major components and spare parts and capitalized project development costs associated with deferred capital projects.

Generation

Generation assets are used in the generation of electricity, including hydroelectric equipment, wind turbines, diesel generators, and tank farms.

Distribution

Distribution assets include assets related to the distribution of low-voltage electricity, including lines, poles, switches, transformers, protective devices, and metering systems.

Administration and Service

Administration and service assets include administrative buildings, personal computers, tools, and other minor assets.

**Capitalized Financing Costs**

Capitalized financing costs represent interest costs attributable to the construction of property, plant and equipment. The financing cost of attributable borrowed funds is capitalized as part of the acquisition cost of such assets. The capitalized financing costs are a reduction of financing charges recognized in the Statements of Operations and Comprehensive Income (Loss). Capitalized financing costs are calculated using the Company's weighted average effective cost of debt.

### Construction in Progress

Construction in progress consists of the capitalized cost of constructed assets that are not yet complete and which have not yet been placed in service.

### Depreciation

The cost of property, plant and equipment is depreciated on a straight-line basis based on the estimated remaining service life of each asset category. The Company periodically initiates an external independent review of its property, plant and equipment depreciation rates, as required by the OEB. Any changes arising from such a review are implemented on a remaining service life basis, consistent with their inclusion in electricity rates. The last review resulted in changes to rates effective January 1, 2013.

A summary of average service lives and depreciation and amortization rates for the various classes of assets is included below:

| | Average Service Life | Rate Range | Rate Average |
|---|---|---|---|
| Generation | 20 years | 3% – 7% | 5% |
| Distribution | 46 years | 1% – 7% | 2% |
| Administration and service | 36 years | 3% – 20% | 4% |

In accordance with group depreciation practices, the original cost of property, plant and equipment, or major components thereof, that are normally retired, is charged to accumulated depreciation with no gain or loss being reflected in results of operations. Where a disposition of property, plant and equipment occurs through sale, a gain or loss is calculated based on proceeds and such gain or loss is included in depreciation expense.

### Long-Lived Asset Impairment

When circumstances indicate the carrying value of long-lived assets may not be recoverable, the Company evaluates whether the carrying value of such assets has been impaired. For such long-lived assets, the Company evaluates whether impairment may exist by estimating future estimated undiscounted cash flows expected to result from the use and eventual disposition of the asset. When alternative courses of action to recover the carrying amount of a long-lived asset are under consideration, a probability-weighted approach is used to develop estimates of future undiscounted cash flows. If the carrying value of the long-lived asset is not recoverable based on the estimated future undiscounted cash flows, an impairment loss is recorded, measured as the excess of the carrying value of the asset over its fair value. As a result, the asset's carrying value is adjusted to its estimated fair value.

The carrying costs of most of Hydro One Remote Communities' long-lived assets are included in rate base where they earn an OEB-approved rate of return. Asset carrying values and the related return are recovered through approved rates. As a result, such assets are only tested for impairment in the event that the OEB disallows recovery, in whole or in part, or if such a disallowance is judged to be probable. As at December 31, 2016 and 2015, no asset impairment had been recorded.

### Costs of Arranging Debt Financing

For financial liabilities classified as other than held-for-trading, the Company defers the external transaction costs related to obtaining debt financing and presents such amounts net of related debt on the Balance Sheets. Deferred debt issuance costs are amortized over the contractual life of the related debt on an effective-interest rate basis and the amortization is included within financing charges in the Statements of Operations and Comprehensive Income (Loss). Transaction costs for items classified as held-for-trading are expensed immediately.

### Comprehensive Income

Comprehensive income is comprised of net income and other comprehensive income (OCI). OCI includes the amortization of net unamortized hedging losses on the Company's proportionate share of Hydro One's discontinued cash flow hedges. The Company amortizes its net unamortized hedging losses on discontinued cash flow hedges to financing charges using the effective interest method over the term of the associated hedged debt. Hydro One Remote Communities presents net income and OCI in a single continuous Statement of Operations and Comprehensive Income (Loss).

### Financial Assets and Liabilities

All financial assets and liabilities are classified into one of the following five categories: held-to-maturity; loans and receivables; held-for-trading; other liabilities; or available-for-sale. Financial assets and liabilities classified as held-for-trading are measured at fair value. All other financial assets and liabilities are measured at amortized cost, except accounts receivable which are measured at the lower of cost or fair value. Accounts receivable are classified as loans and receivables. The Company considers the carrying amount of accounts receivable to be a reasonable estimate of fair value because of the short time to maturity of these instruments. Provisions for impaired accounts receivable are recognized as adjustments to the allowance for doubtful accounts and are recognized when there is objective evidence that the Company will not be able to collect amounts according to the original terms.

The Company determines the classification of its financial assets and liabilities at the date of initial recognition. The Company designates certain of its financial assets and liabilities to be held at fair value, when it is consistent with the Company's risk management policy disclosed in note 11 – Fair Value of Financial Instruments and Risk Management.

### Derivative Instruments and Hedge Accounting

The Company currently does not engage in derivative trading or speculative activities and had no derivative instruments outstanding at December 31, 2016 and 2015. OCI includes the amortization of net unamortized hedging losses on the Company's proportionate share of Hydro One's discontinued cash flow hedges.

### Employee Future Benefits

Employee future benefits provided by Hydro One include pension, post-retirement and post-employment benefits. The costs of Hydro One's pension, post-retirement and post-employment benefit plans are recorded over the periods during which employees render service.

Hydro One recognizes the funded status of its defined benefit pension, post-retirement and post-employment plans on its Consolidated Balance Sheets and subsequently recognizes the changes in funded status at the end of each reporting year. Defined benefit pension, post-retirement and post-employment plans are considered to be underfunded when the projected benefit obligation exceeds the fair value of the plan assets. Liabilities are recognized on the Consolidated Balance Sheets of Hydro One for any net underfunded projected benefit obligation. The net underfunded projected benefit obligation may be disclosed as a current liability, long-term liability, or both. The current portion is the amount by which the actuarial present value of benefits included in the benefit obligation payable in the next 12 months exceeds the fair value of plan assets. If the fair value of plan assets exceeds the projected benefit obligation of the plan, an asset is recognized equal to the net overfunded projected benefit obligation. The post-retirement and post-employment benefit plans are unfunded because there are no related plan assets. For the year ended December 31, 2016, the measurement date for all plans was December 31.

Pension Benefits

Hydro One has a contributory defined benefit pension plan (Pension Plan) covering most regular employees of Hydro One and its subsidiaries, including Hydro One Remote Communities. The Pension Plan does not segregate assets in a separate account for individual subsidiaries, nor is the obligation of the pension plan allocated to, or funded separately by, entities within the consolidated group. Accordingly, for purposes of these Financial Statements, the Pension Plan is accounted for as a defined contribution plan and no pension benefit asset or liability is recorded.

Hydro One recognizes its contributions to the defined contribution pension plan as pension expense, with a portion being capitalized as part of labour costs included in capital expenditures. The expensed amount is included in operation, maintenance and administration costs in the Statements of Operations and Comprehensive Income (Loss).

A detailed description of Hydro One pension plans is provided in note 18 – Pension and Post-Retirement and Post-Employment Benefits, to the Consolidated Financial Statements of Hydro One for the year ended December 31, 2016.

Post-retirement and Post-employment Benefits

Hydro One has post-retirement and post-employment benefit plans covering all regular employees of Hydro One and its subsidiaries, including Hydro One Remote Communities. The benefit obligations of these post-retirement and post-employment benefit plans are not segregated, or funded separately, for Hydro One Remote Communities. Accordingly, for purposes of these Financial Statements, the post-retirement and post-employment benefit obligations are allocated to the Company based on base pensionable earnings.

The Company records a regulatory asset equal to its allocated share of Hydro One's incremental net unfunded projected benefit obligation for post-retirement and post-employment plans at each year end based on annual actuarial reports. The regulatory asset for the incremental net unfunded projected benefit obligation for post-retirement and post-employment plans, in absence of regulatory accounting, would be recognized in accumulated OCI. A regulatory asset is recognized because management considers it to be probable that post-retirement and post-employment benefit costs will be recovered in the future through the rate-setting process.

Post-retirement and post-employment benefits are recorded and included in rates on an accrual basis. Costs are determined by independent actuaries using the projected benefit method prorated on service and based on assumptions that reflect management's best estimates. Past service costs from plan amendments are amortized to results of operations based on the expected average remaining service period.

For post-retirement benefits, all actuarial gains or losses are deferred using the “corridor” approach. The amount calculated above the “corridor” is amortized to results of operations on a straight-line basis over the expected average remaining service life of active Hydro One employees in the plan and over the remaining life expectancy of inactive Hydro One employees in the plan. The post-retirement benefit obligation is remeasured to its fair value at each year end based on an annual actuarial report, with an offset to the associated regulatory asset, to the extent of the remeasurement adjustment.

For post-employment obligations, the actuarial gains and losses that are incurred during the year are recognized immediately to results of operations. The post-employment benefit obligation is remeasured to its fair value at each year end based on an annual actuarial report, with an offset to the associated regulatory asset, to the extent of the remeasurement adjustment.

All post-retirement and post-employment future benefit costs are attributed to labour and are either charged to results of operations or capitalized as part of the cost of property, plant and equipment.

A detailed description of Hydro One post-retirement and post-employment benefits is provided in note 18 – Pension and Post-Retirement and Post-Employment Benefits, to the Consolidated Financial Statements of Hydro One for the year ended December 31, 2016.

**Stock-Based Compensation**

Share Grant Plans

Hydro One measures share grant plans based on fair value of share grants as estimated based on the grant date Hydro One Limited’s share price. The costs are recognized in the financial statements using the graded-vesting attribution method for share grant plans that have both a performance condition and a service condition. The Company records a regulatory asset equal to the accrued costs of share grant plans recognized in each period. Forfeitures are recognized as they occur (see note 3).

Long-term Incentive Plan (LTIP)

The Company measures its LTIP at fair value based on the grant date share price of Hydro One Limited’s common shares. The related compensation expense is recognized over the vesting period on a straight-line basis. Forfeitures are recognized as they occur.

**Loss Contingencies**

Hydro One Remote Communities is involved in certain legal and environmental matters that arise in the normal course of business. In the preparation of its Financial Statements, management makes judgments regarding the future outcome of contingent events and records a loss for a contingency based on its best estimate when it is determined that such loss is probable and the amount of the loss can be reasonably estimated. Where the loss amount is recoverable in future rates, a regulatory asset is also recorded. When a range estimate for the probable loss exists and no amount within the range is a better estimate than any other amount, the Company records a loss at the minimum amount within the range.

Management regularly reviews current information available to determine whether recorded provisions should be adjusted and whether new provisions are required. Estimating probable losses may require analysis of multiple forecasts and scenarios that often depend on judgments about potential actions by third parties, such as federal, provincial and local courts or regulators. Contingent liabilities are often resolved over long periods of time. Amounts recorded in the Financial Statements may differ from the actual outcome once the contingency is resolved. Such differences could have a material impact on future results of operations, financial position and cash flows of the Company.

Provisions are based upon current estimates and are subject to greater uncertainty where the projection period is lengthy. A significant upward or downward trend in the number of claims filed, the nature of the alleged injuries, and the average cost of resolving each claim could change the estimated provision, as could any substantial adverse or favourable verdict at trial. A federal or provincial legislative outcome or structured settlement could also change the estimated liability. Legal fees are expensed as incurred.

**Environmental Liabilities**

Environmental liabilities are recorded in respect of past contamination when it is determined that future environmental remediation expenditures are probable under existing statute or regulation and the amount of the future expenditures can be reasonably estimated. Hydro One Remote Communities records a liability for the estimated future expenditures associated with contaminated land assessment and remediation (LAR) based on the present value of these estimated future expenditures. The Company determines the present value with a discount rate equal to its credit-adjusted risk-free interest rate on financial instruments with comparable maturities to the pattern of future environmental expenditures. As the Company anticipates that the future expenditures will continue to be recoverable in future rates, an offsetting regulatory asset has been recorded to reflect the future recovery of these environmental expenditures from customers. Hydro One Remote Communities reviews its estimates of future environmental expenditures annually or more frequently if there are indications that circumstances have changed.

### 3. NEW ACCOUNTING PRONOUNCEMENTS

The following tables present Accounting Standards Updates (ASUs) issued by the Financial Accounting Standards Board (FASB) that are applicable to Hydro One Remote Communities:

**Recently Adopted Accounting Guidance**

| ASU | Date issued | Description | Effective date | Impact on Hydro One |
|---|---|---|---|---|
| 2015-01 | January 2015 | Extraordinary items are no longer required to be presented separately in the income statement. | January 1, 2016 | No material impact upon adoption |
| 2015-03 | April 2015 | Debt issuance costs are required to be presented on the balance sheet as a direct deduction from the carrying amount of the related debt liability consistent with debt discounts or premiums. | January 1, 2016 | Reclassification of deferred debt issuance costs and net unamortized debt premiums as an offset to long-term debt. Applied retrospectively (see note 10). |
| 2015-05 | April 2015 | Cloud computing arrangements that have been assessed to contain a software licence should be accounted for as internal-use software. | January 1, 2016 | No material impact upon adoption |
| 2015-17 | November 2015 | All deferred tax assets and liabilities are required to be classified as noncurrent on the balance sheet. | January 1, 2017 | This ASU was early adopted as of April 1, 2016 and was applied prospectively. As a result, the current portions of the Company's deferred income tax assets are reclassified as noncurrent assets on the Balance Sheet. Prior periods were not retrospectively adjusted (see note 6). |
| 2016-09 | March 2016 | Several aspects of the accounting for stock-based payment transactions were simplified, including the income tax consequences, classification of awards as either equity or liabilities, and classification on the statement of cash flows. | January 1, 2017 | This ASU was early adopted as of October 1, 2016 and was applied retrospectively. As a result, the Company accounts for forfeitures as they occur. There were no other material impacts upon adoption. |

**Recently Issued Accounting Guidance Not Yet Adopted**

| ASU | Date issued | Description | Effective date | Anticipated impact on Hydro One |
|---|---|---|---|---|
| 2014-09<br>2015-14<br>2016-08<br>2016-10<br>2016-12<br>2016-20 | May 2014 – December 2016 | ASU 2014-09 was issued in May 2014 and provides guidance on revenue recognition relating to the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expects to be entitled in exchange for those goods and services. ASU 2015-14 deferred the effective date of ASU 2014-09 by one year. Additional ASUs were issued in 2016 that simplify transition and provide clarity on certain aspects of the new standard. | January 1, 2018 | Hydro One has completed its initial assessment and has identified relevant revenue streams. No quantitative determination has been made as a detailed assessment is now underway and will continue through to the third quarter of 2017, with the end result being a determination of the financial impact of this standard. The Company is on track for implementation of this standard by the effective date. |
| 2016-02 | February 2016 | Lessees are required to recognize the rights and obligations resulting from operating leases as assets (right to use the underlying asset for the term of the lease) and liabilities (obligation to make future lease payments) on the balance sheet. | January 1, 2019 | An initial assessment is currently underway encompassing a review of all existing leases, which will be followed by a detailed review of relevant contracts. No quantitative determination has been made at this time. The Company is on track for implementation of this standard by the effective date. |
| 2016-13 | June 2016 | The amendment provides users with more decision-useful information about the expected credit losses on financial instruments and other commitments to extend credit held by a reporting entity at each reporting date. | January 1, 2019 | Under assessment |
| 2016-15 | August 2016 | The amendments provide guidance for eight specific cash flow issues with the objective of reducing the existing diversity in practice. | January 1, 2018 | Under assessment |
| 2016-18 | November 2016 | The amendment requires that restricted cash or restricted cash equivalents be included with cash and cash equivalents when reconciling the beginning and end-of-period balances in the statement of cash flows. | January 1, 2018 | Under assessment |

## 4. DEPRECIATION AND AMORTIZATION

| Year ended December 31 *(thousands of dollars)* | 2016 | 2015 |
|---|---|---|
| Depreciation of property, plant and equipment | 2,751 | 2,711 |
| Asset removal costs | 620 | 968 |
| Amortization of regulatory assets | 1,247 | 1,223 |
| | 4,618 | 4,902 |

## 5. FINANCING CHARGES

| Year ended December 31 *(thousands of dollars)* | 2016 | 2015 |
|---|---|---|
| Interest on long-term debt | 1,915 | 1,655 |
| Interest expense (income) on inter-company demand facility | (48) | 65 |
| Amortization of hedging losses | 14 | 14 |
| Other | 31 | 41 |
| Interest capitalized on construction in progress | (115) | (97) |
| | 1,797 | 1,678 |

## 6. INCOME TAXES

Income taxes / provision for PILs differs from the amount that would have been recorded using the combined Canadian federal and Ontario statutory income tax rate. The reconciliation between the statutory and the effective tax rates is provided as follows:

| Year ended December 31 *(thousands of dollars)* | 2016 | 2015 |
|---|---|---|
| Income taxes / provision for PILs at statutory rate | 118 | 166 |
| Increase (decrease) resulting from: | | |
| Net temporary differences recoverable in future rates charged to customers: | | |
| Depreciation and amortization in excess of capital cost allowance | 364 | 1,112 |
| RRPR variance account | 296 | 482 |
| Post-retirement and post-employment benefit expense in excess of cash payments | 223 | 201 |
| Losses carryforward | – | (870) |
| Change in valuation allowance | (516) | – |
| Environmental expenditures | (330) | (324) |
| Overheads capitalized for accounting but deducted for tax purposes | (104) | (141) |
| Pension contribution in excess of pension expense | (76) | (119) |
| Interest capitalized for accounting but deducted for tax purposes | (31) | (26) |
| Other | (27) | 72 |
| Net temporary differences | (201) | 387 |
| Net tax expense resulting from transition from PILs Regime to Federal Tax Regime | – | 5,000 |
| Prior year adjustments | (15) | (3) |
| Other permanent differences | 25 | (9) |
| Total income taxes / provision for PILs | (73) | 5,541 |

The major components of income tax expense (recovery) are as follows:

| Year ended December 31 *(thousands of dollars)* | 2016 | 2015 |
|---|---|---|
| Current income taxes / provision for (recovery of) PILs | (73) | 5,541 |
| Deferred income taxes / provision for PILs | – | – |
| Total income taxes / provision for (recovery of) PILs | (73) | 5,541 |
| | | |
| Effective income tax rate | (16.2%) | 882% |

The provision for PILs / current income taxes is remitted to, or received from, the OEFC (PILs Regime) and the CRA (Federal Tax Regime), respectively. At December 31, 2016, the Company had $463 thousand receivable from the CRA (2015 – $37 thousand payable to the CRA) and $nil receivable from the OEFC (2015 – $327 thousand).

On October 31, 2015, the Company's exemption from tax under the Federal Tax Regime ceased to apply. Under the PILs Regime, the Company was deemed to have disposed of its assets immediately before it lost its tax exempt status under the

Federal Tax Regime, resulting in Hydro One Remote Communities making payments in lieu of tax (Departure Tax) totaling $5 million. To enable Hydro One Remote Communities to make the Departure Tax payment, Hydro One subscribed for 64 common shares of Hydro One Remote Communities for $5 million. The Company used the proceeds of this share subscription to pay the Departure Tax.

For the year ended December 31, 2016, the Company reported net income due to recognition of departure tax recovery. The following table presents a reconciliation of net income (loss) to net income under the cost recovery model to achieve breakeven net income:

| Year ended December 31 *(thousands of dollars)* | 2016 | 2015 |
|---|---|---|
| Net income before income taxes | 447 | 628 |
| Income taxes under cost-recovery model | 447 | 628 |
| Net income under cost-recovery model | – | – |
| Tax expense – Departure Tax | – | 5,000 |
| Tax recovery | (520) | (87) |
| Net income (loss) | 520 | (4,913) |

### Deferred Income Tax Assets and Liabilities

Deferred income tax assets and liabilities arise from differences between the carrying amounts and tax bases of the Company's assets and liabilities. At December 31, 2016 and 2015, deferred income tax assets and liabilities consisted of the following items:

| December 31 *(thousands of dollars)* | 2016 | 2015 |
|---|---|---|
| **Deferred income tax assets (liabilities)** | | |
| Post-retirement and post-employment benefits expense in excess of cash payments | 5,440 | 5,038 |
| Environmental expenditures | 12,924 | 3,984 |
| Depreciation and amortization in excess of capital cost allowance | 6,617 | 7,548 |
| Regulatory amounts not recognized for tax | (14,358) | (5,803) |
| Other | (299) | (215) |
| | 10,324 | 10,552 |
| Less: Valuation allowance | (6,106) | (6,622) |
| Total deferred income tax assets | 4,218 | 3,930 |
| Less: current portion | – | 125 |
| | 4,218 | 3,805 |

During 2016 and 2015, there was no change in the rate applicable to deferred tax assets and liabilities. The valuation allowance for deferred tax assets as at December 31, 2016 was $6,106 thousand (2015 – $6,622 thousand). The valuation allowance primarily relates to temporary differences for non-depreciable assets. As at December 31, 2016, the Company has non-capital losses of $55 thousand, which would expire in 2036.

## 7. ACCOUNTS RECEIVABLE

| December 31, 2016 *(thousands of dollars)* | Current accounts receivable | Long-term accounts receivable | Total |
|---|---|---|---|
| Accounts receivable – billed | 3,396 | 702 | 4,098 |
| Accounts receivable – unbilled | 2,302 | – | 2,302 |
| Accounts receivable, gross | 5,698 | 702 | 6,400 |
| Allowance for doubtful accounts | (141) | (57) | (198) |
| Accounts receivable, net | 5,557 | 645 | 6,202 |

| December 31, 2015 *(thousands of dollars)* | Current accounts receivable | Long-term accounts receivable | Total |
|---|---|---|---|
| Accounts receivable – billed | 3,514 | 1,181 | 4,695 |
| Accounts receivable – unbilled | 1,077 | – | 1,077 |
| Accounts receivable, gross | 4,591 | 1,181 | 5,772 |
| Allowance for doubtful accounts | (156) | (111) | (267) |
| Accounts receivable, net | 4,435 | 1,070 | 5,505 |

The following table shows the movements in the total allowance for doubtful accounts for the years ended December 31, 2016 and 2015:

| December 31 *(thousands of dollars)* | 2016 | 2015 |
|---|---|---|
| Allowance for doubtful accounts – January 1 | (267) | (304) |
| Write-offs | 69 | 67 |
| Adjustments to allowance for doubtful accounts | – | (30) |
| Allowance for doubtful accounts – December 31 | (198) | (267) |

## 8. PROPERTY, PLANT AND EQUIPMENT

| December 31, 2016 *(thousands of dollars)* | Property, Plant and Equipment[1] | Accumulated Depreciation | Construction in Progress | Total |
|---|---|---|---|---|
| Generation | 46,508 | 21,492 | 181 | 25,197 |
| Distribution | 10,542 | 2,234 | 476 | 8,784 |
| Administration and service | 12,496 | 2,904 | 53 | 9,645 |
| | 69,546 | 26,630 | 710 | 43,626 |

[1] Includes future use assets totalling $2,013 thousand.

| December 31, 2015 *(thousands of dollars)* | Property, Plant and Equipment[1] | Accumulated Depreciation | Construction in Progress | Total |
|---|---|---|---|---|
| Generation | 45,779 | 21,150 | 826 | 25,455 |
| Distribution | 9,780 | 2,049 | 312 | 8,043 |
| Administration and service | 11,716 | 2,594 | 50 | 9,172 |
| | 67,275 | 25,793 | 1,188 | 42,670 |

[1] Includes future use assets totalling $1,902 thousand.

Financing charges capitalized on property, plant and equipment under construction were $115 thousand in 2016 (2015 – $97 thousand).

## 9. REGULATORY ASSETS AND LIABILITIES

Regulatory assets and liabilities arise as a result of the rate-setting process. Hydro One Remote Communities has recorded the following regulatory assets and liabilities:

| December 31 *(thousands of dollars)* | 2016 | 2015 |
|---|---|---|
| **Regulatory assets:** | | |
| Environmental | 35,845 | 11,051 |
| RRPR variance account | 1,644 | 2,760 |
| Post-retirement and post-employment benefits | 2,334 | 2,285 |
| Stock-based compensation | 318 | 99 |
| Total regulatory assets | 40,141 | 16,195 |
| Less: current portion | 1,183 | 1,483 |
| | 38,958 | 14,712 |
| **Regulatory liabilities:** | | |
| Deferred income tax regulatory liability | 4,218 | 3,930 |
| Total regulatory liabilities | 4,218 | 3,930 |
| Less: current portion | – | 125 |
| | 4,218 | 3,805 |

### Environmental

The Company records a liability for the estimated future expenditures required to remediate environmental contamination. Because such expenditures are expected to be recoverable in future rates, the Company has recorded an equivalent amount as a regulatory asset. In 2016, the environmental regulatory asset increased by $25,732 thousand (2015 – decreased by $448 thousand) to reflect related changes in the Company's environmental liabilities. The environmental regulatory asset is amortized to results of operations based on the pattern of actual expenditures incurred and charged to environmental liabilities. The OEB has the discretion to examine and assess the prudency and the timing of recovery of all of the Company's actual environmental expenditures. In the absence of rate-regulated accounting, 2016 operation, maintenance and administration expenses would have been higher by $25,732 thousand (2015 – lower by $448 thousand). In addition, 2016 amortization expense would have been lower by $1,247 thousand (2015 – $1,222 thousand), and 2016 financing charges would have been higher by $309 thousand (2015 – $352 thousand).

### RRPR Variance Account

Hydro One Remote Communities receives RRRP amounts from the IESO. At December 31, 2016, the Company recognized a regulatory asset representing the amounts required to achieve breakeven net income, as regulated under the cost recovery model, in excess of cumulative RRRP amounts received. In 2016, RRRP amounts received were higher than amounts required to achieve breakeven net income, and as such, the regulatory asset was reduced by $1,116 thousand (2015 – $1,818 thousand). In the absence of rate-regulated accounting, 2016 revenue would have been higher by $1,116 thousand (2015 – $1,818 thousand).

### Post-Retirement and Post-Employment Benefits

The Company recognizes the net unfunded status of post-retirement and post-employment obligations on the Balance Sheets with an incremental offset to the associated regulatory assets. A regulatory asset is recognized because management considers it to be probable that post-retirement and post-employment benefit costs will be recovered in the future through the rate-setting process. The post-retirement and post-employment benefit obligation is remeasured to its fair value at each year end based on an annual actuarial report, with an offset to the associated regulatory asset, to the extent of the remeasurement adjustment. In the absence of rate-regulated accounting, 2016 OCI would have been lower by $49 thousand (2015 – higher by $352 thousand).

### Stock-based Compensation

The Company recognizes costs associated with share grant plans in a regulatory asset as management considers it probable that share grant plans costs will be recovered in the future through the rate-setting process. In the absence of rate-regulated accounting, 2016 operation, maintenance and administration expenses would have been higher by $156 thousand (2015 – $69 thousand).

### Deferred Income Tax Regulatory Liability

Deferred income taxes are recognized on temporary differences between the carrying amount of assets and liabilities in the financial statements and the corresponding tax bases used in the computation of taxable income. The Company has recognized regulatory assets and liabilities that correspond to deferred income taxes that flow through the rate-setting process. In the absence of rate-regulated accounting, the Company's income tax expense would have been recognized using the liability method and there would be no regulatory accounts established for taxes to be recovered through future rates. As a result, the 2016 income tax expense would have been higher by approximately $201 thousand (2015 – lower by $387 thousand).

## 10. LONG-TERM DEBT

The following table presents outstanding long-term debt at December 31, 2016 and 2015:

| December 31 *(thousands of dollars)* | 2016 | 2015 |
|---|---|---|
| 3.02% note due 2026[1] | 10,000 | – |
| 5.38% note due 2036 | 23,000 | 23,000 |
| 4.19% note due 2044 | 10,000 | 10,000 |
| | 43,000 | 33,000 |
| Less: Deferred debt issuance costs[2] | (179) | (144) |
| Less: Net unamortized debt premiums[2] | (38) | (35) |
| Long-term debt | 42,783 | 32,821 |

1 On February 24, 2016, Hydro One Remote Communities issued a $10 million note wi h a maturity date of February 24, 2026 and a coupon rate of 3.02%. The note is payable to Hydro One.

2 Effective January 1, 2016, deferred debt issuance costs and net unamortized debt discounts were reclassified from other long-term assets as an offset to long-term debt upon adoption of ASU 2015-03 (see note 3). Balances as at December 31, 2015 were updated to reflect the retrospective adoption of ASU 2015-03.

Principal repayments and related weighted average interest rates are summarized by the number of years to maturity in the following table:

| Years to Maturity | Long-term Debt Principal Repayments *(thousands of dollars)* | Weighted Average Interest Rate *(%)* |
|---|---|---|
| 1 – 5 years | – | – |
| 6 – 10 years | 10,000 | 3.0 |
| Over 10 years | 33,000 | 5.0 |
| | 43,000 | 4.6 |

Interest payment obligations related to long-term debt are summarized by year in the following table:

| Year | Interest Payments *(thousands of dollars)* |
|---|---|
| 2017 | 1,958 |
| 2018 | 1,958 |
| 2019 | 1,958 |
| 2020 | 1,958 |
| 2021 | 1,958 |
| | 9,790 |
| 2022-2026 | 9,642 |
| 2027+ | 19,089 |
| | 38,521 |

### 11. FAIR VALUE OF FINANCIAL INSTRUMENTS AND RISK MANAGEMENT

Fair value is considered to be the exchange price in an orderly transaction between market participants to sell an asset or transfer a liability at the measurement date. The fair value definition focuses on an exit price, which is the price that would be received in the sale of an asset or the amount that would be paid to transfer a liability.

Hydro One Remote Communities classifies its fair value measurements based on the following hierarchy, as prescribed by the accounting guidance for fair value, which prioritizes the inputs to valuation techniques used to measure fair value into three levels:

Level 1 inputs are unadjusted quoted prices in active markets for identical assets or liabilities that Hydro One Remote Communities has the ability to access. An active market for the asset or liability is one in which transactions for the asset or liability occur with sufficient frequency and volume to provide ongoing pricing information.

Level 2 inputs are those other than quoted market prices that are observable, either directly or indirectly, for an asset or liability. Level 2 inputs include, but are not limited to, quoted prices for similar assets or liabilities in an active market, quoted prices for identical or similar assets or liabilities in markets that are not active and inputs other than quoted market prices that are observable for the asset or liability, such as interest rate curves and yield curves observable at commonly quoted intervals, volatilities, credit risk and default rates. A Level 2 measurement cannot have more than an insignificant portion of the valuation based on unobservable inputs.

Level 3 inputs are any fair value measurements that include unobservable inputs for the asset or liability for more than an insignificant portion of the valuation. A Level 3 measurement may be based primarily on Level 2 inputs.

#### Non-Derivative Financial Assets and Liabilities

At December 31, 2016 and 2015, the Company's carrying amounts of accounts receivable, inter-company demand facility, and accounts payable are representative of fair value because of the short-term nature of these instruments.

**Fair Value Hierarchy**

The fair value hierarchy of financial assets and liabilities at December 31, 2016 and 2015 is as follows:

| December 31, 2016 *(thousands of dollars)* | Carrying Value | Fair Value | Level 1 | Level 2 | Level 3 |
|---|---|---|---|---|---|
| **Assets:** | | | | | |
| Inter-company demand facility | 7,253 | 7,253 | 7,253 | – | – |
| | 7,253 | 7,253 | 7,253 | – | – |
| **Liabilities:** | | | | | |
| Long-term debt | 42,783 | 48,588 | – | 48,588 | – |
| | 42,783 | 48,588 | – | 48,588 | – |

| December 31, 2015 *(thousands of dollars)* | Carrying Value | Fair Value | Level 1 | Level 2 | Level 3 |
|---|---|---|---|---|---|
| **Liabilities:** | | | | | |
| Inter-company demand facility | 6,056 | 6,056 | 6,056 | – | – |
| Long-term debt | 32,821 | 37,957 | – | 37,957 | – |
| | 38,877 | 44,013 | 6,056 | 37,957 | – |

The fair value of the long-term debt is based on unadjusted period-end market prices for the same or similar debt of the same remaining maturities.

There were no significant transfers between any of the fair value levels during the years ended December 31, 2016 and 2015.

**Risk Management**

Exposure to market risk, credit risk and liquidity risk arises in the normal course of the Company's business.

Market Risk

Market risk refers primarily to the risk of loss that results from changes in costs, foreign exchange rates and interest rates. The Company is exposed to fluctuations in interest rates related to the interest charges passed on by Hydro One on the outstanding inter-company demand facility. The Company is charged interest on overdraft inter-company balances based on the one-month bankers' acceptance rate, plus 0.15%. The Company is not currently exposed to material commodity price risk or material foreign exchange risk.

Credit Risk

Financial assets create a risk that a counterparty will fail to discharge an obligation, causing a financial loss. At December 31, 2016 and 2015, there were no significant concentrations of credit risk with respect to any class of financial assets. The Company's revenue is earned from a broad base of customers. As a result, Hydro One Remote Communities did not earn a significant amount of revenue from any single customer. At December 31, 2016 and 2015, there was no significant accounts receivable balance due from any single customer.

At December 31, 2016, the Company's provision for bad debts was $197 thousand (2015 – $267 thousand). Adjustments and write-offs were determined on the basis of a review of overdue accounts, taking into consideration historical experience. At December 31, 2016, approximately 40% (2015 – 44%) of the Company's net accounts receivable were aged more than 60 days. The Company's credit risk for accounts receivable is limited to the carrying amounts on its Balance Sheets.

Liquidity Risk

Liquidity risk refers to the Company's ability to meet its financial obligations as they come due. Hydro One Remote Communities meets its short-term liquidity requirements through the inter-company demand facility with Hydro One and funds from operations. The short-term liquidity available to the Company should be sufficient to fund normal operating requirements.

At December 31, 2016, accounts payable and accrued liabilities in the amount of $7,626 thousand (2015 – $5,721 thousand) are expected to be settled in cash at their carrying amounts within the next 12 months.

## 12. PENSION AND POST-RETIREMENT AND POST-EMPLOYMENT BENEFITS

Hydro One has a defined benefit pension plan (Pension Plan), a defined contribution pension plan (DC Plan), a supplementary pension plan, and post-retirement and post-employment benefit plans.

**Defined Contribution Pension Plan**

Hydro One established a DC Plan effective January 1, 2016. The DC Plan is mandatory and covers eligible management employees hired on or after January 1, 2016, as well as management employees hired before January 1, 2016 who were not eligible or had not irrevocably elected to join the Pension Plan as of September 30, 2015. Members of the DC Plan have an option to contribute 4%, 5% or 6% of their pensionable earnings, with matching contributions by Hydro One.

The Company's contributions to the DC Plan for the year ended December 31, 2016 were $8 thousand (2015 – $nil). At December 31, 2016, Company contributions payable included in accrued liabilities on the Balance Sheets were less than $1 thousand (2015 – $nil).

### Defined Benefit Pension Plan

The Pension Plan is a defined benefit contributory plan which covers all regular employees of Hydro One and its subsidiaries. The Pension Plan provides benefits based on highest three-year average pensionable earnings. For management employees who commenced employment on or after January 1, 2004, and for Society of Energy Professionals-represented staff hired after November 17, 2005, benefits are based on highest five-year average pensionable earnings. After retirement, pensions are indexed to inflation. Membership in the Pension Plan was closed to management employees who were not eligible or had not irrevocably elected to join the Pension Plan as of September 30, 2015. These employees are eligible to join the DC Plan.

Hydro One and employee contributions to the Pension Plan are based on actuarial valuations performed at least every three years. Annual Pension Plan contributions for 2016 of $108 million (2015 – $177 million) were based on an actuarial valuation effective December 31, 2015 (2015 – based on an actuarial valuation effective December 31, 2013) and the level of pensionable earnings. Estimated annual Pension Plan contributions for 2017 and 2018 are approximately $105 million and $102 million, respectively, based on the actuarial valuation as at December 31, 2015 and projected levels of pensionable earnings. Future minimum contributions beyond 2018 will be based on an actuarial valuation effective no later than December 31, 2018. Contributions are payable one month in arrears. All of the contributions are expected to be in the form of cash.

The Hydro One Supplemental Pension Plan (Supplemental Plan) provides members of the Pension Plan with benefits that would have been earned and payable under the Pension Plan but for limitations imposed by the *Income Tax Act* (Canada). The Supplemental Plan obligation is included with other post-retirement and post-employment benefit obligations on the Balance Sheets.

At December 31, 2016, the present value of Hydro One's projected pension benefit obligation was estimated to be $7,774 million (2015 – $7,683 million). The fair value of pension plan assets available for these benefits was $6,874 million (2015 – $6,731 million).

### Post-Retirement and Post-Employment Benefits

During the year ended December 31, 2016, Hydro One Remote Communities charged $866 thousand (2015 – $759 thousand) of post-retirement and post-employment benefit costs to results of operations, and capitalized $347 thousand (2015 – $325 thousand) as part of the cost of property, plant and equipment. Benefits paid by the Company in 2016 were $63 thousand (2015 – $51 thousand). In addition, the incremental offset to increase the associated post-retirement and post-employment benefits regulatory assets by $49 thousand (2015 – $351 thousand decrease) was recorded on the Company's Balance Sheets to reflect the expected regulatory inclusion of this amount in future rates, which would otherwise be recorded in OCI.

The Company presents its post-retirement and post-employment benefit liability on the Balance Sheets within the following line items:

| December 31 *(thousands of dollars)* | 2016 | 2015 |
|---|---|---|
| Accrued liabilities | 400 | 373 |
| Post-retirement and post-employment benefit liability | 14,689 | 13,517 |
| | 15,089 | 13,890 |

## 13. ENVIRONMENTAL LIABILITIES

The Company has accrued the following discounted amounts for environmental liabilities on the Balance Sheets at December 31, 2016 and 2015:

| Year ended December 31 *(thousands of dollars)* | 2016 | 2015 |
|---|---|---|
| Environmental liabilities, January 1 | 11,051 | 12,369 |
| Interest accretion | 309 | 352 |
| Expenditures | (1,247) | (1,222) |
| Revaluation adjustment | 25,732 | (448) |
| Environmental liabilities, December 31 | 35,845 | 11,051 |
| Less: current portion | 1,183 | 1,483 |
| | 34,662 | 9,568 |

The following table shows the reconciliation between the undiscounted basis of the environmental liabilities and the amount recognized on the Balance Sheets after factoring in the discount rate:

| December 31 *(thousands of dollars)* | 2016 | 2015 |
|---|---|---|
| Undiscounted environmental liabilities | 37,286 | 11,474 |
| Less: discounting accumulated liabilities to present value | 1,441 | 422 |
| Discounted environmental liabilities | 35,845 | 11,051 |

At December 31, 2016, the estimated future environmental expenditures were as follows:

| *(thousands of dollars)* | |
|---|---|
| 2017 | 1,183 |
| 2018 | 1,073 |
| 2019 | 1,794 |
| 2020 | 3,628 |
| 2021 | 3,203 |
| Thereafter | 26,405 |
| | 37,286 |

The Company records a liability for the estimated future expenditures for the contaminated LAR when it is determined that future environmental remediation expenditures are probable under existing statute or regulation and the amount of the future expenditures can be reasonably estimated.

There are uncertainties in estimating future environmental costs due to potential external events such as changes in legislation or regulations, and advances in remediation technologies. In determining the amounts to be recorded as environmental liabilities, the Company estimates the current cost of completing required work and makes assumptions as to when the future expenditures will actually be incurred, in order to generate future cash flow information. A long-term inflation rate assumption of approximately 2% has been used to express these current cost estimates as estimated future expenditures. Future expenditures have been discounted using factors ranging from approximately 2.3% to 3.6%, depending on the appropriate rate for the period when expenditures are expected to be incurred. All factors used in estimating the Company's environmental liabilities represent management's best estimates of the present value of costs required to meet existing legislation or regulations. However, it is reasonably possible that numbers or volumes of contaminated assets, cost estimates to perform work, inflation assumptions and the assumed pattern of annual cash flows may differ significantly from the Company's current assumptions.

The Company's best estimate of the total estimated future expenditures to complete its LAR program is $37,286 thousand (2015 – $11,474 thousand). These expenditures are expected to be incurred over the period from 2017 to 2044. As a result of its annual review of environmental liabilities, the Company recorded a revaluation adjustment in 2016 to increase the LAR environmental liability by $25,732 thousand (2015 – decrease of $448 thousand).

## 14. SHARE CAPITAL

### Common Shares

The Company has 267 issued and outstanding common shares. The Company is authorized to issue an unlimited number of common shares.

The following table presents the movement in common shares during the year ended December 31, 2015. There was no movement in common shares during the year ended December 31, 2016.

| *(number of common shares)* | |
|---|---|
| Number of common shares – January 1, 2015 | 2 |
| Share split *(a)* | 200 |
| Common shares issued *(b)* | 64 |
| Common shares issued *(c)* | 1 |
| Number of common shares – December 31, 2015 | 267 |

(a) On November 2, 2015, all of the issued and outstanding common shares of Hydro Once Remote Communities were changed into 202 issued and outstanding common shares of the Company.

(b) On November 4, 2015, Hydro One Remote Communities issued 64 common shares to Hydro One for proceeds of $5 million.

(c) On November 3, 2015, Hydro One Remote Communities declared a stock dividend on its common shares, which due to the number of shares issued and the resulting effect on the price per share was treated as a stock split. On November 5, 2015, Hydro One Remote Communities effected a reverse split and issued as consideration one common share to Hydro One. There was no impact to the capital structure of Hydro One Remote Communities as a net result of the stock dividend and the reverse split.

### Dividends

The Company does not pay dividends under its breakeven business model.

## 15. STOCK-BASED COMPENSATION

The following compensation plans were established by Hydro One Limited; however they represent components of compensation costs of Hydro One and its subsidiaries, including Hydro One Remote communities, in current and future periods.

### Share Grant Plans

At December 31, 2016, Hydro One Limited had two share grant plans (Share Grant Plans), one for the benefit of certain members of the Power Workers' Union (the PWU Share Grant Plan) and one for the benefit of certain members of The Society of Energy Professionals (the Society Share Grant Plan). Hydro One and Hydro One Limited entered into an intercompany agreement, such that Hydro One will pay Hydro One Limited for the compensation costs associated with these plans. The agreement requires Hydro One Remote Communities to reimburse Hydro One for the value of shares granted to the Company's eligible employees relating to these plans.

The PWU Share Grant Plan provides for the issuance of common shares of Hydro One Limited from treasury to certain eligible members of the Power Workers' Union annually, commencing on April 1, 2017 and continuing until the earlier of April 1, 2028 or the date an eligible employee no longer meets the eligibility criteria of the PWU Share Grant Plan. To be eligible, an employee must be a member of the Pension Plan on April 1, 2015, be employed on the date annual share issuance occurs and continue to have under 35 years of service. The requisite service period for the PWU Share Grant Plan begins on July 3, 2015, which is the date the share grant plan was ratified by the PWU. The number of common shares issued annually to each eligible employee will be equal to 2.7% of such eligible employee's salary as at April 1, 2015, divided by $20.50, being the price of the common shares of Hydro One Limited in the IPO. The aggregate number of Hydro One Limited common shares issuable under the PWU Share Grant Plan shall not exceed 3,981,763 common shares. In 2015, 38,541 Hydro One Limited common shares were granted under the PWU Share Grant Plan to employees of Hydro One Remote Communities.

The Society Share Grant Plan provides for the issuance of common shares of Hydro One Limited from treasury to certain eligible members of The Society of Energy Professionals annually, commencing on April 1, 2018 and continuing until the earlier of April 1, 2029 or the date an eligible employee no longer meets the eligibility criteria of the Society Share Grant Plan. To be eligible, an employee must be a member of the Pension Plan on September 1, 2015, be employed on the date annual share issuance occurs and continue to have under 35 years of service. Therefore the requisite service period for the Society Share Grant Plan begins on September 1, 2015. The number of common shares issued annually to each eligible employee will be equal to 2.0% of such eligible employee's salary as at September 1, 2015, divided by $20.50, being the price of the common shares of Hydro One Limited in the IPO. The aggregate number of Hydro One Limited common shares issuable under the Society Share Grant Plan shall not exceed 1,434,686 common shares. In 2015, 14,655 Hydro One Limited common shares were granted under the Society Share Grant Plan to employees of Hydro One Remote Communities.

The 2015 fair value of Hydro One Limited shares granted to employees of Hydro One Remote Communities was $1,091 thousand. The fair value was estimated based on the grant date Hydro One Limited share price of $20.50 and is recognized using the graded-vesting attribution method as the share grant plans have both a performance condition and a service condition. No shares were granted under the Share Grant Plans in 2016. Total stock-based compensation recognized during 2016 by Hydro One Remote Communities was $219 thousand (2015 – $99 thousand) and was recorded as a regulatory asset.

A summary of Hydro One Remote Communities' share grant activity under the Share Grant Plans during years ended December 31, 2016 and 2015 is presented below:

| Year ended December 31, 2016 | Share Grants *(Number of common shares)* | Weighted-Average Price |
|---|---|---|
| Share grants outstanding – January 1 | 53,196 | $20.50 |
| Granted (non-vested) | – | – |
| Share grants forfeited | (9) | $20.50 |
| Share grants transferred in[1] | 3,455 | $20.50 |
| Share grants transferred out[2] | (2,921) | $20.50 |
| Share grants outstanding – December 31 | 53,721 | $20.50 |

[1] Share grants transferred in relate to PWU employees transferred from Hydro One Networks to Hydro One Remote Communities. These employees have been granted Hydro One Limited shares under the PWU Share Grant Plan in 2015.

[2] Share grants transferred out relate to PWU employees transferred from Hydro One Remote Communi ies to Hydro One Networks. These employees have been granted Hydro One Limited shares under the PWU Share Grant Plan in 2015.

| Year ended December 31, 2015 | Share Grants *(Number of common shares)* | Weighted-Average Price |
|---|---|---|
| Share grants outstanding – January 1 | – | – |
| Granted (non-vested) | 53,196 | $20.50 |
| Share grants outstanding – December 31 | 53,196 | $20.50 |

**Employee Share Ownership Plan**

Effective December 15, 2015, Hydro One Limited established an Employee Share Ownership Plan (ESOP). Under the ESOP, certain eligible management and non-represented employees may contribute between 1% and 6% of their base salary towards purchasing common shares of Hydro One Limited. The Company matches 50% of the employee's contributions, up to a maximum Company contribution of $25,000 per calendar year. In 2016, Company contributions made under the ESOP were $19 thousand (2015 – $nil).

**Long-term Incentive Plan**

Effective August 31, 2015, the Board of Directors of Hydro One Limited adopted an LTIP. Under the LTIP, long-term incentives are granted to certain executive and management employees of Hydro One Limited and its subsidiaries, and all equity-based awards will be settled in newly-issued shares of Hydro One Limited from treasury, consistent with the provisions of the plan. The aggregate number of shares issuable under the LTIP shall not exceed 11,900,000 shares of Hydro One Limited.

The LTIP provides flexibility to award a range of vehicles, including restricted share units (RSUs), performance share units (PSUs), stock options, share appreciation rights, restricted shares, deferred share units and other stock-based awards. The mix of vehicles is intended to vary by role to recognize the level of executive accountability for overall business performance.

During 2016, Hydro One Limited granted awards under its LTIP to employees of Hydro One Remote Communities, consisting of PSUs and RSUs, all of which are equity settled in Hydro One Limited shares, as follows:

| Year ended December 31, 2016 | Number of PSUs | Number of RSUs |
|---|---|---|
| Units outstanding – January 1 | – | – |
| Units granted | 2,581 | 2,729 |
| Units forfeited | – | – |
| Units outstanding – December 31 | 2,581 | 2,729 |

The grant date total fair value of the awards was $133 thousand (2015 – $nil). The compensation expense recognized by the Company relating to these awards during 2016 was $21 thousand (2015 – $nil).

## 16. RELATED PARTY TRANSACTIONS

Hydro One Remote Communities is a subsidiary of Hydro One. Hydro One is owned by Hydro One Limited, and the Province is the majority shareholder of Hydro One Limited. The IESO and OEFC are related parties to Hydro One Remote Communities because they are controlled or significantly influenced by the Province.

| | | Year ended December 31 | |
|---|---|---|---|
| | | 2016 | 2015 |
| Related Party | Transaction | *(thousands of dollars)* | |
| IESO | Supply of electricity to remote northern communities – amounts received[1] | 32,259 | 32,259 |
| OEFC | Departure tax payment | – | 5,000 |
| Hydro One Limited and its subsidiaries | Common shares issued[2] | – | 5,000 |
| | Revenues related to the provision of services[3] | 469 | 213 |
| | Costs expensed related to purchase of services[3] | 2,965 | 2,973 |
| | Interest expense on long-term debt | 1,915 | 1,655 |
| | Interest expense (income) on inter-company demand facility | (48) | 65 |
| | Stock-based compensation costs | 219 | 99 |

[1] Consistent with the break even business model, the Company recognized $31,143 thousand as RRRP revenue in 2016 (2015 – $30,441 thousand), with the difference recorded in the regulatory asset RRPR variance account.

[2] On November 4, 2015, Hydro One Remote Communities issued 64 common shares to Hydro One for proceeds of $5 million.

[3] The Company has entered into various agreements with Hydro One and its other subsidiaries related to the provision of corporate functions and services, such as legal, financial and human resources services, and operational services, such as environmental, forestry, and line services.

Transactions with related parties are based on the requirements of the OEB's Affiliate Relationships Code. Outstanding balances at period end are interest free and settled in cash.

The amounts due to and from related parties as a result of the transactions referred to above are as follows:

| December 31 *(thousands of dollars)* | 2016 | 2015 |
|---|---|---|
| Inter-company demand facility | 7,253 | (6,056) |
| Accrued interest | 280 | 172 |
| Accounts receivable | – | 95 |
| Income tax receivable | – | 327 |

## 17. STATEMENTS OF CASH FLOWS

The changes in non-cash balances related to operations consist of the following:

| Year ended December 31 *(thousands of dollars)* | 2016 | 2015 |
|---|---|---|
| Accounts receivable | (1,122) | 19 |
| Fuel, materials and supplies | 264 | (648) |
| Income taxes receivable | (136) | 2,356 |
| Long-term accounts receivable | 425 | 180 |
| Other assets | (24) | – |
| Accounts payable | 39 | 468 |
| Accrued liabilities | 2,231 | (4,741) |
| Accrued interest | 108 | – |
| Income taxes payable | (37) | 37 |
| Post-retirement and post-employment benefit liability | 1,123 | 1,007 |
| | 2,871 | (1,322) |
| **Supplementary information:** | | |
| Net interest paid | 1,807 | 1,655 |
| Taxes paid | – | 5,000 |

As a result of using the cost recovery model applied to achieve after tax breakeven net income, any income tax expense paid are fully recovered.

## 18. CONTINGENCIES

### Legal Proceedings

Hydro One Remote Communities is involved in various lawsuits, claims and regulatory proceedings in the normal course of business. In the opinion of management, the outcome of such matters will not have a material adverse effect on the Company's financial position, results of operations or cash flows.

Hydro One and three of its subsidiaries, including Hydro One Remote Communities, are defendants in a class action suit in which the representative plaintiff is seeking up to $125 million in damages related to allegations of improper billing practices. A certification motion in the class action is pending. Due to the preliminary stage of legal proceedings, an estimate of a possible loss related to this claim cannot be made.

### Transfer of Assets

The transfer orders by which Hydro One acquired certain of Ontario Hydro's businesses as of April 1, 1999 did not transfer title to some assets located on Reserves (as defined in the *Indian Act* (Canada)). Currently, the OEFC holds these assets. Under the terms of the transfer orders, Hydro One is required to manage these assets until it has obtained all consents necessary to complete the transfer of title of these assets to itself. Hydro One cannot predict the aggregate amount that it may have to pay, either on an annual or one-time basis, to obtain the required consents. In 2016, Hydro One paid approximately $1 million (2015 – $1 million) in respect of consents obtained. If Hydro One or the Company cannot obtain the required consents, the OEFC will continue to hold these assets for an indefinite period of time. If Hydro One cannot reach a satisfactory settlement, it may have to relocate these assets to other locations at a cost that could be substantial or, in a limited number of cases, to abandon a line and replace it with diesel-generation facilities. The costs relating to these assets could have a material adverse effect on Hydro One's and the Company's results of operations if Hydro One is not able to recover them in future rate orders.

## 19. COMMITMENTS

### Operating Lease

Hydro One Remote Communities is committed as lessee to an operating lease agreement for use of reserve land to operate a hydro facility for a period of 10 years. During the year ended December 31, 2016, the Company made lease payments totalling $120 thousand (2015 – $120 thousand). The following table presents a summary of Hydro One Remote Communities' commitments under lease agreements due in the next 5 years and thereafter.

| December 31, 2016 *(thousands of dollars)* | Year 1 | Year 2 | Year 3 | Year 4 | Year 5 | Thereafter |
|---|---|---|---|---|---|---|
| Operating lease commitments | 120 | 150 | 150 | 150 | 150 | 150 |

To Board of Directors of Hydro One Remote Communities Inc.

As specifically agreed, we have performed the specified auditing procedures below in connection with your filing of financial information with the Ontario Energy Board with respect to adjustments from the audited financial statements of Hydro One Remotes Communities Inc. to the 'Regulated' Hydro One Remotes financial information as at and for the year ended December 31, 2016 (hereinafter referred to "financial information") of Hydro One Remote Communities Inc. ("the Entity" or "Hydro One Remotes"). The specified auditing procedures are summarized, along with the findings, as follows:

| **Specified Auditing Procedures Performed** | **Findings** |
|---|---|
| 1) Obtain from Hydro One Remote Communities Inc. ("Hydro One Remotes") the reconciliation from the audited financial statements of Hydro One Remotes to the 'Regulated' Hydro One Remotes financial information, as follows:<br>a) Balance Sheet as at December 31, 2016<br>b) Net income and other comprehensive income for the year ended December 31, 2016 | No exceptions |
| 2) Obtain the analyses and documents prepared by Hydro One Remotes management supporting each of the adjustments identified in the reconciliation obtained in procedure 1. | No exceptions |
| 3) Trace the reconciliation balances as follows:<br>a) Agree the "2016 audited financial statements" column to the audited financial statements of Hydro One Remotes as at and for the period ended December 31, 2016;<br>b) Agree the "Non Regulated Segment" column to the analysis and documents prepared by Hydro One Remotes management obtained in procedure 2;<br>c) Recalculate the "Regulated Segment" based on amounts in procedures 3(a) and 3(b). | No exceptions |

We make no representation regarding the appropriateness and sufficiency of the specified auditing procedures. These specified auditing procedures do not constitute an audit or review of the financial information, and therefore we are unable to and do not provide any assurance on financial information of the Entity.

Our report is intended solely for the Board of Directors of the Entity and the Ontario Energy Board and should not be distributed or used by parties other than Board of Directors of Hydro One Remote Communities Inc. and the Ontario Energy Board.

# ANNUAL REPORT 2013

Every day Hydro One employees go to extraordinary lengths to take care of our customers and each other. During the December 2013 ice storm, 1,400 employees answered the call and gave up time with their families to get the lights back on.

We are committed to providing Ontarians with safe, reliable and affordable power 24/7, 365 days a year.

**Ontarians rely on us and we deliver. Each and every day.**

Serving our customers isn't just about answering the phone and driving a truck. It's about climbing a pole in freezing temperatures to restore power. It's about stopping at the side of the road to help our customers. It's any time we interact with anyone outside our Company.

> "The Company continued its investments in the province's electricity system for the benefit of all Ontarians, as well as strengthening its commitment to provide a firm business model to its sole shareholder, the Province of Ontario."

# LETTER FROM THE CHAIR

Hydro One's commitment to delivering safe, reliable and affordable electricity to the people of Ontario remained foremost in our minds in 2013.

The Company continued its investments in the province's electricity system for the benefit of all Ontarians, as well as strengthening its commitment to provide a firm business model to its sole shareholder, the Province of Ontario.

From a financial standpoint, the year was a great success. Hydro One's net income reached $803 million for the year, compared to $745 million in 2012.

The 8 per cent increase was mainly due to efforts to reduce operating, maintenance and administrative costs. Additionally, the Company experienced higher revenues largely due to an increase in the Ontario Energy Board's regulated price plan rate-setting process and the Independent Electricity System Operator's spot market. Higher energy consumption and peak demand in the summer and winter months also contributed to higher revenues.

The Company's capital investments reached $1,394 million in 2013 due to the severe summer and winter storms, as well as investments in several infrastructure projects, including the completion of the Commerce Way Transformer Station and the Summerhaven 230 kV Switching Station.

Hydro One paid dividends of $218 million to the Province in 2013, and recorded a provision of $109 million for payments in lieu of corporate income taxes.

Our Company's response to the severe storms in 2013, particularly Toronto's July flood and December ice storm, is something of which we can all be proud.

While we continued to demonstrate our ability to deliver safe and reliable electricity and to provide excellent returns to our shareholder, affordability for our customers is a cause for concern. The Province's 2013 Long-Term Energy Plan (LTEP) indicates that electricity prices will continue to rise. While this increase will be caused more by the cost of the electricity itself rather than by our delivery charges, we will have to be even more vigilant as to our costs going forward.

There were important strategic successes during the year:

1. The LTEP designated our Company to develop and seek approval for the Northwest Bulk Transmission Line Project, a significant reinforcement of the transmission system in the area west of Thunder Bay.

2. The Board of Directors approved a robust, but prudent, local distribution company (LDC) consolidation strategy to facilitate consolidation of Ontario's distribution sector. The agreement reached by our Company in 2013 to acquire Norfolk Power was an important first step in pursuing this strategy.

There was, however, a serious disappointment. In May 2013, our Company transitioned to a new customer billing system, a project over which the Board had detailed oversight. Some of our distribution customers experienced prolonged billing and related service issues as a result of the transition to the new system to a degree that was surprising and, indeed, unacceptable. This has led to an investigation by the provincial Ombudsman. However, the Board is confident that senior management is entirely focused on resolving these issues and delivering the service that our customers have a right to expect. Board oversight on this matter will remain a priority in 2014.

I would like to thank all Hydro One employees and my colleagues on the Board for their dedication and commitment to the Company and to the people of Ontario.

**James Arnett**
Chair of the Board of Directors

“During the December ice storm, more than 585,000 customers were affected, with 1,400 Hydro One employees working around the clock to repair the damage caused by freezing rain and to restore electricity service to our customers.”

# LETTER FROM THE PRESIDENT AND CEO

Our Company’s success is determined by how well we serve the people of Ontario. Every employee who wears the Hydro One logo goes to work every day knowing that people count on us to make sure that electricity travels safely and reliably from where it’s generated to where it’s used to power life.

In 2013, we focused on improving our customer service and demonstrating excellence in running our business.

Serving our customers well often means responding in times of emergency. In a year of unprecedented storms, Hydro One employees worked quickly and safely to restore power to 2,556,000 customers affected by nine large storms that brought record rainfall, high winds and severe ice conditions.

During the December ice storm, more than 585,000 customers were affected, with 1,400 Hydro One employees working around the clock to repair the damage caused by freezing rain and to restore electricity service to our customers.

In May, we launched our new Customer Information System to replace a system that was no longer supported and had reached the end of its useful life. For 95 per cent of our customers, the move to the new system was seamless. But for about five per cent of our customers, the new system caused errors and we did not move quickly enough to solve their problems. These service issues will ultimately be resolved and Hydro One will continue to work to restore the confidence of these customers.

We are also measured by how well we perform as a commercial business, an important part of our mandate from the Province. Hydro One continued to demonstrate its value to the Province, exceeding its financial targets and working to control costs by improving the efficiency of our work programs and negotiating increased pension contribution ratios with two of our unions and our management employees.

During 2013, we made capital investments of $1,394 million to improve system reliability, to address our aging power system so we can improve service to our customers and to facilitate the connection of new generation.

I would like to thank our Board of Directors for their support, my leadership team for their dedication to improving our Company and our employees for their commitment to working safely in the service of our customers.

**Carmine Marcello**
President and Chief Executive Officer

# SAFETY

## EVERY DAY RESPONSIBILITY: FOR OUR SAFETY AND YOURS

Safety each and every day means a commitment to a workplace where all employees work together to ensure a safe work environment for all. It means looking out for one another just as much as it means staying alert and focused on the job at hand. We work safely to deliver the ultimate value to our customers. Power.

Hydro One was certified in the internationally recognized Occupational Health and Safety Assessment Series (OHSAS) 18001 standard on June 28, 2013 after an 18-month effort.

## We have nothing without safety.

**INJURY-FREE WORKPLACE**

2.5 medical attentions per 200,000 hours worked in 2013

The electricity industry is an unforgiving, potentially hazardous environment where a single wrong move could result in a series of dangerous events.

To make sure every employee goes home safe and sound, Hydro One is committed to fostering a work environment where health and safety are the top priorities each and every day. This work culture guarantees that the right people are trained for the right jobs. It also maintains the safety of all Hydro One employees and Ontarians.

## OHSAS 18001 CERTIFICATION

In June 2013, Hydro One was certified in the internationally recognized Occupational Health and Safety Assessment Series (OHSAS) 18001 standard. This prestigious certification further enforces the Company's commitment to creating a culture of zero workplace injuries. It is also a significant milestone in our history in sustaining our world-class Health and Safety management system.

## HEALTH AND SAFETY PERFORMANCE RECOGNITION

The aim of the 2013 Health and Safety Performance Recognition program was to celebrate individual and team safety milestone achievements throughout the Company, as well as to improve the employee health and safety performance recognition process.

## INJURY-FREE WORKPLACE

Hydro One has seen a steady decrease in both "near misses" (high Maximum Reasonable Potential for Harm incidents) and the number of preventable motor vehicle accidents year-over-year. As in previous years, Hydro One used medical attentions as a performance indicator to measure its injury-free workplace goal in 2013. This is in line with the Company's strategic objectives and its Journey to Zero initiatives.

Medical attentions are defined as injuries that require treatment by a medical practitioner and are reported to the Workplace Safety and Insurance Board. The indicator is calculated as the number of attentions per 200,000 hours worked. In 2013, Hydro One reported 2.5 incidents per 200,000 hours worked.

# EVERY DAY RELIABILITY: BUILDING AND MAINTAINING OUR INFRASTRUCTURE

We bring knowledge, commitment and dedication to the work that we do. We work through holidays to get the power back on. We stop at the side of a road to talk to customers. We do more than just keep the lights on.

On April 2, 2013, our Company reached an agreement with Norfolk County to acquire Norfolk Power.

**12.9**
(minutes/delivery point)

Duration of customer unplanned interruptions on 115/230 kV network transmission system per all multi-circuit supplied delivery points

**6.9**
(hours per customer)

Duration of customer interruptions on the distribution system

The word "reliability" has been important every year in our history. This past year was proof. From wind storms and torrential rain to an ice storm at the end of December, Mother Nature tested our emergency response efforts in 2013.

## PURCHASE OF NORFOLK POWER

In April, we reached an agreement with Norfolk County to purchase Norfolk Power.

## POLE REPLACEMENT PROGRAM

In 2013, we replaced 11,000 wood poles across our 123,000-kilometre distribution system in an effort to maintain system reliability and promote public safety. The $82 million program is an investment in Ontario's energy future.

## SUMMERHAVEN 230 KV SWITCHING STATION

In June 2013, our Summerhaven 230 kV Switching Station was energized in Haldimand County. Work began in 2012 and involved the construction of a greenfield station to connect the Summerhaven Wind Farm Centre under Ontario's Green Energy Act. At maximum generating capacity, the 124 MW centre can produce enough clean energy to power approximately 32,000 homes.

## STORM RESTORATION

Ontario was hit with an onslaught of severe storms throughout 2013, causing power disruptions and at times, lengthy outages. We worked 24/7 to restore power to our customers.

**Storm highlights include:**

- In January, crews restored power to 48,000 customers after winter storms caused a number of outages.
- In April, crews restored power to more than 150,000 customers after high winds and freezing rain caused widespread damage.
- In July, crews restored power to more than 400,000 Toronto homes and businesses after heavy rains caused severe flooding at our Richview and Manby transmission stations.
- In November, crews worked for three days straight to restore power to more than 315,000 customers after a wind storm caused significant damage to our distribution system.
- In December, an ice storm that hit parts of Ontario downed power lines and caused widespread power outages. Between December 21 and December 29, approximately 585,000 customers were without power. We worked with local utilities to get customers back on line and by December 27, 98 per cent of affected customers had their power restored.

## MODERNIZING THE GRID

Our focus continues on the Advanced Distribution System (ADS) – smart grid initiatives that consist of a wireless communication network and various intelligent electronic devices (IEDs) – to improve reliability and operations, renewable energy integration and provide timely information to help customers better manage their electricity costs.

In terms of our micro-fit initiatives and distributed generation, we connected 1,414 projects in 2013. The 2013 projects calculate to about 12,904 kW. Since December 2010, we've connected 11,329 projects, which calculates to about 109 MW in renewable power, through our clean and renewable energy programming.

Another key step in grid modernization is the reinforcement of our transmission system. Ontario's Long-Term Energy Plan announcement that we will develop and seek approval for the Northwest Bulk Transmission Line Project, west of Thunder Bay, demonstrates the Province's trust in our ability to improve reliability in the north.

# INNOVATION & PRODUCTIVITY

## EVERY DAY INNOVATION: COMMITTED TO THE FUTURE

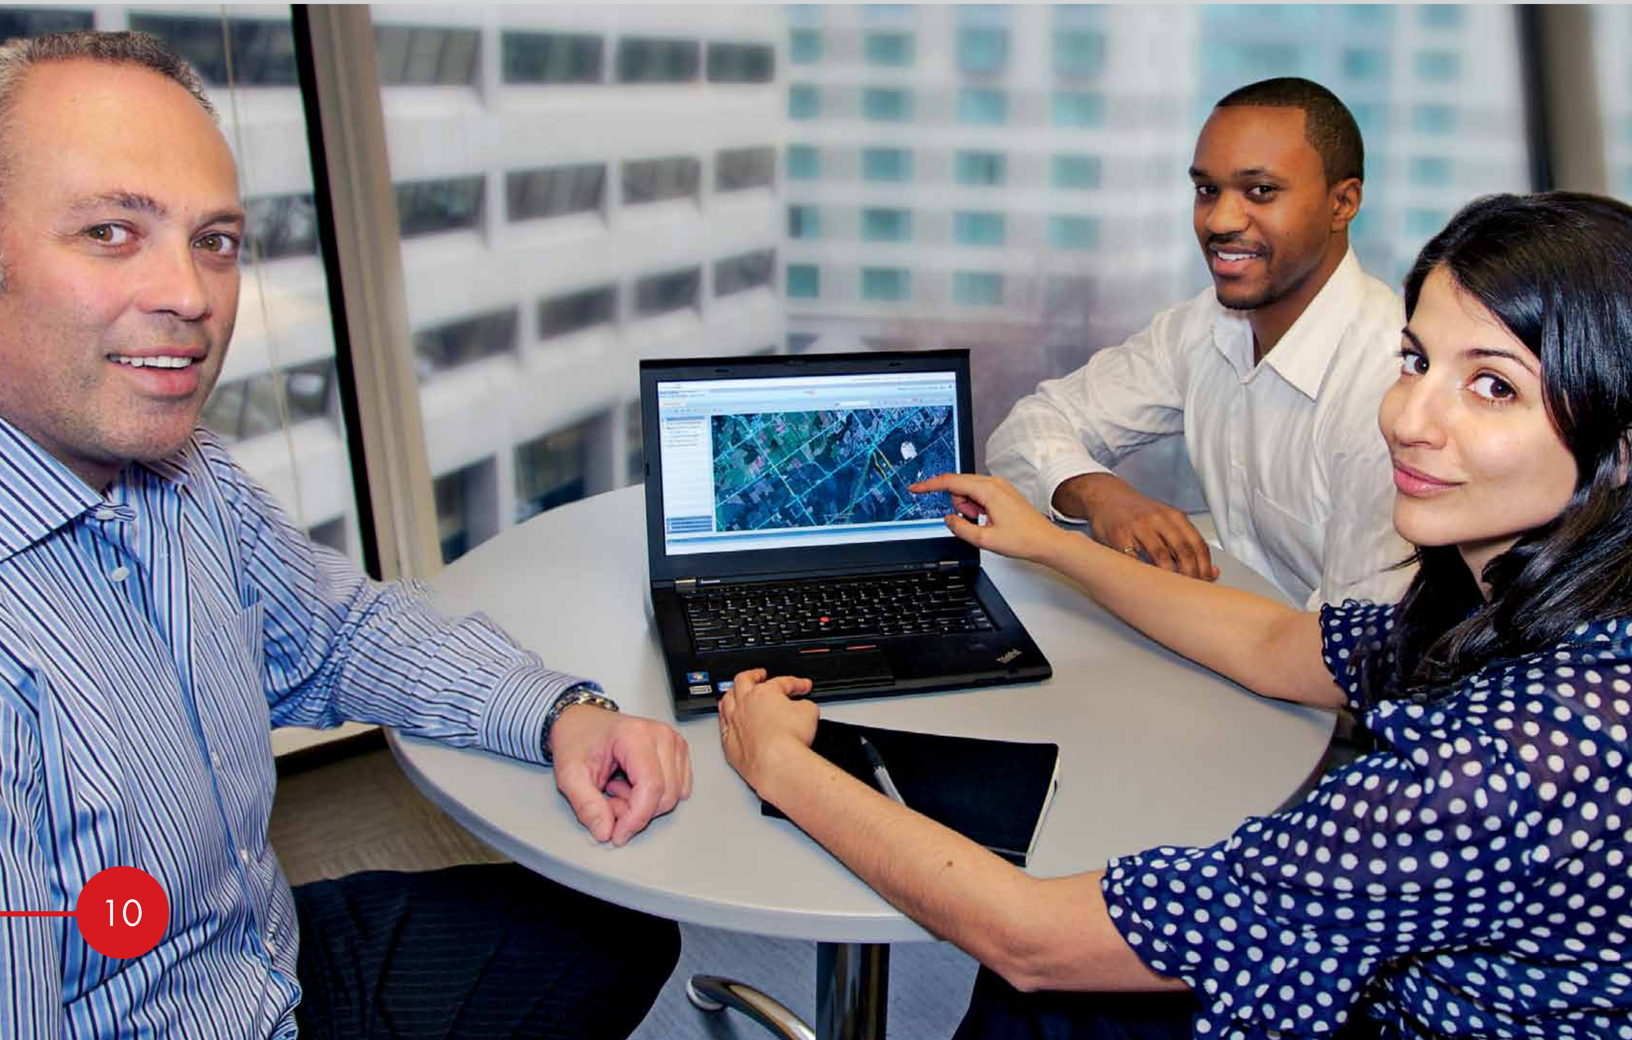
From our sustainment planning tool to our free mobile app, we are constantly looking for innovative and creative ways to better serve the electricity needs of Ontarians today, tomorrow and well into the future.

On December 22, 2013, at the peak of the ice storm, our free mobile app was downloaded 27,047 times.

The new Asset Analytics tool uses a combination of mapping, asset inventory and risk assessment to help make the best investment decisions and address the challenges planners and asset managers face when deciding what to replace and when to replace it.

### BY THE NUMBERS

- **1.7 million** distribution wood poles
- **500,000** pole top transformers
- **50,000** steel transmission structures
- **42,000** transmission wood pole structures
- **1,002** distribution stations
- **29,000** kilometres of transmission line conductor
- **1,400** transformers
- **1,200** distribution power transformers
- **285** transmission stations
- **123,000-** kilometre low-voltage distribution system



We own and operate Ontario's 29,000-kilometre high-voltage transmission network that delivers electricity to municipal utilities and large industrial customers, and a 123,000-kilometre low-voltage distribution system that serves approximately 1.3 million end-use customers.

Ontarians rely on us each and every day to provide them with the power they need to go about their daily lives. We are committed to providing safe, reliable and affordable electricity to the people of Ontario through the advancement of new technologies, programs and procedures.

## LAUNCH OF CUSTOMER INFORMATION SYSTEM

With a commitment to improving our customers' experiences and satisfying their needs, we launched our new Customer Information System (CIS) in May 2013.

The new system replaces an outdated, unsupported and unreliable system, and builds on our customer-first, customer-driven approach to providing value to our customers.

As is the case with any new system, the implementation of the CIS is part of a learning curve. Once it stabilizes, the benefits to our customers include improved call centre experiences, increased accuracy and timeliness of our billing system, and improved ability to address customers' concerns with up-to-date information.

## MOBILE APP

The popularity of our free mobile app grew in 2013. The app connects users to Hydro One's interactive online outage mapping system and allows them to receive detailed power outage information from anywhere in our service area.

Between January 1 and December 31, 2013, the app received 125,133 downloads, an average of 343 downloads per day. On December 22, 2013, at the peak of the ice storm, the app received 27,047 downloads.

## ASSET ANALYTICS

Asset Analytics is our sustainment planning tool created as a way for planners to manage and monitor assets in Hydro One's transmission and distribution systems. The first phase of Asset Analytics was launched in 2012 and work on the second phase began in 2013.

The Asset Analytics tool uses SAP data, Google Earth maps and sustainment planning information to map and list Hydro One's assets. It also has the ability to display risk information about their condition, which allows us to manage our assets so that we get the most out of them.

# COMMUNITY

## EVERY DAY COMMITMENT: ONE EMPLOYEE AT A TIME

We wouldn't be who we are without our employees. Hydro One is a diverse Company of like-minded and talented individuals who are committed to serving the people of Ontario. We are a Company where new ideas and original initiatives are fostered. We are dedicated, knowledgeable and reliable.

On March 23, 2013, during Earth Hour, Hydro One customers contributed to an overall reduction of 448 MW of energy consumption in the province. This demonstrated our commitment to educating our customers through programs and initiatives on ways to reduce energy consumption.

### ELECTRICITY DISCOVERY CENTRE

Our Electricity Discovery Centre (EDC) travels across Ontario, broadening Ontarians' understanding about electrical safety, energy conservation and how we invest in the province's electricity system.

- **In 2013, the EDC visited:**

1. The International Plowing Match
2. The Norfolk County Fair
3. The Royal Agricultural Winter Fair
4. Queen's Park
5. The Association of Municipalities of Ontario's Energy Connections Conference
6. Alight at Night

- **More than 10,000** visitors toured the EDC between September and December 2013.
- **More than 3,700** visitors toured the EDC during its launch at the International Plowing Match in Perth County between September 17 and 21, 2013.

- Internet connected
- Handicap accessible
- Solar smartphone charging station
- Electric vehicle charging station

Our success relies heavily on our people. From the crews in the field to those in head office, Hydro One employees represent many cultures, backgrounds and skills. We are as diverse as Ontario, and we work together to provide Ontarians with a level of customer service they so richly deserve.

Just as we are committed to investing in educating and training our current and future workforce, we are also committed to building our corporate reputation by investing in Ontario and its communities through the development of partnerships and initiatives.

A number of key partnerships and initiatives were launched in 2013 to continue Hydro One's culture of putting Ontarians first.

## ELECTRICITY DISCOVERY CENTRE

We broadened our longstanding commitment to electricity education and consumer engagement with the September 2013, launch of our Electricity Discovery Centre (EDC). The 1,000-square-foot, fully accessible mobile centre features hands-on exhibits about electrical safety, energy conservation and how we invest in Ontario's electricity system.

The EDC features a solar charging station, the Kids' Electricity Safety Team Headquarters, the Time-of-Use game and videos on Ontario's power system. The EDC travels across the province to engage and educate our customers.

The EDC visited a number of community fairs and events throughout Ontario in 2013, including the International Plowing Match in Mitchell in September, The Association of Municipalities Conference in Toronto in December, and Alight at Night in Morrisburg, also in December.

## WOMEN IN ENGINEERING UNIVERSITY PARTNERSHIP

In March, we announced a partnership with Ryerson University, the University of Ontario Institute of Technology, the University of Waterloo and Western University to increase the number of female students pursuing careers in the Science, Mathematics, Technology and Engineering fields.

The main goal of the Women in Engineering University Partnership is to increase the number of female engineering students and graduates over the next four years.

## LIGHTNING TRAIL RETREAT

In August, we partnered with Northern College and the District School Board Ontario North East to host a week-long retreat in Timmins for 29 Aboriginal youth between the ages of 12 and 18. As part of Hydro One's College Consortium, Lightning Trail provided the youth with opportunities to explore several trades and technology programs related to the electricity industry. Each student received a Certificate of Completion from Northern College, with three participants awarded Northern College Hydro One Aboriginal Leadership Entrance Bursaries.

## FIRST NATIONS, MÉTIS AND INUIT SCHOLARSHIP

In June, we held our second annual First Nations, Métis and Inuit awards ceremony in Toronto to recognize the achievements of First Nations and Métis youth in the energy sector. The award honours youth who are attending a post-secondary program with a focus on the electricity industry, and who have demonstrated that they are leaders in the communities we serve.

## WILLIAM PEYTON HUBBARD AWARD

Hydro One also sponsors two academic awards for outstanding black students attending an Ontario college or university through our William Peyton Hubbard Award.

# MANAGEMENT'S DISCUSSION AND ANALYSIS

**For the years ended December 31, 2013 and 2012**

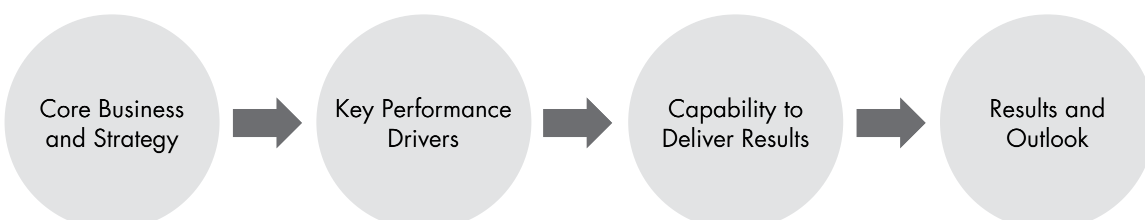
The following Management's Discussion and Analysis (MD&A) of the financial condition and results of operations should be read together with the consolidated financial statements and accompanying notes (the Consolidated Financial Statements) of Hydro One Inc. (the Company) for the year ended December 31, 2013. The Consolidated Financial Statements are presented in Canadian dollars and have been prepared in accordance with United States (US) Generally Accepted Accounting Principles (GAAP). All financial information in this MD&A is presented in Canadian dollars, unless otherwise indicated.

The Company has prepared this MD&A with reference to National Instrument 51-102 – Continuous Disclosure Obligations of the Canadian Securities Administrators. Under the US/Canada Multijurisdictional Disclosure System, the Company is permitted to prepare this MD&A in accordance with the disclosure requirements of Canada, which are different from those of the US. This MD&A provides information for the year ended December 31, 2013.

## EXECUTIVE SUMMARY

We are wholly owned by the Province of Ontario (Province), and our transmission and distribution businesses are regulated by the Ontario Energy Board (OEB). Our mission and vision reflects the unique role we play in the economy of the Province and as a provider of critical infrastructure to all our customers. We strive to be an innovative and trusted company, delivering electricity safely, reliably and efficiently to create value for our customers. We operate as a commercial enterprise with an independent Board of Directors. Our strategic plan is driven by our values: health and safety; excellence; stewardship; and innovation. Safety is of utmost importance to us because we work in an environment that can be hazardous. We take our responsibility as stewards of critical provincial assets seriously. We demonstrate sound stewardship by managing our assets in a manner that is commercial, transparent and which values our customers. We strive for excellence by being trained, prepared and equipped to deliver high-quality service. We value innovation because it allows us to increase our productivity and develop enhanced methods to meet the needs of our customers. In 2013, we continued to focus on our core businesses and our commitment to our customers, and made important contributions to the rebuilding of Ontario's core infrastructure while continuing to meet the requirements of the *Green Energy Act* (GEA).

We manage our business using the following framework:



### *Core Business and Strategy*

Our corporate strategy is based on our mission and vision and our values. Our strategic objectives, which are discussed in the section "Our Strategy," encompass the core values that drive our business. Our strategy touches every part of our core business: health and safety; our customers; innovation; the reliability and efficiency of our systems; the environment; our workforce; shareholder value; and productivity.

### *Key Performance Drivers*

Performance drivers have been identified that relate to achieving certain of our company's strategic objectives. We establish specific performance targets for each driver aimed at measuring the achievement of our strategic objectives over time. For example, we track the duration of unplanned customer interruptions per delivery point as an indication of our commitment to provide a reliable transmission system for our customers. We measure transmission and distribution unit costs as an indication of our commitment to increasing productivity. These and other key performance drivers are included in the discussion of our performance measures in the section "Performance Measures and Targets."

***Capability to Deliver Results***

We continue to use a balanced scorecard approach as we strive to manage our performance and deliver results each and every year. In 2013, we set nine stretch targets and we met or exceeded five of them. In 2012, we also met or exceeded five of nine stretch targets. We met our target for minimizing the duration of unplanned customer interruptions within our Distribution Business. We also met our targets of satisfying our transmission and distribution customers with the service they receive from our company. Our targets, and our 2013 performance relating to these targets, are discussed in the section "Performance Measures and Targets." Our ability to deliver results in each of our strategic areas is limited by risks inherent in our regulatory environment, our business, our workforce, and in the economic environment. These risks, as well as our strategies to mitigate them, are discussed in the section "Risk Management and Risk Factors."

***Results and Outlook***

During 2013, our financial fundamentals remained strong with net income of $803 million. In 2013, we issued $1,185 million of long-term debt, the proceeds of which were used to fund the retirement of $600 million of long-term debt, and to fund a portion of our capital expenditures and other corporate requirements. A full discussion of our results of operations and financing activities can be found in the sections "Annual Results of Operations" and "Liquidity and Capital Resources."

In 2013, we made capital investments totaling $1,394 million to improve our transmission and distribution systems' reliability and performance, address our aging power system infrastructure, facilitate new generation, and improve service to our customers. Capital investments for the next few years will include expenditures required to build critical infrastructure identified in the Long-Term Energy Plan (LTEP), which is based on recommendations from the Ontario Power Authority (OPA), and expenditures to address our aging power system infrastructure. Our future capital expenditures are more fully described in the section "Future Capital Investments."

## OVERVIEW
### Our Businesses

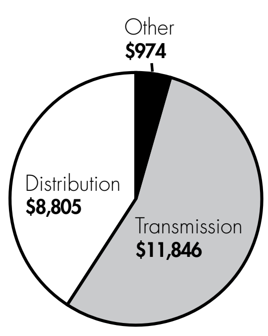
Our company has three reportable segments:

- Our Transmission Business, which comprises the core business of providing electricity transportation and connection services, is responsible for transmitting electricity throughout the Ontario electricity grid;
- Our Distribution Business, which comprises the core business of delivering and selling electricity to customers; and
- Other, the operations of which primarily consist of those of our telecommunications business.

***Transmission***

Our Transmission Business includes the transmission business of our subsidiary Hydro One Networks, which owns and operates substantially all of Ontario's electricity transmission system. Our transmission system forms an integrated transmission grid that is monitored, controlled and managed centrally from our Ontario Grid Control Centre. Our system operates over relatively long distances and links major sources of generation to transmission stations and larger area load centres. In 2013, we earned total transmission revenues of $1,529 million, primarily by transmitting approximately 140.7 TWh of electricity, directly or indirectly, to substantially all consumers of electricity in Ontario. Our transmission system is one of the largest in North America, and it is linked to five adjoining jurisdictions through 26 interconnections, through which we can accommodate electricity imports of up to 6,510 MW in the summer and 6,390 MW in the winter, and electricity exports of up to 6,070 MW in the summer and 6,270 MW in the winter. In terms of assets, our Transmission Business is our largest business segment, representing approximately 55% of our total assets at December 31, 2013.

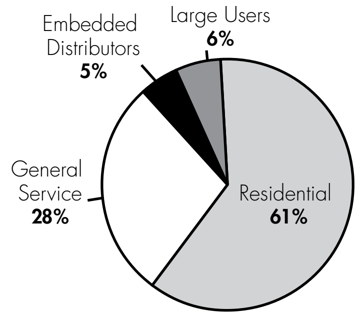
**Total Assets**
December 31, 2013
*(millions of Canadian dollars)*



***Distribution***

Our consolidated Distribution Business includes the distribution business of our subsidiary Hydro One Networks, as well as our subsidiaries Hydro One Brampton Networks Inc. (Hydro One Brampton Networks) and Hydro One Remote Communities Inc. (Hydro One Remote Communities). Our consolidated distribution system is the largest in Ontario and spans roughly 75% of the province. We serve approximately 1.4 million rural and urban customers. Hydro One Remote Communities operates small, regulated generation and distribution systems in a number of remote communities across northern Ontario that are not connected to Ontario's electricity grid. In 2013, we earned total distribution revenues of $4,484 million, and over half of our distribution revenues were earned from our residential customers. At December 31, 2013, our Distribution Business assets represented approximately 41% of our total assets.

**2013 Distribution Revenues**



***Other***

Our Other business segment primarily represents the operations of our subsidiary, Hydro One Telecom Inc. (Hydro One Telecom), which markets fibre-optic capacity to telecommunications carriers and commercial customers with broadband network requirements, including a dedicated optical network providing secure, high-capacity connectivity across numerous health care locations in Ontario. In 2013, our Other business segment contributed revenues of $61 million, and had assets of $974 million at December 31, 2013, representing 4% of our total assets.

## Our Strategy

Our corporate strategy builds on our strong commitment to the Province and is shaped by our values. It lays out a set of objectives to position our company to achieve our mission and vision, which is to be an innovative and trusted company delivering electricity safely, reliably and efficiently to create value for our customers. Our values represent our core beliefs.

- *Health and safety:* Nothing is more important than the health and safety of our employees, those who work on our property, and the public.
- *Excellence:* We achieve excellence through continuous training, ensuring we are prepared and equipped to deliver high-quality and affordable service, with integrity.
- *Stewardship:* We invest in our assets and people to build a safe, environmentally sustainable electricity network in a commercial manner.
- *Innovation:* We innovate through new processes, people and technology to allow us to find better ways to meet the needs of our customers.

We have eight strategic objectives that are inextricably linked. They drive the fulfillment of our mission and vision and ensure we remain focused on achieving our corporate goal of providing safe, reliable and affordable service to our customers, today and tomorrow, while increasing enterprise value for our shareholder.

- *Creating an injury-free workplace and maintaining public safety.* Health and safety must be integrated into all that we do as we continue to reinforce that nothing is more important than the health and safety of our employees. We will continue to create a passion for preventing injury, staying safe and keeping each other safe. We will invest in building a culture of accountability to continue our drive to zero injuries in the workplace. In addition, we will continue to strengthen our already strong safety culture through our Journey to Zero initiative and our successful certification to the Occupational Health and Safety Assessment Series (OHSAS) 18001 standard.
- *Satisfying our customers.* We exist to serve our customers, and serving our customers means reducing costs, improving customer service and meeting their expectations regarding reliable power supply. We will continue to focus our efforts to improve our relationship with customers and to improve our customers' satisfaction with us. We will meet our commitments, make customers our focus in all planning discussions, communicate effectively, coordinate across our company, and maximize opportunities to improve our corporate image and every customer interaction. We will develop and deliver targeted customer segment strategies, products and delivery channels that will respond to their unique needs.

- *Continuous innovation.* Innovation represents one of our values and is critical to achieving our mission and vision. We have been using innovation and technology to build the foundation of our company as the utility of the future. Over the next two decades, we will continue to build on that foundation to improve the reliability and efficiency of our transmission and distribution systems and provide our customers with more capability to manage their power costs. The development of the Advanced Distribution System (ADS) is a key element in our investment in innovation, as are the investments we have made, through our Cornerstone project, in next generation business tools to enable us to implement leading industry practices and increase productivity.
- *Building and maintaining reliable, affordable transmission and distribution systems.* Our transmission strategy is to provide a robust and reliable provincial grid that accommodates Ontario's emerging generation profile, manages an aging asset base and meets demand requirements through prudent expansion and effective maintenance. Our distribution strategy is focused on continuing to meet the challenge of providing reliable, affordable service to our customers in a wide range of geographical regions and climate zones; incorporating ADS technology to provide greater visibility; and increased control and improved customer service. We will meet customer expectations regarding reliability, in part through our investment planning process, which starts with the identification of asset and customer needs.
- *Protecting and sustaining the environment for future generations.* Consistent with our value of stewardship, we play a central role in reducing Ontario's carbon footprint through the delivery of clean and renewable energy and through measures that allow our customers to manage and reduce their energy use.
- *Championing people and culture.* We believe our primary strength is the capability of our people. In order to sustain this advantage, we will continue to address the issues of corporate culture, labour demographics, diversity, development of critical core competencies, and skill and knowledge retention. We will continue to develop a culture of accountability and trust as a key component to fostering employee engagement. Our labour strategy is to consolidate and clarify our collective agreements, increase flexibility and reduce costs, and maintain a progressive relationship with our unions.
- *Maintaining a commercial culture that increases value for our shareholder.* For the delivery component of a customer bill, we are committed to maintaining total annual bill impacts for an average residential customer at or below the rate of inflation, and delivering income and dividends to our shareholder. We will pursue growth opportunities through local distribution company (LDC) consolidation to increase the enterprise value of our company by leveraging our existing assets, technologies, capabilities, unparalleled experience in LDC acquisitions and our distribution and transmission footprint.
- *Achieving productivity improvements and cost-effectiveness.* To achieve our mission and vision, we must constantly strive for productivity through efficiency and effective management of costs. Productivity is key to meeting our other strategic objectives and, in particular, to achieving value for our customers and our shareholder.

## Performance Measures and Targets

We target and measure our performance by using a balanced scorecard approach. Key performance drivers are closely monitored throughout the year to ensure that we maintain a focus on our strategic objectives and take mitigating actions as required. In 2013, we met or exceeded five of nine stretch targets. Overall, we are making progress towards achieving many of our strategic goals.

### *Achieving productivity improvements and cost-effectiveness*

One of our strategic objectives is to increase productivity through efficiency improvements and effective management of costs. The measures for this objective for 2013 were transmission unit cost and distribution unit cost. For transmission unit cost, we measured the capital expenditures and operation, maintenance and administration costs per dollar of gross in-service assets (expressed as a percentage). For distribution unit cost, the measure is capital expenditures and operation, maintenance and administration costs per kilometre of line ($'000/km) due to the length of line required to connect our rural customers. Our objective with our ongoing work and investment program is to maintain and improve our assets and monitor our productivity year-over-year. Our transmission unit cost target was set at 9.8%, and we met this target. The distribution unit cost target was set at $9,800 per kilometre of line. We did not meet this target.

### *Building and maintaining reliable, cost-effective transmission and distribution systems*

We continue to build and retain public confidence and trust in our operations, as stewards of Ontario's electricity grid. In 2013, we continued our focus on this strategic priority by investing in the key assets of the electricity delivery system and by operating the existing system for customers in a safe, reliable and efficient fashion. We are conscious that commercial customers of all sizes require reliable service to allow them to deliver their products and services and that customers' expectations are for a reasonably limited duration when interruptions occur. Transmission and distribution reliability is measured through the duration of customer interruptions.

For the duration of unplanned customer interruptions within our transmission business, the target for 2013 was 9 minutes per delivery point. We did not meet this target.

For the duration of unplanned customer interruptions within our distribution business, the target for 2013 was set at 6.7 hours per customer. While we did not meet this target, our Board of Directors noted that the impact of storms in January and February of 2013 would require our company to change work practices and alter resource levels to simply meet the target and that the cost to do so would be prohibitive and not in the best interests of the ratepayer. Considering the storm impacts and the positive results over the balance of the year, our Board of Directors, in the exercise of its discretion, determined that this target was met.

***Satisfying our customers***

Customer satisfaction measures the degree to which our transmission and distribution customers are satisfied with the service they receive from our company. Customer satisfaction is based on the results of customer surveys conducted on our behalf by independent third parties. In 2013, for transmission customers we targeted a customer satisfaction rate of 82%. The survey was given to three major groups of transmission customers. Our Board of Directors determined that there was significant improvement in two of the three groups which comprise the survey members and accordingly, in the exercise of its discretion, considered this target met. For our distribution customers, we targeted a satisfaction rate of 86%, and we met this target.

***Employee engagement***

We continue to focus efforts on increasing employee engagement throughout the Company. An engaged workforce is one in which employees embrace the corporate values of safety, stewardship, excellence and innovation. The employee engagement survey is administered by an independent third party expert. Our goal is to improve the grand mean score year-over-year. The target of improving the grand mean score to 4.06 (out of 5) in 2013 was not met.

***Maintaining a commercial culture that increases value for our shareholder***

Achievement of strong financial performance is measured by a performance measure of targeted level of net income after tax. Our 2013 target was $702 million net income after tax, and we exceeded our target.

***Creating an injury-free workplace and maintaining public safety***

The safety of our employees is paramount. In 2013, we used medical attentions, defined as injuries that require treatment by a medical practitioner (beyond first aid), as the performance measure for this strategic objective. The medical attentions measure reflects incidents that are reported to the Workplace Safety Insurance Board and is calculated as the number of attentions per 200,000 hours worked. In 2013, we set a target of no higher than 1.9 attentions per 200,000 hours worked. We did not meet this target.

## REGULATION

Our electricity transmission and distribution businesses are licensed and regulated by the OEB. Our transmission revenues primarily include our transmission tariff, which is based on the province-wide Uniform Transmission Rates (UTRs) approved by the OEB for all transmitters across Ontario. Our distribution revenues primarily include our distribution tariff, which is also based on OEB-approved rates, and the recovery of the cost of purchased power used by our customers. Transmission and distribution tariff rates are set based on an approved revenue requirement that provides for cost recovery and a return on deemed common equity. In addition, the OEB approves rate riders to allow for the recovery or disposition of specific regulatory accounts over specified timeframes.

The OEB approved the use of US GAAP for rate setting and regulatory accounting and reporting by Hydro One Networks' Transmission and Distribution Businesses, as well as by Hydro One Remote Communities, beginning with the year 2012. Hydro One Brampton Networks currently uses Canadian GAAP for its distribution rate-setting purposes.

### Renewed Regulatory Framework

In December 2010, the OEB initiated a coordinated consultation process for the development of a Renewed Regulatory Framework for Electricity. In October 2012, the OEB issued its report *A Renewed Regulatory Framework for Electricity Distributors: A Performance Based Approach*. The report identified three rate-setting models available to provide choices suitable for distributors having varying capital requirements: a fourth generation Incentive Regulation Mechanism (IRM); a custom rate setting; and an Annual Incentive Rate-setting Index method. The report also provided information on performance measurement, continuous improvement and implementation of the new framework.

In late 2013, the OEB issued its *Report of the Board on Rate-Setting Parameters and Benchmarking under the Renewed Regulatory Framework for Ontario's Electricity Distributors*. This report sets out the OEB's policies and approaches to the rate adjustment parameters for incentive rate setting for electricity distributors and the benchmarking of electricity distributor total cost performance. It also includes the OEB's determination on rate adjustment parameter values for 2014 incentive rate setting, which were used to adjust Hydro One Networks' 2014 distribution rates.

### Electricity Rates

Under the current market structure, low-volume and designated consumers pay electricity rates established through the Regulated Price Plan (RPP) and wholesale electricity consumers pay a blend of regulated, contract and wholesale spot market prices. The OEB sets prices for RPP customers based on both a two-tiered electricity pricing structure, with seasonal consumption thresholds, and a three-tiered electricity pricing structure with Time of Use (TOU) thresholds. Substantially all of our RPP customers are now on TOU billing. We received an exemption from the OEB, effective until December 31, 2014, from implementing mandatory TOU pricing for approximately 122,000 customers that are currently out of reach of our smart meter telecommunications infrastructure. Unexpected shortfalls or overpayments associated with the RPP are temporarily financed by the OPA. RPP prices are reviewed by the OEB every six months and may change based on an updated OEB forecast and any accumulated differences between the amount that customers paid for electricity and the amount paid to generators in the previous period.

Customers who are not eligible for the RPP and wholesale customers pay the market price for electricity, adjusted for the difference between market prices and prices paid to generators by the Independent Electricity System Operator (IESO) under the *Electricity Act, 1998*. The IESO is responsible for overseeing and operating the wholesale market, as well as ensuring the reliability of the integrated power system. The following is a summary of the RPP for the reporting and comparative periods:

| RPP | Tier Threshold (kWh/month) | | Tier Rates (cents/kWh) | |
|---|---|---|---|---|
| **Effective Date** | **Residential** | **Non-Residential** | **Lower Tier** | **Upper Tier** |
| November 1, 2011 | 1,000 | 750 | 7.1 | 8.3 |
| May 1, 2012 | 600 | 750 | 7.5 | 8.8 |
| November 1, 2012 | 1,000 | 750 | 7.4 | 8.7 |
| May 1, 2013 | 600 | 750 | 7.8 | 9.1 |
| November 1, 2013 | 1,000 | 750 | 8.3 | 9.7 |

| RPP TOU | Rates (cents/kWh) | | |
|---|---|---|---|
| **Effective Date** | **On Peak** | **Mid Peak** | **Off Peak** |
| November 1, 2011 | 10.8 | 9.2 | 6.2 |
| May 1, 2012 | 11.7 | 10.0 | 6.5 |
| November 1, 2012 | 11.8 | 9.9 | 6.3 |
| May 1, 2013 | 12.4 | 10.4 | 6.7 |
| November 1, 2013 | 12.9 | 10.9 | 7.2 |

#### *Transmission Rates*

In May 2010, we filed a cost-of-service application with the OEB for 2011 and 2012 transmission rates, seeking the approval of revenue requirements of approximately $1,446 million for 2011 and $1,547 million for 2012. In December 2010, the OEB approved revenue requirements of $1,346 million for 2011 and $1,658 million for 2012. The approved 2012 revenue requirement was higher than that applied for, reflecting OEB direction for our company to adopt a cost capitalization policy based on modified IFRS. This adjustment was subsequently reversed when the OEB approved the use of US GAAP for transmission rate-setting purposes beginning January 1, 2012. Consequently, the OEB approved a revenue requirement of $1,418 million for 2012, along with new 2012 UTRs, with an effective date of January 1, 2012. The new rates resulted in an approximate 8% transmission rate increase, or 0.6% when considering total bill impact, for a typical residential customer consuming 800 kWh per month. The adoption of US GAAP in lieu of modified IFRS as a basis for rate setting decreased the approved rates by approximately 15%.

In May 2012, we filed a cost-of-service application with the OEB for our 2013 and 2014 transmission rates. The application sought OEB approval for revenue requirement increases of approximately 0.6% in 2013 and 9.1% in 2014, or estimated increases of 0% in 2013 and 0.7% in 2014 on an average customer's total bill. In November 2012, we submitted a draft Rate Order, which included revenue requirements of approximately $1,438 million and $1,528 million for 2013 and 2014, respectively. For the transmission portion of the bill, this represents no change from existing 2012 OEB-approved rate levels in 2013 and a 5.8% increase in 2014. For a typical residential customer consuming 800 kWh per month, this represents increases of nil for 2013 and 0.5% for 2014. In December 2012, the OEB approved the 2013 and 2014 transmission revenue requirements of $1,438 million and $1,528 million, respectively, and the 2013 Ontario UTRs, which remained unchanged at the 2012 levels.

On December 6, 2013, we submitted a draft Rate Order for our 2014 transmission rates. The 2014 revenue requirement has been increased to $1,535 million from the originally-approved revenue requirement of $1,528 million, primarily due to changes in the cost of capital parameters for 2014 released by the OEB in November 2013. On January 9, 2014, the OEB approved the draft Rate Order for 2014 transmission rates as filed. For the transmission portion of a customer's bill, this represents an increase of 6.3% in 2014, or 0.5% when considering total bill impact, for a typical residential customer consuming 800 kWh per month.

***Distribution Rates***

As a distributor, we are responsible for delivering electricity and billing our customers for our approved distribution rates, purchased power costs and other approved regulatory charges. Substantially all of our purchased power costs and other approved regulatory charges are settled through the IESO, which facilitates payments to other parties, such as generators, the Ontario Electricity Financial Corporation (OEFC), and itself.

- **Hydro One Networks**

  Hydro One Networks elected to retain the same distribution rates for 2012 as approved by the OEB for 2011, with a revenue requirement of $1,218 million.

  In June 2012, Hydro One Networks filed an IRM rate application with the OEB for 2013 distribution rates, to be effective January 1, 2013. In December 2012, the OEB issued a final Rate Order, which resulted in an increase in distribution rates of approximately 1.3% in 2013, or 0.4% when considering total bill impact, for a typical residential customer consuming 800 kWh per month.

  On April 26, 2013, Hydro One Networks filed an IRM rate application with the OEB for 2014 distribution rates, to be effective January 1, 2014. On September 26, 2013, the OEB issued a partial decision, approving a rate rider to recover a 2014 revenue requirement of $29.3 million for operation, maintenance and administration expenses and in-service capital costs of the ADS Project, which will modernize our distribution system. On December 5, 2013, the OEB issued its final decision, which resulted in an increase of distribution rates of approximately 2.4% in 2014, or 0.85% when considering total bill impact, for a typical residential customer consuming 800 kWh per month.

  On December 19, 2013, Hydro One Networks filed a 2015–2019 distribution custom rate application with the OEB, for rates effective January 1 of each test year. This application is a five-year custom rate application which is being submitted under the OEB's Renewed Regulatory Framework for Electricity Distributors. It has been customized to fit Hydro One Networks' specific circumstances, which necessitate significant multi-year investments. The submitted evidence includes the overall business plan, revenue requirements, and rate information necessary to support the issuance of a notice by the OEB. We are seeking OEB approvals for revenue requirements of $1,411 million for 2015, $1,515 million for 2016, $1,571 million for 2017, $1,615 million for 2018, and $1,666 million for 2019. If the application is approved as filed, the resulting change to the distribution portion of the average customer bill will be approximately a 1.3% decrease in 2015, 4.2% increase in 2016, 2.6% increase in 2017, 1.9% increase in 2018, and 2.9% increase in 2019, for a typical residential customer consuming 800 kWh per month. When considering total bill impact, the resulting change will be approximately a 1.1% decrease in 2015, 1.5% increase in 2016, 0.9% increase in 2017, 0.7% increase in 2018, and 1.1% increase in 2019.

- **Hydro One Brampton Networks**

  In September 2011, Hydro One Brampton Networks filed an IRM application with the OEB for 2012 distribution rates, with an effective date of January 1, 2012. In January 2012, the OEB released a decision that resulted in a reduction in distribution rates of approximately 13.2% for 2012, or a 1.7% reduction on the average customer's total bill, for a typical residential customer consuming 800 kWh per month. These rate reductions were primarily due to OEB-approved adjustments to depreciation rates.

  In August 2012, Hydro One Brampton Networks filed an IRM application with the OEB for 2013 distribution rates, to be effective January 1, 2013. In December 2012, the OEB released a decision that resulted in an increase in distribution rates of approximately 0.3% for 2013, or less than 0.1% on the average customer's total bill, for a typical residential customer consuming 800 kWh per month.

  In August 2013, Hydro One Brampton Networks filed an IRM application with the OEB for 2014 distribution rates, to be effective January 1, 2014. On December 5, 2013, the OEB released a decision that resulted in a reduction in distribution rates of approximately 2.5% for 2014, or a 0.5% reduction on the average customer's total bill, for a typical residential customer consuming 800 kWh per month.

- **Hydro One Remote Communities**

  In November 2011, Hydro One Remote Communities filed an IRM application with the OEB for 2012 distribution rates. In March 2012, the OEB approved an increase of approximately 1.08% to basic rates for the distribution and generation of electricity, with an effective date of May 1, 2012, representing an increase of approximately $1 on the average residential customer's total bill.

  In September 2012, Hydro One Remote Communities filed a cost-of-service application with the OEB for 2013 distribution rates, seeking approval for a 2013 revenue requirement of $53 million. In August 2013, the OEB issued a final decision approving a revenue requirement of $51 million and rate increase of approximately 3.45%, with an effective date of May 1, 2013.

  In October 2013, Hydro One Remote Communities filed an IRM application with the OEB for 2014 distribution, seeking approval for a rate increase of approximately 0.48%, to be effective May 1, 2014.

## Recent Industry Developments

### *Long-Term Energy Plan*

In 2010, the Ministry of Energy released Ontario's LTEP, which set out the province's expected electricity needs until 2030 and supported the continued procurement of new, cleaner generation. The 2010 LTEP addressed seven key areas: demand, supply, conservation, transmission, Aboriginal communities, capital investments, and electricity prices.

On December 2, 2013, the Province released its updated LTEP, *Achieving Balance*, which sets out the Province's plan of action for the energy sector, including strategies for mitigating increases in electricity rates; increased renewable energy procurement; nuclear refurbishment; enhanced regional planning with respect to energy infrastructure; transmission enhancements; encouraging Aboriginal participation in energy development, transmission and conservation projects; and the expansion of natural gas infrastructure. The plans are guided by the goal of balancing five core principles: cost-effectiveness, reliability, clean energy, community engagement, and conservation and demand management (CDM). Pursuant to the updated LTEP, the Province "will encourage Ontario Power Generation Inc. (OPG) and Hydro One to explore new business lines and opportunities inside and outside Ontario. These opportunities will help leverage existing areas of expertise and grow revenues for the benefit of Ontarians." We will continue to work with the Province to develop business plans and efficiency targets that will reduce costs and result in significant ratepayer savings.

In November 2013, the Minister of Energy issued a directive to the OEB, which in turn issued a decision and order on January 9, 2014, to amend the transmission licence of Hydro One Networks to develop and seek approval for the Northwest Bulk Transmission Line Project, an expansion or reinforcement of the transmission system in the area west of Thunder Bay. The scope and timing of the Northwest Bulk Transmission Line Project shall be in accordance with the recommendations of the OPA.

***Distribution Sector Consolidation***

In April 2012, the Province announced it was launching a comprehensive review of Ontario's electricity sector to explore options to improve efficiencies, including LDC consolidation. As a result, the Province created the Ontario Distribution Sector Review Panel (Panel). In December 2012, the Panel released its report, "Renewing Ontario's Electricity Distribution Sector: Putting the Consumer First" with recommendations for electricity sector consolidation. This report recommended that the 73 LDCs, comprising the focus of the report, be consolidated into eight to 12 larger regional electricity distributors within a two-year timeframe. Specifically, it recommended there be two regional distributors in northern Ontario and between six and ten regional distributors in southern Ontario with a minimum of 400,000 customers each. Given our company's position as the largest LDC, the report recommended that Hydro One Networks be given unambiguous direction to lead and engage in the discussion of the merger of distribution assets with the appropriate interested utilities on a commercial basis. The Minister of Energy subsequently indicated he was supportive of voluntary consolidation and expects all LDCs to pursue innovative partnerships and transformative initiatives that will result in electricity ratepayer savings.

On April 2, 2013, we reached an agreement with Norfolk County to acquire the outstanding shares of Norfolk Power Inc. (Norfolk Power) for $93 million, subject to final closing adjustments. We will pay Norfolk County approximately $66 million net after assuming Norfolk Power's existing debt of approximately $27 million. Norfolk Power is a holding company that owns Norfolk Power Distribution Inc., a local distribution company, and Norfolk Energy Inc., a non-rate regulated energy services company. The selection of our company as successful bidder followed a comprehensive competitive sales process initiated by Norfolk Power. The acquisition is pending a regulatory decision from the OEB, which is anticipated in 2014.

We will continue to pursue growth opportunities through LDC consolidation by leveraging our existing assets, technologies, capabilities, unparalleled experience in LDC acquisitions, and our distribution footprint.

***Procurement of New Generation***

In 2009, the OPA launched its Feed-in Tariff (FIT) Program which is designed to procure energy from a wide range of renewable energy sources, including wind, solar, photovoltaic, bio-energy, and waterpower up to 50 MW. The FIT program is currently divided into three streams: Micro FIT (projects up to 10 kW), Small FIT (projects between 10 kW and 500 kW) and regular FIT (projects greater than 500 kW), all of which may result in connections to our distribution system. Under the FIT program, the OPA has entered into contracts or conditional contracts with generation proponents pursuant to which the OPA will pay a fixed rate for power produced over a specified period of time. We continue to connect projects for which there are firm contracts.

On May 30, 2013, the Province announced that it would make 900 MW of new capacity available between 2013 and 2018 for the Small FIT and Micro FIT programs. The Province has set annual procurement targets, from 2014 onwards, of 150 MW for Small FIT generation and 50 MW for Micro FIT generation. The Province is working with the OPA to develop a competitive process for renewable energy generation projects above 500 kW. The new process will replace the existing large project stream of the FIT program. As at December 31, 2013, our company has connected more than 370 FIT and 11,000 Micro FIT projects.

***Conservation and Demand Management***

In April 2012, the OEB issued its CDM guidelines for all electricity distributors. These guidelines provide guidance on certain provisions in the CDM Code and the type of evidence that should be filed by distributors in support of an application for OEB-approved CDM programs. The guidelines also provide details on the Lost Revenue Adjustment Mechanism (LRAM) related to CDM programs implemented under the CDM Code. LRAM is the mechanism by which LDCs are compensated for lost revenues associated with their respective load reductions resulting from CDM programs. In addition, the guidelines state that savings associated with TOU pricing are eligible to be counted towards the 2011–2014 CDM targets.

In December 2012, the Minister of Energy issued a directive to the OPA to extend funding for the OPA-contracted Ontario-wide CDM programs for one additional year, to December 31, 2015. This extension will provide an opportunity for the OPA and LDCs to collaboratively work to strengthen the current framework, and to keep customer programs in place for 2015.

On September 30, 2013, in accordance with the CDM Code, Hydro One Networks and Hydro One Brampton Networks each filed a 2012 Annual CDM Report with the OEB. The reports discussed CDM activities, energy and peak demand savings results achieved in 2012, and plans to reach CDM targets by the end of 2014. Hydro One Networks reported that it expects to reach 100% of its demand target and 80% of its cumulative energy target by 2014. Hydro One Brampton Networks reported that it expects to reach 68% of its demand target and 100% of its cumulative energy target by 2014. The OEB has indicated that there are several LDCs that have a similar issue. The OEB is aware of our situation.

## ANNUAL RESULTS OF OPERATIONS

| Year ended December 31 *(millions of Canadian dollars)* | **2013** | 2012 | $ Change | % Change |
|---|---|---|---|---|
| Revenues | **6,074** | 5,728 | 346 | 6 |
| Purchased power | **3,020** | 2,774 | 246 | 9 |
| Operation, maintenance and administration | **1,106** | 1,071 | 35 | 3 |
| Depreciation and amortization | **676** | 659 | 17 | 3 |
| | **4,802** | 4,504 | 298 | 7 |
| **Income before financing charges and provision for payments in lieu of corporate income taxes** | **1,272** | 1,224 | 48 | 4 |
| Financing charges | **360** | 358 | 2 | 1 |
| **Income before provision for payments in lieu of corporate income taxes** | **912** | 866 | 46 | 5 |
| Provision for payments in lieu of corporate income taxes | **109** | 121 | (12) | (10) |
| **Net income** | **803** | 745 | 58 | 8 |

### Revenues

| Year ended December 31 *(millions of Canadian dollars)* | **2013** | 2012 | $ Change | % Change |
|---|---|---|---|---|
| Transmission | **1,529** | 1,482 | 47 | 3 |
| Distribution | **4,484** | 4,184 | 300 | 7 |
| Other | **61** | 62 | (1) | (2) |
| | **6,074** | 5,728 | 346 | 6 |
| Average annual Ontario 60-minute peak demand (MW)[1] | **21,493** | 21,132 | 361 | 2 |
| Distribution – units distributed to customers (TWh)[1] | **29.8** | 29.2 | 0.6 | 2 |

[1] System-related statistics are preliminary.

### *Transmission*

Transmission revenues primarily consist of our transmission tariff, which is based on the monthly peak electricity demand across our high-voltage network. The tariff is designed to recover revenues necessary to support a transmission system with sufficient capacity to accommodate the maximum expected demand. Demand is primarily influenced by weather and economic conditions. Transmission revenues also include export revenues associated with transmitting excess generation to surrounding markets, ancillary revenues primarily attributable to maintenance services provided to generators, and secondary use of our land rights.

Our 2013 transmission revenues were higher by $47 million, or 3%, compared to 2012. The average Ontario 60-minute peak demand was higher in 2013, resulting in an increase in transmission revenues of $26 million, compared to 2012. The higher energy consumption in 2013 mainly resulted from a warmer summer and a colder winter, as compared to 2012. In addition, we experienced higher revenues of $21 million in 2013, associated with the OEB's approval of export service revenues and ancillary services.

***Distribution***

Distribution revenues include our distribution tariff and amounts to recover the cost of purchased power used by the customers of our Distribution Business. Accordingly, our distribution revenues are influenced by the amount of electricity we distribute, the cost of purchased power and our distribution tariff rates. Distribution revenues also include minor ancillary distribution service revenues, such as fees related to the joint use of our distribution poles by the telecommunications and cable television industries, as well as miscellaneous charges such as charges for late payments.

Our 2013 distribution revenues were higher by $300 million, or 7%, compared to 2012. The increase was primarily due to the recovery of higher purchased power costs of $246 million, as described below under "Purchased Power." In addition, energy consumption was higher by $29 million in 2013, mainly resulting from a warmer summer and a colder winter, as compared to 2012. Distribution revenues also increased by $15 million as a result of our placement in service of new smart grid and smart meter investments, which are currently being recovered through separate rate mechanisms.

In December 2012, the OEB approved new tariff rates effective January 1, 2013, based on its third generation IRM process. As part of the IRM decision, the OEB approved our application for an additional rate rider related to an incremental capital module (ICM) adjustment to our rates, reflecting our placement in service of certain specific capital investments. This ICM approval resulted in an increase of $13 million, compared to 2012. In addition, the OEB's IRM decision resulted in higher distribution revenues of $10 million, which will support the maintenance and investment requirements of our distribution system and enable the safe and reliable delivery of electricity to our customers throughout Ontario. The 2013 distribution revenue increases were partially offset by lower 2013 ancillary distribution revenues of $13 million, primarily associated with OEB-approved regulatory accounts.

## Purchased Power

Purchased power costs are incurred by our Distribution Business and represent the cost of purchased electricity delivered to customers within our distribution service territory. These costs comprise the wholesale commodity cost of energy, the IESO wholesale market service charges, and transmission charges levied by the IESO. The commodity cost of energy is based on the OEB's RPP, as described above under "Regulation."

Our 2013 purchased power costs increased by $246 million, or 9%, to $3,020 million, compared to 2012. The increase in our 2013 purchased power costs was mainly due to a $104 million increase resulting from higher purchased power costs for customers who are not eligible for the RPP, an $85 million increase resulting from the impact of changes in the OEB's RPP rates for residential and other eligible customers, a $44 million increase due to higher electricity demand, a $9 million increase resulting from the IESO's Smart Metering Entity charge effective May 1, 2013, and a $4 million reduction in wholesale market service charges levied by the IESO.

## Operation, Maintenance and Administration

Our operation, maintenance and administration costs consist of labour, materials, equipment and purchased services which support the operation and maintenance of the transmission and distribution systems. Also included in these costs are property taxes and payments in lieu thereof related to our transmission and distribution lines, stations and buildings. Our transmission operation, maintenance and administration costs are incurred to sustain our high-voltage transmission stations, lines and rights-of-way. Our distribution operation, maintenance and administration costs are required to maintain our low-voltage distribution system. Our company continues to focus on managing its costs, while continuing to substantially complete our planned work programs for both our Transmission and Distribution Businesses.

| Year ended December 31 *(millions of Canadian dollars)* | **2013** | 2012 | $ Change | % Change |
|---|---|---|---|---|
| Transmission | **375** | 402 | (27) | (7) |
| Distribution | **672** | 608 | 64 | 11 |
| Other | **59** | 61 | (2) | (3) |
| | **1,106** | 1,071 | 35 | 3 |

***Transmission***

Our 2013 transmission operation, maintenance and administration costs decreased by $27 million, or 7%, to $375 million, compared to 2012. Within our work programs, we continued to invest in the safe and reliable operation of our transmission system.

Expenditures in support of our transmission system decreased by $33 million in 2013, compared to 2012, primarily due to a reduction to our provision for payments in lieu of property taxes related to transmission stations for the years 1999 to 2012, inclusive, following the finalization of the related regulations and receipt of a final assessment of our property tax returns. The decrease in our transmission system support costs was partially offset by an increase of $6 million in our work program costs, compared to 2012. This increase was primarily due to higher expenditures related to our forestry work program on our transmission rights-of-way resulting from heavy tree densities, power equipment preventive and corrective maintenance, and emergency restoration requirements as a result of severe flooding at our Richview and Manby transmission stations caused by a major rainstorm in July 2013. We also experienced increased cyber security and internal compliance program requirements related to the reliability standards and criteria mandated by the North American Electric Reliability Corporation (NERC). These increases in work program costs were partially offset by lower expenditures related to the OPA's recommendation to increase short circuit and/or transformer capacity at ten of our transmission stations to enable the connection of small renewable projects, as this work was substantially completed by the end of 2012. Expenditures for these station upgrades were recorded within operation, maintenance and administration rather than as capital expenditures, given that recovery was restricted pursuant to a shareholder declaration made in April 2011. No such declarations were issued in 2013. In addition, we experienced lower expenditures within our overhead lines program.

***Distribution***

Our 2013 distribution operation, maintenance and administration costs increased by $64 million, or 11%, to $672 million, compared to 2012. Our work program expenditures increased by $63 million compared to 2012, mainly as a result of increased power restoration expenditures following major storms in 2013, increased customer-driven work related to trouble calls and cable locates in support of the new One Call Program, higher requirements within the line patrol program, higher expenditures on our customer care programs, higher Information Technology (IT) improvements and enhancements, and continued work on the ADS Project. These impacts were partially offset by lower station corrective and preventive maintenance expenditures, as well as lower line clearing expenditures, compared to 2012. Our expenditures in support of our distribution system increased marginally by $1 million, compared to 2012.

## Depreciation and Amortization

Our 2013 depreciation and amortization costs increased by $17 million, or 3%, compared to 2012. This increase was attributable to higher 2013 depreciation expense, primarily related to our placement of new assets in service consistent with our ongoing capital work program, as well as higher asset removal costs in 2013.

## Financing Charges

Financing charges increased by $2 million, or 1%, to $360 million for 2013, compared to 2012. Higher financing costs in 2013 were mainly due to a decrease in interest capitalized, partially offset by a decrease in interest expense on long-term debt due to lower average interest rates.

## Provision for Payments in Lieu of Corporate Income Taxes

The provision for payments in lieu of corporate income taxes (PILs) decreased by $12 million, or 10%, to $109 million in 2013, compared to 2012. This decrease primarily resulted from changes in net temporary differences, and a true-up relating to the 2012 research and development tax credits. This reduction was partially offset by the impact of higher levels of pre-tax income in 2013, compared to 2012.

## Net Income

Our 2013 net income increased by $58 million, or 8%, to $803 million, compared to 2012. We experienced higher distribution revenues in 2013 mainly reflecting increased purchased power costs, primarily related to the OEB's RPP rate-setting process and the IESO's spot market. We also experienced increased transmission revenues in 2013 reflecting a higher peak demand due to intermittent periods of hot weather in the summer of 2013, as well as extreme cold winter weather. Our 2013 net income was also positively impacted by a lower provision for PILs and by a reduction to our provision for payments in lieu of transmission station property taxes, following the finalization of the assessment of certain prior years' property tax returns. This reduction was partially offset by power restoration expenditures following several major storms in 2013.

## QUARTERLY RESULTS OF OPERATIONS

The following table sets forth unaudited quarterly information for each of the eight quarters, from the quarter ended March 31, 2012 through December 31, 2013. This information has been derived from our unaudited interim Consolidated Financial Statements and our audited annual Consolidated Financial Statements which include all adjustments, consisting only of normal recurring adjustments, necessary for fair presentation of our financial position and results of operations for those periods. These operating results are not necessarily indicative of results for any future period and should not be relied upon to predict our future performance.

| *(millions of Canadian dollars)* | **2013** | | | | 2012 | | | |
|---|---|---|---|---|---|---|---|---|
| *Quarter ended* | **Dec. 31** | **Sept. 30** | **Jun. 30** | **Mar. 31** | Dec. 31 | Sept. 30 | Jun. 30 | Mar. 31 |
| Total revenue | **1,557** | **1,542** | **1,403** | **1,572** | 1,435 | 1,466 | 1,359 | 1,468 |
| Net income | **160** | **218** | **168** | **257** | 165 | 201 | 169 | 210 |
| Net income to common shareholder | **155** | **214** | **163** | **253** | 160 | 197 | 164 | 206 |

Electricity demand generally follows normal weather-related variations, and consequently, our electricity-related revenues and profit, all other things being equal, would tend to be higher in the first and third quarters than in the second and fourth quarters.

## LIQUIDITY AND CAPITAL RESOURCES

Our primary sources of liquidity and capital resources are funds generated from our operations, debt capital market borrowings and bank financing. These resources will be used to satisfy our capital resource requirements, which continue to include our capital expenditures, servicing and repayment of our debt, and dividends.

### Summary of Sources and Uses of Cash

| Year ended December 31 *(millions of Canadian dollars)* | **2013** | 2012 |
|---|---|---|
| **Operating activities** | **1,404** | 1,294 |
| **Financing activities** | | |
| Long-term debt issued | **1,185** | 1,085 |
| Long-term debt retired | **(600)** | (600) |
| Dividends paid | **(218)** | (370) |
| **Investing activities** | | |
| Capital expenditures | **(1,412)** | (1,463) |
| **Other financing and investing activities** | **11** | 21 |
| **Net change in cash and cash equivalents** | **370** | (33) |

### Operating Activities

Net cash from operating activities increased by $110 million to $1,404 million in 2013, compared to 2012. The increase was primarily due to higher 2013 net income, compared to 2012, as well as changes in accrual balances, mainly related to timing of tax payments and to capital projects. The increase was partially offset by growth in accounts receivable balances, resulting from higher revenues and lower collections in the period.

### Financing Activities

Short-term liquidity is provided through funds from operations, our Commercial Paper Program, under which we are authorized to issue up to $1,000 million in short-term notes with a term to maturity of less than 365 days, our revolving credit facility, and our holding of Province of Ontario Floating-Rate Notes.

Our Commercial Paper Program is supported by our $1,500 million committed revolving credit facility with a syndicate of banks, which matures in June 2018. In addition, our investment in Province of Ontario Floating-Rate Notes of $250 million (with a fair value of $251 million at December 31, 2013) maturing on November 19, 2014 also provides temporary liquidity. The short-term liquidity under this program and anticipated levels of funds from operations should be sufficient to fund our normal operating requirements.

At December 31, 2013, we had $9,045 million in long-term debt outstanding, including the current portion. Our notes and debentures mature between 2014 and 2062. Long-term financing is provided by our access to the debt markets, primarily through our Medium-Term Note (MTN) Program. The maximum authorized principal amount of medium-term notes issuable under this program is $3,000 million. At December 31, 2013, $1,815 million remained available until October 2015.

Cash generated from operations, after payment of expected dividends, will not be sufficient to fund capital expenditures, fund the repayment of our existing indebtedness, and meet other liquidity requirements. We rely on debt financing through our MTN Program and our Commercial Paper Program to repay our existing indebtedness and fund a portion of our capital expenditures.

The credit ratings assigned to our debt securities by external rating agencies are important to our ability to raise capital and funding to support our business operations. Maintaining strong credit ratings allows us to access capital markets on competitive terms. A material downgrade of our credit ratings would likely increase our cost of funding significantly, and our ability to access funding and capital through the capital markets could be reduced. Our corporate credit ratings from approved rating organizations are as follows:

| | **Rating** | |
|---|---|---|
| **Rating Agency** | **Short-term Debt** | **Long-term Debt** |
| DBRS Limited | R-1 (middle) | A (high) |
| Moody's Investors Service Inc. | Prime-1 | A1 |
| Standard & Poor's Rating Services Inc. (S&P)[1] | A-1 | A+ |

[1] On April 25, 2012, S&P revised their outlook on our company to negative from stable.

We have the customary covenants normally associated with long-term debt. Among other things, our long-term debt covenants limit our permissible debt as a percentage of our total capitalization, limit our ability to sell assets, and impose a negative pledge provision, subject to customary exceptions. The credit agreements related to our credit facilities have no material adverse change clauses that could trigger default. However, the credit agreements require that we provide notice to the lenders of any material adverse change within three business days of the occurrence. The agreements also provide limitations that debt cannot exceed 75% of total capitalization and that third party debt issued by our subsidiaries cannot exceed 10% of the total book value of our assets. We were in compliance with all these covenants and limitations as at December 31, 2013.

In 2013, we issued $1,185 million of long-term debt under our MTN Program, compared to $1,085 million of long-term debt issued in 2012. In 2013, we also repaid $600 million in maturing long-term debt, compared to $600 million of long-term debt called and redeemed in 2012, prior to its maturity date of November 15, 2012. We had no short-term notes outstanding at December 31, 2013 or 2012.

Common dividends are declared at the sole discretion of our Board of Directors, and are recommended by management based on results of operations, maintenance of the deemed regulatory capital structure, financial condition, cash requirements, and other relevant factors, such as industry practice and shareholder expectations. Common dividends pertaining to our quarterly financial results are generally declared and paid in the following quarter.

In 2013, we paid dividends to the Province in the amount of $218 million, consisting of $200 million in common dividends and $18 million in preferred dividends. In 2012, we paid dividends to the Province in the amount of $370 million, consisting of $352 million in common dividends and $18 million in preferred dividends. In 2013, cash dividends per common share were $2,000, compared to $3,523 per common share in 2012. Cash dividends per preferred share were $1.375 in each of 2013 and 2012.

Our objectives with respect to our capital structure are to maintain effective access to capital on a long-term basis at reasonable rates and to deliver appropriate financial returns to our shareholder.

## Investing Activities

Capital investments consist of cash capital expenditures and related accruals. Capital investments primarily relate to enhancing and reinforcing of our transmission and distribution infrastructure.

| Year ended December 31 *(millions of Canadian dollars)* | **2013** | 2012 | $ Change | % Change |
|---|---|---|---|---|
| Transmission | **714** | 776 | (62) | (8) |
| Distribution | **673** | 671 | 2 | – |
| Other | **7** | 7 | – | – |
| **Total capital investments** | **1,394** | 1,454 | (60) | (4) |

### *Transmission*

Our 2013 transmission capital investments decreased by $62 million, or 8%, to $714 million, compared to 2012. Investments to expand and reinforce our transmission system were $170 million in 2013, representing a decrease of $143 million, compared to 2012. The decrease was mainly due to the completion of our Bruce to Milton Transmission Reinforcement Project to connect refurbished nuclear and new wind generation sources in the Huron-Grey-Bruce area. This project was placed in-service in May 2012. In addition, we experienced lower expenditures as a result of completing our Commerce Way Transmission Station, a new load supply station in the City of Woodstock to address load growth issues in the Woodstock area, and the Switchyard Reconstruction Project at our Burlington Transmission Station, where two new 115 kV switchyards were constructed to increase the load supply capacity and to ensure reliability of supply to customers in the area. These projects were placed in-service in February 2013 and December 2012, respectively.

During 2013, we continued to invest in inter-area network projects to support the Province's supply mix objectives for generation, and in load customer connections and local area supply projects to address growing loads. Our local area supply project expenditures include investments in our Midtown Transmission Reinforcement Project, which will provide additional supply capability to meet future load growth in midtown Toronto as well as areas to the west. Work at our Hearn Switching Station was partially completed in December 2013, where we rebuilt an existing switchyard that had reached its end-of-life. This project will also increase short circuit capability to accommodate future connection of renewable generation in central and downtown Toronto. We are also constructing our Lambton to Longwood Transmission Upgrade to increase transmission capability between our Lambton (Sarnia) and Longwood (London) transmission stations. This project is needed to satisfy government policy relating to the incorporation of 10,700 MW of non-hydroelectric renewable generation resources by 2021.

Investments to sustain our existing transmission system were $481 million in 2013, representing an increase of $89 million, compared to 2012. In 2013, we made significant investments in the refurbishment and replacement of end-of-life equipment for overhead lines and system re-investments in order to improve reliability, as well as replacement of circuit breakers. In addition, we have experienced higher expenditures associated with the timing of work related to the replacement of end-of-life power transformers. We continued work on replacing end-of-life underground transmission cables between our Strachan Transmission Station and Riverside Junction. These new underground cables will maintain a reliable supply of electricity to downtown Toronto. These increases were partially offset by lower expenditures related to the replacement of protection and control equipment.

Our other transmission capital investments were $63 million in 2013, representing a decrease of $8 million, compared to 2012. The decrease was mainly due to lower requirements associated with IT initiatives, including our entity-wide SAP information system replacement and improvement project, and timing of field facilities improvements. These reductions were partially offset by increased fleet acquisitions and emergency flood restoration work at our Richview transmission station caused by a major rainstorm in July 2013.

***Distribution***

Our 2013 distribution capital investments increased by $2 million, or less than 1%, to $673 million, compared to 2012. Investments to expand and reinforce our distribution network were $235 million in 2013, representing a decrease of $49 million, compared to 2012. We experienced reduced expenditures related to some of our major projects, including the ADS Project, as we completed the deployment of our Distribution Management System within our Owen Sound pilot area in 2012, and the Smart Metering Project, as most of the network expansion work was completed in 2012. In 2013, we also experienced a lower demand for new customer connections and upgrades. These decreases were partially offset by increased work on upgrading and adding capacity to our system to enable new customer connections and timing of generation connection projects. Given that the OEB has assessed the prudency of the ADS Project, the next phase of this project is anticipated in 2014.

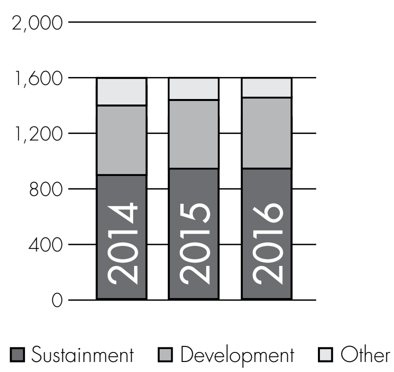
Investments to sustain our distribution system were $324 million in 2013, representing an increase of $79 million, compared to 2012. The increase was primarily due to increased expenditures for replacements related to storm restoration work caused by major storms in 2013. We also experienced increased work within our wood pole replacement program and station refurbishment projects. Investments were also impacted by the timing of customer contribution payments received in 2012 relating to work for joint use and relocation of our lines. These increases were partially offset by lower work within our lines programs.

Our other distribution capital investments were $114 million in 2013, representing a decrease of $28 million, compared to 2012. The majority of these expenditures were related to the Customer Information System (CIS) phase of our entity-wide information system replacement and improvement project, which was placed into service in May 2013. In addition to replacing end-of-life systems, this implementation will result in process improvements that are expected to provide many benefits including enhancements to customer satisfaction through reduced call times and first call resolution of issues given faster availability of information. Productivity savings are also anticipated to result from performance improvements, consolidation and/or decommissioning of legacy IT systems. In addition, we experienced decreased expenditures associated with IT initiatives, including our entity-wide SAP information system replacement and improvement project, and the timing of field facilities improvements, partially offset by an increase in fleet acquisitions and emergency flood restoration work at our Richview Transmission Station.

## Future Capital Investments

Our capital investments for 2014 are budgeted at approximately $1,600 million. Our 2014 capital budgets for our Transmission and Distribution Businesses are approximately $950 million and $650 million, respectively. Consolidated capital investments are expected to be approximately $1,600 million in each of 2015 and 2016. These investment levels reflect the sustainment requirements of our aging infrastructure. Our sustainment program capital investments are expected to be approximately $900 million in each of 2014, 2015, and 2016. Our development capital investments are expected to be approximately $450 million in 2014, $500 million in 2015, and $500 million in 2016. Our development projects include the inter-area network upgrades that reflect supply mix policies, local area supply improvements, the ADS, new load and generation connections and requirements to enable Distributed Generation (DG), and customer demand work. Other capital investments are expected to be $250 million in 2014, $200 million in 2015, and $200 million in 2016. This includes investments in operating infrastructure integration, IT, fleet services and facilities, and real estate. Our future capital investments amounts do not include future LDC acquisitions.

**Future Capital Investments**
*(millions of Canadian dollars)*



***Transmission***

Transmission capital investments are incurred to manage the replacement and refurbishment of our aging transmission infrastructure in order to ensure a continued reliable supply of energy to customers throughout the province. Our sustainment program future capital investments include the replacement of air blast circuit breakers and switchgear, high-voltage underground cables, and power transformers. These investments are necessary to ensure that we maintain our current levels of supply to our customers and continue to meet all regulatory, compliance, safety and environmental objectives.

Our development future capital investments include the Clarington Transmission Station Project to install additional auto-transformer capacity in east Greater Toronto Area; the Guelph Area Transmission Refurbishment Project, an upgrade of a transmission line and transmission stations in south-central Guelph; investments in ADS; requirements to enable DG; and up to four other transmission station upgrades, which when combined with the new Hearn Switching Station, will collectively enable up to 600 MW of new generation capacity in the Niagara, Toronto and Ottawa areas.

In 2011, the OPA provided the scope and timing to increase short circuit and/or transformer capacity at ten of 15 transmission stations. Seven of these station upgrades have now been completed, and alternate solutions have been determined for the remaining three projects. The Lambton to Longwood Transmission Upgrade has a required in-service date of December 2014, and is included in our budgeted future capital investments. This project is needed to satisfy government policy relating to the incorporation of 10,700 MW of non-hydroelectric renewable generation resources by 2021. In August 2013, the OPA requested us to terminate work related to the Southwestern Ontario Reactive Compensation Priority Project, and an OPA recommendation regarding the third priority specified transmission project, which was not included in the most recent LTEP, is not expected in the foreseeable future. Therefore, these two projects are not included in our budgeted future capital investments.

Based on the OEB's framework for competitive designation for the development of eligible transmission projects, we did not include in our budgeted future capital investments any projects that could meet the definition of expansions. We do not plan to undertake large capital investments without a reasonable expectation of recovering them through our rates.

The actual timing and investments of many development projects are uncertain as they are dependent upon various regulatory approvals, negotiations with customers, neighbouring utilities and other stakeholders, and consultations with First Nations and Métis communities. Projects are also dependent upon the timing and level of generator contributions for enabling facilities.

***Distribution***

Distribution capital investments include the sustainment of our infrastructure. Our core work will continue to focus on maintaining the performance of our aging distribution asset base through renewal and refurbishment activities. Planned capital investments include the continued replacements of equipment and components that are beyond their expected service life, as well as increased wood pole replacements and distribution station refurbishments. Sustainment capital investments in the Smart Metering project will decrease through 2016.

Distribution development capital investments are expected to be relatively stable through 2016, with the exception of capital contributions for capacity improvements at the Orleans Transmission Station in 2015 and the Hanmer Transmission Station in 2016. We will continue to make investments required to connect new load and DG customers, as well as investments to ensure the system is capable of supplying customer needs. During 2014 to 2016, a number of our projects will address local load growth issues. Generation connection investments will decrease as the volume of connections is expected to decrease. The budgeted capital expenditures only reflect projects with FIT and Micro FIT Program contracts from the OPA that are expected to connect to our distribution system.

In 2014 and 2015, the ADS Project will continue to pilot various technologies and related capital investments will begin to decrease in 2016. Pilot technologies include improvements to outage response management through more effective resource dispatch, automation to isolate faults where needed, and the dynamic regulation of voltage to reduce losses.

## Off-Balance Sheet Arrangements

There are no off-balance sheet arrangements that have, or are reasonably likely to have, a material current or future effect on our financial condition, changes in financial condition, revenues or expenses, results of operations, liquidity, capital expenditures or capital resources.

### Summary of Contractual Obligations and Other Commercial Commitments

The following table presents a summary of our debt and other major contractual obligations, as well as other major commercial commitments:

| December 31, 2013 *(millions of Canadian dollars)* | Total | 2014 | 2015/2016 | 2017/2018 | After 2018 |
|---|---|---|---|---|---|
| **Contractual obligations** *(due by year)* | | | | | |
| Long-term debt – principal repayments[1] | 9,045 | 750 | 1,050 | 1,350 | 5,895 |
| Long-term debt – interest payments[1] | 7,634 | 422 | 770 | 691 | 5,751 |
| Pension[2] | 172 | 160 | 12 | – | – |
| Environmental and asset retirement obligations[3] | 329 | 32 | 63 | 46 | 188 |
| Inergi LP (Inergi) outsourcing agreement[4] | 152 | 130 | 22 | – | – |
| Operating lease commitments | 48 | 11 | 14 | 14 | 9 |
| **Total contractual obligations** | 17,380 | 1,505 | 1,931 | 2,101 | 11,843 |
| | | | | | |
| **Other commercial commitments** (*by year of expiry*) | | | | | |
| Bank line[5] | 1,500 | – | – | 1,500 | – |
| Letters of credit[6] | 149 | 149 | – | – | – |
| Guarantees[6] | 326 | 326 | – | – | – |
| **Total other commercial commitments** | 1,975 | 475 | – | 1,500 | – |

1 The "long-term debt – principal repayments" amounts are not charged to our results of operations, but are reflected on our Consolidated Balance Sheets and Consolidated Statements of Cash Flows. Interest associated with the long-term debt is recorded in financing charges on our Consolidated Statements of Operations and Comprehensive Income or as a cost of our capital programs.

2 Contributions to the Hydro One Pension Fund are generally made one month in arrears. The 2014 minimum pension contributions are based on an actuarial valuation effective December 31, 2011. Minimum pension contributions beyond 2014 will be based on an actuarial valuation effective no later than December 31, 2014, and will depend on future investment returns, changes in benefits, or actuarial assumptions. Pension contributions beyond 2014 are not estimable at this time. On January 30, 2014, we made contributions of $140 million.

3 We record a liability for the estimated future expenditures associated with the removal and destruction of polychlorinated biphenyl (PCB)-contaminated insulating oils and related electrical equipment, and for the assessment and remediation of chemically-contaminated lands. We also record a liability for asset retirement obligations associated with the removal and disposal of asbestos-containing materials installed in some of our facilities, as well as the future decommissioning and removal of two of our switching stations. The forecast expenditure pattern reflects our planned work programs for the periods.

4 In 2002, Inergi began providing services to our company, including business processing and IT outsourcing services. The current agreement with Inergi will expire in February 2015. We have begun developing a plan of action for end-of-term and issued a request for proposal on November 7, 2013. Based on the September 2013 Shareholder Resolution, the Province requires us to contract only with parties who are employed and physically located in Ontario when providing services to our company. The amounts disclosed include an estimated contractual annual inflation adjustment in the range of 1.5% to 3.0%. Payments in respect of our agreement with Inergi are recorded in operation, maintenance and administration costs on our Consolidated Statements of Operations and Comprehensive Income or as a cost of our capital programs.

5 On May 31, 2013, we increased the size of the revolving standby credit facility used to support our liquidity requirements from $1,250 million to $1,500 million, and extended the maturity date from June 2017 to June 2018.

6 We currently have outstanding bank letters of credit of $127 million relating to retirement compensation arrangements. We provide prudential support to the IESO in the form of letters of credit, the amount of which is calculated based on forecasted monthly power consumption. At December 31, 2013, we have provided letters of credit to the IESO in the amount of $21 million to meet our current prudential requirement. In addition, we have approximately $1 million pertaining to operating letters of credit. We have also provided prudential support to the IESO on behalf of our subsidiaries as required by the IESO's Market Rules, using parental guarantees of up to a maximum of $325 million, and on behalf of two distributors using guarantees of up to approximately $1 million.

## RELATED PARTY TRANSACTIONS

We are owned by the Province. The OEFC, IESO, OPA, OPG and the OEB are related parties to our company because they are controlled or significantly influenced by the Province.

Related party transactions primarily consist of our transmission revenues received from, and our power purchases payments made to the IESO. The year-over-year changes related to these amounts are described more fully in the discussion of our transmission revenues and purchased power costs. Other significant related party transactions include our dividends, which are paid to the Province, and our PILs and some of our payments in lieu of property taxes, which are paid to the OEFC. In addition, in January 2010, we purchased $250 million of Province of Ontario Floating-Rate Notes, maturing on November 19, 2014, as a form of alternate liquidity to supplement our bank credit facilities.

Our company receives revenues for transmission services from the IESO, based on OEB-approved UTRs. Transmission revenues include $1,509 million (2012 – $1,474 million) related to these services. Our company receives amounts for rural rate protection from the IESO. Distribution revenues include $127 million (2012 – $127 million) related to this program. Our company also receives revenues related to the supply of electricity to remote northern communities from the IESO. Distribution revenues include $33 million (2012 – $28 million) related to these services.

In 2013, our company purchased power in the amount of $2,477 million (2012 – $2,392 million) from the IESO-administered electricity market; $15 million (2012 – $10 million) from OPG; and $8 million (2012 – $7 million) from power contracts administered by the OEFC.

Under the *Ontario Energy Board Act, 1998*, the OEB is required to recover all of its annual operating costs from gas and electricity distributors and transmitters. In 2013, our company incurred $12 million (2012 – $11 million) in OEB fees.

Our company has service level agreements with OPG. These services include field, engineering, logistics and telecommunications services. In 2013, revenues related to the provision of construction and equipment maintenance services with respect to these service level agreements were $9 million (2012 – $10 million), primarily for the Transmission Business. Operation, maintenance and administration costs related to the purchase of services with respect to these service level agreements were $1 million in 2013 (2012 – $2 million).

The OPA funds substantially all of the Company's CDM programs. The funding includes program costs, incentives, and management fees. In 2013, our company received $34 million (2012 – $39 million) from the OPA related to these programs.

Our company pays a $5 million annual fee to the OEFC for indemnification against adverse claims in excess of $10 million paid by the OEFC with respect to certain of Ontario Hydro's businesses transferred to our company on April 1, 1999.

Sales to and purchases from related parties occur at normal market prices or at a proxy for fair value based on the requirements of the OEB's Affiliate Relationships Code. Outstanding balances at period end are unsecured, interest free and settled in cash.

The amounts due to and from related parties as a result of the transactions referred to above are as follows:

| December 31 *(millions of Canadian dollars)* | **2013** | 2012 |
|---|---|---|
| Due from related parties | **197** | 154 |
| Due to related parties[1] | **(230)** | (261) |
| Long-term investment | **251** | 251 |

[1] Included in "due to related parties" at December 31, 2013 are amounts owing to the IESO in respect of power purchases of $217 million (2012 – $199 million).

## CONSIDERATIONS OF CURRENT ECONOMIC CONDITIONS

### Effect of Load on Revenue

Our load, based on normal weather patterns, is expected to decline in 2014 due to the impact of CDM and embedded generation, partially offset by load growth associated with economic growth in all sectors of the Ontario economy. Overall load growth due to the economy alone is forecasted to be approximately 1.6%, with the commercial and industrial sectors slightly outperforming the residential sector. The load impacts of CDM and embedded generation are expected to have a negative impact on load growth of approximately 0.4% and 3.5%, respectively. On the whole, our load is expected to decline by about 2.3% in 2014. Our approved revenue requirement for 2014 has taken the expected load decline into account. A reduction in load, beyond our load forecast included in our approved revenue requirement, would negatively impact our financial results.

### Effect of Interest Rates

Changes in interest rates will impact the calculation of the revenue requirements upon which our rates are based. The first component impacted by interest rates is our return on equity (ROE). The OEB-approved adjustment formula for calculating ROE will increase or decrease by 50% of the change between the current Long Canada Bond Forecast and the risk-free rate established at 4.25% and 50% of the change in the spread in 30-year "A"-rated Canadian utility bonds over the 30-year benchmark Government of Canada bond yield established at 1.415%. All other things being equal, we estimate that a 1% decrease in the forecasted long-term Government of Canada bond yield used in determining our ROE would reduce Hydro One Networks' transmission and distribution businesses' 2014 results of operations by approximately $20 million and $10 million, respectively. As interest rates decline, there is more risk of a decline in our net income. The second component of revenue requirement that would be impacted by interest rates is the return on debt. The difference between actual interest rates on new debt issuances and those approved for return by the OEB would impact our results of operations.

### Input Costs and Commodity Pricing

In support of our ongoing work programs, we are required to procure materials, supplies and services. To manage our total costs, we regularly establish security of supply, strategic material and services contracts, general outline agreements, and vendor alliances and we also manage a stock of commonly used items. Such arrangements are for a defined period of time and are monitored. Where advantageous, we develop long-term contractual relationships with suppliers to optimize the cost of goods and services and to ensure the availability and timely supply of critical items. As a result of our strategic sourcing practices, we do not foresee any adverse impacts on our business from current economic conditions in respect of adequacy and timing of supply and credit risk of our counterparties. Further, we have been able to realize significant savings through our strategic sourcing initiatives.

### Pension Plan

In 2013, we contributed approximately $160 million to our pension plan and incurred $287 million in net periodic pension benefit costs, based on an actuarial valuation effective December 31, 2011. Actuarial valuations are minimally required to be filed every three years. We currently estimate our total annual pension contributions to be approximately $160 million for 2014, based on the projected level of pensionable earnings and the same actuarial valuation effective December 31, 2011. Future minimum contributions beyond 2014 will be based on an actuarial valuation effective no later than December 31, 2014. Our pension plan experienced positive returns of approximately 17.91% in 2013. Our pension obligation is impacted by interest rates. The 0.5% increase in the discount rate, from 4.25% at December 31, 2012 to 4.75% at December 31, 2013, resulted in a decrease in the pension obligation of $443 million and an increase to our post-retirement and post-employment benefit obligation of $126 million. Our pension obligation is also impacted by mortality assumptions. The changes in mortality assumptions at December 31, 2013, compared to December 31, 2012, resulted in an increase in the pension obligation of $380 million and an increase to our post-retirement and post-employment benefit obligation of $136 million. Contribution increases are being implemented for all segments of our company's active employees.

## RISK MANAGEMENT AND RISK FACTORS

We have an Enterprise Risk Management (ERM) Program that aims at balancing business risks and returns. An enterprise-wide approach enables regulatory, strategic, operational and financial risks to be managed and aligned with our strategic goals. Our ERM program helps us to better understand uncertainty and its potential impact on our strategic goals. It sets out the uniform principles, processes and criteria for identifying, assessing, evaluating, treating, monitoring and communicating risks across all lines of business. It supports our Board of Directors' corporate governance needs and the due diligence responsibilities of senior management.

While our philosophy is that risk management is the responsibility of all employees, the Board of Directors annually reviews our company's risk tolerances, risk management policies, processes and accountabilities. Twice per year, the Board of Directors reviews our risk profile, which is the list of key risks prepared by senior management, and represents the greatest threats to meeting our strategic objectives. The Board of Directors' committees review risks relevant to their mandate at every meeting. The Audit and Finance Committee of our Board of Directors annually reviews the status of our internal control framework.

Our President and Chief Executive Officer (CEO) has ultimate accountability for risk management. Our Leadership Team provides senior management oversight of our risk portfolio and our risk management processes. The leadership team provides direction on the evolution of these processes and identifies priority areas of focus for risk assessment and mitigation planning.

Our Chief Administration Officer and Chief Financial Officer (CAO and CFO) is responsible for ensuring that the risk management program is an integral part of our business strategy, planning and objective setting. The CAO and CFO has specific accountability for ensuring that ERM processes are established, properly documented and maintained by our company.

Our senior managers, line and functional managers are responsible for managing risks within the scope of their authority and accountability. Risk acceptance or mitigation decisions are made within the risk tolerances specified by the head of the subsidiary or function.

The CAO and CFO provides support to the Audit and Finance Committee of our Board of Directors, the President and CEO, the senior management team and key managers within our company. This support includes developing risk management frameworks, policies and processes, introducing and promoting new techniques, establishing risk tolerances, preparing annual corporate risk profiles, maintaining a registry of key business risks and facilitating risk assessments across our company. Our internal audit staff is responsible for performing independent reviews of the effectiveness of risk management policies, processes and systems. Starting in 2013, our Board of Directors has taken on an enhanced role in our governance structure. Each committee of the Board of Directors will take accountability for reviewing specific risks of our company.

Key elements of our ERM Program enable us to identify, assess and monitor our risks effectively. These include having an ERM policy and framework which communicates our philosophy and process for risk management across our company. A discussion of risks is an integral part of each line of business' planning documents on an annual basis. Risk identification is also considered as part of each business case for investments. Finally, discrete risk assessments and workshops are performed for specific lines of business, key projects and various profiles, such as customer relationships and regulatory compliance. In order to drive consistency throughout our risk identification and risk management processes, we use a standard list of risk sources known as our risk universe. These sources are maintained in a single database that provides a consistent basis for risk identification and classification and serves as a repository for our risk assessments. All risk assessments in our company start with this risk universe. We also use standard risk criteria, which establish the metrics and terminology used for assessing and communicating on risks, and help ensure a consistent basis for our risk assessments and risk evaluations across all lines of business. Risk criteria include formally established risk tolerances and standard scales for assessing the probability of a risk materializing and the strength of controls in place to mitigate them.

**Ownership by the Province**

The Province owns all of our outstanding shares. Accordingly, the Province has the power to determine the composition of our Board of Directors, appoint the Chair, and influence our major business and corporate decisions. We and the Province have entered into a memorandum of agreement relating to certain aspects of the governance of our company. Pursuant to such agreement, in September 2008 the Province made a declaration removing certain powers from our company's directors pertaining to the off-shoring of jobs under the Inergi Agreement. In 2011, the Province made a declaration preventing our company from seeking cost recovery through the regulatory process for the cost of upgrades required for either Micro FIT or Small FIT generators for costs related to investment and expenditures made. Effective September 30, 2013, the Province made a declaration regarding the outsourcing of services covered by the Inergi Agreement.

In 2009, the Province required our company, among other entities, to adhere to certain accountability measures regarding consulting contracts and employee travel, meal and hospitality expenses. The Province may require us to adhere to further accountability measures or may make similar declarations in the future, some of which may have a material adverse effect on our business. Our credit ratings may change with the credit ratings of the Province, to the extent the credit rating agencies link the two ratings by virtue of our company's ownership by the Province.

Conflicts of interest may arise between us and the Province as a result of the obligation of the Province to act in the best interests of the residents of Ontario in a broad range of matters, including the regulation of Ontario's electricity industry and environmental matters, any future sale or other transaction by the Province with respect to its ownership interest in our company, including any potential outcomes arising out of the recommendations of the Ontario Distribution Sector Review Panel's report, the Province's ownership of OPG, and the determination of the amount of dividend or proxy tax payments. We may not be able to resolve any potential conflict with the Province on terms satisfactory to us, which could have a material adverse effect on our business.

## Regulatory Risk

We are subject to regulatory risks, including the approval by the OEB of rates for our transmission and distribution businesses that permit a reasonable opportunity to recover the estimated costs of providing safe and reliable service on a timely basis and earn the approved rates of return. The OEB approves our transmission and distribution rates based on projected electricity load and consumption levels. If actual load or consumption materially falls below projected levels, our net income for either, or both, of these businesses could be materially adversely affected. Also, our current revenue requirements for these businesses are based on cost assumptions that may not materialize. There is no assurance that the OEB would allow rate increases sufficient to offset unfavourable financial impacts from unanticipated changes in electricity demand or in our costs.

The OEB's new Renewed Regulatory Framework requires that the term of a custom rate application (distribution business) is a five-year period. There are risks associated with forecasting over a longer period. Changes in the industry may alter the investment needs or require changes to rate setting that could result in a significant impact on our capability to execute its plan. To mitigate the risk of externally driven factors that may impact its plan, Hydro One Networks proposed a number of adjustment mechanisms in the design of its recent custom application to reflect plan changes outside the normal course of business in order for the Company to avoid a regulatory review by the OEB during the five-year custom application period. Hydro One Networks also proposed a set of outcome measures to track its performance and delivery of the plan. There can be no assurance that the OEB will accept these mechanisms or that they will be sufficient to protect our company from unforeseen changes to its plan.

Our load could also be negatively affected by successful CDM programs. We are also subject to risk of revenue loss from other factors, such as economic trends and weather.

We expect to make investments in the coming years to connect new renewable generating stations. There is the possibility that we could incur unexpected capital expenditures to maintain or improve our assets particularly given that new technology is required to support renewable generation and unforeseen technical issues may be identified through implementation of projects. The risk exists that the OEB may not allow full recovery of such investments in the future. To the extent possible, we aim to mitigate this risk by ensuring prudent expenditures, seeking from the regulator clear policy direction on cost responsibility, and pre-approval of the need for capital expenditures. While we expect all of our expenditures to be fully recoverable after OEB review, any future regulatory decision to disallow or limit the recovery of such costs would lead to potential asset impairment and charges to our results of operations, which could have a material adverse effect on our company.

In Ontario, the Market Rules mandate that we comply with the reliability standards established by NERC and Northeast Power Coordinating Council. As a result, we will be required to comply with the Federal Energy Regulatory Commission's definition of the Bulk Electric System unless we are granted an exception which will allow the application of the new definition in a cost-effective manner. We plan to submit exception applications and will look for recovery for costs incurred in meeting the definition in our rates; however, an adverse decision on an exception or recovery of costs could have an adverse effect on our company.

## Risk of Natural and Other Unexpected Occurrences

Our facilities are exposed to the effects of severe weather conditions, natural disasters, man-made events including cyber and physical terrorist type attacks and, potentially, catastrophic events, such as a major accident or incident at a facility of a third party (such as a generating plant) to which our transmission or distribution assets are connected. Although constructed, operated and maintained to industry standards, our facilities may not withstand occurrences of this type in all circumstances. We do not have insurance for damage to our transmission and distribution wires, poles and towers located outside our transmission and distribution stations resulting from these events. Losses from lost revenues and repair costs could be substantial, especially for many of our facilities that are located in remote areas. We could also be subject to claims for damages caused by our failure to transmit or distribute electricity. Our risk is partly mitigated because our transmission system is designed and operated to withstand the loss of any major element and possesses inherent redundancy that provides alternate means to deliver large amounts of power. In the event of a large uninsured loss, we would apply to the OEB for recovery of such loss; however, there can be no assurance that the OEB would approve any such applications, in whole or in part, which could have a material adverse effect on our net income.

**Risk Associated with Information Technology Infrastructure**

Our ability to operate effectively in the Ontario electricity market is in part dependent upon us developing, maintaining and managing complex IT systems which are employed to operate our transmission and distribution facilities, financial and billing systems, and business systems. Our increasing reliance on information systems and expanding data networks increases our exposure to information security threats. We mitigate this risk through various methods including the use of security event management tools on our power and business systems, by separating our power system network from our business system network, by performing scans of our systems for known cyber threats and by providing company-wide awareness training to our personnel. We also engage the services of external experts to evaluate the security of our IT infrastructure and controls. We perform vulnerability assessments on our critical cyber assets and we ensure security and privacy controls are incorporated into new IT capabilities. Although these security and system disaster recovery controls are in place, there can be no guarantee that there will not be system failures or security breaches. Upon occurrence, the focus would shift from prevention to isolation, remediation and recovery until the incident has been fully addressed. Any such system failures or security breaches could have a material adverse effect on our company.

**Risk Associated with Arranging Debt Financing**

We expect to borrow to repay our existing indebtedness and fund a portion of capital expenditures. We have substantial amounts of existing debt, including $750 million maturing in 2014 and $550 million maturing in 2015. We plan to incur capital expenditures of approximately $1,600 million in each of 2014 and 2015. Cash generated from operations, after the payment of expected dividends, will not be sufficient to fund the repayment of our existing indebtedness and capital expenditures. Our ability to arrange sufficient and cost-effective debt financing could be materially adversely affected by numerous factors, including the regulatory environment in Ontario, our results of operations and financial position, market conditions, the ratings assigned to our debt securities by credit rating agencies and general economic conditions. Any failure or inability on our part to borrow substantial amounts of debt on satisfactory terms could impair our ability to repay maturing debt, fund capital expenditures and meet other obligations and requirements and, as a result, could have a material adverse effect on our company.

**First Nation and Métis Claims Risk**

Some of our current and proposed transmission and distribution lines may traverse lands over which First Nations and Métis have aboriginal, treaty or other legal claims. Although we have a recent history of successful negotiations and consultations with First Nations and Métis communities in Ontario, some communities and/or their citizens have expressed an increasing willingness to assert their claims through the courts, tribunals, or by direct action, which in turn can affect business activities. As a result, there exists uncertainty relating to business operations and project planning which could have an adverse effect on our company.

**Risk Associated with Outsourcing Arrangement**

Consistent with our strategy of reducing operating costs, we amended and extended our agreement with Inergi, effectively renewing the arrangement until February 28, 2015. If our agreement with Inergi is terminated for any reason or expires before a new supplier is selected, we could be required to incur significant expenses to transfer to another service provider, which could have a material adverse effect on our business, operating results, financial condition or prospects.

**Risk Associated with Transmission Projects**

The amount of power that can flow through transmission networks is constrained due to the physical characteristics of transmission lines and operating limitations. Within Ontario, new and expected generation facility connections, including those renewable energy generation facilities connecting as a result of the FIT program stemming from the GEA, and load growth have increased such that parts of our transmission and distribution systems are operating at or near capacity. These constraints or bottlenecks limit the ability of our network to reliably transmit power from new and existing generation sources (including expanded interconnections with neighbouring utilities) to load centres or to meet customers' increasing loads. As a result, investments have been initiated to increase transmission capacity and enable the reliable delivery of power from existing and future generation sources to Ontario consumers. In many cases, these investments are contingent upon one or more of the following approvals and/or processes: environmental approval(s); receipt of OEB approvals which can include expropriation; and appropriate consultation processes with First Nations and Métis communities. Obtaining OEB and/or environmental approvals and carrying out these processes may also be impacted by opposition to the proposed site of transmission investments, which could adversely affect transmission reliability and/or our service quality, both of which could have a material adverse effect on our company.

With the introduction on August 26, 2010, of the OEB's competitive transmission project development planning process, in the absence of a government directive, all interested transmitters will be required to submit a bid to the OEB for identified enabler facilities and network enhancement projects. Historically, we would have been awarded such projects through our rates and Section 92 applications. The facilitation of competitive transmission could impact our future work program and our ability to expand our current transmission footprint. In addition, bid costs are recoverable only by the successful proponent. This could have a material adverse effect on our company.

**Asset Condition**

We continually monitor the condition of our assets and maintain, refurbish or replace them to maintain equipment performance and provide reliable service quality. Our capital programs have been increasing to maintain the performance of our aging asset base. Execution of these plans is partially dependent upon external factors, such as outage planning with the IESO and transmission-connected customers, funding approval by the OEB, and supply chain availability for equipment suppliers and consulting services. In addition, opportunities to remove equipment from service to accommodate construction and maintenance are becoming increasingly limited due to customer and generator priorities.

Adjustments to accommodate these external dependencies have been made in our planning process, and we are focused on overcoming these challenges to execute our work programs. However, if we are unable to carry out these plans in a timely and optimal manner, equipment performance will degrade, which may compromise the reliability of the provincial grid, our ability to deliver sufficient electricity and/or customer supply security, and increase the costs of operating and maintaining these assets. This could have a material adverse effect on our company.

**Workforce Demographic Risk**

By the end of 2013, approximately 16% of our employees were eligible for retirement, and by the end of 2014, there could be up to 20% eligible to retire. Accordingly, our success will be tied to our ability to attract and retain sufficient qualified staff to replace those retiring. This will be challenging as we expect the skilled labour market for our industry to be highly competitive in the future. In addition, many of our employees possess experience and skills that will also be highly sought after by other organizations both inside and outside the electricity sector. We are therefore focused on earlier identification and more rapid development of staff who demonstrate management potential. Moreover, we must also continue to advance our technical training and apprenticeship programs and succession plans to ensure that our future operational staffing needs will be met. If we are unable to attract and retain qualified personnel, it could have a material adverse effect on our business.

**Labour Relations Risk**

The substantial majority of our employees are represented by either the Power Workers Union (PWU) or the Society of Professional Energy Workers (Society). Over the past several years, significant effort has been expended to increase our flexibility to conduct operations in a more cost-efficient manner. Although we have achieved improved flexibility in our collective agreements, including a reduction in pension benefits for Society staff hired after November 2005 similar to a previous reduction affecting management staff and increased pension contributions for PWU and Society staff, we may not be able to achieve further improvement. The existing collective agreement with the PWU will expire on March 31, 2015, and the existing Society collective agreement will expire on March 31, 2016. We face financial risks related to our ability to negotiate collective agreements consistent with our rate orders. In addition, in the event of a labour dispute, we could face operational risk related to continued compliance with our licence requirements of providing service to customers. Any of these could have a material adverse effect on our company.

**Pension Plan Risk**

We have a defined benefit registered pension plan for the majority of our employees. Contributions to the pension plan are established by actuarial valuations which are minimally required to be filed with the Financial Services Commission of Ontario on a triennial basis. The most recently filed valuation was prepared as at December 31, 2011, and was filed in May 2012. Our company contributed approximately $160 million in respect of 2012 and approximately $160 million in respect of 2013 to its pension plan to satisfy minimum funding requirements. Contributions beyond 2013 will depend on investment returns, changes in benefits and actuarial assumptions and may include additional voluntary contributions from time to time. Nevertheless, future contributions are expected to be significant. A determination by the OEB that some of our pension expenditures are not recoverable from customers could have a material adverse effect on our company, and this risk may be exacerbated as the quantum of required pension contributions increases.

### Environmental Risk

Our health, safety and environmental management system is designed to ensure hazards and risks are identified and assessed, and controls are implemented to mitigate significant risks. This system includes a standing committee of our Board of Directors that has governance over environmental matters. However, given the territory that our system encompasses and the amount of equipment that we own, we cannot guarantee that all such risks will be identified and mitigated without significant cost and expense to our company. The following are some of the areas that may have a significant impact on our operations.

We are subject to extensive Canadian federal, provincial and municipal environmental regulation. Failure to comply could subject us to fines and other penalties. In addition, the presence or release of hazardous or other harmful substances could lead to claims by third parties and/or governmental orders requiring us to take specific actions such as investigating, controlling and remediating the effects of these substances. We are currently undertaking a voluntary land assessment and remediation (LAR) program covering most of our stations and service centres. This program involves the systematic identification of any contamination at or from these facilities, and, where necessary, the development of remediation plans for our company and adjacent private properties. Any contamination of our properties could limit our ability to sell these assets in the future.

We record a liability for our best estimate of the present value of the future expenditures required to comply with Environment Canada's PCB regulations and for the present value of the future expenditures to complete our LAR program. The future expenditures required to discharge our PCB obligation are expected to be incurred over the period ending 2025, while our LAR expenditures are expected to be incurred over the period ending 2020. Actual future environmental expenditures may vary materially from the estimates used in the calculation of the environmental liabilities on our balance sheet. We do not have insurance coverage for these environmental expenditures. Under applicable regulations, we expect to incur future expenditures to identify, remove and dispose of asbestos-containing materials installed in some of our facilities. We record an asset retirement obligation for the present value of the estimated future expenditures. The estimates are based on an external, expert study of the current expenditures associated with removing such materials from our facilities. Actual future expenditures may vary materially from the estimates used for the amount of the asset retirement obligation.

There is also risk associated with obtaining governmental approvals, permits, or renewals of existing approvals and permits related to constructing or operating facilities. This may require environmental assessment or result in the imposition of conditions, or both, which could result in delays and cost increases. We anticipate that all of our future environmental expenditures will continue to be recoverable in future electricity rates. However, any future regulatory decision to disallow or limit the recovery of such costs could have a material adverse effect on our company.

Scientists and public health experts have been studying the possibility that exposure to electric and magnetic fields emanating from power lines and other electric sources may cause health problems. If it were to be concluded that electric and magnetic fields present a health risk, or governments decide to implement exposure limits, we could face litigation, be required to take costly mitigation measures such as relocating some of our facilities or experience difficulties in locating and building new facilities. Any of these could have a material adverse effect on our company.

### Market and Credit Risk

Market risk refers primarily to the risk of loss that results from changes in commodity prices, foreign exchange rates and interest rates. We do not have commodity price risk. We do have foreign exchange risk as we enter into agreements to purchase materials and equipment associated with our capital programs and projects that are settled in foreign currencies. This foreign exchange risk is not material. We could in the future decide to issue foreign currency denominated debt which we would anticipate hedging back to Canadian dollars, consistent with our company's risk management policy. We are exposed to fluctuations in interest rates as our regulated rate of return is derived using a formulaic approach.

The OEB-approved adjustment formula for calculating ROE in a deemed regulatory capital structure of 40% common equity and 60% debt will increase or decrease by 50% of the change between the current Long Canada Bond Forecast and the risk-free rate established at 4.25% and 50% of the change in the spread in 30-year "A"-rated Canadian utility bonds over the 30-year benchmark Government of Canada bond yield established at 1.415%. We estimate that a 1% decrease in the forecasted long-term Government of Canada bond yield used in determining our rate of return would reduce our Transmission Business' 2014 net income by approximately $20 million and our Hydro One Networks distribution business' 2014 net income by approximately $10 million. Our net income is adversely impacted by rising interest rates as our maturing long-term debt is refinanced at market rates. We periodically utilize interest-rate swap agreements to mitigate elements of interest rate risk.

Financial assets create a risk that a counterparty will fail to discharge an obligation, causing a financial loss. Derivative financial instruments result in exposure to credit risk, since there is a risk of counterparty default. We monitor and minimize credit risk through various techniques, including dealing with highly-rated counterparties, limiting total exposure levels with individual counterparties, and by entering into master agreements which enable net settlement and by monitoring the financial condition of counterparties. We do not trade in any energy derivatives. We do, however, have interest-rate swap contracts outstanding from time to time. Currently, there are no significant concentrations of credit risk with respect to any class of financial assets. We are required to procure electricity on behalf of competitive retailers and embedded LDCs for resale to their customers. The resulting concentrations of credit risk are mitigated through the use of various security arrangements, including letters of credit, which are incorporated into our service agreements with these retailers in accordance with the OEB's Retail Settlements Code. The failure to properly manage these risks could have a material adverse effect on our company.

### Risk from Transfer of Assets Located on Reserves

The transfer orders by which we acquired certain of Ontario Hydro's businesses as of April 1, 1999, did not transfer title to some assets located on Reserves. Currently, OEFC holds legal title to these assets and we manage them until we have obtained necessary authorizations to complete the title transfer. To occupy Reserves, we must have valid permits issued by Her Majesty the Queen in the Right of Canada. For each permit, we must negotiate an agreement (in the form of a Memorandum of Understanding) with the First Nation, OEFC and any members of the First Nation who have occupancy rights. The agreement includes provisions whereby the First Nation consents to the federal Department of Aboriginal Affairs and Northern Development issuing a permit. Where the agreement and permit are for transmission assets, we must negotiate rental terms. It is difficult to predict the aggregate amount that we may have to pay, either on an annual or one-time basis, to obtain the required agreements from First Nations. In 2013, we paid approximately $2 million to First Nations in respect of these agreements. OEFC will continue to hold these assets until we are able to negotiate agreements with First Nations and occupants. If we cannot reach satisfactory agreements and obtain federal permits, we may have to relocate these assets to other locations at a cost that could be substantial. In a limited number of cases, it may be necessary to abandon a line and replace it with diesel generation facilities. In either case, the costs relating to these assets could have a material adverse effect on our net income if we are not able to recover them in future rate orders.

### Risk from Provincial Ownership of Transmission Corridors

Pursuant to the Reliable Energy and Consumer Protection Act, 2002, the Province acquired ownership of our transmission corridor lands underlying our transmission system. Although we have the statutory right to use the transmission corridors, we may be limited in our ability to expand our systems. Also, other uses of the transmission corridors by third parties in conjunction with the operation of our systems may increase safety or environmental risks, which could have an adverse effect on our company.

## CRITICAL ACCOUNTING ESTIMATES

The preparation of our Consolidated Financial Statements requires us to make estimates and judgements that affect the reported amounts of assets, liabilities, revenues and costs, and related disclosures of contingencies. We base our estimates and judgements on historical experience, current conditions and various other assumptions that are believed to be reasonable under the circumstances, the results of which form the basis for making judgements about the carrying values of assets and liabilities, as well as identifying and assessing our accounting treatment with respect to commitments and contingencies. Actual results may differ from these estimates and judgements. We have identified the following critical accounting estimates used in the preparation of our Consolidated Financial Statements:

### Revenues

Our monthly distribution revenue is estimated based on wholesale electricity purchases. At the end of each month, the electricity delivered to customers, but not billed, is estimated and revenue is recognized. The newly implemented CIS phase of our entity-wide system improvement project will allow us to use historical trends at a customer level to better estimate our unbilled revenue each period. This change in methodology for estimating revenue is anticipated to be implemented in 2014. Any changes in estimate will be accounted for prospectively.

### Regulatory Assets and Liabilities

Our regulatory assets represent certain amounts receivable from future customers and costs that have been deferred for accounting purposes because it is probable that they will be recovered in future rates. Our regulatory assets mainly include costs related to the pension benefit liability, deferred income tax liabilities, post-retirement and post-employment benefit liability, and environmental liabilities. Our regulatory liabilities represent certain amounts that are refundable to future electricity customers, and pertain primarily to OEB deferral and variance accounts. The regulatory assets and liabilities can be recognized for rate-setting and financial reporting purposes only if the amounts have been approved for inclusion in the rates by the OEB, or if such approval is judged to be probable by management. If management judges that it is no longer probable that the OEB will allow the inclusion of a regulatory asset or liability in future rates, the applicable carrying amount of the regulatory asset or liability will be reflected in results of operations in the period that the judgement is made by management.

### Environmental Liabilities

We record a liability for the estimated future expenditures for the contaminated LAR and for the phase-out and destruction of PCB-contaminated mineral oil removed from electrical equipment. There are uncertainties in estimating future environmental costs due to potential external events such as changes in legislation or regulations and advances in remediation technologies. In determining the amounts to be recorded as environmental liabilities, the Company estimates the current cost of completing required work and makes assumptions as to when the future expenditures will actually be incurred, in order to generate future cash flow information. All factors used in estimating the Company's environmental liabilities represent management's best estimates of the present value of costs required to meet existing legislation or regulations. However, it is reasonably possible that numbers or volumes of contaminated assets, cost estimates to perform work, inflation assumptions and the assumed pattern of annual cash flows may differ significantly from the Company's current assumptions. Environmental liabilities are reviewed annually or more frequently if significant changes in regulations or other relevant factors occur. Estimate changes are accounted for prospectively.

In June 2013, Environment Canada issued Canada Gazette I, which included a proposed amendment to the existing PCB regulations. The proposed amendment would extend the end-of-use deadline for our company's PCBs in concentrations of 500 parts per million or more from December 31, 2014 to December 31, 2025. The proposed amendment is subject to final approvals before the enacted regulation is published in Canada Gazette II. Canada Gazette II is anticipated to be issued in the first half of 2014. An environmental liability is recorded based on regulations as currently enacted, and as such, our environmental liability as at December 31, 2013 is based on the current compliance date of December 31, 2014.

### Employee Future Benefits

We provide future benefits to our current and retired employees, including pension, group life insurance, health care and long-term disability.

The discount rate used to calculate the accrued benefit obligation is determined each year end by referring to the most recently available market interest rates based on "AA"-rated corporate bond yields reflecting the duration of the applicable employee future benefit plan. The discount rates at December 31, 2013 increased to 4.75% from 4.25% used at December 31, 2012, in conjunction with increases in bond yields over this period. The increase in discount rates has resulted in a corresponding decrease in liabilities for accounting purposes. The accrual costs are determined by independent actuaries using the projected benefit method prorated on service and based on assumptions that reflect management's best estimates.

The assumed return on pension plan assets is based on expectations of long-term rates of return at the beginning of the fiscal year and reflects a pension asset mix consistent with the pension plan's investment policy. Returns on the respective portfolios are determined with reference to published Canadian and US stock indices and long-term bond and treasury bill indices. The assumed rate of return on pension plan assets reflects our long-term expectations. We believe that this assumption is reasonable because, with the Fund's balanced investment approach, the higher volatility of equity investment returns is intended to be offset by the greater stability of fixed-income and short-term investment returns. The net result, on a long-term basis, is a somewhat lower return than might be expected by investing in equities alone. In the short term, the plan can experience aberrations in actual return.

Further, based on differences between long-term Government of Canada nominal bonds and real return bonds, the implied inflation rate has decreased from 1.9% per annum as at December 31, 2012 to approximately 1.2% per annum as at December 31, 2013. Given the Bank of Canada's commitment to keep long-term inflation between 1.00% and 3.00%, management believes that the current implied rate is reasonable to use as a long-term assumption and as such, has used a 2.0% per annum inflation rate for liability valuation purposes as at December 31, 2013.

Our pension and post-retirement and post-employment obligations are also impacted by changes in life expectancies used in mortality assumptions. Increases in life expectancies of plan members result in increases in pension and post-retirement and post-employment benefit obligations.

The costs of post-retirement and post-employment benefits are determined at the beginning of the year. The costs are based on assumptions for expected claims experience and future health care cost inflation. A 1% increase in the health care cost trends would result in an increase in service cost and interest cost of approximately $21 million per year and an increase in the year-end obligation of about $258 million.

Employee future benefits are included in labour costs that are either charged to results of operations or capitalized as part of the cost of property, plant and equipment and intangible assets. Changes in assumptions will affect the accrued benefit obligation of the employee future benefits and the future years' amounts that will be charged to our results of operations or capitalized as part of the cost of property, plant and equipment and intangible assets.

### Asset Impairment

Within our regulated businesses, the carrying costs of most of our long-lived assets are included in rate base where they earn an OEB-approved rate of return. Asset carrying values and the related return are recovered through approved rates. As a result, such assets are only tested for impairment in the event that the OEB disallows recovery, in whole or in part, or if such a disallowance is judged to be probable. We regularly monitor the assets of our unregulated Hydro One Telecom subsidiary for indications of impairment. As at December 31, 2013, no asset impairment had been recorded for assets within our regulated or unregulated businesses.

Goodwill represents the cost of acquired LDCs that is in excess of the fair value of the net identifiable assets acquired at the acquisition date. Goodwill is evaluated for impairment on an annual basis, or more frequently if circumstances require. We have concluded that goodwill was not impaired at December 31, 2013.

## DISCLOSURE CONTROLS AND INTERNAL CONTROLS OVER FINANCIAL REPORTING

To optimize our customer service operations, we implemented the CIS module of SAP. This new system replaced multiple legacy applications which provided service to our distribution customers and key constituents for billing, customer contacts, field services, settlements, and customer choice administration. Internal controls have been documented and tested for adequacy and effectiveness, and continue to be refined.

In compliance with the requirements of National Instrument 52-109, our Certifying Officers have reviewed and certified the Consolidated Financial Statements for the year ended December 31, 2013, together with other financial information included in our securities filings. Our Certifying Officers have also certified that disclosure controls and procedures (DC&P) have been designed to provide reasonable assurance that material information relating to our company is made known within our company. Further, our Certifying Officers have certified that internal controls over financial reporting (ICFR) have been designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of the Consolidated Financial Statements. Based on the evaluation of the design and operating effectiveness of our company's DC&P and ICFR, our Certifying Officers concluded that our company's DC&P and ICFR were effective as at December 31, 2013.

## SELECTED ANNUAL INFORMATION

**Consolidated Statements of Operations and Comprehensive Income**

| Year ended December 31 *(millions of Canadian dollars, except amounts per share)* | **2013** | 2012 | 2011 |
|---|---|---|---|
| Revenue | **6,074** | 5,728 | 5,471 |
| Net income | **803** | 745 | 641 |
| Basic and fully diluted earnings per common share | **7,850** | 7,280 | 6,228 |
| Cash dividends per common share | **2,000** | 3,523 | 1,500 |
| Cash dividends per preferred share | **1.375** | 1.375 | 1.375 |

**Consolidated Balance Sheets**

| December 31 *(millions of Canadian dollars)* | **2013** | 2012 | 2011 |
|---|---|---|---|
| Total assets | **21,625** | 20,811 | 18,836 |
| Total long-term debt | **9,057** | 8,479 | 8,008 |
| Preferred shares | **323** | 323 | 323 |

**Other**

| Year ended December 31 *(millions of Canadian dollars)* | **2013** | 2012 | 2011 |
|---|---|---|---|
| Total capital investments | **1,394** | 1,454 | 1,447 |

## NEW ACCOUNTING PRONOUNCEMENTS

### *Recently Adopted Accounting Pronouncements*

In December 2011, the Financial Accounting Standards Board (FASB) issued Accounting Standards Update (ASU) 2011-11, Balance Sheet (Topic 210): Disclosures about Offsetting Assets and Liabilities. This ASU requires an entity to disclose both gross and net information about financial instruments and transactions eligible for offset on the Consolidated Balance Sheets as well as financial instruments and transactions executed under a master netting or similar arrangement. The ASU was issued to enable users of financial statements to understand the effects or potential effects of those arrangements on an entity's financial position. This ASU was required to be applied retrospectively and was effective for fiscal years, and interim periods within those years, beginning on or after January 1, 2013. The adoption of this ASU did not have an impact on our Consolidated Financial Statements.

In February 2013, the FASB issued ASU 2013-02, Comprehensive Income (Topic 220): Reporting of Amounts Reclassified Out of Accumulated Other Comprehensive Income. This ASU requires an entity to provide information about the amounts reclassified out of accumulated other comprehensive income by component. In addition, an entity is required to present, either on the face of the statement where net income is presented or in the notes, significant amounts reclassified out of accumulated other comprehensive income by the respective line items of net income, but only if the amount reclassified is required under US GAAP to be reclassified to net income in its entirety in the same reporting period. For other amounts that are not required under US GAAP to be reclassified in their entirety to net income, an entity is required to cross-reference to other disclosures required under US GAAP that provide additional detail about those amounts. This ASU was required to be applied prospectively and was effective for fiscal years, and interim periods within those years, beginning after December 15, 2012. The adoption of this ASU did not have a significant impact on our Consolidated Financial Statements.

### *Recent Accounting Guidance Not Yet Adopted*

In July 2013, the FASB issued ASU 2013-11, Income Taxes (Topic 740): Presentation of an Unrecognized Tax Benefit When a Net Operating Loss Carryforward, a Similar Tax Loss, or a Tax Credit Carryforward Exists. This ASU provides guidance on the presentation of unrecognized tax benefits. This ASU is effective for fiscal years, and interim periods within those years, beginning after December 15, 2013, and should be applied prospectively to all unrecognized tax benefits that exist at the effective date. Retrospective application is permitted. The adoption of this ASU is not anticipated to have a significant impact on our Consolidated Financial Statements.

## OUTLOOK

We will achieve our mission and vision and remain focused on achieving our corporate goal of providing safe, reliable and affordable service to our customers, today and tomorrow, while increasing enterprise value for our shareholder. We will do this by continuing to concentrate on our strategic objectives of safety, customer satisfaction, continuous innovation, reliability, protection of the environment, championing people and culture, shareholder value and productivity and cost-effectiveness.

Given the nature of the work undertaken by our employees and contractors, safety remains our top priority. We will continue to focus on creating an injury-free workplace and maintaining public safety through several health and safety initiatives, including maintaining our OHSAS 18001 standing.

We are focused on achieving our long-term vision of improving customer satisfaction, maintaining affordable rates for the portion of the customers' bill within our control and building a trusted partner relationship with our customers. Our plan has taken into account discussions with our customers and reflects the planned development and delivery of targeted customer segment strategies, products and services which respond to our customers' unique needs. This includes realizing value from our new customer information system, simplifying and shortening timeframes for the delivery of services, enhancing accessibility in person, by phone or through our web portal and/or our mobile application to ensure effective self-service for simple transactions and delivering programs which help customers better manage their energy consumption.

We will continue to focus on driving our transformation to a culture that is accountability-based. All of our management staff received training under our Craft of Management program. This program will serve as the foundation for establishing that culture of accountability. Investments in this program, coupled with existing programs which enhance employee skills and ability, will help us deliver best-in-class service to our customers, continue the drive to zero workplace injuries and create a great workplace that will lead to improved employee engagement. We remain focused on managing the resourcing requirements of an increasing work program through appropriate compensation policies, labour negotiations, use of outsourced multi-skilled staff and support of internal and external college and university training programs. Aging workforce demographics provide opportunities, through retirements, to restructure and transform the workforce.

Our assets are in the midst of a demographic change with an increasing proportion of assets reaching the end of their expected service life and an increasing average asset age. To ensure the electricity system's reliability in the public interest, we have planned for significant investments in transmission and distribution infrastructure. Our plan includes targeted, risk-based investments to maintain, refurbish and replace existing assets that are in poor condition and beyond their expected service life, within the policy set by the OEB. Investments in technology, such as the successful implementation of Asset Analytics, has provided us with real-time asset condition and performance data giving us the visibility to make asset optimization life-cycle decisions, and opportunities through planning and scheduling data to improve materials procurement and to deploy work crews to better manage work programs to meet customer needs.

The actual timing and expenditures in our business plan are predicated on obtaining various approvals including: OEB approvals and environmental assessment approvals; successful negotiations with customers, neighbouring utilities and other stakeholders; and consultations with First Nations and Métis communities.

We continue to seek to strike the right balance between making prudent risk-based reliability investments and keeping customers' rates low. Effectively and efficiently managing costs is an important part of achieving this balance. Over the last five years, we have replaced most of our core IT systems with an enterprise-wide IT system. Further development of the existing IT platform will provide tools which are being developed to allow us to effectively plan and reprioritize work and integrate customers' needs into multi-year investment plans. This outcome is consistent with the OEB's direction in its new Outcomes-Based Approach to regulation.

Our plan is focused on delivering integrated asset-to-work planning, optimized scheduling and dispatch as well as field mobility. Through our investment in our Workflow of the Future initiative we will bring together data, analytics and mobility to allow our employees, especially those in the field, to do more at the job site with their mobile devices.

Significant opportunity resides with smart meters and the proliferation of an ADS including energy efficiency, demand response and distributed-resource technologies. We will continue to invest in the development of an ADS and related grid modernization standards, customer demand work (connections and upgrades), smart meters, DG connections, including station upgrades, protection and control, new lines and some contestable work, for which we will receive customer capital contributions. There is little flexibility to reduce this work as most of it is customer demand driven.

As stewards of significant electricity assets, we are committed to the protection and sustainment of the environment for future generations. We are working towards being an environmental leader in our industry, by distributing clean and renewable energy, by upgrading our electricity grid, by minimizing the impacts of our own operations, and by ensuring that environmental factors are considered in making our business decisions.

Consistent with our corporate strategy, we will pursue an LDC consolidation approach that is robust but prudent, to facilitate the consolidation of Ontario's distribution sector. This is consistent with the Ontario Distribution Sector Panel's assessment that there are substantial efficiencies to be found through consolidation of Ontario LDCs and we are key to the solution. Our plan does not include funding for LDC acquisitions or assume any disposition of our service territory. These opportunities will be managed as they arise. Our plan also does not incorporate any projects related to competitive transmission. However, as leaders in the sector, we plan to bid on key projects. The OEB notes in its *Framework for Transmission Project Development Plans* that where projects are otherwise equivalent or close in other factors, information such as socio-economic benefits, including First Nations involvement, could prove decisive in a competitive bid. As such, First Nations involvement in competitive bids is likely to become more prevalent.

## APPOINTMENT OF CARMINE MARCELLO

On November 14, 2012, our Board of Directors appointed Carmine Marcello to the role of President and CEO, effective January 1, 2013. Mr. Marcello assumed his responsibilities following the planned retirement of outgoing President and CEO Laura Formusa. Mr. Marcello has over 25 years of experience with our company as a senior executive, strategic planner and advisor on transmission and distribution utility processes in the electric utility industry.

## CHANGES TO OUR BOARD OF DIRECTORS

On November 20, 2013, Sandra Pupatello was appointed to our Board of Directors. Ms. Pupatello is the Director of Business Development and Global Markets at PricewaterhouseCoopers Canada. She is also the Chief Executive Officer of the WindsorEssex Economic Development Corporation.

On November 27, 2013, Catherine Karakatsanis was appointed to our Board of Directors. Ms. Karakatsanis is the Chief Operating Officer of Morrison Hershfield Group Inc. and also serves as Director and Secretary of the Toronto-based consulting engineering firm.

On August 12, 2013, Janet Holder resigned from our Board of Directors. Ms. Holder has been a member of our Board of Directors since July 2010.

## FORWARD-LOOKING STATEMENTS AND INFORMATION

Our oral and written public communications, including this document, often contain forward-looking statements that are based on current expectations, estimates, forecasts and projections about our business and the industry in which we operate, and include beliefs and assumptions made by the management of our company. Such statements include, but are not limited to: expectations regarding energy-related revenues and profit and their trend; statements regarding our transmission and distribution rates and customer bills resulting from our rate applications; statements related to the FIT program; statements about CDM; statements about our strategy, including our strategic objectives; statements regarding considerations of current economic conditions; statements related to employee future benefits; expectations regarding First Nation involvement in competitive bids; statements regarding our liquidity and capital resources and operational requirements; statements about our standby credit facility; expectations regarding our financing activities; statements regarding our maturing debt; statements regarding our ongoing and planned projects and/or initiatives including the expected results of these projects and/or initiatives (including productivity savings, process improvements, and customer satisfaction) and their completion dates; expectations regarding the recoverability of large capital investments; expectations regarding generation connection investments; statements regarding expected future capital and development investments, the timing of these expenditures and our investment plans; expectations regarding OPA recommendations; statements regarding contractual obligations and other commercial commitments; statements related to the OEB; statements regarding future pension contributions, our pension plan and actuarial valuation; statements about our outsourcing arrangement with Inergi and such future outsourcing arrangements; expectations regarding work and costs of compliance with environmental and health and safety regulations; statements related to the LTEP; and statements related to LDC consolidation including our acquisition of Norfolk Power. Words such as "expect", "anticipate", "intend", "attempt", "may", "plan", "will", "believe", "seek", "estimate", "goal", "aim", "target", and variations of such words and similar expressions are intended to identify such forward-looking statements. These statements are not guarantees of future performance and involve assumptions and risks and uncertainties that are difficult to predict. Therefore, actual outcomes and results may differ materially from what is expressed, implied or forecasted in such forward-looking statements. We do not intend, and we disclaim any obligation, to update any forward-looking statements, except as required by law.

These forward-looking statements are based on a variety of factors and assumptions including, but not limited to, the following: no unforeseen changes in the legislative and operating framework for Ontario's electricity market; favourable decisions from the OEB and other regulatory bodies concerning outstanding rate and other applications; no delays in obtaining the required approvals; no unforeseen changes in rate orders or rate structures for our distribution and transmission businesses; continued use of US GAAP; a stable regulatory environment; no unfavourable changes in environmental regulation; and no significant event occurring outside the ordinary course of business. These assumptions are based on information currently available to us, including information obtained from third-party sources. Actual results may differ materially from those predicted by such forward-looking statements. While we do not know what impact any of these differences may have, our business, results of operations, financial condition and our credit stability may be materially adversely affected. Factors that could cause actual results or outcomes to differ materially from the results expressed or implied by forward-looking statements include, among other things:

- the risk that unexpected capital investments may be needed to support renewable generation or resolve unforeseen technical issues;
- the risk that previously granted regulatory approvals may be subsequently challenged, appealed or overturned;
- the inability to prepare financial statements in US GAAP;
- the impact of the 2010 LTEP and the 2013 LTEP on our company and the costs and expenses arising therefrom;
- the risk that future environmental expenditures are not recoverable in future electricity rates;
- the risk that the presence of release of hazardous or harmful substances could lead to claims by third parties and/or governmental orders;
- the risk that assumptions that form the basis of our recorded environmental liabilities and related regulatory assets may change;
- the risks associated with information system security, with maintaining a complex information technology system infrastructure, and with transitioning most of our financial and business processes to an integrated business and financial reporting system;
- the risks associated with changes in the forecast long-term Government of Canada bond yield;
- the risks related to our workforce demographic and our potential inability to attract and retain qualified personnel;
- public opposition to and delays or denials of the requisite approvals and accommodations for our planned projects;
- the risks associated with being controlled by the Province including the possibility that the Province may make declarations pursuant to the memorandum of agreement, as well as potential conflicts of interest that may arise between us, the Province and related parties;
- the risks associated with being subject to extensive regulation including risks associated with OEB action or inaction, including regulatory decisions regarding our revenue requirements, cost recovery, rates, acquisitions and divestitures;
- unanticipated changes in electricity demand or in our costs;

- the risk that we are not able to arrange sufficient cost-effective financing to repay maturing debt and to fund capital investments and other obligations;
- the risks associated with the execution of our capital and operation, maintenance and administration programs necessary to maintain the performance of our aging asset base;
- the risk to our facilities posed by severe weather conditions, natural disasters or catastrophic events and our limited insurance coverage for losses resulting from these events;
- future interest rates, future investment returns, inflation, changes in benefits and changes in actuarial assumptions;
- the risks of counterparty default on our outstanding derivative contracts;
- the risks associated with current economic uncertainty and financial market volatility;
- the risk that our long-term credit rating would deteriorate;
- the risk that we may incur significant costs associated with transferring assets located on Reserves (as defined in the *Indian Act* (Canada));
- the potential that we may incur significant expenses to replace some or all of the functions currently outsourced if our agreement with Inergi is terminated or expires before a new service provider is selected;
- the impact of the ownership by the Province of lands underlying our transmission system; and
- the ability to negotiate appropriate collective agreements.

We caution the reader that the above list of factors is not exhaustive. Some of these and other factors are discussed in more detail in the section Risk Management and Risk Factors in this MD&A. You should review this section in detail.

In addition, we caution the reader that information provided in this MD&A regarding our outlook on certain matters, including potential future expenditures, is provided in order to give context to the nature of some of our future plans and may not be appropriate for other purposes.

Additional information about the Company, including the Company's Annual Information Form, can be found on SEDAR at www.sedar.com and on the US Securities and Exchange Commission's website at www.sec.gov.

# MANAGEMENT'S REPORT

The Consolidated Financial Statements, Management's Discussion and Analysis (MD&A) and related financial information have been prepared by the management of Hydro One Inc. (Hydro One or the Company). Management is responsible for the integrity, consistency and reliability of all such information presented. The Consolidated Financial Statements have been prepared in accordance with United States Generally Accepted Accounting Principles and applicable securities legislation. The MD&A has been prepared in accordance with National Instrument 51-102, Part 5.

The preparation of the Consolidated Financial Statements and information in the MD&A involves the use of estimates and assumptions based on management's judgement, particularly when transactions affecting the current accounting period cannot be finalized with certainty until future periods. Estimates and assumptions are based on historical experience, current conditions and various other assumptions believed to be reasonable in the circumstances, with critical analysis of the significant accounting policies followed by the Company as described in Note 2 to the Consolidated Financial Statements. The preparation of the Consolidated Financial Statements and the MD&A includes information regarding the estimated impact of future events and transactions. The MD&A also includes information regarding sources of liquidity and capital resources, operating trends, risks and uncertainties. Actual results in the future may differ materially from the present assessment of this information because future events and circumstances may not occur as expected. The Consolidated Financial Statements and MD&A have been properly prepared within reasonable limits of materiality and in light of information up to February 13, 2014.

Management is responsible for establishing and maintaining adequate internal control over financial reporting for the Company. In meeting its responsibility for the reliability of financial information, management maintains and relies on a comprehensive system of internal control and internal audit. The system of internal control includes a written corporate conduct policy; implementation of a risk management framework; effective segregation of duties and delegation of authorities; and sound and conservative accounting policies that are regularly reviewed. This structure is designed to provide reasonable assurance that assets are safeguarded and that reliable information is available on a timely basis. In addition, management has assessed the design and operating effectiveness of the Company's internal control over financial reporting in accordance with the criteria set forth in Internal Control – Integrated Framework (1992), issued by the Committee of Sponsoring Organizations of the Treadway Commission. Based on this assessment, management concluded that the Company maintained effective internal control over financial reporting as of December 31, 2013. The effectiveness of these internal controls and findings is reported to the Audit and Finance Committee of the Hydro One Board of Directors, as required.

The Consolidated Financial Statements have been examined by KPMG LLP, independent external auditors appointed by the Shareholder. The external auditors' responsibility is to express their opinion on whether the Consolidated Financial Statements are fairly presented in accordance with United States Generally Accepted Accounting Principles. The Independent Auditors' Report outlines the scope of their examination and their opinion.

The Hydro One Board of Directors, through its Audit and Finance Committee, is responsible for ensuring that management fulfills its responsibilities for financial reporting and internal controls. The Audit and Finance Committee of Hydro One met periodically with management, the internal auditors and the external auditors to satisfy itself that each group had properly discharged its respective responsibility and to review the Consolidated Financial Statements before recommending approval by the Board of Directors. The external auditors had direct and full access to the Audit and Finance Committee, with and without the presence of management, to discuss their audit findings.

The President and Chief Executive Officer and the Chief Administration Officer and Chief Financial Officer have certified Hydro One's annual Consolidated Financial Statements and annual MD&A, related disclosure controls and procedures and the design and effectiveness of related internal controls over financial reporting.

On behalf of Hydro One Inc.'s management:

**Carmine Marcello**
President and Chief Executive Officer

**Sandy Struthers**
Chief Administration Officer and Chief Financial Officer

# INDEPENDENT AUDITORS' REPORT

To the Shareholder of Hydro One Inc.

We have audited the accompanying Consolidated Financial Statements of Hydro One Inc., which comprise the consolidated balance sheets as at December 31, 2013 and December 31, 2012, the consolidated statements of operations and comprehensive income, changes in shareholder's equity and cash flows for the years then ended, and notes, comprising a summary of significant accounting policies and other explanatory information.

*Management's Responsibility for the Consolidated Financial Statements*

Management is responsible for the preparation and fair presentation of these Consolidated Financial Statements in accordance with United States Generally Accepted Accounting Principles, and for such internal control as management determines is necessary to enable the preparation of Consolidated Financial Statements that are free from material misstatement, whether due to fraud or error.

*Auditors' Responsibility*

Our responsibility is to express an opinion on these Consolidated Financial Statements based on our audits. We conducted our audits in accordance with Canadian generally accepted auditing standards. Those standards require that we comply with ethical requirements and plan and perform the audit to obtain reasonable assurance about whether the Consolidated Financial Statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the Consolidated Financial Statements. The procedures selected depend on our judgement, including the assessment of the risks of material misstatement of the Consolidated Financial Statements, whether due to fraud or error. In making those risk assessments, we consider internal control relevant to the entity's preparation and fair presentation of the Consolidated Financial Statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management, as well as evaluating the overall presentation of the Consolidated Financial Statements.

We believe that the audit evidence we have obtained in our audits is sufficient and appropriate to provide a basis for our audit opinion.

*Opinion*

In our opinion, the Consolidated Financial Statements present fairly, in all material respects, the consolidated financial position of Hydro One Inc. as at December 31, 2013 and December 31, 2012, and its consolidated results of operations and its consolidated cash flows for the years then ended in accordance with United States Generally Accepted Accounting Principles.

# NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

**For the years ended December 31, 2013 and 2012**

## 1. DESCRIPTION OF THE BUSINESS

Hydro One Inc. (Hydro One or the Company) was incorporated on December 1, 1998, under the *Business Corporations Act* (Ontario) and is wholly owned by the Province of Ontario (Province). The principal businesses of Hydro One are the transmission and distribution of electricity to customers within Ontario. The electricity rates of these businesses are regulated by the Ontario Energy Board (OEB).

## 2. SIGNIFICANT ACCOUNTING POLICIES

### *Basis of Consolidation*

These Consolidated Financial Statements include the accounts of the Company and its wholly owned subsidiaries: Hydro One Networks Inc. (Hydro One Networks), Hydro One Remote Communities Inc. (Hydro One Remote Communities), Hydro One Brampton Networks Inc. (Hydro One Brampton Networks), Hydro One Telecom Inc. (Hydro One Telecom), Hydro One Lake Erie Link Management Inc., and Hydro One Lake Erie Link Company Inc.

Intercompany transactions and balances have been eliminated.

### *Basis of Accounting*

These Consolidated Financial Statements are prepared and presented in accordance with United States (US) Generally Accepted Accounting Principles (GAAP) and in Canadian dollars. Certain comparative figures have been reclassified to conform to the presentation of these Consolidated Financial Statements (see Note 21 – Consolidated Statements of Cash Flows). In the opinion of management, these Consolidated Financial Statements include all adjustments that are necessary to fairly state the financial position and results of operations of Hydro One as at, and for the year ended December 31, 2013.

Hydro One performed an evaluation of subsequent events through to February 13, 2014, the date these Consolidated Financial Statements were issued, to determine whether any events or transactions warranted recognition and disclosure in these Consolidated Financial Statements. See Note 25 – Subsequent Event.

### *Use of Management Estimates*

The preparation of financial statements requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities at the date of the financial statements and the reported amounts of revenues, expenses, gains and losses during the reporting periods. Management evaluates these estimates on an ongoing basis based upon: historical experience; current conditions; and assumptions believed to be reasonable at the time the assumptions are made with any adjustments being recognized in results of operations in the period they arise. Significant estimates relate to regulatory assets and regulatory liabilities, environmental liabilities, pension benefits, post-retirement and post-employment benefits, asset retirement obligations (AROs), goodwill and asset impairments, contingencies, unbilled revenues, allowance for doubtful accounts, derivative instruments, and deferred income tax assets and liabilities. Actual results may differ significantly from these estimates, which may be impacted by future decisions made by the OEB or the Province.

### *Rate Setting*

The Company's Transmission Business includes the separately regulated transmission business of Hydro One Networks. The Company's consolidated Distribution Business includes Hydro One Brampton Networks, Hydro One Remote Communities, as well as the separately regulated distribution business of Hydro One Networks.

The OEB has approved the use of US GAAP for rate setting and regulatory accounting and reporting by Hydro One Networks' transmission and distribution businesses, as well as by Hydro One Remote Communities, beginning with the year 2012. Hydro One Brampton Networks currently uses Canadian GAAP for its distribution rate-setting purposes.

*Transmission*

In May 2010, Hydro One Networks filed a cost-of-service application with the OEB for 2012 transmission rates. The OEB approved a revenue requirement of $1,418 million for 2012, along with new 2012 uniform transmission rates, with an effective date of January 1, 2012. In May 2012, Hydro One Networks filed a cost-of-service application with the OEB for 2013 transmission rates, seeking approval for a 2013 revenue requirement of $1,465 million. In December 2012, the OEB approved a revenue requirement of $1,438 million for 2013. The reduced approved revenue requirement included reductions to proposed operation, maintenance and administration costs, and capital expenditures.

*Distribution*

In 2010, the OEB approved a revised 2011 revenue requirement of $1,218 million and 2011 distribution rates. Hydro One Networks elected to retain the same distribution rates for 2012 as approved by the OEB for the 2011 rate year. In June 2012, Hydro One Networks filed an Incentive Regulation Mechanism (IRM) application with the OEB for 2013 distribution rates. In December 2012, the OEB approved an increase in average distribution rates of approximately 1.3%, with an effective date of January 1, 2013.

In September 2011, Hydro One Brampton Networks filed an IRM application with the OEB for 2012 distribution rates. In January 2012, the OEB approved a reduction in distribution rates of approximately 13.2%, with an effective date of January 1, 2012. These rate reductions were primarily due to OEB-approved adjustments to depreciation rates. In August 2012, Hydro One Brampton Networks filed an IRM application with the OEB for 2013 distribution rates. In December 2012, the OEB approved an increase in average distribution rates of approximately 0.3%, with an effective date of January 1, 2013.

In November 2011, Hydro One Remote Communities filed an IRM application with the OEB for 2012 rates. In March 2012, the OEB approved an increase of approximately 1.1% to basic rates for the distribution and generation of electricity, with an effective date of May 1, 2012. In September 2012, Hydro One Remote Communities filed a cost-of-service application with the OEB for 2013 rates, seeking approval for a 2013 revenue requirement of $53 million. In June 2013, the OEB approved a revenue requirement of $51 million for 2013.

***Regulatory Accounting***

The OEB has the general power to include or exclude revenues, costs, gains or losses in the rates of a specific period, resulting in a change in the timing of accounting recognition from that which would have been applied in an unregulated company. Such change in timing involves the application of rate-regulated accounting, giving rise to the recognition of regulatory assets and liabilities. The Company's regulatory assets represent certain amounts receivable from future customers and costs that have been deferred for accounting purposes because it is probable that they will be recovered in future rates. In addition, the Company has recorded regulatory liabilities that generally represent amounts that are refundable to future customers. The Company continually assesses the likelihood of recovery of each of its regulatory assets and continues to believe that it is probable that the OEB will factor its regulatory assets and liabilities into the setting of future rates. If, at some future date, the Company judges that it is no longer probable that the OEB will include a regulatory asset or liability in setting future rates, the appropriate carrying amount will be reflected in results of operations in the period that the assessment is made.

***Cash and Cash Equivalents***

Cash and cash equivalents include cash and short-term investments with an original maturity of three months or less.

***Revenue Recognition***

Transmission revenues are collected through OEB-approved rates, which are based on an approved revenue requirement that includes a rate of return. Such revenue is recognized as electricity is transmitted and delivered to customers.

Distribution revenues are recognized on an accrual basis and include billed and unbilled revenues. Distribution revenues attributable to the delivery of electricity are based on OEB-approved distribution rates and are recognized as electricity is delivered to customers. The Company estimates monthly revenue for a period based on wholesale electricity purchases because customer meters are not generally read at the end of each month. At the end of each month, the electricity delivered to customers, but not billed, is estimated and revenue is recognized. The unbilled revenue estimate is affected by energy demand, weather, line losses and changes in the composition of customer classes.

Distribution revenue also includes an amount relating to rate protection for rural, residential and remote customers, which is received from the Independent Electricity System Operator (IESO) based on a standardized customer rate that is approved by the OEB. Current legislation provides rate protection for prescribed classes of rural, residential and remote consumers by reducing the electricity rates that would otherwise apply.

Revenues also include amounts related to sales of other services and equipment. Such revenue is recognized as services are rendered or as equipment is delivered.

Revenues are recorded net of indirect taxes.

***Accounts Receivable and Allowance for Doubtful Accounts***

Billed accounts receivable are recorded at the invoiced amount, net of allowance for doubtful accounts. Unbilled accounts receivable are estimated and recorded based on wholesale electricity purchases. Overdue amounts related to regulated billings bear interest at OEB-approved rates. The allowance for doubtful accounts reflects the Company's best estimate of losses on billed accounts receivable balances. The allowance is based on accounts receivable aging, historical experience and other currently available information. The Company estimates the allowance for doubtful accounts on customer receivables by applying internally developed loss rates to the outstanding receivable balances by risk segment. Risk segments represent groups of customers with similar credit quality indicators and are computed based on various attributes, including number of days receivables are past due, delinquency of balances and payment history. Loss rates applied to the accounts receivable balances are based on historical average write-offs as a percentage of accounts receivable in each risk segment. An account is considered delinquent if the amount billed is not received within 110 days of the invoiced date. Accounts receivable are written off against the allowance when they are deemed uncollectible. The existing allowance for uncollectible accounts will continue to be affected by changes in volume, prices and economic conditions.

***Corporate Income Taxes***

Under the *Electricity Act, 1998*, Hydro One is required to make payments in lieu of corporate income taxes (PILs) to the Ontario Electricity Financial Corporation (OEFC). These payments are calculated in accordance with the rules for computing income and other relevant amounts contained in the *Income Tax Act* (Canada) and the *Taxation Act, 2007* (Ontario) as modified by the *Electricity Act, 1998* and related regulations.

Current and deferred income taxes are computed based on the tax rates and tax laws enacted at the balance sheet date. Tax benefits associated with income tax positions taken, or expected to be taken, in a tax return are recorded only when the "more-likely-than-not" recognition threshold is satisfied and are measured at the largest amount of benefit that has a greater than 50% likelihood of being realized upon settlement. Management evaluates each position based solely on the technical merits and facts and circumstances of the position, assuming the position will be examined by a taxing authority having full knowledge of all relevant information. Significant management judgement is required to determine recognition thresholds and the related amount of tax benefits to be recognized in the Consolidated Financial Statements. Management re-evaluates tax positions each period in which new information about recognition or measurement becomes available.

*Current Income Taxes*

The provision for current taxes and the assets and liabilities recognized for the current and prior periods are measured at the amounts receivable from, or payable to, the OEFC.

*Deferred Income Taxes*

Deferred income taxes are provided for using the liability method. Deferred income taxes are recognized based on the estimated future tax consequences attributable to temporary differences between the carrying amount of assets and liabilities in the Consolidated Financial Statements and their corresponding tax bases.

Deferred income tax liabilities are generally recognized on all taxable temporary differences. Deferred tax assets are recognized to the extent that it is more-likely-than-not that these assets will be realized from taxable income available against which deductible temporary differences can be utilized.

Deferred income taxes are calculated at the tax rates that are expected to apply in the period when the liability is settled or the asset is realized, based on the tax rates and tax laws that have been enacted at the balance sheet date. Deferred income taxes that are not included in the rate-setting process are charged or credited to the Consolidated Statements of Operations and Comprehensive Income.

If management determines that it is more-likely-than-not that some or all of a deferred income tax asset will not be realized, a valuation allowance is recorded against the tax asset to report the net balance at the amount expected to be realized. Previously unrecognized deferred income tax assets are reassessed at each balance sheet date and are recognized to the extent that it has become more-likely-than-not that the tax benefit will be realized.

The Company records regulatory assets and liabilities associated with deferred income taxes that will be included in the rate-setting process.

The Company uses the flow-through method to account for investment tax credits (ITCs) earned on eligible scientific research and experimental development expenditures, and apprenticeship job creation. Under this method, only non-refundable ITCs are recognized as a reduction to income tax expense.

***Materials and Supplies***

Materials and supplies represent consumables, small spare parts and construction materials held for internal construction and maintenance of property, plant and equipment. These assets are carried at average cost less any impairments recorded.

***Property, Plant and Equipment***

Property, plant and equipment is recorded at original cost, net of customer contributions received in aid of construction and any accumulated impairment losses. The cost of additions, including betterments and replacement asset components, is included on the Consolidated Balance Sheets as property, plant and equipment.

The original cost of property, plant and equipment includes direct materials, direct labour (including employee benefits), contracted services, attributable capitalized financing costs, asset retirement costs, and direct and indirect overheads that are related to the capital project or program. Indirect overheads include a portion of corporate costs such as finance, treasury, human resources, information technology and executive costs. Overhead costs, including corporate functions and field services costs, are capitalized on a fully allocated basis, consistent with an OEB-approved methodology.

Property, plant and equipment in service consists of transmission, distribution, communication, administration and service assets and land easements. Property, plant and equipment also includes future use assets, such as land, major components and spare parts, and capitalized project development costs associated with deferred capital projects.

*Transmission*

Transmission assets include assets used for the transmission of high-voltage electricity, such as transmission lines, support structures, foundations, insulators, connecting hardware and grounding systems, and assets used to step up the voltage of electricity from generating stations for transmission and to step down voltages for distribution, including transformers, circuit breakers and switches.

*Distribution*

Distribution assets include assets related to the distribution of low-voltage electricity, including lines, poles, switches, transformers, protective devices and metering systems.

*Communication*

Communication assets include the fibre-optic and microwave radio system, optical ground wire, towers, telephone equipment and associated buildings.

*Administration and Service*

Administration and service assets include administrative buildings, personal computers, transport and work equipment, tools and other minor assets.

*Easements*

Easements include statutory rights of use for transmission corridors and abutting lands granted under the *Reliable Energy and Consumer Protection Act, 2002*, as well as other land access rights.

### *Intangible Assets*

Intangible assets separately acquired or internally developed are measured on initial recognition at cost, which comprises purchased software, direct labour (including employee benefits), consulting, engineering, overheads and attributable capitalized financing charges. Following initial recognition, intangible assets are carried at cost, net of any accumulated amortization and accumulated impairment losses. The Company's intangible assets primarily represent major administrative computer applications.

### *Capitalized Financing Costs*

Capitalized financing costs represent interest costs attributable to the construction of property, plant and equipment or development of intangible assets. The financing cost of attributable borrowed funds is capitalized as part of the acquisition cost of such assets. The capitalized portion of financing costs is a reduction to financing charges recognized in the Consolidated Statements of Operations and Comprehensive Income. Capitalized financing costs are calculated using the Company's weighted average effective cost of debt.

### *Construction and Development in Progress*

Construction and development in progress consists of the capitalized cost of constructed assets that are not yet complete and which have not yet been placed in service.

### *Depreciation and Amortization*

The cost of property, plant and equipment and intangible assets is depreciated or amortized on a straight-line basis based on the estimated remaining service life of each asset category, except for transport and work equipment, which is depreciated on a declining balance basis.

The Company periodically initiates an external independent review of its property, plant and equipment and intangible asset depreciation and amortization rates, as required by the OEB. Any changes arising from OEB approval of such a review are implemented on a remaining service life basis, consistent with their inclusion in electricity rates. The last review resulted in changes to rates effective January 1, 2013. A summary of average service lives and depreciation and amortization rates for the various classes of assets is included below:

| | Average Service Life | Rate (%) Range | Average |
|---|---|---|---|
| Transmission | 57 years | 1% – 2% | 2% |
| Distribution | 42 years | 1% – 20% | 2% |
| Communication | 19 years | 1% – 15% | 5% |
| Administration and service | 15 years | 3% – 20% | 6% |

The cost of intangible assets is included primarily within the administration and service classification above. Amortization rates for computer applications software and other intangible assets range from 9% to 10%.

In accordance with group depreciation practices, the original cost of property, plant and equipment, or major components thereof, and intangible assets that are normally retired, is charged to accumulated depreciation, with no gain or loss being reflected in results of operations. Where a disposition of property, plant and equipment occurs through sale, a gain or loss is calculated based on proceeds and such gain or loss is included in depreciation expense. Depreciation expense also includes the costs incurred to remove property, plant and equipment where no ARO has been recorded.

### *Goodwill*

Goodwill represents the cost of acquired local distribution companies that is in excess of the fair value of the net identifiable assets acquired at the acquisition date. Goodwill is not included in rate base.

Goodwill is evaluated for impairment on an annual basis, or more frequently if circumstances require. The Company performs a qualitative assessment to determine whether it is more-likely-than-not that the fair value of the applicable reporting unit is less than its carrying amount. If the Company determines, as a result of its qualitative assessment, that it is not more-likely-than-not that the fair value of the applicable reporting unit is less than its carrying amount, no further testing is required. If the Company determines, as a result of its qualitative assessment, that it is more-likely-than-not that the fair value of the applicable reporting unit is less than its carrying amount, a goodwill impairment assessment is performed using a two-step, fair value-based test. The first step compares the fair value of the applicable reporting unit to its carrying amount, including goodwill. If the carrying amount of the applicable reporting unit exceeds its fair value, a second step is performed. The second step requires an allocation of fair value to the individual assets and liabilities using purchase price allocation in order to determine the implied fair value of goodwill. If the implied fair value of goodwill is less than the carrying amount, an impairment loss is recorded as a reduction to goodwill and as a charge to results of operations.

For the year ended December 31, 2013, based on the qualitative assessment performed as at September 30, 2013, the Company has determined that it is not more-likely-than-not that the fair value of each applicable reporting unit assessed is less than its carrying amount. As a result, no further testing was performed, and the Company has concluded that goodwill was not impaired at December 31, 2013.

***Long-Lived Asset Impairment***

When circumstances indicate the carrying value of long-lived assets may not be recoverable, the Company evaluates whether the carrying value of such assets, excluding goodwill, has been impaired. For such long-lived assets, impairment exists when the carrying value exceeds the sum of the future estimated undiscounted cash flows expected to result from the use and eventual disposition of the asset. When alternative courses of action to recover the carrying amount of a long-lived asset are under consideration, a probability-weighted approach is used to develop estimates of future undiscounted cash flows. If the carrying value of the long-lived asset is not recoverable based on the estimated future undiscounted cash flows, an impairment loss is recorded, measured as the excess of the carrying value of the asset over its fair value. As a result, the asset's carrying value is adjusted to its estimated fair value.

Within its regulated business, the carrying costs of most of Hydro One's long-lived assets are included in rate base where they earn an OEB-approved rate of return. Asset carrying values and the related return are recovered through approved rates. As a result, such assets are only tested for impairment in the event that the OEB disallows recovery, in whole or in part, or if such a disallowance is judged to be probable.

Hydro One regularly monitors the assets of its unregulated Hydro One Telecom subsidiary for indications of impairment. Management assesses the fair value of such long-lived assets using commonly accepted techniques, and may use more than one. Techniques used to determine fair value include, but are not limited to, the use of recent third party comparable sales for reference and internally developed discounted cash flow analysis. Significant changes in market conditions, changes to the condition of an asset, or a change in management's intent to utilize the asset are generally viewed by management as triggering events to reassess the cash flows related to these long-lived assets. As at December 31, 2013, no asset impairment had been recorded for assets within either the Company's regulated or unregulated businesses.

***Costs of Arranging Debt Financing***

For financial liabilities classified as other than held-for-trading, the Company defers the external transaction costs related to obtaining debt financing and presents such amounts as deferred debt costs on the Consolidated Balance Sheets. Deferred debt costs are amortized over the contractual life of the related debt on an effective-interest basis and the amortization is included within financing charges in the Consolidated Statements of Operations and Comprehensive Income. Transaction costs for items classified as held-for-trading are expensed immediately.

***Comprehensive Income***

Comprehensive income is comprised of net income and other comprehensive income (OCI). OCI includes the amortization of net unamortized hedging losses on the Company's discontinued cash flow hedges, and the change in fair value on the existing cash flow hedges to the extent that the hedge is effective. The Company amortizes its unamortized hedging losses on discontinued cash flow hedges to financing charges using the effective-interest method over the term of the allocated hedged debt. Hydro One presents net income and OCI in a single continuous Consolidated Statement of Operations and Comprehensive Income.

***Financial Assets and Liabilities***

All financial assets and liabilities are classified into one of the following five categories: held-to-maturity; loans and receivables; held-for-trading; other liabilities; or available-for-sale. Financial assets and liabilities classified as held-for-trading are measured at fair value. All other financial assets and liabilities are measured at amortized cost, except accounts receivable and amounts due from related parties, which are measured at the lower of cost or fair value. Accounts receivable and amounts due from related parties are classified as loans and receivables. The Company considers the carrying amounts of accounts receivable and amounts due from related parties to be reasonable estimates of fair value because of the short time to maturity of these instruments. Provisions for impaired accounts receivable are recognized as adjustments to the allowance for doubtful accounts and are recognized when there is objective evidence that the Company will not be able to collect amounts according to the original terms.

Derivative instruments are measured at fair value. Gains and losses from fair valuation are included within financing charges in the period in which they arise. The Company determines the classification of its financial assets and liabilities at the date of initial recognition. The Company designates certain of its financial assets and liabilities to be held at fair value, when it is consistent with the Company's risk management policy disclosed in Note 13 – Fair Value of Financial Instruments and Risk Management.

The Company's investment in Province of Ontario Floating-Rate Notes, which is held as an alternate form of liquidity to supplement the bank credit facilities, is classified as held-for-trading and is measured at fair value.

All financial instrument transactions are recorded at trade date.

***Derivative Instruments and Hedge Accounting***

The Company closely monitors the risks associated with changes in interest rates on its operations and, where appropriate, uses various instruments to hedge these risks. Certain of these derivative instruments qualify for hedge accounting and are designated as accounting hedges, while others either do not qualify as hedges or have not been designated as hedges (hereinafter referred to as undesignated contracts) as they are part of economic hedging relationships.

The accounting guidance for derivative instruments requires the recognition of all derivative instruments not identified as meeting the normal purchase and sale exemption as either assets or liabilities recorded at fair value on the Consolidated Balance Sheets. For derivative instruments that qualify for hedge accounting, the Company may elect to designate such derivative instruments as either cash flow hedges or fair value hedges. The Company offsets fair value amounts recognized in its Consolidated Balance Sheets related to derivative instruments executed with the same counterparty under the same master netting agreement.

For derivative instruments that qualify for hedge accounting and which are designated as cash flow hedges, the effective portion of any gain or loss, net of tax, is reported as a component of accumulated OCI (AOCI) and is reclassified to results of operations in the same period or periods during which the hedged transaction affects results of operations. Any gains or losses on the derivative instrument that represent either hedge ineffectiveness or hedge components excluded from the assessment of effectiveness are recognized in results of operations. For fair value hedges, changes in fair value of both the derivative instrument and the underlying hedged exposure are recognized in the Consolidated Statement of Operations and Comprehensive Income in the current period. The gain or loss on the derivative instrument is included in the same line item as the offsetting gain or loss on the hedged item in the Consolidated Statements of Operations and Comprehensive Income. Additionally, the Company enters into derivative agreements that are economic hedges that either do not qualify for hedge accounting or have not been designated as hedges. The changes in fair value of these undesignated derivative instruments are reflected in results of operations.

Embedded derivative instruments are separated from their host contracts and carried at fair value on the Consolidated Balance Sheets when: (a) the economic characteristics and risks of the embedded derivative are not clearly and closely related to the economic characteristics and risks of the host contract; (b) the hybrid instrument is not measured at fair value, with changes in fair value recognized in results of operations each period; and (c) the embedded derivative itself meets the definition of a derivative. The Company does not engage in derivative trading or speculative activities and had no embedded derivatives at December 31, 2013 or 2012.

Hydro One periodically develops hedging strategies taking into account risk management objectives. At the inception of a hedging relationship where the Company has elected to apply hedge accounting, Hydro One formally documents the relationship between the hedged item and the hedging instrument, the related risk management objective, the nature of the specific risk exposure being hedged, and the method for assessing the effectiveness of the hedging relationship. The Company also assesses, both at the inception of the hedge and on a quarterly basis, whether the hedging instruments are effective in offsetting changes in fair values or cash flows of the hedged items.

### *Employee Future Benefits*

Employee future benefits provided by Hydro One include pension, post-retirement and post-employment benefits. The costs of the Company's pension, post-retirement and post-employment benefit plans are recorded over the periods during which employees render service.

The Company recognizes the funded status of its pension, post-retirement and post-employment plans on its Consolidated Balance Sheets and subsequently recognizes the changes in funded status at the end of each reporting year. Pension, post-retirement and post-employment plans are considered to be underfunded when the projected benefit obligation exceeds the fair value of the plan assets. Liabilities are recognized on the Consolidated Balance Sheets for any net underfunded projected benefit obligation. The net underfunded projected benefit obligation may be disclosed as a current liability, long-term liability, or both. The current portion is the amount by which the actuarial present value of benefits included in the benefit obligation payable in the next 12 months exceeds the fair value of plan assets. If the fair value of plan assets exceeds the projected benefit obligation of the plan, an asset is recognized equal to the net overfunded projected benefit obligation. The net asset for an overfunded plan is classified as a long-term asset on the Consolidated Balance Sheets. The post-retirement and post-employment benefit plans are unfunded because there are no related plan assets.

#### *Pension benefits*

In accordance with the OEB's rate orders, pension costs are recorded on a cash basis as employer contributions are paid to the pension fund in accordance with the *Pension Benefits Act* (Ontario). Pension costs are recorded on an accrual basis for financial reporting purposes. Pension costs are actuarially determined using the projected benefit method prorated on service and are based on assumptions that reflect management's best estimate of the effect of future events, including future compensation increases. Past service costs from plan amendments and all actuarial gains and losses are amortized on a straight-line basis over the expected average remaining service period of active employees in the plan, and over the estimated remaining life expectancy of inactive employees in the plan. Pension plan assets, consisting primarily of listed equity securities as well as corporate and government debt securities, are fair valued at the end of each year.

Hydro One records a regulatory asset equal to the net underfunded projected benefit obligation for its pension plan. The regulatory asset for the net underfunded projected benefit obligation for the pension plan, in the absence of regulatory accounting, would be recognized in AOCI. A regulatory asset is recognized because management considers it to be probable that pension benefit costs will be recovered in the future through the rate-setting process. The pension regulatory assets are remeasured at the end of each year based on the current status of the pension plan.

All future pension benefit costs are attributed to labour and are either charged to results of operations or capitalized as part of the cost of property, plant and equipment and intangible assets.

#### *Post-retirement and post-employment benefits*

Post-retirement and post-employment benefits are recorded and included in rates on an accrual basis. Costs are determined by independent actuaries using the projected benefit method prorated on service and based on assumptions that reflect management's best estimates. Past service costs from plan amendments are amortized to results of operations based on the expected average remaining service period.

Hydro One records a regulatory asset equal to the incremental net unfunded projected benefit obligation for post-retirement and post-employment plans recorded at each year end based on annual actuarial reports. The regulatory asset for the incremental net unfunded projected benefit obligation for post-retirement and post-employment plans, in the absence of regulatory accounting, would be recognized in AOCI. A regulatory asset is recognized because management considers it to be probable that post-retirement and post-employment benefit costs will be recovered in the future through the rate-setting process.

For post-retirement benefits, all actuarial gains or losses are deferred using the "corridor" approach. The amount calculated above the "corridor" is amortized to results of operations on a straight-line basis over the expected average remaining service life of active employees in the plan and over the remaining life expectancy of inactive employees in the plan. The post-retirement benefit obligation is remeasured to its fair value at each year end based on an annual actuarial report, with an offset to the associated regulatory asset, to the extent of the remeasurement adjustment.

For post-employment obligations, the associated regulatory liabilities representing actuarial gains on transition to US GAAP are amortized to results of operations based on the "corridor" approach. Post transition, the actuarial gains and losses on post-employment obligations that are incurred during the year are recognized immediately to results of operations. The post-employment benefit obligation is remeasured to its fair value at each year end based on an annual actuarial report, with an offset to the associated regulatory asset, to the extent of the remeasurement adjustment.

All post-retirement and post-employment future benefit costs are attributed to labour and are either charged to results of operations or capitalized as part of the cost of property, plant and equipment and intangible assets.

***Multiemployer Pension Plan***

Employees of Hydro One Brampton Networks participate in the Ontario Municipal Employees Retirement System Fund (OMERS), a multiemployer, contributory, defined benefit public sector pension fund. OMERS provides retirement pension payments based on members' length of service and salary. Both participating employers and members are required to make plan contributions. The OMERS plan assets are pooled together to provide benefits to all plan participants and the plan assets are not segregated by member entity. OMERS is registered with the Financial Services Commission of Ontario under Registration #0345983. At December 31, 2012, OMERS had approximately 429,000 members, with approximately 283 members being current employees of Hydro One Brampton Networks.

The OMERS plan is accounted for as a defined contribution plan by Hydro One because it is not practicable to determine the present value of the Company's obligation, the fair value of plan assets or the related current service cost applicable to Hydro One Brampton Networks' employees. Hydro One recognizes its contributions to the OMERS plan as pension expense, with a portion being capitalized. The expensed amount is included in operation, maintenance and administration costs in the Consolidated Statements of Operations and Comprehensive Income.

***Loss Contingencies***

Hydro One is involved in certain legal and environmental matters that arise in the normal course of business. In the preparation of its Consolidated Financial Statements, management makes judgements regarding the future outcome of contingent events and records a loss for a contingency based on its best estimate when it is determined that such loss is probable and the amount of the loss can be reasonably estimated. Where the loss amount is recoverable in future rates, a regulatory asset is also recorded. When a range estimate for the probable loss exists and no amount within the range is a better estimate than any other amount, the Company records a loss at the minimum amount within the range.

Management regularly reviews current information available to determine whether recorded provisions should be adjusted and whether new provisions are required. Estimating probable losses may require analysis of multiple forecasts and scenarios that often depend on judgements about potential actions by third parties, such as federal, provincial and local courts or regulators. Contingent liabilities are often resolved over long periods of time. Amounts recorded in the Consolidated Financial Statements may differ from the actual outcome once the contingency is resolved. Such differences could have a material impact on future results of operations, financial position and cash flows of the Company.

Provisions are based upon current estimates and are subject to greater uncertainty where the projection period is lengthy. A significant upward or downward trend in the number of claims filed, the nature of the alleged injuries, and the average cost of resolving each claim could change the estimated provision, as could any substantial adverse or favourable verdict at trial. A federal or provincial legislative outcome or structured settlement could also change the estimated liability. Legal fees are expensed as incurred.

***Environmental Liabilities***

Environmental liabilities are recorded in respect of past contamination when it is determined that future environmental remediation expenditures are probable under existing statute or regulation and the amount of the future expenditures can be reasonably estimated. Hydro One records a liability for the estimated future expenditures associated with the contaminated land assessment and remediation (LAR) and for the phase-out and destruction of polychlorinated biphenyl (PCB)-contaminated mineral oil removed from electrical equipment, based on the present value of these estimated future expenditures. The Company determines the present value with a discount rate equal to its credit-adjusted risk-free interest rate on financial instruments with comparable maturities to the pattern of future environmental expenditures. As the Company anticipates that the future expenditures will continue to be recoverable in future rates, an offsetting regulatory asset has been recorded to reflect the future recovery of these environmental expenditures from customers. Hydro One reviews its estimates of future environmental expenditures annually, or more frequently if there are indications that circumstances have changed.

***Asset Retirement Obligations***

AROs are recorded for legal obligations associated with the future removal and disposal of long-lived assets. Such obligations may result from the acquisition, construction, development and/or normal use of the asset. Conditional AROs are recorded when there is a legal obligation to perform a future asset retirement activity but where the timing and/or method of settlement are conditional on a future event that may or may not be within the control of the Company. In such a case, the obligation to perform the asset retirement activity is unconditional even though uncertainty exists about the timing and/or method of settlement.

When recording an ARO, the present value of the estimated future expenditures required to complete the asset retirement activity is recorded in the period in which the obligation is incurred, if a reasonable estimate can be made. In general, the present value of the estimated future expenditures is added to the carrying amount of the associated asset and the resulting asset retirement cost is depreciated over the estimated useful life of the asset. Where an asset is no longer in service when an ARO is recorded, the asset retirement cost is recorded in results of operations.

Some of the Company's transmission and distribution assets, particularly those located on unowned easements and rights-of-way, may have AROs, conditional or otherwise. The majority of the Company's easements and rights-of-way are either of perpetual duration or are automatically renewed annually. Land rights with finite terms are generally subject to extension or renewal. As the Company expects to use the majority of its facilities in perpetuity, no ARO currently exists for these assets. If, at some future date, a particular facility is shown not to meet the perpetuity assumption, it will be reviewed to determine whether an estimable ARO exists. In such a case, an ARO would be recorded at that time.

The Company's AROs recorded to date relate to estimated future expenditures associated with the removal and disposal of asbestos-containing materials installed in some of its facilities and with the decommissioning of specific switching stations located on unowned sites.

## 3. NEW ACCOUNTING PRONOUNCEMENTS

***Recently Adopted Accounting Pronouncements***

In December 2011, the Financial Accounting Standards Board (FASB) issued Accounting Standards Update (ASU) 2011-11, Balance Sheet (Topic 210): Disclosures about Offsetting Assets and Liabilities. This ASU requires an entity to disclose both gross and net information about financial instruments and transactions eligible for offset on the Consolidated Balance Sheets as well as financial instruments and transactions executed under a master netting or similar arrangement. The ASU was issued to enable users of financial statements to understand the effects or potential effects of those arrangements on an entity's financial position. This ASU was required to be applied retrospectively and was effective for fiscal years, and interim periods within those years, beginning on or after January 1, 2013. The adoption of this ASU did not have an impact on the Company's Consolidated Financial Statements.

In February 2013, the FASB issued ASU 2013-02, Comprehensive Income (Topic 220): Reporting of Amounts Reclassified Out of Accumulated Other Comprehensive Income. This ASU requires an entity to provide information about the amounts reclassified out of accumulated other comprehensive income by component. In addition, an entity is required to present, either on the face of the statement where net income is presented or in the notes, significant amounts reclassified out of accumulated other comprehensive income by the respective line items of net income, but only if the amount reclassified is required under US GAAP to be reclassified to net income in its entirety in the same reporting period. For other amounts that are not required under US GAAP to be reclassified in their entirety to net income, an entity is required to cross-reference to other disclosures required under US GAAP that provide additional detail about those amounts. This ASU was required to be applied prospectively and was effective for fiscal years, and interim periods within those years, beginning after December 15, 2012. The adoption of this ASU did not have a significant impact on the Company's Consolidated Financial Statements.

***Recent Accounting Guidance Not Yet Adopted***

In July 2013, the FASB issued ASU 2013-11, Income Taxes (Topic 740): Presentation of an Unrecognized Tax Benefit When a Net Operating Loss Carryforward, a Similar Tax Loss, or a Tax Credit Carryforward Exists. This ASU provides guidance on the presentation of unrecognized tax benefits. This ASU is effective for fiscal years, and interim periods within those years, beginning after December 15, 2013, and should be applied prospectively to all unrecognized tax benefits that exist at the effective date. Retrospective application is permitted. The adoption of this ASU is not anticipated to have a significant impact on the Company's Consolidated Financial Statements.

## 4. BUSINESS ACQUISITION

***Norfolk Power Purchase Agreement***

On April 2, 2013, Hydro One reached an agreement with The Corporation of Norfolk County to acquire 100% of the common shares of Norfolk Power Inc. (Norfolk Power), an electricity distribution and telecom company located in southwestern Ontario. The acquisition is pending a regulatory decision from the OEB. The purchase price for Norfolk Power will be approximately $93 million, subject to final closing adjustments. The transaction is anticipated to be completed in 2014. In anticipation of the Norfolk Power acquisition, the Company made a refundable deposit totaling $5 million, which was recorded in other current assets on the interim Consolidated Balance Sheet.

## 5. DEPRECIATION AND AMORTIZATION

| *Year ended December 31 (millions of Canadian dollars)* | **2013** | 2012 |
|---|---|---|
| Depreciation of property, plant and equipment | **533** | 522 |
| Amortization of intangible assets | **48** | 48 |
| Asset removal costs | **79** | 70 |
| Amortization of regulatory assets | **16** | 19 |
| | **676** | 659 |

## 6. FINANCING CHARGES

| *Year ended December 31 (millions of Canadian dollars)* | **2013** | 2012 |
|---|---|---|
| Interest on long-term debt | **416** | 421 |
| Other | **9** | 12 |
| Less: Interest capitalized on construction and development in progress | **(51)** | (59) |
| Gain on interest-rate swap agreements | **(11)** | (12) |
| Interest earned on investments | **(3)** | (4) |
| | **360** | 358 |

## 7. PROVISION FOR PAYMENTS IN LIEU OF CORPORATE INCOME TAXES

The provision for PILs differs from the amount that would have been recorded using the combined Canadian federal and Ontario statutory income tax rate. The reconciliation between the statutory and the effective tax rates is provided as follows:

| *Year ended December 31 (millions of Canadian dollars)* | **2013** | 2012 |
|---|---|---|
| Income before provision for PILs | **912** | 866 |
| Canadian federal and Ontario statutory income tax rate | **26.50%** | 26.50% |
| Provision for PILs at statutory rate | **242** | 230 |
| | | |
| Increase (decrease) resulting from: | | |
| Net temporary differences included in amounts charged to customers: | | |
| Capital cost allowance in excess of depreciation and amortization | **(72)** | (42) |
| Pension contributions in excess of pension expense | **(23)** | (23) |
| Interest capitalized for accounting but deducted for tax purposes | **(13)** | (15) |
| Overheads capitalized for accounting but deducted for tax purposes | **(14)** | (14) |
| Prior year's adjustments | **(8)** | (2) |
| Non-refundable investment tax credits | **(4)** | (8) |
| Environmental expenditures | **(4)** | (5) |
| Post-retirement and post-employment benefit expense in excess of cash payments | **4** | – |
| Other | **(1)** | (1) |
| Net temporary differences | **(135)** | (110) |
| Net permanent differences | **2** | 1 |
| Total provision for PILs | **109** | 121 |

The major components of income tax expense are as follows:

| *Year ended December 31 (millions of Canadian dollars)* | **2013** | 2012 |
|---|---|---|
| Current provision for PILs | **111** | 130 |
| Deferred recovery of PILs | **(2)** | (9) |
| Total provision for PILs | **109** | 121 |
| | | |
| Effective income tax rate | **11.98%** | 13.96% |

The current provision for PILs is remitted to, or received from, the Ontario Electricity Financial Corporation (OEFC). At December 31, 2013, $29 million due from the OEFC was included in due from related parties on the Consolidated Balance Sheet (December 31, 2012 – $10 million included in due to related parties).

The total provision for PILs includes deferred recovery of PILs of $2 million (2012 – $9 million) that is not included in the rate-setting process, using the liability method of accounting. Deferred PILs balances expected to be included in the rate-setting process are offset by regulatory assets and liabilities to reflect the anticipated recovery or disposition of these balances within future electricity rates.

### *Deferred Income Tax Assets and Liabilities*

Deferred income tax assets and liabilities arise from differences between the carrying amounts and tax bases of the Company's assets and liabilities. At December 31, 2013 and 2012, deferred income tax assets and liabilities consisted of the following:

| *December 31 (millions of Canadian dollars)* | **2013** | 2012 |
|---|---|---|
| **Deferred income tax assets** | | |
| Post-retirement and post-employment benefits expense in excess of cash payments | **7** | 7 |
| Environmental expenditures | **5** | 4 |
| Depreciation and amortization in excess of capital cost allowance | **–** | 3 |
| Other | **(1)** | – |
| Total deferred income tax assets | **11** | 14 |
| Less: current portion | **–** | – |
| | **11** | 14 |

| *December 31 (millions of Canadian dollars)* | **2013** | 2012 |
|---|---|---|
| **Deferred income tax liabilities** | | |
| Capital cost allowance in excess of depreciation and amortization | **(1,556)** | (1,344) |
| Post-retirement and post-employment benefits expense in excess of cash payments | **542** | 519 |
| Environmental expenditures | **66** | 62 |
| Regulatory amounts that are not recognized for tax purposes | **(144)** | (147) |
| Goodwill | **(20)** | (19) |
| Other | **1** | 3 |
| Total deferred income tax liabilities | **(1,111)** | (926) |
| Less: current portion | **18** | 18 |
| | **(1,129)** | (944) |

During 2013, there was no change in the rate applicable to future taxes (2012 – a change in rate applicable to future rates generated a $60 million increase).

## 8. ACCOUNTS RECEIVABLE

| *December 31 (millions of Canadian dollars)* | **2013** | 2012 |
|---|---|---|
| Accounts receivable – billed | **268** | 224 |
| Accounts receivable – unbilled | **691** | 644 |
| Accounts receivable, gross | **959** | 868 |
| Allowance for doubtful accounts | **(36)** | (23) |
| Accounts receivable, net | **923** | 845 |

The following table shows the movements in the allowance for doubtful accounts for the years ended December 31, 2013 and 2012:

| *Year ended December 31 (millions of Canadian dollars)* | **2013** | 2012 |
|---|---|---|
| Allowance for doubtful accounts – January 1 | **(23)** | (18) |
| Write-offs | **24** | 17 |
| Additions to allowance for doubtful accounts | **(37)** | (22) |
| Allowance for doubtful accounts – December 31 | **(36)** | (23) |

## 9. PROPERTY, PLANT AND EQUIPMENT

| *December 31, 2013 (millions of Canadian dollars)* | **Property, Plant and Equipment** | **Accumulated Depreciation** | **Construction in Progress** | **Total** |
|---|---|---|---|---|
| Transmission | **12,413** | **4,215** | **671** | **8,869** |
| Distribution | **8,498** | **3,046** | **316** | **5,768** |
| Communication | **1,060** | **560** | **53** | **553** |
| Administration and Service | **1,380** | **716** | **38** | **702** |
| Easements | **617** | **78** | **–** | **539** |
| | **23,968** | **8,615** | **1,078** | **16,431** |

| *December 31, 2012 (millions of Canadian dollars)* | Property, Plant and Equipment | Accumulated Depreciation | Construction in Progress | Total |
|---|---|---|---|---|
| Transmission | 11,840 | 3,990 | 641 | 8,491 |
| Distribution | 8,005 | 2,879 | 234 | 5,360 |
| Communication | 1,024 | 516 | 57 | 565 |
| Administration and Service | 1,314 | 668 | 123 | 769 |
| Easements | 614 | 92 | – | 522 |
| | 22,797 | 8,145 | 1,055 | 15,707 |

Financing charges capitalized on property, plant and equipment under construction were $48 million in 2013 (2012 – $56 million).

## 10. INTANGIBLE ASSETS

| *December 31, 2013 (millions of Canadian dollars)* | **Intangible Assets** | **Accumulated Amortization** | **Development in Progress** | **Total** |
|---|---|---|---|---|
| Computer applications software | **557** | **249** | **3** | **311** |
| Other | **5** | **3** | **–** | **2** |
| | **562** | **252** | **3** | **313** |

| *December 31, 2012 (millions of Canadian dollars)* | Intangible Assets | Accumulated Amortization | Development in Progress | Total |
|---|---|---|---|---|
| Computer applications software | 451 | 301 | 116 | 266 |
| Other | 5 | 4 | – | 1 |
| | 456 | 305 | 116 | 267 |

Financing charges capitalized on intangible assets under development were $3 million in 2013 (2012 – $3 million). The estimated annual amortization expense for intangible assets is as follows: 2014 – $52 million; 2015 – $52 million; 2016 – $52 million; 2017 – $52 million; and 2018 – $44 million.

## 11. REGULATORY ASSETS AND LIABILITIES

Regulatory assets and liabilities arise as a result of the rate-setting process. Hydro One has recorded the following regulatory assets and liabilities:

| *December 31 (millions of Canadian dollars)* | **2013** | 2012 |
|---|---|---|
| **Regulatory assets:** | | |
| Deferred income tax regulatory asset | **1,145** | 954 |
| Pension benefit regulatory asset | **845** | 1,515 |
| Post-retirement and post-employment benefits | **308** | 320 |
| Environmental | **266** | 249 |
| Pension cost variance | **80** | 61 |
| OEB cost assessment differential | **9** | 6 |
| DSC exemption | **7** | 2 |
| Long-term project development costs | **5** | 5 |
| Rider 2 | **–** | 10 |
| Other | **18** | 5 |
| Total regulatory assets | **2,683** | 3,127 |
| Less: current portion | **47** | 29 |
| | **2,636** | 3,098 |
| **Regulatory liabilities:** | | |
| External revenue variance | **81** | 61 |
| Rider 8 | **55** | 45 |
| Retail settlement variance accounts | **35** | 54 |
| Deferred income tax regulatory liability | **19** | 16 |
| Rider 9 | **19** | – |
| PST savings deferral | **17** | 13 |
| Hydro One Brampton Networks rider | **8** | – |
| Rider 3 | **–** | 9 |
| Rural and remote rate protection variance | **–** | 6 |
| Other | **14** | 17 |
| Total regulatory liabilities | **248** | 221 |
| Less: current portion | **85** | 40 |
| | **163** | 181 |

### *Deferred Income Tax Regulatory Asset and Liability*

Deferred income taxes are recognized on temporary differences between the carrying amount of assets and liabilities in the financial statements and the corresponding tax bases used in the computation of taxable profit. The Company has recognized regulatory assets and liabilities that correspond to deferred income taxes that flow through the rate-setting process. In the absence of rate-regulated accounting, the Company's provision for PILs would have been recognized using the liability method and there would be no regulatory accounts established for taxes to be recovered through future rates. As a result, the 2013 provision for PILs would have been higher by approximately $139 million (2012 – $136 million).

### *Pension Benefit Regulatory Asset*

The Company recognizes the net unfunded status of pension obligations on the Consolidated Balance Sheets with an offset to the associated regulatory asset. A regulatory asset is recognized because management considers it to be probable that pension benefit costs will be recovered in the future through the rate-setting process. The pension benefit obligation is remeasured to its fair value at each year end based on an annual actuarial report, with an offset to the associated regulatory asset, to the extent of the remeasurement adjustment. In the absence of rate-regulated accounting, 2013 OCI would have been higher by $670 million (2012 – lower by $736 million).

*Post-Retirement and Post-Employment Benefits*

The Company recognizes the net unfunded status of post-retirement and post-employment obligations on the Consolidated Balance Sheets with an incremental offset to the associated regulatory assets. A regulatory asset is recognized because management considers it to be probable that post-retirement and post-employment benefit costs will be recovered in the future through the rate-setting process. The post-retirement and post-employment benefit obligation is remeasured to its fair value at each year end based on an annual actuarial report, with an offset to the associated regulatory asset, to the extent of the remeasurement adjustment. In the absence of rate-regulated accounting, 2013 OCI would have been higher by $12 million (2012 – lower by $197 million).

*Environmental*

Hydro One records a liability for the estimated future expenditures required to remediate environmental contamination. Because such expenditures are expected to be recoverable in future rates, the Company has recorded an equivalent amount as a regulatory asset. In 2013, the environmental regulatory asset decreased by $3 million (2012 – $3 million) to reflect related changes in the Company's PCB liability, and increased by $26 million (2012 – $2 million) due to changes in the LAR liability. The environmental regulatory asset is amortized to results of operations based on the pattern of actual expenditures incurred and charged to environmental liabilities. The OEB has the discretion to examine and assess the prudency and the timing of recovery of all of Hydro One's actual environmental expenditures. In the absence of rate-regulated accounting, 2013 operation, maintenance and administration expenses would have been higher by $23 million (2012 – lower by $1 million). In addition, 2013 amortization expense would have been lower by $16 million (2012 – $18 million), and 2013 financing charges would have been higher by $10 million (2012 – $11 million).

*Pension Cost Variance*

A pension cost variance account was established for Hydro One Networks' transmission and distribution businesses to track the difference between the actual pension expense incurred and estimated pension costs approved by the OEB. The balance in this regulatory account reflects the excess of pension costs paid as compared to OEB-approved amounts. In the absence of rate-regulated accounting, 2013 revenue would have been lower by $19 million (2012 – $18 million).

*OEB Cost Assessment Differential*

In April 2010, the OEB announced its decision regarding the Company's rate application in respect of Hydro One Networks' distribution business for 2010 and 2011. As part of this decision, the OEB also approved the distribution-related OEB Cost Assessment Differential Account to record the difference between the amounts approved in rates and actual expenditures with respect to the OEB's cost assessments.

*DSC Exemption*

In June 2010, Hydro One Networks filed an application with the OEB regarding the OEB's new cost responsibility rules contained in the OEB's October 2009 Notice of Amendment to the Distribution System Code (DSC), with respect to the connection of certain renewable generators that were already connected or that had received a connection impact assessment prior to October 21, 2009. The application sought approval to record and defer the unanticipated costs incurred by Hydro One Networks that resulted from the connection of certain renewable generation facilities. The OEB ruled that expenditures for identified specific expenditures can be recorded in a deferral account, subject to the OEB's review at a future date.

*Long-Term Project Development Costs*

In May 2009, the OEB approved the creation of a deferral account to record Hydro One Networks' costs of preliminary work to advance certain transmission projects identified in the Company's 2009 and 2010 transmission rate applications. In March 2010, the OEB issued a decision amending the scope of the account to include the 20 major transmission projects identified in the September 2009 request from the Ministry of Energy and Infrastructure. In December 2012, the OEB approved the recovery of the December 31, 2012 balance, including accrued interest, to be recovered over a one-year period from January 1, 2014 to December 31, 2014.

*Rider 2*

In April 2006, the OEB approved Hydro One Networks' distribution-related deferral account balances. The Rider 2 regulatory asset includes retail settlement and cost variance amounts and distribution low-voltage service amounts, plus accrued interest. In December 2012, as part of Hydro One Networks' 2013 IRM distribution rate application, the OEB approved the balance of the Rider 2 regulatory account for disposition as part of Rider 9, including accrued interest, to be disposed over a 24-month period from January 1, 2013 to December 31, 2014.

*External Revenue Variance*
In May 2009, the OEB approved forecasted amounts related to export service revenue, external revenue from secondary land use, and external revenue from station maintenance and engineering and construction work. In November 2012, the OEB again approved forecasted amounts related to these revenue categories and extended the scope to encompass all other external revenues. The external revenue variance account balance reflects the excess of actual external revenues compared to the OEB-approved forecasted amounts.

*Rider 8*
In April 2010, the OEB requested the establishment of deferral accounts which capture the difference between the revenue recorded on the basis of Green Energy Plan expenditures incurred and the actual recoveries received.

*Retail Settlement Variance Accounts (RSVAs)*
Hydro One has deferred certain retail settlement variance amounts under the provisions of Article 490 of the OEB's Accounting Procedures Handbook. In December 2012, the OEB approved the disposition of the total RSVA balance accumulated from January 2010 to December 2011, including accrued interest, to be disposed over a 24-month period from January 1, 2013 to December 31, 2014. Hydro One has continued to accumulate a net liability in its RSVAs since December 31, 2011.

*Rider 9*
In December 2012, as part of Hydro One Networks' 2013 IRM distribution rate application, the OEB approved for disposition certain distribution-related deferral account balances, including RSVA amounts and balances of Rider 2 and Rider 3, accumulated up to December 2011, including accrued interest, to be disposed over a 24-month period from January 1, 2013 to December 31, 2014.

*PST Savings Deferral Account*
The provincial sales tax (PST) and goods and services tax (GST) were harmonized in July 2010. Unlike the GST, the PST was included in operation, maintenance and administrative expenses or capital expenditures for past revenue requirements approved during a full cost-of-service hearing. Under the harmonized sales tax (HST) regime, the HST included in operation, maintenance and administration expenses or capital expenditures is not a cost ultimately borne by the Company and as such, a refund of the prior PST element in the approved revenue requirement is applicable, and calculations for tracking and refund were requested by the OEB. For Hydro One Networks' transmission revenue requirement, PST was included between July 1, 2010 and December 31, 2010 and recorded in a deferral account, per direction from the OEB. For Hydro One Networks' distribution revenue requirement, PST was included between July 1, 2010 and December 31, 2013 and recorded in a deferral account, per direction from the OEB.

*Hydro One Brampton Networks Rider*
In December 2013, the OEB issued a decision for Hydro One Brampton Networks' 2014 distribution rates. Included in the OEB's decision was the approval of certain deferral account balances, primarily RSVAs. The OEB ordered that the approved balances be aggregated into a single regulatory account and disposed of through a rate rider over a two-year period from January 1, 2014 to December 31, 2015.

*Rider 3*
In December 2008, the OEB approved certain distribution-related deferral account balances, including RSVA amounts, deferred tax changes, OEB costs and smart meters. The OEB approved the disposition of the Rider 3 balance accumulated up to April 2008, including accrued interest, to be disposed over a 27-month period from February 1, 2009 to April 30, 2011. In December 2012, as part of Hydro One Networks' 2013 IRM distribution rate application, the OEB approved the balance of Rider 2 for disposition as part of Rider 9.

*Rural and Remote Rate Protection Variance (RRRP)*
Hydro One receives rural rate protection amounts from the IESO. A portion of these amounts is provided to retail customers of Hydro One Networks who are eligible for rate protection. The OEB has approved a mechanism to collect the RRRP through the Wholesale Market Service Charge. Variances between the amounts remitted by the IESO to Hydro One and the fixed entitlements defined in the regulation, and subsequent OEB utility rate decisions, are tracked by the Company in the RRRP variance account. At December 31, 2013, the RRRP variance account had a $2 million debit balance, which is included in Other regulatory assets.

## 12. DEBT AND CREDIT AGREEMENTS

### Short-Term Notes

Hydro One meets its short-term liquidity requirements in part through the issuance of commercial paper under its Commercial Paper Program which has a maximum authorized amount of $1,000 million. These short-term notes are denominated in Canadian dollars with varying maturities not exceeding 365 days. Hydro One had no commercial paper borrowings outstanding as at December 31, 2013 and 2012.

Hydro One has a $1,500 million committed and unused revolving standby credit facility with a syndicate of banks, maturing in June 2018. If used, interest on the facility would apply based on Canadian benchmark rates. This credit facility is unsecured and supports the Company's Commercial Paper Program. The Company may use the credit facility for general corporate purposes, including meeting short-term funding requirements. The obligation of each lender to make any credit extension to the Company under its credit facility is subject to various conditions including, among other things, that no event of default has occurred or would result from such credit extension.

### Long-Term Debt

The Company issues notes for long-term financing under its Medium-Term Note (MTN) Program. The maximum authorized principal amount of notes issuable under this program is $3,000 million. At December 31, 2013, $1,815 million remained available for issuance until October 2015.

The following table presents the outstanding long-term debt at December 31, 2013 and 2012:

| *December 31 (millions of Canadian dollars)* | **2013** | 2012 |
|---|---|---|
| 5.00% Series 15 notes due 2013 | **–** | 600 |
| 3.13% Series 19 notes due 2014[1] | **750** | 750 |
| 2.95% Series 21 notes due 2015[1] | **500** | 500 |
| Floating-rate Series 22 notes due 2015[2] | **50** | 50 |
| 4.64% Series 10 notes due 2016 | **450** | 450 |
| Floating-rate Series 27 notes due 2016[2] | **50** | 50 |
| 5.18% Series 13 notes due 2017 | **600** | 600 |
| 2.78% Series 28 notes due 2018 | **750** | – |
| 4.40% Series 20 notes due 2020 | **300** | 300 |
| 3.20% Series 25 notes due 2022 | **600** | 600 |
| 7.35% Debentures due 2030 | **400** | 400 |
| 6.93% Series 2 notes due 2032 | **500** | 500 |
| 6.35% Series 4 notes due 2034 | **385** | 385 |
| 5.36% Series 9 notes due 2036 | **600** | 600 |
| 4.89% Series 12 notes due 2037 | **400** | 400 |
| 6.03% Series 17 notes due 2039 | **300** | 300 |
| 5.49% Series 18 notes due 2040 | **500** | 500 |
| 4.39% Series 23 notes due 2041 | **300** | 300 |
| 6.59% Series 5 notes due 2043 | **315** | 315 |
| 4.59% Series 29 notes due 2043 | **435** | – |
| 5.00% Series 11 notes due 2046 | **325** | 325 |
| 4.00% Series 24 notes due 2051 | **225** | 225 |
| 3.79% Series 26 notes due 2062 | **310** | 310 |
| | **9,045** | 8,460 |
| Add: Unrealized marked-to-market loss[1] | **12** | 19 |
| Less: Long-term debt payable within one year | **(756)** | (600) |
| Long-term debt | **8,301** | 7,879 |

[1] The unrealized marked-to-market loss relates to $500 million of the Series 19 notes due 2014, and $250 million of the Series 21 notes due 2015. The unrealized marked-to-market loss is offset by a $12 million (2012 – $19 million) unrealized marked-to-market gain on the related fixed-to-floating interest-rate swap agreements, which are accounted for as fair value hedges. See Note 13 – Fair Value of Financial Instruments and Risk Management for details of fair value hedges.

[2] The interest rates of the floating-rate notes are referenced to the 3-month Canadian dollar bankers' acceptance rate, plus a margin.

In 2013, Hydro One issued $1,185 million (2012 – $1,085 million) of long-term debt under the MTN Program, and repaid the $600 million MTN Series 15 notes (2012 – redeemed $600 million MTN Series 3 notes).

The long-term debt is unsecured and denominated in Canadian dollars. The long-term debt is summarized by the number of years to maturity in Note 13 – Fair Value of Financial Instruments and Risk Management.

## 13. FAIR VALUE OF FINANCIAL INSTRUMENTS AND RISK MANAGEMENT

Fair value is considered to be the exchange price in an orderly transaction between market participants to sell an asset or transfer a liability at the measurement date. The fair value definition focuses on an exit price, which is the price that would be received in the sale of an asset or the amount that would be paid to transfer a liability.

Hydro One classifies its fair value measurements based on the following hierarchy, as prescribed by the accounting guidance for fair value, which prioritizes the inputs to valuation techniques used to measure fair value into three levels:

Level 1 inputs are unadjusted quoted prices in active markets for identical assets or liabilities that Hydro One has the ability to access. An active market for the asset or liability is one in which transactions for the asset or liability occur with sufficient frequency and volume to provide ongoing pricing information.

Level 2 inputs are those other than quoted market prices that are observable, either directly or indirectly, for an asset or liability. Level 2 inputs include, but are not limited to, quoted prices for similar assets or liabilities in an active market, quoted prices for identical or similar assets or liabilities in markets that are not active and inputs other than quoted market prices that are observable for the asset or liability, such as interest rate curves and yield curves observable at commonly quoted intervals, volatilities, credit risk and default rates. A Level 2 measurement cannot have more than an insignificant portion of the valuation based on unobservable inputs.

Level 3 inputs are any fair value measurements that include unobservable inputs for the asset or liability for more than an insignificant portion of the valuation. A Level 3 measurement may be based primarily on Level 2 inputs.

### Non-Derivative Financial Assets and Liabilities

At December 31, 2013 and 2012, the Company's carrying amounts of accounts receivable, due from related parties, cash and cash equivalents, bank indebtedness, accounts payable, and due to related parties are representative of fair value because of the short-term nature of these instruments.

### Fair Value Measurements of Long-Term Debt

The fair values and carrying values of the Company's long-term debt at December 31, 2013 and 2012 are as follows:

| *December 31 (millions of Canadian dollars)* | **2013 Carrying Value** | **2013 Fair Value** | 2012 Carrying Value | 2012 Fair Value |
|---|---|---|---|---|
| Long-term debt | | | | |
| $500 million of MTN Series 19 notes[1] | **506** | **506** | 512 | 512 |
| $250 million of MTN Series 21 notes[2] | **256** | **256** | 257 | 257 |
| Other notes and debentures[3] | **8,295** | **9,018** | 7,710 | 9,188 |
| | **9,057** | **9,780** | 8,479 | 9,957 |

[1] The fair value of $500 million of the MTN Series 19 notes subject to hedging is primarily based on changes in the present value of future cash flows due to a change in the yield in the swap market for the related swap (hedged risk).

[2] The fair value of $250 million of the MTN Series 21 notes subject to hedging is primarily based on changes in the present value of future cash flows due to a change in the yield in the swap market for the related swap (hedged risk).

[3] The fair value of other notes and debentures, and the portions of the MTN Series 19 notes and the MTN Series 21 notes that are not subject to hedging, represents the market value of the notes and debentures and is based on unadjusted period-end market prices for the same or similar debt of the same remaining maturities.

### Fair Value Measurements of Derivative Instruments

At December 31, 2013, the Company had interest-rate swaps totaling $750 million (2012 – $750 million) that were used to convert fixed-rate debt to floating-rate debt. These swaps are classified as fair value hedges. The Company's fair value hedge exposure was equal to about 8% (2012 – 9%) of its total long-term debt of $9,057 million (2012 – $8,479 million). At December 31, 2013, the Company had the following interest-rate swaps designated as fair value hedges:

(a) two $250 million fixed-to-floating interest-rate swap agreements to convert $500 million of the $750 million MTN Series 19 notes maturing November 19, 2014 into three-month variable rate debt; and

(b) two $125 million fixed-to-floating interest-rate swap agreements to convert $250 million of the $500 million MTN Series 21 notes maturing September 11, 2015 into three-month variable rate debt.

At December 31, 2013, the Company also had interest-rate swaps with a total notional value of $900 million (2012 – $900 million) classified as undesignated contracts. The undesignated contracts consist of the following interest-rate swaps:

(c) three $250 million floating-to-fixed interest-rate swap agreements that lock in the floating rate the Company pays on a portion of the above fixed-to-floating interest-rate swaps from December 11, 2013 to December 11, 2014, from February 19, 2013 to February 19, 2014, and from February 19, 2014 to November 19, 2014;

(d) two $50 million floating-to-fixed interest-rate swap agreements that lock in the floating rate the Company pays on the $50 million floating-rate MTN Series 22 notes from January 24, 2013 to January 24, 2014, and from January 24, 2014 to January 24, 2015; and

(e) a $50 million floating-to-fixed interest-rate swap agreement that locks in the floating rate the Company pays on the $50 million floating-rate MTN Series 27 notes from December 3, 2013 to December 3, 2014.

### Fair Value Hierarchy

The fair value hierarchy of financial assets and liabilities at December 31, 2013 and 2012 is as follows:

| *December 31, 2013 (millions of Canadian dollars)* | **Carrying Value** | **Fair Value** | **Level 1** | **Level 2** | **Level 3** |
|---|---|---|---|---|---|
| **Assets:** | | | | | |
| Cash and cash equivalents | **565** | **565** | **565** | **–** | **–** |
| Investment | **251** | **251** | **–** | **251** | **–** |
| Derivative instruments | | | | | |
| Fair value hedges – interest-rate swaps | **12** | **12** | **–** | **12** | **–** |
| | **828** | **828** | **565** | **263** | **–** |
| **Liabilities:** | | | | | |
| Bank indebtedness | **31** | **31** | **31** | **–** | **–** |
| Long-term debt | **9,057** | **9,780** | **–** | **9,780** | **–** |
| | **9,088** | **9,811** | **31** | **9,780** | **–** |

| *December 31, 2012 (millions of Canadian dollars)* | Carrying Value | Fair Value | Level 1 | Level 2 | Level 3 |
|---|---|---|---|---|---|
| **Assets:** | | | | | |
| Cash and cash equivalents | 195 | 195 | 195 | – | – |
| Investment | 251 | 251 | – | 251 | – |
| Derivative instruments | | | | | |
| Fair value hedges – interest-rate swaps | 19 | 19 | – | 19 | – |
| | 465 | 465 | 195 | 270 | – |
| **Liabilities:** | | | | | |
| Bank indebtedness | 42 | 42 | 42 | – | – |
| Long-term debt | 8,479 | 9,957 | – | 9,957 | – |
| | 8,521 | 9,999 | 42 | 9,957 | – |

Cash and cash equivalents include cash and short-term investments. At December 31, 2013, short-term investments consisted of bankers' acceptances and money market funds totaling $515 million (2012 – $195 million). The carrying values are representative of fair value because of the short-term nature of these instruments.

The investment represents the Province of Ontario Floating-Rate Notes maturing in November 2014. The fair value of the investment is determined using inputs other than quoted prices that are observable for the asset, with unrecognized gains or losses recognized in financing charges. The Company obtains quotes from an independent third party for the fair value of the investment, who uses the market price of similar securities adjusted for changes in observable inputs such as maturity dates and interest rates.

The fair value of the derivative instruments is determined using inputs other than quoted prices that are observable for these assets. The fair value is primarily based on the present value of future cash flows using a swap yield curve to determine the assumptions for interest rates.

The fair value of the hedged portion of the long-term debt is primarily based on the present value of future cash flows using a swap yield curve to determine the assumption for interest rates. The fair value of the unhedged portion of the long-term debt is based on unadjusted period-end market prices for the same or similar debt of the same remaining maturities.

There were no significant transfers between any of the fair value levels during the years ended December 31, 2013 and 2012.

## Risk Management

Exposure to market risk, credit risk and liquidity risk arises in the normal course of the Company's business.

### *Market Risk*

Market risk refers primarily to the risk of loss that results from changes in commodity prices, foreign exchange rates and interest rates. The Company does not have commodity risk. The Company does have foreign exchange risk as it enters into agreements to purchase materials and equipment associated with capital programs and projects that are settled in foreign currencies. This foreign exchange risk is not material, although the Company could in the future decide to issue foreign currency-denominated debt which would be hedged back to Canadian dollars consistent with its risk management policy. Hydro One is exposed to fluctuations in interest rates as the regulated rate of return for the Company's Transmission and Distribution Businesses is derived using a formulaic approach that is based on the forecast for long-term Government of Canada bond yields and the spread in 30-year "A"-rated Canadian utility bonds over the 30-year benchmark Government of Canada bond yield. The Company estimates that a 1% decrease in the forecasted long-term Government of Canada bond yield or the "A"-rated Canadian utility spread used in determining the Company's rate of return would reduce the Transmission Business' annual results of operations by approximately $19 million (2012 – $18 million) and Hydro One Networks' distribution business' annual results of operations by approximately $10 million (2012 – $10 million).

The Company uses a combination of fixed and variable-rate debt to manage the mix of its debt portfolio. The Company also uses derivative financial instruments to manage interest-rate risk. The Company utilizes interest-rate swaps, which are typically designated as fair value hedges, as a means to manage its interest rate exposure to achieve a lower cost of debt. In addition, the Company may utilize interest-rate derivative instruments to lock in interest rate levels in anticipation of future financing. Hydro One may also enter into derivative agreements such as forward-starting pay fixed-interest-rate swap agreements to hedge against the effect of future interest rate movements on long-term fixed-rate borrowing requirements. Such arrangements are typically designated as cash flow hedges. No cash flow hedge agreements were in existence as at December 31, 2013 or 2012.

A hypothetical 10% increase in the interest rates associated with variable-rate debt would not have resulted in a significant decrease in Hydro One's results of operations for the years ended December 31, 2013 or 2012.

*Fair Value Hedges*

For derivative instruments that are designated and qualify as fair value hedges, the gain or loss on the derivative as well as the offsetting loss or gain on the hedged item attributable to the hedged risk are recognized in the Consolidated Statements of Operations and Comprehensive Income. The net unrealized loss (gain) on the hedged debt and the related interest-rate swaps for the years ended December 31, 2013 and 2012 are included in financing charges as follows:

| *Year ended December 31 (millions of Canadian dollars)* | **2013** | 2012 |
|---|---|---|
| Unrealized loss (gain) on hedged debt | **(8)** | (14) |
| Unrealized loss (gain) on fair value interest-rate swaps | **8** | 14 |
| Net unrealized loss (gain) | **–** | – |

At December 31, 2013, Hydro One had $750 million (2012 – $750 million) of notional amounts of fair value hedges outstanding related to interest-rate swaps, with assets at fair value of $12 million (2012 – $19 million). During the years ended December 31, 2013 and 2012, there was no significant impact on the results of operations as a result of any ineffectiveness attributable to fair value hedges.

***Credit Risk***

Financial assets create a risk that a counterparty will fail to discharge an obligation, causing a financial loss. At December 31, 2013 and 2012, there were no significant concentrations of credit risk with respect to any class of financial assets. The Company's revenue is earned from a broad base of customers. As a result, Hydro One did not earn a significant amount of revenue from any single customer. At December 31, 2013 and 2012, there was no significant accounts receivable balance due from any single customer.

At December 31, 2013, the Company's provision for bad debts was $36 million (2012 – $23 million). Adjustments and write-offs were determined on the basis of a review of overdue accounts, taking into consideration historical experience. At December 31, 2013, approximately 4% of the Company's net accounts receivable were aged more than 60 days (2012 – 3%).

Hydro One manages its counterparty credit risk through various techniques including: entering into transactions with highly-rated counterparties; limiting total exposure levels with individual counterparties consistent with the Company's Board-approved Credit Risk Policy; entering into master agreements which enable net settlement and the contractual right of offset; and monitoring the financial condition of counterparties. In addition to payment netting language in master agreements, the Company establishes credit limits, margining thresholds and collateral requirements for each counterparty. Counterparty credit limits are based on an internal credit review that considers a variety of factors, including the results of a scoring model, leverage, liquidity, profitability, credit ratings and risk management capabilities. The determination of credit exposure for a particular counterparty is the sum of current exposure plus the potential future exposure with that counterparty. The current exposure is calculated as the sum of the principal value of money market exposures and the market value of all contracts that have a positive marked-to-market position on the measurement date. The Company would offset the positive market values against negative values with the same counterparty only where permitted by the existence of a legal netting agreement such as an International Swap Dealers Association master agreement. The potential future exposure represents a safety margin to protect against future fluctuations of interest rates, currencies, equities, and commodities. It is calculated based on factors developed by the Bank of International Settlements, following extensive historical analysis of random fluctuations of interest rates and currencies. To the extent that a counterparty's margining thresholds are exceeded, the counterparty is required to post collateral with the Company as specified in each agreement. The Company monitors current and forward credit exposure to counterparties both on an individual and an aggregate basis. The Company's credit risk for accounts receivable is limited to the carrying amounts on the Consolidated Balance Sheets.

Derivative financial instruments result in exposure to credit risk since there is a risk of counterparty default. The credit exposure of derivative contracts, before collateral, is represented by the fair value of contracts at the reporting date. At December 31, 2013, the counterparty credit risk exposure on the fair value of these interest-rate swap contracts was $14 million (2012 – $22 million). At December 31, 2013, Hydro One's credit exposure for all derivative instruments, and applicable payables and receivables, had a credit rating of investment grade, with four financial institutions as the counterparties. The credit exposure of three of the four counterparties accounted for more than 10% of the total credit exposure of derivative contracts.

***Liquidity Risk***

Liquidity risk refers to the Company's ability to meet its financial obligations as they come due. Hydro One meets its short-term liquidity requirements using cash and cash equivalents on hand, funds from operations, the issuance of commercial paper, the revolving standby credit facility of $1,500 million, and by holding Province of Ontario Floating-Rate Notes. The short-term liquidity under the Commercial Paper Program, the holding of Province of Ontario Floating-Rate Notes and anticipated levels of funds from operations should be sufficient to fund normal operating requirements.

At December 31, 2013, accounts payable and accrued liabilities in the amount of $795 million (2012 – $722 million) were expected to be settled in cash at their carrying amounts within the next 12 months.

At December 31, 2013, Hydro One had issued long-term debt in the principal amount of $9,045 million (2012 – $8,460 million). Principal outstanding, interest payments and related weighted average interest rates are summarized by the number of years to maturity in the following table:

| **Years to Maturity** | **Principal Outstanding on Long-term Debt** *(millions of Canadian dollars)* | **Interest Payments** *(millions of Canadian dollars)* | **Weighted Average Interest Rate** *(%)* |
|---|---|---|---|
| 1 year | 750 | 422 | 3.1 |
| 2 years | 550 | 398 | 2.8 |
| 3 years | 500 | 372 | 4.3 |
| 4 years | 600 | 361 | 5.2 |
| 5 years | 750 | 330 | 2.8 |
| | 3,150 | 1,883 | 3.6 |
| 6 – 10 years | 900 | 1,470 | 3.6 |
| Over 10 years | 4,995 | 4,281 | 5.5 |
| | 9,045 | 7,634 | 4.7 |

## 14. CAPITAL MANAGEMENT

The Company's objectives with respect to its capital structure are to maintain effective access to capital on a long-term basis at reasonable rates, and to deliver appropriate financial returns. In order to ensure ongoing effective access to capital, the Company targets to maintain an "A" category long-term credit rating.

The Company considers its capital structure to consist of shareholder's equity, preferred shares, long-term debt, and cash and cash equivalents. At December 31, 2013 and 2012, the Company's capital structure was as follows:

| *December 31 (millions of Canadian dollars)* | **2013** | 2012 |
|---|---|---|
| Long-term debt payable within one year | **756** | 600 |
| Less: cash and cash equivalents | **565** | 195 |
| | **191** | 405 |
| Long-term debt | **8,301** | 7,879 |
| Preferred shares | **323** | 323 |
| Common shares | **3,314** | 3,314 |
| Retained earnings | **3,787** | 3,202 |
| | **7,101** | 6,516 |
| **Total capital** | **15,916** | 15,123 |

The Company has customary covenants typically associated with long-term debt. Among other things, Hydro One's long-term debt and credit facility covenants limit the permissible debt to 75% of the Company's total capitalization, limit the ability to sell assets and impose a negative pledge provision, subject to customary exceptions. At December 31, 2013 and 2012, Hydro One was in compliance with all of these covenants and limitations.

## 15. PENSION AND POST-RETIREMENT AND POST-EMPLOYMENT BENEFITS

Hydro One has a defined benefit pension plan, a supplementary pension plan, and post-retirement and post-employment benefit plans. The defined benefit pension plan (Pension Plan) is contributory and covers all regular employees of Hydro One and its subsidiaries, except Hydro One Brampton Networks. Employees of Hydro One Brampton Networks participate in the OMERS plan, a multiemployer public sector pension fund. The supplementary pension plan provides members of the Pension Plan with benefits that would have been earned and payable under the Pension Plan but for the limitations imposed by the *Income Tax Act* (Canada). The supplementary pension plan obligation is included with other post-retirement and post-employment benefit obligations on the Consolidated Balance Sheets.

### The OMERS Plan

Hydro One contributions to the OMERS plan for the year ended December 31, 2013 were $2 million (2012 – $2 million). Company contributions payable at December 31, 2013 and included in accrued liabilities on the Consolidated Balance Sheets were $0.2 million (2012 – $0.2 million). Hydro One contributions do not represent more than 5% of total contributions to the OMERS plan, as indicated in OMERS's most recently available annual report for the year ended December 31, 2012.

At December 31, 2012, the OMERS plan was 85.6% funded, with an unfunded liability of $9,924 million. This unfunded liability will likely result in future payments by participating employers and members. Hydro One future contributions could be increased substantially if other entities withdraw from the plan.

### Pension Plan, Post-Retirement and Post-Employment Plans

The Pension Plan provides benefits based on highest three-year average pensionable earnings. For new management employees who commenced employment on or after January 1, 2004, and for new Society of Energy Professionals-represented staff hired after November 17, 2005, benefits are based on highest five-year average pensionable earnings. After retirement, pensions are indexed to inflation.

Company and employee contributions to the Pension Plan are based on actuarial valuations performed at least every three years. Annual Pension Plan contributions for 2013 of $160 million (2012 – $163 million) were based on an actuarial valuation effective December 31, 2011 and the level of 2013 pensionable earnings. Estimated annual Pension Plan contributions for 2014 are approximately $160 million, based on the December 31, 2011 valuation and the projected level of pensionable earnings.

Hydro One recognizes the overfunded or underfunded status of the Pension Plan, and post-retirement and post-employment benefit plans (Plans) as an asset or liability on its Consolidated Balance Sheets, with offsetting regulatory assets and liabilities as appropriate. The underfunded benefit obligations for the Plans, in the absence of regulatory accounting, would be recognized in AOCI. The impact of changes in assumptions used to measure pension, post-retirement and post-employment benefit obligations is generally recognized over the expected average remaining service period of the employees. The measurement date for the Plans is December 31.

| | Pension Benefits | | Post-Retirement and Post-Employment Benefits | |
|---|---|---|---|---|
| *Year ended December 31 (millions of Canadian dollars)* | **2013** | 2012 | **2013** | 2012 |
| **Change in projected benefit obligation** | | | | |
| Projected benefit obligation, beginning of year | **6,507** | 5,461 | **1,459** | 1,206 |
| Current service cost | **170** | 123 | **40** | 29 |
| Interest cost | **278** | 285 | **63** | 63 |
| Reciprocal transfers | **1** | 1 | **–** | – |
| Benefits paid | **(317)** | (291) | **(44)** | (42) |
| Net actuarial loss (gain) | **(63)** | 928 | **13** | 203 |
| Projected benefit obligation, end of year | **6,576** | 6,507 | **1,531** | 1,459 |
| **Change in plan assets** | | | | |
| Fair value of plan assets, beginning of year | **4,992** | 4,682 | **–** | – |
| Actual return on plan assets | **887** | 425 | **–** | – |
| Reciprocal transfers | **1** | 1 | **–** | – |
| Benefits paid | **(317)** | (291) | **–** | – |
| Employer contributions | **160** | 163 | **–** | – |
| Employee contributions | **30** | 27 | **–** | – |
| Administrative expenses | **(22)** | (15) | **–** | – |
| Fair value of plan assets, end of year | **5,731** | 4,992 | **–** | – |
| Unfunded status | **845** | 1,515 | **1,531** | 1,459 |

Hydro One presents its benefit obligations and plan assets net on its Consolidated Balance Sheets within the following line items:

| | Pension Benefits | | Post-Retirement and Post-Employment Benefits | |
|---|---|---|---|---|
| *December 31 (millions of Canadian dollars)* | **2013** | 2012 | **2013** | 2012 |
| Accrued liabilities | **–** | – | **43** | 43 |
| Pension benefit liability | **845** | 1,515 | **–** | – |
| Post-retirement and post-employment benefit liability | **–** | – | **1,488** | 1,416 |
| Unfunded status | **845** | 1,515 | **1,531** | 1,459 |

The funded or unfunded status of the pension, post-retirement and post-employment benefit plans refers to the difference between the fair value of plan assets and the projected benefit obligations for the Plans. The funded/unfunded status changes over time due to several factors, including contribution levels, assumed discount rates and actual returns on plan assets.

The following table provides the projected benefit obligation (PBO), accumulated benefit obligation (ABO) and fair value of plan assets for the Pension Plan:

| *December 31 (millions of Canadian dollars)* | **2013** | 2012 |
|---|---|---|
| PBO | **6,576** | 6,507 |
| ABO | **5,998** | 6,074 |
| Fair value of plan assets | **5,731** | 4,992 |

On an ABO basis, the Pension Plan was funded at 96% at December 31, 2013 (2012 – 82%). On a PBO basis, the Pension Plan was funded at 87% at December 31, 2013 (2012 – 77%). The ABO differs from the PBO in that the ABO includes no assumption about future compensation levels.

### Components of Net Periodic Benefit Costs

The following table provides the components of the net periodic benefit costs for the years ended December 31, 2013 and 2012 for the Pension Plan:

| *Year ended December 31 (millions of Canadian dollars)* | **2013** | 2012 |
|---|---|---|
| Current service cost, net of employee contributions | **141** | 96 |
| Interest cost | **278** | 285 |
| Expected return on plan assets, net of expenses | **(309)** | (289) |
| Actuarial loss amortization | **175** | 112 |
| Prior service cost amortization | **2** | 3 |
| Net periodic benefit costs | **287** | 207 |
| | | |
| Charged to results of operations[1] | **72** | 76 |

[1] The Company follows the cash basis of accounting consistent with the inclusion of pension costs in OEB-approved rates. During the year ended December 31, 2013, pension costs of $160 million (2012 – $163 million) were attributed to labour, of which $72 million (2012 – $76 million) was charged to operations, and $88 million (2012 – $87 million) was capitalized as part of the cost of property, plant and equipment and intangible assets.

The following table provides the components of the net periodic benefit costs for the years ended December 31, 2013 and 2012 for the post-retirement and post-employment plans:

| *Year ended December 31 (millions of Canadian dollars)* | **2013** | 2012 |
|---|---|---|
| Current service cost, net of employee contributions | **40** | 30 |
| Interest cost | **63** | 63 |
| Actuarial loss amortization | **27** | 8 |
| Prior service cost amortization | **3** | 3 |
| Net periodic benefit costs | **133** | 104 |
| Charged to results of operations | **58** | 48 |

### Assumptions

The measurement of the obligations of the Plans and the costs of providing benefits under the Plans involves various factors, including the development of valuation assumptions and accounting policy elections. When developing the required assumptions, the Company considers historical information as well as future expectations. The measurement of benefit obligations and costs is impacted by several assumptions including the discount rate applied to benefit obligations, the long-term expected rate of return on plan assets, Hydro One's expected level of contributions to the Plans, the incidence of mortality, the expected remaining service period of plan participants, the level of compensation and rate of compensation increases, employee age, length of service, and the anticipated rate of increase of health care costs, among other factors. The impact of changes in assumptions used to measure the obligations of the Plans is generally recognized over the expected average remaining service period of the plan participants. In selecting the expected rate of return on plan assets, Hydro One considers historical economic indicators (including inflation and GDP growth) that impact asset returns, as well as expectations regarding future long-term capital market performance, weighted by target asset class allocations. In general, equity securities, real estate and private equity investments are forecasted to have higher returns than fixed income securities.

The following weighted average assumptions were used to determine the benefit obligations at December 31, 2013 and 2012:

| | Pension Benefits | | Post-Retirement and Post-Employment Benefits | |
|---|---|---|---|---|
| *Year ended December 31* | **2013** | 2012 | **2013** | 2012 |
| **Significant assumptions:** | | | | |
| Weighted average discount rate | **4.75%** | 4.25% | **4.75%** | 4.25% |
| Rate of compensation scale escalation (without merit) | **2.50%** | 2.50% | **2.50%** | 2.50% |
| Rate of cost of living increase | **2.00%** | 2.00% | **2.00%** | 2.00% |
| Rate of increase in health care cost trends[1] | **–** | – | **4.39%** | 4.39% |

[1] 6.81% per annum in 2014, grading down to 4.39% per annum in and after 2031 (2012 – 6.91% in 2013, grading down to 4.39% per annum in and after 2031)

The following weighted average assumptions were used to determine the net periodic benefit costs for the years ended December 31, 2013 and 2012. Assumptions used to determine current year-end benefit obligations are the assumptions used to estimate the subsequent year's net periodic benefit costs.

| *Year ended December 31* | **2013** | 2012 |
|---|---|---|
| **Pension Benefits:** | | |
| Weighted average expected rate of return on plan assets | **6.25%** | 6.25% |
| Weighted average discount rate | **4.25%** | 5.25% |
| Rate of compensation scale escalation (without merit) | **2.50%** | 2.50% |
| Rate of cost of living increase | **2.00%** | 2.00% |
| Average remaining service life of employees *(years)* | **11** | 11 |
| **Post-Retirement and Post-Employment Benefits:** | | |
| Weighted average discount rate | **4.25%** | 5.25% |
| Rate of compensation scale escalation (without merit) | **2.50%** | 2.50% |
| Rate of cost of living increase | **2.00%** | 2.00% |
| Average remaining service life of employees *(years)* | **11** | 11 |
| Rate of increase in health care cost trends[1] | **4.39%** | 4.41% |

[1] 6.91% per annum in 2013, grading down to 4.39% per annum in and after 2031 (2012 – 7.03% in 2012, grading down to 4.41% per annum in and after 2031)

The discount rate used to determine the current year pension obligation and the subsequent year's net periodic benefit costs is based on a yield curve approach. Under the yield curve approach, expected future benefit payments for each plan are discounted by a rate on a third party bond yield curve corresponding to each duration. The yield curve is based on AA long-term corporate bonds. A single discount rate is calculated that would yield the same present value as the sum of the discounted cash flows.

The effect of 1% change in health care cost trends on the projected benefit obligation for the post-retirement and post-employment benefits at December 31, 2013 and 2012 is as follows:

| *December 31 (millions of Canadian dollars)* | **2013** | 2012 |
|---|---|---|
| **Projected benefit obligation:** | | |
| Effect of 1% increase in health care cost trends | **258** | 246 |
| Effect of 1% decrease in health care cost trends | **(200)** | (191) |

The effect of 1% change in health care cost trends on the service cost and interest cost for the post-retirement and post-employment benefits for the years ended December 31, 2013 and 2012 is as follows:

| *Year ended December 31 (millions of Canadian dollars)* | **2013** | 2012 |
|---|---|---|
| **Service cost and interest cost:** | | |
| Effect of 1% increase in health care cost trends | **21** | 17 |
| Effect of 1% decrease in health care cost trends | **(16)** | (13) |

The following approximate life expectancies were used in the mortality assumptions to determine the projected benefit obligations for the pension and post-retirement and post-employment plans at December 31, 2013 and 2012:

| **December 31, 2013** | | | | December 31, 2012 | | | |
|---|---|---|---|---|---|---|---|
| **Life expectancy at 65 for a member currently at** | | | | Life expectancy at 65 for a member currently at | | | |
| **Age 65** | | **Age 45** | | Age 65 | | Age 45 | |
| **Male** | **Female** | **Male** | **Female** | Male | Female | Male | Female |
| **23** | **25** | **24** | **26** | 20 | 22 | 21 | 23 |

### Estimated Future Benefit Payments

At December 31, 2013, estimated future benefit payments by the Company to Plan participants were:

| *(millions of Canadian dollars)* | Pension Benefits | Post-Retirement and Post-Employment Benefits |
|---|---|---|
| 2014 | 310 | 54 |
| 2015 | 319 | 57 |
| 2016 | 327 | 59 |
| 2017 | 335 | 62 |
| 2018 | 343 | 65 |
| 2019 through to 2023 | 1,698 | 370 |
| Total estimated future benefit payments through to 2023 | 3,332 | 667 |

### Components of Regulatory Assets

A portion of actuarial gains and losses and prior service costs is recorded within regulatory assets on Hydro One's Consolidated Balance Sheets to reflect the expected regulatory inclusion of these amounts in future rates, which would otherwise be recorded in OCI. The following table provides the actuarial gains and losses and prior service costs recorded within regulatory assets:

| *Year ended December 31 (millions of Canadian dollars)* | **2013** | 2012 |
|---|---|---|
| **Pension Benefits:** | | |
| Actuarial loss (gain) for the year | **(619)** | 807 |
| Actuarial loss amortization | **(175)** | (112) |
| Prior service cost amortization | **(2)** | (3) |
| | **(796)** | 692 |
| **Post-Retirement and Post-Employment Benefits:** | | |
| Actuarial loss for the year | **13** | 203 |
| Actuarial loss amortization | **(27)** | (8) |
| Prior service cost amortization | **(3)** | (3) |
| | **(17)** | 192 |

The following table provides the components of regulatory assets that have not been recognized as components of net periodic benefit costs for the years ended December 31, 2013 and 2012:

| *Year ended December 31 (millions of Canadian dollars)* | **2013** | 2012 |
|---|---|---|
| **Pension Benefits:** | | |
| Prior service cost | **3** | 5 |
| Actuarial loss | **842** | 1,510 |
| | **845** | 1,515 |
| | | |
| **Post-Retirement and Post-Employment Benefits:** | | |
| Prior service cost | **2** | 5 |
| Actuarial loss | **306** | 315 |
| | **308** | 320 |

The following table provides the components of regulatory assets at December 31 that are expected to be amortized as components of net periodic benefit costs in the following year:

| | Pension Benefits | | Post-Retirement and Post-Employment Benefits | |
|---|---|---|---|---|
| *December 31 (millions of Canadian dollars)* | **2013** | 2012 | **2013** | 2012 |
| Prior service cost | **2** | 2 | **2** | 3 |
| Actuarial loss | **103** | 175 | **15** | 17 |
| | **105** | 177 | **17** | 20 |

## Pension Plan Assets

### *Investment Strategy*

On a regular basis, Hydro One evaluates its investment strategy to ensure that plan assets will be sufficient to pay Pension Plan benefits when due. As part of this ongoing evaluation, Hydro One may make changes to its targeted asset allocation and investment strategy. The Pension Plan is managed at a net asset level. The main objective of the Pension Plan is to sustain a certain level of net assets in order to meet the pension obligations of the Company. The Pension Plan fulfills its primary objective by adhering to specific investment policies outlined in its Summary of Investment Policies and Procedures (SIPP), which is reviewed and approved by the Investment-Pension Committee of Hydro One's Board of Directors. The Company manages net assets by engaging knowledgeable external investment managers who are charged with the responsibility of investing existing funds and new funds (current year's employee and employer contributions) in accordance with the approved SIPP. The performance of the managers is monitored through a governance structure. Increases in net assets are a direct result of investment income generated by investments held by the Pension Plan and contributions to the Pension Plan by eligible employees and by the Company. The main use of net assets is for benefit payments to eligible Pension Plan members.

### *Pension Plan Asset Mix*

At December 31, 2013, the Pension Plan target asset allocations and weighted average asset allocations were as follows:

| | Target Allocation (%) | Pension Plan Assets (%) |
|---|---|---|
| Equity securities | 60.0 | 67.8 |
| Debt securities | 35.0 | 32.2 |
| Other [1] | 5.0 | 0.0 |
| | 100.0 | 100.0 |

[1] Other investments include real estate and infrastructure investments.

At December 31, 2013, the Pension Plan held $15 million of Hydro One corporate bonds (2012 – $20 million) and $217 million of debt securities of the Province (2012 – $243 million).

***Concentrations of Credit Risk***

Hydro One evaluated its Pension Plan's asset portfolio for the existence of significant concentrations of credit risk as at December 31, 2013 and 2012. Concentrations that were evaluated include, but are not limited to, investment concentrations in a single entity, concentrations in a type of industry, and concentrations in individual funds. At December 31, 2013 and 2012, there were no significant concentrations (defined as greater than 10% of plan assets) of risk in the Pension Plan's assets.

The Pension Plan manages its counterparty credit risk with respect to bonds by investing in investment-grade and government bonds and with respect to derivative instruments by transacting only with financial institutions rated at least "A+" by Standard and Poor's, Dominion Bond Rating Service, and Fitch Ratings, and "A1" by Moody's Investors Service Inc., and also by utilizing exposure limits to each counterparty and ensuring that exposure is diversified across counterparties. The risk of default on transactions in listed securities is considered minimal, as the trade will fail if either party to the transaction does not meet its obligation.

***Fair Value Measurements***

The following tables present the Pension Plan assets measured and recorded at fair value on a recurring basis and their level within the fair value hierarchy at December 31, 2013 and 2012:

| *December 31, 2013 (millions of Canadian dollars)* | **Level 1** | **Level 2** | **Level 3** | **Total** |
|---|---|---|---|---|
| Pooled funds | **1** | **16** | **117** | **134** |
| Cash and cash equivalents | **150** | **–** | **–** | **150** |
| Short-term securities | **–** | **180** | **–** | **180** |
| Real estate | **–** | **–** | **2** | **2** |
| Corporate shares – Canadian | **943** | **–** | **–** | **943** |
| Corporate shares – Foreign | **2,708** | **–** | **–** | **2,708** |
| Bonds and debentures – Canadian | **–** | **1,416** | **–** | **1,416** |
| Bonds and debentures – Foreign | **–** | **186** | **–** | **186** |
| Total fair value of plan assets[1] | **3,802** | **1,798** | **119** | **5,719** |

[1] At December 31, 2013, the total fair value of Pension Plan assets excludes $19 million of interest and dividends receivable, and $7 million relating to accruals for pension administration expense.

| *December 31, 2012 (millions of Canadian dollars)* | Level 1 | Level 2 | Level 3 | Total |
|---|---|---|---|---|
| Pooled funds | 2 | 15 | 104 | 121 |
| Cash and cash equivalents | 125 | – | – | 125 |
| Short-term securities | – | 100 | – | 100 |
| Real estate | – | – | 2 | 2 |
| Corporate shares – Canadian | 920 | – | – | 920 |
| Corporate shares – Foreign | 2,077 | – | – | 2,077 |
| Bonds and debentures – Canadian | – | 1,643 | – | 1,643 |
| Total fair value of plan assets[1] | 3,124 | 1,758 | 106 | 4,988 |

[1] At December 31, 2012, the total fair value of Pension Plan assets excludes $16 million of interest and dividends receivable, $4 million relating to accruals for pending sales transactions, and $8 million relating to accruals for pension administration expense.

See Note 13 – Fair Value of Financial Instruments and Risk Management for a description of levels within the fair value hierarchy.

***Changes in the Fair Value of Financial Instruments Classified in Level 3***

The following table summarizes the changes in fair value of financial instruments classified in Level 3 for the years ended December 31, 2013 and 2012. The Pension Plan classifies financial instruments as Level 3 when the fair value is measured based on at least one significant input that is not observable in the markets or due to lack of liquidity in certain markets. The gains and losses presented in the table below may include changes in fair value based on both observable and unobservable inputs.

| *Year ended December 31 (millions of Canadian dollars)* | **2013** | 2012 |
|---|---|---|
| Fair value, beginning of year | **106** | 167 |
| Realized and unrealized gains | **23** | 5 |
| Purchases | **–** | 6 |
| Sales and disbursements | **(10)** | (72) |
| Fair value, end of year | **119** | 106 |

There have been no material transfers into or out of Level 3 of the fair value hierarchy.

The Company performs sensitivity analysis for fair value measurements classified in Level 3, substituting the unobservable inputs with one or more reasonably possible alternative assumptions. These sensitivity analyses resulted in negligible changes in the fair value of financial instruments classified in this level.

***Valuation Techniques Used to Determine Fair Value***

*Pooled Funds*

The pooled fund category mainly consists of private equity investments. Private equity investments represent private equity funds that invest in operating companies that are not publicly traded on a stock exchange. Investment strategies in private equity include limited partnerships in businesses that are characterized by high internal growth and operational efficiencies, venture capital, leveraged buyouts and special situations such as distressed investments. Private equity valuations are reported by the fund manager and are based on the valuation of the underlying investments which includes inputs such as cost, operating results, discounted future cash flows and market-based comparable data. Since these valuation inputs are not highly observable, private equity investments have been categorized as Level 3 within pooled funds.

*Cash Equivalents*

Demand cash deposits held with banks and cash held by the investment managers are considered cash equivalents and are included in the fair value measurements hierarchy as Level 1.

*Short-Term Securities*

Short-term securities are valued at cost plus accrued interest, which approximates fair value due to their short-term nature. Short-term securities have been categorized as Level 2.

*Real Estate*

Real estate investments represent private equity investments in holding companies that invest in real estate properties. The investments in the holding companies are valued using net asset values reported by the fund manager. Real estate investments are categorized as Level 3.

*Corporate Shares*

Corporate shares are valued based on quoted prices in active markets and are categorized as Level 1. Investments denominated in foreign currencies are translated into Canadian currency at year-end rates of exchange.

*Bonds and Debentures*

Bonds and debentures are presented at published closing trade quotations, and are categorized as Level 2.

## 16. ENVIRONMENTAL LIABILITIES

The following tables show the movements in environmental liabilities for the years ended December 31, 2013 and 2012:

| *Year ended December 31, 2013 (millions of Canadian dollars)* | **PCB** | **LAR** | **Total** |
|---|---|---|---|
| Environmental liabilities, January 1 | **197** | **52** | **249** |
| Interest accretion | **9** | **1** | **1** |
| Expenditures | **(2)** | **(14)** | **(16)** |
| Revaluation adjustment | **(3)** | **26** | **23** |
| Environmental liabilities, December 31 | **201** | **65** | **266** |
| Less: current portion | **15** | **12** | **27** |
| | **186** | **53** | **239** |

| *Year ended December 31, 2012 (millions of Canadian dollars)* | PCB | LAR | Total |
|---|---|---|---|
| Environmental liabilities, January 1 | 199 | 58 | 257 |
| Interest accretion | 9 | 2 | 11 |
| Expenditures | (8) | (10) | (18) |
| Revaluation adjustment | (3) | 2 | (1) |
| Environmental liabilities, December 31 | 197 | 52 | 249 |
| Less: current portion | 13 | 9 | 22 |
| | 184 | 43 | 227 |

The following tables show the reconciliation between the undiscounted basis of the environmental liabilities and the amount recognized on the Consolidated Balance Sheets after factoring in the discount rate:

| *December 31, 2013 (millions of Canadian dollars)* | **PCB** | **LAR** | **Total** |
|---|---|---|---|
| Undiscounted environmental liabilities | **237** | **68** | **305** |
| Less: discounting accumulated liabilities to present value | **36** | **3** | **39** |
| Discounted environmental liabilities | **201** | **65** | **266** |

| *December 31, 2012 (millions of Canadian dollars)* | PCB | LAR | Total |
|---|---|---|---|
| Undiscounted environmental liabilities | 233 | 54 | 287 |
| Less: discounting accumulated liabilities to present value | 36 | 2 | 38 |
| Discounted environmental liabilities | 197 | 52 | 249 |

At December 31, 2013, the estimated future environmental expenditures were as follows:

| *(millions of Canadian dollars)* | |
|---|---|
| 2014 | 27 |
| 2015 | 28 |
| 2016 | 35 |
| 2017 | 23 |
| 2018 | 22 |
| Thereafter | 170 |
| | 305 |

At December 31, 2013, of the total estimated future environmental expenditures, $237 million relates to PCBs (2012 – $233 million) and $68 million relates to LAR (2012 – $54 million).

Hydro One records a liability for the estimated future expenditures for the contaminated LAR and for the phase-out and destruction of PCB-contaminated mineral oil removed from electrical equipment. There are uncertainties in estimating future environmental costs due to potential external events such as changes in legislation or regulations, and advances in remediation technologies. In determining the amounts to be recorded as environmental liabilities, the Company estimates the current cost of completing required work and makes assumptions as to when the future expenditures will actually be incurred, in order to generate future cash flow information. A long-term inflation rate assumption of approximately 2% has been used to express these current cost estimates as estimated future expenditures. Future expenditures have been discounted using factors ranging from approximately 3.3% to 6.3%, depending on the appropriate rate for the period when expenditures are expected to be incurred. All factors used in estimating the Company's environmental liabilities represent management's best estimates of the present value of costs required to meet existing legislation or regulations. However, it is reasonably possible that numbers or volumes of contaminated assets, cost estimates to perform work, inflation assumptions and the assumed pattern of annual cash flows may differ significantly from the Company's current assumptions. In addition, with respect to the PCB environmental liability, the availability of critical resources such as skilled labour and replacement assets and the ability to take maintenance outages in critical facilities may influence the timing of expenditures. Environmental liabilities are reviewed annually or more frequently if significant changes in regulations or other relevant factors occur. Estimate changes are accounted for prospectively. The Company records a regulatory asset reflecting the expectation that future environmental costs will be recoverable in rates.

***PCBs***

In September 2008, Environment Canada published regulations governing the management, storage and disposal of PCBs, enacted under the *Canadian Environmental Protection Act, 1999*. The regulations impose timelines for disposal of PCBs based on certain criteria, including type of equipment, in-use status, and PCB-contamination thresholds. Under these regulations and Hydro One's approved end-of-use extension, PCBs in concentrations of 500 parts per million (ppm) or more have to be disposed of by the end of 2014, with the exception of specifically exempted equipment, and PCBs in concentrations greater than 50 ppm and less than 500 ppm, or greater than 50 ppm for pole-top transformers, pole-top auxiliary electrical equipment and light ballasts, must be disposed of by the end of 2025. Management judges that the Company currently has very few PCB-contaminated assets in excess of 500 ppm. Contaminated equipment will generally be replaced, or will be decontaminated by removing PCB-contaminated insulating oil and retro filling with replacement oil that contains PCBs in concentrations of less than 2 ppm.

The Company's best estimate of the total estimated future expenditures to comply with current PCB regulations is $237 million. These expenditures are expected to be incurred over the period from 2014 to 2025. As a result of its annual review of environmental liabilities, the Company recorded a revaluation adjustment in 2013 to reduce the PCB environmental liability by $3 million (2012 – $3 million).

***LAR***

The Company's best estimate of the total estimated future expenditures to complete its LAR program is $68 million. These expenditures are expected to be incurred over the period from 2014 to 2022. As a result of its annual review of environmental liabilities, the Company recorded a revaluation adjustment in 2013 to increase the LAR environmental liability by $26 million (2012 – $2 million).

## 17. ASSET RETIREMENT OBLIGATIONS

Hydro One records a liability for the estimated future expenditures for the removal and disposal of asbestos-containing materials installed in some of its facilities and for the decommissioning of specific switching stations located on unowned sites. AROs, which represent legal obligations associated with the retirement of certain tangible long-lived assets, are computed as the present value of the projected expenditures for the future retirement of specific assets and are recognized in the period in which the liability is incurred, if a reasonable estimate of fair value can be made. If the asset remains in service at the recognition date, the present value of the liability is added to the carrying amount of the associated asset in the period the liability is incurred and this additional carrying amount is depreciated over the remaining life of the asset. If an ARO is recorded in respect of an out-of-service asset, the asset retirement cost is charged to results of operations. Subsequent to the initial recognition, the liability is adjusted for any revisions to the estimated future cash flows associated with the ARO, which can occur due to a number of factors including, but not limited to, cost escalation, changes in technology applicable to the assets to be retired, changes in legislation or regulations, as well as for accretion of the liability due to the passage of time until the obligation is settled. Depreciation expense is adjusted prospectively for any increases or decreases to the carrying amount of the associated asset.

In determining the amounts to be recorded as AROs, the Company estimates the current fair value for completing required work and makes assumptions as to when the future expenditures will actually be incurred, in order to generate future cash flow information. A long-term inflation assumption of approximately 2% has been used to express these current cost estimates as estimated future expenditures. Future expenditures have been discounted using factors ranging from approximately 3.0% to 5.0%, depending on the appropriate rate for the period when expenditures are expected to be incurred. All factors used in estimating the Company's AROs represent management's best estimates of the cost required to meet existing legislation or regulations. However, it is reasonably possible that numbers or volumes of contaminated assets, cost estimates to perform work, inflation assumptions and the assumed pattern of annual cash flows may differ significantly from the Company's current assumptions. AROs are reviewed annually or more frequently if significant changes in regulations or other relevant factors occur. Estimate changes are accounted for prospectively.

At December 31, 2013, Hydro One had recorded AROs of $14 million (2012 – $15 million), consisting of $7 million (2012 – $7 million) related to the estimated future expenditures associated with the removal and disposal of asbestos-containing materials installed in some of its facilities, as well as $7 million (2012 – $8 million) related to the future decommissioning and removal of two switching stations. The amount of interest recorded is nominal and there have been no significant expenditures associated with these obligations in 2013.

## 18. SHARE CAPITAL

*Preferred Shares*

The Company has 12,920,000 issued and outstanding 5.5% cumulative preferred shares with a redemption value of $25 per share or $323 million total value. The Company is authorized to issue an unlimited number of preferred shares.

The Company's preferred shares are entitled to an annual cumulative dividend of $18 million, or $1.375 per share, which is payable on a quarterly basis. The preferred shares are not subject to mandatory redemption (except on liquidation) but are redeemable in certain circumstances. The shares are redeemable at the option of the Province at the redemption value, plus any accrued and unpaid dividends, if the Province sells a number of the common shares which it owns to the public such that the Province's holdings are reduced to less than 50% of the common shares of the Company. Hydro One may elect, without condition, to pay all or part of the redemption price by issuing additional common shares to the Province. If the Province does not exercise its redemption right, the Company would have the ability to adjust the dividend on the preferred shares to produce a yield that is 0.50% less than the then-current dividend market yield for similarly rated preferred shares. The preferred shares do not carry voting rights, except in limited circumstances, and would rank in priority over the common shares upon liquidation.

These preferred shares have conditions for their redemption that are outside the control of the Company because the Province can exercise its right to redeem in the event of change in ownership without approval of the Company's Board of Directors. Because the conditional redemption feature is outside the control of the Company, the preferred shares are classified outside of Shareholder's Equity on the Consolidated Balance Sheets. Management believes that it is not probable that the preferred shares will become redeemable. No adjustment to the carrying value of the preferred shares has been recognized at December 31, 2013. If it becomes probable in the future that the preferred shares will be redeemed, the redemption value would be adjusted.

*Common Shares*

The Company has 100,000 issued and outstanding common shares. The Company is authorized to issue an unlimited number of common shares.

Common share dividends are declared at the sole discretion of the Hydro One Board of Directors, and are recommended by management based on results of operations, maintenance of the deemed regulatory capital structure, financial conditions, cash requirements, and other relevant factors, such as industry practice and shareholder expectations.

*Earnings per Share*

Earnings per share is calculated as net income for the year, after cumulative preferred dividends, divided by the weighted average number of common shares outstanding during the year.

## 19. DIVIDENDS

In 2013, preferred share dividends in the amount of $18 million (2012 – $18 million) and common share dividends in the amount of $200 million (2012 – $352 million) were declared.

## 20. RELATED PARTY TRANSACTIONS

Hydro One is owned by the Province. The OEFC, IESO, Ontario Power Authority (OPA), Ontario Power Generation Inc. (OPG) and the OEB are related parties to Hydro One because they are controlled or significantly influenced by the Province.

Hydro One receives revenues for transmission services from the IESO, based on OEB-approved uniform transmission rates. Transmission revenues include $1,509 million (2012 – $1,474 million) related to these services. Hydro One receives amounts for rural rate protection from the IESO. Distribution revenues include $127 million (2012 – $127 million) related to this program. Hydro One also receives revenues related to the supply of electricity to remote northern communities from the IESO. Distribution revenues include $33 million (2012 – $28 million) related to these services.

In 2013, Hydro One purchased power in the amount of $2,477 million (2012 – $2,392 million) from the IESO-administered electricity market; $15 million (2012 – $10 million) from OPG; and $8 million (2012 – $7 million) from power contracts administered by the OEFC.

Under the *Ontario Energy Board Act, 1998*, the OEB is required to recover all of its annual operating costs from gas and electricity distributors and transmitters. In 2013, Hydro One incurred $12 million (2012 – $11 million) in OEB fees.

Hydro One has service level agreements with OPG. These services include field, engineering, logistics and telecommunications services. In 2013, revenues related to the provision of construction and equipment maintenance services with respect to these service level agreements were $9 million (2012 – $10 million), primarily for the Transmission Business. Operation, maintenance and administration costs related to the purchase of services with respect to these service level agreements were $1 million in 2013 (2012 – $2 million).

The OPA funds substantially all of the Company's conservation and demand management programs. The funding includes program costs, incentives, and management fees. In 2013, Hydro One received $34 million (2012 – $39 million) from the OPA related to these programs.

Hydro One pays a $5 million annual fee to the OEFC for indemnification against adverse claims in excess of $10 million paid by the OEFC with respect to certain of Ontario Hydro's businesses transferred to Hydro One on April 1, 1999.

PILs and payments in lieu of property taxes are paid to the OEFC, and dividends are paid to the Province.

Sales to and purchases from related parties occur at normal market prices or at a proxy for fair value based on the requirements of the OEB's Affiliate Relationships Code. Outstanding balances at period end are interest free and settled in cash.

At December 31, 2013, the Company held $250 million in Province of Ontario Floating-Rate Notes with a fair value of $251 million (2012 – $251 million).

The amounts due to and from related parties as a result of the transactions referred to above are as follows:

| *December 31 (millions of Canadian dollars)* | **2013** | 2012 |
|---|---|---|
| Due from related parties | **197** | 154 |
| Due to related parties[1] | **(230)** | (261) |
| Investment | **251** | 251 |

[1] Included in due to related parties at December 31, 2013 are amounts owing to the IESO in respect of power purchases of $217 million (2012 – $199 million).

## 21. CONSOLIDATED STATEMENTS OF CASH FLOWS

The changes in non-cash balances related to operations consist of the following:

| *Year ended December 31 (millions of Canadian dollars)* | **2013** | 2012 |
|---|---|---|
| Accounts receivable | **(78)** | (30) |
| Due from related parties | **(43)** | 2 |
| Materials and supplies | **–** | 2 |
| Other assets | **(5)** | (4) |
| Accounts payable | **(60)** | (5) |
| Accrued liabilities | **150** | 10 |
| Due to related parties | **(31)** | (85) |
| Accrued interest | **5** | 10 |
| Long-term accounts payable and other liabilities | **(11)** | 13 |
| Post-retirement and post-employment benefit liability | **84** | 56 |
| | **11** | (31) |

### *Capital Expenditures*

The following table illustrates the reconciliation between investments in property, plant and equipment and the amount presented in the Consolidated Statements of Cash Flows after factoring in the net change in related accruals:

| *Year ended December 31 (millions of Canadian dollars)* | **2013** | 2012 |
|---|---|---|
| Capital investments in property, plant and equipment | **(1,312)** | (1,363) |
| Net change in accruals included in capital investments in property, plant and equipment | **(21)** | (10) |
| Capital expenditures – property, plant and equipment | **(1,333)** | (1,373) |

The following table illustrates the reconciliation between investments in intangible assets and the amount presented in the Consolidated Statements of Cash Flows after factoring in the net change in related accruals:

| *Year ended December 31 (millions of Canadian dollars)* | **2013** | 2012 |
|---|---|---|
| Capital investments in intangible assets | **(82)** | (91) |
| Net change in accruals included in capital investments in intangible assets | **3** | 1 |
| Capital expenditures – intangible assets | **(79)** | (90) |

***Supplementary Information***

| *Year ended December 31 (millions of Canadian dollars)* | **2013** | 2012 |
|---|---|---|
| Net interest paid | **395** | 411 |
| PILs | **138** | 197 |

## 22. CONTINGENCIES

***Legal Proceedings***

Hydro One is involved in various lawsuits, claims and regulatory proceedings in the normal course of business. In the opinion of management, the outcome of such matters will not have a material adverse effect on the Company's consolidated financial position, results of operations or cash flows.

***Transfer of Assets***

The transfer orders by which the Company acquired certain of Ontario Hydro's businesses as of April 1, 1999 did not transfer title to some assets located on Reserves (as defined in the *Indian Act* (Canada)). Currently, the OEFC holds these assets. Under the terms of the transfer orders, the Company is required to manage these assets until it has obtained all consents necessary to complete the transfer of title of these assets to itself. The Company cannot predict the aggregate amount that it may have to pay, either on an annual or one-time basis, to obtain the required consents. In 2013, the Company paid approximately $2 million (2012 – $1 million) in respect of these consents. If the Company cannot obtain the required consents, the OEFC will continue to hold these assets for an indefinite period of time. If the Company cannot reach a satisfactory settlement, it may have to relocate these assets to other locations at a cost that could be substantial or, in a limited number of cases, to abandon a line and replace it with diesel-generation facilities. The costs relating to these assets could have a material adverse effect on the Company's results of operations if the Company is not able to recover them in future rate orders.

## 23. COMMITMENTS

***Agreement with Inergi LP (Inergi)***

In 2002, Inergi, an affiliate of Capgemini Canada Inc., began providing services to Hydro One, including business processing and information technology outsourcing services, as well as core system support related primarily to SAP implementation and optimization. The current agreement with Inergi will expire in February 2015.

At December 31, 2013, the annual commitments under the Inergi agreement are as follows: 2014 – $130 million; 2015 – $22 million; 2016 and thereafter – nil.

***Prudential Support***
Purchasers of electricity in Ontario, through the IESO, are required to provide security to mitigate the risk of their default based on their expected activity in the market. As at December 31, 2013, the Company provided prudential support to the IESO on behalf of Hydro One Networks and Hydro One Brampton Networks using parental guarantees of $325 million (2012 – $325 million), and on behalf of two distributors using guarantees of $1 million (2012 – $1 million). In addition, as at December 31, 2013, the Company has provided letters of credit in the amount of $21 million (2012 – $22 million) to the IESO. The IESO could draw on these guarantees and/or letters of credit if these subsidiaries or distributors fail to make a payment required by a default notice issued by the IESO. The maximum potential payment is the face value of any letters of credit plus the amount of the parental guarantees.

***Retirement Compensation Arrangements***
Bank letters of credit have been issued to provide security for the Company's liability under the terms of a trust fund established pursuant to the supplementary pension plan for eligible employees of Hydro One. The supplementary pension plan trustee is required to draw upon these letters of credit if Hydro One is in default of its obligations under the terms of this plan. Such obligations include the requirement to provide the trustee with an annual actuarial report as well as letters of credit sufficient to secure the Company's liability under the plan, to pay benefits payable under the plan and to pay the letter of credit fee. The maximum potential payment is the face value of the letters of credit. At December 31, 2013, Hydro One had letters of credit of $127 million (2012 – $127 million) outstanding relating to retirement compensation arrangements.

***Operating Leases***
Hydro One is committed as lessee to irrevocable operating lease contracts for buildings used in administrative and service-related functions and storing telecommunications equipment. These leases have an average life of between one and five years with renewal options for periods ranging from one to 10 years included in some of the contracts. All leases include a clause to enable upward revision of the rental charge on an annual basis or on renewal according to prevailing market conditions. There are no restrictions placed upon Hydro One by entering into these leases. Hydro One Networks and Hydro One Telecom are the principal entities concerned.

At December 31, the future minimum lease payments under non-cancellable operating leases were as follows:

| *December 31 (millions of Canadian dollars)* | **2013** | 2012 |
|---|---|---|
| Within one year | **11** | 10 |
| After one year but not more than five years | **28** | 29 |
| More than five years | **9** | 14 |
| | **48** | 53 |

During the year ended December 31, 2013, the Company made lease payments totaling $11 million (2012 – $9 million).

## 24. SEGMENTED REPORTING
Hydro One has three reportable segments:

- The Transmission Business, which comprises the core business of providing electricity transportation and connection services, is responsible for transmitting electricity throughout the Ontario electricity grid;
- The Distribution Business, which comprises the core business of delivering and selling electricity to customers; and
- Other, the operations of which primarily consist of those of the telecommunications business.

The designation of segments has been based on a combination of regulatory status and the nature of the products and services provided. Operating segments of the Company are determined based on information used by the chief operating decision maker in deciding how to allocate resources and evaluate the performance of each of the segments. The Company evaluates segment performance based on income before financing charges and provision for PILs from continuing operations (excluding certain allocated corporate governance costs).

The accounting policies followed by the segments are the same as those described in the summary of significant accounting policies (see Note 2 – Significant Accounting Policies). Segment information on the above basis is as follows:

| *Year ended December 31, 2013 (millions of Canadian dollars)* | **Transmission** | **Distribution** | **Other** | **Consolidated** |
|---|---|---|---|---|
| Revenues | **1,529** | **4,484** | **61** | **6,074** |
| Purchased power | **–** | **3,020** | **–** | **3,020** |
| Operation, maintenance and administration | **375** | **672** | **59** | **1,106** |
| Depreciation and amortization | **327** | **340** | **9** | **676** |
| Income (loss) before financing charges and provision for PILs | **827** | **452** | **(7)** | **1,272** |
| Financing charges | | | | **360** |
| **Income before provision for PILs** | | | | **912** |
| **Capital investments** | **714** | **673** | **7** | **1,394** |

| *Year ended December 31, 2012 (millions of Canadian dollars)* | Transmission | Distribution | Other | Consolidated |
|---|---|---|---|---|
| Revenues | 1,482 | 4,184 | 62 | 5,728 |
| Purchased power | – | 2,774 | – | 2,774 |
| Operation, maintenance and administration | 402 | 608 | 61 | 1,071 |
| Depreciation and amortization | 320 | 329 | 10 | 659 |
| Income (loss) before financing charges and provision for PILs | 760 | 473 | (9) | 1,224 |
| Financing charges | | | | 358 |
| **Income before provision for PILs** | | | | 866 |
| **Capital investments** | 776 | 671 | 7 | 1,454 |

### Total Assets by Segment:

| *December 31 (millions of Canadian dollars)* | **2013** | 2012 |
|---|---|---|
| **Total assets** | | |
| Transmission | **11,846** | 11,586 |
| Distribution | **8,805** | 8,621 |
| Other | **974** | 604 |
| | **21,625** | 20,811 |

All revenues, costs and assets, as the case may be, are earned, incurred or held in Canada.

## 25. SUBSEQUENT EVENT

On January 29, 2014, Hydro One issued $50 million notes under its MTN Program, with a maturity date of January 29, 2064 and a coupon rate of 4.29%.

**Board Committees**

1 *Audit and Finance Committee* The Audit and Finance Committee oversees the integrity of accounting policies and financial reporting, internal controls, internal audit, financial risk exposures, financial compliance and ethics policies. With the Company's SEC registration in 2013, the Audit and Finance Committee mandate was updated to ensure compliance with U.S. securities legislation. The committee met six times in 2013.

2 *Corporate Governance Committee* The Corporate Governance Committee is responsible for the Board's governance of the Company. It recommends issues to be discussed at meetings of the Board of Directors, reviews the mandate of the Board and each committee of the Board, conducts Board Assessments, monitors the quality of management's relationship with the Board and recommends suitable nominees for election to the Board of Directors. The committee met seven times in 2013.

3 *Human Resources Committee* The Human Resources Committee is responsible for reviewing the appropriateness of the Company's current and future organizational structure, succession plans for corporate and divisional officers, the code of business conduct, and the performance and remuneration of senior executives, including recommending to the Board the remuneration of the President and CEO. The committee met seven times in 2013.

4 *Business Transformation Committee* The Business Transformation Committee is responsible for assisting the Board in its oversight responsibilities in all matters related to the Company's Cornerstone Project, the Advanced Distribution System and Continuous Innovation Strategy, and the planning, development and implementation of major transmission system or distribution projects, including projects described in the Corporation's Green Energy Implementation Plan. The committee met seven times in 2013.

5 *Regulatory and Public Policy Committee* The Regulatory and Public Policy Committee monitors the Company's compliance with applicable regulatory requirements and legislation, and is responsible for identifying, assessing and providing advice to the Board of Directors on public affairs issues that have a significant impact on the Company. The committee oversees compliance programs, policies, standards and procedures and reviews the Company's proposals for rate applications, compliance actions and reports. The committee met five times in 2013.

6 *Health, Safety and Environment Committee* The Health, Safety and Environment Committee is responsible for reviewing occupational health, safety and environment policies, standards, and programs, compliance with occupational health, safety and environmental legislation, policies and standards, and public health and safety issues. The committee met four times in 2013.

7 *Investment – Pension Committee* The Investment – Pension Committee's primary function is to assist the Board in fulfilling its oversight responsibilities in all matters related to the Corporation's Pension Plan including the Hydro One Pension Fund. The committee met five times in 2013.

### Hydro One Inc.
Is a holding company with subsidiaries that operate in the business areas of electricity transmission and distribution, and telecom services.

### Hydro One Networks Inc.
Represents the majority of our business, which is regulated by the Ontario Energy Board. It is involved in the planning, construction, operation and maintenance of our transmission and distribution networks.

### Hydro One Brampton Networks Inc.
Distributes electricity to one of the fastest-growing urban centres in Canada, just 30 kilometres outside of Toronto.

### Hydro One Remote Communities Inc.
Operates and maintains the generation and distribution assets used to supply electricity to 21 remote communities across Northern Ontario that are not connected to the province's electricity transmission grid.

### Hydro One Telecom Inc.
Markets our fibre-optic capacity to business customers. This business represents less than one per cent of our total assets.

# LETTER FROM THE CHAIR

"Of all the firsts in 2014, the one that speaks to me the most is the commercial partnership between our Company and the Saugeen Ojibway Nation to own the Bruce to Milton transmission line. This is the first time in the Company's history that we have partnered with a First Nation on a commercial basis."

The people of Ontario count on Hydro One to reliably deliver the electricity necessary for their families, their businesses and their communities to thrive. They also count on Hydro One to operate effectively in a commercial fashion and make a vital financial contribution to the Province of Ontario, its sole shareholder.

In 2014, the Company focused its efforts on improving customer service, enabling the connection of new energy sources and making the right investments to ensure that Ontario's grid is strong today and ready for the future.

From a financial standpoint, Hydro One's net income in 2014 reached $749 million, with revenues of $6,548 million for the year.

Our 2014 revenues increased by $474 million compared to 2013's revenues of $6,074 million. The increase was due to higher Ontario Energy Board-approved 2014 transmission rates, the recovery of higher purchased power costs, and the OEB's approval of increased export service revenues in recognition of higher electricity exports to other jurisdictions.

Hydro One paid dividends of $287 million to the Province in 2014.

One of the Company's top priorities in 2014 was improving Hydro One's level of customer service. A number of internal and external initiatives across the Company were introduced, including Hydro One's Customer Service Advisory Panel and a customer consultation process to ensure we made things right for our customers.

There were many firsts for the Company in 2014 in the areas of research and innovation. For example, we acquired two unmanned aerial vehicles for our Kleinburg Training Centre. These drones will be primarily used for training purposes and work to use them to test our transmission lines is underway across various departments.

Of all the firsts in 2014, the one that speaks to me the most is the commercial partnership between our Company and the Saugeen Ojibway Nation to own the Bruce to Milton transmission line. This is the first time in the Company's history that we have partnered with a First Nation on a commercial basis.

I would like to thank all Hydro One employees, senior management and my colleagues on the Board for their dedication and commitment to the Company and the people of Ontario.

**Sandra Pupatello**
Chair of the Board of Directors

# LETTER FROM THE PRESIDENT AND CEO

"We are committed to delivering cost-effective service to all our customers and we remain focused on prudent management, efficient operations and improving the customer experience for everyone we serve."

In 2014, Hydro One concentrated on achieving its goal of becoming Canada's leading utility by 2019. How will we know when we have arrived? The true measure of success will be when our customers, shareholder and employees believe we are a company of great people providing real value and safe, reliable and responsible service. We will only get there if we focus on transforming our culture, get better at our jobs every single day and manage our business effectively.

Hydro One's strong financial performance in 2014 demonstrated our commitment to delivering results for our shareholder as well as our dedication to operating a well-managed business.

During 2014, we put tremendous effort into serving our customers and building stronger relationships. Service levels at our call centre and of our billing system are now better than ever and we have set new targets that, when achieved, will put us among the best in the business.

We moved forward on our journey by investing in our system to replace aging assets and put in place new infrastructure required to deliver the electricity that Ontario needs. Our 2014 Transmission Business capital investments included the replacement of end-of-life power transformers at our Pembroke Transmission Station in eastern Ontario, and at our Hanover, Allanburg, Elmira, and Trafalgar transmission stations in southwestern Ontario. We also received an approved Environmental Assessment to construct the Clarington Transformer Station, critical to keeping the lights on for more than one million Ontarians after the Pickering Nuclear Generating Station shuts down in 2020.

Within our distribution business, our 2014 capital investments included replacement of meters and end-of-life wood poles, work within our station and lines programs, new customer connections and upgrades, and system capability reinforcement projects.

Last year, we completed the acquisition of Norfolk Power Inc., an electricity distribution and telecom company located in southwestern Ontario. We have also reached agreements to acquire two more local distribution companies in southwestern Ontario, Woodstock Hydro and Haldimand Hydro. Consolidating our operations with smaller utilities in our service territory will remain an opportunity to drive growth for Hydro One and improve value for our customers.

We are committed to delivering cost-effective service to all our customers and we remain focused on prudent management, efficient operations and improving the customer experience for everyone we serve.

I would like to thank our Board of Directors for their support, my leadership team for their dedication and our employees for their commitment to working safe, working hard and working to change. They wear the Hydro One logo with pride.

**Carmine Marcello**
President and Chief Executive Officer

# CUSTOMER SERVICE

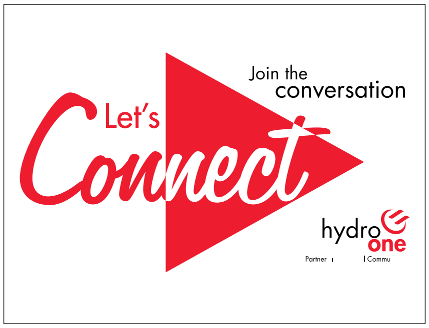
## OUR FOCUS IS ON YOU

Hydro One believes a well-managed company is a customer-driven company. The people of Ontario deserve safe, reliable and responsible power. We can only achieve this with a strong customer service culture – a culture that remains transparent, accountable and fair.

Hydro One spoke to more than 60,000 customers during three tele-townhalls in 2014.

## CUSTOMER COMMITMENTS

In 2014, Hydro One hosted three tele-townhalls to reach out to our customers to gather their feedback on how we can serve them better. In the townhalls, we spoke to more than 60,000 customers from across Ontario and the concerns they expressed led to the creation of a customer consultation process in October where we began developing a series of Customer Commitments. We further reached out to customers with our Let's Connect survey to gather additional feedback on our customer service practices.



## CUSTOMER SERVICE ADVISORY PANEL

October also saw the launch of Hydro One's third-party Customer Service Advisory Panel to advise us on how we can improve our customer service culture and deliver on our customer service promises. The body is made up of industry-leading experts from several sectors, including finance, education and technology. The panel meets regularly to assess our performance against stated objectives and holds us accountable for our actions.

## CUSTOMER RECOVERY PROCESS

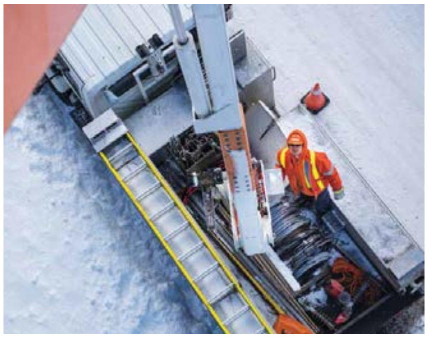
Our path to becoming Canada's leading utility is one of change. In 2014, we introduced major changes across all lines of business to truly become one company. We knew we had to make things right for our customers. In early 2014, at the height of our customer service disruptions with our billing system, approximately 5 per cent of our customers hadn't received a bill for more than three months. By December 2014, that figure had dropped to less than 1 per cent.

Other changes in 2014 to transform our customer service culture included improvements made at our call centre and the launch of a Call-A-Customer program where senior managers from different lines of business contact customers. As well, we revamped our Quality Program in the call centre, with a heightened attention to connecting customers and providing service excellence.

Service levels at our call centre are now better than they were before we implemented our new billing system in May 2013. We have set new targets that, when achieved, will put us among the best in the business. Overall, customer satisfaction has shown a steady increase since early 2014, with a weekly high of 93 per cent of customers satisfied with their call centre interaction.

## LINES AND FORESTRY PARTNERSHIP

The year saw a deepening of an already powerful partnership between our Provincial Lines and Forestry Services. What began as a small modification to a zone map has led to a strong partnership that is evident across all levels of the organization. This has resulted in improved customer service, reduced operating costs and shorter storm response times.



## REDESIGN OF HYDROONE.COM HOME PAGE

In October, we redesigned the HydroOne.com home page to include a featured stories section to inform our customers about our employees, current projects and the good work we are doing in communities across Ontario.

# SAFETY

## WE PUT SAFETY FIRST IN EVERYTHING WE DO

The safety of our employees and the people of Ontario guides our decisions. We are focused on delivering value to our customers in a fair, safe and responsible manner. We know that safety is *every* employee's responsibility.

In July, Hydro One's Owen Sound crew celebrated one million hours worked without a lost time injury or illness and no recordable injuries over the past three years.

## JOURNEY TO ZERO

Hydro One continued our work with Journey to Zero in 2014, reinforcing employee involvement and engagement by instilling the belief that all injuries are preventable, as well as creating effective Health and Safety communication across the Company and establishing local health and safety goals and objectives.

## OHSAS 18001

Hydro One maintained its Occupational Health and Safety Assessment Series (OHSAS) 18001 certification in 2014 due to a continuous improvement strategy to help us prepare for future surveillance audits. The Company was OHSAS 18001 certified in June 2013, demonstrating that we have the elements of a world-class health and safety system in place.

## MOVE TO AN INJURY-FREE WORKPLACE

One of our goals is to become a world-class utility by 2019. Our year-end safety performance in 2014 helped us work toward this goal with 1.8 recordable injuries[1] per 200,000 hours worked. That number decreased from 2013 when Hydro One reported 2.5 medical attentions per 200,000 hours worked. The Company has also seen a reduction in both "High MRPH" (Maximum Reasonable Potential for Harm) incidents and the number of preventable motor vehicle accidents in the last few years. In 2014, Hydro One used recordable rates as its corporate safety metric to allow for better performance benchmarking with North American and international industries.

## REDUCING DISTRACTED DRIVING

Nothing is more important than the health and safety of our employees and the people of Ontario. Acting on that belief, we introduced a standard in April to prohibit the use of hands-free electronic devices, including smartphones, for all employees who are operating a motor vehicle on Company business. Employees are encouraged to pull over to the side of the road, where it is safe, if they need to handle a call, text or email. The standard takes Section 78.1 of the *Highway Traffic Act* a step further by prohibiting the use of the hands-free options while driving.

## BUILDING A SAFE WORKPLACE CULTURE

From proper job planning to a trained and competent workforce, throughout 2014 Hydro One emphasized the importance of a safe workplace culture across all lines of business. The Company introduced nine core principles around its Safe Workplace Vision in 2014. The nine principles focus on continuous improvement and health and safety at Hydro One.

## EMPLOYEE ENGAGEMENT

Engaged employees are safer employees. In 2014, we measured employee engagement as it related to our core values, best business practices and health and safety initiatives. Engaged employees had fewer sick days, reported fewer recordable incidents and were less likely to get hurt compared to less engaged employees. Our findings illustrate how strong employee engagement drives our Company's success, enabling us to reach our stated objectives.

## OWEN SOUND CREW REACHES SAFETY MILESTONE

In July, Hydro One's Owen Sound crew celebrated one million hours worked without a lost time injury or illness and no recordable injuries over the past three years. The milestone took 14 years to accomplish, and was achieved through proper job planning, teamwork and creating a strong safety culture among all employees.

[1] A recordable injury is a work-related injury or illness that results in:

- Restricted work,
- Lost time,
- Loss of consciousness,
- Medical attention beyond first aid,
- Death, or
- Any other significant work-related injury or illness diagnosed by a physician or other health care professional.

# RELIABILITY

## CONNECTING ONTARIO TO WHAT MATTERS

The people of Ontario depend on Hydro One as stewards of Ontario's electricity system to deliver safe and reliable electricity to power their lives. Our employees are committed to providing this level of service.

In 2014, Hydro One invested more than $224 million in Ontario's transmission system to increase electricity reliability in Toronto and the Greater Toronto Area.

## CLARINGTON TRANSFORMER STATION

Hydro One received the final Environmental Assessment approval in 2014 for the Clarington Transformer Station (TS) project. Clarington TS will enable future electricity growth in the local area and address growing electricity demands in the east Greater Toronto Area (GTA). Once completed, the station will serve one million customers in the east GTA.

## MAJOR INVESTMENTS

During 2014, we made capital investments totalling approximately $1.5 billion to improve our transmission and distribution systems' reliability and performance, address our aging power system infrastructure, facilitate new generation, and improve service to our customers throughout Ontario.

Our total capital investments included transmission system investments of more than $224 million to increase electricity reliability and support the energy needs in the GTA. Given the aging of our infrastructure, our ongoing investment plans are designed to reliably power our economy and to support the innovation that can be expected over the next decade.

## ORLÉANS OPERATIONS CENTRE

In accordance with our commitment to improve reliability for our customers, in January we opened the permanently located Orléans Operations Centre, outside of Ottawa. The centre will benefit Orléans, Navan, Rockland and surrounding areas and serve roughly 39,000 customers. The centre is part of a $33.4 million investment in a new transmission line to meet growing electricity needs in the area.

## WOOD POLES REPLACEMENT

Throughout 2014, Hydro One continued its wood pole replacement program – replacing 11,000 wood poles across Ontario. This proactive program targets poles more than 60 years old across our 122,000-kilometre system. With 1.6 million wood poles in our distribution system, more than 340,000 will need replacing in the next 10 years. The $82 million investment is part of an ongoing effort to make notable upgrades to system reliability and maintain public safety.

**11,000**

wood poles replaced in 2014

## ACQUISITION OF NORFOLK POWER

In 2014, we completed the acquisition of Norfolk Power Inc., a local distribution and telecom company in southwestern Ontario. Hydro One also reached an agreement to acquire Woodstock Hydro Holdings Inc., which is pending Ontario Energy Board approval.

Our major 2014 GTA investments include:

| | |
|---|---|
| Main Transmission Station, Toronto | $9.1 million |
| Toronto Lakeshore Infrastructure Renewal | $53 million |
| Bridgman Transmission Station, Toronto | $12.3 million |
| Leaside Transmission Station, Toronto | $7.2 million |
| Basin Transmission Station, Toronto | $7 million |
| Claireville Transmission Station, Woodbridge | $5.5 million |
| Cooksville Transmission Station, Mississauga | $32.1 million |
| Manby Transmission Station, Toronto | $5.8 million |
| Gerrard Transmission Station, Toronto | $10 million |
| Trafalgar Transmission Station, Oakville | $15 million |

# EXECUTION EXCELLENCE

## CONTINUOUS IMPROVEMENT POWERS THE FUTURE. EXCELLENCE ENABLES IT.

From our innovative Move to Mobile project to our research into the use of drones to inspect our transmission lines, we are committed to providing the people of Ontario with reliable and innovative initiatives to power them into the future.

Hydro One's mobile outage app received 51,067 downloads in 2014.

## B2M LP WITH THE SAUGEEN OJIBWAY NATION

A first in Canada, Hydro One partnered with the Saugeen Ojibway Nation (SON) to create a limited partnership (B2M LP) to own the Bruce to Milton transmission line – a double-circuit, 500 kV line between the Bruce Nuclear Generating Station in Kincardine and our Milton Switching Station. The line – completed in 2012 – has the capacity to transmit 3,000 MW of clean, renewable energy. The SON owns a 34 per cent interest in B2M LP while Hydro One is the majority unitholder. Operations for B2M LP commenced in December 2014.

## MOVE TO MOBILE PROJECT

Hydro One's Move to Mobile project is the first step in a multi-year program to enhance our existing work processes and planning by introducing industry-leading mobile capabilities. The program launched in August and will equip our workforce with a new mobility solution to perform daily tasks wherever they are in the province.

## LAMBTON TO LONGWOOD CONNECTION

In September, we completed a $24 million upgrade to a transmission circuit between Lambton Transmission Station and Longwood Transmission Station in southwestern Ontario. The investment refurbished 36 tower foundations, replaced the circuit with a higher capacity wire and replaced insulators along the line – allowing for approximately 500 MW of renewable generation to be connected. This project used the Aluminum Conductor Steel Supported conductor for the first time in our Company's transmission system. This lightweight wire increases the line's current carrying capabilities without the need to rebuild existing towers.

## DRONE TESTING

In the fall, Hydro One acquired two drones. A first for the Company, the drones will be housed at Hydro One's Kleinburg Training Centre and will be used primarily for training purposes. Work to use the drones to test our transmission lines is underway.

## MOBILE APP

The Company's mobile outage app received 51,067 downloads in 2014, totalling more than 230,000 downloads since it launched in May 2012. The app connects our customers with our interactive outage mapping system, allowing them to receive detailed and updated power outage information from anywhere in our service area.

# MANAGEMENT'S DISCUSSION AND ANALYSIS

**For the years ended December 31, 2014 and 2013**

The following Management's Discussion and Analysis (MD&A) of the financial condition and results of operations should be read together with the consolidated financial statements and accompanying notes (the Consolidated Financial Statements) of Hydro One Inc. (Hydro One or the Company) for the year ended December 31, 2014. The Consolidated Financial Statements are presented in Canadian dollars and have been prepared in accordance with United States (US) Generally Accepted Accounting Principles (GAAP). All financial information in this MD&A is presented in Canadian dollars, unless otherwise indicated.

The Company has prepared this MD&A in accordance with National Instrument 51-102 – Continuous Disclosure Obligations of the Canadian Securities Administrators. Under the US/Canada Multijurisdictional Disclosure System, the Company is permitted to prepare this MD&A in accordance with the disclosure requirements of Canada, which are different from those of the US. This MD&A provides information for the year ended December 31, 2014, based on information available to management as of February 11, 2015.

## EXECUTIVE SUMMARY

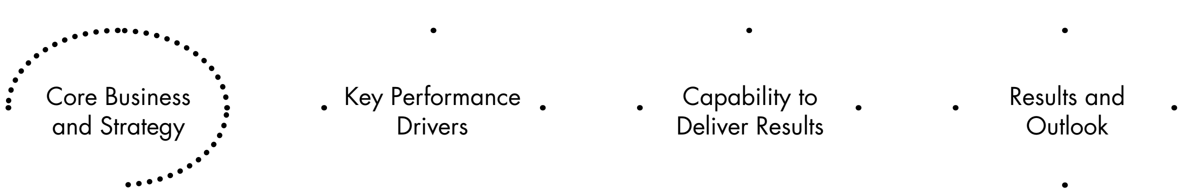
We are wholly owned by the Province of Ontario (Province or Shareholder), and our Transmission and Distribution Businesses are regulated by the Ontario Energy Board (OEB).

During 2014, we continued to focus tremendous effort on customer service and on forming a stronger relationship between our customers' satisfaction with our service and their perceptions of our company. The expectation is that in doing so, we will emerge from the challenges of this year with a renewed, transparent and consistent experience for all our customers by creating new customer tools, products, and processes and by establishing new standards for customer service. We have implemented a strong governance system that will ensure we are monitoring and measuring key performance indicators to support and advance our values with respect to being a customer caring company. We have achieved a number of targets with respect to call centre performance and billing issues to stabilize customer operations following the implementation of our new billing system, and we will continue to strive for stronger performance and an ever-improving experience for our customers.

To further improve our customer service performance culture, we have recently announced two new initiatives – a third party expert Customer Service Advisory Panel and our draft Customer Commitments. Our Customer Commitments will form the basis of our promises to our customers, and the Customer Service Advisory Panel will provide advice and hold us accountable to the promises we make to our customers. Once our Customer Commitments are finalized with input received from our customers, our employees and our Customer Service Advisory Panel, we will develop a public scorecard and will report on our performance as a transparent, accountable and customer focused organization.

Our mission and vision reflects the unique role we play in the economy of the Province and as a provider of critical infrastructure to all our customers. We strive to be an innovative and trusted company, delivering electricity safely, reliably and efficiently to create value for our customers. We operate as a commercial enterprise with an independent Board of Directors. Our strategic plan is driven by our values: health and safety; excellence; stewardship; and innovation. Safety is of utmost importance to us because we work in an environment that can be hazardous. We take our responsibility as stewards of critical provincial assets seriously. We demonstrate sound stewardship by managing our assets in a manner that is commercial, transparent and which values our customers. We strive for excellence by being trained, prepared and equipped to deliver high-quality service. We value innovation because it allows us to increase our productivity and develop enhanced methods to meet the needs of our customers.

We manage our business using the following framework:



## Core Business and Strategy

Our corporate strategy is based on our mission and vision and our values. Our strategic objectives, which are discussed in the section "Overview – Our Strategy," encompass the core values that drive our business. Our strategy touches every part of our core business: health and safety; our customers; innovation; the reliability and efficiency of our systems; the environment; our workforce; Shareholder value; and productivity.

## Key Performance Drivers

Performance drivers have been identified that relate to achieving our company's strategic objectives. We establish specific performance targets for each driver aimed at measuring the achievement of our strategic objectives over time. For example, we track the duration of unplanned customer interruptions per delivery point as an indication of our commitment to provide a reliable transmission system for our customers. We measure transmission and distribution unit costs as an indication of our commitment to increasing productivity. These and other key performance drivers are included in the discussion of our performance measures in the section "Overview – Performance Measures and Targets."

## Capability to Deliver Results

We continue to use a balanced scorecard approach as we strive to manage our performance and deliver results each and every year. In 2014, we set 14 performance measure targets and we met or exceeded eight of them. We exceeded our targets for an injury-free workplace, timely and efficient connection of new customers, the ability to provide timely and accurate bills to customers, our Transmission Business cost-effectiveness, net income after tax, and our transmission and distribution in-service capital. Our targets, and our 2014 performance relating to these targets, are discussed in the section "Overview – Performance Measures and Targets." Our ability to deliver results in each of our strategic areas is limited by risks inherent in our regulatory environment, our business, our workforce, and in the economic environment. These risks, as well as our strategies to mitigate them, are discussed in the section "Risk Management and Risk Factors."

## Results and Outlook

**Consolidated Statements of Operations and Comprehensive Income**

| *Year ended December 31*<br>*(millions of Canadian dollars, except per share amounts)* | **2014** | 2013 | 2012 |
|---|---|---|---|
| Total revenue | **6,548** | 6,074 | 5,728 |
| Net income attributable to the Shareholder of Hydro One | **749** | 803 | 745 |
| Basic and fully diluted earnings per common share *(dollars)* | **7,319** | 7,850 | 7,280 |
| Cash dividends per common share *(dollars)* | **2,696** | 2,000 | 3,523 |
| Cash dividends per preferred share *(dollars)* | **1.375** | 1.375 | 1.375 |

**Consolidated Balance Sheets**

| *December 31 (millions of Canadian dollars)* | **2014** | 2013 | 2012 |
|---|---|---|---|
| Total assets | **22,550** | 21,625 | 20,811 |
| Total long-term debt | **8,925** | 9,057 | 8,479 |
| Preferred shares | **323** | 323 | 323 |
| Net assets | **7,947** | 7,415 | 6,830 |

During 2014, we earned net income of $749 million and revenues of $6,548 million. We made capital investments totalling $1,530 million to improve our transmission and distribution systems' reliability and performance, address our aging power system infrastructure, facilitate new generation, and improve service to our customers. A full discussion of our results of operations, financing activities, and capital investments can be found in the sections "Annual Results of Operations" and "Liquidity and Capital Resources."

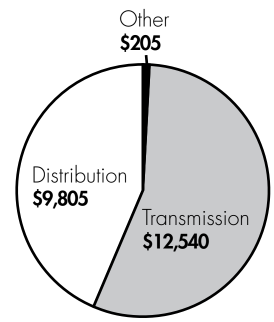
In August 2014, we completed the acquisition of Norfolk Power Inc. (Norfolk Power), an electricity distribution and telecom company located in southwestern Ontario. Hydro One has been a proud electricity distributor in Norfolk County for decades, serving approximately 14,000 Norfolk County customers. The acquisition of Norfolk Power enables our company to extend our service to the entire Norfolk County and a further 18,000 distribution customers. We are committed to delivering cost-effective service for Norfolk Power's customers and we remain focused on prudent management, efficient operations and improving the customer experience for everyone we serve. In 2014, we also signed agreements to purchase two more local distribution companies (LDCs): Woodstock Hydro Holdings Inc. (Woodstock Hydro) and Haldimand County Utilities Inc. (Haldimand Hydro). A full discussion of the Norfolk Power, Woodstock Hydro and Haldimand Hydro acquisitions can be found in the section "New Developments in 2014 – Business Combinations."

In addition, we have completed a partnership transaction with the Saugeen Ojibway Nation (SON), where the SON has acquired a noncontrolling equity interest in our new limited partnership, B2M Limited Partnership (B2M LP). A full discussion of this transaction can be found in the section "New Developments in 2014 – Business Combinations."

## OVERVIEW

We are the largest electricity transmission and distribution company in Ontario. We own and operate substantially all of Ontario's electricity transmission system, accounting for approximately 97% of Ontario's transmission capacity based on revenue approved by the OEB. Based on assets, our transmission system is one of the largest in North America. Our consolidated distribution system is the largest in Ontario and spans roughly 75% of the province.

**Total Assets**
December 31, 2014
*(millions of dollars)*



### Our Businesses

Our company has three reportable segments:

- Our Transmission Business, which comprises the core business of providing electricity transportation and connection services, is responsible for transmitting electricity throughout the Ontario electricity grid;
- Our Distribution Business, which comprises the core business of delivering and selling electricity to customers; and
- Other Business, which includes certain corporate activities and the operations of our telecommunications business.

***Transmission Business***

| | **2014** | 2013 |
|---|---|---|
| Electricity transmitted *(TWh)*[1] | **139.8** | 140.7 |
| Ontario 20-minute system peak demand *(MW)*[1] | **23,040** | 24,957 |
| Ontario 60-minute system peak demand *(MW)*[1] | **22,774** | 24,927 |
| Total transmission lines spanning the province *(circuit-kilometres)* | **29,344** | 29,344 |
| Transmission stations *(#)* | **290** | 285 |
| Transmission transformers *(#)* | **1,471** | 1,416 |
| Transmission customers *(approximate #)* | **5,000,000** | 5,000,000 |

[1] System-related statistics include preliminary figures for December.
TWh means terawatt-hours
MW means megawatts

Our transmission system totals approximately 29,000 circuit-kilometres of high-voltage lines whose major components consist of cables, conductors, wood or steel support structures, foundations, insulators, connecting hardware and grounding systems. We also own 290 transmission stations and over 1,400 transmission transformers. Our transmission system operates at 500 kV, 230 kV and 115 kV over relatively long distances and transmits electricity from hydroelectric, wind, solar, nuclear and coal-burning generators to customers consisting of 46 LDCs, our own distribution businesses, and 90 transmission-connected companies. It is also linked to five adjoining jurisdictions through 26 interconnections, through which we can accommodate electricity imports of up to 6,963 MW, and electricity exports of up to 6,295 MW. During 2014, our transmission system transported approximately 139.8 TWh of energy throughout Ontario.

Our Transmission Business includes the transmission businesses of our subsidiary Hydro One Networks Inc. (Hydro One Networks) as well as B2M LP. We own and operate substantially all of Ontario's electricity transmission system, and serve, directly or indirectly, approximately five million customers. Our transmission system forms an integrated transmission grid that is monitored, controlled and managed centrally from our Ontario Grid Control Centre.

In 2014, we earned total transmission revenues of $1,588 million, representing approximately 24% of our total 2014 revenues. At December 31, 2014, our Transmission Business assets were $12,540 million, representing approximately 56% of our total assets.

### *Distribution Business*

| | **2014** | 2013 |
|---|---|---|
| Electricity distributed to Hydro One customers *(TWh)*[1] | **29.8** | 29.8 |
| Electricity distributed through Hydro One lines *(TWh)*[1,2] | **42.4** | 42.5 |
| Total distribution lines spanning the province *(circuit-kilometres)* | **123,657** | 122,853 |
| Distribution wood poles *(approximate #)* | **1,551,000** | 1,550,000 |
| Distribution and regulating stations *(#)* | **1,026** | 1,017 |
| Distribution customers *(#)* | **1,439,321** | 1,420,379 |

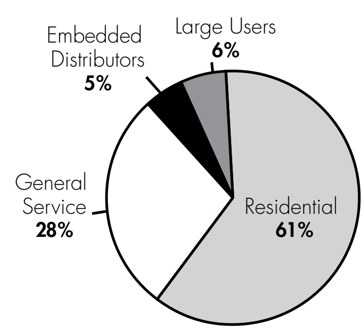
[1] System-related statistics include preliminary figures for December.

[2] Units distributed through Hydro One lines represent total distribution system requirements and include electricity distributed to consumers who purchased power directly from the IESO.

Our distribution system totals over 123,000 circuit-kilometres of distribution lines, and we own over 1,000 distribution and regulating stations and over 1.5 million distribution wood poles. Our distribution system distributes electricity from our transmission system and from more than 14,200 small generators to approximately 1.4 million of our rural and urban customers within Ontario. During 2014, approximately 42.4 TWh of electricity was distributed through our distribution system, including 29.8 TWh of electricity delivered to Hydro One customers.

Our consolidated Distribution Business includes the distribution businesses of our subsidiary Hydro One Networks and the newly acquired Norfolk Power, as well as our subsidiaries Hydro One Brampton Networks Inc. (Hydro One Brampton Networks), and Hydro One Remote Communities Inc. (Hydro One Remote Communities).

**2014 Distribution Revenues**



- Hydro One Networks' distribution business operates a low-voltage electrical distribution network that distributes electricity to customers, including 23 LDCs not directly connected to our transmission system, 33 LDCs connected to our transmission system, 31 customers with loads exceeding 5 MW, and approximately 1.3 million rural and urban customers.
- Hydro One Brampton Networks operates the electricity distribution system and facilities within the City of Brampton, Ontario, serving approximately 150,000 urban retail customers.
- Hydro One Remote Communities operates 19 small, regulated generation and distribution systems in 21 remote communities across northern Ontario that are not connected to Ontario's electricity grid, serving approximately 3,500 customers.

In 2014, we earned total distribution revenues of $4,903 million, including cost of purchased power of $3,419 million, representing approximately 75% of our total 2014 revenues. At December 31, 2014, our Distribution Business assets were $9,805 million, representing approximately 43% of our total assets.

***Other Business***

Our Other Business segment includes the operations of our subsidiary, Hydro One Telecom Inc. (Hydro One Telecom), which operates a fibre optic communications network spanning over 6,000 kilometres. Hydro One Telecom provides dark fibre and lit fibre optic capacity to telecommunications carriers and commercial customers with broadband network requirements, including a dedicated optical network providing secure, high-capacity connectivity across numerous health care locations in Ontario. Hydro One Telecom also provides telecommunication systems management and related functions which are required for our transmission and distribution businesses, including corporate data and voice networks and smart meter operations.

In 2014, our Other Business segment contributed revenues of $57 million, representing approximately 1% of our total 2014 revenues. At December 31, 2014, our Other Business segment assets were $205 million, representing approximately 1% of our total assets.

## Our Strategy

Our corporate strategy builds on our strong commitment to the Province and is shaped by our values. It lays out a set of objectives to position our company to achieve our mission and vision, which is to be an innovative and trusted company delivering electricity safely, reliably and efficiently to create value for our customers. Our values represent our core beliefs.

- *Health and safety:* Nothing is more important than the health and safety of our employees, those who work on our property, and the public.
- *Excellence:* We achieve excellence through continuous training, ensuring we are prepared and equipped to deliver high-quality and affordable service, with integrity.
- *Stewardship:* We invest in our assets and people to build a safe, environmentally sustainable electricity network in a commercial manner.
- *Innovation:* We innovate through new processes, people and technology to allow us to find better ways to meet the needs of our customers.

We have eight strategic objectives that are inextricably linked. They drive the fulfillment of our mission and vision and ensure we remain focused on achieving our corporate goal of providing safe, reliable and affordable service to our customers, today and tomorrow, while increasing enterprise value for our Shareholder.

- *Creating an injury-free workplace and maintaining public safety.* Health and safety must be integrated into all that we do as we continue to reinforce that nothing is more important than the health and safety of our employees. We will continue to create a passion for preventing injury, staying safe and keeping each other safe. We will invest in building a culture of accountability to continue our drive to zero injuries in the workplace. In addition, we will continue to strengthen our already strong safety culture through our Journey to Zero initiative and our successful certification to the Occupational Health and Safety Assessment Series (OHSAS) 18001 standard.
- *Satisfying our customers.* We exist to serve our customers, and serving our customers means reducing costs, improving customer service and meeting their expectations regarding reliable power supply. We will continue to focus our efforts to improve our relationship with customers and to improve our customers' satisfaction with us. We will meet our commitments, make customers our focus in all planning discussions, communicate effectively, coordinate across our company, and maximize opportunities to improve our corporate image and every customer interaction. We will develop and deliver targeted customer segment strategies, products and delivery channels that will respond to their unique needs.
- *Continuous innovation.* Innovation represents one of our values and is critical to achieving our mission and vision. We have been using innovation and technology to build the foundation of our company as the utility of the future. Over the next two decades, we will continue to build on that foundation to improve the reliability and efficiency of our transmission and distribution systems and provide our customers with more capability to manage their power costs. The development of the Advanced Distribution System (ADS) is a key element in our investment in innovation, as are the investments we have made, through our Cornerstone project, in next-generation business tools to enable us to implement leading industry practices and increase productivity.

- *Building and maintaining reliable, affordable transmission and distribution systems.* Our transmission strategy is to provide a robust and reliable provincial grid that accommodates Ontario's emerging generation profile, manages an aging asset base and meets demand requirements through prudent expansion and effective maintenance. Our distribution strategy is focused on continuing to meet the challenge of providing reliable, affordable service to our customers in a wide range of geographical regions and climate zones; incorporating ADS technology to provide greater visibility; and increased control and improved customer service. We will meet customer expectations regarding reliability, in part through our investment planning process, which starts with the identification of asset and customer needs.
- *Protecting and sustaining the environment for future generations.* Consistent with our value of stewardship, we play a central role in reducing Ontario's carbon footprint through the delivery of clean and renewable energy and through measures that allow our customers to manage and reduce their energy use.
- *Championing people and culture.* We believe our primary strength is the capability of our people. In order to sustain this advantage, we will continue to address the issues of corporate culture, labour demographics, diversity, development of critical core competencies, and skill and knowledge retention. We will continue to develop a culture of accountability and trust as a key component to fostering employee engagement. Our labour strategy is to consolidate and clarify our collective agreements, increase flexibility and reduce costs, and maintain a progressive relationship with our unions.
- *Maintaining a commercial culture that increases value for our Shareholder.* For the delivery component of a customer bill, we are committed to maintaining total annual bill impacts for an average residential customer at or below the rate of inflation, and delivering income and dividends to our Shareholder. We will pursue growth opportunities through LDC consolidation to increase the enterprise value of our company by leveraging our existing assets, technologies, capabilities, unparalleled experience in LDC acquisitions, and our distribution and transmission footprint.
- *Achieving productivity improvements and cost-effectiveness.* To achieve our mission and vision, we must constantly strive for productivity through efficiency and effective management of costs. Productivity is key to meeting our other strategic objectives and, in particular, to achieving value for our customers and our Shareholder.

## Performance Measures and Targets

We target and measure our performance by using a balanced scorecard approach. Key performance drivers are closely monitored throughout the year to ensure that we maintain a focus on our strategic objectives and take mitigating actions as required. In 2014, we met or exceeded eight of 14 performance measure targets. Overall, we are making progress towards achieving many of our strategic goals.

### *Injury-free Workplace*

The safety of our employees is paramount. For 2014, our company used the measure of all work-related injuries or illnesses as the performance measure for this strategic objective. A "recordable" injury/illness is one of the following: medical attention (treatment beyond first aid); modified work (restricted duties); lost time; or death. For 2014, our Board of Directors set the target at 1.9 recordable injuries per 200,000 hours worked for this measure. We exceeded this target.

### *Satisfying our Customers*

In 2014, we approached the objective of customer satisfaction by addressing five measures related to improving customer relations. These measures relate to transmission and distribution customer satisfaction, and connection of new services, as well as estimated bills and no bill volume, as part of our customer service recovery project. Our customer service recovery project was a result of billing issues our company encountered due to the implementation in May 2013 of our new Customer Information System (CIS).

- *Customer Satisfaction – Transmission*
  This measure is to determine the degree to which our transmission customers are satisfied with the service they receive from our company. It is based on survey results of customer surveys conducted on our company's behalf by independent third parties. The survey is given to three major groups of transmission customers. In 2014, we targeted a transmission customer satisfaction rate of 84%. We did not meet this target.

- *Customer Satisfaction – Distribution*
  Similar to the transmission customers, we survey our distribution customers to assess the degree to which they are satisfied with the service they receive from our company. The results arise from surveys conducted on our company's behalf by independent third parties. This measure reflects the overall satisfaction levels of three major distribution customer segments, based on transaction satisfaction levels, annual satisfaction surveys and the meeting of OEB milestones, respectively, for the three segments. For 2014, our company set a target for distribution customer satisfaction at 87%, and did well on the transactional elements, but did not meet this target on an overall basis.

- *Connection of New Customers*
  This measure relates to distribution low-voltage connections that is reported annually to the OEB. It addresses our customers' needs for a specific and timely connection date and assesses our efficiency in connecting new customers. It measures the percentage of connections for a requested new service (< 750 volts). The connection must be completed within five business days from the day on which all applicable service conditions are satisfied, or at a later date agreed upon by the customer and our company. We set a 2014 target of 90%, which we exceeded.

- *Unscheduled Estimated Bills*
  With respect to this measure, we seek to track our company's ability to provide accurate bills to our customers. We track the percentage of total customers that have received unscheduled estimates in any billing period. Our company established a target of 1.8% of all bills for this measure. We exceeded the target.

- *No Bill Volume*
  No bill volume is a customer service measure related to our company's ability to provide timely bills to our customers. This measure tracks the number of customers who have not received a bill in three consecutive billing periods. Our expectation was to reach a volume of 8,000 no-bill customers by September 2014, and sustain this level beyond that date. We exceeded this target.

***Continuous Improvement and Cost-effectiveness***

As part of our strategic objectives to increase productivity through efficiency improvements and effective management of costs, our company measures transmission unit cost and distribution unit cost and sets targets for those costs. Regarding the maintenance and reliability of the transmission and distribution systems, we continue to build and retain public confidence and trust in our company's operations, as stewards of Ontario's electricity grid. In 2014, we continued our focus on this strategic priority by investing in the key assets of the electricity delivery system and by operating the existing system for customers in a safe, reliable and efficient fashion. Our company is conscious that commercial customers of all sizes require reliable service to allow them to deliver their products and services and that customers' expectations are for a reasonably limited duration when interruptions occur. Transmission and distribution reliability is measured through the duration of customer interruptions.

- *Transmission Unit Costs*
  For 2014, the transmission unit cost measure shows the Transmission Business cost-effectiveness by comparing the ratio of operation, maintenance and administration spending to gross fixed asset costs, using benchmarking initiatives. Our company set a target of 2.9% for 2014, and exceeded the target.

- *Distribution Unit Costs*
  Similar to transmission unit cost, the distribution unit cost measure demonstrates the distribution cost-effectiveness by comparing the ratio of operation, maintenance and administration spending to gross fixed asset costs, using benchmarking initiatives. For 2014, our company set a target of 5.7%, but did not meet this target.

- *Customer Interruption Duration – Transmission*
  This measure monitors the reliability of the transmission system by tracking the average length of unplanned interruptions (in minutes) to multiple-circuit supplied delivery points. Our company has set a target of 8.9 minutes per delivery point for 2014. During 2014, our company was aware that we would miss the target, which was not indicative of degrading reliability, but rather a result of refurbishing aging assets. In doing so, this resulted in occasions where load with a multiple-circuit supply was placed on single supply to accommodate the work program. This exposed the system to interruptions if there was a loss of the single supply. Our company determined that it was important to continue with the maintenance program even if this would result in missing the target. Our company, in fact, did not meet this target.

- *Customer Interruption Duration – Distribution*
  This measure is an indicator of the distribution system reliability that expresses the average length of outages in hours that a customer can expect to experience in the year. This measure excludes *force majeure* events and loss of supply events (events caused by the transmission system or other distributors). Our company set a target of 6.7 hours per customer for this measure. In 2014, there were numerous storm events which were not considered *force majeure* events and comparatively more equipment outages that resulted in higher than normal customer interruptions. In the circumstances, we did not meet this target.

***Maintaining a Commercial Culture***

- *Net Income*
  Achievement of strong financial performance is measured by a performance measure of targeted level of net income after tax. Our target was $668 million net income after tax for 2014, and we exceeded our target.
- *Customer Service Recovery Cost*
  As a result of billing issues that arose from the implementation of our new CIS in 2013, the effects of which became acute in early 2014, our company established the customer service recovery project to dedicate staff to resolve outstanding and any new billing issues and stabilize the billing system. We anticipated, and fixed as a target, costs of $48 million (including revenue impacts) for this project. The project was completed in 2014 and the CIS is now in sustainment mode. As the costs of the customer service recovery project exceeded the target, our company did not meet this anticipated target.
- *In-Service Capital – Transmission*
  This new measure for 2014 evaluates how our company is meeting the OEB targets for in-service capital. For our Transmission Business, the 2014 target of 85% of in-service capital to our business plan is based on historical performance, our increasing capital work program, and the additional variability caused by external commitments and required approvals. Our 2014 result shows that our company exceeded the target.
- *In-Service Capital – Distribution*
  For our Distribution Business, our company set the 2014 target of 87% of in-service capital to our business plan based on historical performance, with adjustments to reflect that our Distribution Business has more storm-related capital spending than our Transmission Business, as well as the performance of our smart meter and distributed generation capital work programs. Our 2014 result was better than the target.

## REGULATION

Our Transmission and Distribution Businesses are primarily regulated by the OEB and the National Energy Board (NEB).

### Provincial Framework

The *Electricity Act, 1998*, and the *OEB Act* primarily establish the broad legislative framework for Ontario's electricity market. The *Electricity Act, 1998*, sets out the fundamental principles of Ontario's electricity industry, enabling open and nondiscriminatory access to transmission and distribution systems. The *OEB Act* provides the OEB with the jurisdiction and mandate to regulate Ontario's electricity market. The OEB provides a framework for the review of electrical utilities' distribution and transmission revenue requirements so that rates may be established based on historical average or forecasted needs.

The OEB approves both the revenue requirements of and the rates charged by our regulated businesses. The rates are designed to permit our businesses to recover the allowed costs and to earn a formula-based annual rate of return on our common equity by applying a specified equity risk premium to forecasted interest rates on long-term bonds. In addition, the OEB approves rate riders to allow for the recovery or disposition of specific regulatory accounts over specified timeframes.

The OEB approved the use of US GAAP for rate setting and regulatory accounting and reporting by Hydro One Networks' Transmission and Distribution Businesses, as well as by Hydro One Remote Communities, beginning with the year 2012. Up to the year ended December 31, 2014, Hydro One Brampton Networks used Canadian GAAP (Part V) for its distribution rate-setting purposes, and has transitioned to International Financial Reporting Standards (IFRS) beginning on January 1, 2015.

### *Renewed Regulatory Framework*

In December 2010, the OEB initiated a coordinated consultation process for the development of a Renewed Regulatory Framework for Electricity (RRFE). In October 2012, the OEB issued its report *A Renewed Regulatory Framework for Electricity Distributors: A Performance Based Approach*. The report identified three rate-setting models available to provide choices suitable for distributors having varying capital requirements: a fourth-generation Incentive Regulation Mechanism (IRM); a custom rate setting; and an Annual Incentive Rate-setting Index method. The report also provided information on performance measurement, continuous improvement and implementation of the new framework.

In late 2013, the OEB issued its *Report of the Board on Rate-Setting Parameters and Benchmarking under the Renewed Regulatory Framework for Ontario's Electricity Distributors*. This report sets out the OEB's policies and approaches to the rate adjustment parameters for incentive rate setting for electricity distributors and the benchmarking of electricity distributor total cost performance. It also includes the OEB's determination on rate adjustment parameter values for 2014 incentive rate setting, which were used to adjust Hydro One Networks' 2014 distribution rates.

## Federal Framework

While most electricity power lines and facilities in Canada fall within provincial jurisdiction, the NEB has jurisdiction over the construction and operation of international power lines (IPLs). Hydro One Networks owns and operates IPLs with New York, Michigan and Minnesota, and is subject to several NEB-issued certificates and permits. According to the *NEB Act*, any modifications to an IPL require NEB approval.

In 2012, the NEB issued a general order and five amending orders for mandatory electricity reliability standards for certain IPLs in Canada. The orders (i) require Hydro One Networks, as the owner of such lines, to comply with specified North American Electric Reliability Corporation (NERC) and Northeast Power Coordinating Council Inc. (NPCC) reliability standards, (ii) mandate certain reporting requirements, and (iii) contain provisions for IPL owners to seek exemptions. In March 2013, Hydro One Networks submitted to the NEB a declaration of compliance and a request for indefinite exemptions from a list of standards that do not apply to Hydro One Networks or to the IPLs it owns. On November 13, 2013, the NEB granted Hydro One Networks' exemption requests, with some minor exceptions. Hydro One Networks maintains compliance with all applicable NEB orders and seeks approval for all appropriate exemptions, as required.

NERC Critical Infrastructure Protection (Cyber Security) standards are designed to ensure that utilities and other users, owners, and operators of the bulk power system in North America have appropriate procedures in place to protect critical infrastructure from cyber attack. As a result, our physical, electronic and information security processes have been upgraded to meet more stringent security requirements in order to meet NERC's requirements. The NERC Cyber Security standards were updated and revised in 2013, resulting in additional work, effort and associated costs for our company. We anticipate these costs will be spread over a number of years, and expect that they will be recovered in future rates.

## Regulatory Proceedings

The following table summarizes our company's recent major regulatory proceedings:

| Application | Year(s) | Type | Date Filed | Current Status |
|---|---|---|---|---|
| **Electricity Rates – Transmission Rate Applications** | | | | |
| Hydro One Networks | 2013–2014 | Cost-of-service | May 28, 2012 | OEB decision received on January 9, 2014[1] |
| Hydro One Networks | 2015–2016 | Cost-of-service | September 16, 2014 | OEB decision received on December 2, 2014 |
| B2M LP | 2015 | Interim | October 24, 2014 | OEB decision received on December 11, 2014 |
| **Electricity Rates – Distribution Rate Applications** | | | | |
| Hydro One Networks | 2014 | IRM | April 26, 2013 | OEB decision received December 5, 2013 |
| Hydro One Networks | 2015–2019 | Custom | December 19, 2013 | OEB decision anticipated in 2015 Q1 |
| Hydro One Brampton Networks | 2014 | IRM | August 14, 2013 | OEB decision received December 5, 2013 |
| Hydro One Brampton Networks | 2015 | Cost-of-service | April 23, 2014 | OEB decision received on January 15, 2015 |
| Hydro One Remote Communities | 2014 | IRM | October 25, 2013 | OEB decision received March 13, 2014 |
| Hydro One Remote Communities | 2015 | IRM | September 24, 2014 | OEB decision anticipated in 2015 Q1 |
| **Mergers Acquisitions Amalgamations and Divestitures (MAAD) Applications** | | | | |
| Norfolk Power | n/a | Acquisition | April 26, 2013 | OEB decision received July 3, 2014 |
| Woodstock Hydro | n/a | Acquisition | July 9, 2014 | OEB decision anticipated in 2015 |
| Haldimand Hydro | n/a | Acquisition | July 31, 2014 | OEB decision anticipated in 2015 |
| **Leave to Construct Application** | | | | |
| Supply to Essex County Transmission Reinforcement Project | n/a | Section 92 | January 22, 2014 | OEB decision anticipated in 2015 |

[1] OEB Oral Decision for 2013 transmission rates was received on November 8, 2012. On December 6, 2013, we submitted a draft Rate Order for our 2014 transmission rates. On January 9, 2014, the OEB approved the draft Rate Order for 2014 transmission rates as filed.

### *Electricity Rates*

Under the current market structure, low-volume and designated consumers pay electricity rates established through the Regulated Price Plan (RPP). The RPP regulates the commodity price of electricity only and does not affect the rates charged for transmission and distribution of electricity. The OEB sets prices for RPP customers based on both a two-tiered electricity pricing structure with seasonal consumption thresholds, and a three-tiered electricity pricing structure with Time-of-Use (TOU) thresholds. New RPP prices are computed at six-month intervals and are the result of an integrated consideration of rebasing and true-ups. The following is a summary of the two-tiered RPP and the TOU RPP prices for the reporting and comparative periods:

| RPP | Tier Threshold (kWh/month) | | Tier Rates (cents/kWh) | |
|---|---|---|---|---|
| **Effective Date** | **Residential** | **Non-Residential** | **Lower Tier 1** | **Upper Tier 2** |
| November 1, 2012 | 1,000 | 750 | 7.4 | 8.7 |
| May 1, 2013 | 600 | 750 | 7.8 | 9.1 |
| November 1, 2013 | 1,000 | 750 | 8.3 | 9.7 |
| May 1, 2014 | 600 | 750 | 8.6 | 10.1 |
| November 1, 2014 | 1,000 | 750 | 8.8 | 10.3 |

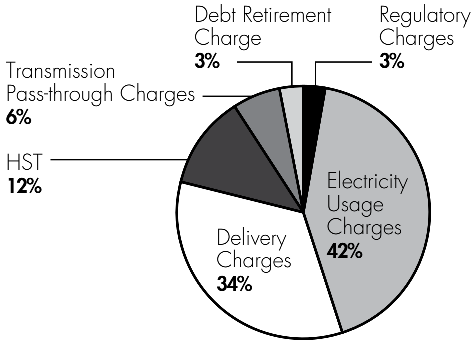
| TOU RPP | Rates (cents/kWh) | | |
|---|---|---|---|
| **Effective Date** | **On Peak** | **Mid Peak** | **Off Peak** |
| November 1, 2012 | 11.8 | 9.9 | 6.3 |
| May 1, 2013 | 12.4 | 10.4 | 6.7 |
| November 1, 2013 | 12.9 | 10.9 | 7.2 |
| May 1, 2014 | 13.5 | 11.2 | 7.5 |
| November 1, 2014 | 14.0 | 11.4 | 7.7 |

In 2010, the OEB issued its final determination to mandate TOU pricing for RPP customers. All eligible Hydro One distribution customers were migrated to TOU billing as of June 2011, except certain customers located in very rural and very sparsely populated areas. An exemption from the requirement to move these customers to TOU pricing was approved until December 31, 2014. On December 1, 2014, Hydro One filed a request with the OEB for a five-year exemption extension for 120,000 hard-to-reach customers and requested permission to migrate an additional 50,000 customers back to two-tiered RPP pricing, as it is not economically feasible to consistently provide actual readings from these meters. An OEB Hearing on this matter has commenced. The OEB issued an interim Decision granting an exemption extension until June 30, 2015 or until a final OEB Decision is issued.

Customers who are not eligible for the RPP and wholesale customers pay the market price for electricity, adjusted for the difference between market prices and prices paid to generators by the Independent Electricity System Operator (IESO) under the *Electricity Act, 1998*. The IESO is responsible for overseeing and operating the wholesale electricity market, as well as ensuring the reliability of the integrated power system.

A typical residential customer consumes 800 kWh of electricity per month. The total bill for a typical residential customer consists of the following: electricity usage charges based on RPP rates; electricity delivery charges based on OEB-approved distribution rates; transmission pass-through charges for the usage of the transmission system; regulatory charges, which include wholesale market costs and rural and remote rate protection amounts; the debt retirement charge; and the harmonized sales tax (HST).

**Composition of Total Bill for Typical Residential Customer**



***Transmission Rates***

Our transmission revenues primarily include our transmission tariff, which is based on the province-wide Uniform Transmission Rates (UTRs) approved by the OEB for all transmitters across Ontario. The OEB rate-setting process is a rigorous judicial process based on evidence, and usually legal cross-examination of witnesses who testify to the volumes of information submitted. The transmission tariff rates are set based on an approved revenue requirement that provides for cost recovery and a return on our common equity.

- **Hydro One Networks**

  In May 2012, we filed a cost-of-service rate application with the OEB for our 2013 and 2014 transmission rates. The application sought OEB approval for revenue requirement increases of approximately 0.6% in 2013 and 9.1% in 2014, or estimated increases of 0% in 2013 and 0.7% in 2014 on a typical residential customer's total bill. In November 2012, we submitted a draft Rate Order, which included revenue requirements of approximately $1,438 million and $1,528 million for 2013 and 2014, respectively. For a typical residential customer, this represents no change from the 2012 OEB-approved rate levels in 2013 and a 5.8% increase in 2014 for the transmission portion of the bill, or no change for 2013 and an increase of 0.5% for 2014 when considering total bill impact. In December 2012, the OEB approved the 2013 and 2014 transmission revenue requirements as requested. The 2013 Ontario UTRs remained unchanged at the 2012 levels.

On December 6, 2013, we submitted a draft Rate Order for our 2014 transmission rates. The 2014 revenue requirement increased to $1,535 million from the originally-approved revenue requirement of $1,528 million, primarily due to changes in the cost of capital parameters for 2014 released by the OEB in November 2013. On January 9, 2014, the OEB approved the draft Rate Order for 2014 transmission rates as filed. For a typical residential customer, this represents an increase of 6.3% in 2014 for the transmission portion of the bill, or 0.5% when considering total bill impact.

On September 16, 2014, Hydro One Networks filed its application, evidence and Settlement Agreement with the OEB in support of proposed transmission revenue requirements to be implemented on January 1, 2015 and January 1, 2016. This application is pursuant to a comprehensive Settlement Agreement between the stakeholders and Hydro One Networks. On January 8, 2015, the OEB approved the Hydro One transmission rates revenue requirement, excluding the B2M LP revenue requirement, for 2015 of $1,477 million and the 2016 revenue requirement of $1,516 million, subject to adjustments for the cost of capital parameters. For a typical residential customer, this represents increases of 0.4% in 2015 and 1.4% in 2016 for the transmission portion of the bill, or increases of 0.03% in 2015 and 0.1% in 2016 when considering total bill impact.

- **B2M LP**

  On October 24, 2014, B2M LP filed an application with the OEB for an interim transmission rate, effective January 1, 2015, seeking approval for a revenue requirement of $41 million in 2015. This rate is equal to the amount included in Hydro One Networks' transmission rates for the Bruce to Milton Line assets, resulting in no change to overall UTRs. The interim Rate Order was approved by the OEB on December 11, 2014. B2M LP was directed to file a full cost-of-service application for final 2015 transmission rates by April 1, 2015.

  A full discussion of the B2M LP transaction can be found in the section "New Developments in 2014 – Business Combinations."

***Distribution Rates***

Our distribution revenues primarily include our distribution tariff, which is based on OEB-approved rates, and the recovery of the cost of purchased power used by our customers. The distribution tariff rates are set based on an approved revenue requirement that provides for cost recovery and a return on our common equity.

- **Hydro One Networks**

  In June 2012, Hydro One Networks filed an IRM application with the OEB for 2013 distribution rates, to be effective January 1, 2013. In December 2012, the OEB issued a final Rate Order, which resulted in an increase in distribution rates of approximately 1.3% in 2013, or 0.4% when considering total bill impact, for a typical residential customer.

  On April 26, 2013, Hydro One Networks filed an IRM application with the OEB for 2014 distribution rates, to be effective January 1, 2014. On September 26, 2013, the OEB issued a partial Decision, approving a rate rider to recover a 2014 revenue requirement of $29 million for operation, maintenance and administration expenses and in-service capital costs of the ADS Project, which will modernize our distribution system. On December 5, 2013, the OEB issued its final Decision, which resulted in an increase of distribution rates of approximately 2.4% in 2014, or 0.85% when considering total bill impact, for a typical residential customer.

  On December 19, 2013, Hydro One Networks filed a 2015–2019 distribution custom rate application with the OEB, for rates effective January 1 of each test year. This application is a five-year custom rate application submitted under the OEB's RRFE, and has been customized to fit Hydro One Networks' specific circumstances, which necessitate significant multi-year investments. We are seeking OEB approval for distribution revenue requirements of $1,415 million for 2015, $1,523 million for 2016, $1,578 million for 2017, $1,615 million for 2018, and $1,660 million for 2019. If the application is approved as filed, the resulting change to the distribution portion of the bill for a typical residential customer will be approximately a 1.4% decrease in 2015, 3.8% increase in 2016, 2.3% increase in 2017, 1.2% increase in 2018, and 2.6% increase in 2019. When considering total bill impact, the resulting change will be approximately a 1.5% decrease in 2015, 1.3% increase in 2016, 0.8% increase in 2017, 0.4% increase in 2018, and 0.9% increase in 2019 for a typical residential customer. A technical conference, a settlement conference and an Oral Hearing took place in the third quarter of 2014. On December 18, 2014, the OEB issued a Decision and interim Rate Order approving the 2014 distribution rates as interim 2015 rates effective January 1, 2015. The OEB also approved the discontinuation of the collection of revenues for the provincially funded portion of renewable generation connection investments of approximately $20 million per year from ratepayers effective December 31, 2014. A final Decision and Order from the OEB is anticipated in the first quarter of 2015.

- **Hydro One Brampton Networks**

  In August 2012, Hydro One Brampton Networks filed an IRM application with the OEB for 2013 distribution rates, to be effective January 1, 2013. In December 2012, the OEB released a Decision that resulted in an increase in distribution rates of approximately 0.3% for 2013, or less than 0.1% on the average total bill for a typical residential customer.

  In August 2013, Hydro One Brampton Networks filed an IRM application with the OEB for 2014 distribution rates, to be effective January 1, 2014. On December 5, 2013, the OEB released a Decision that resulted in a reduction in distribution rates of approximately 2.3% for 2014, or a 0.5% reduction on the average total bill for a typical residential customer.

  On April 23, 2014, Hydro One Brampton Networks filed a cost-of-service application with the OEB for 2015 distribution rates, to be effective January 1, 2015, after being in an IRM application period for three years. The 2015 distribution rate application was seeking the approval of a revenue requirement of approximately $74 million for 2015. In its application, Hydro One Brampton Networks also requested OEB approval for retail transmission service rates and the approval of rate riders to dispose of certain deferral and variance accounts. A partial Settlement Proposal was filed with the OEB and the unsettled issues were heard by the OEB in an Oral Hearing in October 2014. On December 18, 2014, the OEB approved a revenue requirement of $72 million. The reduction of $2 million is mainly attributable to updates to the cost of capital parameters, operation, maintenance and administration, and depreciation expense. For a typical residential customer, this represents an increase of 4.5% in 2015 for the distribution portion of the bill, or 1.6% when considering total bill impact. The increase is reflective of increased rate base and higher operation, maintenance and administration costs since Hydro One Brampton Networks' last cost-of-service application in 2011. On January 15, 2015, the OEB issued its final Rate Order approving the application.

- **Hydro One Remote Communities**

  In September 2012, Hydro One Remote Communities filed a cost-of-service application with the OEB for 2013 distribution rates, seeking approval for a 2013 revenue requirement of $53 million. In August 2013, the OEB issued a final Decision approving a revenue requirement of $51 million and rate increase of approximately 3.45%, with an effective date of May 1, 2013.

  In October 2013, Hydro One Remote Communities filed an IRM application with the OEB for 2014 distribution rates, seeking approval for a rate increase of approximately 0.48%. On March 13, 2014, the OEB approved an increase of approximately 1.7% to basic rates for the distribution and generation of electricity, with an effective date of May 1, 2014. The final rate increase was adjusted by the OEB's updated rate adjustment parameters.

  On September 24, 2014, Hydro One Remote Communities filed an IRM application with the OEB for 2015 rates, seeking approval for increased base rates for the distribution and generation of electricity of 1.7% to be effective May 1, 2015. A final Decision from the OEB is anticipated in the first quarter of 2015.

### *Mergers Acquisitions Amalgamations and Divestitures (MAAD) Applications*

*Norfolk Power Acquisition*

On April 26, 2013, Hydro One filed a MAAD application with the OEB for the approval of the acquisition of Norfolk Power. On July 3, 2014, the OEB issued its Decision and Order granting Hydro One leave to acquire all of the issued and outstanding common shares of Norfolk Power within 18 months from the date of this Decision and Order. In addition, among other items, the OEB's Decision and Order granted Norfolk Power Distribution Inc. (NPDI), a subsidiary of Norfolk Power, leave to transfer its distribution system to Hydro One Networks within 18 months from the date of this Decision and Order, and ordered that NPDI file with the OEB a draft Rate Order that includes a proposed Tariff of Rates and Changes reflecting the OEB's approval of a 1% reduction relative to NPDI's 2012 base electricity delivery rates. As part of the Norfolk Power acquisition agreement, Norfolk Power residential customers received a 1.4% reduction to their monthly distribution delivery rates, and general service customers received a reduction of between 1.4% and 1.6%, depending on their rate class, effective September 8, 2014. In addition, Norfolk Power customers' distribution rates will be frozen for the next five years. Once the NPDI distribution system transfer is completed, the OEB will transfer NPDI's electricity distribution licence and NPDI's Rate Order to Hydro One Networks. A full discussion of the Norfolk Power acquisition can be found in the section "New Developments in 2014 – Business Combinations."

*Woodstock Hydro Acquisition*

On July 9, 2014, Hydro One filed a MAAD application with the OEB for the approval of the acquisition of Woodstock Hydro, which is anticipated to be completed in 2015. A full discussion of the Woodstock Hydro acquisition can be found in the section "New Developments in 2014 – Business Combinations."

*Haldimand Hydro Acquisition*

On July 31, 2014, Hydro One filed a MAAD application with the OEB for the approval of the acquisition of Haldimand Hydro, which is anticipated to be completed in 2015. A full discussion of the Haldimand Hydro acquisition can be found in the section "New Developments in 2014 – Business Combinations."

***Leave to Construct Application***

*Supply to Essex County Transmission Reinforcement Project*

On January 22, 2014, Hydro One Networks submitted a Leave to Construct application to the OEB under Section 92 of the *OEB Act* to construct a new 13-kilometre 230 kV double-circuit transmission line in the Windsor-Essex region. The new transmission line will connect to a proposed transmission station in the Municipality of Leamington and an existing 230 kV transmission line between Chatham and Windsor. Further discussion of the Supply to Essex County Transmission Reinforcement Project can be found in the section "Liquidity and Capital Resources – Investing Activities – Major Transmission Projects."

## Contractual Agreements, Codes and Licences

As a regulated company, we are subject to various contractual arrangements, codes and licences.

***Operating Agreement with the IESO***

The IESO is the system controller of Ontario's electricity system. The IESO manages the reliability of Ontario's power system, forecasts the demand and supply of electricity and co-ordinates emergency preparedness for Ontario's electricity system. The IESO also operates the wholesale electricity market, while ensuring fair competition through market surveillance.

Under the *Electricity Act, 1998*, the IESO is required to enter into agreements with transmitters, giving it the authority to direct the operations of the transmitters' systems. Our operating agreement with the IESO, which sets out the specific responsibilities of both parties relating to the provision of transmission service, extends until December 31, 2019. The distribution portion of Ontario's network is not directed by the IESO and remains subject to the operational control of LDCs in accordance with the regulatory framework.

***Hydro One's Relationships with Other Market Participants***

Generators, LDCs and customers directly connected to our transmission system must enter into agreements with us to ensure reliable connection service in conformity with the Transmission System Code (TSC) established by the OEB.

Some market participants, such as generators and large load customers embedded within distribution systems, are supplied from the wholesale market through lines and facilities that are defined or deemed by the OEB as "distribution" and owned by LDCs. At a minimum, under the *Electricity Act, 1998*, LDCs must provide nondiscriminatory access for eligible generators and customers to the wholesale markets administered by the IESO.

***Electricity Industry Codes***

The OEB has issued and revised several codes that govern the operation of OEB-licensed entities in Ontario. These codes include, but are not limited to, the Affiliate Relationships Code for Electricity Distributors and Transmitters, the Standard Supply Service Code, the TSC, the Distribution System Code (DSC), the Retail Settlement Code, the Electricity Retailer Code of Conduct, the Smart Sub-Metering Code, and the Conservation and Demand Management (CDM) Code. These codes prescribe minimum standards of conduct and standards of service for transmitters, distributors, smart sub-metering providers and/or retailers in the electricity market.

***Electricity Industry Licences***

Our transmission and distribution licences were issued in 2003 and 2004, respectively. The licences for all of our regulated businesses have a 20-year term and incorporate reporting and record-keeping requirements in accordance with the OEB's Electricity Reporting and Record Keeping Requirements. Further discussion of the OEB's Electricity Reporting and Record Keeping Requirements can be found in the section "Regulation – Regulatory Developments – Performance Measurement and Continuous Improvement." Our licences promote the expansion and upgrading of the transmission and distribution systems to accommodate load due to forecasted demand growth over the long term, the connection of renewable energy generation facilities, and implementation of modern technologies to improve reliability, operations and network planning.

## Regulatory Developments

### *Long-Term Energy Plan*

On December 2, 2013, the Province released its updated Long-Term Energy Plan (2013 LTEP), *Achieving Balance*, replacing the 2010 LTEP. The 2013 LTEP sets out the Province's plan of action for the energy sector, including strategies for mitigating increases in electricity rates; continued renewable energy procurement; nuclear refurbishment; enhanced regional planning with respect to energy infrastructure; transmission enhancements; encouraging Aboriginal participation in energy development, transmission and conservation projects; and the expansion of natural gas infrastructure. The plans are guided by the goal of balancing five core principles: cost-effectiveness, reliability, clean energy, community engagement, and CDM. Pursuant to the 2013 LTEP, the Province "will encourage Ontario Power Generation Inc. (OPG) and Hydro One to explore new business lines and opportunities inside and outside Ontario. These opportunities will help leverage existing areas of expertise and grow revenues for the benefit of Ontarians." We will continue to work with the Province to develop business plans and efficiency targets that will reduce costs and result in significant ratepayer savings. The 2013 LTEP encourages conservation and reinforces the policy of considering conservation first in planning processes. Under the 2013 LTEP, conservation will be used to lessen the need for new supply-and-demand response initiatives to meet peak demand requirements.

### *Procurement of New Generation*

The Ontario Power Authority's (OPA) Feed-in Tariff (FIT) Program is designed to procure energy from a wide range of renewable energy sources, including wind, solar, photovoltaic, bio-energy, and water power up to 50 MW. The FIT program is currently divided into three streams: MicroFIT (projects up to 10 kW), Small FIT (projects between 10 kW and 500 kW), and regular FIT (projects greater than 500 kW), all of which may result in connections to our distribution system. Under the FIT program, the OPA has entered into contracts or conditional contracts with generation proponents pursuant to which the OPA will pay a fixed rate for power produced over a specified period of time. We continue to connect projects for which there are firm contracts.

On May 30, 2013, the Province announced that it would make 900 MW of new capacity available between 2013 and 2018 for the Small FIT and MicroFIT programs. The Province has set annual procurement targets, from 2014 onwards, of 150 MW for Small FIT generation and 50 MW for MicroFIT generation. The Province is working with the OPA to develop a competitive process for renewable energy generation projects above 500 kW. The new process will replace the existing large project stream of the FIT program. As at December 31, 2014, our company has connected more than 560 FIT and nearly 12,000 MicroFIT projects, enough energy to power approximately 274,000 homes. These connections represent over 1,000 MW of power.

### *Conservation and Demand Management*

The OEB's CDM guidelines for electricity distributors provide guidance on certain provisions in the CDM Code and the type of evidence that should be filed by distributors in support of applications for OEB-approved CDM programs. The guidelines also provide details on the Lost Revenue Adjustment Mechanism (LRAM) related to CDM programs implemented under the CDM Code. LRAM is the mechanism by which LDCs are compensated for lost revenues associated with their respective load reductions resulting from CDM programs. In addition, the guidelines state that savings associated with TOU pricing are eligible to be counted towards the 2011–2014 CDM targets. The funding for the OPA-contracted Ontario-wide CDM programs is in place until December 31, 2015. This will provide an opportunity for the OPA and LDCs to work collaboratively to strengthen the current framework, and to keep customer programs in place for 2015.

On September 30, 2014, in accordance with the CDM Code, Hydro One Networks and Hydro One Brampton Networks each filed a 2013 Annual CDM Report with the OEB outlining CDM activities, energy and peak demand savings results achieved in 2013, and expectations regarding CDM targets for 2014. Hydro One Networks reported that it expected to reach 95% to 100% of its demand target and 80% of its cumulative energy target by the end of 2014. Hydro One Brampton Networks reported that it expected to reach 60% of its demand target and 100% of its cumulative energy target by the end of 2014.

In March 2014, the Minister of Energy issued parallel directives to the OEB and the OPA, respectively, regarding the new "2015–2020 Conservation Framework." The directives call for the OPA to establish a provincial target of 7 TWh of persistent energy savings to be achieved by 2020 and for all LDCs to enter into an Electricity Conservation Agreement with the OPA by December 31, 2014. Both Hydro One Networks and Hydro One Brampton Networks submitted their signed Electricity Conservation Agreements to the OPA in December 2014. Conservation opportunities will be provided to customers and available to distributors to ensure both end-user usage and utility systems are as efficient as possible.

The OPA allocated targets and budgets to LDCs on October 31, 2014. Hydro One Networks' 2015–2020 CDM savings target is 1,159 GWh, to be achieved with a budget of approximately $322 million. Hydro One Brampton Networks' 2015–2020 CDM savings target is 255.2 GWh, to be achieved with a budget of approximately $67 million. All LDCs must submit CDM Plans indicating how they will achieve their allocated targets by May 1, 2015 using either "Full Cost Recovery" or "Pay-for-Performance" funding models. All CDM programs must be cost-effective to ensure full cost recovery. LDCs may, at any point, resubmit changes to their CDM Plan for approval by the OPA.

On December 19, 2014, the OEB issued its new CDM Guidelines (2015 Guidelines). The 2015 Guidelines are consistent with the Directive the OEB received in March 2014 from the Minister of Energy requiring the OEB to take steps to promote CDM, including amendments to the licences of electricity distributors and the establishment of CDM Requirement guidelines.

***Revenue Decoupling for Distributors***

In November 2012, the OEB initiated a project to coordinate revenue decoupling with the new rate-setting policies proposed in the RRFE. On April 3, 2014, the OEB released a Draft Report of the Board on Rate Design for Electricity Distributors (Rate Design Report) to solicit stakeholder comments. The Rate Design Report presents three proposals to achieve revenue decoupling: (1) a single monthly charge which is the same for all consumers within the rate class; (2) a fixed monthly charge, with the size of the charge to be based on the size of the electrical connection; and (3) a fixed monthly charge where the size of the charge is based on use during peak hours. The OEB expects to issue a report in early 2015 regarding the phase-in implementation of fixed rates.

***Performance Measurement and Continuous Improvement***

On March 5, 2014, the OEB issued its *Report of the Board on Performance Measurement for Electricity Distributors: A Scorecard Approach* (Performance Report) under its RRFE. The Performance Report sets out the OEB's policies on the measures that will be used by the OEB to assess a distributor's effectiveness and improvement in achieving customer focus, operational effectiveness, public policy responsiveness, and financial performance to the benefit of existing and future customers, as well as the form and implementation of a performance monitoring tool – a Scorecard.

On July 15, 2014, the OEB issued a Staff Discussion Paper "Electricity Distribution System Reliability Measures and Targets" to establish specific performance targets for the existing system reliability measures, to develop customer-specific reliability measures and to address the monitoring of momentary outages.

***Regional Plans***

In August 2013, the OEB amended the TSC and DSC to implement a more formal and structured approach to regional planning in Ontario. The new regional planning approach consists of two main processes: Regional Infrastructure Planning (RIP) to be led by transmitters, and Integrated Regional Resource Planning (IRRP) to be led by the OPA. The RIP process focuses mainly on wires planning, both transmission and distribution, and the IRRP process focuses on resources planning (e.g. generation, CDM) and the integration of resources with wires planning. The development of regional plans will involve close coordination of the two processes and active participation by the OPA, transmitters, distributors and other applicable agencies such as the IESO.

The regional plans are intended to support investments brought forward in transmitter and distributor rate submissions and transmitter Leave to Construct applications. Regional plans are to be reviewed or developed at least every five years. The OEB expects the first cycle of regional plans for all regions in Ontario to be completed in the next three to four years. For regional planning purposes, the province has been subdivided into 21 regions. Hydro One is the lead transmitter responsible for the RIP process for 19 of the 21 regions. Planning activities are underway and the regional plans are expected to be completed between 2015 and 2017.

## NEW DEVELOPMENTS IN 2014

### Premier's Advisory Council on Government Assets

On April 11, 2014, the Province announced the appointment of the Premier's Advisory Council on Government Assets (Council) to provide the Province with recommendations designed to maximize the value of certain provincially owned assets, one of which being our company. The objective of the review is to advise the Province on how to best maximize value from its assets. The Council's Terms of Reference provided guidance indicating that it would give preference to continued ownership of government assets, but would consider mergers, acquisitions, divestments if there is a strong business case, and would enhance value to taxpayers of the Province.

The interim report released on November 19, 2014, noted our company's Transmission Business is a well-run entity with some opportunities to deliver savings on the operating side and on capital expenditures, and recommended that the Province maintain its ownership of our company's Transmission Business. The interim report noted that Ontario's local electricity distribution system is an unnecessarily cluttered and fragmented system with too many entities, some of which are highly inefficient, unable to adapt to the changing environment and lack capital to modernize or consolidate.

Consequently, the Council recommended that our company's Transmission and Distribution Businesses be separated, and that Hydro One Networks' distribution business and Hydro One Brampton Networks be used to spur industry consolidation. The Council also recommended that the Province reduce its equity interest in our company's Distribution Business by bringing in private sector investment.

The Province has now asked the Council to build on its work by entering phase two, which includes the Council receiving and discussing written ideas related to encouraging consolidation and to Hydro One Brampton Networks and Hydro One Networks' distribution business, and finalizing its recommendations to the Province. We understand that the Province is specifically considering the sale of Hydro One Brampton Networks, as well as the distribution business of Hydro One Networks.

**Business Combinations**

***B2M LP***

In 2012, we entered into an agreement with the Chippewas of Nawash First Nation and the Chippewas of Saugeen First Nation, collectively referred to as the SON, where a noncontrolling equity interest in B2M LP would be made available for purchase at fair value by the SON. B2M LP was formed by Hydro One in 2013 to hold most of the transmission lines and a licence to use the related land. These assets are associated with our Bruce to Milton Transmission Reinforcement Project, an electricity transmission line (Bruce to Milton Line) in southwestern Ontario, from the Bruce Power facility in Kincardine to our Milton Switching Station in the Town of Milton. Hydro One Networks will maintain and operate the Bruce to Milton Line in accordance with an operation and management services agreement. In November 2013, the OEB issued a Decision and Order granting B2M LP a transmission licence and granting Hydro One Networks leave to sell the relevant Bruce to Milton Line transmission assets to B2M LP.

On December 16, 2014, the relevant Bruce to Milton Line transmission assets totalling $526 million were transferred from Hydro One Networks to B2M LP. This was financed by 60% debt ($316 million) and 40% equity ($210 million). On December 17, 2014, the SON acquired a 34.2% equity interest in B2M LP for consideration of $72 million, representing the fair value of the equity interest acquired. B2M LP is now operational.

Details of B2M LP's transmission rate application can be found in the section "Regulation – Regulatory Proceedings – Transmission Rates."

***Norfolk Power Acquisition***

On August 29, 2014, our company completed the acquisition of the outstanding shares of Norfolk Power from The Corporation of Norfolk County. Norfolk Power is a holding company that owns NPDI, a local electricity distribution company, and Norfolk Energy Inc., a non-rate regulated energy services company, located in southwestern Ontario. The selection of our company as successful bidder followed a comprehensive, competitive sales process initiated by Norfolk Power.

The total purchase price for Norfolk Power, net of the long-term debt assumed and adjusted for preliminary working capital and other closing adjustments, is approximately $68 million. The determination of the fair values of assets acquired and liabilities assumed has been based upon management's estimates and certain assumptions with respect to the fair values of the assets acquired and liabilities assumed. We have also determined the preliminary purchase price adjustments based on agreed working capital and other balances at the acquisition date. The resulting preliminary goodwill of approximately $40 million arising from the Norfolk Power acquisition consists largely of the synergies and economies of scale expected from combining the operations of Hydro One and Norfolk Power. We intend to complete the determination of the final purchase price adjustments during the first half of 2015.

Norfolk Power contributed revenues of $18 million and net income of less than $1 million to our company's consolidated financial results for the year ended December 31, 2014.

Details of the Norfolk Power MAAD application can be found in the section "Regulation – Regulatory Proceedings – MAAD Applications."

***Woodstock Hydro Purchase Agreement***

On May 21, 2014, we reached an agreement with the City of Woodstock to acquire 100% of the common shares of Woodstock Hydro for approximately $29 million, subject to final closing adjustments. Woodstock Hydro is an urban electricity distribution company located in southwestern Ontario. The transaction is the result of extensive discussions between Hydro One and the City of Woodstock which involved consideration of economic development opportunities and other benefits resulting from the sale of Woodstock Hydro. The acquisition is pending a regulatory decision from the OEB and is anticipated to be completed in 2015.

Details of the Woodstock Hydro MAAD application can be found in the section "Regulation – Regulatory Proceedings – MAAD Applications."

***Haldimand Hydro Purchase Agreement***

On June 10, 2014, we reached an agreement with Haldimand County to acquire 100% of the common shares of Haldimand Hydro for approximately $65 million, subject to final closing adjustments. Haldimand Hydro is an electricity distribution and telecom company located in southwestern Ontario. The transaction is the result of extensive discussions between Hydro One and Haldimand County. The acquisition is pending a regulatory decision from the OEB and is anticipated to be completed in 2015.

Details of the Haldimand Hydro MAAD application can be found in the section "Regulation – Regulatory Proceedings – MAAD Applications."

**Other**

***Environment Canada Regulations***

In April 2014, Environment Canada issued Canada Gazette II, which included amendments to the existing polychlorinated biphenyl (PCB) regulations, including the extension of the end-of-use deadline beyond 2014 for equipment containing certain concentrations of PCBs, with an effective date of January 1, 2015. The amendments extend the end-of-use deadline for our company's PCBs in concentrations of 500 parts per million or more from December 31, 2014 to December 31, 2025. As a result of an annual review of environmental liabilities, our company recorded a revaluation adjustment in 2014 to reduce our environmental liabilities by $20 million. This adjustment included the impact of the PCB regulations amendments.

***Electricity Sector Pension Plans***

On August 1, 2014, a Report on the Sustainability of Electricity Sector Pension Plans (Sustainability Report) was released by Jim Leech, Special Advisor to the Minister of Finance for Ontario. As part of its fiscal 2013 budget, the Province announced its intention to establish a government-led industry Working Group (Working Group) to address pension issues associated with the single-employer pension plans at Hydro One, OPG, IESO and the Electrical Safety Authority (ESA). This Sustainability Report is intended to inform and help frame the efforts of the Working Group. The Sustainability Report noted that it is critically important for any pension plan for public-sector workers to be sustainable so that the retirement income of retirees and active members is secure. Management will continue to monitor the initiatives of this Working Group and potential impacts of any recommendations for Hydro One accordingly. To ensure the sustainability of the Hydro One Pension Plan, our company has implemented a gradual increase in the amount of employee contributions to the plan.

***Outsourcing Agreements***

The current agreement with Inergi LP (Inergi), an affiliate of Capgemini Canada Inc., expires on February 28, 2015. On November 28, 2014, we entered into an agreement with Inergi (Inergi Agreement), the service provider selected through a competitive procurement process which began in 2013, for second-generation back office and IT outsourcing services for a term of 58 months, commencing March 1, 2015 to December 31, 2019. Under the agreement, Inergi will provide us with settlements, source to pay services, pay operations services, information technology and finance and accounting services.

Coincident with the conclusion of negotiations on the Inergi Agreement, we reached agreement with Inergi to provide us with second-generation customer service operations outsourcing services for a fixed period of three years beginning March 1, 2015 to February 28, 2018.

In its re-tendering initiative, Hydro One set out four objectives for its new outsourcing agreements: continually improved value for money; providing operational flexibility; delivery of services to reflect global best practices; and robust, effective performance management and governance. This agreement achieves those objectives and supports our company's key strategic objectives, while allowing the Company to focus on its core activities of maintaining, planning and operating our Transmission and Distribution Businesses and delivering excellent service to our customers. The agreement will see cost savings on annual base fees while at the same time providing service delivery improvements, as we continue our ongoing efforts to reduce costs and drive more efficiency in our business.

In September 2014, we entered into an agreement with Brookfield Johnson Controls Canada LP (Brookfield), a service provider selected through a competitive procurement process, for facilities management services for a term of ten years, effective January 1, 2015 to December 31, 2024, with the option to renew for an additional term of three years. Over the term of the contract we will transition the facilities management of all of our facilities. Under the agreement, Brookfield will provide us with facilities management and execution of certain capital projects as deemed required by our company. The Brookfield Agreement has a value of up to approximately $658 million over the ten-year term of the agreement, including the facilities management portion of the contract, plus a variable amount of capital work depending on the needs that may arise as determined by our company, with no minimum capital work guarantee.

Details of our contractual obligations under our outsourcing agreements can be found in the section "Liquidity and Capital Resources – Summary of Contractual Obligations and Other Commercial Commitments."

## ANNUAL RESULTS OF OPERATIONS

| *Year ended December 31 (millions of Canadian dollars)* | **2014** | 2013 | $ Change | % Change |
|---|---|---|---|---|
| Revenues | **6,548** | 6,074 | 474 | 8 |
| Purchased power | **3,419** | 3,020 | 399 | 13 |
| Operation, maintenance and administration | **1,192** | 1,106 | 86 | 8 |
| Depreciation and amortization | **722** | 676 | 46 | 7 |
| | **5,333** | 4,802 | 531 | 11 |
| **Income before financing charges and provision for payments in lieu of corporate income taxes** | **1,215** | 1,272 | (57) | (4) |
| Financing charges | **379** | 360 | 19 | 5 |
| **Income before provision for payments in lieu of corporate income taxes** | **836** | 912 | (76) | (8) |
| Provision for payments in lieu of corporate income taxes | **89** | 109 | (20) | (18) |
| **Net income** | **747** | 803 | (56) | (7) |
| Net income (loss) attributable to noncontrolling interest | **(2)** | – | (2) | (100) |
| **Net income attributable to Shareholder of Hydro One** | **749** | 803 | (54) | (7) |

### Revenues

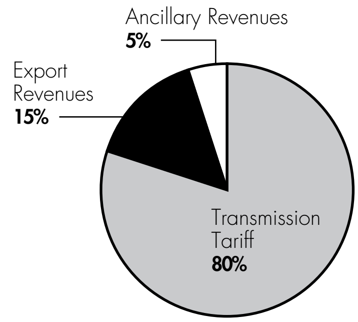
| *Year ended December 31 (millions of Canadian dollars)* | **2014** | 2013 | $ Change | % Change |
|---|---|---|---|---|
| Transmission | **1,588** | 1,529 | 59 | 4 |
| Distribution | **4,903** | 4,484 | 419 | 9 |
| Other | **57** | 61 | (4) | (7) |
| | **6,548** | 6,074 | 474 | 8 |
| Average annual Ontario 60-minute peak demand (MW)[1] | **20,596** | 21,493 | (897) | (4) |
| Distribution – units distributed to our customers (TWh)[1] | **29.8** | 29.8 | – | – |

[1] System-related statistics are preliminary.

### *Transmission*

Transmission revenues primarily consist of our transmission tariff, which is based on the monthly peak electricity demand across our high-voltage network. The tariff is designed to recover revenues necessary to support a transmission system with sufficient capacity to accommodate the maximum expected demand. Demand is primarily influenced by weather and economic conditions. Transmission revenues also include export revenues associated with transmitting excess generation to surrounding markets, ancillary revenues primarily attributable to maintenance services provided to generators, and secondary use of our land rights.

**Composition of 2014 Transmission Revenues**



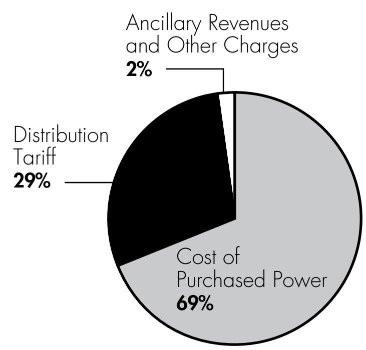
Our 2014 transmission revenues increased by $59 million, or 4%, compared to 2013. The components of the increase include the following:

- $90 million increase due to new transmission rates effective January 1, 2014 approved by the OEB in January 2014; Ê
- $42 million increase due to the OEB's approval of increased export service revenues in recognition of higher electricity exports to other jurisdictions and the disposition of certain OEB-approved transmission regulatory accounts;
- $45 million decrease due to lower average Ontario 60-minute peak demand in 2014. The lower electricity demand in 2014 was mainly due to milder weather in the summer and fall of 2014, compared to 2013; and
- $28 million decrease due to ancillary transmission revenues, primarily associated with OEB-approved regulatory accounts.

### *Distribution*

Distribution revenues include our distribution tariff and amounts to recover the cost of purchased power used by the customers of our Distribution Business. Accordingly, our distribution revenues are influenced by the amount of electricity we distribute, the cost of purchased power and our distribution tariff rates. Distribution revenues also include minor ancillary distribution service revenues, such as fees related to the joint use of our distribution poles by the telecommunications and cable television industries, as well as miscellaneous charges such as charges for late payments.

**Composition of 2014 Distribution Revenues**



Our 2014 distribution revenues increased by $419 million, or 9%, compared to 2013. The components of the increase include the following:

- $399 million increase due to the recovery of higher purchased power costs, as described below under "Purchased Power;" Ê
- $12 million increase due to new distribution rates effective January 1, 2014 approved by the OEB in December 2013; and
- $8 million increase due to ancillary distribution revenues, primarily associated with OEB-approved regulatory accounts.

## Purchased Power

Purchased power costs are incurred by our Distribution Business and represent the cost of purchased electricity delivered to customers within our distribution service territory. These costs comprise the wholesale commodity cost of energy, the IESO wholesale market service charges, and transmission charges levied by the IESO. The commodity cost of energy is based on the OEB's RPP or the market price for electricity. A discussion of the electricity rates can be found in the section "Regulation – Regulatory Proceedings – Electricity Rates."

Our purchased power costs increased by $399 million, or 13%, in 2014, compared to 2013. The components of the increase include the following:

- $291 million increase resulting from higher purchased power costs for customers who are not eligible for the RPP;
- $78 million increase resulting from the impact of changes in the OEB's RPP rates for residential and other eligible customers;

- $26 million increase resulting from the OEB transmission rate decision effective January 1, 2014;
- $10 million increase due to wholesale market service charges levied by the IESO;
- $4 million increase resulting from the IESO's Smart Metering Entity charge effective May 1, 2013; and
- $10 million decrease due to lower energy consumption in 2014, mainly resulting from a milder summer and a warmer fall in 2014.

### Operation, Maintenance and Administration

Our operation, maintenance and administration costs consist of labour, which is substantially established under collective bargaining agreements, and materials, equipment and purchased services, which are subject to public tenders. Key enablers of the successful implementation of our work programs are our human and material resourcing strategies. Our human resources strategy is focused on hiring through our apprenticeship program and our association with universities, colleges and our unions, as well as skills development and retention, including earlier identification and more rapid development of staff who demonstrate management potential. Our skilled labour pool primarily consists of line, forestry, construction and stations staff who live and work across the province.

Our operation, maintenance and administration expenditures include work program costs and costs to support the operation and maintenance of the transmission and distribution systems. Also included in these costs are payments in lieu of property taxes related to our transmission and distribution lines, stations and buildings. Our transmission operation, maintenance and administration costs are incurred to sustain our high-voltage transmission stations, lines and rights-of-way, and include preventive and corrective maintenance costs related to our power equipment, overhead transmission lines, transmission station sites, and brush control. Our distribution operation, maintenance and administration costs are required to maintain our low-voltage distribution system, and include costs related to distribution line clearing and brush control, line maintenance and repair, as well as land assessment and remediation (LAR). Our company continues to focus on managing its costs, while continuing to complete our planned work programs for both our Transmission and Distribution Businesses.

| *Year ended December 31 (millions of Canadian dollars)* | **2014** | 2013 | $ Change | % Change |
|---|---|---|---|---|
| Transmission | **394** | 375 | 19 | 5 |
| Distribution | **742** | 672 | 70 | 10 |
| Other | **56** | 59 | (3) | (5) |
| | **1,192** | 1,106 | 86 | 8 |

#### *Transmission*

Our 2014 transmission operation, maintenance and administration costs increased by $19 million, or 5%, compared to 2013.

Our 2014 transmission work program costs were $240 million, compared to $237 million in 2013, an increase of $3 million. The increase is mainly due to the following:

- increased forestry expenditures related to brush control and line clearing on our transmission rights-of-way;
- a higher volume of corrective and preventive maintenance on power equipment and overhead lines; and
- higher transmission site facilities maintenance requirements.

Our 2014 transmission support costs were $154 million, compared to $138 million in 2013, an increase of $16 million. The increase is mainly due to the following:

- a one-time reduction to our provision for payments in lieu of property taxes in 2013 related to transmission stations for the years 1999 to 2012, inclusive, following the finalization of the related regulations and receipt of a final assessment of our property tax returns;
- partially offset by lower expenditures due to the recovery of insurance proceeds for the 2013 floods at our Richview and Manby transmission stations; and
- increased attribution of overheads to capital project expenditures in 2014.

***Distribution***

Our 2014 distribution operation, maintenance and administration costs increased by $70 million, or 10%, compared to 2013.

Our 2014 distribution work program costs were $599 million, compared to $515 million in 2013, an increase of $84 million. The increase is mainly due to the following:

- our customer service recovery initiatives and the increase in our bad debt expense, resulting from higher electricity consumption due to a substantially colder than normal winter, combined with higher electricity prices and the suspension of certain collection tools and efforts during several months in 2014. We resumed some of our collection tools and efforts in September 2014.

Our 2014 distribution support costs were $143 million, compared to $157 million in 2013, a decrease of $14 million. The decrease is mainly due to the following:

- decreased expenditures in 2014 related to CIS, as it was placed in-service in May 2013.

**Depreciation and Amortization**

Our 2014 depreciation and amortization costs increased by $46 million, or 7%, compared to 2013. This increase was primarily attributable to higher property, plant and equipment depreciation expense in 2014, mainly related to the growth in capital assets as we continue to place new assets in-service, consistent with our ongoing capital work program.

**Financing Charges**

Our 2014 financing charges increased by $19 million, or 5%, compared to 2013. The increase is primarily due to the following:

- an increase in interest expense on our long-term debt due to a higher average level of debt;
- partially offset by a lower average interest rate.

**Provision for Payments in Lieu of Corporate Income Taxes**

The provision for payments in lieu of corporate income taxes (PILs) decreased by $20 million, or 18%, to $89 million in 2014, compared to 2013. The decrease is primarily due to lower levels of pre-tax income in 2014 compared to 2013.

**Net Income**

Our 2014 net income attributable to the Shareholder of Hydro One decreased by $54 million, or 7%, to $749 million, compared to 2013. The decrease is primarily due to the following:

- $70 million increase in our 2014 distribution operation, maintenance and administration costs, mainly due to our customer service recovery initiatives and the increase in our bad debt expense, resulting from higher electricity consumption due to a substantially colder than normal winter, combined with higher electricity prices and the suspension of certain collection tools and efforts during several months in 2014;
- $46 million increase in our 2014 depreciation and amortization costs, mainly due to higher property, plant and equipment depreciation expense in 2014, related to the growth in capital assets as we continue to place new assets in-service, consistent with our ongoing capital work program; and
- partially offset by a $59 million increase in our 2014 transmission revenues, mainly due to new OEB-approved 2014 transmission rates.

## QUARTERLY RESULTS OF OPERATIONS

The following table sets forth unaudited quarterly information for each of the eight quarters, from the quarter ended March 31, 2013 through to December 31, 2014. This information has been derived from our unaudited interim Consolidated Financial Statements and our audited annual Consolidated Financial Statements, which include all adjustments, consisting only of normal recurring adjustments, necessary for fair presentation of our financial position and results of operations for those periods. These operating results are not necessarily indicative of results for any future period and should not be relied upon to predict our future performance.

| *(millions of Canadian dollars)* | **2014** | | | | 2013 | | | |
|---|---|---|---|---|---|---|---|---|
| *Quarter ended* | **Dec. 31** | **Sept. 30** | **Jun. 30** | **Mar. 31** | Dec. 31 | Sept. 30 | Jun. 30 | Mar. 31 |
| Total revenue | **1,662** | **1,556** | **1,566** | **1,764** | 1,557 | 1,542 | 1,403 | 1,572 |
| Net income attributable to Shareholder of Hydro One | **221** | **173** | **115** | **240** | 160 | 218 | 168 | 257 |
| Net income to common Shareholder of Hydro One | **216** | **169** | **110** | **236** | 155 | 214 | 163 | 253 |

Electricity demand generally follows normal weather-related variations, and consequently, our electricity-related revenues and profit, all other things being equal, would tend to be higher in the first and third quarters than in the second and fourth quarters.

### 2014 Fourth Quarter Results of Operations

| *Three months ended December 31 (millions of Canadian dollars)* | **2014** | 2013 | $ Change | % Change |
|---|---|---|---|---|
| Revenues | **1,662** | 1,557 | 105 | 7 |
| Purchased power | **893** | 794 | 99 | 12 |
| Operation, maintenance and administration | **247** | 286 | (39) | (14) |
| Depreciation and amortization | **190** | 184 | 6 | 3 |
| | **1,330** | 1,264 | 66 | 5 |
| **Income before financing charges and provision for payments in lieu of corporate income taxes** | **332** | 293 | 39 | 13 |
| Financing charges | **98** | 93 | 5 | 5 |
| **Income before provision for payments in lieu of corporate income taxes** | **234** | 200 | 34 | 17 |
| Provision for payments in lieu of corporate income taxes | **15** | 40 | (25) | (63) |
| **Net income** | **219** | 160 | 59 | 37 |
| Net income (loss) attributable to noncontrolling interest | **(2)** | – | (2) | (100) |
| **Net income attributable to Shareholder of Hydro One** | **221** | 160 | 61 | 38 |

Our total revenues for the three months ended December 31, 2014 were $1,662 million, compared to $1,557 million during the same period in 2013, an increase of $105 million or 7%. The increase is mainly due to the following:

- the recovery of higher purchased power costs;
- new transmission and distribution rates effective January 1, 2014;
- the OEB's approval of increased export service revenues in recognition of higher electricity exports to other jurisdictions and the disposition of certain OEB-approved transmission regulatory accounts;

- partially offset by lower average Ontario 60-minute peak demand and energy consumption in the fourth quarter of 2014, mainly due to milder weather in the fall of 2014; and
- lower ancillary revenues, primarily associated with OEB-approved regulatory accounts.

Our purchased power costs for the three months ended December 31, 2014 were $893 million, compared to $794 million during the same period in 2013, an increase of $99 million or 12%. The increase is mainly due to the following:

- higher purchased power costs for customers who are not eligible for the RPP;
- partially offset by lower energy consumption in the fourth quarter of 2014, mainly due to milder weather in the fall of 2014;
- wholesale market service charges levied by the IESO; and
- OEB transmission rate decision effective January 1, 2014.

Our operation, maintenance and administration costs for the three months ended December 31, 2014 were $247 million, compared to $286 million during the same period in 2013, a decrease of $39 million or 14%. The decrease is mainly due to the following:

- decreased distribution operation, maintenance and administration costs, primarily due to lower storm response expenditures as a result of lower storm activity in 2014, compared to 2013; and
- decreased expenditures related to brush control and distribution line maintenance work.

Our depreciation and amortization costs for the three months ended December 31, 2014 were $190 million, compared to $184 million during the same period in 2013, an increase of $6 million or 3%. The increase is mainly due to higher property, plant and equipment depreciation expense in 2014, mainly related to the growth in capital assets as we continue to place new assets in-service, consistent with our ongoing capital work program.

Our financing charges for the three months ended December 31, 2014 were $98 million, compared to $93 million during the same period in 2013, an increase of $5 million or 5%. The increase is mainly due to the following:

- an increase in interest expense on our long-term debt due to a higher average level of debt; and
- partially offset by a lower average interest rate.

Our provision for PILs for the three months ended December 31, 2014 was $15 million, compared to $40 million during the same period in 2013, a decrease of $25 million or 63%. The decrease is due to the following:

- changes in net temporary differences, such as capital cost allowance in excess of depreciation, deductions for pension payments made in excess of amounts expensed for accounting purposes, and interest deducted for tax purposes in excess of interest expensed for accounting purposes; and
- partially offset by higher pre-tax income for the three months ended December 31, 2014 compared to the same period in 2013.

Net income attributable to the Shareholder of Hydro One for the three months ended December 31, 2014 was $221 million, compared to $160 million during the same period in 2013, an increase of $61 million or 38%. The increase is mainly due to the following:

- decreased distribution operation, maintenance and administration costs, primarily due to lower storm response expenditures as a result of lower storm activity in 2014, compared to 2013, and decreased expenditures related to brush control and distribution line maintenance work;
- a decrease in our provision for PILs, primarily due to changes in net temporary differences; and
- an increase in our 2014 transmission revenues, mainly due to new OEB-approved 2014 transmission rates.

## LIQUIDITY AND CAPITAL RESOURCES

Our primary sources of liquidity and capital resources are funds generated from our operations, debt capital market borrowings and bank financing. These resources will be used to satisfy our capital resource requirements, which continue to include our capital expenditures, servicing and repayment of our debt, and dividends.

### Summary of Sources and Uses of Cash

| *Year ended December 31 (millions of Canadian dollars)* | **2014** | 2013 |
|---|---|---|
| **Operating activities** | **1,256** | 1,404 |
| **Financing activities** | | |
| Long-term debt issued | **628** | 1,185 |
| Long-term debt retired | **(776)** | (600) |
| Amount contributed by noncontrolling interest | **72** | – |
| Dividends paid | **(287)** | (218) |
| **Investing activities** | | |
| Capital expenditures | **(1,504)** | (1,387) |
| Acquisition of Norfolk Power | **(66)** | – |
| Proceeds from investment | **250** | – |
| **Other financing and investing activities** | **(38)** | (14) |
| **Net change in cash and cash equivalents** | **(465)** | 370 |

### Operating Activities

Net cash from operating activities decreased by $148 million to $1,256 million in 2014, compared to 2013. The decrease was primarily due to the following:

- lower 2014 net income, compared to 2013;
- changes in accrual balances, mainly related to timing of capital projects;
- changes in regulatory accounts, including the retail settlement and external revenue variance accounts; and
- partially offset by higher property, plant and equipment depreciation expense in 2014, mainly related to the growth in capital assets as we continue to place new assets in-service, consistent with our ongoing capital work program.

### Financing Activities

Short-term liquidity is provided through funds from operations, our Commercial Paper Program, under which we are authorized to issue up to $1,000 million in short-term notes with a term to maturity of less than 365 days, and our revolving credit facility.

Our Commercial Paper Program is supported by our $1,500 million committed revolving credit facility with a syndicate of banks, which matures in June 2019. The short-term liquidity under this program and anticipated levels of funds from operations should be sufficient to fund our normal operating requirements.

At December 31, 2014, we had $8,923 million in long-term debt outstanding, including the current portion. Our notes and debentures mature between 2015 and 2064. Long-term financing is provided by our access to the debt markets, primarily through our Medium-Term Note (MTN) Program. The maximum authorized principal amount of medium-term notes issuable under this program is $3,000 million. At December 31, 2014, $1,187 million remained available until October 2015.

We rely on debt financing through our MTN Program and our Commercial Paper Program to repay our existing indebtedness and fund a portion of our capital expenditures. The credit ratings assigned to our debt securities by external rating agencies are important to our ability to raise capital and funding to support our business operations. Maintaining strong credit ratings allows us to access capital markets on competitive terms. A material downgrade of our credit ratings would likely increase our cost of funding significantly, and our ability to access funding and capital through the capital markets could be reduced. Our corporate credit ratings from approved rating organizations are as follows:

| | Rating | |
|---|---|---|
| **Rating Agency** | **Short-term Debt** | **Long-term Debt** |
| DBRS Limited | R-1 (middle) | A (high) |
| Moody's Investors Service Inc. | Prime-1 | A1 |
| Standard & Poor's Rating Services Inc. (S&P) | A-1 | A+ |

We have the customary covenants normally associated with long-term debt. Among other things, our long-term debt covenants limit our permissible debt as a percentage of our total capitalization, limit our ability to sell assets, and impose a negative pledge provision, subject to customary exceptions. The credit agreements related to our credit facilities have no material adverse change clauses that could trigger default. However, the credit agreements require that we provide notice to the lenders of any material adverse change within three business days of the occurrence. The agreements also provide limitations that debt cannot exceed 75% of total capitalization and that third party debt issued by our subsidiaries cannot exceed 10% of the total book value of our assets. We were in compliance with all of these covenants and limitations as at December 31, 2014.

In 2014, we issued $628 million of long-term debt under our MTN Program, compared to $1,185 million of long-term debt issued in 2013. In 2014, we also repaid $750 million in maturing long-term debt, compared to $600 million of long-term debt repaid in 2013. In addition, long-term debt totalling $26 million assumed on the Norfolk Power acquisition was repaid in September 2014. We had no short-term notes outstanding at December 31, 2014 or December 31, 2013.

Common share dividends are declared at the sole discretion of our Board of Directors, and are recommended by management based on results of operations, maintenance of the deemed regulatory capital structure, financial condition, cash requirements, and other relevant factors, such as industry practice and Shareholder expectations. Common share dividends pertaining to our quarterly financial results are generally declared and paid in the following quarter.

During 2014, we paid dividends to the Province in the amount of $287 million, consisting of $269 million in common share dividends and $18 million in preferred share dividends, compared to dividends of $218 million, consisting of $200 million of common share dividends and $18 million of preferred share dividends, paid to the Province in 2013.

Our objectives with respect to our capital structure are to maintain effective access to capital on a long-term basis at reasonable rates and to deliver appropriate financial returns to our Shareholder.

### Investing Activities

During 2014, we continued to focus on making important investments in our transmission and distribution systems to address our aging power system infrastructure, improve our systems' reliability and performance, and improve service to our customers. We made capital investments totalling $1,530 million in 2014, compared to $1,394 million of capital investments in 2013, and have placed $1,574 million of new assets in-service in 2014, compared to $1,491 million of new assets placed in-service in 2013.

Capital investments consist of cash capital expenditures and related accruals. Capital investments primarily relate to sustaining, enhancing and reinforcing our transmission and distribution infrastructure.

| *Year ended December 31 (millions of Canadian dollars)* | **2014** | 2013 | $ Change | % Change |
|---|---|---|---|---|
| Transmission | **845** | 714 | 131 | 18 |
| Distribution | **680** | 673 | 7 | 1 |
| Other | **5** | 7 | (2) | (29) |
| **Total capital investments** | **1,530** | 1,394 | 136 | 10 |

***Transmission Capital Investments***

Our 2014 transmission capital investments were $845 million, compared to $714 million in 2013, an increase of $131 million or 18%, primarily due to sustainment programs to address our aging infrastructure. Given the aging of our infrastructure, we have ongoing investment plans which are designed to reliably power our economy and to support the innovation that can be expected over the next decade.

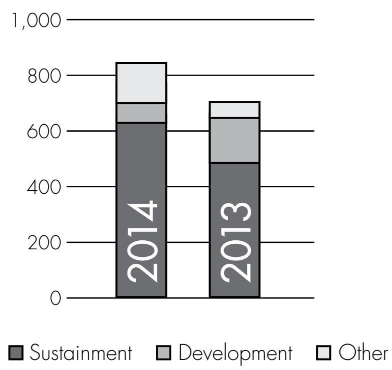
The following table presents the main components of our transmission capital investments during 2014 and 2013.

| *Year ended December 31 (millions of Canadian dollars)* | **2014** | 2013 | $ Change | % Change |
|---|---|---|---|---|
| Sustainment | **625** | 481 | 144 | 30 |
| Development | **132** | 170 | (38) | (22) |
| Other | **88** | 63 | 25 | 40 |
| **Total transmission capital investments** | **845** | 714 | 131 | 18 |

*Sustainment Transmission Capital Investments*

Our current transmission sustainment programs include protection and control systems, wood poles, breakers and high-voltage instrument transformer replacements. Our 2014 transmission sustainment capital investments were $625 million, compared to $481 million in 2013, an increase of $144 million or 30%. The increase was mainly due to the following:

**Transmission Capital Investments**
*(millions of dollars)*



- several system re-investments, including the Gerrard and Timmins transmission stations and new type of breakers at our Bruce Transmission Station, which progressed in 2014, as well as completed projects, such as the Pinard Transmission Station Breakers and the Wallaceburg Transmission Station;
- several replacements of end-of-life power transformers at our Pembroke Transmission Station in eastern Ontario, and our Hanover, Allanburg, and Elmira transmission stations in southwestern Ontario, as well as the emergency replacement of a unit at the Trafalgar Transmission Station;
- increased work within our station and lines equipment replacement and refurbishment projects and programs, including our investment to address the condition of the conductors on the 170 kilometre 230 kV circuit from the Chats Falls Switching Station to the Havelock Transmission Station in southeastern Ontario, and increased work on overhead lines wood pole structure replacements; and
- increased volume of replacements related to addressing aging protection and control equipment.

*Development Transmission Capital Investments*

Our current transmission development projects include transmission system upgrades, local area supply projects, and inter-area network projects. These investments will expand and reinforce power reliability for electricity customers throughout the province, including our residential and industrial customers. Our 2014 development capital investments to expand and reinforce our transmission system were $132 million, compared to $170 million in 2013, a decrease of $38 million or 22%. The decrease was mainly due to the following:

- the successful completion of our Sundusk and Summerhaven Switching Stations upgrades in 2013 to incorporate renewable energy into our transmission system; and
- reduced expenditures related to some of our major projects which were completed in 2014, such as the Lambton to Longwood Transmission Upgrade Project, the Barwick Transmission Station, and the Allanburg Transmission Station to ensure mandatory transmission system standards are met.

*Other Transmission Capital Investments*

Our 2014 other transmission capital investments were $88 million, compared to $63 million in 2013, an increase of $25 million or 40%. The increase was mainly due to the following:

- the development phase investment in our Network Management System Project, a critical operating tool used for monitoring and control of our transmission system;
- the investment in our Payroll Transformation Project to realize various process efficiencies; and
- partially offset by a decrease from the higher investments in 2013 as a result of emergency flood restoration work at our Richview Transmission Station resulting from a major rainstorm in July 2013.

***Major Transmission Projects***

Our company successfully advanced or completed a number of transmission capital investments projects during 2014. The following table summarizes the status of our major projects at December 31, 2014:

| Project Name | Location | Type | Planned In-Service Date | Approved Budget | Capital Cost To-Date | Current Status |
|---|---|---|---|---|---|---|
| Lambton to Longwood Transmission Upgrade | Sarnia area to west of London area Southwestern Ontario | Transmission line upgrade | 2014 | $41 million | $24 million | Placed in-service in September 2014 |
| Barwick Transmission Station | Rainy River/Fort Frances Northwestern Ontario | New transmission station | 2014 | $25 million | $21 million | Placed in-service in September 2014 |
| Allanburg Transmission Station | Niagara area Southwestern Ontario | Transmission station upgrade | 2014 | $33 million | $29 million | Placed in-service in December 2014 |
| Toronto Midtown Transmission Reinforcement | Toronto Southwestern Ontario | New transmission line | 2015 | $115 million | $83 million | Project is in progress |
| Guelph Area Transmission Refurbishment | Guelph area Southwestern Ontario | Transmission line upgrade | 2016 | $103 million | $24 million | Project is in progress |
| Manby Transmission Station | Toronto Southwestern Ontario | Transmission station upgrade | 2016 | $24 million | $14 million | Project is in progress |
| Clarington Transmission Station | Oshawa area Eastern GTA | New transmission station | 2017 | $297 million | $42 million | Project is in progress |
| Supply to Essex County Transmission Reinforcement | Windsor-Essex area Southwestern Ontario | New transmission line and station | 2018 | To be determined | – | Section 92 application filed with OEB in January 2014 |
| Northwest Bulk Transmission Line | Thunder Bay Northwestern Ontario | New transmission line | As early as 2020 | To be determined | – | OPA recommendation letter received in October 2014 |

*Lambton to Longwood Transmission Upgrade*

Our Lambton to Longwood Transmission Upgrade project involved the upgrade of approximately 70 kilometres of 230 kV double-circuit transmission line between our Lambton and Longwood transmission stations in southwestern Ontario. The investment refurbished 36 tower foundations, replaced the conductor with a higher capacity wire and replaced insulators along the line. This project involved an innovative new technology that allowed the vast majority of the towers to remain in place, and will enable approximately 500 MW of additional clean energy to be connected to the grid. The additional capacity on the grid will also contribute to meeting provincial energy supply targets for installed non-hydroelectric renewable generation by 2021.

*Barwick Transmission Station*

Our Barwick Transmission Station provides more capacity for communities between Rainy River and Fort Frances in northwestern Ontario, thereby strengthening the reliability of the power supply for both residential and commercial customers in the area. The Barwick Transmission Station consists of two 115 kV/44 kV transformers and allows for shorter spans of 44 kV power lines to connect customers to our system, ultimately improving the reliability of their power supply. The project involved in-house construction crews, local vendors and labour from the Rainy River First Nation community.

*Allanburg Transmission Station*

As a result of new generation connections and various transmission project upgrades in the Niagara area of southwestern Ontario, the Allanburg Transmission Station 115 kV switchyard short circuit level has increased and exceeded breaker capability limits. Consequently, upgrade work was required to replace 15 end-of-life breakers with upgraded short circuit capability in accordance with the TSC standards.

*Toronto Midtown Transmission Reinforcement*

Supply to the midtown Toronto area is currently provided by three 115 kV circuits between the Leaside Transmission Station and the Wiltshire Transmission Station. These circuits also supply the Bridgman and Dufferin Transmission Stations and provide load transfer capability between the Leaside and Manby transmission stations. The Toronto Midtown Transmission Reinforcement project includes the replacement of an aging underground cable which is nearing its end of life; the installation of an additional 115 kV circuit between the Leaside and Bridgman transmission stations to relieve loading on the existing circuits which are currently operating above their capacity; and the installation of new equipment at the Leaside Transmission Station, and Bayview, Birch and Bridgman Junctions. These transmission infrastructure reinforcements are intended to reduce the risk of power outages, improve reliability for electricity customers, and provide additional supply capability to meet future load growth in midtown Toronto as well as areas to the west.

*Guelph Area Transmission Refurbishment*

The Guelph Area Transmission Refurbishment Project, an upgrade of a transmission line and transmission stations in Guelph and the surrounding area, includes the installation of two new autotransformers at the existing Cedar Transmission Station, an upgrade of approximately five kilometres of an existing transmission line from 115 kV to 230 kV in south-central Guelph, and an upgrade of the existing Guelph North Junction to a switching station by installing new facilities and fencing. These refurbishments will reinforce the electricity supply and will minimize the impact of any major transmission outages on area customers.

*Manby Transmission Station*

The Manby Transmission Station project will upgrade the station short circuit capability and install higher rated breakers, which will permit incorporation of new renewable generation in the central Toronto area. Upgrade work requires the replacement of 16 end-of-life breakers and other components in the 115 kV Manby switchyard.

*Clarington Transmission Station*

To accommodate the eventual closure of the Pickering Nuclear Generating Station, the Clarington Transmission Station will provide additional autotransformer capacity to reliably supply load in the eastern GTA. Upon completion, the Clarington Transmission Station will consist of two 500/230 kV autotransformers and a 230 kV switchyard, and will connect to the existing 230 kV and 500 kV transmission lines. The project will enable future electricity demand growth in the local area and provide the area with the necessary facilities to ensure a safe, reliable supply of electricity to existing and future customers.

*Supply to Essex County Transmission Reinforcement Project*
On January 22, 2014, Hydro One Networks submitted a Leave to Construct application to the OEB under Section 92 of the *OEB Act* to construct a new 13-kilometre 230 kV double-circuit transmission line in the Windsor-Essex region. The new transmission line will connect to a proposed transmission station in the Municipality of Leamington and an existing 230 kV transmission line between Chatham and Windsor. The new transmission line and transmission station will address future growth in electricity demand and anticipated expansion in the local agricultural sector and improve the reliability of electricity supply in the broader Windsor-Essex region.

*Northwest Bulk Transmission Line*
In November 2013, the Minister of Energy issued a Directive to the OEB, which in turn issued a Decision and Order on January 9, 2014, to amend the transmission licence of Hydro One Networks to develop and seek approval for the Northwest Bulk Transmission Line Project, an expansion and reinforcement of the transmission system in the area west of Thunder Bay in northwestern Ontario. The project consists of a new transmission line that would increase transmission capacity and maintain the reliability of electricity supply to meet forecasted electricity demand growth and accommodate new generation capacity. Over the long term, it would also enhance the potential for development and connection of renewable energy facilities. Because of its importance to the region, this new line has been identified as a priority project in Ontario's LTEP. The Northwest Bulk Transmission Line Project will be developed by our company in cooperation with Infrastructure Ontario. The scope and timing of the project shall be in accordance with the recommendations of the OPA.

On October 1, 2014, Hydro One received a letter from the OPA outlining the scope and timing of the Northwest Bulk Transmission Line Project. The scope of the development work will include preliminary design and engineering, cost estimation, public engagement and consultation, routing and siting, and the preparation of an environmental assessment in support of this project. Hydro One is currently initiating the development work for the project and discussions are ongoing with Infrastructure Ontario on the project plan and related accountabilities.

### *Other Transmission Capital Investments*

*Pan American (Pan Am) Games*
The Pan Am Games project tracking initiative is underway to ensure that we provide a high level of electricity supply reliability to the Pan Am and Parapan Am Games during the summer of 2015, and that operating, maintenance and capital work plans are coordinated across lines of business to minimize outage risks to the venues hosting the 2015 Pan Am and Parapan Am Games. Key major capital projects and site-specific maintenance work in the GTA are being monitored on a monthly basis to ensure our customer commitments are met. This work will ultimately benefit all of our customers in the GTA.

*Niagara Reinforcement Project*
This project comprises the construction of 76 kilometres of 230 kV line from our Allanburg Transmission Station in the Niagara area to our Middleport Transmission Station in the Hamilton area. The Niagara Reinforcement Project status is considered substantially on time, with the exception that some project work has been delayed due to access issues related to Aboriginal land claims on a section of the line.

### *Distribution Capital Investments*

Our 2014 distribution capital investments were $680 million, compared to $673 million in 2013, an increase of $7 million or 1%, primarily due to our distribution sustainment programs to address our aging infrastructure.

The following table presents the main components of our distribution capital investments during 2014 and 2013.

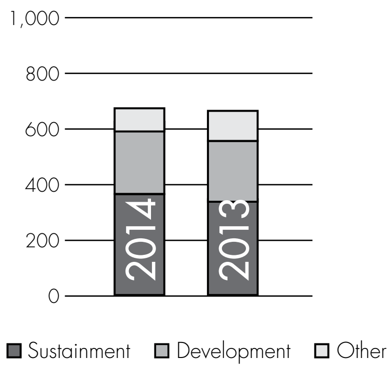
| *Year ended December 31 (millions of Canadian dollars)* | **2014** | 2013 | $ Change | % Change |
|---|---|---|---|---|
| Sustainment | **356** | 324 | 32 | 10 |
| Development | **236** | 235 | 1 | – |
| Other | **88** | 114 | (26) | (23) |
| **Total distribution capital investments** | **680** | 673 | 7 | 1 |

*Sustainment Distribution Capital Investments*

Our current distribution sustainment programs include wood pole and meter replacements, emergency work for storm restoration, distribution station refurbishments and upgrades, and work related to joint-use and relocation of our distribution lines. Our 2014 distribution sustainment capital investments were $356 million, compared to $324 million in 2013, an increase of $32 million or 10%. The increase is mainly due to the following:

- increased investments in meter replacements, including Itron Sentinel 16S meter replacements and Field Metering Services installations;
- higher volume of end-of-life wood pole replacements;
- increased focus on capital lines work, mainly due to the lines large sustainment initiatives program;
- increased work within our station refurbishment programs due to more refurbishments accomplished in 2014; and
- partially offset by less storm restoration work in 2014 due to lower storm activity compared to 2013.

**Distribution Capital Investments**
*(millions of dollars)*



*Development Distribution Capital Investments*

Our current development projects to expand and reinforce our distribution network include new customer connections and upgrades, system capability reinforcement projects, line transfers requested by our customers, and connections to new generation facilities. Our 2014 distribution development capital expenditures were $236 million, compared to $235 million in 2013, an increase of $1 million. The increase is mainly due to the following:

- increased work for subdivision connections, new customer connections, and upgrades;
- the purchase of retail revenue meters for all new connections and service upgrades; and
- partially offset by less lines and stations work related to upgrading and adding capacity to our distribution system.

*Other Distribution Capital Investments*

Our 2014 other distribution capital expenditures were $88 million, compared to $114 million in 2013, a decrease of $26 million or 23%. The decrease is mainly due to the following:

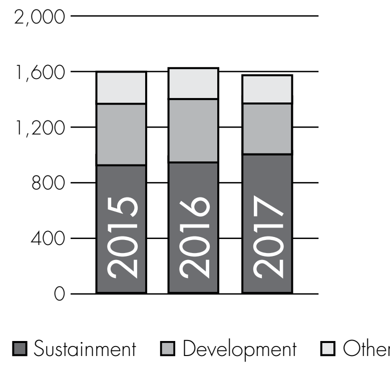
- decreased expenditures in 2014 related to CIS, as it was placed in-service in May 2013;
- decrease due to higher investments in 2013 as a result of emergency flood restoration work at our Richview Transmission Station resulting from a major rainstorm in July 2013; and
- partially offset by the investment in our Payroll Transformation Project to realize various process efficiencies.

## Future Capital Investments

Our capital investments for 2015 are budgeted at approximately $1,600 million. Our 2015 capital budgets for our Transmission and Distribution Businesses are approximately $900 million and $700 million, respectively. Consolidated capital investments are expected to be approximately $1,625 million in 2016 and $1,575 million in 2017. These investment levels reflect our continued sustainment focus on our aging infrastructure. Our sustainment program capital investments are expected to be approximately $925 million in 2015, $950 million in 2016 and $1,000 million in 2017. Our development capital investments are expected to be approximately $450 million in 2015,

$450 million in 2016, and $375 million in 2017. Our development projects include the inter-area network upgrades that reflect supply mix policies, local area supply improvements, the ADS Project, new load and generation connections and requirements to enable DG, and customer demand work. Other capital investments are expected to be $225 million in 2015, $225 million in 2016, and $200 million in 2017. This includes investments in operating infrastructure integration, information technology (IT), fleet services and facilities, and real estate. Our future capital investments amounts do not include future LDC acquisitions.

**Future Capital Investments**
*(millions of dollars)*



Hydro One's plans to maintain, refurbish or replace existing facilities are developed on the basis of maintenance standards, asset condition assessments and end-of-life criteria specific to each type of equipment. Priorities are assigned to each type of investment based on the risks that it mitigates. In addition, investments that are cross-functional and/or require IT involvement are governed by a productivity framework with substantive benefits. These capital investment plans are also included in our rate filings submitted to the OEB for approval.

***Transmission***

Transmission capital investments are incurred to manage the replacement and refurbishment of our aging transmission infrastructure in order to ensure a continued reliable supply of energy to customers throughout the province. Our sustainment program future capital investments include the replacement and/or refurbishment of end-of-life air blast circuit breakers and switchgear, high-voltage underground cables, high-voltage circuits and power transformers. Also, given the current age of our assets and infrastructure and to achieve significant cost efficiencies, we have moved to a more integrated station and circuit centric refurbishments approach than has been undertaken historically in order to address and bundle component and refurbishment replacements that would have occurred over time into one project. These investments are necessary to ensure that we maintain our current levels of supply to our customers and continue to meet all regulatory, compliance, safety and environmental objectives.

Our future development capital investments include the Clarington Transmission Station Project to install additional autotransformer capacity in the eastern GTA; the Guelph Area Transmission Refurbishment Project, an upgrade of a transmission line and transmission stations in south-central Guelph; investments in ADS; requirements to enable DG; the Supply to Essex County Transmission Reinforcement Project, a new transmission line in the Windsor-Essex region; and the Toronto Midtown Transmission Reinforcement Project, a new circuit in midtown Toronto and the refurbishment of an underground cable. Development capital investments also include the connection of new generation projects to the transmission system; however, these investments are largely funded by the connecting generation customers.

Based on the OEB's framework for competitive designation for the development of eligible transmission projects, we did not include in our budgeted future capital investments any projects that could meet the definition of expansions. We do not plan to undertake large capital investments without a reasonable expectation of recovering them through our rates.

The actual timing and investments of many development projects are uncertain as they are dependent upon various regulatory approvals, negotiations with customers, neighbouring utilities and other stakeholders, and consultations with First Nations and Métis communities. Projects are also dependent upon the timing and level of generator contributions for enabling facilities.

***Distribution***

Distribution capital investments include the sustainment of our infrastructure. Our core work will continue to focus on maintaining the performance of our aging distribution asset base through renewal and refurbishment activities. Planned capital investments include the continued replacements of equipment and components that are beyond their expected service life, as well as increased wood pole replacements and distribution station refurbishments. Sustainment capital investments related to the smart metering project will decrease through 2016.

Distribution development capital investments are expected to be relatively stable through 2016, with the exception of capital contributions for capacity improvements at the Orleans Transmission Station in the Ottawa area in 2015 and the Hanmer Transmission Station in the Sudbury area in 2016. We will continue to make investments required to connect new load and DG customers, as well as investments to ensure the system is capable of supplying customer needs. During 2015 and 2016, a number of our projects will address local load growth issues. Generation connection investments, consisting of OPA-contracted FIT and MicroFIT Program generators, will decrease as the volume of connections is expected to decrease.

The ADS Project continues to pilot various technologies and related capital investments and will begin to decrease in 2015 and 2016. Pilot technologies include improvements to outage response management through more effective resource dispatch, automation to isolate faults where needed, and the dynamic regulation of voltage to reduce power losses.

### Off-Balance Sheet Arrangements

There are no off-balance sheet arrangements that have, or are reasonably likely to have, a material current or future effect on our financial condition, changes in financial condition, revenues or expenses, results of operations, liquidity, capital expenditures or capital resources.

### Summary of Contractual Obligations and Other Commercial Commitments

The following table presents a summary of our debt and other major contractual obligations, as well as other major commercial commitments:

| *December 31, 2014 (millions of Canadian dollars)* | **Total** | **Less than 1 year** | **1–3 years** | **3–5 years** | **More than 5 years** |
|---|---|---|---|---|---|
| **Contractual obligations** *(due by year)* | | | | | |
| Long-term debt – principal repayments[1] | 8,923 | 550 | 1,100 | 978 | 6,295 |
| Long-term debt – interest payments[1] | 7,765 | 419 | 774 | 677 | 5,895 |
| Pension[2] | 361 | 174 | 187 | – | – |
| Environmental and asset retirement obligations[3] | 284 | 19 | 73 | 68 | 124 |
| Outsourcing agreements[4] | 701 | 179 | 291 | 218 | 13 |
| Operating lease commitments | 45 | 7 | 19 | 10 | 9 |
| **Total contractual obligations** | 18,079 | 1,348 | 2,444 | 1,951 | 12,336 |
| | | | | | |
| **Other commercial commitments** *(by year of expiry)* | | | | | |
| Bank line[5] | 1,500 | – | – | 1,500 | – |
| Letters of credit[6] | 134 | 134 | – | – | – |
| Guarantees[6] | 331 | 331 | – | – | – |
| **Total other commercial commitments** | 1,965 | 465 | – | 1,500 | – |

[1] The "long-term debt – principal repayments" amounts are not charged to our results of operations, but are reflected on our Consolidated Balance Sheets and Consolidated Statements of Cash Flows. Interest associated with the long-term debt is recorded in financing charges on our Consolidated Statements of Operations and Comprehensive Income or as a cost of our capital programs.

[2] Contributions to the Hydro One Pension Fund were generally made one month in arrears. However, due to the interest rate environment, the annual contributions have been prepaid in each of the last two years. No contribution prepayments are anticipated in 2015. The 2015 and 2016 minimum pension contributions are based on an actuarial valuation as at December 31, 2013. Pension contributions totalling $174 million were made during the year ended December 31, 2014. Minimum pension contributions beyond 2016 will be based on an actuarial valuation effective no later than December 31, 2016, and will depend on future investment returns, changes in benefits, or actuarial assumptions. Pension contributions beyond 2016 are not estimable at this time.

[3] We record a liability for the estimated future expenditures associated with the removal and destruction of PCB-contaminated insulating oils and related electrical equipment, and for the assessment and remediation of chemically-contaminated lands. We also record a liability for asset retirement obligations associated with the removal and disposal of asbestos-containing materials installed in some of our facilities, as well as the future decommissioning and removal of two of our switching stations. The forecasted expenditure pattern reflects our planned work programs for the periods.

[4] In 2014, we have finalized a new outsourcing agreement with Inergi for the provision of certain services, as well as a facilities outsourcing agreement with Brookfield. Details of the new outsourcing agreements can be found in the section "New Developments in 2014 – Other – Outsourcing Agreements." Based on the September 2013 Shareholder Resolution, the Province requires us to contract only with parties who are employed and physically located in Ontario when providing services to our company. The contractual amounts disclosed include an estimated contractual annual inflation adjustment in the range of 1.9% to 2.1%. Payments in respect of our outsourcing agreements are recorded in operation, maintenance and administration costs on our Consolidated Statements of Operations and Comprehensive Income or as a cost of our capital programs.

[5] In support of our liquidity requirements, we have a $1,500 million revolving standby credit facility with a syndicate of banks maturing in June 2019.

[6] We currently have outstanding bank letters of credit of $126 million relating to retirement compensation arrangements. We provide prudential support to the IESO in the form of letters of credit, the amount of which is calculated based on forecasted monthly power consumption. At December 31, 2014, we have provided a letter of credit to the IESO in the amount of $8 million to meet our current prudential requirement. We have also provided prudential support to the IESO on behalf of our subsidiaries as required by the IESO's Market Rules, using parental guarantees of $330 million, and on behalf of two distributors using total guarantees of $1 million.

## RELATED PARTY TRANSACTIONS

We are owned by the Province. The Ontario Electricity Financial Corporation (OEFC), IESO, OPA, OPG, and the OEB are related parties to our company because they are controlled or significantly influenced by the Province. The following is a summary of our related party transactions during the year ended December 31, 2014:

### The Province

- During 2014, we paid dividends to the Province totalling $287 million, compared to $218 million paid in 2013.
- In November 2014, we redeemed the $250 million Province of Ontario Floating-Rate Notes held as a long-term investment. These notes were originally purchased in January 2010 with a maturity date of November 19, 2014. Ê

### IESO

- During 2014, we purchased power in the amount of $2,601 million from the IESO-administered electricity market, compared to $2,477 million purchased in 2013.
- We receive revenues for transmission services from the IESO, based on OEB-approved UTRs. Our 2014 transmission revenues include $1,556 million related to these services, compared to $1,509 million in 2013.
- We receive amounts for rural rate protection from the IESO. Our 2014 distribution revenues include $127 million related to this program, compared to $127 million in 2013.
- We receive revenues related to the supply of electricity to remote northern communities from the IESO. Our 2014 distribution revenues include $32 million related to these services, compared to $33 million in 2013.

### OPA

- The OPA funds substantially all of our CDM programs. The funding includes program costs, incentives, and management fees. During 2014, we received $33 million from the OPA related to these programs, compared to $34 million received in 2013.

### OPG

- During 2014, we purchased power in the amount of $23 million from OPG, compared to $15 million in 2013.
- Our company has service level agreements with OPG. These services include field, engineering, logistics and telecommunications services. Our 2014 other revenues include $12 million related to these service level agreements, compared to $9 million in 2013. Our 2014 operation, maintenance and administration costs related to the purchase of services with respect to these service level contracts were $1 million, compared to $1 million in 2013.

### OEFC

- During 2014, we made payments in lieu of corporate income taxes to the OEFC totalling $86 million, compared to payments of $138 million made in 2013.
- During 2014, we purchased power in the amount of $9 million from power contracts administered by the OEFC, compared to $8 million purchased in 2013.
- During 2014, our company paid a $5 million annual fee to the OEFC, compared to $5 million paid in 2013, for indemnification against adverse claims in excess of $10 million paid by the OEFC with respect to certain of Ontario Hydro's businesses transferred to Hydro One on April 1, 1999.

### OEB

- Under the *OEB Act*, the OEB is required to recover all of its annual operating costs from gas and electricity distributors and transmitters. During 2014, we incurred $12 million in OEB fees, compared to $12 million incurred in 2013.

At December 31, 2014, the amounts due from and due to related parties as a result of the transactions described above were $224 million and $227 million, respectively, compared to $197 million and $230 million at December 31, 2013, respectively. At December 31, 2014, included in amounts due to related parties were amounts owing to the IESO in respect of power purchases of $214 million, compared to $217 million at December 31, 2013.

## CONSIDERATIONS OF CURRENT ECONOMIC CONDITIONS

### Effect of Load on Revenue

Our load, based on normal weather patterns, is expected to increase in 2015 due to economic growth in all sectors of the Ontario economy, partially offset by the load impact of CDM and embedded generation. Overall load growth due to the economy alone is forecasted to be approximately 1.9%, with the commercial and industrial sectors slightly outperforming the residential sector. The load impacts of CDM and embedded generation are expected to have a negative impact on load growth of approximately 0.6% and 0.4%, respectively. On the whole, our load is expected to increase by approximately 0.9% in 2015. Our approved revenue requirement for 2015 has taken the negative load impact of CDM and embedded generation into account. A load growth below our load forecast, included in our approved revenue requirement, would negatively impact our financial results.

### Effect of Interest Rates

Changes in interest rates will impact the calculation of the revenue requirements upon which our rates are based. The first component impacted by interest rates is our return on equity (ROE). The OEB-approved adjustment formula for calculating ROE will increase or decrease by 50% of the change between the current Long Canada Bond Forecast and the risk-free rate established at 4.25% and 50% of the change in the spread in 30-year "A"-rated Canadian utility bonds over the 30-year benchmark Government of Canada bond yield established at 1.415%. All other things being equal, we estimate that a 1% decrease in the forecasted long-term Government of Canada bond yield used in determining our ROE would reduce Hydro One Networks' transmission and distribution businesses' 2015 results of operations by approximately $20 million and $13 million, respectively. As interest rates decline, there is more risk of a decline in our net income. The second component of revenue requirement that would be impacted by interest rates is the return on debt. The difference between actual interest rates on new debt issuances and those approved for return by the OEB would impact our results of operations.

### Input Costs

In support of our ongoing work programs, we are required to procure materials, supplies and services. To manage our total costs, we regularly establish security of supply, strategic material and services contracts, general outline agreements, and vendor alliances and we also manage a stock of commonly used items. Such arrangements are for a defined period of time and are monitored. Where advantageous, we develop long-term contractual relationships with suppliers to optimize the cost of goods and services and to ensure the availability and timely supply of critical items. As a result of our strategic sourcing practices, we do not foresee any adverse impacts on our business from current economic conditions in respect of adequacy and timing of supply and credit risk of our counterparties. Further, we have been able to realize significant savings through our strategic sourcing initiatives.

During 2014, we finalized a new outsourcing agreement with Inergi for the provision of certain services, as well as a facilities outsourcing agreement. Details of the new outsourcing agreements can be found in the section "New Developments in 2014 – Other – Outsourcing Agreements."

### Pension Plan

In 2014, we contributed approximately $174 million to our pension plan, compared to contributions of approximately $160 million made in 2013, and incurred $158 million in net periodic pension benefit costs, compared to $287 million incurred in 2013. We currently estimate our total annual pension contributions to be approximately $174 million for 2015 and $175 million for 2016, based on an actuarial valuation as at December 31, 2013 and projected levels of pensionable earnings. Actuarial valuations are required to be filed at least every three years. Future minimum contributions beyond 2016 will be based on an actuarial valuation effective no later than December 31, 2016. In 2014, our pension plan experienced positive returns of approximately 12.3%, compared to approximately 17.9% in 2013.

Our pension benefits obligation is impacted by various assumptions and estimates, such as discount rate, rate of return on plan assets, rate of cost of living increase, and mortality assumptions. A full discussion of the significant assumptions and estimates can be found in the section "Critical Accounting Estimates – Employee Future Benefits."

## RISK MANAGEMENT AND RISK FACTORS

We have an Enterprise Risk Management (ERM) Program that aims at balancing business risks and returns. A company-wide approach enables regulatory, strategic, operational and financial risks to be managed and aligned with our strategic goals. Our ERM program helps us to better understand uncertainty and its potential impact on our strategic goals. It sets out the uniform principles, processes and criteria for identifying, assessing, evaluating, treating, monitoring and communicating risks across all lines of business. It supports our Board of Directors' corporate governance needs and the due diligence responsibilities of senior management.

While our philosophy is that risk management is the responsibility of all employees, the Board of Directors annually reviews our company's risk tolerances, risk management policies, processes and accountabilities. Twice per year, the Board of Directors reviews our risk profile, which is the list of key risks prepared by senior management, and represents the greatest threats to meeting our strategic objectives. The Board of Directors' committees review risks relevant to their mandate at every meeting. The Audit, Finance and Pension Investment Committee of our Board of Directors annually reviews the status of our internal control framework.

Our President and Chief Executive Officer (CEO) has ultimate accountability for risk management. Our Leadership Team provides senior management oversight of our risk portfolio and our risk management processes. The leadership team provides direction on the evolution of these processes and identifies priority areas of focus for risk assessment and mitigation planning.

Our Chief Financial Officer (CFO) is responsible for ensuring that the risk management program is an integral part of our business strategy, planning and objective setting. The CFO has specific accountability for ensuring that ERM processes are established, properly documented and maintained by our company.

Our senior managers, line and functional managers are responsible for managing risks within the scope of their authority and accountability. Risk acceptance or mitigation decisions are made within the risk tolerances specified by the head of the subsidiary or function.

The CFO provides support to the committees of our Board of Directors, the President and CEO, the senior management team and key managers within our company. This support includes developing risk management frameworks, policies and processes, introducing and promoting new techniques, establishing risk tolerances, preparing annual corporate risk profiles, maintaining a registry of key business risks and facilitating risk assessments across our company. Our internal audit staff is responsible for performing independent reviews of the effectiveness of risk management policies, processes and systems. Starting in 2013, our Board of Directors has taken on an enhanced role in our governance structure. Each committee of the Board of Directors will take accountability for reviewing specific risks of our company.

Key elements of our ERM Program enable us to identify, assess and monitor our risks effectively. These include having an ERM policy and framework which communicates our philosophy and process for risk management across our company. A discussion of risks is an integral part of each line of business' planning documents on an annual basis. Risk identification is also considered as part of each business case for investments. Finally, discrete risk assessments and workshops are performed for specific lines of business, key projects and various profiles, such as customer relationships and regulatory compliance. In order to drive consistency throughout our risk identification and risk management processes, we use a standard list of risk sources known as our risk universe. These sources are maintained in a single database that provides a consistent basis for risk identification and classification and serves as a repository for our risk assessments. All risk assessments in our company start with this risk universe. We also use standard risk criteria, which establish the metrics and terminology used for assessing and communicating on risks, and help ensure a consistent basis for our risk assessments and risk evaluations across all lines of business. Risk criteria include formally established risk tolerances and standard scales for assessing the probability of a risk materializing and the strength of controls in place to mitigate them.

Our key risks are as follows:

### Ownership by the Province

The Province owns all of our outstanding shares. Accordingly, the Province has the power to determine the composition of our Board of Directors, appoint the Chair, and influence our major business and corporate decisions. We and the Province have entered into a memorandum of agreement relating to certain aspects of the governance of our company. Pursuant to such agreement, in September 2008, the Province made a declaration removing certain powers from our company's directors pertaining to the off-shoring of jobs under the 2001 Inergi Agreement. In 2011, the Province made a declaration preventing our company from seeking cost recovery through the regulatory process for the cost of upgrades required for either MicroFIT or Small FIT generators for costs related to investment and expenditures made. Effective September 30, 2013, the Province made a declaration regarding the outsourcing of services covered by the Inergi Agreement.

Effective December 17, 2014, the Province made a further declaration pursuant to the memorandum of agreement and section 108 of the *Business Corporations Act* (Ontario) regarding the provision of information, personnel and resources to the Premier's Advisory Council on Government Assets. By way of the declaration and concurrent Shareholder resolution, the Province restricted the rights, powers and duties of our Board of Directors, and at the same time assumed such rights, powers and duties, with respect to providing the Premier's Advisory Council on Government Assets, the Government or the Ministries and their advisors and consultants all information, assistance, personnel, resources and reports as and when requested and co-operating with those Government advisors tasked with providing recommendations on labour relations matters and pension-related matters. The directors are charged with carrying out the intention of the declaration and resolution, including taking such necessary steps to issue similar declarations and resolutions with respect to Hydro One Networks and Hydro One Brampton Networks. The Province could mandate the selling of all or part of our distribution business and this could have a material adverse effect on our company.

In 2009, the Province required our company, among other entities, to adhere to certain accountability measures regarding consulting contracts and employee travel, meal and hospitality expenses. The Province may require us to adhere to further accountability measures or may make similar declarations in the future, some of which may have a material adverse effect on our business. Our company's credit ratings may change with the credit ratings of the Province, to the extent the credit rating agencies link the two ratings by virtue of our company's ownership by the Province.

Conflicts of interest may arise between us and the Province as a result of the obligation of the Province to act in the best interests of the residents of Ontario in a broad range of matters, including the regulation of Ontario's electricity industry and environmental matters, any future sale or other transaction by the Province with respect to its ownership interest in our company, including any potential outcomes arising out of the recommendations of the Ontario Distribution Sector Review Panel's report, the Province's ownership of OPG, and the determination of the amount of dividend or proxy tax payments. We may not be able to resolve any potential conflict with the Province on terms satisfactory to us, which could have a material adverse effect on our business.

### Regulatory Risk

We are subject to regulatory risks, including the approval by the OEB of rates for our Transmission and Distribution Businesses that permit a reasonable opportunity to recover the estimated costs of providing safe and reliable service on a timely basis and earn the approved rates of return.

The OEB approves our transmission and distribution rates based on projected electricity load and consumption levels. If actual load or consumption materially falls below projected levels, our net income for either, or both, of these businesses could be materially adversely affected. Also, our current revenue requirements for these businesses are based on cost assumptions that may not materialize. There is no assurance that the OEB would allow rate increases sufficient to offset unfavourable financial impacts from unanticipated changes in electricity demand or in our costs.

The OEB's new RRFE requires that the term of a custom rate application (distribution business) be a five-year period. There are risks associated with forecasting over a longer period. Changes in the industry may alter the investment needs or require changes to rate setting that could result in a significant impact on our company's capability to execute its plan.

Our load could also be negatively affected by successful CDM programs. We are also subject to risk of revenue loss from other factors, such as economic trends and weather.

We expect to make investments in the coming years to connect new renewable generating stations. There is the possibility that we could incur unexpected capital expenditures to maintain or improve our assets, particularly given that new technology is required to support renewable generation, and unforeseen technical issues may be identified through implementation of projects. The risk exists that the OEB may not allow full recovery of such investments in the future. To the extent possible, we aim to mitigate this risk by ensuring prudent expenditures, seeking from the regulator clear policy direction on cost responsibility, and pre-approval of the need for capital expenditures.

While we expect all of our expenditures to be fully recoverable after OEB review, any future regulatory decision to disallow or limit the recovery of such costs would lead to potential asset impairment and charges to our results of operations, which could have a material adverse effect on our company.

In Ontario, the Market Rules mandate that we comply with the reliability standards established by NERC and NPCC. As a result, we will be required to comply with the United States Federal Energy Regulatory Commission's definition of Bulk Electric System unless we are granted an exception which will allow the application of the new definition in a cost-effective manner. Our company plans to submit exception applications and will look for recovery of costs incurred in meeting the definition in our rates; however, an adverse decision on an exception of recovery of costs could have an adverse effect on our company.

### Risk of Natural and Other Unexpected Occurrences

Our facilities are exposed to the effects of severe weather conditions, natural disasters, man-made events including cyber and physical terrorist type attacks and, potentially, catastrophic events, such as a major accident or incident at a facility of a third party (such as a generating plant) to which our transmission or distribution assets are connected. Although constructed, operated and maintained to industry standards, our facilities may not withstand occurrences of this type in all circumstances. We do not have insurance for damage to our transmission and distribution wires, poles and towers located outside our transmission and distribution stations resulting from these events. Losses from lost revenues and repair costs could be substantial, especially for many of our facilities that are located in remote areas. We could also be subject to claims for damages caused by our failure to transmit or distribute electricity. Our risk is partly mitigated because our transmission system is designed and operated to withstand the loss of any major element and possesses inherent redundancy that provides alternate means to deliver large amounts of power. In the event of a large uninsured loss we would apply to the OEB for recovery of such loss; however, there can be no assurance that the OEB would approve any such applications, in whole or in part, which could have a material adverse effect on our net income.

### First Nations and Métis Claims Risk

Some of our current and proposed transmission and distribution lines may traverse lands over which First Nations and Métis have Aboriginal, treaty or other legal claims. Although we have a recent history of successful negotiations, engagement and consultation with First Nations and Métis communities in Ontario, some communities and/or their citizens have expressed an increasing willingness to assert their claims through the courts, tribunals, or by direct action, which in turn can affect business activities. As a result, there exists uncertainty relating to business operations and project planning which could have an adverse effect on our company.

### Risk from Transfer of Assets Located on Reserves

The transfer orders by which we acquired certain of Ontario Hydro's businesses as of April 1, 1999, did not transfer title to some assets located on Reserves. Currently, OEFC holds legal title to these assets and we manage them until we have obtained necessary authorizations to complete the title transfer. To occupy Reserves, our company must have valid permits issued by Her Majesty the Queen in the Right of Canada. For each permit, we must negotiate an agreement (in the form of a Memorandum of Understanding) with the First Nation, OEFC and any members of the First Nation who have occupancy rights. The agreement includes provisions whereby the First Nation consents to the federal Department of Aboriginal Affairs and Northern Development issuing a permit. Where the agreement and permit are for transmission assets, our company must negotiate terms of payment. It is difficult to predict the aggregate amount that we may have to pay, either on an annual or one-time basis, to obtain the required agreements from First Nations. In 2014, we paid approximately $1 million to First Nations in respect of these agreements. OEFC will continue to hold these assets until we are able to negotiate agreements with First Nations and occupants. If we cannot reach satisfactory agreements and obtain federal permits, we may have to relocate these assets to other locations at a cost that could be substantial. In a limited number of cases, it may be necessary to abandon a line and replace it with diesel-generation facilities. In either case, the costs relating to these assets could have a material adverse effect on our net income if we are not able to recover them in future rate orders.

### Risk Associated with Information Technology Infrastructure

Our ability to operate effectively in the Ontario electricity market is in part dependent upon us developing, maintaining and managing complex information technology systems which are employed to operate our transmission and distribution facilities, financial and billing systems, and business systems. Our increasing reliance on information systems and expanding data networks increases our exposure to information security threats. We mitigate this risk through various methods including the use of security event management tools on our power and business systems, by separating our power system network from our business system network, by performing scans of our systems for known cyber threats, and by providing company-wide awareness training to our personnel. We also engage the services of external experts to evaluate the security of our IT infrastructure and controls. We perform vulnerability assessments on our critical cyber assets and we ensure security and privacy controls are incorporated into new IT capabilities. Although these security and system disaster recovery controls are in place, there can be no guarantee that there will not be system failures or security breaches. Upon occurrence, the focus would shift from prevention to isolation, remediation and recovery until the incident has been fully addressed. Any such system failures or security breaches could have a material adverse effect on our company.

### Workforce Demographic Risk

By the end of 2014, approximately 17% of our employees were eligible for retirement and by the end of 2015 up to 21% could be eligible. These percentages are not evenly spread across our workforce, but tend naturally to be most significant in the most senior levels of our staff and especially among management and executive staff. Accordingly our continued success will be tied to our ability to attract and retain sufficient qualified staff to replace the capability lost through retirements and meet the demands of our work programs. This will be more challenging than in the past for a number of reasons.

Firstly, we expect the skilled labour market for our industry to be highly competitive in the future: many of our current employees and many of the employees we are going to be looking for possess skills and experience that will also be highly sought after by other organizations inside and outside the electricity sector; secondly, a variety of restraints on compensation and benefits for management and executive staff (including Bill 8) together with possible pension plan changes, and the uncertainty attaching to Hydro One's future size and scope as a result of the work of the Council, may adversely impact our ability to attract and retain the number and calibre of people we need in these roles.

In order to mitigate the potential effects of these factors, we are focused on earlier identification and more rapid development of staff who demonstrate the potential to progress quickly, especially those who demonstrate leadership potential, and on maintaining robust but flexible succession plans for the organization. In addition we continue to advance our apprenticeship and technical training programs to ensure that our future operational staffing needs will be met.

### Labour Relations Risk

The substantial majority of our employees are represented by either the Power Workers' Union (PWU) or the Society of Energy Professionals (Society). Over the past several years, significant effort has been expended to increase our flexibility to conduct operations in a more cost-efficient manner. Although we have achieved improved flexibility in our collective agreements, including a reduction in pension benefits for Society staff hired after November 2005 similar to a previous reduction affecting management staff and increased pension contributions for PWU and Society staff, we may not be able to achieve further improvement. The existing collective agreement with the PWU will expire on March 31, 2015, and the existing Society collective agreement will expire on March 31, 2016. We face financial risks related to our ability to negotiate collective agreements consistent with our rate orders. In addition, in the event of a labour dispute, we could face operational risk related to continued compliance with our licence requirements of providing service to customers. Any of these could have a material adverse effect on our company.

### Risk Associated with Arranging Debt Financing

We expect to borrow to repay our existing indebtedness and fund a portion of capital expenditures. We have substantial amounts of existing debt, including $550 million maturing in 2015 and $500 million maturing in 2016. We plan to incur capital expenditures of approximately $1,600 million in 2015 and $1,625 million in 2016. Cash generated from operations, after the payment of expected dividends, will not be sufficient to fund the repayment of our existing indebtedness and capital expenditures. Our ability to arrange sufficient and cost-effective debt financing could be materially adversely affected by numerous factors, including the regulatory environment in Ontario, our results of operations and financial position, market conditions, the ratings assigned to our debt securities by credit rating agencies, and general economic conditions. Any failure or inability on our part to borrow substantial amounts of debt on satisfactory terms could impair our ability to repay maturing debt, fund capital expenditures, and meet other obligations and requirements and, as a result, could have a material adverse effect on our company.

### Asset Condition

We continually monitor the condition of our assets to determine need and timing of preventative or remedial actions to maintain the desired level of service. Condition assessment is one of the key drivers for asset maintenance, refurbishment or replacement strategies to maintain equipment performance and provide reliable service quality. Our capital programs have been increasing to maintain the performance of our aging asset base. Execution of these plans is partially dependent on external factors, such as outage planning with the IESO and transmission-connected customers, funding approval by the OEB, and supply chain availability for equipment suppliers and consulting services. In addition, opportunities to remove equipment from service to accommodate construction and maintenance are becoming increasingly limited due to customer and generator priorities.

Adjustments to accommodate these external dependencies have been made in our planning process, and we are focused on overcoming these challenges to execute our work programs. However, if we are unable to carry out these plans in a timely and optimal manner, equipment performance will degrade which may compromise the reliability of the provincial grid, our ability to deliver sufficient electricity and/or customer supply security and increase the costs of operating and maintaining these assets. This could have a material adverse effect on our company.

### Environmental Risk

Our health, safety and environmental management system is designed to ensure hazards and risks are identified and assessed, and controls are implemented to mitigate significant risks. This system includes a standing committee of our Board of Directors that has governance over environmental matters. However, given the territory that our system encompasses and the amount of equipment that we own, we cannot guarantee that all such risks will be identified and mitigated without significant cost and expense to our company. The following are some of the areas that may have a significant impact on our operations.

We are subject to extensive Canadian federal, provincial and municipal environmental regulation. Failure to comply could subject us to fines and other penalties. In addition, the presence or release of hazardous or other harmful substances could lead to claims by third parties and/or governmental orders requiring us to take specific actions such as investigating, controlling and remediating the effects of these substances. We are currently undertaking a voluntary LAR program covering most of our stations and service centres. This program involves the systematic identification of any contamination at or from these facilities, and, where necessary, the development of remediation plans for our company and adjacent private properties. Any contamination of our properties could limit our ability to sell these assets in the future.

We record a liability for our best estimate of the present value of the future expenditures required to comply with Environment Canada's PCB regulations and for the present value of the future expenditures to complete our LAR program. The future expenditures required to discharge our PCB obligation are expected to be incurred over the period ending 2025, while our LAR expenditures are expected to be incurred over the period ending 2022. Actual future environmental expenditures may vary materially from the estimates used in the calculation of the environmental liabilities on our balance sheet. We do not have insurance coverage for these environmental expenditures.

Under applicable regulations, we expect to incur future expenditures to identify, remove and dispose of asbestos-containing materials installed in some of our facilities. We record an asset retirement obligation for the present value of the estimated future expenditures. The estimates are based on an external, expert study of the current expenditures associated with removing such materials from our facilities. Actual future expenditures may vary materially from the estimates used for the amount of the asset retirement obligation.

There is also risk associated with obtaining governmental approvals, permits, or renewals of existing approvals and permits related to constructing or operating facilities. This may require environmental assessment or result in the imposition of conditions, or both, which could result in delays and cost increases.

We anticipate that all of our future environmental expenditures will continue to be recoverable in future electricity rates. However, any future regulatory decision to disallow or limit the recovery of such costs could have a material adverse effect on our company.

Scientists and public health experts have been studying the possibility that exposure to electric and magnetic fields emanating from power lines and other electric sources may cause health problems. If it were to be concluded that electric and magnetic fields present a health risk, or governments decide to implement exposure limits, we could face litigation, be required to take costly mitigation measures such as relocating some of our facilities or experience difficulties in locating and building new facilities. Any of these could have a material adverse effect on our company.

### Pension Plan Risk

We have a defined benefit registered pension plan for the majority of our employees. Contributions to the pension plan are established by actuarial valuations which are minimally required to be filed with the Financial Services Commission of Ontario on a triennial basis. The most recently filed valuation was prepared as at December 31, 2013, and was filed in June 2014. Our company contributed approximately $160 million in respect of 2013 and approximately $174 million in respect of 2014 to its pension plan to satisfy minimum funding requirements. Contributions beyond 2014 will depend on investment returns, changes in benefits and actuarial assumptions and may include additional voluntary contributions from time to time. Nevertheless, future contributions are expected to be significant. A determination by the OEB that some of our pension expenditures are not recoverable from customers could have a material adverse effect on our company, and this risk may be exacerbated as the quantum of required pension contributions increase.

### Risk Associated with Outsourcing Arrangement

Consistent with our strategy of reducing operating costs, we entered into outsourcing arrangements with Inergi and Brookfield. Details of the new outsourcing agreements can be found in the section "New Developments in 2014 – Other – Outsourcing Agreements." If either of these outsourcing agreements are terminated for any reason or expire before a new supplier is selected, we could be required to incur significant expenses to transfer to another service provider or insource, which could have a material adverse effect on our business, operating results, financial condition or prospects.

### Market and Credit Risk

Market risk refers primarily to the risk of loss that results from changes in commodity prices, foreign exchange rates and interest rates. We do not have commodity price risk. We do have foreign exchange risk as we enter into agreements to purchase materials and equipment associated with our capital programs and projects that are settled in foreign currencies. This foreign exchange risk is not material. We could in the future decide to issue foreign currency-denominated debt which we would anticipate hedging back to Canadian dollars, consistent with our company's risk management policy. We are exposed to fluctuations in interest rates as our regulated rate of return is derived using a formulaic approach.

The OEB-approved adjustment formula for calculating ROE in a deemed regulatory capital structure of 40% common equity and 60% debt will increase or decrease by 50% of the change between the current Long Canada Bond Forecast and the risk-free rate established at 4.25% and 50% of the change in the spread in 30-year "A"-rated Canadian utility bonds over the 30-year benchmark Government of Canada bond yield established at 1.415%. We estimate that a 1% decrease in the forecasted long-term Government of Canada bond yield used in determining our rate of return would reduce our Transmission Business' 2015 net income by approximately $20 million and our Hydro One Networks' distribution business' 2015 net income by approximately $13 million. Our net income is adversely impacted by rising interest rates as our maturing long-term debt is refinanced at market rates. We periodically utilize interest rate swap agreements to mitigate elements of interest rate risk.

Financial assets create a risk that a counterparty will fail to discharge an obligation, causing a financial loss. Derivative financial instruments result in exposure to credit risk, since there is a risk of counterparty default. We monitor and minimize credit risk through various techniques, including dealing with highly-rated counterparties, limiting total exposure levels with individual counterparties, and by entering into master agreements which enable net settlement and by monitoring the financial condition of counterparties. We do not trade in any energy derivatives. We do, however, have interest rate swap contracts outstanding from time to time. Currently, there are no significant concentrations of credit risk with respect to any class of financial assets. We are required to procure electricity on behalf of competitive retailers and embedded LDCs for resale to their customers. The resulting concentrations of credit risk are mitigated through the use of various security arrangements, including letters of credit, which are incorporated into our service agreements with these retailers in accordance with the OEB's Retail Settlement Code. The failure to properly manage these risks could have a material adverse effect on our company.

### Risk Associated with Transmission Projects

Transmission projects involve either modifying existing or building new transmission lines and/or stations or both. Such projects are required primarily to address limitations on the transmission network to transfer power from generation sources to load centres, improve regional load supply capacity and reliability, connect new generators and load customers, and to meet new, or changes to, codes and standards.

In many cases, transmission investments are contingent upon one or more of the following approvals and/or processes: *Environmental Assessment Act* (Ontario) approval(s); receipt of OEB approvals which can include expropriation; and appropriate consultation processes with First Nations and Métis communities. Obtaining OEB and/or *Environmental Assessment Act* (Ontario) approvals and carrying out these processes may also be impacted by opposition to the proposed site of transmission investments which could adversely affect transmission reliability and/or our service quality, both of which could have a material adverse effect on our company.

With the introduction on August 26, 2010, of the OEB's competitive transmission project development planning process, in the absence of a government directive, all interested transmitters will be required to submit a bid to the OEB for possibly some identified enabler facilities and network enhancement projects. The facilitation of competitive transmission could impact our future work program and our ability to expand our current transmission footprint. In addition, as bid costs are recoverable only by the successful proponent, additional costs for unsuccessful bids would be absorbed. This could have a material adverse effect on our company.

### Risk from Provincial Ownership of Transmission Corridors

Pursuant to the *Reliable Energy and Consumer Protection Act, 2002*, the Province acquired ownership of our transmission corridor lands underlying our transmission system. Although we have the statutory right to use the transmission corridors, we may be limited in our ability to expand our systems. Also, other uses of the transmission corridors by third parties in conjunction with the operation of our systems may increase safety or environmental risks, which could have an adverse effect on our company.

## CRITICAL ACCOUNTING ESTIMATES

The preparation of our Consolidated Financial Statements requires us to make estimates and judgments that affect the reported amounts of assets, liabilities, revenues and costs, and related disclosures of contingencies. We base our estimates and judgments on historical experience, current conditions and various other assumptions that are believed to be reasonable under the circumstances, the results of which form the basis for making judgments about the carrying values of assets and liabilities, as well as identifying and assessing our accounting treatment with respect to commitments and contingencies. Actual results may differ from these estimates and judgments. We have identified the following critical accounting estimates used in the preparation of our Consolidated Financial Statements:

### Revenues

Our monthly distribution revenue is estimated based on wholesale electricity purchases. At the end of each month, the electricity delivered to customers, but not billed, is estimated and revenue is recognized. The newly implemented CIS phase of our entity-wide system improvement project will allow us to use historical trends at a customer level to better estimate our unbilled revenue each period. This change in methodology for estimating revenue is anticipated to be implemented in 2015. Any changes in estimate will be accounted for prospectively.

### Allowance for Doubtful Accounts

The allowance for doubtful accounts reflects management's best estimate of losses on billed accounts receivable balances. The allowance is based on accounts receivable aging, historical experience and other currently available information. The allowance for doubtful accounts on customer receivables is estimated by applying internally developed loss rates to the outstanding receivable balances by risk segment. Risk segments represent groups of customers with similar credit quality indicators and are computed based on various attributes, including number of days receivables are past due, delinquency of balances and payment history. Loss rates applied to the accounts receivable balances are based on historical average write-offs as a percentage of accounts receivable in each risk segment.

### Regulatory Assets and Liabilities

Our regulatory assets represent certain amounts receivable from future electricity customers and costs that have been deferred for accounting purposes because it is probable that they will be recovered in future rates. Our regulatory assets mainly include costs related to the pension benefit liability, deferred income tax liabilities, post-retirement and post-employment benefit liability, and environmental liabilities. Our regulatory liabilities represent certain amounts that are refundable to future electricity customers, and pertain primarily to OEB deferral and variance accounts. The regulatory assets and liabilities can be recognized for rate-setting and financial reporting purposes only if the amounts have been approved for inclusion in the electricity rates by the OEB, or if such approval is judged to be probable by management. If management judges that it is no longer probable that the OEB will allow the inclusion of a regulatory asset or liability in future electricity rates, the applicable carrying amount of the regulatory asset or liability will be reflected in results of operations in the period that the judgment is made by management.

### Environmental Liabilities

We record a liability for the estimated future expenditures associated with the removal and destruction of PCB-contaminated insulating oils and related electrical equipment, and for the assessment and remediation of chemically-contaminated lands.

There are uncertainties in estimating future environmental costs due to potential external events such as changes in legislation or regulations and advances in remediation technologies. In determining the amounts to be recorded as environmental liabilities, the Company estimates the current cost of completing required work and makes assumptions as to when the future expenditures will actually be incurred, in order to generate future cash flow information. All factors used in estimating the Company's environmental liabilities represent management's best estimates of the present value of costs required to meet existing legislation or regulations. However, it is reasonably possible that numbers or volumes of contaminated assets, cost estimates to perform work, inflation assumptions and the assumed pattern of annual cash flows may differ significantly from the Company's current assumptions. Environmental liabilities are reviewed annually or more frequently if significant changes in regulations or other relevant factors occur. Estimate changes are accounted for prospectively.

In April 2014, Environment Canada enacted amendments to the existing PCB regulations, which included the extension of the end-of-use deadline from 2014 to 2025 for equipment containing certain concentrations of PCBs. Further discussion of the PCB amendments and related impact on our company can be found in the section "New Developments in 2014 – Other – Environment Canada Regulations."

### Employee Future Benefits

Our employee future benefits consist of pension and post-retirement and post-employment plans, and include pension, group life insurance, health care, and long-term disability benefits provided to our current and retired employees. Employee future benefits costs are included in our labour costs that are either charged to results of operations or capitalized as part of the cost of property, plant and equipment and intangible assets. Changes in assumptions affect the benefit obligation of the employee future benefits and the amounts that will be charged to our results of operations or capitalized in future years. The following significant assumptions and estimates are used to determine employee future benefit costs and obligations:

*Weighted Average Discount Rate*
The weighted average discount rate used to calculate the employee future benefits obligation is determined at each year end by referring to the most recently available market interest rates based on "AA"-rated corporate bond yields reflecting the duration of the applicable employee future benefit plan. The discount rate at December 31, 2014 decreased to 4.00% from 4.75% used at December 31, 2013, in conjunction with decreases in bond yields over this period. The decrease in the discount rate has resulted in a corresponding increase in employee future benefits liabilities for accounting purposes. The liabilities are determined by independent actuaries using the projected benefit method prorated on service and based on assumptions that reflect management's best estimates.

*Expected Rate of Return on Plan Assets*
The expected rate of return on pension plan assets is based on expectations of long-term rates of return at the beginning of the year and reflects a pension asset mix consistent with the pension plan's current investment policy.

Rates of return on the respective portfolios are determined with reference to respective published market indices. The expected rate of return on pension plan assets reflects our long-term expectations. We believe that this assumption is reasonable because, with the pension plan's balanced investment approach, the higher volatility of equity investment returns is intended to be offset by the greater stability of fixed-income and short-term investment returns. The net result, on a long-term basis, is a lower return than might be expected by investing in equities alone. In the short term, the pension plan can experience fluctuations in actual rates of return.

*Rate of Cost of Living Increase*
The rate of cost of living increase is determined by considering differences between long-term Government of Canada nominal bonds and real return bonds, which decreased from 2.00% per annum as at December 31, 2013 to approximately 1.70% per annum as at December 31, 2014. Given the Bank of Canada's commitment to keep long-term inflation between 1.00% and 3.00%, management believes that the current rate is reasonable to use as a long-term assumption and as such, has used a 2.0% per annum inflation rate for employee future benefits liability valuation purposes as at December 31, 2014.

*Mortality Assumptions*
Our employee future benefits liability is also impacted by changes in life expectancies used in mortality assumptions. Increases in life expectancies of plan members result in increases in the employee future benefits liability. The mortality assumption at December 31, 2014 was updated to the final tables issued by the Canadian Institute of Actuaries (for public sector, with projection scale CPM-B and no adjustment due to pension size). As at December 31, 2013, the draft tables published by the Canadian Institute of Actuaries were used.

*Rate of Increase in Health Care Cost Trends*
The costs of post-retirement and post-employment benefits are determined at the beginning of the year and are based on assumptions for expected claims experience and future health care cost inflation. A 1% increase in the health care cost trends would result in a $23 million increase in 2014 interest cost plus service cost, and a $248 million increase in the year-end 2014 benefit liability.

## Asset Impairment
Within our regulated businesses, the carrying costs of most of our long-lived assets are included in the rate base where they earn an OEB-approved rate of return. Asset carrying values and the related return are recovered through OEB-approved rates. As a result, such assets are only tested for impairment in the event that the OEB disallows recovery, in whole or in part, or if such a disallowance is judged to be probable. We regularly monitor the assets of our unregulated Hydro One Telecom subsidiary for indications of impairment. As at December 31, 2014, no asset impairment had been recorded for assets within our regulated or unregulated businesses.

Goodwill represents the cost of acquired LDCs that is in excess of the fair value of the net identifiable assets acquired at the acquisition date. Goodwill is evaluated for impairment on an annual basis, or more frequently if circumstances require. We have concluded that goodwill was not impaired at December 31, 2014.

## DISCLOSURE CONTROLS AND INTERNAL CONTROLS OVER FINANCIAL REPORTING

Internal controls have been documented and tested for adequacy and effectiveness, and continue to be refined over all business processes.

In compliance with the requirements of National Instrument 52-109, our Certifying Officers have reviewed and certified the Consolidated Financial Statements for the year ended December 31, 2014, together with other financial information included in our securities filings. Our Certifying Officers have also certified that disclosure controls and procedures (DC&P) have been designed to provide reasonable assurance that material information relating to our company is made known within our company. Further, our Certifying Officers have certified that internal controls over financial reporting (ICFR) have been designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of the Consolidated Financial Statements. Based on the evaluation of the design and operating effectiveness of our company's DC&P and ICFR, our Certifying Officers concluded that our company's DC&P and ICFR were effective as at December 31, 2014.

## NEW ACCOUNTING PRONOUNCEMENTS

In May 2014, the Financial Accounting Standards Board (FASB) issued an accounting standards update that provides guidance on revenue recognition which depicts the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expects to be entitled in exchange for those goods and services. This update is applicable to our company for the years and interim periods beginning on January 1, 2017. We are currently assessing the impact of adoption of this accounting standards update on our consolidated financial statements.

In August 2014, the FASB issued an accounting standards update that provides guidance about management's responsibility to evaluate whether there is substantial doubt about an entity's ability to continue as a going concern and related disclosures. This update is applicable to our company for the year ending December 31, 2016, and for annual and interim periods thereafter. We do not anticipate that the adoption of this accounting standards update will have a significant impact on our consolidated financial statements.

In November 2014, the FASB issued an accounting standards update that provides guidance on accounting for hybrid financial instruments issued in the form of a share. This update is applicable to our company for the years and interim periods beginning on January 1, 2016. We are currently assessing the impact of adoption of this accounting standards update on our consolidated financial statements.

## OUTLOOK

We will achieve our mission and vision and remain focused on achieving our corporate goal of providing safe, reliable and affordable service to our customers, today and tomorrow, while increasing enterprise value for our Shareholder. We will do this by continuing to concentrate on our strategic objectives of safety, customer satisfaction, continuous innovation, reliability, protection of the environment, championing people and culture, Shareholder value and productivity and cost-effectiveness. We continue to seek to strike the right balance between making prudent risk-based reliability investments and keeping customers' rates low. Effectively and efficiently managing costs is an important part of achieving this balance.

Given the nature of the work undertaken by our employees and contractors, safety remains our top priority. We will continue to focus on creating an injury-free workplace and maintaining public safety through several health and safety initiatives, including maintaining our OHSAS 18001 standing.

We are focused on becoming a customer centric company and achieving our vision of improving customer satisfaction, maintaining affordable rates for the portion of the customers' bill within our control and building a trusted partner relationship with our customers. Our plan has taken into account discussions with our customers and reflects the planned development and delivery of targeted customer segment strategies, products and services which respond to our customers' unique needs. This includes realizing value from our new CIS, simplifying and shortening timeframes for the delivery of services, enhancing accessibility in person, by phone or through our web portal and/or our mobile application to ensure effective self-service for simple transactions, and delivering programs which help customers better manage their energy consumption. In addition, to further improve our customer service performance culture as a transparent, accountable and customer-focused organization, we have recently announced two new initiatives – a third party expert Customer Service Advisory Panel and our draft Customer Commitments.

We will continue to focus on driving our transformation to a culture that is accountability-based. All of our management staff received training under our Craft of Management program. In addition, a new Talent Management program was piloted in 2014 and will be rolled out company-wide in 2015. These programs will serve as the foundation for establishing that culture of accountability. Investments in these programs, coupled with existing programs which enhance employee skills and ability, will help us deliver best-in-class service to our customers, continue the drive to zero workplace injuries and create a great workplace that will lead to improved employee engagement. We remain focused on managing the resourcing requirements of an increasing work program through appropriate compensation policies, labour negotiations, use of outsourced multi-skilled staff and support of internal and external college and university training programs. Aging workforce demographics provide opportunities, through retirements, to restructure and transform the workforce.

Our assets are in the midst of a demographic change with an increasing proportion of assets reaching the end of their expected service life and an increasing average asset age. To ensure the electricity system's reliability in the public interest, we have planned for significant investments in transmission and distribution infrastructure. Our plan includes targeted, risk-based investments to maintain, refurbish and replace existing assets that are in poor condition and beyond their expected service life, within the policy set by the OEB. Investments in technology, such as the successful implementation of Asset Analytics, have provided us with real-time asset condition and performance data, giving us the ability to make asset optimization life-cycle decisions, and opportunities through planning and scheduling data to improve materials procurement and to deploy work crews to better manage work programs to meet customer needs.

The actual timing and expenditures in our business plan are predicated on obtaining various approvals including: OEB approvals and environmental assessment approvals; successful negotiations with customers, neighbouring utilities and other stakeholders; and consultations with First Nations and Métis communities.

Over the last five years, we have replaced all of our core IT systems with a company-wide IT system. Further development of the existing IT platform will enable various tools to consistently provide a comprehensive and cascading information view of asset risks based on demographics, condition, performance, criticality, economics and utilization. In addition, we have introduced talent management, employee pay and time reporting enhancements to reduce costs, and to further develop and retain critical core competencies, skills and knowledge of our people. These new initiatives will allow us to effectively plan and reprioritize work and integrate customers' needs into multi-year investment plans. This outcome is consistent with the OEB's direction in its new Outcomes-Based Approach to regulation.

Our plan is focused on delivering integrated asset-to-work planning, optimized scheduling, and execution, as well as field mobility. Through our investment in our Workflow of the Future initiative (currently a pilot program), we will bring together data, analytics and mobility to allow our employees, especially those in the field, to do more at the job site with their mobile devices.

Significant opportunity resides with smart meters and the proliferation of ADS including energy efficiency, demand response and distributed-resource technologies over the long term. Our investments in this area will focus on reliability, customer needs and affordability. We will continue to invest on a prudent basis in the development of ADS and related grid modernization standards, customer demand work (connections and upgrades), smart meters, DG connections, including station upgrades, protection and control, new lines and some contestable work, for which we will receive customer capital contributions. There is little flexibility to reduce this work as most of it is customer demand driven.

Consistent with our corporate strategy, we will pursue an LDC consolidation approach that is robust but prudent, to facilitate the consolidation of Ontario's distribution sector. This is consistent with the Ontario Distribution Sector Review Panel's assessment that there are substantial efficiencies to be found through consolidation of Ontario LDCs and we are key to the solution. We will also work with our Shareholder to address the recommendations of the Council once they are finalized in the Council's final report which is anticipated in the spring of 2015. Our plan does not include funding for LDC acquisitions or assume any disposition of our service territory. These opportunities will be managed as they arise. Our plan also does not incorporate any projects related to competitive transmission. However, as leaders in the sector, we plan to bid on key projects. The OEB notes in its *Framework for Transmission Project Development Plans* that where projects are otherwise equivalent or close in other factors, information such as socio-economic benefits, including First Nations involvement, could prove decisive in a competitive bid. As such, First Nations involvement in competitive bids is likely to become more prevalent.

## CHANGES TO OUR BOARD OF DIRECTORS

On March 7, 2014, our Shareholder, the Minister of Energy, on behalf of the Government of Ontario, announced that Sandra Pupatello would be appointed Chair of our Board of Directors, effective April 1, 2014, and on April 1, 2014, the Shareholder formally elected Ms. Pupatello as our new Chair. Ms. Pupatello is the Director of Business Development and Global Markets at PricewaterhouseCoopers Canada. She is also the Chief Executive Officer of the WindsorEssex Economic Development Corporation. Ms. Pupatello has been a member of our Board of Directors since November 2013.

On April 11, 2014, the following new members were added to our Board of Directors: William Limbrick, Tom Moss, and John Wiersma. William Limbrick was the Vice President of Information and Technology Services, Chief Information Officer of the IESO, and a Principal Consultant within the utilities practice of PricewaterhouseCoopers and Sun Life Assurance in the United Kingdom. Tom Moss is the former President and Chief Operating Officer of Telecom Ottawa, and has held strategic policy positions in the federal government at Treasury Board and Industry Canada. John Wiersma, P.Eng., is a former director of the ESA (Ontario) and IESO Board of Directors, and a former member of the Board of the Electrical and Utilities Safety Association and the Canadian Energy Efficiency Alliance.

On April 25, 2014, the following new members were added to our Board of Directors: Sally Daub, Maureen Sabia, and Carole Workman. Sally Daub is a director and former President and Chief Executive Officer of ViXS Systems, a former chair of the Small Business Agency of Ontario, and a former board member of the Information Technology Association of Canada and the Global Semiconductor Association. Maureen Sabia is the Chair of the Board of Canadian Tire Corporation Limited, and has an extensive background with organizations at the provincial and federal levels. She has been named one of Canada's Most Powerful Women and is also an officer of the Order of Canada. Carole Workman is a member of the Board of Allstate Insurance of Canada (Toronto). She also served on the Board of the Ottawa Hospital and its affiliates since 2007, and is a former member of the Board of Hydro Ottawa Holding Inc.

On April 1, 2014, James Arnett resigned from our Board of Directors. Mr. Arnett has been a member and Chair of our Board of Directors since March 2008. The Board of Directors terms for Michael Mueller, Walter Murray, Robert Pace, and Douglas Speers expired on April 11, 2014.

## FORWARD-LOOKING STATEMENTS AND INFORMATION

Our oral and written public communications, including this document, often contain forward-looking statements that are based on current expectations, estimates, forecasts and projections about our business and the industry in which we operate, and include beliefs and assumptions made by the management of our company. Such statements include, but are not limited to: expectations regarding energy-related revenues and profit and their trend; statements regarding our transmission and distribution rates and customer bills resulting from our rate applications; statements related to the FIT program; statements about CDM; statements about our strategy, including our strategic objectives; statements regarding considerations of current economic conditions; statements regarding the new regional planning process; statements related to employee future benefits; expectations regarding First Nation involvement in competitive bids; statements regarding our liquidity and capital resources and operational requirements; statements about our standby credit facility; expectations regarding our financing activities; statements regarding our maturing debt; statements regarding our ongoing and planned projects and/or initiatives including the expected results of these projects and/or initiatives (including productivity savings, process improvements, and customer satisfaction) and their completion dates; expectations regarding the recoverability of large capital investments; expectations regarding generation connection investments; statements regarding expected future capital and development investments, the timing of these expenditures and our investment plans; expectations regarding OPA recommendations; statements regarding contractual obligations and other commercial commitments; statements related to the OEB; statements regarding future pension contributions, our pension plan and actuarial valuation; statements about our outsourcing arrangements with Inergi and Brookfield and such future outsourcing arrangements; statements regarding customer service performance culture, including statements about the Customer Service Advisory Panel and Customer Commitments; expectations regarding work and costs of compliance with environmental and health and safety regulations; statements related to the 2013 LTEP; statements regarding recent accounting-related guidance; statements related to the Council; statements related to the Working Group on electricity sector pension plans; statements related to B2M LP; and statements related to LDC consolidation including our acquisition of Norfolk Power, Woodstock Hydro, and Haldimand Hydro. Words such as "expect", "anticipate", "intend", "attempt", "may", "plan", "will", "believe", "seek", "estimate", "goal", "aim", "target", and variations of such words and similar expressions are intended to identify such forward-looking statements. These statements are not guarantees of future performance and involve assumptions and risks and uncertainties that are difficult to predict. Therefore, actual outcomes and results may differ materially from what is expressed, implied or forecasted in such forward-looking statements. We do not intend, and we disclaim any obligation, to update any forward-looking statements, except as required by law.

These forward-looking statements are based on a variety of factors and assumptions including, but not limited to, the following: no unforeseen changes in the legislative and operating framework for Ontario's electricity market; favourable decisions from the OEB and other regulatory bodies concerning outstanding rate and other applications; no delays in obtaining the required approvals; no unforeseen changes in rate orders or rate structures for our Distribution and Transmission Businesses; continued use of US GAAP; a stable regulatory environment; no unfavourable changes in environmental regulation; and no significant event occurring outside the ordinary course of business. These assumptions are based on information currently available to us, including information obtained from third party sources. Actual results may differ materially from those predicted by such forward-looking statements. While we do not know what impact any of these differences may have, our business, results of operations, financial condition and our credit stability may be materially adversely affected. Factors that could cause actual results or outcomes to differ materially from the results expressed or implied by forward-looking statements include, among other things:

- the risks associated with being controlled by the Province including the possibility that the Province may make declarations pursuant to the memorandum of agreement, the Province could mandate the selling of all or part of our distribution business, as well as potential conflicts of interest that may arise between us, the Province and related parties;
- the risks associated with being subject to extensive regulation including risks associated with OEB action or inaction, including regulatory decisions regarding our revenue requirements, cost recovery, rates, acquisitions and divestitures;
- the risk that previously granted regulatory approvals may be subsequently challenged, appealed or overturned;
- the risk to our facilities posed by severe weather conditions, natural disasters or catastrophic events and our limited insurance coverage for losses resulting from these events;
- public opposition to and delays or denials of the requisite approvals and accommodations for our planned projects;
- the risk that we may incur significant costs associated with transferring assets located on Reserves (as defined in the *Indian Act* (Canada));
- the risks associated with information system security, with maintaining a complex information technology system infrastructure, and with transitioning most of our financial and business processes to an integrated business and financial reporting system;
- the risks related to our workforce demographic and our potential inability to attract and retain qualified personnel;
- the ability to negotiate appropriate collective agreements;
- the risk that we are not able to arrange sufficient cost-effective financing to repay maturing debt and to fund capital investments and other obligations;
- the risks associated with the execution of our capital and operation, maintenance and administration programs necessary to maintain the performance of our aging asset base;
- the risk that future environmental expenditures are not recoverable in future electricity rates;
- the risk that the presence or release of hazardous or harmful substances could lead to claims by third parties and/or governmental orders;
- the risk that assumptions that form the basis of our recorded environmental liabilities and related regulatory assets may change;
- future interest rates, future investment returns, inflation, changes in benefits and changes in actuarial assumptions;
- the potential that we may incur significant expenses to replace some or all of the functions currently outsourced if either of our agreements with Inergi or Brookfield are terminated or expire before a new service provider is selected;
- the risks associated with changes in the forecasted long-term Government of Canada bond yield;
- the risks of counterparty default on our outstanding derivative contracts;
- the risks associated with current economic uncertainty and financial market volatility;
- the risk that our long-term credit rating would deteriorate;
- the inability to prepare financial statements using US GAAP, or IFRS, as applicable;

- the impact of the 2013 LTEP on our company and the costs and expenses arising therefrom;
- unanticipated changes in electricity demand or in our costs;
- the risk that unexpected capital investments may be needed to support renewable generation or resolve unforeseen technical issues; and
- the impact of the ownership by the Province of lands underlying our transmission system.

We caution the reader that the above list of factors is not exhaustive. Some of these and other factors are discussed in more detail in the section "Risk Management and Risk Factors" in this MD&A. You should review this section in detail.

In addition, we caution the reader that information provided in this MD&A regarding our outlook on certain matters, including potential future expenditures, is provided in order to give context to the nature of some of our future plans and may not be appropriate for other purposes.

Additional information about the Company, including the Company's Annual Information Form, can be found on SEDAR at www.sedar.com and on the US Securities and Exchange Commission's website at www.sec.gov.

# MANAGEMENT'S REPORT

The Consolidated Financial Statements, Management's Discussion and Analysis (MD&A) and related financial information have been prepared by the management of Hydro One Inc. (Hydro One or the Company). Management is responsible for the integrity, consistency and reliability of all such information presented. The Consolidated Financial Statements have been prepared in accordance with United States Generally Accepted Accounting Principles and applicable securities legislation. The MD&A has been prepared in accordance with National Instrument 51-102.

The preparation of the Consolidated Financial Statements and information in the MD&A involves the use of estimates and assumptions based on management's judgment, particularly when transactions affecting the current accounting period cannot be finalized with certainty until future periods. Estimates and assumptions are based on historical experience, current conditions and various other assumptions believed to be reasonable in the circumstances, with critical analysis of the significant accounting policies followed by the Company as described in Note 2 to the Consolidated Financial Statements. The preparation of the Consolidated Financial Statements and the MD&A includes information regarding the estimated impact of future events and transactions. The MD&A also includes information regarding sources of liquidity and capital resources, operating trends, risks and uncertainties. Actual results in the future may differ materially from the present assessment of this information because future events and circumstances may not occur as expected. The Consolidated Financial Statements and MD&A have been properly prepared within reasonable limits of materiality and in light of information up to February 11, 2015.

Management is responsible for establishing and maintaining adequate internal control over financial reporting for the Company. In meeting its responsibility for the reliability of financial information, management maintains and relies on a comprehensive system of internal control and internal audit. The system of internal control includes a written corporate conduct policy; implementation of a risk management framework; effective segregation of duties and delegation of authorities; and sound and conservative accounting policies that are regularly reviewed. This structure is designed to provide reasonable assurance that assets are safeguarded and that reliable information is available on a timely basis. In addition, management has assessed the design and operating effectiveness of the Company's internal control over financial reporting in accordance with the criteria set forth in Internal Control – Integrated Framework (2013), issued by the Committee of Sponsoring Organizations of the Treadway Commission. Based on this assessment, management concluded that the Company maintained effective internal control over financial reporting as of December 31, 2014. The effectiveness of these internal controls is reported to the Audit, Finance and Pension Investment Committee of the Hydro One Board of Directors, as required.

The Consolidated Financial Statements have been audited by KPMG LLP, independent external auditors appointed by the Shareholder. The external auditors' responsibility is to express their opinion on whether the Consolidated Financial Statements are fairly presented in accordance with United States Generally Accepted Accounting Principles. The Independent Auditors' Report outlines the scope of their examination and their opinion.

The Hydro One Board of Directors, through its Audit, Finance and Pension Investment Committee, is responsible for ensuring that management fulfills its responsibilities for financial reporting and internal controls. The Audit, Finance and Pension Investment Committee of Hydro One met periodically with management, the internal auditors and the external auditors to satisfy itself that each group had properly discharged its respective responsibility and to review the Consolidated Financial Statements before recommending approval by the Board of Directors. The external auditors had direct and full access to the Audit, Finance and Pension Investment Committee, with and without the presence of management, to discuss their audit findings, if any.

The President and Chief Executive Officer and the Chief Financial Officer (Acting) have certified Hydro One's annual Consolidated Financial Statements and annual MD&A, related disclosure controls and procedures and the design and effectiveness of related internal controls over financial reporting.

On behalf of Hydro One Inc.'s management:

**Carmine Marcello**
President and Chief Executive Officer

**Ali R. Suleman**
Chief Financial Officer (Acting)

# INDEPENDENT AUDITORS' REPORT

To the Shareholder of Hydro One Inc.

We have audited the accompanying Consolidated Financial Statements of Hydro One Inc., which comprise the consolidated balance sheets as at December 31, 2014 and December 31, 2013, the consolidated statements of operations and comprehensive income, changes in equity and cash flows for the years then ended, and notes, comprising a summary of significant accounting policies and other explanatory information.

*Management's Responsibility for the Consolidated Financial Statements*

Management is responsible for the preparation and fair presentation of these Consolidated Financial Statements in accordance with United States Generally Accepted Accounting Principles, and for such internal control as management determines is necessary to enable the preparation of Consolidated Financial Statements that are free from material misstatement, whether due to fraud or error.

*Auditors' Responsibility*

Our responsibility is to express an opinion on these Consolidated Financial Statements based on our audits. We conducted our audits in accordance with Canadian generally accepted auditing standards. Those standards require that we comply with ethical requirements and plan and perform the audit to obtain reasonable assurance about whether the Consolidated Financial Statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the Consolidated Financial Statements. The procedures selected depend on our judgment, including the assessment of the risks of material misstatement of the Consolidated Financial Statements, whether due to fraud or error. In making those risk assessments, we consider internal control relevant to the entity's preparation and fair presentation of the Consolidated Financial Statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management, as well as evaluating the overall presentation of the Consolidated Financial Statements.

We believe that the audit evidence we have obtained in our audits is sufficient and appropriate to provide a basis for our audit opinion.

*Opinion*

In our opinion, the Consolidated Financial Statements present fairly, in all material respects, the consolidated financial position of Hydro One Inc. as at December 31, 2014 and December 31, 2013, and its consolidated results of operations and its consolidated cash flows for the years then ended in accordance with United States Generally Accepted Accounting Principles.

# NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

**For the years ended December 31, 2014 and 2013**

## 1. DESCRIPTION OF THE BUSINESS

Hydro One Inc. (Hydro One or the Company) was incorporated on December 1, 1998, under the *Business Corporations Act* (Ontario) and is wholly owned by the Province of Ontario (Province). The principal businesses of Hydro One are the transmission and distribution of electricity to customers within Ontario. The electricity rates of these businesses are regulated by the Ontario Energy Board (OEB).

## 2. SIGNIFICANT ACCOUNTING POLICIES

### Basis of Consolidation

These Consolidated Financial Statements include the accounts of the Company and its wholly owned subsidiaries: Hydro One Networks Inc. (Hydro One Networks), Hydro One Remote Communities Inc. (Hydro One Remote Communities), Hydro One Brampton Networks Inc. (Hydro One Brampton Networks), Hydro One Telecom Inc. (Hydro One Telecom), Hydro One Lake Erie Link Management Inc., Hydro One Lake Erie Link Company Inc., Norfolk Power Inc. (Norfolk Power), and Hydro One B2M Holdings. Intercompany transactions and balances have been eliminated.

### Basis of Accounting

These Consolidated Financial Statements are prepared and presented in accordance with United States (US) Generally Accepted Accounting Principles (GAAP) and in Canadian dollars.

Hydro One performed an evaluation of subsequent events through to February 11, 2015, the date these Consolidated Financial Statements were issued, to determine whether any events or transactions warranted recognition and disclosure in these Consolidated Financial Statements. See Note 25 – Subsequent Event.

### Use of Management Estimates

The preparation of financial statements requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities at the date of the financial statements and the reported amounts of revenues, expenses, gains and losses during the reporting periods. Management evaluates these estimates on an ongoing basis based upon historical experience, current conditions, and assumptions believed to be reasonable at the time the assumptions are made, with any adjustments being recognized in results of operations in the period they arise. Significant estimates relate to regulatory assets and regulatory liabilities, environmental liabilities, pension benefits, post-retirement and post-employment benefits, asset retirement obligations (AROs), goodwill and asset impairments, contingencies, unbilled revenues, allowance for doubtful accounts, derivative instruments, and deferred income tax assets and liabilities. Actual results may differ significantly from these estimates, which may be impacted by future decisions made by the OEB or the Province.

### Rate Setting

The Company's Transmission Business includes the separately regulated transmission businesses of Hydro One Networks and B2M Limited Partnership (B2M LP). The Company's consolidated Distribution Business includes the separately regulated distribution businesses of Hydro One Networks and the newly acquired Norfolk Power, as well as the subsidiaries Hydro One Brampton Networks and Hydro One Remote Communities.

The OEB has approved the use of US GAAP for rate setting and regulatory accounting and reporting by Hydro One Networks' transmission and distribution businesses, as well as by Hydro One Remote Communities, beginning with the year 2012. Up to the year ended December 31, 2014, Hydro One Brampton Networks used Canadian GAAP (Part V) for its distribution rate-setting purposes, and has transitioned to International Financial Reporting Standards beginning on January 1, 2015.

***Transmission***

In May 2012, Hydro One Networks filed a cost-of-service application with the OEB for 2013 and 2014 transmission rates. In December 2012, the OEB approved the 2013 and 2014 revenue requirement of $1,438 million and $1,528 million, respectively.

In December 2013, Hydro One Networks filed a draft Rate Order with the OEB for 2014 transmission rates. The 2014 transmission revenue requirement was increased to $1,535 million from the originally-approved revenue requirement of $1,528 million, primarily due to changes in the cost of capital parameters for 2014 released by the OEB in November 2013. On January 9, 2014, the OEB approved the draft Rate Order for 2014 transmission rates as filed.

***Distribution***

In June 2012, Hydro One Networks filed an Incentive Regulation Mechanism (IRM) application with the OEB for 2013 distribution rates, to be effective January 1, 2013. In December 2012, the OEB issued its final Decision, which resulted in an increase in distribution rates of approximately 1.3% in 2013, or 0.4% when considering total bill impact, for a typical residential customer consuming 800 kWh per month. In April 2013, Hydro One Networks filed an IRM application with the OEB for 2014 distribution rates, to be effective January 1, 2014. In December 2013, the OEB issued its final Decision, which resulted in an increase in distribution rates of approximately 2.4% in 2014, or 0.85% when considering total bill impact, for a typical residential customer consuming 800 kWh per month.

In August 2012, Hydro One Brampton Networks filed an IRM application with the OEB for 2013 distribution rates, to be effective January 1, 2013. In December 2012, the OEB issued its final Decision, which resulted in an increase in distribution rates of approximately 0.3% in 2013, or less than 0.1% when considering total bill impact, for a typical residential customer consuming 800 kWh per month. In August 2013, Hydro One Brampton Networks filed an IRM application with the OEB for 2014 distribution rates, to be effective January 1, 2014. In December 2013, the OEB issued its final Decision, which resulted in a reduction in distribution rates of approximately 2.3% in 2014, or 0.5% when considering total bill impact, for a typical residential customer consuming 800 kWh per month.

In September 2012, Hydro One Remote Communities filed a cost-of-service application with the OEB for 2013 rates, seeking approval for a 2013 revenue requirement of $53 million. In June 2013, the OEB approved a revenue requirement of $51 million for 2013. In October 2013, Hydro One Remote Communities filed an IRM application with the OEB for 2014 rates, seeking approval for a rate increase of approximately 0.5%. In March 2014, the OEB approved an increase of approximately 1.7% to basic rates for the distribution and generation of electricity, with an effective date of May 1, 2014. The final rate increase was adjusted by the OEB's updated rate adjustment parameters and Hydro One Remote Communities' IRM stretch factor.

## Regulatory Accounting

The OEB has the general power to include or exclude revenues, costs, gains or losses in the rates of a specific period, resulting in a change in the timing of accounting recognition from that which would have been applied in an unregulated company. Such change in timing involves the application of rate-regulated accounting, giving rise to the recognition of regulatory assets and liabilities. The Company's regulatory assets represent certain amounts receivable from future customers and costs that have been deferred for accounting purposes because it is probable that they will be recovered in future rates. In addition, the Company has recorded regulatory liabilities that generally represent amounts that are refundable to future customers. The Company continually assesses the likelihood of recovery of each of its regulatory assets and continues to believe that it is probable that the OEB will factor its regulatory assets and liabilities into the setting of future rates. If, at some future date, the Company judges that it is no longer probable that the OEB will include a regulatory asset or liability in setting future rates, the appropriate carrying amount will be reflected in results of operations in the period that the assessment is made.

## Cash and Cash Equivalents

Cash and cash equivalents include cash and short-term investments with an original maturity of three months or less.

### Revenue Recognition

Transmission revenues are collected through OEB-approved rates, which are based on an approved revenue requirement that includes a rate of return. Such revenue is recognized as electricity is transmitted and delivered to customers.

Distribution revenues are recognized on an accrual basis and include billed and unbilled revenues. Distribution revenues attributable to the delivery of electricity are based on OEB-approved distribution rates and are recognized as electricity is delivered to customers. The Company estimates monthly revenue for a period based on wholesale electricity purchases because customer meters are not generally read at the end of each month. At the end of each month, the electricity delivered to customers, but not billed, is estimated and revenue is recognized. The unbilled revenue estimate is affected by energy demand, weather, line losses and changes in the composition of customer classes.

Distribution revenue also includes an amount relating to rate protection for rural, residential and remote customers, which is received from the Independent Electricity System Operator (IESO) based on a standardized customer rate that is approved by the OEB. Current legislation provides rate protection for prescribed classes of rural, residential and remote consumers by reducing the electricity rates that would otherwise apply.

Revenues also include amounts related to sales of other services and equipment. Such revenue is recognized as services are rendered or as equipment is delivered.

Revenues are recorded net of indirect taxes.

### Accounts Receivable and Allowance for Doubtful Accounts

Billed accounts receivable are recorded at the invoiced amount, net of allowance for doubtful accounts. Unbilled accounts receivable are estimated and recorded based on wholesale electricity purchases. Overdue amounts related to regulated billings bear interest at OEB-approved rates. The allowance for doubtful accounts reflects the Company's best estimate of losses on billed accounts receivable balances. The allowance is based on accounts receivable aging, historical experience and other currently available information. The Company estimates the allowance for doubtful accounts on customer receivables by applying internally developed loss rates to the outstanding receivable balances by risk segment. Risk segments represent groups of customers with similar credit quality indicators and are computed based on various attributes, including number of days receivables are past due, delinquency of balances and payment history. Loss rates applied to the accounts receivable balances are based on historical average write-offs as a percentage of accounts receivable in each risk segment. An account is considered delinquent if the final amount billed is not received within 110 days of the invoiced date. Accounts receivable are written off against the allowance when they are deemed uncollectible. The existing allowance for uncollectible accounts will continue to be affected by changes in volume, prices and economic conditions.

### Noncontrolling interest

Noncontrolling interest represents the portion of equity ownership in subsidiaries that is not attributable to the Shareholder of the parent company. Noncontrolling interest is initially recorded at fair value and subsequently the amount is adjusted for the proportionate share of net income (loss) and other comprehensive income (loss) attributable to the noncontrolling interest and any dividends or distributions paid to the noncontrolling interest.

If a transaction results in the acquisition of all, or part, of a noncontrolling interest in a subsidiary, the acquisition of the noncontrolling interest is accounted for as an equity transaction. No gain or loss is recognized in consolidated net income or comprehensive income as a result of changes in the noncontrolling interest, unless a change results in the loss of control by the Company.

### Corporate Income Taxes

Under the *Electricity Act, 1998*, Hydro One is required to make payments in lieu of corporate income taxes (PILs) to the Ontario Electricity Financial Corporation (OEFC). These payments are calculated in accordance with the rules for computing income and other relevant amounts contained in the *Income Tax Act* (Canada) and the *Taxation Act, 2007* (Ontario) as modified by the *Electricity Act, 1998* and related regulations.

Current and deferred income taxes are computed based on the tax rates and tax laws enacted at the balance sheet date. Tax benefits associated with income tax positions taken, or expected to be taken, in a tax return are recorded only when the "more-likely-than-not" recognition threshold is satisfied and are measured at the largest amount of benefit that has a greater than 50% likelihood of being realized upon settlement. Management evaluates each position based solely on the technical merits and facts and circumstances of the position, assuming the position will be examined by a taxing authority having full knowledge of all relevant information. Significant management judgment is required to determine recognition thresholds and the related amount of tax benefits to be recognized in the Consolidated Financial Statements. Management re-evaluates tax positions each period in which new information about recognition or measurement becomes available.

### *Current Income Taxes*

The provision for current taxes and the assets and liabilities recognized for the current and prior periods are measured at the amounts receivable from, or payable to, the OEFC.

### *Deferred Income Taxes*

Deferred income taxes are provided for using the liability method. Deferred income taxes are recognized based on the estimated future tax consequences attributable to temporary differences between the carrying amount of assets and liabilities in the Consolidated Financial Statements and their corresponding tax bases.

Deferred income tax liabilities are generally recognized on all taxable temporary differences. Deferred tax assets are recognized to the extent that it is more-likely-than-not that these assets will be realized from taxable income available against which deductible temporary differences can be utilized.

Deferred income taxes are calculated at the tax rates that are expected to apply in the period when the liability is settled or the asset is realized, based on the tax rates and tax laws that have been enacted at the balance sheet date. Deferred income taxes that are not included in the rate-setting process are charged or credited to the Consolidated Statements of Operations and Comprehensive Income.

If management determines that it is more-likely-than-not that some or all of a deferred income tax asset will not be realized, a valuation allowance is recorded against the deferred income tax asset to report the net balance at the amount expected to be realized. Previously unrecognized deferred income tax assets are reassessed at each balance sheet date and are recognized to the extent that it has become more-likely-than-not that the tax benefit will be realized.

The Company records regulatory assets and liabilities associated with deferred income taxes that will be included in the rate-setting process.

The Company uses the flow-through method to account for investment tax credits (ITCs) earned on eligible scientific research and experimental development expenditures, and apprenticeship job creation. Under this method, only non-refundable ITCs are recognized as a reduction to income tax expense.

## Materials and Supplies

Materials and supplies represent consumables, small spare parts and construction materials held for internal construction and maintenance of property, plant and equipment. These assets are carried at average cost less any impairments recorded.

## Property, Plant and Equipment

Property, plant and equipment is recorded at original cost, net of customer contributions received in aid of construction and any accumulated impairment losses. The cost of additions, including betterments and replacement asset components, is included on the Consolidated Balance Sheets as property, plant and equipment.

The original cost of property, plant and equipment includes direct materials, direct labour (including employee benefits), contracted services, attributable capitalized financing costs, asset retirement costs, and direct and indirect overheads that are related to the capital project or program. Indirect overheads include a portion of corporate costs such as finance, treasury, human resources, information technology and executive costs. Overhead costs, including corporate functions and field services costs, are capitalized on a fully allocated basis, consistent with an OEB-approved methodology.

Property, plant and equipment in service consists of transmission, distribution, communication, administration and service assets and land easements. Property, plant and equipment also includes future use assets, such as land, major components and spare parts, and capitalized project development costs associated with deferred capital projects.

***Transmission***
Transmission assets include assets used for the transmission of high-voltage electricity, such as transmission lines, support structures, foundations, insulators, connecting hardware and grounding systems, and assets used to step up the voltage of electricity from generating stations for transmission and to step down voltages for distribution, including transformers, circuit breakers and switches.

***Distribution***
Distribution assets include assets related to the distribution of low-voltage electricity, including lines, poles, switches, transformers, protective devices and metering systems.

***Communication***
Communication assets include the fibre optic and microwave radio system, optical ground wire, towers, telephone equipment and associated buildings.

***Administration and Service***
Administration and service assets include administrative buildings, personal computers, transport and work equipment, tools and other minor assets.

***Easements***
Easements include statutory rights of use for transmission corridors and abutting lands granted under the *Reliable Energy and Consumer Protection Act, 2002*, as well as other land access rights.

### Intangible Assets
Intangible assets separately acquired or internally developed are measured on initial recognition at cost, which comprises purchased software, direct labour (including employee benefits), consulting, engineering, overheads and attributable capitalized financing charges. Following initial recognition, intangible assets are carried at cost, net of any accumulated amortization and accumulated impairment losses. The Company's intangible assets primarily represent major company-wide computer applications.

### Capitalized Financing Costs
Capitalized financing costs represent interest costs attributable to the construction of property, plant and equipment or development of intangible assets. The financing cost of attributable borrowed funds is capitalized as part of the acquisition cost of such assets. The capitalized portion of financing costs is a reduction to financing charges recognized in the Consolidated Statements of Operations and Comprehensive Income. Capitalized financing costs are calculated using the Company's weighted average effective cost of debt.

### Construction and Development in Progress
Construction and development in progress consists of the capitalized cost of constructed assets that are not yet complete and which have not yet been placed in service.

**Depreciation and Amortization**

The cost of property, plant and equipment and intangible assets is depreciated or amortized on a straight-line basis based on the estimated remaining service life of each asset category, except for transport and work equipment, which is depreciated on a declining balance basis.

The Company periodically initiates an external independent review of its property, plant and equipment and intangible asset depreciation and amortization rates, as required by the OEB. Any changes arising from OEB approval of such a review are implemented on a remaining service life basis, consistent with their inclusion in electricity rates. The last review resulted in changes to rates effective January 1, 2013. A summary of average service lives and depreciation and amortization rates for the various classes of assets is included below:

| | Average Service Life | Rate Range | Rate Average |
|---|---|---|---|
| Transmission | 57 years | 1% – 2% | 2% |
| Distribution | 42 years | 1% – 20% | 2% |
| Communication | 19 years | 1% – 15% | 4% |
| Administration and service | 15 years | 3% – 20% | 7% |

The cost of intangible assets is included primarily within the administration and service classification above. Amortization rates for computer applications software and other intangible assets range from 9% to 20%.

In accordance with group depreciation practices, the original cost of property, plant and equipment, or major components thereof, and intangible assets that are normally retired, is charged to accumulated depreciation, with no gain or loss being reflected in results of operations. Where a disposition of property, plant and equipment occurs through sale, a gain or loss is calculated based on proceeds and such gain or loss is included in depreciation expense. Depreciation expense also includes the costs incurred to remove property, plant and equipment where no ARO has been recorded.

**Goodwill**

Goodwill represents the cost of acquired local distribution companies that is in excess of the fair value of the net identifiable assets acquired at the acquisition date. Goodwill is not included in rate base.

Goodwill is evaluated for impairment on an annual basis, or more frequently if circumstances require. The Company performs a qualitative assessment to determine whether it is more-likely-than-not that the fair value of the applicable reporting unit is less than its carrying amount. If the Company determines, as a result of its qualitative assessment, that it is not more-likely-than-not that the fair value of the applicable reporting unit is less than its carrying amount, no further testing is required. If the Company determines, as a result of its qualitative assessment, that it is more-likely-than-not that the fair value of the applicable reporting unit is less than its carrying amount, a goodwill impairment assessment is performed using a two-step, fair value-based test. The first step compares the fair value of the applicable reporting unit to its carrying amount, including goodwill. If the carrying amount of the applicable reporting unit exceeds its fair value, a second step is performed. The second step requires an allocation of fair value to the individual assets and liabilities using purchase price allocation in order to determine the implied fair value of goodwill. If the implied fair value of goodwill is less than the carrying amount, an impairment loss is recorded as a reduction to goodwill and as a charge to results of operations.

For the year ended December 31, 2014, based on the qualitative assessment performed as at September 30, 2014, the Company has determined that it is not more-likely-than-not that the fair value of each applicable reporting unit assessed is less than its carrying amount. As a result, no further testing was performed, and the Company has concluded that goodwill was not impaired at December 31, 2014.

**Long-Lived Asset Impairment**

When circumstances indicate the carrying value of long-lived assets may not be recoverable, the Company evaluates whether the carrying value of such assets, excluding goodwill, has been impaired. For such long-lived assets, impairment exists when the carrying value exceeds the sum of the future estimated undiscounted cash flows expected to result from the use and eventual disposition of the asset. When alternative courses of action to recover the carrying amount of a long-lived asset are under consideration, a probability-weighted approach is used to develop estimates of future undiscounted cash flows. If the carrying value of the long-lived asset is not recoverable based on the estimated future undiscounted cash flows, an impairment loss is recorded, measured as the excess of the carrying value of the asset over its fair value. As a result, the asset's carrying value is adjusted to its estimated fair value.

Within its regulated business, the carrying costs of most of Hydro One's long-lived assets are included in rate base where they earn an OEB-approved rate of return. Asset carrying values and the related return are recovered through approved rates. As a result, such assets are only tested for impairment in the event that the OEB disallows recovery, in whole or in part, or if such a disallowance is judged to be probable.

Hydro One regularly monitors the assets of its unregulated Hydro One Telecom subsidiary for indications of impairment. Management assesses the fair value of such long-lived assets using commonly accepted techniques, and may use more than one. Techniques used to determine fair value include, but are not limited to, the use of recent third party comparable sales for reference and internally developed discounted cash flow analysis. Significant changes in market conditions, changes to the condition of an asset, or a change in management's intent to utilize the asset are generally viewed by management as triggering events to reassess the cash flows related to these long-lived assets. As at December 31, 2014, no asset impairment had been recorded for assets within either the Company's regulated or unregulated businesses.

### Costs of Arranging Debt Financing

For financial liabilities classified as other than held-for-trading, the Company defers the external transaction costs related to obtaining debt financing and presents such amounts as deferred debt issuance costs on the Consolidated Balance Sheets. Deferred debt issuance costs are amortized over the contractual life of the related debt on an effective-interest basis and the amortization is included within financing charges in the Consolidated Statements of Operations and Comprehensive Income. Transaction costs for items classified as held-for-trading are expensed immediately.

### Comprehensive Income

Comprehensive income is comprised of net income and other comprehensive income (OCI). Hydro One presents net income and OCI in a single continuous Consolidated Statement of Operations and Comprehensive Income.

### Financial Assets and Liabilities

All financial assets and liabilities are classified into one of the following five categories: held-to-maturity; loans and receivables; held-for-trading; other liabilities; or available-for-sale. Financial assets and liabilities classified as held-for-trading are measured at fair value. All other financial assets and liabilities are measured at amortized cost, except accounts receivable and amounts due from related parties, which are measured at the lower of cost or fair value. Accounts receivable and amounts due from related parties are classified as loans and receivables. The Company considers the carrying amounts of accounts receivable and amounts due from related parties to be reasonable estimates of fair value because of the short time to maturity of these instruments. Provisions for impaired accounts receivable are recognized as adjustments to the allowance for doubtful accounts and are recognized when there is objective evidence that the Company will not be able to collect amounts according to the original terms. All financial instrument transactions are recorded at trade date.

Derivative instruments are measured at fair value. Gains and losses from fair valuation are included within financing charges in the period in which they arise. The Company determines the classification of its financial assets and liabilities at the date of initial recognition. The Company designates certain of its financial assets and liabilities to be held at fair value, when it is consistent with the Company's risk management policy disclosed in Note 13 – Fair Value of Financial Instruments and Risk Management.

### Derivative Instruments and Hedge Accounting

The Company closely monitors the risks associated with changes in interest rates on its operations and, where appropriate, uses various instruments to hedge these risks. Certain of these derivative instruments qualify for hedge accounting and are designated as accounting hedges, while others either do not qualify as hedges or have not been designated as hedges (hereinafter referred to as undesignated contracts) as they are part of economic hedging relationships.

The accounting guidance for derivative instruments requires the recognition of all derivative instruments not identified as meeting the normal purchase and sale exemption as either assets or liabilities recorded at fair value on the Consolidated Balance Sheets. For derivative instruments that qualify for hedge accounting, the Company may elect to designate such derivative instruments as either cash flow hedges or fair value hedges. The Company offsets fair value amounts recognized on its Consolidated Balance Sheets related to derivative instruments executed with the same counterparty under the same master netting agreement.

For derivative instruments that qualify for hedge accounting and which are designated as cash flow hedges, the effective portion of any gain or loss, net of tax, is reported as a component of accumulated OCI (AOCI) and is reclassified to results of operations in the same period or periods during which the hedged transaction affects results of operations. Any gains or losses on the derivative instrument that represent either hedge ineffectiveness or hedge components excluded from the assessment of effectiveness are recognized in results of operations. For fair value hedges, changes in fair value of both the derivative instrument and the underlying hedged exposure are recognized in the Consolidated Statements of Operations and Comprehensive Income in the current period. The gain or loss on the derivative instrument is included in the same line item as the offsetting gain or loss on the hedged item in the Consolidated Statements of Operations and Comprehensive Income. Additionally, the Company enters into derivative agreements that are economic hedges which either do not qualify for hedge accounting or have not been designated as hedges. The changes in fair value of these undesignated derivative instruments are reflected in results of operations.

Embedded derivative instruments are separated from their host contracts and carried at fair value on the Consolidated Balance Sheets when: (a) the economic characteristics and risks of the embedded derivative are not clearly and closely related to the economic characteristics and risks of the host contract; (b) the hybrid instrument is not measured at fair value, with changes in fair value recognized in results of operations each period; and (c) the embedded derivative itself meets the definition of a derivative. The Company does not engage in derivative trading or speculative activities and had no embedded derivatives at December 31, 2014 or 2013.

Hydro One periodically develops hedging strategies taking into account risk management objectives. At the inception of a hedging relationship where the Company has elected to apply hedge accounting, Hydro One formally documents the relationship between the hedged item and the hedging instrument, the related risk management objective, the nature of the specific risk exposure being hedged, and the method for assessing the effectiveness of the hedging relationship. The Company also assesses, both at the inception of the hedge and on a quarterly basis, whether the hedging instruments are effective in offsetting changes in fair values or cash flows of the hedged items.

### Employee Future Benefits

Employee future benefits provided by Hydro One include pension, post-retirement and post-employment benefits. The costs of the Company's pension, post-retirement and post-employment benefit plans are recorded over the periods during which employees render service.

The Company recognizes the funded status of its pension, post-retirement and post-employment plans on its Consolidated Balance Sheets and subsequently recognizes the changes in funded status at the end of each reporting year. Pension, post-retirement and post-employment plans are considered to be underfunded when the projected benefit obligation exceeds the fair value of the plan assets. Liabilities are recognized on the Consolidated Balance Sheets for any net underfunded projected benefit obligation. The net underfunded projected benefit obligation may be disclosed as a current liability, long-term liability, or both. The current portion is the amount by which the actuarial present value of benefits included in the benefit obligation payable in the next 12 months exceeds the fair value of plan assets. If the fair value of plan assets exceeds the projected benefit obligation of the plan, an asset is recognized equal to the net overfunded projected benefit obligation. The post-retirement and post-employment benefit plans are unfunded because there are no related plan assets.

#### *Pension benefits*

In accordance with the OEB's rate orders, pension costs are recorded on a cash basis as employer contributions are paid to the pension fund in accordance with the *Pension Benefits Act* (Ontario). Pension costs are recorded on an accrual basis for financial reporting purposes. Pension costs are actuarially determined using the projected benefit method prorated on service and are based on assumptions that reflect management's best estimate of the effect of future events, including future compensation increases. Past service costs from plan amendments and all actuarial gains and losses are amortized on a straight-line basis over the expected average remaining service period of active employees in the plan, and over the estimated remaining life expectancy of inactive employees in the plan. Pension plan assets, consisting primarily of listed equity securities as well as corporate and government debt securities, are fair valued at the end of each year.

Hydro One records a regulatory asset equal to the net underfunded projected benefit obligation for its pension plan. The regulatory asset for the net underfunded projected benefit obligation for the pension plan, in the absence of regulatory accounting, would be recognized in AOCI. A regulatory asset is recognized because management considers it to be probable that pension benefit costs will be recovered in the future through the rate-setting process. The pension regulatory assets are remeasured at the end of each year based on the current status of the pension plan.

All future pension benefit costs are attributed to labour and are either charged to results of operations or capitalized as part of the cost of property, plant and equipment and intangible assets.

***Post-retirement and post-employment benefits***

Post-retirement and post-employment benefits are recorded and included in rates on an accrual basis. Costs are determined by independent actuaries using the projected benefit method prorated on service and based on assumptions that reflect management's best estimates. Past service costs from plan amendments are amortized to results of operations based on the expected average remaining service period.

Hydro One records a regulatory asset equal to the incremental net unfunded projected benefit obligation for post-retirement and post-employment plans recorded at each year end based on annual actuarial reports. The regulatory asset for the incremental net unfunded projected benefit obligation for post-retirement and post-employment plans, in the absence of regulatory accounting, would be recognized in AOCI. A regulatory asset is recognized because management considers it to be probable that post-retirement and post-employment benefit costs will be recovered in the future through the rate-setting process.

For post-retirement benefits, all actuarial gains or losses are deferred using the "corridor" approach. The amount calculated above the "corridor" is amortized to results of operations on a straight-line basis over the expected average remaining service life of active employees in the plan and over the remaining life expectancy of inactive employees in the plan. The post-retirement benefit obligation is remeasured to its fair value at each year end based on an annual actuarial report, with an offset to the associated regulatory asset, to the extent of the remeasurement adjustment.

For post-employment obligations, the associated regulatory liabilities representing actuarial gains on transition to US GAAP are amortized to results of operations based on the "corridor" approach. Post transition, the actuarial gains and losses on post-employment obligations that are incurred during the year are recognized immediately to results of operations. The post-employment benefit obligation is remeasured to its fair value at each year end based on an annual actuarial report, with an offset to the associated regulatory asset, to the extent of the remeasurement adjustment.

All post-retirement and post-employment future benefit costs are attributed to labour and are either charged to results of operations or capitalized as part of the cost of property, plant and equipment and intangible assets.

### Multiemployer Pension Plan

Employees of Hydro One Brampton Networks and the newly acquired Norfolk Power participate in the Ontario Municipal Employees Retirement System Fund (OMERS), a multiemployer, contributory, defined benefit public sector pension fund. OMERS provides retirement pension payments based on members' length of service and salary. Both the participating employers and members are required to make plan contributions. The OMERS plan assets are pooled together to provide benefits to all plan participants and the plan assets are not segregated by member entity. OMERS is registered with the Financial Services Commission of Ontario under Registration #0345983. At December 31, 2013, OMERS had approximately 440,000 members, with approximately 335 members being current employees of Hydro One Brampton Networks and Norfolk Power.

The OMERS plan is accounted for as a defined contribution plan by Hydro One because it is not practicable to determine the present value of the Company's obligation, the fair value of plan assets or the related current service cost applicable to Hydro One Brampton Networks and Norfolk Power employees. Hydro One recognizes its contributions to the OMERS plan as pension expense, with a portion being capitalized. The expensed amount is included in operation, maintenance and administration costs in the Consolidated Statements of Operations and Comprehensive Income.

### Loss Contingencies

Hydro One is involved in certain legal and environmental matters that arise in the normal course of business. In the preparation of its Consolidated Financial Statements, management makes judgments regarding the future outcome of contingent events and records a loss for a contingency based on its best estimate when it is determined that such loss is probable and the amount of the loss can be reasonably estimated. Where the loss amount is recoverable in future rates, a regulatory asset is also recorded. When a range estimate for the probable loss exists and no amount within the range is a better estimate than any other amount, the Company records a loss at the minimum amount within the range.

Management regularly reviews current information available to determine whether recorded provisions should be adjusted and whether new provisions are required. Estimating probable losses may require analysis of multiple forecasts and scenarios that often depend on judgments about potential actions by third parties, such as federal, provincial and local courts or regulators. Contingent liabilities are often resolved over long periods of time. Amounts recorded in the Consolidated Financial Statements may differ from the actual outcome once the contingency is resolved. Such differences could have a material impact on future results of operations, financial position and cash flows of the Company.

Provisions are based upon current estimates and are subject to greater uncertainty where the projection period is lengthy. A significant upward or downward trend in the number of claims filed, the nature of the alleged injuries, and the average cost of resolving each claim could change the estimated provision, as could any substantial adverse or favourable verdict at trial. A federal or provincial legislative outcome or structured settlement could also change the estimated liability. Legal fees are expensed as incurred.

**Environmental Liabilities**

Environmental liabilities are recorded in respect of past contamination when it is determined that future environmental remediation expenditures are probable under existing statute or regulation and the amount of the future expenditures can be reasonably estimated. Hydro One records a liability for the estimated future expenditures associated with the contaminated land assessment and remediation (LAR) and for the phase-out and destruction of polychlorinated biphenyl (PCB)-contaminated mineral oil removed from electrical equipment, based on the present value of these estimated future expenditures. The Company determines the present value with a discount rate equal to its credit-adjusted risk-free interest rate on financial instruments with comparable maturities to the pattern of future environmental expenditures. As the Company anticipates that the future expenditures will continue to be recoverable in future rates, an offsetting regulatory asset has been recorded to reflect the future recovery of these environmental expenditures from customers. Hydro One reviews its estimates of future environmental expenditures annually, or more frequently if there are indications that circumstances have changed.

**Asset Retirement Obligations**

AROs are recorded for legal obligations associated with the future removal and disposal of long-lived assets. Such obligations may result from the acquisition, construction, development and/or normal use of the asset. Conditional AROs are recorded when there is a legal obligation to perform a future asset retirement activity but where the timing and/or method of settlement are conditional on a future event that may or may not be within the control of the Company. In such a case, the obligation to perform the asset retirement activity is unconditional even though uncertainty exists about the timing and/or method of settlement.

When recording an ARO, the present value of the estimated future expenditures required to complete the asset retirement activity is recorded in the period in which the obligation is incurred, if a reasonable estimate can be made. In general, the present value of the estimated future expenditures is added to the carrying amount of the associated asset and the resulting asset retirement cost is depreciated over the estimated useful life of the asset. Where an asset is no longer in service when an ARO is recorded, the asset retirement cost is recorded in results of operations.

Some of the Company's transmission and distribution assets, particularly those located on unowned easements and rights-of-way, may have AROs, conditional or otherwise. The majority of the Company's easements and rights-of-way are either of perpetual duration or are automatically renewed annually. Land rights with finite terms are generally subject to extension or renewal. As the Company expects to use the majority of its facilities in perpetuity, no ARO currently exists for these assets. If, at some future date, a particular facility is shown not to meet the perpetuity assumption, it will be reviewed to determine whether an estimable ARO exists. In such a case, an ARO would be recorded at that time.

The Company's AROs recorded to date relate to estimated future expenditures associated with the removal and disposal of asbestos-containing materials installed in some of its facilities and with the decommissioning of specific switching stations located on unowned sites.

## 3. NEW ACCOUNTING PRONOUNCEMENTS

### Recently Adopted Accounting Pronouncements

In July 2013, the Financial Accounting Standards Board (FASB) issued Accounting Standards Update (ASU) 2013-11, Income Taxes (Topic 740): Presentation of an Unrecognized Tax Benefit When a Net Operating Loss Carryforward, a Similar Tax Loss, or a Tax Credit Carryforward Exists. This ASU provides guidance on the presentation of unrecognized tax benefits. This ASU is effective for fiscal years, and interim periods within those years, beginning after December 15, 2013, and should be applied prospectively to all unrecognized tax benefits that exist at the effective date. The adoption of this ASU did not have a significant impact on the Company's consolidated financial statements.

### Recent Accounting Guidance Not Yet Adopted

In May 2014, the FASB issued ASU 2014-09, Revenue from Contracts with Customers (Topic 606). This ASU provides guidance on revenue recognition that depicts the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expects to be entitled in exchange for those goods and services. This ASU is required to be applied retrospectively and is effective for fiscal years, and interim periods within those years, beginning after December 15, 2016. The Company is currently assessing the impact of adoption of ASU 2014-09 on its consolidated financial statements.

In August 2014, the FASB issued ASU 2014-15, Presentation of Financial Statements – Going Concern (Subtopic 205-40): Disclosure of Uncertainties about an Entity's Ability to Continue as a Going Concern. This ASU provides guidance about management's responsibility to evaluate whether there is substantial doubt about an entity's ability to continue as a going concern and related disclosures. This ASU is effective for the annual period ending December 31, 2016, and for annual and interim periods thereafter. The adoption of this ASU is not anticipated to have a significant impact on the Company's consolidated financial statements.

In November 2014, the FASB issued ASU 2014-16, Derivatives and Hedging (Topic 815). This ASU provides guidance on accounting for hybrid financial instruments issued in the form of a share. This ASU is effective for fiscal years, and interim periods within those years, beginning after December 15, 2015. The Company is currently assessing the impact of adoption of ASU 2014-16 on its consolidated financial statements.

## 4. BUSINESS COMBINATIONS

### B2M Limited Partnership

In 2012, Hydro One entered into an agreement with the Chippewas of Nawash First Nation and the Chippewas of Saugeen First Nation, collectively referred to as the Saugeen Ojibway Nation (SON), where a noncontrolling equity interest in Hydro One's new limited partnership, B2M LP, would be made available for purchase at fair value by the SON. B2M LP was formed by Hydro One in 2013 to hold most of the transmission lines and a licence to use the related land. These assets are associated with Hydro One's Bruce to Milton Transmission Reinforcement Project, an electricity transmission line (Bruce to Milton Line) in southwestern Ontario, from the Bruce Power facility in Kincardine to Hydro One's Milton Switching Station in the Town of Milton. Hydro One Networks will maintain and operate the Bruce to Milton Line in accordance with an operation and management services agreement. In November 2013, the OEB issued a Decision and Order granting B2M LP a transmission licence and granting Hydro One Networks leave to sell the relevant Bruce to Milton Line transmission assets to B2M LP.

On December 16, 2014, the relevant Bruce to Milton Line transmission assets totalling $526 million were transferred from Hydro One Networks to B2M LP. This was financed by 60% debt ($316 million) and 40% equity ($210 million). On December 17, 2014, the SON acquired a 34.2% equity interest in B2M LP for consideration of $72 million, representing the fair value of the equity interest acquired.

Part of the SON's equity interest in B2M LP is in Class B units of B2M LP that have a mandatory put option. The put option requires that upon the occurrence of an enforcement event (i.e. an event of default such as a debt default by the SON or insolvency event), the SON has the ability to require Hydro One to purchase the Class B units of B2M LP for net book value on the redemption date.

The noncontrolling interest relating to the Class B units is classified on the Consolidated Balance Sheet as temporary equity because the redemption feature is outside the control of the Company. The balance of the noncontrolling interest is classified within equity. At December 31, 2014, the total noncontrolling interest was reduced by the 2014 net loss attributable to noncontrolling interest totalling $2 million, including $1 million relating to noncontrolling interest subject to redemption.

**Acquisition of Norfolk Power**

On August 29, 2014, Hydro One acquired 100% of the common shares of Norfolk Power, an electricity distribution and telecom company located in southwestern Ontario. The total purchase price for Norfolk Power, net of the long-term debt assumed and adjusted for preliminary working capital and other closing adjustments, is approximately $68 million.

The following table summarizes the preliminary determination of the fair value of the assets acquired and liabilities assumed:

| *(millions of Canadian dollars)* | |
|---|---|
| Working capital | 6 |
| Property, plant and equipment | 56 |
| Deferred income tax assets | 1 |
| Goodwill | 40 |
| Bank indebtedness | (3) |
| Derivative instruments | (3) |
| Long-term debt | (26) |
| Post-retirement and post-employment benefit liability | (1) |
| Environmental liability | (1) |
| Long-term accounts payable and other liabilities | (1) |
| | 68 |

The determination of the fair values of assets acquired and liabilities assumed has been based upon management's estimates and certain assumptions with respect to the fair values of the assets acquired and liabilities assumed. The purchase agreement provides for final purchase price adjustments based on agreed working capital and other balances at the acquisition date which have not yet been finalized. The Company will continue to review information and perform further analysis prior to finalizing the total purchase price and therefore the actual total purchase price and the consequent impact on goodwill may differ from the amounts above.

Goodwill of approximately $40 million arising from the Norfolk Power acquisition consists largely of the synergies and economies of scale expected from combining the operations of Hydro One and Norfolk Power. All of the goodwill was assigned to Hydro One's Distribution Business segment. None of the goodwill recognized is expected to be deductible for income tax purposes.

Norfolk Power contributed revenues of $18 million and net income of less than $1 million to the Company's consolidated financial results for the year ended December 31, 2014.

All costs related to the acquisition have been expensed through the Consolidated Statements of Operations and Comprehensive Income. The disclosure of Norfolk Power's pro forma information is immaterial to the Company's consolidated financial results for the year ended December 31, 2014.

**Woodstock Hydro Purchase Agreement**

On May 21, 2014, Hydro One reached an agreement with the City of Woodstock to acquire 100% of the common shares of Woodstock Hydro Holdings Inc. (Woodstock Hydro), an electricity distribution company located in southwestern Ontario. The acquisition is pending a regulatory decision from the OEB. The purchase price for Woodstock Hydro will be approximately $29 million, subject to final closing adjustments. The transaction is anticipated to be completed in 2015. In anticipation of the Woodstock Hydro acquisition, the Company made a refundable deposit totalling $2 million, which is recorded in prepaid expenses and other assets on the Consolidated Balance Sheet.

**Haldimand Hydro Purchase Agreement**

On June 10, 2014, Hydro One reached an agreement with Haldimand County to acquire 100% of the common shares of Haldimand County Utilities Inc. (Haldimand Hydro), an electricity distribution and telecom company located in southwestern Ontario. The acquisition is pending a regulatory decision from the OEB. The purchase price for Haldimand Hydro will be approximately $65 million, subject to final closing adjustments. The transaction is anticipated to be completed in 2015. In anticipation of the Haldimand Hydro acquisition, the Company made a refundable deposit totalling $3 million, which is recorded in prepaid expenses and other assets on the Consolidated Balance Sheet.

## 5. DEPRECIATION AND AMORTIZATION

| *Year ended December 31 (millions of Canadian dollars)* | **2014** | 2013 |
|---|---|---|
| Depreciation of property, plant and equipment | **565** | 533 |
| Amortization of intangible assets | **53** | 48 |
| Asset removal costs | **81** | 79 |
| Amortization of regulatory assets | **23** | 16 |
| | **722** | 676 |

## 6. FINANCING CHARGES

| *Year ended December 31 (millions of Canadian dollars)* | **2014** | 2013 |
|---|---|---|
| Interest on long-term debt | **432** | 416 |
| Other | **12** | 9 |
| Less: Interest capitalized on construction and development in progress | **(49)** | (51) |
| Gain on interest-rate swap agreements | **(10)** | (11) |
| Interest earned on investments | **(6)** | (3) |
| | **379** | 360 |

## 7. PROVISION FOR PAYMENTS IN LIEU OF CORPORATE INCOME TAXES

The provision for PILs differs from the amount that would have been recorded using the combined Canadian federal and Ontario statutory income tax rate. The reconciliation between the statutory and the effective tax rates is provided as follows:

| *Year ended December 31 (millions of Canadian dollars)* | **2014** | 2013 |
|---|---|---|
| Income before provision for PILs | **836** | 912 |
| Canadian federal and Ontario statutory income tax rate | **26.50%** | 26.50% |
| Provision for PILs at statutory rate | **222** | 242 |
| | | |
| Increase (decrease) resulting from: | | |
| Net temporary differences included in amounts charged to customers: | | |
| Capital cost allowance in excess of depreciation and amortization | **(72)** | (72) |
| Pension contributions in excess of pension expense | **(24)** | (23) |
| Overheads capitalized for accounting but deducted for tax purposes | **(15)** | (14) |
| Interest capitalized for accounting but deducted for tax purposes | **(13)** | (13) |
| Environmental expenditures | **(5)** | (4) |
| Prior year's adjustments | **(4)** | (8) |
| Non-refundable investment tax credits | **(3)** | (4) |
| Post-retirement and post-employment benefit expense in excess of cash payments | **3** | 4 |
| Other | **(1)** | (1) |
| Net temporary differences | **(134)** | (135) |
| Net permanent differences | **1** | 2 |
| Total provision for PILs | **89** | 109 |

The major components of income tax expense are as follows:

| *Year ended December 31 (millions of Canadian dollars)* | **2014** | 2013 |
|---|---|---|
| Current provision for PILs | **79** | 111 |
| Deferred provision (recovery) for PILs | **10** | (2) |
| Total provision for PILs | **89** | 109 |
| | | |
| Effective income tax rate | **10.63%** | 11.98% |

The current provision for PILs is remitted to, or received from, the OEFC. At December 31, 2014, $39 million due from the OEFC was included in due from related parties on the Consolidated Balance Sheet (2013 – $29 million).

At December 31, 2014, the total provision for PILs includes deferred provision for PILs of $10 million (2013 – deferred recovery of $2 million) that is not included in the rate-setting process, using the liability method of accounting. Deferred PILs balances expected to be included in the rate-setting process are offset by regulatory assets and liabilities to reflect the anticipated recovery or disposition of these balances within future electricity rates.

### Deferred Income Tax Assets and Liabilities

Deferred income tax assets and liabilities arise from differences between the carrying amounts and tax basis of the Company's assets and liabilities. At December 31, 2014 and 2013, deferred income tax assets and liabilities consisted of the following:

| *December 31 (millions of Canadian dollars)* | **2014** | 2013 |
|---|---|---|
| **Deferred income tax assets** | | |
| Post-retirement and post-employment benefits expense in excess of cash payments | **8** | 7 |
| Environmental expenditures | **4** | 5 |
| Depreciation and amortization in excess of capital cost allowance | **(4)** | – |
| Other | **(1)** | (1) |
| Total deferred income tax assets | **7** | 11 |
| Less: current portion | **–** | – |
| | **7** | 11 |

| *December 31 (millions of Canadian dollars)* | **2014** | 2013 |
|---|---|---|
| **Deferred income tax liabilities** | | |
| Capital cost allowance in excess of depreciation and amortization | **(1,713)** | (1,556) |
| Regulatory amounts that are not recognized for tax purposes | **(140)** | (144) |
| Partnership interest | **(38)** | – |
| Goodwill | **(21)** | (20) |
| Post-retirement and post-employment benefits expense in excess of cash payments | **559** | 542 |
| Environmental expenditures | **59** | 66 |
| Other | **–** | 1 |
| Total deferred income tax liabilities | **(1,294)** | (1,111) |
| Less: current portion | **19** | 18 |
| | **(1,313)** | (1,129) |

During 2014 and 2013, there were no changes in the rate applicable to future taxes.

## 8. ACCOUNTS RECEIVABLE

| *December 31 (millions of Canadian dollars)* | **2014** | 2013 |
|---|---|---|
| Accounts receivable – billed | **496** | 268 |
| Accounts receivable – unbilled | **586** | 691 |
| Accounts receivable, gross | **1,082** | 959 |
| Allowance for doubtful accounts | **(66)** | (36) |
| Accounts receivable, net | **1,016** | 923 |

The following table shows the movements in the allowance for doubtful accounts for the years ended December 31, 2014 and 2013:

| *Year ended December 31 (millions of Canadian dollars)* | **2014** | 2013 |
|---|---|---|
| Allowance for doubtful accounts – January 1 | **(36)** | (23) |
| Write-offs | **24** | 24 |
| Additions to allowance for doubtful accounts | **(54)** | (37) |
| Allowance for doubtful accounts – December 31 | **(66)** | (36) |

## 9. PROPERTY, PLANT AND EQUIPMENT

| *December 31, 2014 (millions of Canadian dollars)* | **Property, Plant and Equipment** | **Accumulated Depreciation** | **Construction in Progress** | **Total** |
|---|---|---|---|---|
| Transmission | **13,209** | **4,416** | **626** | **9,419** |
| Distribution | **9,076** | **3,225** | **320** | **6,171** |
| Communication | **1,100** | **615** | **56** | **541** |
| Administration and Service | **1,502** | **793** | **23** | **732** |
| Easements | **623** | **85** | **–** | **538** |
| | **25,510** | **9,134** | **1,025** | **17,401** |

| *December 31, 2013 (millions of Canadian dollars)* | Property, Plant and Equipment | Accumulated Depreciation | Construction in Progress | Total |
|---|---|---|---|---|
| Transmission | 12,413 | 4,215 | 671 | 8,869 |
| Distribution | 8,498 | 3,046 | 316 | 5,768 |
| Communication | 1,060 | 560 | 53 | 553 |
| Administration and Service | 1,380 | 716 | 38 | 702 |
| Easements | 617 | 78 | – | 539 |
| | 23,968 | 8,615 | 1,078 | 16,431 |

Financing charges capitalized on property, plant and equipment under construction were $48 million in 2014 (2013 – $48 million).

## 10. INTANGIBLE ASSETS

| *December 31, 2014 (millions of Canadian dollars)* | **Intangible Assets** | **Accumulated Amortization** | **Development in Progress** | **Total** |
|---|---|---|---|---|
| Computer applications software | **573** | **303** | **3** | **273** |
| Other | **5** | **2** | **–** | **3** |
| | **578** | **305** | **3** | **276** |

| *December 31, 2013 (millions of Canadian dollars)* | Intangible Assets | Accumulated Amortization | Development in Progress | Total |
|---|---|---|---|---|
| Computer applications software | 557 | 249 | 3 | 311 |
| Other | 5 | 3 | – | 2 |
| | 562 | 252 | 3 | 313 |

Financing charges capitalized on intangible assets under development were $1 million in 2014 (2013 – $3 million). The estimated annual amortization expense for intangible assets is as follows: 2015 – $53 million; 2016 – $53 million; 2017 – $53 million; 2018 – $45 million; and 2019 – $31 million.

## 11. REGULATORY ASSETS AND LIABILITIES

Regulatory assets and liabilities arise as a result of the rate-setting process. Hydro One has recorded the following regulatory assets and liabilities:

| *December 31 (millions of Canadian dollars)* | **2014** | 2013 |
|---|---|---|
| **Regulatory assets:** | | |
| Deferred income tax regulatory asset | **1,327** | 1,145 |
| Pension benefit regulatory asset | **1,236** | 845 |
| Post-retirement and post-employment benefits | **273** | 308 |
| Environmental | **239** | 266 |
| Pension cost variance | **90** | 80 |
| DSC exemption | **16** | 7 |
| OEB cost assessment differential | **12** | 9 |
| Retail settlement variance accounts | **11** | – |
| Long-term project development costs | **–** | 5 |
| Other | **27** | 18 |
| Total regulatory assets | **3,231** | 2,683 |
| Less: current portion | **31** | 47 |
| | **3,200** | 2,636 |
| **Regulatory liabilities:** | | |
| Rider 11 | **83** | 55 |
| External revenue variance | **54** | 81 |
| CDM deferral variance account | **25** | – |
| Deferred income tax regulatory liability | **21** | 19 |
| PST savings deferral | **19** | 17 |
| Hydro One Brampton Networks rider | **2** | 8 |
| Retail settlement variance accounts | **–** | 35 |
| Rider 9 | **–** | 19 |
| Other | **11** | 14 |
| Total regulatory liabilities | **215** | 248 |
| Less: current portion | **47** | 85 |
| | **168** | 163 |

**Deferred Income Tax Regulatory Asset and Liability**

Deferred income taxes are recognized on temporary differences between the carrying amount of assets and liabilities in the financial statements and the corresponding tax bases used in the computation of taxable profit. The Company has recognized regulatory assets and liabilities that correspond to deferred income taxes that flow through the rate-setting process. In the absence of rate-regulated accounting, the Company's provision for PILs would have been recognized using the liability method and there would be no regulatory accounts established for taxes to be recovered through future rates. As a result, the 2014 provision for PILs would have been higher by approximately $132 million (2013 – $139 million).

**Pension Benefit Regulatory Asset**

The Company recognizes the net unfunded status of pension obligations on the Consolidated Balance Sheets with an offset to the associated regulatory asset. A regulatory asset is recognized because management considers it to be probable that pension benefit costs will be recovered in the future through the rate-setting process. The pension benefit obligation is remeasured to its fair value at each year end based on an annual actuarial report, with an offset to the associated regulatory asset, to the extent of the remeasurement adjustment. In the absence of rate-regulated accounting, 2014 OCI would have been lower by $391 million (2013 – higher by $670 million).

**Post-Retirement and Post-Employment Benefits**

The Company recognizes the net unfunded status of post-retirement and post-employment obligations on the Consolidated Balance Sheets with an incremental offset to the associated regulatory assets. A regulatory asset is recognized because management considers it to be probable that post-retirement and post-employment benefit costs will be recovered in the future through the rate-setting process. The post-retirement and post-employment benefit obligation is remeasured to its fair value at each year end based on an annual actuarial report, with an offset to the associated regulatory asset, to the extent of the remeasurement adjustment. In the absence of rate-regulated accounting, 2014 OCI would have been higher by $35 million (2013 – $12 million).

**Environmental**

Hydro One records a liability for the estimated future expenditures required to remediate environmental contamination. Because such expenditures are expected to be recoverable in future rates, the Company has recorded an equivalent amount as a regulatory asset. In 2014, the environmental regulatory asset decreased by $33 million (2013 – $3 million) to reflect related changes in the Company's PCB liability, and increased by $13 million (2013 – $26 million) due to changes in the LAR liability. The environmental regulatory asset is amortized to results of operations based on the pattern of actual expenditures incurred and charged to environmental liabilities. The OEB has the discretion to examine and assess the prudency and the timing of recovery of all of Hydro One's actual environmental expenditures. In the absence of rate-regulated accounting, 2014 operation, maintenance and administration expenses would have been lower by $20 million (2013 – higher by $23 million). In addition, 2014 amortization expense would have been lower by $18 million (2013 – $16 million), and 2014 financing charges would have been higher by $11 million (2013 – $10 million).

**Pension Cost Variance**

A pension cost variance account was established for Hydro One Networks' transmission and distribution businesses to track the difference between the actual pension expenses incurred and estimated pension costs approved by the OEB. The balance in this regulatory account reflects the excess of pension costs paid as compared to OEB-approved amounts. In the absence of rate-regulated accounting, 2014 revenue would have been lower by $10 million (2013 – $19 million).

**DSC Exemption**

In June 2010, Hydro One Networks filed an application with the OEB regarding the OEB's new cost responsibility rules contained in the OEB's October 2009 Notice of Amendment to the Distribution System Code (DSC), with respect to the connection of certain renewable generators that were already connected or that had received a connection impact assessment prior to October 21, 2009. The application sought approval to record and defer the unanticipated costs incurred by Hydro One Networks that resulted from the connection of certain renewable generation facilities. The OEB ruled that identified specific expenditures can be recorded in a deferral account subject to the OEB's review until the next Hydro One Networks' distribution cost-of-service application. This program effectively ended at the end of 2014 with no new principal to be recorded in 2015.

**OEB Cost Assessment Differential**

In April 2010, the OEB issued its Decision regarding Hydro One Networks' distribution rate application for 2010 and 2011. As part of this decision, the OEB also approved the distribution-related OEB Cost Assessment Differential Account to record the difference between the amounts approved in rates and actual expenditures with respect to the OEB's cost assessments. This continued for 2012–2014 until the next Hydro One Networks' distribution cost-of-service application, which was submitted in 2014. This program effectively ended at the end of 2014 with no new activity to be recorded in 2015.

**Retail Settlement Variance Accounts (RSVAs)**

Hydro One has deferred certain retail settlement variance amounts under the provisions of Article 490 of the OEB's Accounting Procedures Handbook. In December 2012, the OEB approved the disposition of the total RSVA balance accumulated from January 2010 to December 2011, including accrued interest, to be disposed over a 24-month period from January 1, 2013 to December 31, 2014. At December 31, 2014, the RSVA was in a net asset position due to a change in global adjustment.

**Long-Term Project Development Costs**

In May 2009, the OEB approved the creation of a deferral account to record Hydro One Networks' costs of preliminary work to advance certain transmission projects identified in the Company's 2009 and 2010 transmission rate applications. In March 2010, the OEB issued a decision amending the scope of the account to include the 20 major transmission projects identified in the September 2009 request from the Ministry of Energy and Infrastructure. In December 2012, the OEB approved the recovery of the December 31, 2012 balance, including accrued interest, to be recovered over a one-year period from January 1, 2014 to December 31, 2014.

**Rider 11**

In April 2010, the OEB requested the establishment of deferral accounts which capture the difference between the revenue recorded on the basis of Green Energy Plan expenditures incurred and the actual recoveries received. Rider 11 includes amounts previously included as Rider 8.

**External Revenue Variance**

In May 2009, the OEB approved forecasted amounts related to export service revenue, external revenue from secondary land use, and external revenue from station maintenance and engineering and construction work. In November 2012, the OEB again approved forecasted amounts related to these revenue categories and extended the scope to encompass all other external revenues. The external revenue variance account balance reflects the excess of actual external revenues compared to the OEB-approved forecasted amounts.

**CDM Deferral Variance Account**

As part of Hydro One Networks' application for 2013 and 2014 transmission rates, Hydro One agreed to establish a new regulatory deferral variance account to track the impact of actual Conservation and Demand Management (CDM) and demand response results on the load forecast compared to the estimated load forecast included in the revenue requirement. The balance in the CDM deferral variance account relates to the actual 2013 CDM compared to the amounts included in 2013 revenue requirement. The OEB rate order specifically states that the Ontario Power Authority (OPA) data used to calculate the difference between forecasted and actual savings will be provided one year in arrears, and as a result, no amount should be recorded in advance of notification from the OPA of actual results. This notification from the OPA typically occurs in September of each year.

### PST Savings Deferral Account

The provincial sales tax (PST) and goods and services tax (GST) were harmonized in July 2010. Unlike the GST, the PST was included in operation, maintenance and administration expenses or capital expenditures for past revenue requirements approved during a full cost-of-service hearing. Under the harmonized sales tax (HST) regime, the HST included in operation, maintenance and administration expenses or capital expenditures is not a cost ultimately borne by the Company and as such, a refund of the prior PST element in the approved revenue requirement is applicable, and calculations for tracking and refund were requested by the OEB. For Hydro One Networks' transmission revenue requirement, PST was included between July 1, 2010 and December 31, 2010 and recorded in a deferral account, per direction from the OEB. For Hydro One Networks' distribution revenue requirement, PST was included between July 1, 2010 and December 31, 2014 and recorded in a deferral account, per direction from the OEB.

### Hydro One Brampton Networks Rider

In December 2013, the OEB issued a decision for Hydro One Brampton Networks' 2014 distribution rates. Included in the OEB's decision was the approval of certain deferral account balances, primarily RSVAs. The OEB ordered that the approved balances be aggregated into a single regulatory account and disposed of through a rate rider over a two-year period from January 1, 2014 to December 31, 2015.

### Rider 9

In December 2012, as part of Hydro One Networks' 2013 IRM distribution rate application, the OEB approved for disposition certain distribution-related deferral account balances, including RSVA amounts and balances of Rider 2 and Rider 3, accumulated up to December 2011, including accrued interest, to be disposed over a 24-month period from January 1, 2013 to December 31, 2014.

## 12. DEBT AND CREDIT AGREEMENTS

### Short-Term Notes

Hydro One meets its short-term liquidity requirements in part through the issuance of commercial paper under its Commercial Paper Program which has a maximum authorized amount of $1,000 million. These short-term notes are denominated in Canadian dollars with varying maturities not exceeding 365 days. Hydro One had no commercial paper borrowings outstanding as at December 31, 2014 and 2013.

Hydro One has a $1,500 million committed and unused revolving standby credit facility with a syndicate of banks, maturing in June 2019. If used, interest on the facility would apply based on Canadian benchmark rates. This credit facility is unsecured and supports the Company's Commercial Paper Program. The Company may use the credit facility for general corporate purposes, including meeting short-term funding requirements. The obligation of each lender to make any credit extension to the Company under its credit facility is subject to various conditions including, among other things, that no event of default has occurred or would result from such credit extension.

### Long-Term Debt

The Company issues notes for long-term financing under its Medium-Term Note (MTN) Program. The maximum authorized principal amount of notes issuable under this program is $3,000 million. At December 31, 2014, $1,187 million remained available for issuance until October 2015.

The following table presents the outstanding long-term debt at December 31, 2014 and 2013:

| *December 31 (millions of Canadian dollars)* | **2014** | 2013 |
|---|---|---|
| 3.13% Series 19 notes due 2014[1] | **–** | 750 |
| 2.95% Series 21 notes due 2015[1] | **500** | 500 |
| Floating-rate Series 22 notes due 2015[2] | **50** | 50 |
| 4.64% Series 10 notes due 2016 | **450** | 450 |
| Floating-rate Series 27 notes due 2016[2] | **50** | 50 |
| 5.18% Series 13 notes due 2017 | **600** | 600 |
| 2.78% Series 28 notes due 2018 | **750** | 750 |
| Floating-rate Series 31 notes due 2019[2] | **228** | – |
| 4.40% Series 20 notes due 2020 | **300** | 300 |
| 3.20% Series 25 notes due 2022 | **600** | 600 |
| 7.35% Debentures due 2030 | **400** | 400 |
| 6.93% Series 2 notes due 2032 | **500** | 500 |
| 6.35% Series 4 notes due 2034 | **385** | 385 |
| 5.36% Series 9 notes due 2036 | **600** | 600 |
| 4.89% Series 12 notes due 2037 | **400** | 400 |
| 6.03% Series 17 notes due 2039 | **300** | 300 |
| 5.49% Series 18 notes due 2040 | **500** | 500 |
| 4.39% Series 23 notes due 2041 | **300** | 300 |
| 6.59% Series 5 notes due 2043 | **315** | 315 |
| 4.59% Series 29 notes due 2043 | **435** | 435 |
| 4.17% Series 32 notes due 2044 | **350** | – |
| 5.00% Series 11 notes due 2046 | **325** | 325 |
| 4.00% Series 24 notes due 2051 | **225** | 225 |
| 3.79% Series 26 notes due 2062 | **310** | 310 |
| 4.29% Series 30 notes due 2064 | **50** | – |
| | **8,923** | 9,045 |
| Add: Unrealized mark-to-market loss[1] | **2** | 12 |
| Less: Long-term debt payable within one year | **(552)** | (756) |
| Long-term debt | **8,373** | 8,301 |

[1] The unrealized mark-to-market loss relates to $250 million of the Series 21 notes due 2015 (2013 – $500 million of the Series 19 notes due 2014, and $250 million of the Series 21 notes due 2015). The unrealized mark-to-market loss is offset by a $2 million (2013 – $12 million) unrealized mark-to-market gain on the related fixed-to-floating interest-rate swap agreements, which are accounted for as fair value hedges. See Note 13 – Fair Value of Financial Instruments and Risk Management for details of fair value hedges.

[2] The interest rates of the floating-rate notes are referenced to the 3-month Canadian dollar bankers' acceptance rate, plus a margin.

In 2014, Hydro One issued $628 million (2013 – $1,185 million) of long-term debt under the MTN Program, and repaid the $750 million MTN Series 19 notes (2013 – repaid $600 million MTN Series 15 notes). In addition, the Company repaid long-term debt totalling $26 million assumed on the Norfolk Power acquisition.

The long-term debt is unsecured and denominated in Canadian dollars. The long-term debt is summarized by the number of years to maturity in Note 13 – Fair Value of Financial Instruments and Risk Management.

## 13. FAIR VALUE OF FINANCIAL INSTRUMENTS AND RISK MANAGEMENT

Fair value is considered to be the exchange price in an orderly transaction between market participants to sell an asset or transfer a liability at the measurement date. The fair value definition focuses on an exit price, which is the price that would be received in the sale of an asset or the amount that would be paid to transfer a liability.

Hydro One classifies its fair value measurements based on the following hierarchy, as prescribed by the accounting guidance for fair value, which prioritizes the inputs to valuation techniques used to measure fair value into three levels:

Level 1 inputs are unadjusted quoted prices in active markets for identical assets or liabilities that Hydro One has the ability to access. An active market for the asset or liability is one in which transactions for the asset or liability occur with sufficient frequency and volume to provide ongoing pricing information.

Level 2 inputs are those other than quoted market prices that are observable, either directly or indirectly, for an asset or liability. Level 2 inputs include, but are not limited to, quoted prices for similar assets or liabilities in an active market, quoted prices for identical or similar assets or liabilities in markets that are not active and inputs other than quoted market prices that are observable for the asset or liability, such as interest-rate curves and yield curves observable at commonly quoted intervals, volatilities, credit risk and default rates. A Level 2 measurement cannot have more than an insignificant portion of the valuation based on unobservable inputs.

Level 3 inputs are any fair value measurements that include unobservable inputs for the asset or liability for more than an insignificant portion of the valuation. A Level 3 measurement may be based primarily on Level 2 inputs.

### Non-Derivative Financial Assets and Liabilities

At December 31, 2014 and 2013, the Company's carrying amounts of accounts receivable, due from related parties, cash and cash equivalents, bank indebtedness, accounts payable, and due to related parties are representative of fair value because of the short-term nature of these instruments.

### Fair Value Measurements of Long-Term Debt

The fair values and carrying values of the Company's long-term debt at December 31, 2014 and 2013 are as follows:

| *December 31*<br>*(millions of Canadian dollars)* | **2014**<br>**Carrying Value** | **2014**<br>**Fair Value** | 2013<br>Carrying Value | 2013<br>Fair Value |
|---|---|---|---|---|
| Long-term debt | | | | |
| $500 million of MTN Series 19 notes[1] | **–** | **–** | 506 | 506 |
| $250 million of MTN Series 21 notes[1] | **252** | **252** | 256 | 256 |
| Other notes and debentures[2] | **8,673** | **10,159** | 8,295 | 9,018 |
| | **8,925** | **10,411** | 9,057 | 9,780 |

[1] The fair value of $500 million of the MTN Series 19 notes and of $250 million of the MTN Series 21 notes subject to hedging is primarily based on changes in the present value of future cash flows due to a change in the yield in the swap market for the related swap (hedged risk).

[2] The fair value of other notes and debentures, and the portions of the MTN Series 19 notes and the MTN Series 21 notes that are not subject to hedging, represents the market value of the notes and debentures and is based on unadjusted period-end market prices for the same or similar debt of the same remaining maturities.

### Fair Value Measurements of Derivative Instruments

At December 31, 2014, the Company had interest-rate swaps totalling $250 million (2013 – $750 million) that were used to convert fixed-rate debt to floating-rate debt. These swaps are classified as fair value hedges. The Company's fair value hedge exposure was equal to about 3% (2013 – 8%) of its total long-term debt of $8,925 million (2013 – $9,057 million). At December 31, 2014, the Company had the following interest-rate swaps designated as fair value hedges:

(a) two $125 million fixed-to-floating interest-rate swap agreements to convert $250 million of the $500 million MTN Series 21 notes maturing September 11, 2015 into three-month variable-rate debt.

At December 31, 2014, the Company also had interest-rate swaps with a total notional value of $409 million (2013 – $900 million) classified as undesignated contracts. The undesignated contracts consist of the following interest-rate swaps:

(b) a $150 million floating-to-fixed interest-rate swap agreement that locks in the floating rate the Company pays on a portion of the above fixed-to-floating interest-rate swaps from December 11, 2014 to September 11, 2015;

(c) a $50 million floating-to-fixed interest-rate swap agreement that locks in the floating rate the Company pays on the $50 million floating-rate MTN Series 22 notes from January 24, 2014 to January 24, 2015;

(d) a $137 million floating-to-fixed interest-rate swap agreement that locks in the floating rate the Company pays on the $228 million floating-rate MTN Series 31 notes from December 22, 2014 to December 21, 2015;

(e) a $30 million floating-to-fixed interest-rate swap agreement that locks in the floating rate the Company pays on the $50 million floating-rate MTN Series 27 notes from March 3, 2015 to December 3, 2015;

(f) a $30 million floating-to-fixed interest-rate swap agreement that locks in the floating rate the Company pays on the $50 million floating-rate MTN Series 22 notes from January 26, 2015 to July 24, 2015; and Ê

(g) three interest-rate swaps with a total notional value of $12 million that were assumed as part of the Norfolk Power acquisition. These swaps consist of $8 million and $2 million floating-to-fixed interest-rate swap agreements maturing on September 20, 2029, and a $2 million floating-to-fixed interest-rate swap agreement maturing on September 20, 2019.

### Fair Value Hierarchy

The fair value hierarchy of financial assets and liabilities at December 31, 2014 and 2013 is as follows:

| *December 31, 2014 (millions of Canadian dollars)* | **Carrying Value** | **Fair Value** | **Level 1** | **Level 2** | **Level 3** |
|---|---|---|---|---|---|
| **Assets:** | | | | | |
| Cash and cash equivalents | **100** | **100** | **100** | **–** | **–** |
| Derivative instruments | | | | | |
| Fair value hedges – interest-rate swaps | **2** | **2** | **–** | **2** | **–** |
| | **102** | **102** | **100** | **2** | **–** |
| **Liabilities:** | | | | | |
| Bank indebtedness | **2** | **2** | **2** | **–** | **–** |
| Derivative instruments | | | | | |
| Undesignated contracts – interest-rate swaps | **3** | **3** | **–** | **3** | **–** |
| Long-term debt | **8,925** | **10,411** | **–** | **10,411** | **–** |
| | **8,930** | **10,416** | **2** | **10,414** | **–** |

| *December 31, 2013 (millions of Canadian dollars)* | Carrying Value | Fair Value | Level 1 | Level 2 | Level 3 |
|---|---|---|---|---|---|
| **Assets:** | | | | | |
| Cash and cash equivalents | 565 | 565 | 565 | – | – |
| Investment | 251 | 251 | – | 251 | – |
| Derivative instruments | | | | | |
| Fair value hedges – interest-rate swaps | 12 | 12 | – | 12 | – |
| | 828 | 828 | 565 | 263 | – |
| **Liabilities:** | | | | | |
| Bank indebtedness | 31 | 31 | 31 | – | – |
| Long-term debt | 9,057 | 9,780 | – | 9,780 | – |
| | 9,088 | 9,811 | 31 | 9,780 | – |

Cash and cash equivalents include cash and short-term investments. At December 31, 2014, short-term investments consisted of bankers' acceptances and money market funds totalling $nil (2013 – $515 million). The carrying values are representative of fair value because of the short-term nature of these instruments.

The investment at December 31, 2013 represented the Province of Ontario Floating-Rate Notes that matured in November 2014. The fair value of the investment was determined using inputs other than quoted prices that are observable for the asset, with unrecognized gains or losses recognized in financing charges. The Company obtained quotes from an independent third party for the fair value of the investment, who uses the market price of similar securities adjusted for changes in observable inputs such as maturity dates and interest rates.

The fair value of the derivative instruments is determined using inputs other than quoted prices that are observable for these assets. The fair value is primarily based on the present value of future cash flows using a swap yield curve to determine the assumptions for interest rates.

The fair value of the hedged portion of the long-term debt is primarily based on the present value of future cash flows using a swap yield curve to determine the assumption for interest rates. The fair value of the unhedged portion of the long-term debt is based on unadjusted period-end market prices for the same or similar debt of the same remaining maturities.

There were no significant transfers between any of the fair value levels during the years ended December 31, 2014 and 2013.

## Risk Management

Exposure to market risk, credit risk and liquidity risk arises in the normal course of the Company's business.

### *Market Risk*

Market risk refers primarily to the risk of loss that results from changes in commodity prices, foreign exchange rates and interest rates. The Company does not have commodity risk. The Company does have foreign exchange risk as it enters into agreements to purchase materials and equipment associated with capital programs and projects that are settled in foreign currencies. This foreign exchange risk is not material, although the Company could in the future decide to issue foreign currency-denominated debt which would be hedged back to Canadian dollars consistent with its risk management policy. Hydro One is exposed to fluctuations in interest rates as the regulated rate of return for the Company's Transmission and Distribution Businesses is derived using a formulaic approach that is based on the forecast for long-term Government of Canada bond yields and the spread in 30-year "A"-rated Canadian utility bonds over the 30-year benchmark Government of Canada bond yield. The Company estimates that a 1% decrease in the forecasted long-term Government of Canada bond yield or the "A"-rated Canadian utility spread used in determining the Company's rate of return would reduce the Transmission Business' 2014 annual results of operations by approximately $20 million (2013 – $19 million) and Hydro One Networks' distribution business' 2014 annual results of operations by approximately $10 million (2013 – $10 million).

The Company uses a combination of fixed and variable-rate debt to manage the mix of its debt portfolio. The Company also uses derivative financial instruments to manage interest-rate risk. The Company utilizes interest-rate swaps, which are typically designated as fair value hedges, as a means to manage its interest rate exposure to achieve a lower cost of debt. In addition, the Company may utilize interest-rate derivative instruments to lock in interest-rate levels in anticipation of future financing. Hydro One may also enter into derivative agreements such as forward-starting pay fixed-interest-rate swap agreements to hedge against the effect of future interest-rate movements on long-term fixed-rate borrowing requirements. Such arrangements are typically designated as cash flow hedges. No cash flow hedge agreements were in existence as at December 31, 2014 or 2013.

A hypothetical 10% increase in the interest rates associated with variable-rate debt would not have resulted in a significant decrease in Hydro One's results of operations for the years ended December 31, 2014 or 2013.

*Fair Value Hedges*

For derivative instruments that are designated and qualify as fair value hedges, the gain or loss on the derivative as well as the offsetting loss or gain on the hedged item attributable to the hedged risk are recognized in the Consolidated Statements of Operations and Comprehensive Income. The net unrealized loss (gain) on the hedged debt and the related interest-rate swaps for the years ended December 31, 2014 and 2013 are included in financing charges as follows:

| *Year ended December 31 (millions of Canadian dollars)* | **2014** | 2013 |
|---|---|---|
| Unrealized loss (gain) on hedged debt | **(3)** | (8) |
| Unrealized loss (gain) on fair value interest-rate swaps | **3** | 8 |
| Net unrealized loss (gain) | **–** | – |

At December 31, 2014, Hydro One had $250 million (2013 – $750 million) of notional amounts of fair value hedges outstanding related to interest-rate swaps, with assets at fair value of $2 million (2013 – $12 million). During the years ended December 31, 2014 and 2013, there was no significant impact on the results of operations as a result of any ineffectiveness attributable to fair value hedges.

***Credit Risk***

Financial assets create a risk that a counterparty will fail to discharge an obligation, causing a financial loss. At December 31, 2014 and 2013, there were no significant concentrations of credit risk with respect to any class of financial assets. The Company's revenue is earned from a broad base of customers. As a result, Hydro One did not earn a significant amount of revenue from any single customer. At December 31, 2014 and 2013, there was no significant accounts receivable balance due from any single customer.

At December 31, 2014, the Company's provision for bad debts was $66 million (2013 – $36 million). Adjustments and write-offs were determined on the basis of a review of overdue accounts, taking into consideration historical experience. At December 31, 2014, approximately 6% of the Company's net accounts receivable were aged more than 60 days (2013 – 4%).

Hydro One manages its counterparty credit risk through various techniques including: entering into transactions with highly-rated counterparties; limiting total exposure levels with individual counterparties consistent with the Company's Board-approved Credit Risk Policy; entering into master agreements which enable net settlement and the contractual right of offset; and monitoring the financial condition of counterparties. In addition to payment netting language in master agreements, the Company establishes credit limits, margining thresholds and collateral requirements for each counterparty. Counterparty credit limits are based on an internal credit review that considers a variety of factors, including the results of a scoring model, leverage, liquidity, profitability, credit ratings and risk management capabilities. The determination of credit exposure for a particular counterparty is the sum of current exposure plus the potential future exposure with that counterparty. The current exposure is calculated as the sum of the principal value of money market exposures and the market value of all contracts that have a positive mark-to-market position on the measurement date. The Company would offset the positive market values against negative values with the same counterparty only where permitted by the existence of a legal netting agreement such as an International Swap Dealers Association master agreement. The potential future exposure represents a safety margin to protect against future fluctuations of interest rates, currencies, equities, and commodities. It is calculated based on factors developed by the Bank of International Settlements, following extensive historical analysis of random fluctuations of interest rates and currencies. To the extent that a counterparty's margining thresholds are exceeded, the counterparty is required to post collateral with the Company as specified in each agreement. The Company monitors current and forward credit exposure to counterparties both on an individual and an aggregate basis. The Company's credit risk for accounts receivable is limited to the carrying amounts on the Consolidated Balance Sheets.

Derivative financial instruments result in exposure to credit risk since there is a risk of counterparty default. The credit exposure of derivative contracts, before collateral, is represented by the fair value of contracts at the reporting date. At December 31, 2014, the counterparty credit risk exposure on the fair value of these interest-rate swap contracts was $3 million (2013 – $14 million). At December 31, 2014, Hydro One's credit exposure for all derivative instruments, and applicable payables and receivables, had a credit rating of investment grade, with five financial institutions as the counterparties. The credit exposure of three of the five counterparties accounted for more than 10% of the total credit exposure of derivative contracts.

***Liquidity Risk***

Liquidity risk refers to the Company's ability to meet its financial obligations as they come due. Hydro One meets its short-term liquidity requirements using cash and cash equivalents on hand, funds from operations, the issuance of commercial paper, and the revolving standby credit facility of $1,500 million. The short-term liquidity under the Commercial Paper Program, and anticipated levels of funds from operations should be sufficient to fund normal operating requirements.

At December 31, 2014, accounts payable and accrued liabilities in the amount of $784 million (2013 – $789 million) were expected to be settled in cash at their carrying amounts within the next 12 months.

At December 31, 2014, Hydro One had issued long-term debt in the principal amount of $8,923 million (2013 – $9,045 million). Principal repayments, interest payments and related weighted average interest rates are summarized by the number of years to maturity in the following table:

| **Years to Maturity** | **Long-term Debt Principal Repayments** *(millions of Canadian dollars)* | **Interest Payments** *(millions of Canadian dollars)* | **Weighted Average Interest Rate** *(%)* |
|---|---|---|---|
| 1 year | 550 | 419 | 2.8 |
| 2 years | 500 | 393 | 4.3 |
| 3 years | 600 | 381 | 5.2 |
| 4 years | 750 | 350 | 2.8 |
| 5 years | 228 | 327 | 1.6 |
| | 2,628 | 1,870 | 3.5 |
| 6 – 10 years | 900 | 1,522 | 3.6 |
| Over 10 years | 5,395 | 4,373 | 5.4 |
| | 8,923 | 7,765 | 4.7 |

## 14. CAPITAL MANAGEMENT

The Company's objectives with respect to its capital structure are to maintain effective access to capital on a long-term basis at reasonable rates, and to deliver appropriate financial returns. In order to ensure ongoing effective access to capital, the Company targets to maintain an "A" category long-term credit rating.

The Company considers its capital structure to consist of Shareholder's equity, preferred shares, long-term debt, and cash and cash equivalents. At December 31, 2014 and 2013, the Company's capital structure was as follows:

| *December 31 (millions of Canadian dollars)* | **2014** | 2013 |
|---|---|---|
| Long-term debt payable within one year | **552** | 756 |
| Less: cash and cash equivalents | **100** | 565 |
| | **452** | 191 |
| Long-term debt | **8,373** | 8,301 |
| Preferred shares | **323** | 323 |
| Common shares | **3,314** | 3,314 |
| Retained earnings | **4,249** | 3,787 |
| | **7,563** | 7,101 |
| **Total capital** | **16,711** | 15,916 |

The Company has customary covenants typically associated with long-term debt. Among other things, Hydro One's long-term debt and credit facility covenants limit the permissible debt to 75% of the Company's total capitalization, limit the ability to sell assets and impose a negative pledge provision, subject to customary exceptions. At December 31, 2014 and 2013, Hydro One was in compliance with all of these covenants and limitations.

## 15. PENSION AND POST-RETIREMENT AND POST-EMPLOYMENT BENEFITS

Hydro One has a defined benefit pension plan, a supplementary pension plan, and post-retirement and post-employment benefit plans. The defined benefit pension plan (Pension Plan) is contributory and covers all regular employees of Hydro One and its subsidiaries, except employees of Hydro One Brampton Networks and Norfolk Power. Employees of Hydro One Brampton Networks and Norfolk Power participate in the OMERS plan. The supplementary pension plan provides members of the Pension Plan with benefits that would have been earned and payable under the Pension Plan but for the limitations imposed by the *Income Tax Act* (Canada). The supplementary pension plan obligation is included with other post-retirement and post-employment benefit obligations on the Consolidated Balance Sheets.

### The OMERS Plan

Hydro One contributions to the OMERS plan for the year ended December 31, 2014 were $2 million (2013 – $2 million). Company contributions payable at December 31, 2014 and included in accrued liabilities on the Consolidated Balance Sheets were less than $1 million (2013 – less than $1 million). Hydro One contributions do not represent more than 5% of total contributions to the OMERS plan, as indicated in OMERS' most recently available annual report for the year ended December 31, 2013.

At December 31, 2013, the OMERS plan was 88.2% funded, with an unfunded liability of $8,641 million. This unfunded liability could result in future payments by participating employers and members. Hydro One future contributions could be increased substantially if other entities withdraw from the plan.

**Pension Plan, Post-Retirement and Post-Employment Plans**

The Pension Plan provides benefits based on highest three-year average pensionable earnings. For new management employees who commenced employment on or after January 1, 2004, and for new Society of Energy Professionals-represented staff hired after November 17, 2005, benefits are based on highest five-year average pensionable earnings. After retirement, pensions are indexed to inflation.

Company and employee contributions to the Pension Plan are based on actuarial valuations performed at least every three years. Annual Pension Plan contributions for 2014 of $174 million (2013 – $160 million) were based on an actuarial valuation effective December 31, 2013 (2013 – effective December 31, 2011) and the expected level of pensionable earnings. Estimated annual Pension Plan contributions for 2015 and 2016 are approximately $174 million and $175 million, respectively, based on the actuarial valuation as at December 31, 2013 and projected levels of pensionable earnings. Future minimum contributions beyond 2016 will be based on an actuarial valuation effective no later than December 31, 2016. Contributions are payable one month in arrears. All of the contributions are expected to be in the form of cash.

Hydro One recognizes the overfunded or underfunded status of the Pension Plan, and post-retirement and post-employment benefit plans (Plans) as an asset or liability on its Consolidated Balance Sheets, with offsetting regulatory assets and liabilities as appropriate. The underfunded benefit obligations for the Plans, in the absence of regulatory accounting, would be recognized in AOCI. The impact of changes in assumptions used to measure pension, post-retirement and post-employment benefit obligations is generally recognized over the expected average remaining service period of the employees. The measurement date for the Plans is December 31.

| *Year ended December 31* | Pension Benefits | | Post-Retirement and Post-Employment Benefits | |
|---|---|---|---|---|
| *(millions of Canadian dollars)* | **2014** | 2013 | **2014** | 2013 |
| **Change in projected benefit obligation** | | | | |
| Projected benefit obligation, beginning of year | **6,576** | 6,507 | **1,531** | 1,459 |
| Current service cost | **145** | 170 | **41** | 40 |
| Interest cost | **312** | 278 | **73** | 63 |
| Reciprocal transfers | **–** | 1 | **–** | – |
| Benefits paid | **(319)** | (317) | **(45)** | (44) |
| Net actuarial loss (gain) | **821** | (63) | **(18)** | 13 |
| Projected benefit obligation, end of year | **7,535** | 6,576 | **1,582** | 1,531 |
| **Change in plan assets** | | | | |
| Fair value of plan assets, beginning of year | **5,731** | 4,992 | **–** | – |
| Actual return on plan assets | **703** | 887 | **–** | – |
| Reciprocal transfers | **–** | 1 | **–** | – |
| Benefits paid | **(319)** | (317) | **–** | – |
| Employer contributions | **174** | 160 | **–** | – |
| Employee contributions | **35** | 30 | **–** | – |
| Administrative expenses | **(25)** | (22) | **–** | – |
| Fair value of plan assets, end of year | **6,299** | 5,731 | **–** | – |
| Unfunded status | **1,236** | 845 | **1,582** | 1,531 |

Hydro One presents its benefit obligations and plan assets net on its Consolidated Balance Sheets within the following line items:

| | Pension Benefits | | Post-Retirement and Post-Employment Benefits | |
|---|---|---|---|---|
| *December 31 (millions of Canadian dollars)* | **2014** | 2013 | **2014** | 2013 |
| Accrued liabilities | **–** | – | **49** | 43 |
| Pension benefit liability | **1,236** | 845 | **–** | – |
| Post-retirement and post-employment benefit liability | **–** | – | **1,533** | 1,488 |
| Unfunded status | **1,236** | 845 | **1,582** | 1,531 |

The funded or unfunded status of the pension, post-retirement and post-employment benefit plans refers to the difference between the fair value of plan assets and the projected benefit obligations for the Plans. The funded/unfunded status changes over time due to several factors, including contribution levels, assumed discount rates and actual returns on plan assets.

The following table provides the projected benefit obligation (PBO), accumulated benefit obligation (ABO) and fair value of plan assets for the Pension Plan:

| *December 31 (millions of Canadian dollars)* | **2014** | 2013 |
|---|---|---|
| PBO | **7,535** | 6,576 |
| ABO | **6,887** | 5,998 |
| Fair value of plan assets | **6,299** | 5,731 |

On an ABO basis, the Pension Plan was funded at 91% at December 31, 2014 (2013 – 96%). On a PBO basis, the Pension Plan was funded at 84% at December 31, 2014 (2013 – 87%). The ABO differs from the PBO in that the ABO includes no assumption about future compensation levels.

### Components of Net Periodic Benefit Costs

The following table provides the components of the net periodic benefit costs for the years ended December 31, 2014 and 2013 for the Pension Plan:

| *Year ended December 31 (millions of Canadian dollars)* | **2014** | 2013 |
|---|---|---|
| Current service cost, net of employee contributions | **110** | 141 |
| Interest cost | **312** | 278 |
| Expected return on plan assets, net of expenses | **(369)** | (309) |
| Actuarial loss amortization | **103** | 175 |
| Prior service cost amortization | **2** | 2 |
| Net periodic benefit costs | **158** | 287 |
| | | |
| Charged to results of operations[1] | **81** | 72 |

The following table provides the components of the net periodic benefit costs for the years ended December 31, 2014 and 2013 for the post-retirement and post-employment benefit plans:

| *Year ended December 31 (millions of Canadian dollars)* | **2014** | 2013 |
|---|---|---|
| Current service cost, net of employee contributions | **41** | 40 |
| Interest cost | **73** | 63 |
| Actuarial loss amortization | **18** | 27 |
| Prior service cost amortization | **2** | 3 |
| Net periodic benefit costs | **134** | 133 |
| | | |
| Charged to results of operations | **62** | 58 |

## Assumptions

The measurement of the obligations of the Plans and the costs of providing benefits under the Plans involves various factors, including the development of valuation assumptions and accounting policy elections. When developing the required assumptions, the Company considers historical information as well as future expectations. The measurement of benefit obligations and costs is impacted by several assumptions including the discount rate applied to benefit obligations, the long-term expected rate of return on plan assets, Hydro One's expected level of contributions to the Plans, the incidence of mortality, the expected remaining service period of plan participants, the level of compensation and rate of compensation increases, employee age, length of service, and the anticipated rate of increase of health care costs, among other factors. The impact of changes in assumptions used to measure the obligations of the Plans is generally recognized over the expected average remaining service period of the plan participants. In selecting the expected rate of return on plan assets, Hydro One considers historical economic indicators that impact asset returns, as well as expectations regarding future long-term capital market performance, weighted by target asset class allocations. In general, equity securities, real estate and private equity investments are forecasted to have higher returns than fixed-income securities.

The following weighted average assumptions were used to determine the benefit obligations at December 31, 2014 and 2013:

| | Pension Benefits | | Post-Retirement and Post-Employment Benefits | |
|---|---|---|---|---|
| *Year ended December 31* | **2014** | 2013 | **2014** | 2013 |
| **Significant assumptions:** | | | | |
| Weighted average discount rate | **4.00%** | 4.75% | **4.00%** | 4.75% |
| Rate of compensation scale escalation (without merit) | **2.50%** | 2.50% | **2.50%** | 2.50% |
| Rate of cost of living increase | **2.00%** | 2.00% | **2.00%** | 2.00% |
| Rate of increase in health care cost trends[1] | **–** | – | **4.36%** | 4.39% |

[1] 6.52% per annum in 2015, grading down to 4.36% per annum in and after 2031 (2013 – 6.81% in 2014, grading down to 4.39% per annum in and after 2031)

The following weighted average assumptions were used to determine the net periodic benefit costs for the years ended December 31, 2014 and 2013. Assumptions used to determine current year-end benefit obligations are the assumptions used to estimate the subsequent year's net periodic benefit costs.

| *Year ended December 31* | **2014** | 2013 |
|---|---|---|
| **Pension Benefits:** | | |
| Weighted average expected rate of return on plan assets | **6.50%** | 6.25% |
| Weighted average discount rate | **4.75%** | 4.25% |
| Rate of compensation scale escalation (without merit) | **2.50%** | 2.50% |
| Rate of cost of living increase | **2.00%** | 2.00% |
| Average remaining service life of employees *(years)* | **11** | 11 |
| | | |
| **Post-Retirement and Post-Employment Benefits:** | | |
| Weighted average discount rate | **4.75%** | 4.25% |
| Rate of compensation scale escalation (without merit) | **2.50%** | 2.50% |
| Rate of cost of living increase | **2.00%** | 2.00% |
| Average remaining service life of employees *(years)* | **12** | 12 |
| Rate of increase in health care cost trends[1] | **4.39%** | 4.39% |

[1] 6.81% per annum in 2014, grading down to 4.39% per annum in and after 2031 (2013 – 6.91% in 2013, grading down to 4.39% per annum in and after 2031)

The discount rate used to determine the current year pension obligation and the subsequent year's net periodic benefit costs is based on a yield curve approach. Under the yield curve approach, expected future benefit payments for each plan are discounted by a rate on a third party bond yield curve corresponding to each duration. The yield curve is based on "AA" long-term corporate bonds. A single discount rate is calculated that would yield the same present value as the sum of the discounted cash flows.

The effect of a 1% change in health care cost trends on the projected benefit obligation for the post-retirement and post-employment benefits at December 31, 2014 and 2013 is as follows:

| *December 31 (millions of Canadian dollars)* | **2014** | 2013 |
|---|---|---|
| **Projected benefit obligation:** | | |
| Effect of a 1% increase in health care cost trends | **248** | 258 |
| Effect of a 1% decrease in health care cost trends | **(193)** | (200) |

The effect of a 1% change in health care cost trends on the service cost and interest cost for the post-retirement and post-employment benefits for the years ended December 31, 2014 and 2013 is as follows:

| *Year ended December 31 (millions of Canadian dollars)* | **2014** | 2013 |
|---|---|---|
| **Service cost and interest cost:** | | |
| Effect of a 1% increase in health care cost trends | **23** | 21 |
| Effect of a 1% decrease in health care cost trends | **(17)** | (16) |

The following approximate life expectancies were used in the mortality assumptions to determine the projected benefit obligations for the pension and post-retirement and post-employment plans at December 31, 2014 and 2013:

| **December 31, 2014** | | | | December 31, 2013 | | | |
|---|---|---|---|---|---|---|---|
| **Life expectancy at 65 for a member currently at** | | | | Life expectancy at 65 for a member currently at | | | |
| **Age 65** | | **Age 45** | | Age 65 | | Age 45 | |
| **Male** | **Female** | **Male** | **Female** | Male | Female | Male | Female |
| **23** | **25** | **24** | **26** | 23 | 25 | 24 | 26 |

**Estimated Future Benefit Payments**

At December 31, 2014, estimated future benefit payments to the participants of the Plans were:

| *(millions of Canadian dollars)* | Pension Benefits | Post-Retirement and Post-Employment Benefits |
|---|---|---|
| 2015 | 305 | 50 |
| 2016 | 316 | 52 |
| 2017 | 328 | 54 |
| 2018 | 339 | 56 |
| 2019 | 350 | 59 |
| 2020 through to 2024 | 1,889 | 332 |
| Total estimated future benefit payments through to 2024 | 3,527 | 603 |

**Components of Regulatory Assets**

A portion of actuarial gains and losses and prior service costs is recorded within regulatory assets on Hydro One's Consolidated Balance Sheets to reflect the expected regulatory inclusion of these amounts in future rates, which would otherwise be recorded in OCI. The following table provides the actuarial gains and losses and prior service costs recorded within regulatory assets:

| *Year ended December 31 (millions of Canadian dollars)* | **2014** | 2013 |
|---|---|---|
| **Pension Benefits:** | | |
| Actuarial loss (gain) for the year | **511** | (619) |
| Actuarial loss amortization | **(103)** | (175) |
| Prior service cost amortization | **(2)** | (2) |
| | **406** | (796) |
| **Post-Retirement and Post-Employment Benefits:** | | |
| Actuarial loss (gain) for the year | **(18)** | 13 |
| Actuarial loss amortization | **(18)** | (27) |
| Prior service cost amortization | **(2)** | (3) |
| | **(38)** | (17) |

The following table provides the components of regulatory assets that have not been recognized as components of net periodic benefit costs for the years ended December 31, 2014 and 2013:

| *Year ended December 31 (millions of Canadian dollars)* | **2014** | 2013 |
|---|---|---|
| **Pension Benefits:** | | |
| Prior service cost | **2** | 3 |
| Actuarial loss | **1,234** | 842 |
| | **1,236** | 845 |
| **Post-Retirement and Post-Employment Benefits:** | | |
| Prior service cost | **–** | 2 |
| Actuarial loss | **273** | 306 |
| | **273** | 308 |

The following table provides the components of regulatory assets at December 31 that are expected to be amortized as components of net periodic benefit costs in the following year:

| | Pension Benefits | | Post-Retirement and Post-Employment Benefits | |
|---|---|---|---|---|
| *December 31 (millions of Canadian dollars)* | **2014** | 2013 | **2014** | 2013 |
| Prior service cost | **2** | 2 | **–** | 2 |
| Actuarial loss | **119** | 103 | **10** | 15 |
| | **121** | 105 | **10** | 17 |

## Pension Plan Assets

### *Investment Strategy*

On a regular basis, Hydro One evaluates its investment strategy to ensure that Pension Plan assets will be sufficient to pay Pension Plan benefits when due. As part of this ongoing evaluation, Hydro One may make changes to its targeted asset allocation and investment strategy. The Pension Plan is managed at a net asset level. The main objective of the Pension Plan is to sustain a certain level of net assets in order to meet the pension obligations of the Company. The Pension Plan fulfills its primary objective by adhering to specific investment policies outlined in its Summary of Investment Policies and Procedures (SIPP), which is reviewed and approved by the Audit, Finance and Pension Investment Committee of Hydro One's Board of Directors. The Company manages net assets by engaging knowledgeable external investment managers who are charged with the responsibility of investing existing funds and new funds (current year's employee and employer contributions) in accordance with the approved SIPP. The performance of the managers is monitored through a governance structure. Increases in net assets are a direct result of investment income generated by investments held by the Pension Plan and contributions to the Pension Plan by eligible employees and by the Company. The main use of net assets is for benefit payments to eligible Pension Plan members.

### *Pension Plan Asset Mix*

At December 31, 2014, the Pension Plan target asset allocations and weighted average asset allocations were as follows:

| | Target Allocation (%) | Pension Plan Assets (%) |
|---|---|---|
| Equity securities | 60.0 | 60.9 |
| Debt securities | 35.0 | 35.9 |
| Other[1] | 5.0 | 3.2 |
| | 100.0 | 100.0 |

[1] Other investments include real estate and infrastructure investments.

At December 31, 2014, the Pension Plan held no Hydro One corporate bonds (2013 – $15 million) and $340 million of debt securities of the Province (2013 – $217 million).

***Concentrations of Credit Risk***

Hydro One evaluated its Pension Plan's asset portfolio for the existence of significant concentrations of credit risk as at December 31, 2014 and 2013. Concentrations that were evaluated include, but are not limited to, investment concentrations in a single entity, concentrations in a type of industry, and concentrations in individual funds. At December 31, 2014 and 2013, there were no significant concentrations (defined as greater than 10% of plan assets) of risk in the Pension Plan's assets.

The Pension Plan manages its counterparty credit risk with respect to bonds by investing in investment-grade and government bonds and with respect to derivative instruments by transacting only with financial institutions rated at least "A+" by Standard and Poor's Rating Services Inc., DBRS Limited, and Fitch Ratings Inc., and "A1" by Moody's Investors Service Inc., and also by utilizing exposure limits to each counterparty and ensuring that exposure is diversified across counterparties. The risk of default on transactions in listed securities is considered minimal, as the trade will fail if either party to the transaction does not meet its obligation.

***Fair Value Measurements***

The following tables present the Pension Plan assets measured and recorded at fair value on a recurring basis and their level within the fair value hierarchy at December 31, 2014 and 2013:

| *December 31, 2014 (millions of Canadian dollars)* | **Level 1** | **Level 2** | **Level 3** | **Total** |
|---|---|---|---|---|
| Pooled funds | **–** | **18** | **142** | **160** |
| Cash and cash equivalents | **166** | **–** | **–** | **166** |
| Short-term securities | **–** | **176** | **–** | **176** |
| Real estate | **–** | **–** | **2** | **2** |
| Corporate shares – Canadian | **1,008** | **–** | **–** | **1,008** |
| Corporate shares – Foreign | **2,766** | **–** | **–** | **2,766** |
| Bonds and debentures – Canadian | **–** | **1,799** | **–** | **1,799** |
| Bonds and debentures – Foreign | **–** | **211** | **–** | **211** |
| Total fair value of plan assets[1] | **3,940** | **2,204** | **144** | **6,288** |

[1] At December 31, 2014, the total fair value of Pension Plan assets excludes $18 million of interest and dividends receivable, and $7 million relating to accruals for pension administration expense.

| *December 31, 2013 (millions of Canadian dollars)* | Level 1 | Level 2 | Level 3 | Total |
|---|---|---|---|---|
| Pooled funds | 1 | 16 | 117 | 134 |
| Cash and cash equivalents | 150 | – | – | 150 |
| Short-term securities | – | 180 | – | 180 |
| Real estate | – | – | 2 | 2 |
| Corporate shares – Canadian | 943 | – | – | 943 |
| Corporate shares – Foreign | 2,708 | – | – | 2,708 |
| Bonds and debentures – Canadian | – | 1,416 | – | 1,416 |
| Bonds and debentures – Foreign | – | 186 | – | 186 |
| Total fair value of plan assets[1] | 3,802 | 1,798 | 119 | 5,719 |

[1] At December 31, 2013, the total fair value of Pension Plan assets excludes $19 million of interest and dividends receivable, and $7 million relating to accruals for pension administration expense.

See Note 13 – Fair Value of Financial Instruments and Risk Management for a description of levels within the fair value hierarchy.

***Changes in the Fair Value of Financial Instruments Classified in Level 3***

The following table summarizes the changes in fair value of financial instruments classified in Level 3 for the years ended December 31, 2014 and 2013. The Pension Plan classifies financial instruments as Level 3 when the fair value is measured based on at least one significant input that is not observable in the markets or due to lack of liquidity in certain markets. The gains and losses presented in the table below may include changes in fair value based on both observable and unobservable inputs.

| *Year ended December 31 (millions of Canadian dollars)* | **2014** | 2013 |
|---|---|---|
| Fair value, beginning of year | **119** | 106 |
| Realized and unrealized gains | **30** | 23 |
| Purchases | **23** | – |
| Sales and disbursements | **(28)** | (10) |
| Fair value, end of year | **144** | 119 |

There were no significant transfers between any of the fair value levels during the years ended December 31, 2014 and 2013.

The Company performs sensitivity analysis for fair value measurements classified in Level 3, substituting the unobservable inputs with one or more reasonably possible alternative assumptions. These sensitivity analyses resulted in negligible changes in the fair value of financial instruments classified in this level.

***Valuation Techniques Used to Determine Fair Value***

*Pooled Funds*

The pooled fund category mainly consists of private equity and infrastructure investments. Private equity investments represent private equity funds that invest in operating companies that are not publicly traded on a stock exchange. Investment strategies in private equity include limited partnerships in businesses that are characterized by high internal growth and operational efficiencies, venture capital, leveraged buyouts and special situations such as distressed investments. Infrastructure investments represent infrastructure funds that invest in real assets which are not publicly traded on a stock exchange. Investment strategies in infrastructure include limited partnerships in core infrastructure assets focusing on assets that generate stable, long-term cash flows and deliver incremental returns relative to conventional fixed-income investments. Private equity and infrastructure valuations are reported by the fund manager and are based on the valuation of the underlying investments which includes inputs such as cost, operating results, discounted future cash flows and market-based comparable data. Since these valuation inputs are not highly observable, private equity and infrastructure investments have been categorized as Level 3 within pooled funds.

*Cash Equivalents*

Demand cash deposits held with banks and cash held by the investment managers are considered cash equivalents and are included in the fair value measurements hierarchy as Level 1.

*Short-Term Securities*

Short-term securities are valued at cost plus accrued interest, which approximates fair value due to their short-term nature. Short-term securities have been categorized as Level 2.

*Real Estate*

Real estate investments represent private equity investments in holding companies that invest in real estate properties. The investments in the holding companies are valued using net asset values reported by the fund manager. Real estate investments are categorized as Level 3.

*Corporate Shares*

Corporate shares are valued based on quoted prices in active markets and are categorized as Level 1. Investments denominated in foreign currencies are translated into Canadian currency at year-end rates of exchange.

*Bonds and Debentures*

Bonds and debentures are presented at published closing trade quotations, and are categorized as Level 2.

## 16. ENVIRONMENTAL LIABILITIES

The following tables show the movements in environmental liabilities for the years ended December 31, 2014 and 2013:

| *Year ended December 31, 2014 (millions of Canadian dollars)* | **PCB** | **LAR** | **Total** |
|---|---|---|---|
| Environmental liabilities, January 1 | **201** | **65** | **266** |
| Interest accretion | **9** | **2** | **11** |
| Expenditures | **(5)** | **(13)** | **(18)** |
| Revaluation adjustment | **(33)** | **13** | **(20)** |
| Environmental liabilities, December 31 | **172** | **67** | **239** |
| Less: current portion | **8** | **10** | **18** |
| | **164** | **57** | **221** |

| *Year ended December 31, 2013 (millions of Canadian dollars)* | PCB | LAR | Total |
|---|---|---|---|
| Environmental liabilities, January 1 | 197 | 52 | 249 |
| Interest accretion | 9 | 1 | 10 |
| Expenditures | (2) | (14) | (16) |
| Revaluation adjustment | (3) | 26 | 23 |
| Environmental liabilities, December 31 | 201 | 65 | 266 |
| Less: current portion | 15 | 12 | 27 |
| | 186 | 53 | 239 |

The following tables show the reconciliation between the undiscounted basis of the environmental liabilities and the amount recognized on the Consolidated Balance Sheets after factoring in the discount rate:

| *December 31, 2014 (millions of Canadian dollars)* | **PCB** | **LAR** | **Total** |
|---|---|---|---|
| Undiscounted environmental liabilities | **195** | **70** | **265** |
| Less: discounting accumulated liabilities to present value | **23** | **3** | **26** |
| Discounted environmental liabilities | **172** | **67** | **239** |

| *December 31, 2013 (millions of Canadian dollars)* | PCB | LAR | Total |
|---|---|---|---|
| Undiscounted environmental liabilities | 237 | 68 | 305 |
| Less: discounting accumulated liabilities to present value | 36 | 3 | 39 |
| Discounted environmental liabilities | 201 | 65 | 266 |

At December 31, 2014, the estimated future environmental expenditures were as follows:

| *(millions of Canadian dollars)* | |
|---|---|
| 2015 | 18 |
| 2016 | 37 |
| 2017 | 36 |
| 2018 | 35 |
| 2019 | 33 |
| Thereafter | 106 |
| | 265 |

At December 31, 2014, of the total estimated future environmental expenditures, $195 million relates to PCBs (2013 – $237 million) and $70 million relates to LAR (2013 – $68 million).

Hydro One records a liability for the estimated future expenditures for the contaminated LAR and for the phase-out and destruction of PCB-contaminated mineral oil removed from electrical equipment when it is determined that future environmental remediation expenditures are probable under existing statute or regulation and the amount of the future expenditures can be reasonably estimated.

There are uncertainties in estimating future environmental costs due to potential external events such as changes in legislation or regulations, and advances in remediation technologies. In determining the amounts to be recorded as environmental liabilities, the Company estimates the current cost of completing required work and makes assumptions as to when the future expenditures will actually be incurred, in order to generate future cash flow information. A long-term inflation rate assumption of approximately 2% has been used to express these current cost estimates as estimated future expenditures. Future expenditures have been discounted using factors ranging from approximately 2.3% to 6.3%, depending on the appropriate rate for the period when expenditures are expected to be incurred. All factors used in estimating the Company's environmental liabilities represent management's best estimates of the present value of costs required to meet existing legislation or regulations. However, it is reasonably possible that numbers or volumes of contaminated assets, cost estimates to perform work, inflation assumptions and the assumed pattern of annual cash flows may differ significantly from the Company's current assumptions. In addition, with respect to the PCB environmental liability, the availability of critical resources such as skilled labour and replacement assets and the ability to take maintenance outages in critical facilities may influence the timing of expenditures.

### PCBs

The Environment Canada regulations, enacted under the *Canadian Environmental Protection Act, 1999*, govern the management, storage and disposal of PCBs based on certain criteria, including type of equipment, in-use status, and PCB-contamination thresholds. Under current regulations, Hydro One's PCBs have to be disposed of by the end of 2025, with the exception of specifically exempted equipment. Contaminated equipment will generally be replaced, or will be decontaminated by removing PCB-contaminated insulating oil and retro filling with replacement oil that contains PCBs in concentrations of less than 2 ppm.

The Company's best estimate of the total estimated future expenditures to comply with current PCB regulations is $195 million. These expenditures are expected to be incurred over the period from 2015 to 2025. As a result of its annual review of environmental liabilities, the Company recorded a revaluation adjustment in 2014 to reduce the PCB environmental liability by $33 million (2013 – $3 million).

### LAR

The Company's best estimate of the total estimated future expenditures to complete its LAR program is $70 million. These expenditures are expected to be incurred over the period from 2015 to 2023. As a result of its annual review of environmental liabilities, the Company recorded a revaluation adjustment in 2014 to increase the LAR environmental liability by $13 million (2013 – $26 million).

## 17. ASSET RETIREMENT OBLIGATIONS

Hydro One records a liability for the estimated future expenditures for the removal and disposal of asbestos-containing materials installed in some of its facilities and for the decommissioning of specific switching stations located on unowned sites. AROs, which represent legal obligations associated with the retirement of certain tangible long-lived assets, are computed as the present value of the projected expenditures for the future retirement of specific assets and are recognized in the period in which the liability is incurred, if a reasonable estimate of fair value can be made. If the asset remains in service at the recognition date, the present value of the liability is added to the carrying amount of the associated asset in the period the liability is incurred and this additional carrying amount is depreciated over the remaining life of the asset. If an ARO is recorded in respect of an out-of-service asset, the asset retirement cost is charged to results of operations. Subsequent to the initial recognition, the liability is adjusted for any revisions to the estimated future cash flows associated with the ARO, which can occur due to a number of factors including, but not limited to, cost escalation, changes in technology applicable to the assets to be retired, changes in legislation or regulations, as well as for accretion of the liability due to the passage of time until the obligation is settled. Depreciation expense is adjusted prospectively for any increases or decreases to the carrying amount of the associated asset.

In determining the amounts to be recorded as AROs, the Company estimates the current fair value for completing required work and makes assumptions as to when the future expenditures will actually be incurred, in order to generate future cash flow information. A long-term inflation assumption of approximately 2% has been used to express these current cost estimates as estimated future expenditures. Future expenditures have been discounted using factors ranging from approximately 3.0% to 5.0%, depending on the appropriate rate for the period when expenditures are expected to be incurred. All factors used in estimating the Company's AROs represent management's best estimates of the cost required to meet existing legislation or regulations. However, it is reasonably possible that numbers or volumes of contaminated assets, cost estimates to perform work, inflation assumptions and the assumed pattern of annual cash flows may differ significantly from the Company's current assumptions. AROs are reviewed annually or more frequently if significant changes in regulations or other relevant factors occur. Estimate changes are accounted for prospectively.

At December 31, 2014, Hydro One had recorded AROs of $9 million (2013 – $14 million), consisting of $8 million (2013 – $7 million) related to the estimated future expenditures associated with the removal and disposal of asbestos-containing materials installed in some of its facilities, as well as $1 million (2013 – $7 million) related to the future decommissioning and removal of two switching stations. The amount of interest recorded is nominal.

## 18. SHARE CAPITAL

### Preferred Shares

The Company has 12,920,000 issued and outstanding 5.5% cumulative preferred shares with a redemption value of $25 per share or $323 million total value. The Company is authorized to issue an unlimited number of preferred shares.

The Company's preferred shares are entitled to an annual cumulative dividend of $18 million, or $1.375 per share, which is payable on a quarterly basis. The preferred shares are not subject to mandatory redemption (except on liquidation) but are redeemable in certain circumstances. The shares are redeemable at the option of the Province at the redemption value, plus any accrued and unpaid dividends, if the Province sells a number of the common shares which it owns to the public such that the Province's holdings are reduced to less than 50% of the common shares of the Company. Hydro One may elect, without condition, to pay all or part of the redemption price by issuing additional common shares to the Province. If the Province does not exercise its redemption right, the Company would have the ability to adjust the dividend on the preferred shares to produce a yield that is 0.50% less than the then-current dividend market yield for similarly rated preferred shares. The preferred shares do not carry voting rights, except in limited circumstances, and would rank in priority over the common shares upon liquidation.

These preferred shares have conditions for their redemption that are outside the control of the Company because the Province can exercise its right to redeem in the event of change in ownership without approval of the Company's Board of Directors. Because the conditional redemption feature is outside the control of the Company, the preferred shares are classified outside of equity on the Consolidated Balance Sheets. Management believes that it is not probable that the preferred shares will become redeemable. No adjustment to the carrying value of the preferred shares has been recognized at December 31, 2014. If it becomes probable in the future that the preferred shares will be redeemed, the redemption value would be adjusted.

### Common Shares

The Company has 100,000 issued and outstanding common shares. The Company is authorized to issue an unlimited number of common shares.

Common share dividends are declared at the sole discretion of the Hydro One Board of Directors, and are recommended by management based on results of operations, maintenance of the deemed regulatory capital structure, financial conditions, cash requirements, and other relevant factors, such as industry practice and Shareholder expectations.

### Earnings per Share

Basic and diluted earnings per share have been calculated on the basis of net income attributable to the Shareholder of Hydro One and the weighted average number of common shares outstanding during the year.

## 19. DIVIDENDS

In 2014, preferred share dividends in the amount of $18 million (2013 – $18 million) and common share dividends in the amount of $269 million (2013 – $200 million) were declared.

## 20. RELATED PARTY TRANSACTIONS

Hydro One is owned by the Province. The OEFC, IESO, OPA, Ontario Power Generation Inc. (OPG) and the OEB are related parties to Hydro One because they are controlled or significantly influenced by the Province.

### The Province

During 2014, Hydro One paid dividends to the Province totalling $287 million (2013 – $218 million).

In November 2014, the Company redeemed the $250 million Province of Ontario Floating-Rate Notes held as a long-term investment. These notes were originally purchased in January 2010 with a maturity date of November 19, 2014.

### IESO

In 2014, Hydro One purchased power in the amount of $2,601 million (2013 – $2,477 million) from the IESO-administered electricity market.

Hydro One receives revenues for transmission services from the IESO, based on OEB-approved uniform transmission rates. Transmission revenues for 2014 include $1,556 million (2013 – $1,509 million) related to these services.

Hydro One receives amounts for rural rate protection from the IESO. Distribution revenues for 2014 include $127 million (2013 – $127 million) related to this program.

Hydro One also receives revenues related to the supply of electricity to remote northern communities from the IESO. Distribution revenues for 2014 include $32 million (2013 – $33 million) related to these services.

### OPA

The OPA funds substantially all of the Company's conservation and demand management programs. The funding includes program costs, incentives, and management fees. In 2014, Hydro One received $33 million (2013 – $34 million) from the OPA related to these programs.

### OPG

In 2014, Hydro One purchased power in the amount of $23 million (2013 – $15 million) from OPG.

Hydro One has service level agreements with OPG. These services include field, engineering, logistics and telecommunications services. In 2014, revenues related to the provision of construction and equipment maintenance services with respect to these service level agreements were $12 million (2013 – $9 million), primarily for the Transmission Business. Operation, maintenance and administration costs in 2014 related to the purchase of services with respect to these service level agreements were $1 million (2013 – $1 million).

### OEFC

In 2014, Hydro One made payments in lieu of corporate income taxes to the OEFC totalling $86 million (2013 – $138 million).

In 2014, Hydro One purchased power in the amount of $9 million (2013 – $8 million) from power contracts administered by the OEFC.

Hydro One pays a $5 million annual fee to the OEFC for indemnification against adverse claims in excess of $10 million paid by the OEFC with respect to certain of Ontario Hydro's businesses transferred to Hydro One on April 1, 1999.

PILs and payments in lieu of property taxes are paid to the OEFC.

**OEB**

Under the *Ontario Energy Board Act, 1998*, the OEB is required to recover all of its annual operating costs from gas and electricity distributors and transmitters. In 2014, Hydro One incurred $12 million (2013 – $12 million) in OEB fees.

Sales to and purchases from related parties occur at normal market prices or at a proxy for fair value based on the requirements of the OEB's Affiliate Relationships Code. Outstanding balances at period end are interest free and settled in cash.

The amounts due to and from related parties as a result of the transactions referred to above are as follows:

| *December 31 (millions of Canadian dollars)* | **2014** | 2013 |
|---|---|---|
| Due from related parties | **224** | 197 |
| Due to related parties[1] | **(227)** | (230) |
| Investment | **–** | 251 |

[1] Included in due to related parties at December 31, 2014 are amounts owing to the IESO in respect of power purchases of $214 million (2013 – $217 million).

## 21. CONSOLIDATED STATEMENTS OF CASH FLOWS

The changes in non-cash balances related to operations consist of the following:

| *Year ended December 31 (millions of Canadian dollars)* | **2014** | 2013 |
|---|---|---|
| Accounts receivable | **(93)** | (78) |
| Due from related parties | **(27)** | (43) |
| Prepaid expenses and other assets | **(13)** | (5) |
| Accounts payable | **39** | 13 |
| Accrued liabilities | **(35)** | 71 |
| Due to related parties | **(3)** | (31) |
| Accrued interest | **–** | 5 |
| Long-term accounts payable and other liabilities | **(3)** | (5) |
| Post-retirement and post-employment benefit liability | **80** | 84 |
| | **(55)** | 11 |

### Capital Expenditures

The following table illustrates the reconciliation between investments in property, plant and equipment and the amount presented in the Consolidated Statements of Cash Flows after factoring in capitalized depreciation and the net change in related accruals:

| *Year ended December 31 (millions of Canadian dollars)* | **2014** | 2013 |
|---|---|---|
| Capital investments in property, plant and equipment | **(1,511)** | (1,312) |
| Capitalized depreciation and net change in accruals included in capital investments in property, plant and equipment | **30** | 4 |
| Capital expenditures – property, plant and equipment | **(1,481)** | (1,308) |

The following table illustrates the reconciliation between investments in intangible assets and the amount presented in the Consolidated Statements of Cash Flows after factoring in the net change in related accruals:

| *Year ended December 31 (millions of Canadian dollars)* | **2014** | 2013 |
|---|---|---|
| Capital investments in intangible assets | **(19)** | (82) |
| Net change in accruals included in capital investments in intangible assets | **(4)** | 3 |
| Capital expenditures – intangible assets | **(23)** | (79) |

### Supplementary Information

| *Year ended December 31 (millions of Canadian dollars)* | **2014** | 2013 |
|---|---|---|
| Net interest paid | **412** | 395 |
| PILs | **86** | 138 |

## 22. CONTINGENCIES

### Legal Proceedings

Hydro One is involved in various lawsuits, claims and regulatory proceedings in the normal course of business. In the opinion of management, the outcome of such matters will not have a material adverse effect on the Company's consolidated financial position, results of operations or cash flows.

### Transfer of Assets

The transfer orders by which the Company acquired certain of Ontario Hydro's businesses as of April 1, 1999 did not transfer title to some assets located on Reserves (as defined in the *Indian Act* (Canada)). Currently, the OEFC holds these assets. Under the terms of the transfer orders, the Company is required to manage these assets until it has obtained all consents necessary to complete the transfer of title of these assets to itself. The Company cannot predict the aggregate amount that it may have to pay, either on an annual or one-time basis, to obtain the required consents. In 2014, the Company paid approximately $1 million (2013 – $2 million) in respect of these consents. If the Company cannot obtain the required consents, the OEFC will continue to hold these assets for an indefinite period of time. If the Company cannot reach a satisfactory settlement, it may have to relocate these assets to other locations at a cost that could be substantial or, in a limited number of cases, to abandon a line and replace it with diesel-generation facilities. The costs relating to these assets could have a material adverse effect on the Company's results of operations if the Company is not able to recover them in future rate orders.

## 23. COMMITMENTS

### Outsourcing Agreements

The current agreement with Inergi LP (Inergi), an affiliate of Capgemini Canada Inc., expires on February 28, 2015. On November 28, 2014, Hydro One entered into an agreement with Inergi (Inergi Agreement), the service provider selected through a competitive procurement process which began in 2013, for second-generation back office and IT outsourcing services for a term of 58 months, commencing March 1, 2015 to December 31, 2019. Under the agreement, Inergi will provide Hydro One with settlements, source to pay services, pay operations services, information technology and finance and accounting services. Coincident with the conclusion of negotiations on the Inergi Agreement, Hydro One reached agreement with Inergi for the provision of second-generation customer service operations outsourcing services for a fixed period of three years beginning March 1, 2015 to February 28, 2018.

In September 2014, Hydro One entered into an agreement with Brookfield Johnson Controls Canada LP (Brookfield) for facilities management services for a term of ten years, from January 1, 2015 to December 31, 2024, with the option to renew for an additional term of three years. Under the agreement, Brookfield will provide us with facilities management and execution of certain capital projects as deemed required by the Company. The Brookfield Agreement has a value of up to approximately $658 million over the ten-year term of the agreement, including the facilities management portion of the contract, plus a variable amount of capital work depending on the needs that may arise as determined by the Company, with no minimum capital work guarantee. The agreement also includes a fixed management fee of approximately $2 million for each year of the term.

At December 31, 2014, the annual commitments under the outsourcing agreements were as follows: 2015 – $179 million; 2016 – $146 million; 2017 – $145 million; 2018 – $113 million; 2019 – $105 million; and thereafter – $13 million.

### Prudential Support

Purchasers of electricity in Ontario, through the IESO, are required to provide security to mitigate the risk of their default based on their expected activity in the market. As at December 31, 2014, the Company provided prudential support to the IESO on behalf of its subsidiaries using parental guarantees of $330 million (2013 – $325 million), and on behalf of two distributors using guarantees of $1 million (2013 – $1 million). In addition, as at December 31, 2014, the Company has provided letters of credit in the amount of $8 million (2013 – $21 million) to the IESO. The IESO could draw on these guarantees and/or letters of credit if these subsidiaries or distributors fail to make a payment required by a default notice issued by the IESO. The maximum potential payment is the face value of any letters of credit plus the amount of the parental guarantees.

### Retirement Compensation Arrangements

Bank letters of credit have been issued to provide security for the Company's liability under the terms of a trust fund established pursuant to the supplementary pension plan for eligible employees of Hydro One. The supplementary pension plan trustee is required to draw upon these letters of credit if Hydro One is in default of its obligations under the terms of this plan. Such obligations include the requirement to provide the trustee with an annual actuarial report as well as letters of credit sufficient to secure the Company's liability under the plan, to pay benefits payable under the plan and to pay the letter of credit fee. The maximum potential payment is the face value of the letters of credit. At December 31, 2014, Hydro One had letters of credit of $126 million (2013 – $127 million) outstanding relating to retirement compensation arrangements.

### Operating Leases

Hydro One is committed as lessee to irrevocable operating lease contracts for buildings used in administrative and service-related functions and storing telecommunications equipment. These leases have a typical term of between three and five years, but several leases have lesser or greater terms to address special circumstances and/or opportunities. Renewal options, which are generally prevalent in most leases, have similar terms of three to five years. All leases include a clause to enable upward revision of the rental charge on an annual basis or on renewal according to prevailing market conditions or pre-established rents. There are no restrictions placed upon Hydro One by entering into these leases. Hydro One Networks and Hydro One Telecom are the principal entities concerned.

During the year ended December 31, 2014, the Company made lease payments totalling $11 million (2013 – $11 million). At December 31, 2014, the future minimum lease payments under non-cancellable operating leases were as follows: 2015 – $7 million; 2016 – $10 million; 2017 – $9 million; 2018 – $7 million; 2019 – $3 million; and thereafter – $9 million.

## 24. SEGMENTED REPORTING

Hydro One has three reportable segments:

- The Transmission Business, which comprises the core business of providing electricity transportation and connection services, is responsible for transmitting electricity throughout the Ontario electricity grid;
- The Distribution Business, which comprises the core business of delivering and selling electricity to customers; and
- Other, which includes certain corporate activities and the operations of the telecommunications business.

The designation of segments has been based on a combination of regulatory status and the nature of the products and services provided. Operating segments of the Company are determined based on information used by the chief operating decision maker in deciding how to allocate resources and evaluate the performance of each of the segments. The Company evaluates segment performance based on income before financing charges and provision for PILs from continuing operations (excluding certain allocated corporate governance costs).

The accounting policies followed by the segments are the same as those described in the summary of significant accounting policies (see Note 2 – Significant Accounting Policies). Segment information on the above basis is as follows:

| *Year ended December 31, 2014*<br>*(millions of Canadian dollars)* | **Transmission** | **Distribution** | **Other** | **Consolidated** |
|---|---|---|---|---|
| Revenues | **1,588** | **4,903** | **57** | **6,548** |
| Purchased power | **–** | **3,419** | **–** | **3,419** |
| Operation, maintenance and administration | **394** | **742** | **56** | **1,192** |
| Depreciation and amortization | **346** | **367** | **9** | **722** |
| **Income (loss) before financing charges and provision for PILs** | **848** | **375** | **(8)** | **1,215** |
| **Capital investments** | **845** | **680** | **5** | **1,530** |

| *Year ended December 31, 2013*<br>*(millions of Canadian dollars)* | Transmission | Distribution | Other | Consolidated |
|---|---|---|---|---|
| Revenues | 1,529 | 4,484 | 61 | 6,074 |
| Purchased power | – | 3,020 | – | 3,020 |
| Operation, maintenance and administration | 375 | 672 | 59 | 1,106 |
| Depreciation and amortization | 327 | 340 | 9 | 676 |
| **Income (loss) before financing charges and provision for PILs** | 827 | 452 | (7) | 1,272 |
| **Capital investments** | 714 | 673 | 7 | 1,394 |

**Total Assets by Segment:**

| *December 31 (millions of Canadian dollars)* | **2014** | 2013 |
|---|---|---|
| Transmission | **12,540** | 11,846 |
| Distribution | **9,805** | 8,805 |
| Other | **205** | 974 |
| Total assets | **22,550** | 21,625 |

All revenues, costs and assets, as the case may be, are earned, incurred or held in Canada.

## 25. SUBSEQUENT EVENT

On February 11, 2015, preferred share dividends in the amount of $4 million and common share dividends in the amount of $25 million were declared.

# COMMUNITY

The Electricity Discovery Centre travelled more than 12,000 kilometres between September 2013 and September 2014 – the equivalent of driving from Halifax to Vancouver and back.

13 women were awarded the Women in Engineering Scholarship

**95%**
**of visitors**

would recommend visiting the Electricity Discovery Centre to family and friends

## YOUR COMMUNITY IS OUR COMMUNITY

From a partnership with a Northern Ontario college to the 12,000 kilometres travelled by our Electricity Discovery Centre, our 2014 investments are investments in Ontario's future.

Jim Burpee, President and CEO of the Canadian Electricity Association, presents Carmine Marcello, President and CEO of Hydro One, with the Sustainable Electricity Company designation.

### SUSTAINABLE ELECTRICITY COMPANY DESIGNATION

In December, the Canadian Electricity Association (CEA) awarded Hydro One with the Sustainable Electricity Company™ designation for our commitment to corporate responsibility and sustainable business practices. The designation recognizes the outstanding work Hydro One employees do in delivering electricity in a sustainable and socially responsible manner and in meeting the high expectations of our customers and the people of Ontario.

## WOMEN IN ENGINEERING SCHOLARSHIP

Hydro One has a long history of helping female students who are pursuing non-traditional careers. In October, we launched the Women in Engineering Scholarship for up to 15 women studying engineering at the undergraduate level in accredited Ontario universities. Winners receive a financial reward, plus a paid work placement with Hydro One.

## ELECTRICITY DISCOVERY CENTRE

September marked the first anniversary of our Electricity Discovery Centre, a mobile educational trailer that travels across the province to inform and educate the people of Ontario about energy consumption, electrical safety and the role Hydro One plays in their communities. Between September 2013 and September 2014, the Electricity Discovery Centre travelled more than 12,000 kilometres, attended 28 fairs and welcomed more than 27,500 visitors from across Ontario.

## CONFEDERATION COLLEGE PARTNERSHIP

In January, Hydro One announced funding for a pre-apprenticeship program with Confederation College. The $750,000 investment will support recruiting and training residents of Northern Ontario, with particular emphasis on peoples from Treaty 9 First Nations communities, in readiness for electrical technology and technician apprenticeships. The program will help build local trades capacity across Northern Ontario and is well aligned with the existing Hydro One College Consortium that focuses on curriculum development for electrical trades.

## LEONARD S. (TONY) MANDAMIN SCHOLARSHIP AWARD

In June, Hydro One recognized eight outstanding Aboriginal students as the 2014 recipients of the Leonard S. (Tony) Mandamin Scholarship Award. The scholarship was renamed in 2014 to recognize the achievements of the Honourable Justice Leonard S. (Tony) Mandamin, who was one of Ontario's first electrical engineering graduates of First Nations ancestry. The recipients of this award are offered a work term with Hydro One and receive financial support to aid in their academic studies.

## THE WILLIAM PEYTON HUBBARD MEMORIAL AWARD

In May, Hydro One awarded two outstanding black students with the William Peyton Hubbard Memorial Award for their studies in disciplines related to our industry. The award honours William Peyton Hubbard, Toronto's first black councillor and advocate of publicly owned electricity, who with Sir Adam Beck, brought electrical power to the people of Ontario.

## HYDRO ONE EMPLOYEES' AND PENSIONERS' CHARITY CAMPAIGN

The Company's charity campaign raised more than $1.3 million in 2014 for hundreds of charities across Ontario, surpassing 2013's contribution of $1.24 million. To date, more than 1,780 charities have benefited from the campaign.

### Board Committees

1 *Audit, Finance and Pension Investment Committee* In May 2014, the Audit and Finance (AF) Committee amalgamated with the Investment-Pension (IP) Committee to form the Audit, Finance and Pension Investment Committee (AFPIC). The Committee oversees the integrity of accounting policies and financial reporting, internal controls, internal audit, financial risk exposures, financial compliance and ethics policies. In addition, the Committee assists the Board in fulfilling its oversight responsibilities in all matters related to the Hydro One Pension Plan including the Hydro One Pension Fund. The AF Committee met four times in 2014, the IP Committee met one time in 2014, and the AFPIC met five times in 2014.

2 *Corporate Governance and Human Resources Committee* In May 2014, the Corporate Governance (CG) Committee amalgamated with the Human Resources (HR) Committee to form the Corporate Governance and Human Resources Committee (CGHR). The Committee is responsible for the Board's governance of the Company. It recommends issues to be discussed at meetings of the Board of Directors, reviews the mandate of the Board and each committee of the Board, conducts Board Assessments, monitors the quality of management's relationship with the Board and recommends suitable nominees for election to the Board of Directors. In addition, the Committee is responsible for reviewing the appropriateness of the Company's current and future organizational structure, succession plans for senior corporate executive officers and divisional officers, the code of business conduct, and the performance and remuneration of senior executives, including recommending to the Board the remuneration of the President and CEO. The CG Committee met one time in 2014, the HR Committee met five times in 2014, and the CGHR Committee met nine times in 2014.

3 *Business Transformation Committee* The Business Transformation Committee is responsible for assisting the Board in its oversight responsibilities in all matters related to the Company's Cornerstone Project, the Advanced Distribution System (Smart Grid) and Continuous Innovation Strategy, and the planning, development and implementation of major transmission system or distribution projects, including projects described in the Corporation's Green Energy Implementation Plan. The Committee met fourteen times in 2014.

4 *Regulatory and Public Policy Committee* The Regulatory and Public Policy Committee monitors the Company's compliance with applicable regulatory requirements and legislation, and is responsible for identifying, assessing and providing advice to the Board of Directors on public affairs issues that have a significant impact on the Company. The Committee oversees compliance programs, policies, standards and procedures and reviews the Company's proposals for rate applications, compliance actions and reports. The Committee met four times in 2014.

5 *Health, Safety and Environment Committee* The Health, Safety and Environment Committee is responsible for reviewing occupational health, safety and environment policies, standards, and programs, compliance with occupational health, safety and environmental legislation, policies and standards, and public health and safety issues. The Committee met three times in 2014.

6 *Strategy Committee* The Strategy Committee was established in May 2014 to assist the Board with matters relating to the Premier's Advisory Council on Government Assets. The Committee met four times in 2014.

### Hydro One Inc.
Is a holding company with subsidiaries that operate in the business areas of electricity transmission and distribution, and telecom services.

### Hydro One Networks Inc.
Represents the majority of our business, which is regulated by the Ontario Energy Board. It is involved in the planning, construction, operation and maintenance of our transmission and distribution networks.

### Hydro One Brampton Networks Inc.
Distributes electricity to one of the fastest-growing urban centres in Canada, just 30 kilometres outside of Toronto.

### Hydro One Remote Communities Inc.
Operates and maintains the generation and distribution assets used to supply electricity to 21 remote communities across Northern Ontario that are not connected to the province's electricity transmission grid.

### Hydro One Telecom Inc.
Markets our fibre-optic capacity to business customers. This business represents less than one per cent of our total assets.

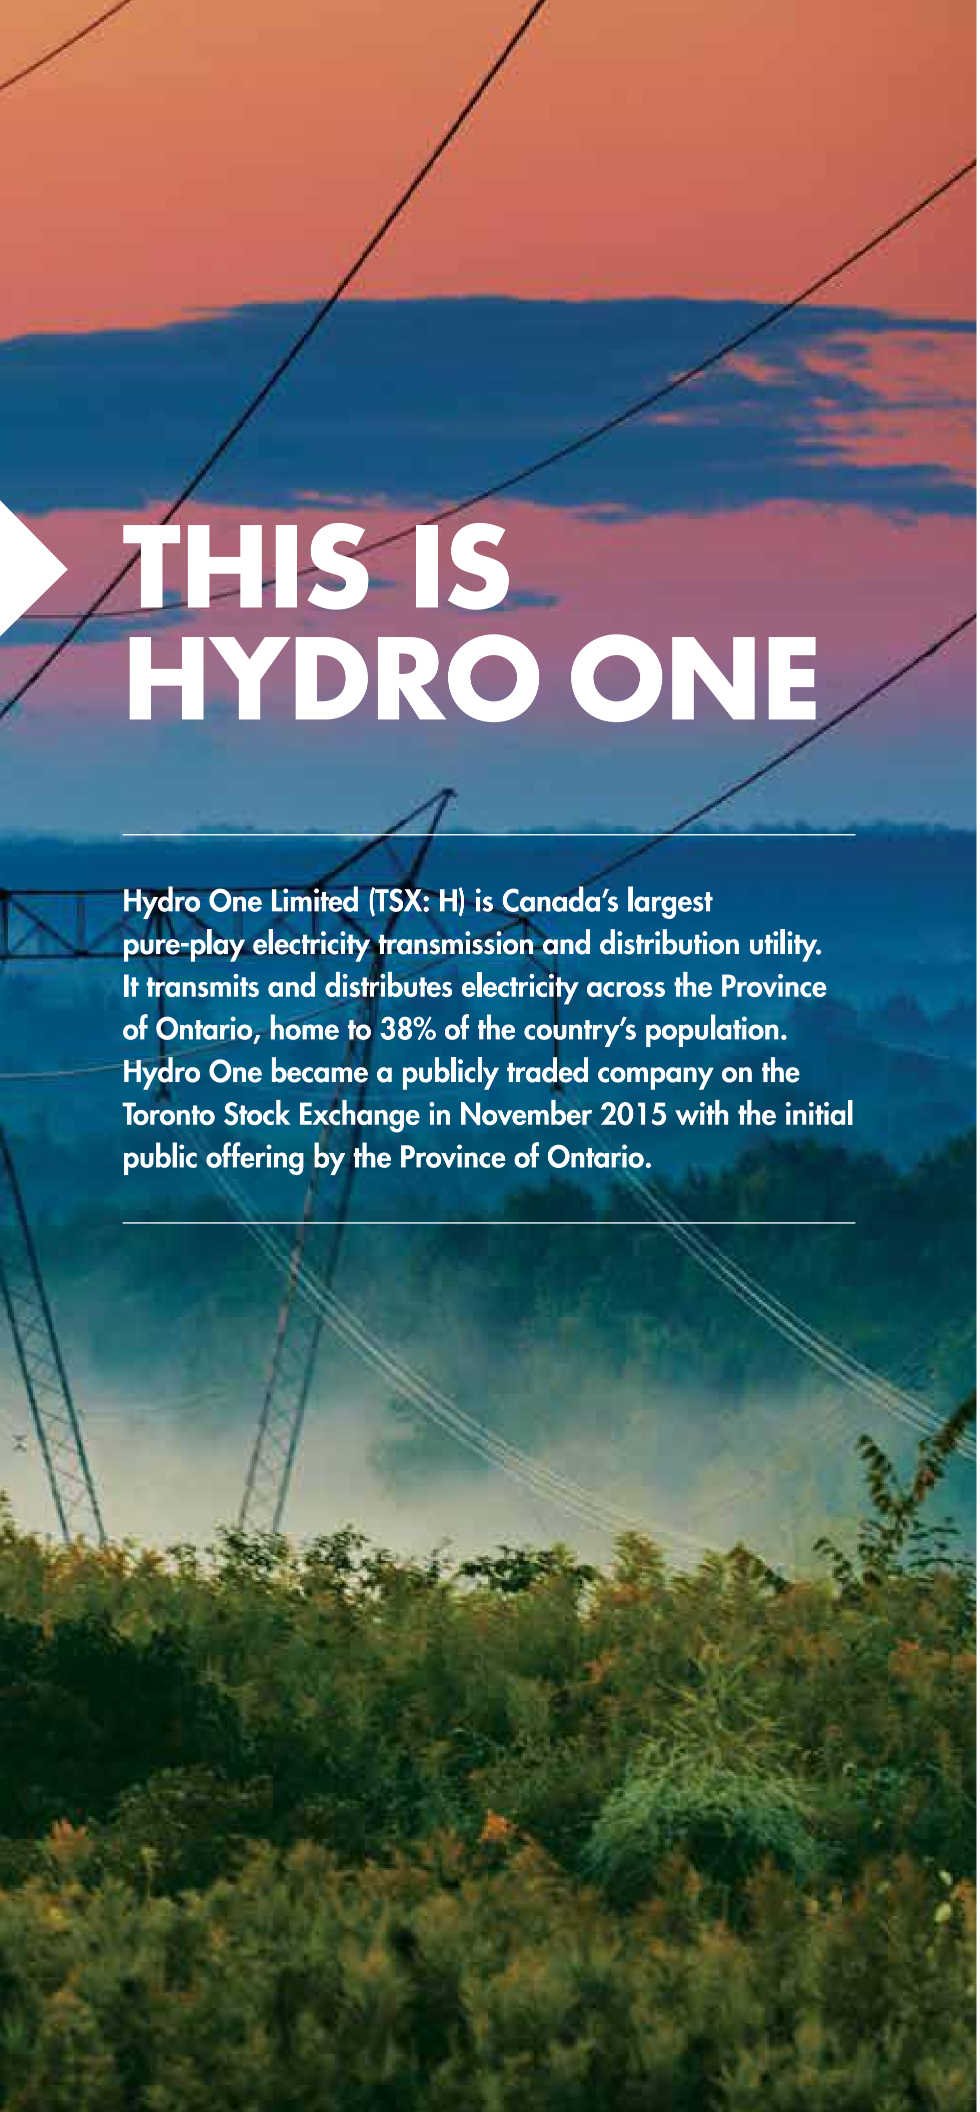
# POWERING UP

ANNUAL REPORT 2015

ONE OF NORTH AMERICA'S LARGEST
ELECTRICAL UTILITIES (TSX: H)

hydro One



# THIS IS HYDRO ONE

**Hydro One Limited (TSX: H) is Canada's largest pure-play electricity transmission and distribution utility. It transmits and distributes electricity across the Province of Ontario, home to 38% of the country's population. Hydro One became a publicly traded company on the Toronto Stock Exchange in November 2015 with the initial public offering by the Province of Ontario.**

**Hydro One Limited** has three reportable segments: the electrical transmission business, the electrical distribution business and a third business segment consisting of the company's telecommunications business and certain corporate activities.

Together, the company's regulated transmission and distribution operations comprise approximately 88% of Hydro One's assets and provide 98% of its net revenues.

Hydro One Telecom leverages the company's telecommunications and tower assets to sell broadband fibre-optic capacity to other carriers, large corporations, government agencies, and healthcare and educational institutions.

A new governance agreement between Hydro One and the Province of Ontario was announced on April 16, 2015. On July 17, 2015 a new independent Board of Directors was appointed to govern Hydro One through its transition into a publicly traded company.

In November 2015, Hydro One Limited completed the initial public offering of 15% of its common shares, with the proceeds of the offering going to the Province of Ontario in the first phase of its previously announced sale of the majority of the company to the public. The common shares are listed and trade on the Toronto Stock Exchange under the symbol "H".

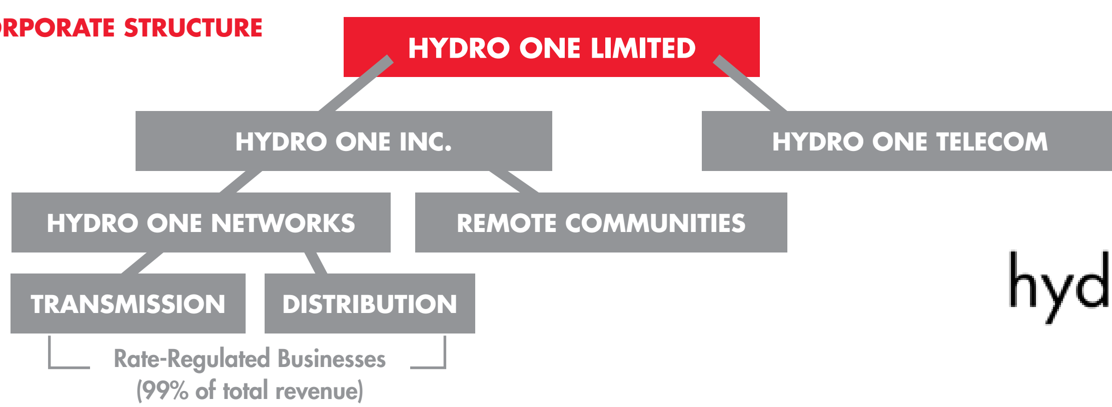
## CORPORATE STRUCTURE



**“Hydro One has a fully independent, diverse and deeply experienced Board of Directors to govern the Company’s business, allowing it to execute as an independently controlled and professionally managed commercial entity well positioned to generate growth and value for our shareholders...”**

# DAVID F. DENISON

*Chair of the Board*

Dear fellow shareholders,

This was a seminal year of change and movement forward for Hydro One.

The transformative journey began last spring when the Province of Ontario, previously the sole shareholder of Hydro One, made a series of announcements relating to the company, including that it would broaden the ownership through an initial public offering. While the province remains the company’s largest shareholder with 84% of the outstanding shares today, it has stated that it intends to make additional tranches of shares available to the public in stages, until it achieves its stated goal of reducing its ownership of Hydro One to 40%.

An integral part of the company’s future is a renewed focus on customer service excellence and improved performance. During the past summer, the new Board announced the appointment of Mayo Schmidt as the company’s new President and Chief Executive Officer and Michael Vels as its Chief Financial Officer. Both executives have strong track records and demonstrated experience in leading the transformation of large, publicly traded companies into high performance, innovative and customer-focused organizations that enhance customer service, accelerate growth and create significant shareholder value. Together with the technical expertise of the existing Hydro One team, I believe they can help to lead the company forward.

In addition to rolling up their sleeves in their critical new roles, the Hydro One management team led one of the largest and most successful initial public offerings in Canada in more than 15 years. The shares of Hydro One began trading on the Toronto Stock Exchange on November 5th.

To facilitate the change in ownership structure associated with the initial public offering, the province announced a new governance agreement between Hydro One and the province. This agreement ensures that the company is governed as an independent commercial entity going forward, providing confidence that the province is strictly playing the role of shareholder and not manager. Over the ensuing months, the new Board was assembled, drawing upon a diverse and accomplished group of proven leaders to govern Hydro One’s transformation with a renewed focus on customer service excellence and improved performance and reliability. My fellow Board members were selected for their independence, commercial experience and strong governance expertise concerning public companies, customer service, the electricity sector and public policy.

As management and the Board work together to put in place a broad strategy to take Hydro One forward, work has already commenced across the company to strengthen customer service and performance excellence while putting in place initiatives to accelerate growth.

I would like to recognize the important foundational work of the previous Chair, Sandra Pupatello, and her Board, and acknowledge the efforts of former President and Chief Executive Officer Carmine Marcello: his contribution and leadership was essential to Hydro One’s successful transition in 2015. Finally, I would like to thank the more than 5,500 Hydro One employees who work tirelessly – often around the clock and in hazardous weather and conditions – to ensure that electricity is delivered safely, reliably and cost-effectively to the millions of citizens of Ontario. It is their efforts and commitment that enable this great company to deliver for you – our shareholders, our customers and our communities – and we look forward to taking your company even further in 2016.

Thank you for your support,

**David F. Denison, OC**

*Chair of the Board*
Hydro One Limited

**"2015 was a year of tremendous positive change for Hydro One. The team is intently focused on transforming this significant North American electrical utility into a high-performance commercial organization with considerable muscle to accelerate growth and consistently deliver on its promises..."**

## MAYO SCHMIDT

*President and CEO*

Dear fellow shareholders,

It is clear that 2015 was a pivotal year for your company as Hydro One charted a new course towards becoming a publicly traded, increasingly customer-focused and performance-driven company that offers dependable dividends and robust, predictable growth prospects.

It was a year of tremendous positive change that opened the door to a very bright future.

The size, strength and efficiency of our electrical grid is critical to reliably delivering the electricity that sustains and secures the economic and social well-being of every community in Ontario. This past year, the company made important investments to modernize and bolster the grid, investing approximately $1.7 billion in capital projects across both our transmission and distribution networks. Over the next few years, we will invest in significant infrastructure that is needed to maintain and modernize the critical electrical systems that we all depend on. We are stewards of this system, a mission we take very seriously.

Hydro One is embarking on a journey to take a leadership position in the North American utility landscape. Through building on our strong foundation, we have the opportunity to become a leader in this dynamic and evolving environment. To enable this, we have undertaken a strategic planning process to define our future.

We know that we need to understand the needs of our customers and stakeholders, including First Nations and Métis communities. Serving these needs effectively and efficiently will drive our business decisions. Our strategy will ensure we are ready to adapt to the emerging technology landscape and position our business for success. We will build world-class competencies and position ourselves to grow in the long term.

Hydro One is fortunate to operate in a stable and supportive regulatory environment with a transparent and predictable rate-setting process. The company plays an essential leadership role in the Ontario electricity industry.

We are focused on making life better for our customers. We improve their lives by treating them with respect, by making certain our system is reliable and ready for the future, by managing our costs and thus the cost of our service, and by having highly trained men and women across Ontario who are ready to respond 24/7 when storms and extreme weather disrupt service.

I believe we are uniquely positioned to make the most of the significant opportunities that lie ahead – and transform our business into a great Canadian company that stands out for its commitment to its customers and its performance for its shareholders.

On behalf of our 5,500 employees, thank you for your investment and interest in our progress. I would like to thank the Board of Directors for its support and its confidence in management. I would also like to thank employees across Ontario for embracing Hydro One's transformation and for their unwavering commitment to our customers. The future is bright.

**Mayo Schmidt**
*President and CEO*
Hydro One Limited

# ELECTRICAL TRANSMISSION OPERATIONS

**Hydro One's electrical transmission system totals approximately 29,000 circuit kilometres of high-voltage lines, towers and transformers, operating at 500 kV, 230 kV or 115 kV. Hydro One's grid transmits electricity from hydroelectric, nuclear, gas, wind and solar power generation sources to customers across Ontario, including 47 local distribution companies (LDCs), Hydro One's own local distribution systems and 90 large industrial customers directly connected to the transmission system.**

The transmission operations service approximately 96% of the Province of Ontario by capacity and represent approximately 50% of the total assets and provide 50% of the net revenues of the company.

The transmission system is linked to five jurisdictions adjacent to Ontario (Manitoba, Minnesota, Michigan, New York and Quebec) through high-voltage interconnections. The transmission operations are regulated by the Ontario Energy Board (OEB) and the National Energy Board (NEB), together with an operating agreement with the Independent Electricity System Operator (IESO) and the North American Electric Reliability Corporation (NERC). Hydro One is also a partner in the Bruce to Milton Limited Partnership, which is a unique partnership between the company and the Saugeen Ojibway Nation Finance Corporation, operating a 176-kilometre long dual circuit transmission line between the Bruce Nuclear Generating Station and Hydro One's Milton Switching Station.

**Our transmission assets can be divided into four functional categories:**

1. **Transmission stations:** These facilities are used for the delivery of power, voltage transformation and switching, and serve as connection points for both customers and generators.

2. **Transmission lines:** Bulk transmission lines are main lines delivering power from generating stations or connections to receiving terminal stations. Area supply lines take power from the network and transmit it to customer supply transmission stations at customer load centres.

3. **Network operations:** All transmission assets and many sub-transmission assets are managed from one central location, the Ontario Grid Control Centre.

4. **Telecommunications facilities:** These facilities ensure the company's telecommunications requirements are met, with respect to the protection and operation of the power system as well as voice and administrative data. Our subsidiary Hydro One Telecom sells excess capacity on our fibre-optic network.

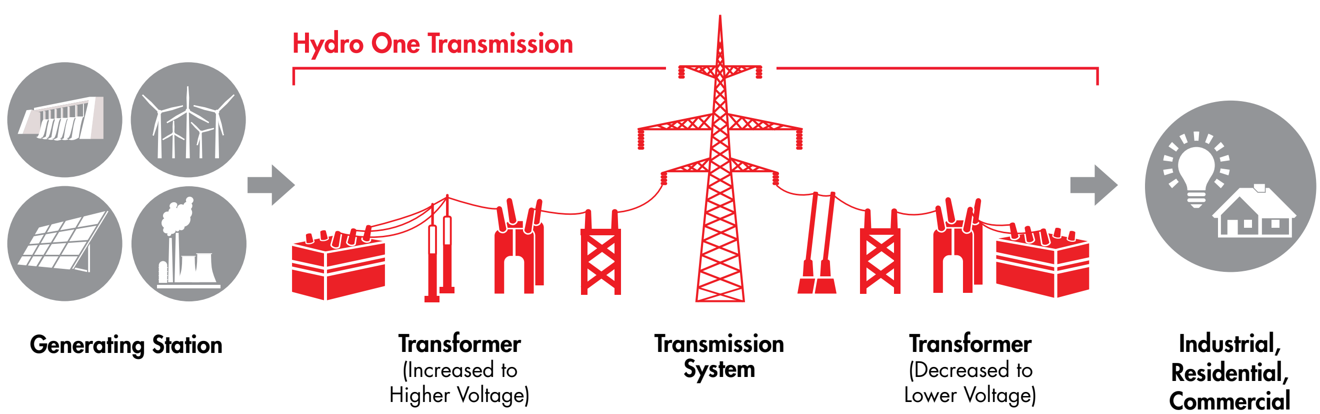
| Allowed ROE (2016) | 9.19% |

[1] *Current transmission rate base as at December 31, 2015 includes 100% of B2MLP rate base.*

## ONTARIO'S ELECTRICITY SYSTEM



# ELECTRICAL DISTRIBUTION OPERATIONS

**Hydro One's electrical distribution system totals approximately 123,000 circuit kilometres of lower-voltage power lines, poles and transformers, serving more than 1.3 million customers across Ontario.**

As Hydro One operates in both rural and urban centres across Ontario, customers benefit from our integrated planning and the coordinated operations of our distribution and transmission systems and workforce.

In June 2015, Hydro One announced the closing of its acquisition of Haldimand County Utilities, adding 21,200 customers to its local distribution network. In October, the closing of the acquisition of Woodstock Hydro Holdings Inc., including its wholly-owned subsidiary Woodstock Hydro Services Inc., added 15,800 customers, to be integrated with Hydro One's network in 2016.

**Hydro One Remote Communities Inc.** operates and maintains the generation and distribution assets used to supply electricity to 21 remote communities across northern Ontario that are not connected to the electricity transmission grid.

## HYDRO ONE HAS A LARGELY RURAL AND SUBURBAN FOOTPRINT

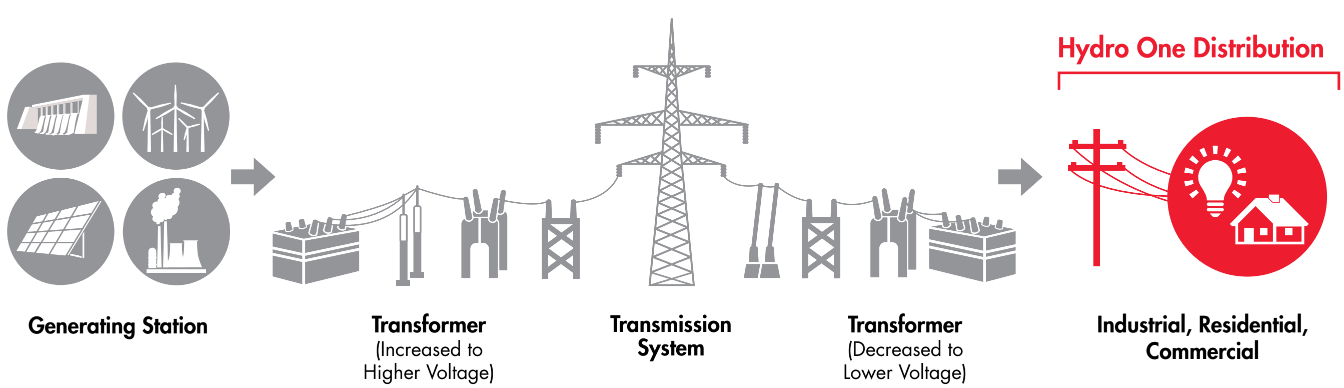
## ONTARIO'S ELECTRICITY SYSTEM



# SERVING CUSTOMERS

Throughout 2015, Hydro One continued to put customers at the core of its decision-making, planning and execution. Every day the organization is focused on exceeding customer expectations. Whether it's launching new customer-friendly tools or mobilizing hundreds of employees to restore power, Hydro One's future path to success lies with our ability to exceed expectations.

## CUSTOMER COMMITMENTS

In 2015, Hydro One was the first utility in Canada to launch Customer Commitments and service level guarantees. Developed with input from more than 40,000 customers and the company's Customer Service Advisory Panel, these five commitments provide assurance to customers about the service they can expect from Hydro One:

1. **We will provide you with a bill you can trust and understand.**
2. **We will provide you with a reliable supply of electricity.**
3. **We will make it easy to do business with us.**
4. **We will courteously and promptly work to resolve any issues you may have.**
5. **We will help you manage your electricity use.**

## MOBILE OUTAGE APP

Customer service includes keeping customers connected to the information that is most important to them. The company's mobile outage app – available free to customers on their smartphones – was downloaded more than 60,000 times during 2015, totaling more than 286,000 since its launch in May 2012.

## OUTAGE ALERTS

Drawing on the success of the mobile app, Hydro One was the first utility in Canada to launch personalized text and email alerts to customers, proactively informing them of outages that might affect their homes, cottages, farms or small businesses. Customers who register for this service receive alerts and updates on estimated times of restoration when an outage has been reported near their residences. Customers decide when and how they receive messages. To date, more than 7,000 customers have signed up for the service.

## OFFICE OF THE OMBUDSMAN

To further support customer service, in October the company's Board of Directors appointed Fiona Crean to the role of Ombudsman for Hydro One. Having most recently served as the City of Toronto's ombudsman, Ms. Crean has worked in the area of complaints investigation and dispute resolution for more than 25 years.

## STORM RESPONSE

Wind, snow and rain are a reality of life in Ontario. Across the province, the men and women of Hydro One are available 24 hours a day, seven days a week, to restore power for customers if the lights go out.

From the state-of-the-art Ontario Grid Control Centre, highly trained employees monitor all potential events, including weather, solar storms and geomagnetic disturbances that could affect Hydro One's system. The centre provides Hydro One with the industry-leading ability to remotely monitor and operate transmission equipment, respond to alarms and restore or reroute interrupted power.

When an alert is issued, the entire organization begins mobilizing staff and equipment to ensure power is restored as efficiently as possible. This means moving crews and equipment to where they are needed to make sure that power can be restored safely and quickly. With a workforce trained to the highest standards, crews can travel more than 500 kilometres to aid in restoration.

Working through holidays, in the harshest of conditions and in remote areas of the province, Hydro One employees not only restore power, but restore life back to normal for customers.

# SAFETY, COMMUNITY AND THE ENVIRONMENT

## SAFETY

The safety of the public, the communities Hydro One serves and the people of Ontario is every employee's responsibility.

From proper job planning to a trained and highly-skilled workforce, Hydro One emphasizes the importance of a safe workplace across every line of business. The result of this focus was seen in 2015 as Hydro One achieved its ambitious health and safety target, recording only 1.68 incidents per 200,000 hours worked.

Hydro One was awarded the Electrical Safety Authority's Powerline Safety Award for its community outreach with the company's mobile Electricity Discovery Centre. More than 30,000 visitors from 26 communities learned about electrical safety, how to conserve energy and the role Hydro One plays in the community.

## COMMUNITY

Hydro One believes in the importance of connecting with the communities where we live and work through sponsorships, donations, scholarship programs and volunteering. These charitable giving programs broadly support safety and injury prevention, education and community support. They are an important link to the hundreds of communities that the company serves across the province.

### *Community Investment*

Furthering the company's commitment to First Nations and Métis communities, in February 2015 Hydro One announced a three-year funding extension for Right to Play's Promoting Life-skills in Aboriginal Youth program. Hydro One is investing $100,000 each year to support after-school programming, sport for developmental activities, youth leadership, and health and wellness education.

### *Scholarship Programs*

In 2015, 13 female engineering students received Hydro One's Women in Engineering Scholarship for their outstanding achievements in electrical engineering. Winners receive a financial award along with a paid opportunity to work for Hydro One in a developmental student work placement. In celebration of National Aboriginal Day, in June Hydro One awarded 12 students with the Leonard S. (Tony) Mandamin Scholarship, which is granted annually to First Nations, Métis or Inuit post-secondary students.

## CORPORATE SOCIAL RESPONSIBILITY

In January, Hydro One was designated as a Sustainable Electricity Company by the Canadian Electricity Association (CEA). This designation established by the CEA for utilities across Canada recognizes success building on the three foundational pillars of sustainability – environmental, social, and economic performance. It requires utilities to establish an Environmental Management System consistent with the ISO 14001 standard; to take the actions and meet the expectations laid out in the ISO 26000 Guidance on Social Responsibility. Hydro One is only the fourth electric utility in Canada to receive this designation.

# CORPORATE GOVERNANCE OVERVIEW

Hydro One and the Board recognize the importance of corporate governance to the effective management of the company. Independence, integrity and accountability are the foundation of the company's approach to corporate governance. It is in the long-term best interests of our shareholders as well as our customers and promotes and strengthens relationships with employees, the communities in which the company operates and other stakeholders of the company.

Hydro One's Board of Directors was appointed on July 17, 2015, drawing upon a diverse and accomplished group of proven business leaders with deep corporate governance experience. The Board's primary role is overseeing corporate performance and the quality, depth and continuity of management required to meet the company's strategic objectives.

Hydro One is committed to best practices that will allow us to honour important fiduciary and oversight responsibilities. The Board regularly reviews and revises the company's governance practices in response to changing governance expectations and regulations. Our practices meet the rules and regulations issued by Canadian Securities Administrators and the Toronto Stock Exchange, including national corporate governance guidelines and related disclosure requirements.

The **Audit Committee** reviews the integrity of the company's financial statements and financial reporting process, internal control over financial reporting, enterprise risk management, disclosure controls and procedures, and compliance with other related legal and regulatory requirements. The committee also assists the Board in fulfilling its oversight responsibilities with respect to financial reporting, including overseeing the independence, qualifications and appointment of external auditors as well as the performance of the company's finance function, auditors (both external and internal) and the auditing, accounting and financial reporting process.

The **Nominating, Corporate Governance, Public Policy and Regulatory Committee** manages and oversees the process of nominating new directors to the Board in accordance with the governance agreement between the company and the Province of Ontario. The committee makes recommendations respecting the Board's approach to corporate governance, overseeing director orientation, education, performance evaluation, compensation and protection. The committee also oversees the company's relationship with shareholders, communities, stakeholders, electricity regulators, customers, the Province of Ontario and the company's approach to corporate social responsibility, including its sponsorship and donation programs.

The **Human Resources Committee** assists the Board in discharging the Board's oversight responsibilities relating to compensation, attraction and retention of key senior management, employee benefits, labour relations and succession planning.

The **Health, Safety, Environment and First Nations and Métis Committee** is responsible for oversight relating to effective occupational health and safety and environmental policies and practices at the company as well as the company's relationships with First Nations and Métis communities.

# WHY INVEST IN HYDRO ONE?

Opportunities to transition to a customer focused performance culture under Ontario's emerging incentive-based regulation

One of the largest electrical utilities in North America, with significant scale and a leadership position in Canada's most populated province

One of the strongest investment grade balance sheets in the utility sector

Unique combination of electrical transmission and local distribution, with no power generation assets or material exposure to commodity prices

Attractive dividend yield with 70 – 80% target payout ratio and opportunity for growth with rate base expansion

The business operates in a stable, transparent and collaborative rate-regulated environment

2015 IPO was the first phase of the largest-ever privatization by the Province of Ontario providing opportunities for public participation in asset transformation

Predictable growth profile, with consistent rate base growth expected under multi-year approved capital investment program to upgrade aging infrastructure

Strong governance structure and a fully independent Board allow the company to operate autonomously, transform its culture and drive shareholder value creation on multiple fronts

Proven management with demonstrated experience transforming organizations, accelerating performance and creating significant shareholder value

**A unique opportunity to participate in the transformation of a premium, large-scale utility**

hydro One

# Management's Discussion and Analysis

*For the years ended December 31, 2015 and 2014*

The following Management's Discussion and Analysis (MD&A) of the financial condition and results of operations should be read together with the consolidated financial statements and accompanying notes (the Consolidated Financial Statements) of Hydro One Limited (Hydro One or the Company) for the year ended December 31, 2015. The Consolidated Financial Statements are presented in Canadian dollars and have been prepared in accordance with United States (US) Generally Accepted Accounting Principles (GAAP). All financial information in this MD&A is presented in Canadian dollars, unless otherwise indicated.

The Company has prepared this MD&A in accordance with National Instrument 51-102 – Continuous Disclosure Obligations of the Canadian Securities Administrators. This MD&A provides information for the year ended December 31, 2015, based on information available to management as of February 11, 2016.

## Initial Public Offering

In November 2015, Hydro One and the Province of Ontario (Province) completed an initial public offering (IPO) on the Toronto Stock Exchange of 15% of the Company's 595 million outstanding common shares. Prior to the completion of the IPO, Hydro One and its subsidiary, Hydro One Inc., completed a series of transactions (Pre-Closing Transactions) that resulted in, among other things, the acquisition by Hydro One of all of the issued and outstanding shares of Hydro One Inc. from the Province and the issuance of new common shares and preferred shares of Hydro One to the Province. Both Hydro One and Hydro One Inc. are reporting issuers. See section "Other Developments – Change in Hydro One Ownership Structure" for details relating to the IPO.

Current year information consists of the results of Hydro One Inc. up to October 31, 2015, and the consolidated results of Hydro One and Hydro One Inc. from November 1, 2015 to December 31, 2015. The comparative information consists of the results of Hydro One Inc. as at and for the year ended December 31, 2014.

## Consolidated Financial Highlights And Statistics

| *Year ended December 31*<br>*(millions of Canadian dollars, except as otherwise noted)* | 2015 | 2014 | Change |
|---|---|---|---|
| Revenues | 6,538 | 6,548 | (0.2%) |
| Purchased power | 3,450 | 3,419 | 0.9% |
| Revenues, net of purchased power | 3,088 | 3,129 | (1.3%) |
| Operation, maintenance and administration costs | 1,135 | 1,192 | (4.8%) |
| Depreciation and amortization | 759 | 722 | 5.1% |
| Financing charges | 376 | 379 | (0.8%) |
| Income tax expense | 105 | 89 | 18.0% |
| Net income attributable to common shareholders of Hydro One | 690 | 731 | (5.6%) |
| Basic and diluted earnings per common share (EPS) | $1.39 | $1.53 | (9.2%) |
| Pro forma adjusted non-GAAP basic and diluted EPS[1] | $1.16 | $1.23 | (5.6%) |
| Net cash from (used in) operating activities | (1,253) | 1,256 | (199.8%) |
| Adjusted net cash from operating activities[1] | 1,557 | 1,256 | 24.0% |
| Funds from (used in) operations (FFO)[1] | (1,479) | 1,293 | (214.4%) |
| Adjusted FFO[1] | 1,331 | 1,293 | 2.9% |
| Capital investments | 1,663 | 1,530 | 8.7% |
| Transmission: Average monthly Ontario 60-minute peak demand *(MW)* | 20,344 | 20,596 | (1.2%) |
| Distribution: Units distributed to Hydro One customers *(TWh)* | 28.9 | 29.8 | (3.0%) |
| Debt to capitalization ratio[2] | 50.7% | 52.8% | |

[1] See section "Non-GAAP Measures" for description and reconciliation of pro forma adjusted non-GAAP basic and diluted EPS, adjusted net cash from operating activities, FFO and adjusted FFO.

[2] Debt to capitalization ratio has been calculated as total debt (includes total long-term debt and short-term borrowings, net of cash) divided by total debt plus total shareholder's equity, including preferred shares but excluding any amounts related to non-controlling interest.

# Overview

Hydro One is the largest electricity transmission and distribution company in Ontario. Through its subsidiary, Hydro One Inc., Hydro One owns and operates substantially all of Ontario's electricity transmission network, and is the largest electricity distributor in Ontario. Hydro One has three business segments: (i) Transmission Business; (ii) Distribution Business; and (iii) Other Business (telecommunications).

## Transmission Business

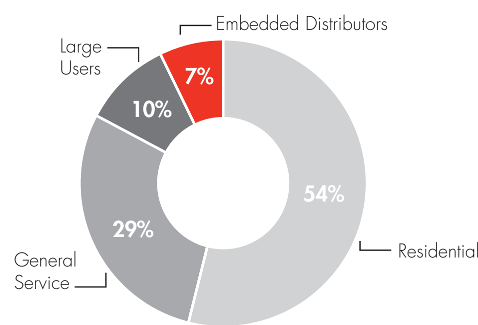
Hydro One's transmission business owns, operates and maintains Hydro One's transmission system, which accounts for approximately 96% of Ontario's transmission capacity. The Transmission Business consists of the transmission system operated by Hydro One Inc.'s subsidiary, Hydro One Networks Inc. (Hydro One Networks), and a 66% interest in B2M Limited Partnership (B2M LP), a limited partnership between Hydro One and the Saugeen Ojibway Nation in respect of the Bruce-to-Milton transmission line. The Company's Transmission Business is a rate-regulated business that earns revenues mainly from charging transmission rates that are approved by the Ontario Energy Board (OEB). The Transmission Business represented approximately 50% of the Company's total assets as at December 31, 2015, and approximately 50% of its total revenues, net of purchased power, in 2015.

| | 2015 | 2014 |
|---|---|---|
| Electricity transmitted *(TWh)* | **137.0** | 139.8 |
| Transmission lines spanning the province *(circuit-kilometres)* | **29,355** | 29,344 |
| Rate base *(millions of Canadian dollars)* | **10,175** | 9,934 |
| Capital investments *(millions of Canadian dollars)* | **943** | 845 |

Note: TWh means terawatt-hours.

## Distribution Business

Hydro One's Distribution Business is the largest in Ontario and consists of the distribution system operated by Hydro One Inc.'s subsidiaries Hydro One Networks and Hydro One Remote Communities Inc. The Company's Distribution Business is a rate-regulated business that earns revenues mainly by charging distribution rates that must be approved by the OEB. The Distribution Business represented approximately 38% of the Company's total assets as at December 31, 2015, and approximately 48% of its total revenues, net of purchased power, in 2015.



| | 2015 | 2014 |
|---|---|---|
| Electricity distributed to Hydro One customers *(TWh)* | **28.9** | 29.8 |
| Electricity distributed through Hydro One lines *(TWh)*[1] | **40.7** | 42.4 |
| Distribution lines spanning the province *(circuit-kilometres)* | **123,425** | 123,657 |
| Distribution customers *(number of customers)* | **1,347,231** | 1,439,321 |
| Rate base *(millions of Canadian dollars)* | **6,739** | 6,415 |
| Capital investments *(millions of Canadian dollars)* | **711** | 680 |

1 Units distributed through Hydro One lines represent total distribution system requirements and include electricity distributed to consumers who purchased power directly from the Independent Electricity System Operator (IESO).

## Other Business

Hydro One's Other Business segment consists of the Company's telecommunications business and certain corporate activities. The telecommunications business provides telecommunications support for the Company's Transmission and Distribution Businesses, and also offers communications and IT solutions to organizations with broadband network requirements utilizing Hydro One Telecom Inc.'s (Hydro One Telecom) fibre optic network to provide diverse, secure and highly reliable connectivity. Hydro One's other business segment is not rate-regulated. This segment represented approximately 12% of Hydro One's total assets as at December 31, 2015, and approximately 2% of its total revenues, net of purchased power, in 2015.

## Primary Factors Affecting Results Of Operations

### Transmission Revenues

Transmission revenues primarily consist of the Company's transmission rates approved by the OEB which are charged based on the monthly peak electricity demand across Hydro One's high-voltage network. Transmission rates are designed to generate revenues necessary to construct, upgrade, extend and support a transmission system with sufficient capacity to accommodate maximum forecasted demand and a regulated return on the Company's investment. Peak electricity demand is primarily influenced by weather and economic conditions. Transmission revenues also include export revenues associated with transmitting electricity to markets outside of Ontario. Ancillary revenues include revenues from providing maintenance services to generators and from third-party land use.

### Distribution Revenues

Distribution revenues include the distribution rates approved by the OEB and amounts to recover the cost of purchased power used by the customers of the distribution business. Distribution rates are designed to generate revenues necessary to construct and support local distribution system with sufficient capacity to accommodate existing and new customer demand and a regulated return on the Company's investment. Accordingly, distribution revenues are influenced by distribution rates, the cost of purchased power, and the amount of electricity the Company distributes. Distribution revenues also include ancillary distribution service revenues, such as fees related to the joint use of Hydro One's distribution poles by the telecommunications and cable television industries, as well as miscellaneous charges such as charges for late payments.

### Purchased Power Costs

Purchased power costs are incurred by the distribution business and represent the cost of purchased electricity delivered to customers within Hydro One's distribution service territory. These costs comprise the wholesale commodity cost of energy, in addition to wholesale market service and transmission charges levied by the Independent Electricity System Operator (IESO). Hydro One passes the cost of electricity that it delivers to its customers, and is therefore not exposed to wholesale electricity commodity price risk.

### Operation, Maintenance and Administration Costs

Operation, maintenance and administration (OM&A) costs are incurred to support the operation and maintenance of the transmission and distribution systems, and other costs such as property taxes related to transmission and distribution lines, stations and buildings. Transmission OM&A costs are incurred to sustain the Company's high-voltage transmission stations, lines and rights-of-way, and include preventive and corrective maintenance costs related to power equipment, overhead transmission lines, transmission station sites, and forestry control to maintain safe distance between line spans and trees. Distribution OM&A costs are required to maintain the Company's low-voltage distribution system, and include costs related to distribution line clearing and forestry control to reduce power outages caused by trees, line maintenance and repair, as well as land assessment and remediation. Hydro One manages its costs through ongoing efficiency and productivity initiatives, while continuing to complete planned work programs associated with the development and maintenance of its transmission and distribution networks.

### Depreciation and Amortization

Depreciation and amortization costs relate primarily to depreciation of the Company's property, plant and equipment, and amortization of certain intangible assets and regulatory assets. Depreciation expense also includes the costs incurred to remove property, plant and equipment where no asset retirement obligations have been recorded on the balance sheet.

### Financing Charges

Financing charges relate to the Company's financing activities, and include interest expense on the Company's long-term debt, gains and losses on interest rate swap agreements, net of interest earned on short-term and long-term investments. A portion of financing charges incurred by the Company is capitalized to the cost of property, plant and equipment associated with the periods during which such assets are under construction before being placed in-service.

### Income Taxes

Hydro One and its subsidiaries were exempt from regular Canadian federal and Ontario income tax (Federal Tax Regime) and instead paid an equivalent amount referred to as payments in lieu of corporate income taxes (PILs) to the Ontario Electricity Financial Corporation (OEFC) under the *Electricity Act* (PILs Regime) until October 2015. Since then, Hydro One and its subsidiaries have been subject to the Federal Tax Regime. See further details in section "Other Developments – PILs Deemed Disposition Rules."

# Results of Operations

## Net Income

Net income attributable to common shareholders for the year ended December 31, 2015 of $690 million is a decrease of $41 million or 5.6% from the prior year. Significant influences on net income included:

- milder weather in 2015 resulted in a decrease in transmission revenues, mainly due to lower average Ontario peak demand in 2015 compared to 2014, particularly in June, November, and December;
- the effective income tax rate of 12.8% in 2015 compared to an effective tax rate of 10.6% in 2014;
- OM&A costs were lower than the prior year due to:
  - lower costs related to remediating the Company's customer information system, lower customer support expenses and lower bad debt expenses; and
  - lower preventative maintenance related to vegetation management; partially offset by
  - in 2014, insurance proceeds related to 2013 floods at the Company's Richview and Manby transformer stations were recorded as a reduction in 2014 OM&A costs and did not recur in 2015; and
  - during 2015, the Company recorded expenditures related to the integration of acquired local distribution companies.

## Revenues

*Year ended December 31*

| *(millions of Canadian dollars, except as otherwise noted)* | 2015 | 2014 | Change |
|---|---|---|---|
| Transmission | 1,536 | 1,588 | (3.3%) |
| Distribution | 4,949 | 4,903 | 0.9% |
| Other | 53 | 57 | (7.0%) |
| | 6,538 | 6,548 | (0.2%) |
| Transmission: Average monthly Ontario 60-minute peak demand *(MW)* | 20,344 | 20,596 | (1.2%) |
| Distribution: Units distributed to Hydro One customers *(TWh)* | 28.9 | 29.8 | (3.0%) |

### Transmission Revenues

The decrease of $52 million or 3.3% in transmission revenues for the year ended December 31, 2015 was primarily due to lower average monthly Ontario 60-minute peak demand due to industrial customers shifting energy use away from system-wide peaks in the winter months of 2015 and generally milder weather in 2015, which more than offset increased transmission rates for 2015.

### Distribution Revenues

The increase of $46 million or 0.9% in distribution revenues for the year ended December 31, 2015 was primarily due to higher OEB-approved distribution rates and higher purchased power costs, partially offset by decreased revenues due to the spin-off of Hydro One Inc.'s subsidiary, Hydro One Brampton Networks Inc. (Hydro One Brampton).

## Operation, Maintenance and Administration Costs

*Year ended December 31*

| *(millions of Canadian dollars)* | 2015 | 2014 | Change |
|---|---|---|---|
| Transmission | 426 | 394 | 8.1% |
| Distribution | 633 | 742 | (14.7%) |
| Other | 76 | 56 | 35.7% |
| | 1,135 | 1,192 | 4.8% |

### Transmission OM&A Costs

The increase of $32 million or 8.1% in transmission OM&A costs for the year ended December 31, 2015 was primarily due to the following:

- expenses related to write-offs of project and inventory costs due to revisions of asset replacement strategies:
- higher expenditures during 2015 related to work required to adhere to the North American Electric Reliability Corporation (NERC) Critical Infrastructure Protection (Cyber Security) standards; and

- in 2014, insurance proceeds related to 2013 floods at the Company's Richview and Manby transformer stations were recorded as a reduction in 2014 OM&A costs and did not recur in 2015; partially offset by:
- decreased expenditures related to forestry control and line clearing on the Company's transmission rights-of-way.

## Distribution OM&A Costs

The decrease of $109 million or 14.7% in distribution OM&A costs for the year ended December 31, 2015 was primarily due to the following:

- a decrease in bad debt expense and lower expenditures related to remediation of the Company's customer information system;
- decreased vegetation management expenditures relating to the distribution line clearing and forestry control; and
- lower volume of work associated with locating and restoring power outages; partially offset by
- increased costs associated with responding to power outages as a result of multiple wind storms during the fourth quarter of 2015.

## Other OM&A Costs

The increase of $20 million or 35.7% in other OM&A costs for the year ended December 31, 2015 was primarily due to costs to integrate acquired local distribution companies and increased compensation costs.

## Depreciation and Amortization

The increase of $37 million or 5.1% in depreciation and amortization costs for the year ended December 31, 2015 compared to last year was mainly due to the growth in capital assets as the Company continues to place new assets in-service, consistent with its ongoing capital investment program.

## Income tax expense

Income tax expense for the year ended December 31, 2015 increased by $16 million compared to 2014, and the Company realized an effective tax rate of approximately 12.8% in 2015, compared to approximately 10.6% realized in 2014. The differences are primarily due to the following:

- lower capital cost allowance in excess of depreciation and amortization; and
- additional tax expense in connection with the spin-off of Hydro One Brampton; partially offset by
- an income tax recovery recorded on the revaluation to fair market value of the tax basis of the assets of Hydro One Inc. and its subsidiaries in excess of the Departure Tax triggered when Hydro One exited the PILs Regime.

## Hydro One Brampton

On August 31, 2015, a dividend was paid to the Province by transferring to a company wholly-owned by the Province all of the issued and outstanding shares of Hydro One Brampton and inter-company indebtedness owed to Hydro One Inc. by Hydro One Brampton.

Hydro One's 2015 consolidated results of operations include the results of Hydro One Brampton up to August 31, 2015. The following tables present quarterly results of Hydro One Brampton that are included in consolidated results of Hydro One for the years ended December 31, 2015 and 2014.

| *Quarter ended* *(millions of Canadian dollars)* | Mar. 31, 2015 | Jun. 30, 2015 | Sept. 30, 2015 | Dec. 31, 2015 | 2015 Total |

| Basic and diluted EPS | $ 0.26 | $ 0.39 | $0.27 | $0.47 | $ 0.45 | $ 0.35 | $ 0.23 | $ 0.50 |

# Non-GAAP Measures

## FFO and Adjusted FFO

FFO is defined as net cash from operating activities, adjusted for the following: (i) changes in non-cash balances related to operations, (ii) dividends paid on preferred shares, and (iii) distributions to noncontrolling interest. Adjusted FFO is defined as FFO, adjusted for the impact of the deferred income tax asset that resulted as a consequence of leaving the PILs Regime and entering the Federal Tax Regime. Management believes that FFO and adjusted FFO are helpful as supplemental measures of the Company's operating cash flows as they exclude timing-related fluctuations in non-cash operating working capital and cash flows not attributable to common shareholders, and, in the case of adjusted FFO, the impact of the IPO-related deferred income tax asset. As such, these measures provide a consistent measure of the cash generating performance of the Company's assets.

The following table presents the reconciliation of net cash from operating activities to FFO and adjusted FFO:

| *Year ended December 31* *(millions of Canadian dollars)* | 2015 | 2014 |
|---|---|---|
| Net cash from (used in) operating activities | (1,253) | 1,256 |
| Changes in non-cash balances related to operations | (208) | 55 |
| Preferred dividends | (13) | (18) |
| Distributions to noncontrolling interest | (5) | – |
| FFO | (1,479) | 1,293 |
| Less: Deferred income tax asset[1] | (2,810) | – |
| Adjusted FFO | 1,331 | 1,293 |

[1] Impact of deferred income tax asset that resulted as a consequence of leaving the PILs Regime and entering the Federal Tax Regime

## Pro forma Adjusted non-GAAP Basic and Diluted EPS

The following pro forma adjusted non-GAAP basic and diluted EPS has been prepared by management on a supplementary basis which assumes that the total number of common shares outstanding was 595,000,000 in each of the years ended December 31, 2015 and 2014. The supplementary pro forma disclosure is used internally by management subsequent to the IPO to assess the Company's performance and is considered useful because it eliminates the impact of the issuance of common shares to the Province prior to the IPO. Prior to the IPO, the Province was the sole shareholder of Hydro One and disclosure of EPS did not provide meaningful information. EPS is considered an important measure and management believes that presenting it for all periods based on the number of outstanding shares on, and subsequent to, the IPO provides users with a basis to evaluate the operations of the Company with comparable companies and with prior periods.

| *Year ended December 31* | 2015 | 2014 |
|---|---|---|
| Net income attributable to common shareholders *(millions of Canadian dollars)* | 690 | 731 |
| Pro forma weighted average number of common shares | | |
| Basic | 595,000,000 | 595,000,000 |
| Effect of dilutive share grant plans | 94,691 | – |
| Diluted | 595,094,691 | 595,000,000 |
| Pro forma adjusted non-GAAP EPS | | |
| Basic | $1.16 | $1.23 |
| Diluted | $1.16 | $1.23 |

## Adjusted Net Cash from Operating Activities

Adjusted net cash from operating activities is defined as net cash from operating activities, adjusted for the impact of the deferred income tax asset that resulted as a consequence of leaving the PILs Regime and entering the Federal Tax Regime. Management believes that this measure is helpful as a supplemental measure of the Company's net cash from operating activities as it excludes the impact of the IPO-related deferred income tax asset. As such, adjusted net cash from operating activities provides a consistent measure of the Company's cash from operating activities compared to prior periods.

The following table presents the reconciliation of net cash from operating activities to adjusted net cash from operating activities:

| *Year ended December 31* *(millions of Canadian dollars)* | 2015 | 2014 |
|---|---|---|
| Net cash from (used in) operating activities | (1,253) | 1,256 |
| Less: Deferred income tax asset[1] | (2,810) | – |
| Adjusted net cash from operating activities | 1,557 | 1,256 |

[1] Impact of deferred income tax asset that resulted as a consequence of leaving the PILs Regime and entering the Federal Tax Regime

To the extent that adjusted net income is used in future continuous disclosure documents of Hydro One, it will be defined as net income, adjusted for certain items, including non-recurring items and other one-time items that management does not consider to be reflective of the operating performance of the Company. No such adjustments to net income are presented in this MD&A. Management believes that this measure will be helpful in assessing the Company's financial and operating performance in the future.

FFO, adjusted FFO, pro forma adjusted non-GAAP basic and diluted EPS, adjusted net cash from operating activities, and adjusted net income are not recognized measures under US GAAP and do not have a standardized meaning prescribed by US GAAP. They are therefore unlikely to be directly comparable to similar measures presented by other companies. They should not be considered in isolation nor as a substitute for analysis of the Company's financial information reported under US GAAP.

## Summary of Sources and Uses of Cash

Hydro One's primary sources of cash flows are funds generated from operations, capital market debt borrowings and bank financing that are used to satisfy Hydro One's capital resource requirements, including the Company's capital expenditures, servicing and repayment of debt, and dividends.

The following table presents the Company's sources and uses of cash during the years ended December 31, 2015 and 2014:

| *Year ended December 31* *(millions of Canadian dollars)* | 2015 | 2014 |
|---|---|---|
| Operating activities | | |
| Net income | 713 | 747 |
| Deferred income taxes | (2,844) | 10 |
| Changes in non-cash balances related to operations | 208 | (55) |
| Other | 670 | 554 |
| | (1,253) | 1,256 |
| Financing activities | | |
| Long-term debt issued | 350 | 628 |
| Long-term debt retired | (585) | (776) |
| Short-term notes issued | 1,491 | – |
| Common shares issued | 2,600 | – |
| Dividends paid | (888) | (287) |
| Amount contributed by (distributed to) noncontrolling interest | (5) | 72 |
| Other | (9) | (32) |
| | 2,954 | (395) |
| Investing activities | | |
| Capital expenditures | (1,632) | (1,504) |
| Capital contributions | 62 | – |
| Acquisitions of local distribution companies | (90) | (66) |
| Investment in Hydro One Brampton | (53) | – |
| Proceeds from investment | – | 250 |
| Other | 6 | (6) |
| | (1,707) | (1,326) |
| Net change in cash and cash equivalents | (6) | (465) |

## Cash from Operating Activities

Cash used in operations totalled $1,253 million for 2015 compared to cash from operations of $1,256 million in 2014. Cash from operations was affected by changes in deferred income tax assets that resulted as a consequence of leaving the PILs Regime and entering the Federal Tax Regime. Excluding this effect, cash from operations would have been $1,557 million for 2015, an increase of $301 million compared to prior year, mainly due to improved accounts receivable collections in 2015 and changes in regulatory accounts that impact revenue.

## Cash from Financing Activities

Cash from financing activities of $2,954 million for 2015 compared to cash used in financing activities of $395 million in 2014. The increase in 2015 was primarily due to cash proceeds from common shares issued, and the issuance of short-term notes and long-term debt, partly offset by payment of dividends and repayment of long-term debt. See section "Liquidity and Financing Strategy" for details of the Company's liquidity and financing strategy.

In 2015, Hydro One issued $350 million of long-term debt under its Medium-Term Note (MTN) Program, compared to $628 million of long-term debt issued in 2014. In 2015, Hydro One repaid $550 million in maturing long-term debt, compared to no long-term debt maturing or repaid in 2014. In addition, long-term debt totalling $35 million assumed as part of the Haldimand County Utilities Inc. (Haldimand Hydro) acquisition and the Woodstock Hydro Holdings Inc. (Woodstock Hydro) acquisition was repaid in 2015.

In 2015, Hydro One paid dividends in the amount of $888 million ($875 million of common share dividends and $13 million of preferred share dividends), compared to dividends totalling $287 million paid in 2014. Included in dividends paid in 2015 was a special dividend paid to the Province prior to the completion of the IPO.

In November 2015, Hydro One issued 2.6 billion common shares to the Province for cash proceeds of $2.6 billion prior to the completion of the IPO.

## Cash from Investing Activities

Cash used in investing activities was $1,707 million for 2015 compared to $1,326 million in 2014. The increase in 2015 was mainly due to higher capital investments in 2015 and the sale of an investment in 2014 for $250 million that did not recur in 2015. In 2015, cash totalling $90 million was used to purchase Haldimand Hydro and Woodstock Hydro, compared to cash of $66 million used to purchase Norfolk Power Inc. (Norfolk Power) in 2014. See section "Capital Investments" for details of the Company's capital investments, and section "Other Developments – Acquisitions" for details of the acquisitions of Haldimand Hydro and Woodstock Hydro.

# Liquidity and Financing Strategy

Short-term liquidity is provided through funds from operations, Hydro One Inc.'s Commercial Paper Program, and the Company's consolidated credit facilities. Under the commercial paper program, Hydro One Inc. is authorized to issue up to $1.5 billion in short-term notes with a term to maturity of less than 365 days. At December 31, 2015, Hydro One Inc. had $1,491 million in commercial paper borrowings outstanding, compared to no commercial paper borrowings outstanding at December 31, 2014. In addition, the Company and Hydro One Inc. have revolving credit facilities totalling $2,550 million that mature between 2018 and 2020. The Company may use the credit facilities for working capital and general corporate purposes. The short-term liquidity under the Commercial Paper Program, the credit facilities and anticipated levels of funds from operations are expected to be sufficient to fund the Company's normal operating requirements.

At December 31, 2015, all of the Company's long-term debt totalling $8,723 million was issued by Hydro One Inc. under Hydro One Inc.'s MTN Program. At December 31, 2015, the maximum authorized principal amount of medium-term notes issuable under the MTN Program was $3.5 billion, with the entire amount remaining available until January 2018. The long-term debt consists of notes and debentures that mature between 2016 and 2064, and at December 31, 2015, had an average term to maturity of approximately 16.6 years and a weighted average coupon of 4.7%.

At December 31, 2015, Hydro One's corporate credit ratings from approved rating organizations were as follows:

| Rating Agency | Corporate Credit Rating |
|---|---|
| Standard & Poor's Rating Services (S&P)[1] | A |

[1] On September 18, 2015, S&P assigned its A corporate credit rating on Hydro One. The outlook is stable.

At December 31, 2015, Hydro One Inc.'s long-term and short-term debt ratings from approved rating organizations were as follows:

| Rating Agency | Short-term Debt Rating | Long-term Debt Rating |
|---|---|---|
| DBRS Limited (DBRS)[1] | R-1 (low) | A (high) |
| Moody's Investors Service (Moody's)[2] | Prime-2 | A3 |
| S&P[3] | A-1 | A |

[1] On November 5, 2015, DBRS confirmed Hydro One Inc.'s issuer rating and senior unsecured debenture rating at A (high), downgraded its short-term debt rating to R-1(low) from R-1 (mid), and revised its trend to stable.

[2] On November 5, 2015, Moody's downgraded the senior unsecured ratings of Hydro One Inc. to A3 from A2, downgraded its short term debt rating to Prime-2 from Prime-1, and revised its outlook on the Company to stable from negative.

[3] On September 18, 2015, S&P affirmed its ratings on Hydro One Inc., including its A long-term corporate credit rating on the company.

At December 31, 2015, Hydro One and Hydro One Inc. were in compliance with all financial covenants and limitations associated with the outstanding borrowings and credit facilities.

### Effect of Interest Rates

The Company is exposed to fluctuations in interest rates as its regulated return on equity is derived using a formulaic approach that takes into account anticipated interest rates. See section "Risk Management and Risk Factors – Risks Relating to Hydro One's Business – Market, Financial Instrument and Credit Risk" for more details.

### Pension Plan

In 2015, Hydro One contributed approximately $177 million to its pension plan, compared to contributions of approximately $174 million in 2014, and incurred $163 million in net periodic pension benefit costs, compared to $158 million incurred in 2014. The Company estimates that total pension contributions for 2016 will be approximately $180 million.

The Company's pension benefits obligation is impacted by various assumptions and estimates, such as discount rate, rate of return on plan assets, rate of cost of living increase, and mortality assumptions. A full discussion of the significant assumptions and estimates can be found in the section "Critical Accounting Estimates – Employee Future Benefits."

## Capital Investments

The Company makes capital investments to maintain the safety, reliability and integrity of its transmission and distribution assets and to provide for the ongoing growth and modernization required to meet the expanding and evolving needs of its customers and the electricity market. This is achieved through a combination of sustaining capital investments, which are required to support the continued operation of Hydro One's existing assets, and development capital investments, which involve both additions to existing assets and large scale projects such as new transmission lines and transmission stations.

In 2015, the Company made capital investments totalling $1,663 million and placed $1,476 million of new assets in-service, including replacements of end-of-life wood poles, new load connections, and the completion of two transformer replacements at the Hanmer Transmission Station, compared to $1,530 million of capital investments and $1,574 million of new assets placed in-service in 2014.

The following table presents Hydro One's 2015 and 2014 capital investments:

| *Year ended December 31*<br>*(millions of Canadian dollars)* | 2015 | 2014 | Change |
|---|---|---|---|
| Transmission | | | |
| Sustaining | 706 | 625 | 13.0% |
| Development | 166 | 132 | 25.8% |
| Other | 71 | 88 | (19.3%) |
| Total Transmission Capital Investments | 943 | 845 | 11.6% |
| Distribution | | | |
| Sustaining | 398 | 356 | 11.8% |
| Development | 220 | 236 | (6.8%) |
| Other | 93 | 88 | 5.7% |
| Total Distribution Capital Investments | 711 | 680 | 4.6% |
| Other Capital Investments | 9 | 5 | 80.0% |
| Total Capital Investments | 1,663 | 1,530 | 8.7% |

## Transmission Capital Investments

The increase of $98 million or 11.6% in transmission capital investments in 2015 was primarily due to the following:

- several system re-investments, including various end-of-life equipment replacements at certain transmission stations, including the Bruce, Richview, Larchwood and Wiltshire Transmission Stations, as well as the completion of two transformer replacements at the Hanmer Transmission Station;
- the continued work on some of the Company's major inter-area network and local area supply projects, such as the Clarington Transmission Station and Guelph Area Transmission Refurbishment projects;
- increased work on overhead lines refurbishment and replacement projects and programs;
- increased volume of work related to station security upgrades to prevent unauthorized entry to stations and enhance safety, and increased cyber system replacements, including firewall infrastructure, auxiliary equipment and management software, to adhere to the NERC Cyber Security standards; and
- increased volume of demand equipment replacements, as well as spare transformer equipment purchases to ensure readiness for unplanned transformer replacements; partially offset by
- decreased expenditures related to underground lines system replacements, as the end-of-life underground transmission cables between the Strachan Transformer Station and Riverside Junction were replaced and placed in-service in 2014.

## Distribution Capital Investments

The increase of $31 million or 4.6% in distribution capital investments in 2015 was primarily due to the following:

- increased capital lines work, primarily related to multiple sustainment initiatives programs and higher volume of component replacements;
- increased work related to station refurbishment programs due to a larger volume of transformer purchases and more refurbishments accomplished during 2015; and
- increased storm restoration work as a result of multiple wind storms which occurred during the fourth quarter of 2015, as well as related power quality-related issues; partially offset by
- decreased expenses in 2015 due to completion of a smart meter installation project in 2014.

## Major Transmission Projects

The following table summarizes the status of certain of Hydro One's major transmission projects at December 31, 2015:

| Project Name | Location | Type | Anticipated In-Service Date | Estimated Cost | Capital Cost To-Date | Status |
|---|---|---|---|---|---|---|
| Toronto Midtown Transmission Reinforcement | Toronto Southwestern Ontario | New transmission line | 2016 | $123 million | $121 million | In progress |
| Guelph Area Transmission Refurbishment | Guelph area Southwestern Ontario | Transmission line upgrade | 2016 | $103 million | $67 million | In progress |
| Clarington Transmission Station | Oshawa area Eastern GTA | New transmission station | 2018/2019 | $297 million | $97 million | In progress |
| Supply to Essex County Transmission Reinforcement | Windsor-Essex area Southwestern Ontario | New transmission line and station | 2018 | To be determined | – | OEB decision received in July 2015 |
| Northwest Bulk Transmission Line | Thunder Bay Northwestern Ontario | New transmission line | As early as 2020 | To be determined | – | Development work is in progress |

## Future Capital Investments

Hydro One anticipates that it will spend an average of over $1.6 billion per year over the next five years on total capital investments, with sustaining capital investments representing an average of approximately 60% of total capital investments in each year. The Company anticipates that these investments will contribute to improved reliability, customer service and operating efficiencies.

The following table summarizes Hydro One's annual projected capital investments for 2016 to 2020, by business segment:

| *(millions of Canadian dollars)* | 2016 | 2017 | 2018 | 2019 | 2020 |
|---|---|---|---|---|---|
| Transmission | 937 | 920 | 978 | 1,021 | 989 |
| Distribution | 706 | 692 | 690 | 729 | 663 |
| Other | 8 | 8 | 7 | 7 | 7 |
| **Total capital investments** | **1,651** | **1,620** | **1,675** | **1,757** | **1,659** |

The following table summarizes Hydro One's annual projected capital investments for 2016 to 2020, by category:

| *(millions of Canadian dollars)* | 2016 | 2017 | 2018 | 2019 | 2020 |
|---|---|---|---|---|---|
| Sustaining | 999 | 998 | 1,098 | 1,006 | 1,001 |
| Development | 416 | 435 | 360 | 479 | 480 |
| Other | 236 | 187 | 217 | 272 | 178 |
| **Total capital investments** | **1,651** | **1,620** | **1,675** | **1,757** | **1,659** |

Note: "Other" capital expenditures consist of special projects, such as those relating to information technology.

# Other Obligations

## Off-Balance Sheet Arrangements

There are no off-balance sheet arrangements that have, or are reasonably likely to have, a material current or future effect on the Company's financial condition, changes in financial condition, revenues or expenses, results of operations, liquidity, capital expenditures or capital resources.

## Summary of Contractual Obligations and Other Commercial Commitments

The following table presents a summary of Hydro One's debt and other major contractual obligations, as well as other major commercial commitments:

| *December 31, 2015* *(millions of Canadian dollars)* | Total | Less than 1 year | 1-3 years | 3-5 years | More than 5 years |
|---|---|---|---|---|---|
| Contractual obligations *(due by year)* | | | | | |
| Long-term debt – principal repayments | 8,723 | 500 | 1,350 | 878 | 5,995 |
| Long-term debt – interest payments | 7,368 | 397 | 741 | 654 | 5,576 |
| Short-term notes payable | 1,491 | 1,491 | – | – | – |
| Pension contributions[1] | 197 | 180 | 17 | – | – |
| Environmental and asset retirement obligations[2] | 248 | 22 | 51 | 58 | 117 |
| Outsourcing agreements[3] | 523 | 167 | 244 | 101 | 11 |
| Operating lease commitments | 45 | 11 | 19 | 12 | 3 |
| Other | 90 | 17 | 34 | 33 | 6 |
| Total contractual obligations | 18,685 | 2,785 | 2,456 | 1,736 | 11,708 |
| Other commercial commitments *(by year of expiry)* | | | | | |
| Bank line[4] | 2,550 | – | 800 | 1,750 | – |
| Letters of credit[5] | 154 | 154 | – | – | – |
| Guarantees[5] | 330 | 330 | – | – | – |
| Total other commercial commitments | 3,034 | 484 | 800 | 1,750 | – |

1 Contributions to the Hydro One Pension Fund are generally made one month in arrears. The 2016 minimum pension contributions are based on an actuarial valuation as at December 31, 2013 and projected levels of pensionable earnings. Pension contributions beyond 2016 are not estimable at this time.

2 Hydro One records a liability for the estimated future expenditures associated with the removal and destruction of polychlorinated biphenyl (PCB)-contaminated insulating oils and related electrical equipment, and for the assessment and remediation of chemically-contaminated lands owned by the Company. Hydro One also records a liability for asset retirement obligations associated with the removal and disposal of asbestos-containing materials installed in some of its facilities. The forecasted expenditure pattern reflects the Company's planned work programs for the periods.

3 Inergi LP (Inergi), an affiliate of Capgemini Canada Inc., provides services to Hydro One, including settlements, source to pay services, pay operations services, information technology, finance and accounting services. The agreement with Inergi for these services expires in December 2019. In addition, Inergi provides customer service operations outsourcing services to Hydro One. The agreement for these services expires in February 2018. Brookfield Global Integrated Solutions (formerly Brookfield Johnson Controls Canada LP) (Brookfield) provides services to Hydro One, including facilities management and execution of certain capital projects as deemed required by the Company. The current agreement with Brookfield expires in December 2024. The contractual amounts disclosed include an estimated contractual annual inflation adjustment in the range of 1.9% to 2.1%. Payments in respect of the Company's outsourcing agreements are recorded in OM&A costs on the Company's Consolidated Statements of Operations and Comprehensive Income or as a cost of capital programs.

4 The Company and Hydro One Inc. have revolving credit facilities totalling $2,550 million that expire between 2018 and 2020.

5 Hydro One Inc. currently has outstanding bank letters of credit of $139 million relating to retirement compensation arrangements. Hydro One Inc. provides prudential support to the IESO in the form of letters of credit, the amount of which is calculated based on forecasted monthly power consumption. At December 31, 2015, Hydro One Inc. has provided a letter of credit to the IESO in the amount of $15 million to meet its current prudential requirements. Hydro One Inc. has also provided prudential support to the IESO on behalf of its subsidiaries as required by the IESO's Market Rules, using parental guarantees of $329 million, and on behalf of a distributor using total guarantees of $1 million.

# Regulation

The OEB approves both the revenue requirements of and the rates charged by Hydro One's regulated transmission and distribution businesses. The rates are designed to permit the Company's transmission and distribution businesses to recover the allowed costs and to earn a formula-based annual rate of return on its equity invested in the regulated businesses. This is done by applying a specified equity risk premium to forecasted interest rates on long-term bonds. In addition, the OEB approves rate riders to allow for the recovery or disposition of specific regulatory deferral accounts over specified timeframes.

The following table summarizes Hydro One's major regulatory proceedings:

| Application | Year(s) | Type | Status |
|---|---|---|---|
| **Electricity Rates** | | | |
| Hydro One Networks | 2015-2016 | Transmission – Cost-of-service | OEB decision received |
| Hydro One Networks | 2015-2017 | Distribution – Custom | OEB decision received |
| B2M LP | 2015 | Transmission – Interim | OEB decision received |
| B2M LP | 2015-2019 | Transmission – Cost-of-service | OEB decision received |
| **Mergers Acquisitions Amalgamations and Divestitures** | | | |
| Haldimand Hydro | n/a | Acquisition | OEB decision received |
| Woodstock Hydro | n/a | Acquisition | OEB decision received |
| **Leave to Construct** | | | |
| Supply to Essex County Transmission Reinforcement Project | n/a | Section 92 | OEB decision received |

Hydro One has secured rate orders for Hydro One Networks' transmission business through 2016, for B2M LP through 2019, and for Hydro One Networks' distribution business to the end of 2017.

The following table summarizes the status of Hydro One's electricity rate applications.

| Application | Date of Rate Application Approval | Year | ROE Allowed (A) or Forecast (F) | Rate Base | Date of Rate Order Filing | Rate Order Status |
|---|---|---|---|---|---|---|
| **Transmission:** | | | | | | |
| Hydro One Networks | January 2015 | 2015 | 9.30% (A) | $9,651 million | January 2015 | Approved |
| | | 2016 | 9.19% (A) | $10,040 million | November 2015 | Approved |
| B2M LP | December 2015 | 2015 | 9.30% (A) | $523 million | December 2014 | Approved |
| | | 2016 | 9.19% (A) | $516 million | January 2016 | Approved |
| | | 2017 | 9.71% (F) | $509 million | – | To be filed 2016 Q4 |
| | | 2018 | 9.96% (F) | $502 million | – | To be filed 2017 Q4 |
| | | 2019 | 10.01% (F) | $496 million | – | To be filed 2018 Q4 |
| **Distribution:** | | | | | | |
| Hydro One Networks | March 2015 | 2015 | 9.30% (A) | $6,552 million | April 2015 | Approved |
| | | 2016 | 9.19% (A) | $6,863 million | January 2016 | Approved |
| | | 2017 | 9.71% (F) | $7,190 million | – | To be filed 2016 Q4 |

## Hydro One Networks

Hydro One Networks' transmission 2016 revenue requirement of $1,480 million is reflected in the Uniform Transmission Rates (UTR) Decision and Order. Hydro One Networks plans to submit a transmission application for 2017-2018 rates in the second quarter of 2016.

The Hydro One Distribution forecast for 2017 will be subject to adjustments for cost of capital parameters. Hydro One Networks plans to submit a distribution application for 2018-2022 rates in the first quarter of 2017.

## B2M LP

On December 29, 2015, the OEB issued a Decision and Order approving the five-year revenue requirement for years 2015-2019 inclusive, approving the recovery of $8 million start-up costs in rates, and the establishment of a deferral account to capture costs of Tax Rate and Rule changes. The January 14, 2016, Decision and Rate Order approved the B2M LP revenue requirement recovery through the 2016 UTRs.

## Supply to Essex County Transmission Reinforcement Project

On July 16, 2015, the OEB issued a Decision and Order granting Hydro One Networks Leave to Construct a new 13-kilometre 230 kV double-circuit transmission line in the Windsor-Essex region. The Decision and Order includes standard conditions of adherence to the system impact assessment and the connection impact assessment, and requires construction to commence within twelve months. In addition, on August 28, 2015, the OEB issued a letter stating that given the complexities and implications of the issues relating to cost allocation, including potential changes to the provisions in the Distribution System Code and the Transmission System Code, the OEB will not proceed with cost allocation through an adjudicative process, but will review these issues from a policy perspective.

On January 7, 2016, the OEB initiated its policy review. In the southeast Essex County, a number of large distribution-connected customers are a factor driving the need for new transmission capacity, such as the new Leamington transmission station. Three other distributors embedded in Hydro One's distribution area will also benefit from this investment. Therefore, Hydro One has proposed that its share of this transmission investment be shared proportionately between Hydro One and the other identified beneficiaries in the area. The OEB consultation will review the concept of proportional benefit and its application, as the policy and regulatory framework to flow transmission costs through to identified distribution-connected customers is not in place.

## Other Regulatory Developments

### Time-of-Use (TOU) Pricing Decision and Order

On March 26, 2015, the OEB issued a Decision and Order to amend Hydro One Networks' distribution license to include an exemption from the requirement to apply TOU pricing to approximately 170,000 Regulated Price Plan customers that are outside the smart meter telecommunications infrastructure. The exemption expires December 31, 2019.

### Distribution System Code Requirements

In April 2015, the OEB introduced a Notice of Amendment to the Distribution System Code requiring electricity distributors to issue monthly bills to non-seasonal residential and certain general service customers by the end of 2016. In addition, the OEB amended the Distribution System Code imposing a 98% billing accuracy requirement, and provisions allowing a local distribution company to issue a bill based on estimated consumption only twice every twelve months to these customers. In September 2015, the OEB issued its Decision and Order amending Hydro One Networks' electricity distribution licence to include an exemption from the requirement for estimated billing and billing accuracy for the 170,000 hard-to-reach customers that are currently exempt from TOU billing, for a term ending on December 31, 2019.

On December 31, 2015, Hydro One submitted a report to the OEB summarizing that as of November 2015, approximately only 101,000 "hard-to-reach" customers received estimated bills in 2015 and significant improvements were realized in estimated billing accuracy due to the availability of better customer-specific historical usage data on which the estimation algorithms are based.

### Conservation and Demand Management

In accordance with a directive from the Minister of Energy and Infrastructure dated March 31, 2010, as a condition of licence, certain licensed electricity distributors must meet the IESO established targets for the reduction of electricity consumption and peak provincial electricity demand. On September 30, 2015, Hydro One Networks filed its annual Conservation and Demand Management (CDM) Report with the OEB. In 2014, Hydro One Networks achieved 167.4 MW in peak demand savings and 898.4 GWh in energy savings, which represent 78.4% and 79.5% of its peak demand and energy reduction targets, respectively. Although Hydro One Networks did not meet its peak demand reduction target, no punitive action will be taken against the Company.

### Rate Design (previously Revenue Decoupling for Distributors)

In April 2015, the OEB issued a report, *"Board Policy: A New Distribution Rate Design for Residential Electricity Customers"*, outlining its new policy on fully fixed distribution charges for residential customers. The current distribution charges are a combination of fixed and variable rates. Under the new policy, electricity distributors will structure their residential rates such that all distribution service costs will be collected through a fixed monthly charge only. The new policy will be implemented gradually over a four year period, with increases in the fixed rate and decreases in the variable rate, resulting in a fixed rate only by 2019. The new rate design will enable residential customers to leverage new technologies, manage costs through conservation, and better understand the value of distribution services. It will also provide greater revenue stability for distributors, including Hydro One.

In its December 22, 2015 Decision, the OEB has increased the transition period for Hydro One Networks' certain customer classes to eight years to mitigate excessive bill impacts.

In January 2016, the OEB issued a Decision and Rate Order for the area formerly served by Norfolk Power approving Hydro One's implementation plan to transition residential customers to fixed rates over a four year period. Although Norfolk Power customers' rates are frozen for five years, the OEB Order approved Tariffs of Rates and Charges for 2016 only.

In 2015, Hydro One Networks filed applications with the OEB with respect to the new rate design for residential customers in the service areas formerly served by Haldimand Hydro and Woodstock Hydro that include fixed rates for five years and implementation plans to transition to fixed distribution rates. Approvals for these applications are pending.

### Performance Measurement for Electricity Distributors

On September 18, 2015, Hydro One Networks submitted its 2014 Performance Scorecard to the OEB. In addition to ongoing operations, a major focus in 2014 was investing in improvements to the Company's customer call centre and billing operations. Hydro One plans to continue developing targeted products and services that respond to its customers' unique needs, including realizing value from the new customer information system, simplifying and shortening timeframes for the delivery of services, and enhancing accessibility to allow effective self-service for simple transactions. The Company is also committed to delivering programs to help its customers manage their energy consumption. Hydro One Networks' 2014 Scorecard was posted on the Hydro One and the OEB websites.

### Renewed Regulatory Framework for Transmitters

In 2015, the OEB initiated a discussion to develop a framework for the application of Renewed Regulatory Framework principles to transmitters, and in January 2016, issued a new set of draft filing requirements for transmitters for discussion.

### Transmitter Consolidations

On January 19, 2016, the OEB issued the *Handbook for Electricity Distributor and Transmitter Consolidations* (the "handbook") to provide guidance on applications for approval of electricity utility consolidations by way of mergers, acquisitions, amalgamations and divestitures and subsequent rate applications. The handbook is intended to provide guidance on the process for review of consolidation applications by the OEB and affirms the OEB's policy of using the "no harm" test in reviewing consolidation applications. This test requires applicants to demonstrate that the costs to serve acquired customers post-consolidation will be no higher than they otherwise would be without consolidation. In addition the OEB will consider whether any price premium paid on the acquisition is financially burdensome to the applicant, as any premium paid over historic asset value is not recoverable in rates. The handbook will allow applicants to defer rebasing of the acquired utility for up to a 10 year period with the view of permitting the applicant to fully realize the anticipated efficiency gains and offset the overall costs of the transaction.

## Other Developments

### Change in Hydro One Ownership Structure

During the fourth quarter of 2015, Hydro One and Hydro One Inc. completed a series of Pre-Closing Transactions that resulted in, among other things, the acquisition by Hydro One of all of the issued and outstanding shares of Hydro One Inc. and the issuance of new common shares and preferred shares of Hydro One to the Province. On November 5, 2015, Hydro One and the Province concluded the IPO of Hydro One on the Toronto Stock Exchange, whereby 81.1 million of the 595 million outstanding common shares of Hydro One were sold to the public. On November 12, 2015, the underwriters of the IPO exercised their option to purchase an additional 8.15 million common shares of Hydro One from the Province. All proceeds from the IPO were received by the Province. All of the regulated business and outstanding notes and debentures of Hydro One at the time of the IPO remain at Hydro One Inc. The final prospectus associated with the IPO, which contains details of the IPO, recapitalization and corporate structure, is posted on www.sedar.com.

### PILs Deemed Disposition Rules

In connection with the IPO, upon ceasing to be exempt from tax under the Federal Tax Regime in October 2015, Hydro One and its subsidiaries were deemed to dispose of their assets for proceeds equal to their fair market value, triggering a PILs liability of $2.6 billion (Departure Tax). The Departure Tax amount was confirmed in writing by the Minister of Finance and was paid to the OEFC in 2015. To enable Hydro One and its subsidiaries to pay the Departure Tax, the Province made an equity injection of $2.6 billion in Hydro One and received 2.6 billion common shares of Hydro One. The revaluation of the tax basis of the assets of Hydro One Inc. and its subsidiaries to fair market value resulted in a net deferred tax recovery of $2,619 million recorded in 2015.

## Class Action Lawsuit

In September 2015, Hydro One and three of its subsidiaries were served with a class action suit in which the representative plaintiff is seeking up to $125 million in damages related to allegations of improper billing practices. Hydro One intends to defend the action. Due to the preliminary stage of legal proceedings, an estimate of a possible loss related to this claim cannot be made.

## Acquisitions

### Integration of Norfolk Power

The Company acquired Norfolk Power in August 2014. The purchase price for Norfolk Power, adjusted for working capital and other closing adjustments, was approximately $68 million. Due to this acquisition, approximately 18,000 new customers were added to Hydro One's Distribution Business. In September 2015, the Company completed the integration of Norfolk Power, including the integration of employees, customers, business processes, information and operations. This successful integration will allow the Company to standardize processes and leverage key lessons learned to drive efficiency and improvements when integrating other acquisitions in the future.

### Acquisition of Haldimand Hydro

In June 2015, Hydro One completed the acquisition of Haldimand Hydro, an electricity distribution company located in southwestern Ontario, following approval of the acquisition by the OEB in March 2015. The purchase price for Haldimand Hydro, adjusted for working capital and other closing adjustments of approximately $8 million, was approximately $73 million. The goodwill of approximately $33 million arising from the Haldimand Hydro acquisition consists largely of the synergies and economies of scale expected from combining the operations of Hydro One and Haldimand Hydro. Due to this acquisition, approximately 21,000 new customers were added to Hydro One's Distribution Business. Integration of Haldimand Hydro is ongoing.

### Acquisition of Woodstock Hydro

In October 2015, Hydro One completed the acquisition of Woodstock Hydro, an electricity distribution company located in southwestern Ontario, following approval of the acquisition by the OEB in September 2015. The purchase price for Woodstock Hydro, adjusted for preliminary working capital and other closing adjustments, was approximately $32 million. The preliminary goodwill of approximately $17 million arising from the Woodstock Hydro acquisition consists largely of the synergies and economies of scale expected from combining the operations of Hydro One and Woodstock Hydro. Due to this acquisition, approximately 16,000 new customers were added to Hydro One's Distribution Business. Integration of Woodstock Hydro is ongoing.

### Great Lakes Power Transmission Purchase Agreement

On January 28, 2016, Hydro One reached an agreement to acquire from Brookfield Infrastructure various entities that own and control Great Lakes Power Transmission LP, an Ontario regulated electricity transmission business operating along the eastern shore of Lake Superior, north and east of Sault Ste. Marie, Ontario, for $222 million in cash, subject to customary adjustments, plus the assumption of approximately $151 million in outstanding indebtedness. The acquisition is pending a *Competition Act* approval as well as regulatory approval from the OEB.

## Hydro One Workforce

Hydro One has a skilled and flexible work force of over 5,500 regular employees and over 2,000 non-regular employees province-wide, comprising a mix of skilled trades, lines staff, engineering, professional, managerial and executive personnel. Hydro One's regular employees are supplemented primarily by accessing a large external labour force available through arrangements with the Company's trade unions for variable workers, sometimes referred to as "hiring halls", and also by access to contract personnel. The hiring halls offer Hydro One the ability to access highly trained and appropriately skilled workers on a project-by-project and seasonal basis.

The following table sets out the number of Hydro One employees as at December 31, 2015.

| | Regular Employees | Non-Regular Employees | Total |
|---|---|---|---|
| Power Workers' Union (PWU) | 3,419 | 636[1] | 4,055 |
| The Society of Energy Professionals (Society) | 1,394 | 57 | 1,451 |
| Canadian Union of Skilled Workers (CUSW) and construction building trade unions[2] | – | 1,346 | 1,346 |
| International Brotherhood of Electrical Workers (IBEW) | 63 | 4 | 67 |
| Total employees represented by unions | 4,876 | 2,043 | 6,919 |
| Management and non-represented employees | 640 | 34 | 674 |
| Total employees | 5,516 | 2,077 | 7,593 |

[1] Includes 475 non-regular "hiring hall" employees covered by PWU agreement.

[2] Employees are jointly represented by both unions. The construction building trade unions have collective agreements with the Electrical Power Systems Construction Association (EPSCA).

## Collective Agreements

The PWU represents the majority of the skilled trade personnel employed by Hydro One. In April 2015, Hydro One reached an agreement with the PWU for a renewal of the collective agreement. The agreement is for a three-year term, covering April 1, 2015 to March 31, 2018. The agreement was ratified by the PWU and the Hydro One Board of Directors in July 2015.

The Society represents professional and certain first-level supervisory staff employed by Hydro One. In July 2015, Hydro One reached an agreement with the Society for an early renewal of the collective agreement. The agreement is for a three-year term, covering April 1, 2016 to March 31, 2019. The agreement was ratified by the Society and the Hydro One Board of Directors in August 2015.

In July 2015, Hydro One reached an agreement with the CUSW for a renewal of the collective agreement. The agreement is for a three-year term, covering May 1, 2014 to April 30, 2017. The agreement was ratified by CUSW in September 2015 and the Hydro One Board of Directors in August 2015.

The EPSCA is an employers' association of which Hydro One is a member. A number of the EPSCA construction collective agreements, which bind Hydro One, expired in April 2015. Ratified five-year renewal collective agreements, covering May 1, 2015 to April 30, 2020, have been reached with The United Association of Plumbers and Pipefitters, The Ironworkers, The Rodmen, The Boilermakers, The Insulators, The Sheet Metal Workers, The Roofers, the Labourers International Union of North America (LIUNA), the Operating Engineers (OE) and the Teamsters.

## Share-based Compensation

### Share Grant Plans

At December 31, 2015, Hydro One had two share grant plans, one for the benefit of certain members of the Power Workers' Union (the PWU Share Grant Plan) and one for the benefit of certain members of The Society of Energy Professionals (the Society Share Grant Plan).

The PWU Share Grant Plan provides for the issuance of common shares of Hydro One from treasury to certain eligible members of the PWU annually, commencing on April 1, 2017 and continuing until the earlier of April 1, 2028 or the date an eligible employee no longer meets the eligibility criteria of the PWU Share Grant Plan. The number of common shares granted annually to each eligible employee will be equal to 2.7% of such eligible employee's salary as at April 1, 2015, divided by the price of the common shares of Hydro One in the IPO. The aggregate number of common shares issuable under the PWU Share Grant Plan shall not exceed 3,981,763 common shares.

The Society Share Grant Plan provides for the issuance of common shares of Hydro One from treasury to certain eligible members of the Society annually, commencing on April 1, 2018 and continuing until the earlier of April 1, 2029 or the date an eligible employee no longer meets the eligibility criteria of the Society Share Grant Plan. The number of common shares granted annually to each eligible employee will be equal to 2.0% of such eligible employee's salary as at September 1, 2015, divided by the price of the common shares of Hydro One in the IPO. The aggregate number of common shares issuable under the Society Share Grant Plan shall not exceed 1,434,686 common shares.

### Directors' Deferred Share Unit (DSU) Plan

Under the Company's Directors' DSU Plan, directors can elect to receive credit for their annual cash retainer in a notional account of DSUs in lieu of cash. Hydro One's Board of Directors may also determine from time to time that special circumstances exist that would reasonably justify the grant of DSUs to a director as compensation in addition to any regular retainer or fee to which the director is entitled.

### Employee Share Ownership Plan

Effective December 15, 2015, Hydro One established an Employee Share Ownership Plan (ESOP). Under the ESOP, certain eligible management and non-represented employees may contribute between 1% and 6% of their base salary towards purchasing common shares of Hydro One. The Company will match 50% of the employee's contributions, up to maximum Company contribution of $25,000 per calendar year. No contributions were made under the ESOP during 2015.

### Long-term Incentive Plan

The Board of Directors of Hydro One adopted a Long-term Incentive Plan effective August 31, 2015. Under the Long-term Incentive Plan, long-term incentives will be granted to certain executive and management employees, and all equity-based awards will be settled in newly-issued shares of Hydro One from treasury, consistent with the provisions of the plan.

The mix of long-term incentive vehicles has not yet been determined and, accordingly, the Long-term Incentive Plan provides flexibility to award a range of vehicles, including restricted share units, performance share units, stock options, share appreciation rights, restricted shares, deferred share units and other share-based awards. The mix of vehicles is intended to vary by role to recognize the level of executive accountability for overall business performance. It is expected that the specific incentive vehicles and performance targets associated with the Long-term Incentive Plan will be decided in early 2016, after which the incentive grants will commence. No long-term incentive payments were awarded during 2015.

## Related Party Transactions

The Province is the majority shareholder of Hydro One. The OEFC, IESO, Ontario Power Generation Inc. (OPG), the OEB, and Hydro One Brampton are related parties to Hydro One because they are controlled or significantly influenced by the Province. The following is a summary of the Company's related party transactions during the year ended December 31, 2015:

### The Province

- During 2015, Hydro One paid dividends to the Province totalling $888 million (2014 – $287 million). In addition, on August 31, 2015, Hydro One declared a dividend in-kind on its common shares payable in all of the issued and outstanding shares of Hydro One Brampton.
- On November 4, 2015, Hydro One issued 2.6 billion common shares to the Province for proceeds of $2.6 billion.
- In 2015, Hydro One Inc. incurred certain IPO related expenses totaling $7 million which will be reimbursed to the Company by the Province and reimbursed by the Company to Hydro One Inc.

### IESO

- During 2015, Hydro One purchased power in the amount of $2,318 million from the IESO-administered electricity market, compared to $2,601 million purchased in 2014.
- Hydro One receives revenues for transmission services from the IESO, based on OEB-approved Uniform Transmission Rates. The Company's 2015 transmission revenues include $1,548 million related to these services, compared to $1,556 million in 2014.
- Hydro One receives amounts for rural rate protection from the IESO. The Company's 2015 distribution revenues include $127 million related to this program, compared to $127 million in 2014.
- Hydro One receives revenues related to the supply of electricity to remote northern communities from the IESO. The Company's 2015 distribution revenues include $32 million related to these services, compared to $32 million in 2014.
- The IESO (Ontario Power Authority prior to January 1, 2015) funds substantially all of Hydro One's CDM programs. The funding includes program costs, incentives, and management fees. During 2015, the Company received $70 million related to these programs, compared to $33 million received in 2014.

### OPG

- During 2015, Hydro One purchased power in the amount of $11 million from the OPG, compared to $23 million purchased in 2014.
- Hydro One has service level agreements with OPG. These services include field, engineering, logistics and telecommunications services. The Company's other 2015 revenues include $7 million related to these service level agreements, compared to $12 million in 2014. OM&A costs related to the purchase of services with respect to these service level contracts were not significant in 2015 and 2014.

### OEFC

- During 2015, Hydro One made PILs to the OEFC totalling $2.9 billion, including Departure Tax of $2.6 billion, compared to payments of $86 million made in 2014.
- During 2015, Hydro One purchased power in the amount of $6 million from power contracts administered by the OEFC, compared to $9 million purchased in 2014.
- In 2015, the Company paid $8 million to the OEFC, compared to $5 million paid in 2014, for indemnification against adverse claims in excess of $10 million paid by the OEFC with respect to certain of Ontario Hydro's businesses transferred to Hydro One on April 1, 1999. Hydro One has not made any claims under the indemnity since it was put in place in 1999. Hydro One and the OEFC, with the consent of the Minister of Finance, have agreed to terminate the indemnity effective October 31, 2015.

### OEB

- Under the *OEB Act*, the OEB is required to recover all of its annual operating costs from gas and electricity distributors and transmitters. During 2015, Hydro One incurred $12 million in OEB fees, compared to $12 million incurred in 2014.

### Hydro One Brampton

- Effective August 31, 2015, Hydro One Brampton is no longer a subsidiary of Hydro One Inc., but is indirectly owned by the Province. Subsequent to August 31, 2015, Hydro One continues to provide certain management, administrative and smart meter network services to Hydro One Brampton pursuant to certain service level agreements, which are provided at market rates. During 2015, revenues related to the provision of services with respect to these service level agreements were $1 million.

At December 31, 2015, the amounts due from and due to related parties as a result of the transactions described above were $191 million and $138 million, compared to $224 million and $227 million at December 31, 2014, respectively. At December 31, 2015, included in amounts due to related parties were amounts owing to the IESO in respect of power purchases of $134 million, compared to $214 million at December 31, 2014.

# Risk Management and Risk Factors

## Risks Relating to Hydro One's Business

### Regulatory Risks and Risks Relating to Hydro One's Revenues

#### *Risks Relating to Obtaining Rate Orders*

The Company is subject to the risk that the OEB will not approve the Company's transmission and distribution revenue requirements requested in future applications for rates. Rate applications for revenue requirements are subject to the OEB's review process, usually involving participation from intervenors and a public hearing process. There can be no assurance that resulting decisions or rate orders issued by the OEB will permit Hydro One to recover all costs actually incurred, including operations, maintenance and administration costs, costs accumulated in other regulatory accounts (including, for instance, deferral and variance accounts), costs of debt and income taxes, or to earn a particular return on equity. A failure to obtain acceptable rate orders, or approvals of appropriate returns on equity and costs actually incurred, may materially adversely affect: Hydro One's transmission or distribution businesses, the undertaking or timing of capital expenditures, ratings assigned by credit rating agencies, the cost and issuance of long-term debt, and other matters, any of which may in turn have a material adverse effect on the Company. In addition, there is no assurance that the Company will receive regulatory decisions in a timely manner and, therefore, costs may be incurred prior to having an approved revenue requirement.

#### *Risks Relating to Actual Performance Against Forecasts*

The Company's ability to recover the actual costs of providing service and earn the allowed return on equity depends on the Company achieving its forecasts established and approved in the rate-setting process. Actual costs could exceed the approved forecasts if, for example, the Company incurs operations, maintenance and administration costs above those included in the Company's approved revenue requirement, higher capital expenditures than those approved in rate decisions, or additional financing charges because of increased debt amounts or higher interest rates. The inability to obtain acceptable rate decisions or to otherwise recover any significant difference between forecast and actual expenses could materially adversely affect the Company's financial condition and results of operations.

Further, the OEB approves the Company's transmission and distribution rates based on projected electricity load and consumption levels, among other factors. If actual load or consumption materially falls below projected levels, the Company's revenue and net income for either, or both, of these businesses could be materially adversely affected. Also, the Company's current revenue requirements for these businesses are based on cost and other assumptions that may not materialize. There is no assurance that the OEB would allow rate increases sufficient to offset unfavourable financial impacts from unanticipated changes in electricity demand or in the Company's costs.

The Company is subject to risk of revenue loss from other factors, such as economic trends and weather conditions that influence the demand for electricity. The Company's overall operating results may fluctuate substantially on a seasonal and year-to-year basis based on these trends and weather conditions. For instance, a cooler than normal summer or warmer than normal winter may reduce demand for electricity below that forecast by the Company, causing a decrease in the Company's revenues from the same period of the previous year. The Company's load could also be negatively affected by successful CDM programs whose results exceed forecasted expectations.

### *Risks Relating to Rate-Setting Models for Transmission and Distribution*

The OEB's rate-setting model for distributors requires that the term of a custom rate application (distribution business) be a minimum five-year period. There are risks associated with forecasting over such a long period. For instance, if unanticipated capital expenditures arise that were not contemplated in the Company's most recent rate decision, the Company may be required to incur costs that may not be recoverable until a future period or not recoverable at all in future rates. This could have a material adverse effect on the Company.

The OEB has stated its intention to examine the policies that may apply to transmission rate setting, and this may result in changes to the rate-setting model for transmission services. A change to the rate-setting model for transmission services, such as the introduction of an asymmetrical earnings sharing mechanism, could result in a decrease in the Company's revenues or financial performance.

The OEB approves and periodically, generally on an annual basis, changes the return on equity for transmission and distribution businesses. The OEB may in the future decide to reduce its allowed return on equity for either of these businesses, modify the formula or methodology it uses to determine the return on equity, or reduce the weighting of the equity component of the deemed capital structure. Any such reduction could reduce the net income of the Company.

### *Risks Relating to Capital Expenditures*

In order to be recoverable, capital expenditures require the approval of the OEB, either through the approval of capital expenditure plans, rate base or revenue requirements for the purposes of setting transmission and distribution rates, which include the impact of capital expenditures on rate base or cost of service. There can be no assurance that all capital expenditures incurred by Hydro One will be approved by the OEB. Capital cost overruns may not be recoverable in transmission or distribution rates. The Company could incur unexpected capital expenditures in maintaining or improving its assets, particularly given that new technology is required to support renewable generation and unforeseen technical issues may be identified through implementation of projects. There is risk that the OEB may not allow full recovery of such expenditures in the future. To the extent possible, Hydro One aims to mitigate this risk by ensuring prudent expenditures, seeking from the regulator clear policy direction on cost responsibility, and pre-approval of the need for capital expenditures.

While the Company expects all of its expenditures and regulatory assets to be fully recoverable after OEB review, any future regulatory decision to disallow or limit the recovery of such costs would lead to a lower than expected approved revenue requirement or rate base, potential asset impairment or charges to the Company's results of operations, any of which could have a material adverse effect on the Company.

### *Risks Relating to Deferred Tax Asset*

As a result of leaving the PILs Regime and entering the Federal Tax Regime, Hydro One recorded a deferred tax asset due to the revaluation of the tax basis of Hydro One's fixed assets at their fair market value and recognition of eligible capital expenditures. Management believes this will result in annual net cash savings over the next five years due to the reduction of cash taxes payable by Hydro One associated primarily with a higher capital cost allowance. There is a risk that, in future rate applications, the OEB will reduce the Company's revenue requirement by all or a portion of those net cash savings. If the OEB were to reduce the Company's revenue requirement in this manner, it could have a material adverse effect on the Company.

### *Risks Relating to Other Applications to the OEB*

The Company is also subject to the risk that it will not obtain required regulatory approvals for other matters, such as leave to construct applications, applications for mergers, acquisitions, amalgamations and divestitures, and environmental approvals. Decisions to acquire or divest other regulated businesses licensed by the OEB are subject to OEB approval. Accordingly, there is the risk that such matters may not be approved or that unfavourable conditions will be imposed by the OEB.

## First Nations and Métis Claims Risk

Some of the Company's current and proposed transmission and distribution assets are or may be located on Reserve (as defined in the *Indian Act* (Canada)) lands, and lands over which First Nations and Métis have Aboriginal, treaty or other legal claims. Although the Company has a recent history of successful negotiations and engagement with First Nations and Métis communities in Ontario, some First Nations and Métis leaders, communities and their members have made assertions related to sovereignty and jurisdiction over Reserve lands and traditional territories and are increasingly willing to assert their claims through the courts, tribunals, or by direct action. These claims could have a material adverse effect on the Company or otherwise materially adversely impact the Company's operations, including the development of current and future projects.

The Company's operations and activities may, on occasion, give rise to the Crown's duty to consult and potentially accommodate First Nations and Métis communities. Procedural aspects of the duty to consult may be delegated to the Company by the Province or the federal government. A perceived failure by the Crown to sufficiently consult a First Nations or Métis community, or a perceived failure by the Company in relation to delegated consultation obligations, could result in legal challenges against the Crown or the Company, including judicial review or injunction proceedings, or could potentially result in direct action against the Company by a community or its members. If this occurs, it could disrupt or delay the Company's operations and activities, including current and future projects, and have a material adverse effect on the Company.

## Risk from Transfer of Assets Located on Reserves

The transfer orders by which the Company acquired certain of Ontario Hydro's businesses as of April 1, 1999 did not transfer title to assets located on Reserves. The transfer of title to these assets did not occur because authorizations originally granted by the federal government for the construction and operation of these assets on Reserves could not be transferred without required consent. In several cases, the authorizations had either expired or had never been issued.

Currently, the Ontario Electricity Financial Corporation holds legal title to these assets and it is expected that the Company will manage them until it has obtained permits to complete the title transfer. To occupy Reserves, the Company must have valid permits issued by Her Majesty the Queen in the Right of Canada. For each permit, the Company must negotiate an agreement (in the form of a memorandum of understanding) with the First Nation, the Ontario Electricity Financial Corporation and any members of the First Nation who have occupancy rights. The agreement includes provisions whereby the First Nation consents to the federal government (presently Indigenous Affairs and Northern Development Canada) issuing a permit. For transmission assets, the Company must negotiate terms of payment. It is difficult to predict the aggregate amount that the Company may have to pay, either on an annual or one-time basis, to obtain the required agreements from First Nations. If the Company cannot reach satisfactory agreements with the relevant First Nation to obtain federal permits, it may have to relocate these assets to other locations at a cost that could be substantial. In a limited number of cases, it may be necessary to abandon a line and replace it with diesel generation facilities. In either case, the costs relating to these assets could have a material adverse effect on the Company if the costs are not recoverable in future rate orders.

## Compliance with Laws and Regulations

Hydro One must comply with numerous laws and regulations affecting its business, including requirements relating to transmission and distribution companies, environmental laws, employment laws and health and safety laws. The failure of the Company to comply with these laws could have a material adverse effect on the Company's business. See also "– Health, Safety and Environmental Risk".

For instance, Hydro One's licensed transmission and distribution businesses are required to comply with the terms of their licenses, with codes and rules issued by the OEB, and with other regulatory requirements, including regulations of the National Energy Board. In Ontario, the Market Rules issued by the IESO require the Company to, among other things, comply with the reliability standards established by the NERC and Northeast Power Coordinating Council, Inc. (NPCC). The incremental costs associated with compliance with these reliability standards are expected to be recovered through rates, but there can be no assurance that the OEB will approve the recovery of all of such incremental costs. Failure to obtain such approvals could have a material adverse effect on the Company.

There is the risk that new legislation, regulations or policies will be introduced in the future. These may require Hydro One to incur additional costs, which may or may not be recovered in future transmission and distribution rates.

## Risk of Natural and Other Unexpected Occurrences

The Company's facilities are exposed to the effects of severe weather conditions, natural disasters, man-made events including but not limited to cyber and physical terrorist type attacks, events which originate from third party connected systems, or any other potentially catastrophic events. Although constructed, operated and maintained to industry standards, the Company's facilities may not withstand occurrences of this type in all circumstances. The Company does not have insurance for damage to its transmission and distribution wires, poles and towers located outside its transmission and distribution stations resulting from these or other events. Losses from lost revenues and repair costs could be substantial, especially for many of the Company's facilities that are located in remote areas. The Company could also be subject to claims for damages caused by its failure to transmit or distribute electricity. Hydro One's risk is partly mitigated because its transmission system is designed and operated to withstand the loss of any major element and possesses inherent redundancy that provides alternate means to deliver large amounts of power. In the event of a large uninsured loss, Hydro One would apply to the OEB for recovery of such loss; however, there can be no assurance that the OEB would approve any such applications, in whole or in part, which could have a material adverse effect on the Company.

## Risk Associated with Information Technology Infrastructure and Data Security

The Company's ability to operate effectively in the Ontario electricity market is, in part, dependent upon it developing, maintaining and managing complex information technology systems which are employed to operate and monitor its transmission and distribution facilities, financial and billing systems and other business systems. The Company's increasing reliance on information systems and expanding data networks increases its exposure to information security threats. The Company's transmission business is required to comply with various rules and standards for transmission reliability, including mandatory standards established by the NERC and the NPCC. These include standards relating to cyber-security and information technology, which only apply to certain of the Company's assets (generally being those whose failure could impact the functioning of the bulk electricity system). The Company may maintain different or lower levels of information technology security for its assets that are not subject to these mandatory standards. Unauthorized access to corporate and information technology systems or cyber-attacks could result in service disruptions and system failures, which could have a material adverse effect on the Company, including as a result of a failure to provide electricity to customers. In addition, in the normal course of its operations, the Company may collect, process or retain access to confidential customer, supplier, counterparty or employee information, which could be exposed in the event of a cyber security incident.

Hydro One mitigates these risks, including through the use of security event management tools on its power and business systems, by separating its transmission and distribution system networks from its other business system networks, by performing scans of its systems for known cyber threats and by providing company-wide awareness training to Hydro One personnel. Hydro One also engages the services of external experts to evaluate the security of its information technology infrastructure and controls. Hydro One performs vulnerability assessments on its critical cyber assets and it ensures security and privacy controls are incorporated into new information technology capabilities. Although these security and system disaster recovery controls are in place, there can be no assurance that there will not be system failures or security breaches or that such threats would be detected or mitigated on a timely basis. Upon occurrence and detection, the focus would shift from prevention to isolation, remediation and recovery until the incident has been fully addressed. Any such system failures or security breaches could have a material adverse effect on the Company.

## Workforce Demographic Risk

By the end of 2015, approximately 17% of the Company's employees were eligible for retirement and by the end of 2016, up to approximately 21% could be eligible. These percentages are not evenly spread across the Company's workforce, but tend to be most significant in the most senior levels of the Company's staff and especially among management staff. During each of 2015 and 2014, approximately 3% of the Company's workforce elected to retire. Accordingly, the Company's continued success will be tied to its ability to attract and retain sufficient qualified staff to replace the capability lost through retirements and to meet the demands of the Company's work programs.

In addition, the Company expects the skilled labour market for its industry to be highly competitive in the future. Many of the Company's current employees and many of the potential employees it would seek in the future possess skills and experience that would also be highly sought after by other organizations inside and outside the electricity sector. The failure to attract and retain qualified personnel for Hydro One's business could have a material adverse effect on the Company.

## Labour Relations Risk

The substantial majority of the Company's employees are represented by either the Power Workers' Union or The Society of Energy Professionals. Over the past several years, significant effort has been expended to increase Hydro One's flexibility to conduct operations in a more cost efficient manner. Although the Company has achieved improved flexibility in its collective agreements, the Company may not be able to achieve further improvements. The Company recently reached an agreement with the Power Workers' Union for a renewal collective agreement with a three-year term, covering the period from April 1, 2015 to March 31, 2018 and an early renewal collective agreement with The Society of Energy Professionals with a three-year term, covering the period from April 1, 2016 to March 31, 2019. The Company also reached a renewal collective agreement with the

Canadian Union of Skilled Workers for a three-year term, covering the period from May 1, 2014 to April 30, 2017. Additionally, the Electrical Power Systems Construction Association ("EPSCA") and a number of construction unions have reached renewal agreements, to which Hydro One is bound, for a 5-year period covering May 1, 2015 to April 30, 2020. However, there can be no assurance that future collective agreement renewals with these unions or that collective agreements with the other unions with which Hydro One has contractual relationships, will be renewed on acceptable terms. The Company faces financial risks related to its ability to negotiate collective agreements consistent with its rate orders. In addition, in the event of a labour dispute, the Company could face operational risk related to continued compliance with its license requirements of providing service to customers. Any of these could have a material adverse effect on the Company.

## Risk Associated with Arranging Debt Financing

The Company expects to borrow to repay its existing indebtedness and to fund a portion of capital expenditures. Hydro One Inc. has substantial amounts of existing debt, including $500 million maturing in 2016, $600 million maturing in 2017, and $750 million maturing in 2018. In addition, from time to time, the Company may draw on its syndicated bank lines and or issue short-term debt under Hydro One Inc.'s $1.5 billion commercial paper program which would need to be paid down. The Company also plans to incur capital expenditures of over $1.6 billion for each of 2016 and 2017. Cash generated from operations, after the payment of expected dividends, will not be sufficient to fund the repayment of the Company's existing indebtedness and capital expenditures. The Company's ability to arrange sufficient and cost-effective debt financing could be materially adversely affected by numerous factors, including the regulatory environment in Ontario, the Company's results of operations and financial position, market conditions, the ratings assigned to its debt securities by credit rating agencies and general economic conditions. A downgrade in the Company's credit ratings could restrict the Company's ability to access debt capital markets and increase the Company's cost of debt. Any failure or inability on the Company's part to borrow the required amounts of debt on satisfactory terms could impair its ability to repay maturing debt, fund capital expenditures and meet other obligations and requirements and, as a result, could have a material adverse effect on the Company.

## Market, Financial Instrument and Credit Risk

Market risk refers primarily to the risk of loss that results from changes in costs, foreign exchange rates and interest rates. The Company is exposed to fluctuations in interest rates as its regulated return on equity is derived using a formulaic approach that takes into account anticipated interest rates, but is not currently exposed to material commodity price risk or material foreign exchange risk.

The OEB-approved adjustment formula for calculating return on equity in a deemed regulatory capital structure of 60% debt and 40% equity provides for increases and decreases depending on changes in benchmark rates of return for Government of Canada debt. The Company estimates that a 1% decrease in the forecasted long-term Government of Canada bond yield used in determining its rate of return would reduce the Company's transmission business' 2017 net income by approximately $22 million and its distribution business' 2017 net income by approximately $14 million. The Company's net income is adversely impacted by rising interest rates as the Company's maturing debt is refinanced at market rates. The Company periodically utilizes interest rate swap agreements to mitigate elements of interest rate risk.

Financial assets create a risk that a counterparty will fail to discharge an obligation, causing a financial loss. Derivative financial instruments result in exposure to credit risk, since there is a risk of counterparty default. Hydro One monitors and minimizes credit risk through various techniques, including dealing with highly-rated counterparties, limiting total exposure levels with individual counterparties, entering into master agreements which enable net settlement, and by monitoring the financial condition of counterparties. The Company does not trade in any energy derivatives. Currently, there are no significant concentrations of credit risk with respect to any class of financial assets. The Company is required to procure electricity on behalf of competitive retailers and certain local distribution companies for resale to their customers. The resulting concentrations of credit risk are mitigated through the use of various security arrangements, including letters of credit, which are incorporated into the Company's service agreements with these retailers in accordance with the OEB's Retail Settlement Code.

The failure to properly manage these risks could have a material adverse effect on the Company.

## Risks Relating to Asset Condition and Capital Projects

The Company continually incurs sustainment and development capital expenditures and monitors the condition of its transmission assets to manage the risk of equipment failures and to determine the need for and timing of major refurbishments and replacements of its transmission and distribution infrastructure. However the lack of real time monitoring of distribution assets increases the risk of distribution equipment failure. The connection of large amounts of distributed generation on the distribution network has resulted in more equipment operations than in the past for the Company. This increases maintenance requirements and may accelerate the aging of the Company's assets.

Execution of the Company's capital expenditure programs, particularly for development capital expenditures, is partially dependent on external factors, such as environmental approvals, municipal permits, equipment outage schedules that accommodate the IESO, generators and transmission-connected customers, and supply chain availability for equipment suppliers and consulting services. There may also be a need for, among other things, *Environmental Assessment Act* (Ontario) approvals, approvals which require public meetings, appropriate engagement with First Nations and Métis communities, OEB approvals of expropriation or early access to property, and other activities. Obtaining approvals and carrying out these processes may also be impacted by opposition to the proposed site of the capital investments. Delays in obtaining required approvals or failure to complete capital projects on a timely basis could materially adversely affect transmission reliability or customers' service quality or increase maintenance costs which could have a material adverse effect on the Company. External factors are considered in the Company's planning process. However, if the Company is unable to carry out capital expenditure plans in a timely manner, equipment performance may degrade, which may reduce transmission capacity, compromise the reliability of the Company's transmission system or increase the costs of operating and maintaining these assets. Any of these consequences could have a material adverse effect on the Company.

Increased competition for the development of large transmission projects and legislative changes relating to the selection of transmitters could impact the Company's ability to expand its existing transmission system, which may have an adverse effect on the Company. To the extent that other parties are selected to construct, own and operate new transmission assets, the Company's share of Ontario's transmission network would be reduced.

## Health, Safety and Environmental Risk

Hydro One's health, safety and environmental management system is designed to ensure hazards and risks are identified and assessed, and controls are implemented to mitigate significant risks. This system includes a standing committee of the Board of Directors that has governance over health, safety and environmental matters. However, given the expansive territory that the Company's system encompasses and the amount of equipment that it owns, the Company cannot guarantee that all such risks will be identified and mitigated without significant cost and expense to the Company. The following are some of the areas that may have a significant impact on the Company's operations.

The Company is subject to extensive Canadian federal, provincial and municipal environmental regulation. Failure to comply could subject the Company to fines or other penalties. In addition, the presence or release of hazardous or other harmful substances could lead to claims by third parties or governmental orders requiring the Company to take specific actions such as investigating, controlling and remediating the effects of these substances. Hydro One currently has a voluntary land assessment and remediation program for off-site migration in place to identify and, where necessary, remediate historical contamination that has resulted from past operational practices and uses of certain long-lasting chemicals at the Company's facilities. Any contamination of the Company's properties could limit its ability to sell or lease these assets in the future.

In addition, actual future environmental expenditures may vary materially from the estimates used in the calculation of the environmental liabilities on the Company's balance sheet. The Company does not have insurance coverage for these environmental expenditures.

There is also risk associated with obtaining governmental approvals, permits, or renewals of existing approvals and permits related to constructing or operating facilities. This may require environmental assessment or result in the imposition of conditions, or both, which could result in delays and cost increases.

Although Hydro One is not a large emitter of greenhouse gases, the Company monitors all of these emissions and has a management plan in place to track and report on all sources, including sulphur hexafluoride or "SF6". In addition, the Company recognizes the risks associated with potential climate change and has developed plans to respond as appropriate.

The Company anticipates that all of its future environmental expenditures will continue to be recoverable in future rates. However, any future regulatory decision to disallow or limit the recovery of such costs could have a material adverse effect on the Company.

## Pension Plan Risk

Hydro One has the Hydro One Defined Benefit Pension Plan in place for the majority of its employees. Contributions to the pension plan are established by actuarial valuations which are minimally required to be filed with the Financial Services Commission of Ontario on a triennial basis. The most recently filed valuation was prepared as at December 31, 2013, and was filed in June 2014, covering a three year period from 2014 to 2016. Hydro One contributed approximately $174 million in respect of 2014, approximately $177 million in respect of 2015, and is expected to contribute approximately $180 million by the end of 2016 to its pension plan to satisfy minimum funding requirements. Contributions beyond 2016 are expected to continue to be significant; actual amounts will depend on investment returns, interest rates, changes in benefits and actuarial assumptions, and may include additional voluntary contributions by the Company from time to time. A determination by the OEB that some of the Company's pension expenditures are not recoverable through rates could have a material adverse effect on the Company, and this risk may be exacerbated if the amount of required pension contributions increases.

The OEB has begun a consultation process that will examine pensions and other post-employment benefits in regulated utilities. See "– Other Post-Employment and Post-Retirement Benefits Risks". The outcome of this consultation process is uncertain and the Company is unable to assess the impact of the potential changes stemming from the review at this time.

## Risk of Recoverability of Total Compensation Costs

The Company manages all of its total compensation costs, including pension and other post-employment and post-retirement benefits, subject to restrictions and requirements imposed by the collective bargaining process. Should any element of total compensation costs be disallowed in whole or part by the OEB and not be recoverable from customers in rates, the costs could be material and could lead to changes to the Company's results of operations and decrease net income, which could have a material adverse effect on the Company.

## Other Post-Employment and Post-Retirement Benefits Risks

The Company provides other post-employment and post-retirement benefits, including workers compensation benefits and long-term disability benefits to qualifying employees. The OEB has begun a consultation process that will examine pensions and other post-employment benefits in regulated utilities. The objectives of the consultation are to develop standard principles to guide the OEB's review of pension and other post-employment and post-retirement benefits costs in the future, to establish specific information requirements for application and to establish appropriate regulatory mechanisms for cost recovery which can be applied consistently across the gas and electricity sectors for rate-regulated utilities. The outcome of this consultation process is uncertain and the Company is unable to assess the impact of the potential changes stemming from the review at this time. A determination that some of the Company's post-employment and post-retirement benefit costs are not recoverable could have a material adverse effect on the Company.

## Risk Associated with Outsourcing Arrangements

Consistent with Hydro One's strategy of reducing operating costs, it has entered into an outsourcing arrangement with Inergi for the provision of back office services and call centre services. If the outsourcing arrangement or statements of work thereunder are terminated for any reason or expire before a new supplier is selected, the Company could be required to incur significant expenses to transfer to another service provider or insource, which could have a material adverse effect on the Company's business, operating results, financial condition or prospects.

## Risk from Provincial Ownership of Transmission Corridors

The Province owns some of the corridor lands underlying the Company's transmission system. Although the Company has the statutory right to use these transmission corridors, the Company may be limited in its options to expand or operate its systems. Also, other uses of the transmission corridors by third parties in conjunction with the operation of the Company's systems may increase safety or environmental risks, which could have a material adverse effect on the Company.

## Litigation Risks

In the normal course of the Company's operations, it may become involved in, be named as a party to or be the subject of, various legal proceedings, including regulatory proceedings, tax proceedings and legal actions, relating to actual or alleged violations of law, common law damages claims, personal injuries, property damage, property taxes, land rights, the environment and contract disputes. The outcome of outstanding, pending or future proceedings cannot be predicted with certainty and may be determined adversely to the Company, which could have a material adverse effect on the Company. Even if the Company prevails in any such legal proceeding, the proceedings could be costly and time-consuming and would divert the attention of management and key personnel from the Company's business operations, which could adversely affect the Company.

# Risks Relating to the Company's Relationship with the Province

## Ownership by the Province and Voting Power; Share Ownership Restrictions

The Province currently owns approximately 84% of the common shares of Hydro One. The *Electricity Act* restricts the Province from selling voting securities of Hydro One (including common shares) of any class or series if it would own less than 40% of the outstanding number of voting securities of that class or series after the sale and in certain circumstances also requires the Province to take steps to maintain that level of ownership. Accordingly, the Province is expected to continue to maintain a significant ownership interest in voting securities of Hydro One for an indefinite period.

As a result of its significant ownership of the common shares of Hydro One, the Province has, and is expected indefinitely to have, the ability to determine or significantly influence the outcome of shareholder votes, subject to the restrictions in the governance agreement entered into between Hydro One and the Province dated November 5, 2015 ("Governance Agreement"; available on SEDAR at www.sedar.com). While, with respect to its ownership interest in Hydro One, the Province has agreed to engage in the business and affairs of Hydro One only as an investor and not as a manager, and has stated its intention to achieve its policy objectives through legislation and regulation as it would with respect to any other utility operating in Ontario, the Governance Agreement preserves the Province's right to vote its common shares in its sole interest, which may not be aligned with the interests of the Company's other shareholders.

The share ownership restrictions in the *Electricity Act* ("Share Ownership Restrictions") and the Province's significant ownership of common shares of Hydro One together effectively prohibit one or more persons acting together from acquiring control of Hydro One. They also may limit or discourage transactions involving other fundamental changes to Hydro One and the ability of other shareholders to successfully contest the election of the directors proposed for election pursuant to the Governance Agreement. The Share Ownership Restrictions may also discourage trading in, and may limit the market for, the common shares and other voting securities.

## Continued Influence by the Province

Despite the terms of the Governance Agreement in which the Province has agreed to engage in the business and affairs of the Company as an investor and not as a manager, there is a risk that the Province's engagement in the business and affairs of the Company as an investor will be informed by its own policy objectives and may influence the conduct of the business and affairs of the Company in ways that may not be aligned with the interests of other shareholders.

## Nomination of Directors and Confirmation of Chief Executive Officer and Chair

Although director nominees are required to be independent of both the Company and the Province pursuant to the Governance Agreement, there is a risk that the Province will nominate or confirm individuals who satisfy the independence requirements but who it considers are disposed to support and advance its policy objectives and give disproportionate weight to the Province's interests in exercising their business judgment and balancing the interests of the stakeholders of Hydro One. This, combined with the fact certain matters require a two-thirds vote of the Board of Directors, could allow the Province to unduly influence certain Board actions such as confirmation of the Chair and confirmation of the Chief Executive Officer.

## Board Removal Rights

Under the Governance Agreement, the Province has the right to withhold from voting in favour of all director nominees and has the right to seek to remove and replace the entire Board of Directors, including in each case its own director nominees but excluding the Chief Executive Officer and, at the Province's discretion, the Chair. In exercising these rights in any particular circumstance, the Province is entitled to vote in its sole interest, which may not be aligned with the interests of other shareholders.

## More Extensive Regulation

Although under the Governance Agreement, the Province has agreed to engage in the business and affairs of Hydro One as an investor and not as a manager and has stated that its intention is to achieve its policy objectives through legislation and regulation as it would with respect to any other utility operating in Ontario, there is a risk that the Province will exercise its legislative and regulatory power to achieve policy objectives in a manner that has a material adverse effect on the Company.

## Prohibitions on Selling the Company's Transmission or Distribution Business

The *Electricity Act* prohibits the Company from selling all or substantially all of the business, property or assets related to its transmission system or distribution system that is regulated by the OEB. There is a risk that these prohibitions may limit the ability of the Company to engage in sale transactions involving a substantial portion of either system, even where such a transaction may otherwise be considered to provide substantial benefits to the Company and the holders of the common shares.

## Future Sales of Common Shares by the Province

The Province has indicated that it currently intends to sell further common shares of Hydro One over time, until it holds approximately 40% of the common shares, subject to the selling restrictions agreed with the Underwriters. The registration rights agreement between Hydro One and the Province dated November 5, 2015 (available on SEDAR at www.sedar.com) also grants the Province the right to request that Hydro One file one or more prospectuses and take other procedural steps to facilitate secondary offerings by the Province of the common shares of Hydro One. Future sales of common shares of Hydro One by the Province, or the perception that such sales could occur, may materially adversely affect market prices for these common shares and impede Hydro One's ability to raise capital through the issuance of additional common shares, including the number of common shares that Hydro One may be able to sell at a particular time or the total proceeds that may be realized.

### Limitations on Enforcing the Governance Agreement

The Governance Agreement includes commitments by the Province restricting the exercise of its rights as a holder of voting securities, including with respect to the maximum number of directors that the Province may nominate and on how the Province will vote with respect to other director nominees. Hydro One's ability to obtain an effective remedy against the Province, if the Province were not to comply with these commitments, is limited as a result of the *Proceedings Against the Crown Act* (Ontario). This legislation provides that the remedies of injunction and specific performance are not available against the Province, although a court may make an order declaratory of the rights of the parties, which may influence the Province's actions. A remedy of damages would be available to Hydro One, but damages may not be an effective remedy, depending on the nature of the Province's non-compliance with the Governance Agreement.

## Critical Accounting Estimates

The preparation of Hydro One Consolidated Financial Statements requires the Company to make estimates and judgments that affect the reported amounts of assets, liabilities, revenues and costs, and related disclosures of contingencies. Hydro One bases its estimates and judgments on historical experience, current conditions and various other assumptions that are believed to be reasonable under the circumstances, the results of which form the basis for making judgments about the carrying values of assets and liabilities, as well as identifying and assessing the Company's accounting treatment with respect to commitments and contingencies. Actual results may differ from these estimates and judgments. Hydro One has identified the following critical accounting estimates used in the preparation of its Consolidated Financial Statements:

### Revenues

Distribution revenues are recognized on an accrual basis and include billed and unbilled revenues. Unbilled revenues are based on an estimate of electricity delivered determined by historical trends of consumption and are estimated at the end of each month. The unbilled revenue estimate is affected by energy consumption, weather, and changes in the composition of customer classes.

### Accounts Receivable and Allowance for Doubtful Accounts

In 2015, the Company revised its method to estimate the unbilled accounts receivable based on new technology implemented to enhance the estimation process. This change has been accounted for on a prospective basis in the consolidated financial statements at December 31, 2015. At December 31, 2015, the change in estimate reduced unbilled accounts receivable by approximately $121 million, with a corresponding offset to various components of the retail settlement variance accounts (RSVA) regulatory asset. The change in estimate had no impact on 2015 revenues or net income.

The allowance for doubtful accounts reflects the Company's best estimate of losses on billed accounts receivable balances. The Company estimates the allowance for doubtful accounts on customer receivables by applying internally developed loss rates to the outstanding receivable balances by aging category. Loss rates applied to the accounts receivable balances are based on historical overdue balances, customer payments and write-offs.

### Regulatory Assets and Liabilities

Hydro One's regulatory assets represent certain amounts receivable from future electricity customers and costs that have been deferred for accounting purposes because it is probable that they will be recovered in future rates. The regulatory assets mainly include costs related to the pension benefit liability, deferred income tax liabilities, post-retirement and post-employment benefit liability, share-based compensation costs, and environmental liabilities. The Company's regulatory liabilities represent certain amounts that are refundable to future electricity customers, and pertain primarily to OEB deferral and variance accounts. The regulatory assets and liabilities can be recognized for rate-setting and financial reporting purposes only if the amounts have been approved for inclusion in the electricity rates by the OEB, or if such approval is judged to be probable by management. If management judges that it is no longer probable that the OEB will allow the inclusion of a regulatory asset or liability in future electricity rates, the applicable carrying amount of the regulatory asset or liability will be reflected in results of operations in the period that the judgment is made by management.

### Environmental Liabilities

Hydro One records a liability for the estimated future expenditures associated with the removal and destruction of PCB-contaminated insulating oils and related electrical equipment, and for the assessment and remediation of chemically-contaminated lands. There are uncertainties in estimating future environmental costs due to potential external events such as changes in legislation or regulations and advances in remediation technologies. In determining the amounts to be recorded as environmental liabilities, the Company estimates the current cost of completing required work and makes assumptions as to when the future expenditures will actually be incurred, in order to generate future cash flow information. All factors used in estimating the Company's environmental liabilities represent management's best estimates of the present value of costs required to meet existing legislation or regulations. However, it is reasonably possible that numbers or volumes of contaminated assets, cost estimates to perform work, inflation assumptions and the assumed pattern of annual cash flows may differ significantly from the Company's current assumptions. Environmental liabilities are reviewed annually or more frequently if significant changes in regulations or other relevant factors occur. Estimate changes are accounted for prospectively.

## Employee Future Benefits

Hydro One's employee future benefits consist of pension and post-retirement and post-employment plans, and include pension, group life insurance, health care, and long-term disability benefits provided to the Company's current and retired employees. Employee future benefits costs are included in Hydro One's labour costs that are either charged to results of operations or capitalized as part of the cost of property, plant and equipment and intangible assets. Changes in assumptions affect the benefit obligation of the employee future benefits and the amounts that will be charged to results of operations or capitalized in future years. The following significant assumptions and estimates are used to determine employee future benefit costs and obligations:

### Weighted Average Discount Rate

The weighted average discount rate used to calculate the employee future benefits obligation is determined at each year end by referring to the most recently available market interest rates based on "AA"-rated corporate bond yields reflecting the duration of the applicable employee future benefit plan. The discount rate at December 31, 2015 remained at 4.00% for pension benefits whereas it increased to 4.10% (from 4.00% used at December 31, 2014) for the post-retirement and post-employment plans. The increase in the discount rate has resulted in a corresponding decrease in employee future benefits liabilities for the post-retirement and post-employment plans for accounting purposes. The liabilities are determined by independent actuaries using the projected benefit method prorated on service and based on assumptions that reflect management's best estimates.

### Expected Rate of Return on Plan Assets

The expected rate of return on pension plan assets is based on expectations of long-term rates of return at the beginning of the year and reflects a pension asset mix consistent with the pension plan's current investment policy.

Rates of return on the respective portfolios are determined with reference to respective published market indices. The expected rate of return on pension plan assets reflects the Company's long-term expectations. We believe that this assumption is reasonable because, with the pension plan's balanced investment approach, the higher volatility of equity investment returns is intended to be offset by the greater stability of fixed-income and short-term investment returns. The net result, on a long-term basis, is a lower return than might be expected by investing in equities alone. In the short term, the pension plan can experience fluctuations in actual rates of return.

### Rate of Cost of Living Increase

The rate of cost of living increase is determined by considering differences between long-term Government of Canada nominal bonds and real return bonds, which decreased from 1.70% per annum as at December 31, 2014 to approximately 1.50% per annum as at December 31, 2015. Given the Bank of Canada's commitment to keep long-term inflation between 1.00% and 3.00%, management believes that the current rate is reasonable to use as a long-term assumption and as such, has used a 2.0% per annum inflation rate for employee future benefits liability valuation purposes as at December 31, 2015.

### Mortality Assumptions

The Company's employee future benefits liability is also impacted by changes in life expectancies used in mortality assumptions. Increases in life expectancies of plan members result in increases in the employee future benefits liability. The mortality assumption at December 31, 2015 is based on the final tables issued by the Canadian Institute of Actuaries (for public sector, with projection scale CPM-B and no adjustment due to pension size). This is the same assumption as was used as of December 31, 2014.

### Rate of Increase in Health Care Cost Trends

The costs of post-retirement and post-employment benefits are determined at the beginning of the year and are based on assumptions for expected claims experience and future health care cost inflation. A 1% increase in the health care cost trends would result in a $22 million increase in 2015 interest cost plus service cost, and a $252 million increase in the year-end 2015 benefit liability.

## Asset Impairment

Within Hydro One's regulated businesses, the carrying costs of most of the long-lived assets are included in the rate base where they earn an OEB-approved rate of return. Asset carrying values and the related return are recovered through OEB-approved rates. As a result, such assets are only tested for impairment in the event that the OEB disallows recovery, in whole or in part, or if such a disallowance is judged to be probable. We regularly monitor the assets of the

Company's unregulated Hydro One Telecom subsidiary for indications of impairment. As at December 31, 2015, no asset impairment had been recorded for assets within Hydro One's regulated or unregulated businesses.

Goodwill is evaluated for impairment on an annual basis, or more frequently if circumstances require. Hydro One has concluded that goodwill was not impaired at December 31, 2015. Goodwill represents the cost of acquired local distribution companies that is in excess of the fair value of the net identifiable assets acquired at the acquisition date.

## Disclosure Controls And Internal Controls Over Financial Reporting

Internal controls have been documented and tested for adequacy and effectiveness, and continue to be refined over all business processes.

In compliance with the requirements of National Instrument 52-109, the Company's Certifying Officers have reviewed and certified the Consolidated Financial Statements for the year ended December 31, 2015, together with other financial information included in the Company's securities filings. The Certifying Officers have also certified that disclosure controls and procedures (DC&P) have been designed to provide reasonable assurance that material information relating to the Company is made known within the Company. Further, the Certifying Officers have certified that internal controls over financial reporting (ICFR) have been designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of the Consolidated Financial Statements. Based on the evaluation of the design and operating effectiveness of the Company's DC&P and ICFR, the Certifying Officers concluded that the Company's DC&P and ICFR were effective as at December 31, 2015.

## New Accounting Pronouncements

In January 2015, the Financial Accounting Standards Board (FASB) issued an accounting standards update that eliminates the requirements for reporting entities to consider whether an underlying event or transaction is extraordinary and to show the item separately in the income statement. This update is applicable to Hydro One for the years and interim periods beginning on January 1, 2016. The Company does not anticipate that the adoption of this update will have a significant impact on its consolidated financial statements.

In February 2015, the FASB issued an accounting standards update that provides guidance about the analysis that a reporting entity must perform to determine whether it should consolidate certain types of legal entities. This update is applicable to Hydro One for the years and interim periods beginning on January 1, 2016. The Company does not anticipate that the adoption of this update will have a significant impact on its consolidated financial statements.

In April 2015, the FASB issued an accounting standards update that requires debt issuance costs related to a recognized debt liability to be presented on the balance sheet as a direct deduction from the carrying amount of that debt liability. The recognition and measurement guidance for debt issuance costs are not affected. This update is applicable to Hydro One for the years and interim periods beginning on January 1, 2016. Upon adoption of this update in the first quarter of 2016, the Company's deferred debt issuance costs that are currently presented under other long-term assets will be reclassified as a deduction from the carrying amount of long-term debt.

In April 2015, the FASB issued an accounting standards update that permits an entity with a fiscal year-end that does not coincide with a month-end and an entity that has a significant event in an interim period that calls for a remeasurement of defined benefit plan assets and obligations to measure the defined benefit plan assets and obligations using the month-end that is closest to the entity's fiscal year-end. This update is applicable to Hydro One for the years and interim periods beginning on January 1, 2016. The Company does not anticipate that the adoption of this update will have a significant impact on its consolidated financial statements.

In April 2015, the FASB issued an accounting standards update that provides guidance to customers about whether a cloud computing arrangement includes a software license, as well as the related accounting for the arrangement. This update is applicable to Hydro One for the years and interim periods beginning on January 1, 2016. The Company is currently assessing the impact of adoption of this update on its consolidated financial statements.

In August 2015, the FASB issued an accounting standards update that defers by one year the effective date of a revenue recognition standard issued in 2014 to January 1, 2018. The standard provides guidance on revenue recognition that depicts the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expects to be entitled in exchange for those goods and services. The Company is currently assessing the impact of adoption of this update on its consolidated financial statements.

In September 2015, the FASB issued an accounting standards update that requires an acquirer to recognize adjustments to provisional amounts that are identified during the measurement period of a business combination in the reporting period in which the adjustment amounts are determined. This update is applicable to Hydro One for the years and interim periods beginning on January 1, 2016 for measurement adjustments related to business combinations.

In November 2015, the FASB issued an accounting standards update that requires all deferred tax assets and liabilities to be classified as noncurrent on the balance sheet. This update is applicable to Hydro One for the years and interim periods beginning on January 1, 2017. Upon adoption of this update in the first quarter of 2017, the current portions of the Company's deferred income tax assets and liabilities will be reclassified as long-term assets and liabilities on the consolidated Balance Sheets.

In January 2016, the FASB issued an accounting standards update that requires equity investments to be measured at fair value with changes in fair value recognized in net income, and requires enhanced disclosures and presentation of financial assets and liabilities in the financial statements. This update also simplifies the impairment assessment of equity investments without readily determinable fair values by requiring a qualitative assessment to identify impairment. This update is applicable to Hydro One for the years and interim periods beginning on January 1, 2018. The Company is currently assessing the impact of adoption of this update on its consolidated financial statements.

# Other Matters

## Appointment of New Board of Directors

In 2015, the Province appointed a fully independent Board of Directors to govern Hydro One as a publicly traded company, with a renewed focus on customer service excellence, improved performance and reliability, and growing shareholder value. Each of the directors, including Canadian business leaders, electricity sector experts, corporate directors and a former provincial Ombudsman, was selected based upon their independence, commercial experience, and specific expertise.

## Appointment of President and Chief Executive Officer

In August 2015, the Company's Board of Directors announced the appointment of Mayo Schmidt as Hydro One's new President and Chief Executive Officer, effective September 3, 2015. Mr. Schmidt was most recently the Chief Executive Officer of Viterra Inc.

## Appointment of Chief Financial Officer

In June 2015, Mr. Michael Vels was appointed to the position of Chief Financial Officer of Hydro One, effective July 1, 2015. Mr. Vels was most recently the Chief Financial Officer at Maple Leaf Foods Inc.

## Appointment of Hydro One Ombudsman

In October 2015, the Hydro One Board of Directors announced the appointment of Fiona Crean to the role of Ombudsman for Hydro One, effective November 17, 2015. Ms. Crean most recently served as the City of Toronto's Ombudsman, and has worked in the area of dispute resolution and complaints investigation for more than 25 years. Ms. Crean will report directly to the Hydro One Board of Directors.

## Summary of Fourth Quarter Results of Operations

| *Quarter ended December 31* *(millions of Canadian dollars, except per share amounts)* | 2015 | 2014 | Change |
|---|---|---|---|
| **Revenues** | | | |
| Distribution | 1,148 | 1,268 | (9.5%) |
| Transmission | 361 | 382 | (5.5%) |
| Other | 13 | 12 | 8.3% |
| | 1,522 | 1,662 | (8.4%) |
| **Costs** | | | |
| Purchased power | 786 | 893 | (12.0%) |
| OM&A | | | |
| Distribution | 146 | 148 | (1.4%) |

| | 1,280 | 1,330 | (3.8%) |
| **Income before financing charges and income taxes** | 242 | 332 | (27.1%) |
| Financing charges | 94 | 98 | (4.1%) |
| **Income before income taxes** | 148 | 234 | (36.8%) |
| Income tax expense | 1 | 15 | (93.3%) |
| **Net income** | 147 | 219 | (32.9%) |
| **Net income attributable to common shareholders of Hydro One** | 143 | 216 | (33.8%) |
| **Basic and diluted EPS** | $ 0.26 | $ 0.45 | (42.2%) |
| Capital investments | | | |
| Distribution | 198 | 211 | (6.2%) |
| Transmission | 251 | 265 | (5.3%) |
| Other | 2 | 2 | – |
| | 451 | 478 | (5.6%) |

### Net Income and EPS

The changes to net income and EPS were primarily due to the following:

- Milder weather resulted in a decrease in transmission revenues, mainly due to lower average monthly Ontario 60-minute peak demand, and lower net distribution revenues; and
- Although expenses related to stabilization of the Company's customer information system were significantly lower than last year, OM&A costs increased from last year, primarily due to:
  - expenses related to write-offs of project and inventory costs due to revisions of asset replacement strategies;
  - higher storm restoration efforts due to multiple windstorms in the fourth quarter of 2015;
  - timing of preventative maintenance on grid infrastructure;
  - insurance proceeds receipts in 2014 that did not re-occur in 2015; and
  - expenditures related to integration of acquired local distribution companies.

Income tax expense for the quarter was reduced by an income tax recovery of $19 million due to tax benefits related to the IPO.

Excluding this effect, the fourth quarter 2015 effective tax rate would have been approximately 13.8% compared to the fourth quarter 2014 effective tax rate of approximately 6.6%.

### Revenues

The quarterly decrease of $21 million or 5.5% in transmission revenues was primarily due to lower average monthly Ontario 60-minute peak demand associated with unseasonably warm weather during the fourth quarter of 2015.

The quarterly decrease of $120 million or 9.5% in distribution revenues was primarily due to lower purchased power costs, the spin-off of Hydro One Brampton, and lower consumption due primarily to milder weather, partially offset by higher OEB-approved distribution rates.

### OM&A Costs

The quarterly increase of $42 million or 48.8% in transmission OM&A costs was primarily due to the following:

- expenses related to write-offs of project and inventory costs due to revisions of asset replacement strategies;
- higher volumes of preventative and corrective station maintenance on power equipment;
- insurance proceeds received in the fourth quarter of 2014 related to 2013 floods at the Company's Richview and Manby transformer stations which were recorded as a reduction in 2014 OM&A costs;
- higher expenditures during 2015 related to work required to adhere to the NERC Cyber Security standards; and
- increased expenditures related to forestry control and line clearing on the Company's transmission rights-of-way.

The decrease of $2 million or 1.4% in distribution OM&A costs during the fourth quarter of 2015 was primarily due to the following:

- a decrease in bad debt expense and lower expenditures related to remediation of the Company's customer information system; and
- decreased vegetation management expenditures relating to distribution line clearing and forestry control; partially offset by
- increased costs associated with responding to power quality-related issues and outages as a result of multiple wind storms which occurred during the fourth quarter of 2015.

### Depreciation and Amortization

The increase of $3 million or 1.6% in depreciation and amortization costs during the fourth quarter of 2015 compared to last year was mainly due to the growth in capital assets as the Company continues to place new assets in-service, consistent with its multi-year capital investment program.

### Income Taxes

The decrease of $14 million in income tax expense for the fourth quarter of 2015 compared to 2014 was due to lower income before taxes, in addition to the positive effect of an income tax recovery associated with the step-up of the tax basis of the assets of Hydro One Inc. and its subsidiaries to fair market value in excess of the Departure Tax incurred when Hydro One exited the PILs Regime.

For the fourth quarter of 2015, the Company realized an effective tax rate of approximately 0.7%, compared to approximately 6.6% realized for the fourth quarter of 2014. The difference in the effective tax rates is due primarily to the income tax recovery on the revaluation of the assets of Hydro One on exiting the PILs Regime, partially offset by a decrease in accelerated capital cost allowance over depreciation recognized in 2014 for certain classes of assets.

### Capital Investments

During the fourth quarter of 2015, the Company made capital investments totalling $451 million and placed $607 million of new assets in-service. Capital investments in the transmission system during the fourth quarter included equipment replacements at the Bruce, Richview and Pickering Transmission Stations, and continued work on the Company's major inter-area network and local area supply projects, including the Clarington Transmission Station and Guelph Area Transmission Refurbishment projects.

Capital investments in the distribution system during the fourth quarter included capital work related to station refurbishment programs and wood utility pole replacements, continued investments in new customer connections and upgrades, and increased storm restoration work as a result of two significant wind storms during the fourth quarter of 2015.

## Forward-looking Statements And Information

The Company's oral and written public communications, including this document, often contain forward-looking statements that are based on current expectations, estimates, forecasts and projections about the Company's business and the industry in which it operates, and include beliefs and assumptions made by the management of the Company. Such statements include, but are not limited to: expectations regarding energy-related revenues and profit and their trend; statements regarding the Company's transmission and distribution rates resulting from rate applications; statements about

CDM; statements regarding the Company's liquidity and capital resources and operational requirements; statements about the standby credit facilities; expectations regarding the Company's financing activities; statements regarding the Company's maturing debt; statements regarding ongoing and planned projects and/or initiatives including the expected results of these projects and/or initiatives and their completion dates; expectations regarding the recoverability of large capital investments; statements regarding expected future capital and development investments, the timing of these expenditures and the Company's investment plans; statements regarding contractual obligations and other commercial commitments; statements related to the OEB; statements regarding future pension contributions, the pension plan and actuarial valuation; expectations related to workforce demographics; statements about the outsourcing arrangements with Inergi and Brookfield; expectations regarding work and costs of compliance with environmental and health and safety regulations; statements related to critical accounting estimates, including employee future benefits and expectations regarding regulatory assets and liabilities; statements about non-GAAP measures; statements regarding recent accounting-related guidance; statements about internal controls; expectations about effect of interest rates; statements related to Hydro One Brampton; statements about collective agreements; expectations regarding taxes; statements related to future sales of shares of Hydro One; statements related to the Company's relationship with the Province; statements about share-based compensation; statements related to claims; statements regarding the role of Hydro One's Ombudsman; and statements related to the Company's acquisitions and integrations, including statements about Great Lakes Power Transmission LP, Woodstock Hydro, Haldimand Hydro, and Norfolk Power. Words such as "expect", "anticipate", "intend", "attempt", "may", "plan", "will", "believe", "seek", "estimate", "goal", "aim", "target", and variations of such words and similar expressions are intended to identify such forward-looking statements. These statements are not guarantees of future performance and involve assumptions and risks and uncertainties that are difficult to predict. Therefore, actual outcomes and results may differ materially from what is expressed, implied or forecasted in such forward-looking statements. Hydro One does not intend, and it disclaims any obligation, to update any forward-looking statements, except as required by law.

These forward-looking statements are based on a variety of factors and assumptions including, but not limited to, the following: no unforeseen changes in the legislative and operating framework for Ontario's electricity market; favourable decisions from the OEB and other regulatory bodies concerning outstanding and future rate and other applications; no unexpected delays in obtaining the required approvals; no unforeseen changes in rate orders or rate setting methodologies for the Company's Distribution and Transmission Businesses; continued use of US GAAP; a stable regulatory environment; no unfavourable changes in environmental regulation; and no significant event occurring outside the ordinary course of business. These assumptions are based on information currently available to the Company, including information obtained from third party sources. Actual results may differ materially from those predicted by such forward-looking statements. While Hydro One does not know what impact any of these differences may have, the Company's business, results of operations, financial condition and credit stability may be materially adversely affected. Factors that could cause actual results or outcomes to differ materially from the results expressed or implied by forward-looking statements include, among other things:

- risks associated with the Province's significant share ownership of Hydro One and other relationships with the Province, including potential conflicts of interest that may arise between Hydro One, the Province and related parties;
- regulatory risks and risks relating to Hydro One's revenues, including risks relating to rate orders, actual performance against forecasts and capital expenditures;
- the risk that previously granted regulatory approvals may be subsequently challenged, appealed or overturned;
- the risk that the Company may be unable to comply with regulatory and legislative requirements or that the Company may incur additional costs for compliance that are not recoverable through rates;
- the risk of exposure of the Company's facilities to the effects of severe weather conditions, natural disasters or other unexpected occurrences for which the Company is uninsured or for which the Company could be subject to claims for damage;
- public opposition to and delays or denials of the requisite approvals and accommodations for the Company's planned projects;
- the risk that Hydro One may incur significant costs associated with transferring assets located on Reserves (as defined in the Indian Act (Canada));
- the risks associated with information system security and with maintaining a complex information technology system infrastructure;
- the risks related to the Company's workforce demographic and its potential inability to attract and retain qualified personnel;
- the risk of labour disputes and inability to negotiate appropriate collective agreements on acceptable terms consistent with the Company's rate decisions;
- risk that the Company is not able to arrange sufficient cost-effective financing to repay maturing debt and to fund capital expenditures;

- risks associated with fluctuations in interest rates and failure to manage exposure to credit risk;
- the risk that the Company may not be able to execute plans for capital projects necessary to maintain the performance of the Company's assets or to carry out projects in a timely manner;
- the risk of non-compliance with environmental regulations or failure to mitigate significant health and safety risks and inability to recover environmental expenditures in rate applications;
- the risk that assumptions that form the basis of the Company's recorded environmental liabilities and related regulatory assets may change;
- changes in benefits and changes in actuarial assumptions;
- the risk of not being able to recover the Company's pension expenditures in future rates and uncertainty regarding the future regulatory treatment of pension, other post-employment benefits and post-retirement benefits costs;
- the potential that Hydro One may incur significant expenses to replace some or all of the functions currently outsourced if either of the Company's agreements with Inergi or Brookfield are terminated or expire before a new service provider is selected;
- the risks associated with economic uncertainty and financial market volatility;
- the inability to prepare financial statements using US GAAP; and
- the impact of the ownership by the Province of lands underlying the Company's transmission system.

Hydro One cautions the reader that the above list of factors is not exhaustive. Some of these and other factors are discussed in more detail in the section "Risk Management and Risk Factors" in this MD&A.

In addition, Hydro One cautions the reader that information provided in this MD&A regarding the Company's outlook on certain matters, including potential future expenditures, is provided in order to give context to the nature of some of the Company's future plans and may not be appropriate for other purposes.

Additional information about Hydro One is available on SEDAR at www.sedar.com.

# Management's Report

The Consolidated Financial Statements, Management's Discussion and Analysis (MD&A) and related financial information have been prepared by the management of Hydro One Limited (Hydro One or the Company). Management is responsible for the integrity, consistency and reliability of all such information presented. The Consolidated Financial Statements have been prepared in accordance with United States Generally Accepted Accounting Principles and applicable securities legislation. The MD&A has been prepared in accordance with National Instrument 51-102.

The preparation of the Consolidated Financial Statements and information in the MD&A involves the use of estimates and assumptions based on management's judgment, particularly when transactions affecting the current accounting period cannot be finalized with certainty until future periods. Estimates and assumptions are based on historical experience, current conditions and various other assumptions believed to be reasonable in the circumstances, with critical analysis of the significant accounting policies followed by the Company as described in Note 2 to the Consolidated Financial Statements. The preparation of the Consolidated Financial Statements and the MD&A includes information regarding the estimated impact of future events and transactions. The MD&A also includes information regarding sources of liquidity and capital resources, operating trends, risks and uncertainties. Actual results in the future may differ materially from the present assessment of this information because future events and circumstances may not occur as expected. The Consolidated Financial Statements and MD&A have been properly prepared within reasonable limits of materiality and in light of information up to February 11, 2016.

Management is responsible for establishing and maintaining adequate internal control over financial reporting for the Company. In meeting its responsibility for the reliability of financial information, management maintains and relies on a comprehensive system of internal control and internal audit. The system of internal control includes a written corporate conduct policy; implementation of a risk management framework; effective segregation of duties and delegation of authorities; and sound and conservative accounting policies that are regularly reviewed. This structure is designed to provide reasonable assurance that assets are safeguarded and that reliable information is available on a timely basis. In addition, management has assessed the design and operating effectiveness of the Company's internal control over financial reporting in accordance with the criteria set forth in Internal Control – Integrated Framework (2013), issued by the Committee of Sponsoring Organizations of the Treadway Commission. Based on this assessment, management concluded that the Company maintained effective internal control over financial reporting as of December 31, 2015. The effectiveness of these internal controls is reported to the Audit Committee of the Hydro One Board of Directors, as required.

The Consolidated Financial Statements have been audited by KPMG LLP, independent external auditors appointed by the shareholders of the Company. The external auditors' responsibility is to express their opinion on whether the Consolidated Financial Statements are fairly presented in accordance with United States Generally Accepted Accounting Principles. The Independent Auditors' Report outlines the scope of their examination and their opinion.

The Hydro One Board of Directors, through its Audit Committee, is responsible for ensuring that management fulfills its responsibilities for financial reporting and internal controls. The Audit Committee of Hydro One met periodically with management, the internal auditors and the external auditors to satisfy itself that each group had properly discharged its respective responsibility and to review the Consolidated Financial Statements before recommending approval by the Board of Directors. The external auditors had direct and full access to the Audit Committee, with and without the presence of management, to discuss their audit findings.

The President and Chief Executive Officer and the Chief Financial Officer have certified Hydro One's annual Consolidated Financial Statements and annual MD&A, related disclosure controls and procedures and the design and effectiveness of related internal controls over financial reporting.

On behalf of Hydro One's management:

Mayo Schmidt
President and Chief
Executive Officer

Michael Vels
Chief Financial Officer

# Independent Auditors' Report

*To the Shareholders of Hydro One Limited*

We have audited the accompanying Consolidated Financial Statements of Hydro One Limited, which comprise the consolidated balance sheets as at December 31, 2015 and December 31, 2014, the consolidated statements of operations and comprehensive income, changes in equity and cash flows for the years then ended, and notes, comprising a summary of significant accounting policies and other explanatory information.

## *Management's Responsibility for the Consolidated Financial Statements*

Management is responsible for the preparation and fair presentation of these Consolidated Financial Statements in accordance with United States Generally Accepted Accounting Principles, and for such internal control as management determines is necessary to enable the preparation of Consolidated Financial Statements that are free from material misstatement, whether due to fraud or error.

## *Auditors' Responsibility*

Our responsibility is to express an opinion on these Consolidated Financial Statements based on our audits. We conducted our audits in accordance with Canadian generally accepted auditing standards. Those standards require that we comply with ethical requirements and plan and perform the audit to obtain reasonable assurance about whether the Consolidated Financial Statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the Consolidated Financial Statements. The procedures selected depend on our judgment, including the assessment of the risks of material misstatement of the Consolidated Financial Statements, whether due to fraud or error. In making those risk assessments, we consider internal control relevant to the entity's preparation and fair presentation of the Consolidated Financial Statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management, as well as evaluating the overall presentation of the Consolidated Financial Statements.

We believe that the audit evidence we have obtained in our audits is sufficient and appropriate to provide a basis for our audit opinion.

## *Opinion*

In our opinion, the Consolidated Financial Statements present fairly, in all material respects, the consolidated financial position of Hydro One Limited as at December 31, 2015 and December 31, 2014, and its consolidated results of operations and its consolidated cash flows for the years then ended in accordance with United States Generally Accepted Accounting Principles.

# Notes to Consolidated Financial Statements

*For the years ended December 31, 2015 and 2014*

## 1. Description of The Business

Hydro One Limited (Hydro One or the Company) was incorporated on August 31, 2015, under the *Business Corporations Act* (Ontario).

On October 31, 2015, the Company acquired Hydro One Inc., a company previously wholly-owned by the Province of Ontario (Province). The acquisition of Hydro One Inc. by Hydro One was accounted for as a common control transaction and Hydro One is a continuation of business operations of Hydro One Inc. The principal businesses of Hydro One are the transmission and distribution of electricity to customers within Ontario.

In November 2015, Hydro One and the Province completed an initial public offering (IPO) on the Toronto Stock Exchange of 15% of its 595 million outstanding common shares. The proceeds of the offering were received by the Province. All of the regulated business and outstanding publicly issued notes and debentures of Hydro One remain at the Company's wholly owned subsidiary Hydro One Inc. At December 31, 2015, the Province owns 84% of Hydro One. See Note 18 for further details regarding the reorganization of Hydro One.

## 2. Significant Accounting Policies

### Basis of Consolidation and Preparation

These Consolidated Financial Statements have been presented in a manner similar to the pooling-of-interests method. The financial statements consist of the results of operations of Hydro One Inc. prior to October 31, 2015, and the consolidated results of operations of Hydro One from the date of incorporation on August 31, 2015 to December 31, 2015, which include the results of Hydro One Inc. subsequent to its acquisition on October 31, 2015. All periods have been combined using historical amounts. The comparative information consists of the results of Hydro One Inc. as at and for the year ended December 31, 2014. In addition, Hydro One's issued and outstanding common shares prior to October 31, 2015 have been retroactively adjusted for the purposes of presentation to reflect the effects of the acquisition of Hydro One Inc. using the exchange ratio established for the acquisition. The accompanying combined consolidated and consolidated financial statements are referred to as "consolidated" for all periods presented. Intercompany transactions and balances have been eliminated.

On August 31, 2015, Hydro One Inc. completed the spin-off of its subsidiary, Hydro One Brampton Networks Inc. (Hydro One Brampton) to the Province. See note 4 – Business Combinations. These Consolidated Financial Statements include the results of operations of Hydro One Brampton up to August 31, 2015.

### Basis of Accounting

These Consolidated Financial Statements are prepared and presented in accordance with United States (US) Generally Accepted Accounting Principles (GAAP) and in Canadian dollars.

Hydro One performed an evaluation of subsequent events through to February 11, 2016, the date these Consolidated Financial Statements were issued, to determine whether any events or transactions warranted recognition and disclosure in these Consolidated Financial Statements. See Note 28 – Subsequent Events.

### Use of Management Estimates

The preparation of financial statements requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities at the date of the financial statements and the reported amounts of revenues, expenses, gains and losses during the reporting periods. Management evaluates these estimates on an ongoing basis based upon historical experience, current conditions, and assumptions believed to be reasonable at the time the assumptions are made, with any adjustments being recognized in results of operations in the period they arise. Significant estimates relate to regulatory assets and regulatory liabilities, environmental liabilities, pension benefits, post-retirement and post-employment benefits, asset retirement obligations, goodwill and asset impairments, contingencies, unbilled revenues, allowance for doubtful accounts, derivative instruments, and deferred income tax assets and liabilities. Actual results may differ significantly from these estimates.

### Rate Setting

The Company's Transmission Business consists of the transmission business of Hydro One Inc., which includes the transmission business of its subsidiary, Hydro One Networks Inc. (Hydro One Networks), as well as its 66% interest in B2M Limited Partnership (B2M LP). The

Company's Distribution Business consists of the distribution business of Hydro One Inc., which includes the distribution businesses of Hydro One Networks, Haldimand County Utilities Inc. (Haldimand Hydro), Hydro One Remote Communities Inc. (Hydro One Remote Communities), and Woodstock Hydro Holdings Inc. (Woodstock Hydro).

The Ontario Energy Board (OEB) has approved the use of US GAAP for rate setting and regulatory accounting and reporting by Hydro One Networks' transmission and distribution businesses, as well as by Hydro One Remote Communities.

### Transmission

On January 8, 2015, pursuant to an application filed with the OEB, the OEB approved the 2015 Hydro One transmission rates revenue requirement, excluding the B2M LP revenue requirement, of $1,477 million.

On June 30, 2015, B2M LP updated its application (originally filed March 30, 2015) with the OEB for 2015-2019 transmission rates, requesting approval of revenue requirement of $39 million, $36 million, $37 million, $38 million and $37 million for the respective years. On December 29, 2015, the OEB issued a Decision and Order approving the 2015-2019 rates revenue requirement, and on January 14, 2016, the OEB approved the B2M LP revenue requirement recovery through the 2016 Uniform Transmission Rates, and the establishment of a deferral account to capture costs of Tax Rate and Rule changes.

### Distribution

On March 12, 2015, the OEB issued a Decision and Rate Order approving a revenue requirement of $1,326 million for 2015, $1,430 million for 2016 and $1,486 million for 2017. The revenue requirements for 2016 and 2017 are estimates that may change based on 2016 and 2017 Rate Orders. On April 23, 2015, the Final Rate Order for 2015 rates was approved by the OEB.

On September 24, 2014, Hydro One Remote Communities filed an Incentive Regulation Mechanism application with the OEB for 2015 rates, seeking approval for increased base rates for the distribution and generation of electricity of 1.7%. On March 19, 2015, the OEB approved an increase of approximately 1.6% to basic rates for the distribution and generation of electricity, with an effective date of May 1, 2015.

## Regulatory Accounting

The OEB has the general power to include or exclude revenues, costs, gains or losses in the rates of a specific period, resulting in a change in the timing of accounting recognition from that which would have been applied in an unregulated company. Such change in timing involves the application of rate-regulated accounting, giving rise to the recognition of regulatory assets and liabilities. The Company's regulatory assets represent certain amounts receivable from future customers and costs that have been deferred for accounting purposes because it is probable that they will be recovered in future rates. In addition, the Company has recorded regulatory liabilities that generally represent amounts that are refundable to future customers. The Company continually assesses the likelihood of recovery of each of its regulatory assets and continues to believe that it is probable that the OEB will factor its regulatory assets and liabilities into the setting of future rates. If, at some future date, the Company judges that it is no longer probable that the OEB will include a regulatory asset or liability in setting future rates, the appropriate carrying amount will be reflected in results of operations in the period that the assessment is made.

## Cash and Cash Equivalents

Cash and cash equivalents include cash and short-term investments with an original maturity of three months or less.

## Revenue Recognition

Transmission revenues are collected through OEB-approved rates, which are based on an approved revenue requirement that includes a rate of return. Such revenue is recognized as electricity is transmitted and delivered to customers.

Distribution revenues attributable to the delivery of electricity are based on OEB-approved distribution rates and are recognized on an accrual basis and include billed and unbilled revenues. Billed revenues are based on electricity delivered as measured from customer meters. Unbilled revenues are based on an estimate of electricity delivered determined by historical trends of consumption and are estimated at the end of each month. The unbilled revenue estimate is affected by energy consumption, weather, and changes in the composition of customer classes.

Distribution revenue also includes an amount relating to rate protection for rural, residential and remote customers, which is received from the Independent Electricity System Operator (IESO) based on a standardized customer rate that is approved by the OEB.

Revenues also include amounts related to sales of other services and equipment. Such revenue is recognized as services are rendered or as equipment is delivered.

Revenues are recorded net of indirect taxes.

## Accounts Receivable and Allowance for Doubtful Accounts

Billed accounts receivable are recorded at the invoiced amount, net of allowance for doubtful accounts. Unbilled accounts receivable are recorded at their estimated value. Overdue amounts related to regulated billings bear interest at OEB-approved rates. The allowance for doubtful accounts reflects the Company's best estimate of losses on billed accounts receivable balances. The Company estimates the allowance for doubtful accounts on customer receivables by applying internally developed loss rates to the outstanding receivable balances by aging category. Loss rates applied to the accounts receivable balances are based on historical overdue balances, customer payments and write-offs. Accounts receivable are written-off against the allowance when they are deemed uncollectible. The existing allowance for doubtful accounts will continue to be affected by changes in volume, prices and economic conditions.

## Noncontrolling interest

Noncontrolling interest represents the portion of equity ownership in subsidiaries that is not attributable to shareholders of Hydro One. Noncontrolling interest is initially recorded at fair value and subsequently the amount is adjusted for the proportionate share of net income (loss) and other comprehensive income (loss) attributable to the noncontrolling interest and any dividends or distributions paid to the noncontrolling interest.

If a transaction results in the acquisition of all, or part, of a noncontrolling interest in a subsidiary, the acquisition of the noncontrolling interest is accounted for as an equity transaction. No gain or loss is recognized in consolidated net income or comprehensive income as a result of changes in the noncontrolling interest, unless a change results in the loss of control by the Company.

## Income Taxes

By virtue of being wholly owned by the Province, Hydro One was exempt from tax under the *Income Tax Act* (Canada) and the *Taxation Act, 2007* (Ontario) (Federal Tax Regime). However, under the *Electricity Act*, Hydro One was required to make payments in lieu of tax (PILs) to the Ontario Electricity Financial Corporation (OEFC) (PILs Regime). The PILs were, in general, based on the amount of tax that Hydro One would otherwise be liable to pay under the Federal Tax Regime if it was not exempt from taxes under those statutes.

In connection with the IPO of Hydro One, Hydro One's exemption from tax under the Federal Tax Regime ceased to apply. Upon exiting the PILs Regime, Hydro One is required to make corporate income tax payments to the Canada Revenue Agency (CRA) under the Federal Tax Regime.

Current and deferred income taxes are computed based on the tax rates and tax laws enacted as at the balance sheet date. Tax benefits associated with income tax positions taken, or expected to be taken, in a tax return are recorded only when the "more-likely-than-not" recognition threshold is satisfied and are measured at the largest amount of benefit that has a greater than 50% likelihood of being realized upon settlement. Management evaluates each position based solely on the technical merits and facts and circumstances of the position, assuming the position will be examined by a taxing authority having full knowledge of all relevant information. Significant management judgment is required to determine recognition thresholds and the related amount of tax benefits to be recognized in the Consolidated Financial Statements. Management re-evaluates tax positions each period in which new information about recognition or measurement becomes available.

## Deferred Income Taxes

Deferred income taxes are provided for using the liability method. Deferred income taxes are recognized based on the estimated future tax consequences attributable to temporary differences between the carrying amount of assets and liabilities in the Consolidated Financial Statements and their corresponding tax bases.

Deferred income tax liabilities are generally recognized on all taxable temporary differences. Deferred tax assets are recognized to the extent that it is more-likely-than-not that these assets will be realized from taxable income available against which deductible temporary differences can be utilized.

Deferred income taxes are calculated at the tax rates that are expected to apply in the period when the liability is settled or the asset is realized, based on the tax rates and tax laws that have been enacted as at the balance sheet date. Deferred income taxes that are not included in the rate-setting process are charged or credited to the Consolidated Statements of Operations and Comprehensive Income.

If management determines that it is more-likely-than-not that some or all of a deferred income tax asset will not be realized, a valuation allowance is recorded against the deferred income tax asset to report the net balance at the amount expected to be realized. Previously unrecognized deferred income tax assets are reassessed at each balance sheet date and are recognized to the extent that it has become more-likely-than-not that the tax benefit will be realized.

The Company records regulatory assets and liabilities associated with deferred income taxes that will be included in the rate-setting process.

The Company uses the flow-through method to account for investment tax credits (ITCs) earned on eligible scientific research and experimental development expenditures, and apprenticeship job creation. Under this method, only non-refundable ITCs are recognized as a reduction to income tax expense.

## Materials and Supplies

Materials and supplies represent consumables, small spare parts and construction materials held for internal construction and maintenance of property, plant and equipment. These assets are carried at average cost less any impairments recorded.

## Property, Plant and Equipment

Property, plant and equipment is recorded at original cost, net of customer contributions, and any accumulated impairment losses. The cost of additions, including betterments and replacement asset components, is included on the Consolidated Balance Sheets as property, plant and equipment.

The original cost of property, plant and equipment includes direct materials, direct labour (including employee benefits), contracted services, attributable capitalized financing costs, asset retirement costs, and direct and indirect overheads that are related to the capital project or program. Indirect overheads include a portion of corporate costs such as finance, treasury, human resources, information technology and executive costs. Overhead costs, including corporate functions and field services costs, are capitalized on a fully allocated basis, consistent with an OEB-approved methodology.

Property, plant and equipment in service consists of transmission, distribution, communication, administration and service assets and land easements. Property, plant and equipment also includes future use assets, such as land, major components and spare parts, and capitalized project development costs associated with deferred capital projects.

### Transmission

Transmission assets include assets used for the transmission of high-voltage electricity, such as transmission lines, support structures, foundations, insulators, connecting hardware and grounding systems, and assets used to step up the voltage of electricity from generating stations for transmission and to step down voltages for distribution, including transformers, circuit breakers and switches.

### Distribution

Distribution assets include assets related to the distribution of low-voltage electricity, including lines, poles, switches, transformers, protective devices and metering systems.

### Communication

Communication assets include fibre optic and microwave radio systems, optical ground wire, towers, telephone equipment and associated buildings.

### Administration and Service

Administration and service assets include administrative buildings, personal computers, transport and work equipment, tools and other minor assets.

### Easements

Easements include statutory rights of use for transmission corridors and abutting lands granted under the *Reliable Energy and Consumer Protection Act, 2002*, as well as other land access rights.

## Intangible Assets

Intangible assets separately acquired or internally developed are measured on initial recognition at cost, which comprises purchased software, direct labour (including employee benefits), consulting, engineering, overheads and attributable capitalized financing charges. Following initial recognition, intangible assets are carried at cost, net of any accumulated amortization and accumulated impairment losses. The Company's intangible assets primarily represent major computer applications.

## Capitalized Financing Costs

Capitalized financing costs represent interest costs attributable to the construction of property, plant and equipment or development of intangible assets. The financing cost of attributable borrowed funds is capitalized as part of the acquisition cost of such assets. The capitalized financing costs are a reduction of financing charges recognized in the Consolidated Statements of Operations and Comprehensive Income. Capitalized financing costs are calculated using the Company's weighted average effective cost of debt.

## Construction and Development in Progress

Construction and development in progress consists of the capitalized cost of constructed assets that are not yet complete and which have not yet been placed in service.

## Depreciation and Amortization

The cost of property, plant and equipment and intangible assets is depreciated or amortized on a straight-line basis based on the estimated remaining service life of each asset category, except for transport and work equipment, which is depreciated on a declining balance basis.

The Company periodically initiates an external independent review of its property, plant and equipment and intangible asset depreciation and amortization rates, as required by the OEB. Any changes arising from OEB approval of such a review are implemented on a remaining service life basis, consistent with their inclusion in electricity rates. The last review resulted in changes to rates effective January 1, 2015. A summary of average service lives and depreciation and amortization rates for the various classes of assets is included below:

| | Average Service Life | Rate Range | Rate Average |
|---|---|---|---|
| Transmission | 56 years | 1% – 2% | 2% |
| Distribution | 46 years | 1% – 7% | 2% |
| Communication | 16 years | 1% – 15% | 6% |
| Administration and service | 18 years | 1% – 20% | 6% |

The cost of intangible assets is included primarily within the administration and service classification above. Amortization rate for computer applications software and other intangible assets is 10%.

In accordance with group depreciation practices, the original cost of property, plant and equipment, or major components thereof, and intangible assets that are normally retired, is charged to accumulated depreciation, with no gain or loss being reflected in results of operations. Where a disposition of property, plant and equipment occurs through sale, a gain or loss is calculated based on proceeds and such gain or loss is included in depreciation expense. Depreciation expense also includes the costs incurred to remove property, plant and equipment where no asset retirement obligations have been recorded.

## Goodwill

Goodwill represents the cost of acquired local distribution companies that is in excess of the fair value of the net identifiable assets acquired at the acquisition date. Goodwill is not included in rate base.

Goodwill is evaluated for impairment on an annual basis, or more frequently if circumstances require. The Company performs a qualitative assessment to determine whether it is more-likely-than-not that the fair value of the applicable reporting unit is less than its carrying amount. If the Company determines, as a result of its qualitative assessment, that it is not more-likely-than-not that the fair value of the applicable reporting unit is less than its carrying amount, no further testing is required. If the Company determines, as a result of its qualitative assessment, that it is more-likely-than-not that the fair value of the applicable reporting unit is less than its carrying amount, a goodwill impairment assessment is performed using a two-step, fair value-based test. The first step compares the fair value of the applicable reporting unit to its carrying amount, including goodwill. If the carrying amount of the applicable reporting unit exceeds its fair value, a second step is performed. The second step requires an allocation of fair value to the individual assets and liabilities using purchase price allocation in order to determine the implied fair value of goodwill. If the implied fair value of goodwill is less than the carrying amount, an impairment loss is recorded as a reduction to goodwill and as a charge to results of operations.

For the year ended December 31, 2015, based on the qualitative assessment performed as at September 30, 2015, the Company has determined that it is not more-likely-than-not that the fair value of each applicable reporting unit assessed is less than its carrying amount. As a result, no further testing was performed, and the Company has concluded that goodwill was not impaired at December 31, 2015.

## Long-Lived Asset Impairment

When circumstances indicate the carrying value of long-lived assets may not be recoverable, the Company evaluates whether the carrying value of such assets, excluding goodwill, has been impaired. For such long-lived assets, the Company evaluates whether impairment may exist by estimating future estimated undiscounted cash flows expected to result from the use and eventual disposition of the asset. When alternative courses of action to recover the carrying amount of a long-lived asset are under consideration, a probability-weighted approach is used to develop estimates of future undiscounted cash flows. If the carrying value of the long-lived asset is not recoverable based on the estimated future undiscounted cash flows, an impairment loss is recorded, measured as the excess of the carrying value of the asset over its fair value. As a result, the asset's carrying value is adjusted to its estimated fair value.

Within its regulated business, the carrying costs of most of Hydro One's long-lived assets are included in rate base where they earn an OEB-approved rate of return. Asset carrying values and the related return are recovered through approved rates. As a result, such assets are only tested for impairment in the event that the OEB disallows recovery, in whole or in part, or if such a disallowance is judged to be probable.

Hydro One regularly monitors the assets of its unregulated Hydro One Telecom subsidiary for indications of impairment. Management assesses the fair value of such long-lived assets using commonly accepted techniques, and may use more than one. Techniques used to determine fair value include, but are not limited to, the use of recent third party comparable sales for reference and internally developed discounted cash flow analysis. Significant changes in market conditions, changes to the condition of an asset, or a change in management's intent to utilize the asset are generally viewed by management as triggering events to reassess the cash flows related to these long-lived assets. As at December 31, 2015 and 2014, no asset impairment had been recorded for assets within either the Company's regulated or unregulated businesses.

## Costs of Arranging Debt Financing

For financial liabilities classified as other than held-for-trading, the Company defers the external transaction costs related to obtaining debt financing and presents such amounts as deferred debt issuance costs on the Consolidated Balance Sheets. Deferred debt issuance costs are amortized over the contractual life of the related debt on an effective-interest basis and the amortization is included within financing charges in the Consolidated Statements of Operations and Comprehensive Income. Transaction costs for items classified as held-for-trading are expensed immediately.

## Comprehensive Income

Comprehensive income is comprised of net income and other comprehensive income (OCI). Hydro One presents net income and OCI in a single continuous Consolidated Statement of Operations and Comprehensive Income.

## Financial Assets and Liabilities

All financial assets and liabilities are classified into one of the following five categories: held-to-maturity; loans and receivables; held-for-trading; other liabilities; or available-for-sale. Financial assets and liabilities classified as held-for-trading are measured at fair value. All other financial assets and liabilities are measured at amortized cost, except accounts receivable and amounts due from related parties, which are measured at the lower of cost or fair value. Accounts receivable and amounts due from related parties are classified as loans and receivables. The Company considers the carrying amounts of accounts receivable and amounts due from related parties to be reasonable estimates of fair value because of the short time to maturity of these instruments. Provisions for impaired accounts receivable are recognized as adjustments to the allowance for doubtful accounts and are recognized when there is objective evidence that the Company will not be able to collect amounts according to the original terms. All financial instrument transactions are recorded at trade date.

Derivative instruments are measured at fair value. Gains and losses from fair valuation are included within financing charges in the period in which they arise. The Company determines the classification of its financial assets and liabilities at the date of initial recognition. The Company designates certain of its financial assets and liabilities to be held at fair value, when it is consistent with the Company's risk management policy disclosed in Note 13 – Fair Value of Financial Instruments and Risk Management.

## Derivative Instruments and Hedge Accounting

The Company closely monitors the risks associated with changes in interest rates on its operations and, where appropriate, uses various instruments to hedge these risks. Certain of these derivative instruments qualify for hedge accounting and are designated as accounting hedges, while others either do not qualify as hedges or have not been designated as hedges (hereinafter referred to as undesignated contracts) as they are part of economic hedging relationships.

The accounting guidance for derivative instruments requires the recognition of all derivative instruments not identified as meeting the normal purchase and sale exemption as either assets or liabilities recorded at fair value on the Consolidated Balance Sheets. For derivative instruments that qualify for hedge accounting, the Company may elect to designate such derivative instruments as either cash flow hedges or fair value hedges. The Company offsets fair value amounts recognized on its Consolidated Balance Sheets related to derivative instruments executed with the same counterparty under the same master netting agreement.

For derivative instruments that qualify for hedge accounting and which are designated as cash flow hedges, the effective portion of any gain or loss, net of tax, is reported as a component of accumulated OCI (AOCI) and is reclassified to results of operations in the same period or periods during which the hedged transaction affects results of operations. Any gains or losses on the derivative instrument that represent either hedge ineffectiveness or hedge components excluded from the assessment of effectiveness are recognized in results of operations. For fair value hedges, changes in fair value of both the derivative instrument and the underlying hedged exposure are recognized in the Consolidated Statements of Operations and Comprehensive Income in the current period. The gain or loss on the derivative instrument is included in the same line item as the offsetting gain or loss on the hedged item in the Consolidated Statements of Operations and Comprehensive Income. Additionally, the Company enters into derivative agreements that are economic hedges which either do not qualify for hedge accounting or have not been designated as hedges. The changes in fair value of these undesignated derivative instruments are reflected in results of operations.

Embedded derivative instruments are separated from their host contracts and carried at fair value on the Consolidated Balance Sheets when: (a) the economic characteristics and risks of the embedded derivative are not clearly and closely related to the economic characteristics and risks of the host contract; (b) the hybrid instrument is not measured at fair value, with changes in fair value recognized in results of operations each period; and (c) the embedded derivative itself meets the definition of a derivative. The Company does not engage in derivative trading or speculative activities and had no embedded derivatives at December 31, 2015 or 2014.

Hydro One periodically develops hedging strategies taking into account risk management objectives. At the inception of a hedging relationship where the Company has elected to apply hedge accounting, Hydro One formally documents the relationship between the hedged item and the hedging instrument, the related risk management objective, the nature of the specific risk exposure being hedged, and the method for assessing the effectiveness of the hedging relationship. The Company also assesses, both at the inception of the hedge and on a quarterly basis, whether the hedging instruments are effective in offsetting changes in fair values or cash flows of the hedged items.

## Employee Future Benefits

Employee future benefits provided by Hydro One include pension, post-retirement and post-employment benefits. The costs of the Company's pension, post-retirement and post-employment benefit plans are recorded over the periods during which employees render service.

The Company recognizes the funded status of its defined benefit pension, post-retirement and post-employment plans on its Consolidated Balance Sheets and subsequently recognizes the changes in funded status at the end of each reporting year. Defined benefit pension, post-retirement and post-employment plans are considered to be underfunded when the projected benefit obligation exceeds the fair value of the plan assets. Liabilities are recognized on the Consolidated Balance Sheets for any net underfunded projected benefit obligation. The net underfunded projected benefit obligation may be disclosed as a current liability, long-term liability, or both. The current portion is the amount by which the actuarial present value of benefits included in the benefit obligation payable in the next 12 months exceeds the fair value of plan assets. If the fair value of plan assets exceeds the projected benefit obligation of the plan, an asset is recognized equal to the net overfunded projected benefit obligation. The post-retirement and post-employment benefit plans are unfunded because there are no related plan assets.

### Pension benefits

Pension costs are recorded on an accrual basis for financial reporting purposes. Pension costs are actuarially determined using the projected benefit method prorated on service and are based on assumptions that reflect management's best estimate of the effect of future events, including future compensation increases. Past service costs from plan amendments and all actuarial gains and losses are amortized on a straight-line basis over the expected average remaining service period of active employees in the plan, and over the estimated remaining life expectancy of inactive employees in the plan. Pension plan assets, consisting primarily of listed equity securities as well as corporate and government debt securities, are fair valued at the end of each year. Hydro One records a regulatory asset equal to the net underfunded projected benefit obligation for its pension plan.

### Post-retirement and post-employment benefits

Post-retirement and post-employment benefits are recorded and included in rates on an accrual basis. Costs are determined by independent actuaries using the projected benefit method prorated on service and based on assumptions that reflect management's best estimates. Past service costs from plan amendments are amortized to results of operations based on the expected average remaining service period. Hydro One records a regulatory asset equal to the incremental net unfunded projected benefit obligation for post-retirement and post-employment plans recorded at each year end based on annual actuarial reports.

For post-retirement benefits, all actuarial gains or losses are deferred using the "corridor" approach. The amount calculated above the "corridor" is amortized to results of operations on a straight-line basis over the expected average remaining service life of active employees in the plan and over the remaining life expectancy of inactive employees in the plan. The post-retirement benefit obligation is remeasured to its fair value at each year end based on an annual actuarial report, with an offset to the associated regulatory asset, to the extent of the remeasurement adjustment.

For post-employment obligations, the associated regulatory liabilities representing actuarial gains on transition to US GAAP are amortized to results of operations based on the "corridor" approach. Post transition, the actuarial gains and losses on post-employment obligations that are incurred during the year are recognized immediately to results of operations. The post-employment benefit obligation is remeasured to its fair value at each year end based on an annual actuarial report, with an offset to the associated regulatory asset, to the extent of the remeasurement adjustment.

All post-retirement and post-employment future benefit costs are attributed to labour and are either charged to results of operations or capitalized as part of the cost of property, plant and equipment and intangible assets.

## Multiemployer Pension Plan

Former employees of Haldimand Hydro and Woodstock Hydro participate in the Ontario Municipal Employees Retirement System Fund (OMERS Plan), a multiemployer, contributory, defined benefit public sector pension fund. Former employees of Norfolk Power Inc. (Norfolk Power) ceased to contribute to the OMERS Plan upon integration of Norfolk Power into Hydro One Networks in September 2015. These employees are now included in Hydro One's defined benefit pension plan. OMERS Plan provides retirement pension payments based on members' length of service and salary. Both the participating employers and members are required to make plan contributions. The OMERS Plan assets are pooled together to provide benefits to all plan participants and the plan assets are not segregated by member entity. The OMERS Plan is registered with the Financial Services Commission of Ontario under Registration #0345983.

The OMERS Plan is accounted for as a defined contribution plan by Hydro One because it is not practicable to determine the present value of the Company's obligation, the fair value of plan assets or the related current service cost applicable to employees of Haldimand Hydro and Woodstock Hydro. Hydro One recognizes its contributions to the OMERS Plan as pension expense, with a portion being capitalized. The expensed amount is included in operation, maintenance and administration costs in the Consolidated Statements of Operations and Comprehensive Income.

## Stock-Based Compensation

Hydro One measures share grant plans based on fair value of share grants as estimated based on the grant date share price. The costs are recognized in the financial statements using the graded-vesting attribution method for share grant plans that have both a performance condition and a service condition. The Company records a regulatory asset equal to the accrued costs of share grant plans recognized in each period, as management considers it to be probable that such costs will be recovered in the future through the rate-setting process.

The Company also records the liabilities associated with its Directors' Deferred Share Unit (DSU) Plan at fair value at each reporting date until settlement, recognizing compensation expense over the vesting period on a straight-line basis. The fair value of the DSU liability is based on the Company's common share closing price at the end of each reporting period.

## Loss Contingencies

Hydro One is involved in certain legal and environmental matters that arise in the normal course of business. In the preparation of its Consolidated Financial Statements, management makes judgments regarding the future outcome of contingent events and records a loss for a contingency based on its best estimate when it is determined that such loss is probable and the amount of the loss can be reasonably estimated. Where the loss amount is recoverable in future rates, a regulatory asset is also recorded. When a range estimate for the probable loss exists and no amount within the range is a better estimate than any other amount, the Company records a loss at the minimum amount within the range.

Management regularly reviews current information available to determine whether recorded provisions should be adjusted and whether new provisions are required. Estimating probable losses may require analysis of multiple forecasts and scenarios that often depend on judgments about potential actions by third parties, such as federal, provincial and local courts or regulators. Contingent liabilities are often resolved over long periods of time. Amounts recorded in the Consolidated Financial Statements may differ from the actual outcome once the contingency is resolved. Such differences could have a material impact on future results of operations, financial position and cash flows of the Company.

Provisions are based upon current estimates and are subject to greater uncertainty where the projection period is lengthy. A significant upward or downward trend in the number of claims filed, the nature of the alleged injuries, and the average cost of resolving each claim could change the estimated provision, as could any substantial adverse or favourable verdict at trial. A federal or provincial legislative outcome or structured settlement could also change the estimated liability. Legal fees are expensed as incurred.

## Environmental Liabilities

Environmental liabilities are recorded in respect of past contamination when it is determined that future environmental remediation expenditures are probable under existing statute or regulation and the amount of the future expenditures can be reasonably estimated. Hydro One records a liability for the estimated future expenditures associated with contaminated land assessment and remediation and for the phase-out and destruction of polychlorinated biphenyl (PCB)-contaminated mineral oil removed from electrical equipment, based on the present value of these estimated future expenditures. The Company determines the present value with a discount rate equal to its credit-adjusted risk-free interest rate on financial instruments with comparable maturities to the pattern of future environmental expenditures. As the Company anticipates that the future expenditures will continue to be recoverable in future rates, an offsetting regulatory asset has been recorded to reflect the future recovery of these environmental expenditures from customers. Hydro One reviews its estimates of future environmental expenditures annually, or more frequently if there are indications that circumstances have changed.

### Asset Retirement Obligations

Asset retirement obligations are recorded for legal obligations associated with the future removal and disposal of long-lived assets. Such obligations may result from the acquisition, construction, development and/or normal use of the asset. Conditional asset retirement obligations are recorded when there is a legal obligation to perform a future asset retirement activity but where the timing and/or method of settlement are conditional on a future event that may or may not be within the control of the Company. In such a case, the obligation to perform the asset retirement activity is unconditional even though uncertainty exists about the timing and/or method of settlement.

When recording an asset retirement obligation, the present value of the estimated future expenditures required to complete the asset retirement activity is recorded in the period in which the obligation is incurred, if a reasonable estimate can be made. In general, the present value of the estimated future expenditures is added to the carrying amount of the associated asset and the resulting asset retirement cost is depreciated over the estimated useful life of the asset. Where an asset is no longer in service when an asset retirement obligation is recorded, the asset retirement cost is recorded in results of operations.

Some of the Company's transmission and distribution assets, particularly those located on unowned easements and rights-of-way, may have asset retirement obligations, conditional or otherwise. The majority of the Company's easements and rights-of-way are either of perpetual duration or are automatically renewed annually. Land rights with finite terms are generally subject to extension or renewal. As the Company expects to use the majority of its facilities in perpetuity, no asset retirement obligations currently exist for these assets. If, at some future date, a particular facility is shown not to meet the perpetuity assumption, it will be reviewed to determine whether an estimable asset retirement obligation exists. In such a case, an asset retirement obligation would be recorded at that time.

The Company's asset retirement obligations recorded to date relate to estimated future expenditures associated with the removal and disposal of asbestos-containing materials installed in some of its facilities and with the decommissioning of specific switching stations located on unowned sites.

## 3. New Accounting Pronouncements

### Recent Accounting Guidance Not Yet Adopted

In January 2015, the Financial Accounting Standards Board (FASB) issued Accounting Standards Update (ASU) 2015-01, Income Statement – Extraordinary and Unusual Items (Subtopic 225-20): Simplifying Income Statement Presentation by Eliminating the Concept of Extraordinary Items. This ASU eliminates the requirements for reporting entities to consider whether an underlying event or transaction is extraordinary and to show the item separately in the income statement. This ASU is effective for fiscal years, and interim periods within these years, beginning after December 15, 2015. The adoption of this ASU is not anticipated to have an impact on the Company's consolidated financial statements.

In February 2015, the FASB issued ASU 2015-02, Consolidation (Topic 810): Amendments to the Consolidation Analysis. This ASU provides guidance about the analysis that a reporting entity must perform to determine whether it should consolidate certain types of legal entities. This ASU is effective for fiscal years, and interim periods within those years, beginning after December 15, 2015. The adoption of this ASU is not anticipated to have an impact on the Company's consolidated financial statements.

In April 2015, the FASB issued ASU 2015-03, Interest – Imputation of Interest (Subtopic 835-30): Simplifying the Presentation of Debt Issuance Costs. This ASU requires that debt issuance costs related to a recognized debt liability be presented in the balance sheet as a direct deduction from the carrying amount of that debt liability. The recognition and measurement guidance for debt issuance costs are not affected. This ASU is effective for fiscal years, and interim periods within those years, beginning after December 15, 2015. Upon adoption of this ASU in the first quarter of 2016, the Company's deferred debt issuance costs that are currently presented under other long-term assets will be reclassified as a deduction from the carrying amount of long-term debt.

In April 2015, the FASB issued ASU 2015-04, Compensation – Retirement Benefits (Topic 715): Practical Expedient for the Measurement Date of an Employer's Defined Benefit Obligation and Plan Assets. This ASU permits an entity with a fiscal year-end that does not coincide with a month-end and an entity that has a significant event in an interim period that calls for a remeasurement of defined benefit plan assets and obligations to measure the defined benefit plan assets and obligations using the month-end that is closest to the entity's fiscal year-end. This ASU is effective for fiscal years, and interim periods within these years, beginning after December 15, 2015. The adoption of this ASU is not anticipated to have an impact on the Company's consolidated financial statements.

In April 2015, the FASB issued ASU 2015-05, Intangibles – Goodwill and Other – Internal-Use Software (Subtopic 350-40): Customer's Accounting for Fees Paid in a Cloud Computing Arrangement. This ASU provides guidance to customers about whether a cloud computing arrangement includes a software license, as well as the related accounting for the arrangement. This ASU is effective for fiscal years, and interim periods within these years, beginning after December 15, 2015. The Company is currently assessing the impact of adoption of this ASU on its consolidated financial statements.

In August 2015, the FASB issued ASU 2015-14, Revenue from Contracts with Customers (Topic 606): Deferral of the Effective Date. This ASU defers by one year the effective date of ASU 2014-09, Revenue from Contracts with Customers (Topic 606) issued by the FASB in May 2014. ASU 2014-09 provides guidance on revenue recognition that depicts the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expects to be entitled in exchange for those goods and services. The guidance in ASU 2014-09 is now effective for fiscal years, and interim periods within those years, beginning after December 15, 2017. The Company is currently assessing the impact of adoption of ASU 2014-09 on its consolidated financial statements.

In September 2015, the FASB issued ASU 2015-16, Business Combinations (Topic 805): Simplifying the Accounting for Measurement-Period Adjustments. The amendments in this ASU require that an acquirer recognize adjustments to provisional amounts that are identified during the measurement period of a business combination in the reporting period in which the adjustment amounts are determined. The amendments in this update require that the acquirer to present separately on the face of the income statement or disclose in the notes the portion of the amount recorded in current-period earnings by line item that would have been recorded in previous reporting periods if the adjustment to the provisional amounts had been recognized as of the acquisition date. This ASU is effective for fiscal years, and interim periods within those years, beginning after December 15, 2015. Upon adoption of this ASU in the first quarter of 2016, the Company will apply the guidance in this ASU to future measurement adjustments related to business combinations, as applicable.

In November 2015, the FASB issued ASU 2015-17, Income Taxes (Topic 740): Balance Sheet Classification of Deferred Taxes. The amendments in this ASU require that all deferred tax assets and liabilities be classified as noncurrent on the balance sheet. This ASU is effective for fiscal years, and interim periods within those years, beginning after December 15, 2016. Upon adoption of this ASU in the first quarter of 2017, the current portions of the Company's deferred income tax assets and liabilities will be reclassified as noncurrent assets and liabilities on the consolidated Balance Sheets.

In January 2016, the FASB issued ASU 2016-01, Financial Instruments – Overall (Subtopic 825-10): Recognition and Measurement of Financial Assets and Financial Liabilities. This ASU requires equity investments to be measured at fair value with changes in fair value recognized in net income, and requires enhanced disclosures and presentation of financial assets and liabilities in the financial statements. This ASU also simplifies the impairment assessment of equity investments without readily determinable fair values by requiring a qualitative assessment to identify impairment. This ASU is effective for fiscal years, and interim periods within those years, beginning after December 15, 2017. The Company is currently assessing the impact of adoption of this ASU on its consolidated financial statements.

## 4. Business Combinations

### Acquisition of Woodstock Hydro

On October 31, 2015, Hydro One acquired 100% of the common shares of Woodstock Hydro, an electricity distribution company located in southwestern Ontario. The total purchase price for Woodstock Hydro was approximately $32 million.

The following table summarizes the preliminary determination of the fair value of the assets acquired and liabilities assumed:

| *(millions of Canadian dollars)* | |
|---|---|
| Cash and cash equivalents | 3 |
| Working capital | 4 |
| Property, plant and equipment | 28 |
| Intangible assets | 1 |
| Deferred income tax assets | 2 |
| Goodwill | 17 |
| Long-term debt | (17) |
| Other long-term liabilities | (2) |
| Post-retirement and post-employment benefit liability | (1) |
| Derivative instruments | (3) |
| | 32 |

The preliminary determination of the fair value of assets acquired and liabilities assumed has been based upon management's preliminary estimates and certain assumptions with respect to the fair values of the assets acquired and liabilities assumed. Due to the timing of the transaction, the Company has not yet completed the final fair value measurements as at December 31, 2015. In addition, the purchase agreement provides for final purchase price adjustments based on agreed working capital and other balances at the acquisition date which have not yet been finalized. The Company will continue to review information and perform further analysis prior to finalizing the total purchase price and the fair values of the assets acquired and liabilities assumed. The actual total purchase price and the fair values of the assets acquired and liabilities assumed may differ from the amounts above.

Goodwill of approximately $17 million arising from the Woodstock Hydro acquisition consists largely of the synergies and economies of scale expected from combining the operations of Hydro One and Woodstock Hydro. All of the goodwill was assigned to Hydro One's Distribution Business segment. Woodstock Hydro contributed revenues of $12 million and net income of $2 million to the Company's consolidated financial results for the year ended December 31, 2015. All costs related to the acquisition have been expensed through the Consolidated Statements of Operations and Comprehensive Income. Woodstock Hydro's financial information is not material to the Company's consolidated financial results for the year ended December 31, 2015 and therefore, has not been disclosed on a pro forma basis.

## Hydro One Brampton Spin-off

On August 31, 2015, Hydro One completed the spin-off of its subsidiary, Hydro One Brampton. The spin-off was accounted as a non-monetary, nonreciprocal transfer with the Province, based on its carrying values at August 31, 2015. Transactions that immediately preceded the spin-off as well as the spin-off were as follows:

- Hydro One subscribed for 357 common shares of Hydro One Brampton for an aggregate subscription price of $53 million;
- Hydro One transferred to a company wholly owned by the Province all the issued and outstanding shares of Hydro One Brampton as a dividend-in-kind; and all of the long-term intercompany debt in aggregate principal amount of $193 million plus accrued interest of $3 million owed by Hydro One Brampton to Hydro One as a return of stated capital of $196 million on its common shares.

In connection with the Hydro One Brampton spin-off, the following assets and liabilities of Hydro One Brampton were transferred:

| *(millions of Canadian dollars)* | |
|---|---|
| Working capital | 33 |
| Property, plant and equipment and intangibles (net) | 360 |
| Other long-term assets | 6 |
| Long-term liabilities | (205) |

As a result of the spin-off, goodwill related to Hydro One Brampton of $60 million was eliminated from the Consolidated Balance Sheet.

## Acquisition of Haldimand Hydro

On June 30, 2015, Hydro One acquired 100% of the common shares of Haldimand Hydro, an electricity distribution company located in southwestern Ontario. The final total purchase price for Haldimand Hydro was approximately $73 million.

The following table summarizes the determination of the fair value of the assets acquired and liabilities assumed:

| *(millions of Canadian dollars)* | |
|---|---|
| Cash and cash equivalents | 3 |
| Working capital | 5 |
| Property, plant and equipment | 52 |
| Deferred income tax assets | 1 |
| Goodwill | 33 |
| Long-term debt | (18) |
| Regulatory liabilities | (3) |
| | 73 |

The determination of the fair value of assets acquired and liabilities assumed has been based upon management's estimates and certain assumptions with respect to the fair values of the assets acquired and liabilities assumed.

Goodwill of approximately $33 million arising from the Haldimand Hydro acquisition consists largely of the synergies and economies of scale expected from combining the operations of Hydro One and Haldimand Hydro. All of the goodwill was assigned to Hydro One's Distribution Business segment. Haldimand Hydro contributed revenues of $32 million and net income of $6 million to the Company's consolidated financial results for the year ended December 31, 2015. All costs related to the acquisition have been expensed through the Consolidated Statements of Operations and Comprehensive Income. Haldimand Hydro's financial information is not material to the Company's consolidated financial results for the year ended December 31, 2015 and therefore, has not been disclosed on a pro forma basis.

## Acquisition of Norfolk Power

On August 29, 2014, Hydro One acquired 100% of the common shares of Norfolk Power an electricity distribution and telecom company located in southwestern Ontario. Norfolk Power was a holding company for two subsidiaries, Norfolk Power Distribution Inc. (NPDI) and Norfolk Energy Inc. The total purchase price for Norfolk Power, net of the long-term debt assumed, was approximately $68 million. The purchase price was finalized in 2015, with no adjustments to the preliminary purchase price allocation as disclosed at December 31, 2014.

The following table summarizes the determination of the fair value of the assets acquired and liabilities assumed:

| *(millions of Canadian dollars)* | |
|---|---|
| Working capital | 6 |
| Property, plant and equipment | 56 |
| Deferred income tax assets | 1 |
| Goodwill | 40 |
| Bank indebtedness | (3) |
| Derivative instruments | (3) |
| Long-term debt | (26) |
| Post-retirement and post-employment benefit liability | (1) |
| Environmental liability | (1) |
| Long-term accounts payable and other liabilities | (1) |
| | 68 |

The determination of the fair values of assets acquired and liabilities assumed has been based upon management's estimates and certain assumptions with respect to the fair values of the assets acquired and liabilities assumed.

Goodwill of approximately $40 million arising from the Norfolk Power acquisition consists largely of the synergies and economies of scale expected from combining the operations of Hydro One and Norfolk Power. All of the goodwill was assigned to Hydro One's Distribution Business segment. Norfolk Power contributed revenues of $18 million and net income of less than $1 million to the Company's consolidated financial results for the year ended December 31, 2014. All costs related to the acquisition have been expensed through the Consolidated Statements of Operations and Comprehensive Income. Norfolk Power's financial information was not material to the Company's consolidated financial results for the year ended December 31, 2014 and therefore, has not been disclosed on a pro forma basis.

## 5. Depreciation And Amortization

| *Year ended December 31*<br>*(millions of Canadian dollars)* | 2015 | 2014 |
|---|---|---|
| Depreciation of property, plant and equipment | 595 | 565 |
| Amortization of intangible assets | 54 | 53 |
| Asset removal costs | 91 | 81 |
| Amortization of regulatory assets | 19 | 23 |
| | 759 | 722 |

## 6. Financing Charges

| *Year ended December 31*<br>*(millions of Canadian dollars)* | 2015 | 2014 |
|---|---|---|
| Interest on long-term debt | 417 | 432 |
| Other | 16 | 12 |
| Less: Interest capitalized on construction and development in progress | (52) | (49) |
| Gain on interest-rate swap agreements | (2) | (10) |
| Interest earned on investments | (3) | (6) |
| | 376 | 379 |

## 7. Income Taxes

Income taxes / provision for PILs differs from the amount that would have been recorded using the combined Canadian federal and Ontario statutory income tax rate. The reconciliation between the statutory and the effective tax rates is provided as follows:

| *Year ended December 31* *(millions of Canadian dollars)* | 2015 | 2014 |
|---|---|---|
| Income taxes / provision for PILs at statutory rate | 217 | 222 |
| Increase (decrease) resulting from: | | |
| Net temporary differences included in amounts charged to customers: | | |
| Capital cost allowance in excess of depreciation and amortization | (37) | (72) |
| Pension contributions in excess of pension expense | (25) | (24) |
| Overheads capitalized for accounting but deducted for tax purposes | (15) | (15) |
| Interest capitalized for accounting but deducted for tax purposes | (13) | (13) |
| Environmental expenditures | (5) | (5) |
| Non-refundable investment tax credits | (2) | (3) |
| Post-retirement and post-employment benefit expense in excess of cash payments | (1) | 3 |
| Prior year's adjustments | (1) | (4) |
| Other | (2) | (1) |
| Net temporary differences | (101) | (134) |
| Net tax benefit resulting from transition from PILs Regime to Federal Tax Regime | (19) | – |
| Hydro One Brampton spin-off | 7 | – |
| Net permanent differences | 1 | 1 |
| Total income taxes / provision for PILs | 105 | 89 |

The major components of income tax expense are as follows:

| *Year ended December 31* *(millions of Canadian dollars)* | 2015 | 2014 |
|---|---|---|
| Current income taxes / provision for PILs | 2,949 | 79 |
| Deferred income taxes / provision for (recovery of) PILs | (2,844) | 10 |
| Total income taxes / provision for PILs | 105 | 89 |
| Effective income tax rate | 12.84% | 10.63% |

The provision for PILs / current income taxes is remitted to, or received from, the OEFC (PILs Regime) and the CRA (Federal Tax Regime). At December 31, 2015, $12 million (2014 – $39 million) due from the OEFC was included in due from related parties and $1 million (2014 – $nil) due from the CRA was included in prepaid expenses and other assets on the Consolidated Balance Sheet.

In connection with the IPO, Hydro One's exemption from tax under the Federal Tax Regime ceased to apply. Under the PILs Regime, Hydro One was deemed to have disposed of its assets immediately before it lost its tax exempt status under the Federal Tax Regime, resulting in Hydro One making payments in lieu of tax (Departure Tax) totalling $2.6 billion. To enable Hydro One to make the Departure Tax payment, the Province subscribed for common shares of Hydro One for $2.6 billion (See Note 18 – Share Capital). Hydro One used the proceeds of this share subscription to pay the Departure Tax.

At December 31, 2015, the total income taxes / provision for PILs includes deferred income taxes / recovery of PILs of $2,844 million (2014 – deferred provision of $10 million), including $2,810 million (2014 – $nil) resulting from transition from the PILs Regime to the Federal Tax Regime, that is not included in the rate-setting process, using the liability method of accounting. Deferred income taxes / PILs balances expected to be included in the rate-setting process are offset by regulatory assets and liabilities to reflect the anticipated recovery or disposition of these balances within future electricity rates.

## Deferred Income Tax Assets and Liabilities

Deferred income tax assets and liabilities arise from differences between the carrying amounts and tax basis of the Company's assets and liabilities. At December 31, 2015 and 2014, deferred income tax assets and liabilities consisted of the following:

| *December 31*<br>*(millions of Canadian dollars)* | 2015 | 2014 |
|---|---|---|
| **Deferred income tax assets** | | |
| Depreciation and amortization in excess of capital cost allowance | 937 | (4) |
| Post-retirement and post-employment benefits expense in excess of cash payments | 578 | 8 |
| Environmental expenditures | 75 | 4 |
| Non-capital losses | 62 | – |
| Other | 3 | (1) |
| Total deferred income tax assets | 1,655 | 7 |
| Less: current portion | 19 | – |
| | 1,636 | 7 |

| *December 31*<br>*(millions of Canadian dollars)* | 2015 | 2014 |
|---|---|---|
| **Deferred income tax liabilities** | | |
| Regulatory amounts that are not recognized for tax purposes | (153) | (140) |
| Partnership interest | (41) | (38) |
| Goodwill | (10) | (21) |
| Capital cost allowance in excess of depreciation and amortization | (1) | (1,713) |
| Post-retirement and post-employment benefits expense in excess of cash payments | – | 559 |
| Environmental expenditures | – | 59 |
| Other | (2) | – |
| Total deferred income tax liabilities | (207) | (1,294) |
| Less: current portion | – | 19 |
| | (207) | (1,313) |

During 2015 and 2014, there were no changes in the rate applicable to future taxes. The Company has recorded a valuation allowance in the amount of $278 million (2014 – $nil) in respect of non-depreciable capital property.

## 8. Accounts Receivable

| *December 31*<br>*(millions of Canadian dollars)* | 2015 | 2014 |
|---|---|---|
| Accounts receivable – billed | 379 | 496 |
| Accounts receivable – unbilled | 458 | 586 |
| Accounts receivable, gross | 837 | 1,082 |
| Allowance for doubtful accounts | (61) | (66) |
| Accounts receivable, net | 776 | 1,016 |

In 2015, the Company revised the method to estimate the unbilled accounts receivable by using new technology that improved the estimation process. This change has been accounted for on a prospective basis in the consolidated financial statements at December 31, 2015. At December 31, 2015, the change in estimation technology resulted in a reduction in unbilled accounts receivable of approximately $121 million, with a corresponding offset to various components of the retail settlement variance accounts (RSVA). The change in estimate had no significant impact on 2015 net income.

The following table shows the movements in the allowance for doubtful accounts for the years ended December 31, 2015 and 2014:

| *Year ended December 31* *(millions of Canadian dollars)* | 2015 | 2014 |
|---|---|---|
| Allowance for doubtful accounts – January 1 | (66) | (36) |
| Write-offs | 37 | 24 |
| Additions to allowance for doubtful accounts | (32) | (54) |
| Allowance for doubtful accounts – December 31 | (61) | (66) |

## 9. Property, Plant And Equipment

| *December 31, 2015* *(millions of Canadian dollars)* | Property, Plant and Equipment | Accumulated Depreciation | Construction in Progress | Total |
|---|---|---|---|---|
| Transmission | 13,803 | 4,625 | 853 | 10,031 |
| Distribution | 9,205 | 3,177 | 238 | 6,266 |
| Communication | 1,165 | 704 | 28 | 489 |
| Administration and service | 1,531 | 848 | 36 | 719 |
| Easements | 523 | 60 | – | 463 |
| | 26,227 | 9,414 | 1,155 | 17,968 |

| *December 31, 2014* *(millions of Canadian dollars)* | Property, Plant and Equipment | Accumulated Depreciation | Construction in Progress | Total |
|---|---|---|---|---|
| Transmission | 13,209 | 4,416 | 626 | 9,419 |
| Distribution | 9,076 | 3,225 | 320 | 6,171 |
| Communication | 1,100 | 615 | 56 | 541 |
| Administration and service | 1,502 | 793 | 23 | 732 |
| Easements | 623 | 85 | – | 538 |
| | 25,510 | 9,134 | 1,025 | 17,401 |

Financing charges capitalized on property, plant and equipment under construction were $50 million in 2015 (2014 – $48 million).

## 10. Intangible Assets

| *December 31, 2015* *(millions of Canadian dollars)* | Intangible Assets | Accumulated Amortization | Development in Progress | Total |
|---|---|---|---|---|
| Computer applications software | 579 | 270 | 24 | 333 |
| Other | 7 | 4 | – | 3 |
| | 586 | 274 | 24 | 336 |

| *December 31, 2014* *(millions of Canadian dollars)* | Intangible Assets | Accumulated Amortization | Development in Progress | Total |
|---|---|---|---|---|
| Computer applications software | 573 | 303 | 3 | 273 |
| Other | 5 | 2 | – | 3 |
| | 578 | 305 | 3 | 276 |

Financing charges capitalized to intangible assets under development were $1 million in 2015 (2014 – $1 million). The estimated annual amortization expense for intangible assets is as follows: 2016 – $57 million; 2017 – $57 million; 2018 – $57 million; 2019 – $47 million; and 2020 – $30 million.

## 11. Regulatory Assets And Liabilities

Regulatory assets and liabilities arise as a result of the rate-setting process. Hydro One has recorded the following regulatory assets and liabilities:

| *December 31* *(millions of Canadian dollars)* | 2015 | 2014 |
|---|---|---|
| Regulatory assets: | | |
| Deferred income tax regulatory asset | 1,445 | 1,327 |
| Pension benefit regulatory asset | 952 | 1,236 |
| Post-retirement and post-employment benefits | 240 | 273 |
| Environmental | 207 | 239 |
| RSVA | 110 | 11 |
| Pension cost variance | 37 | 90 |
| 2015-2017 rate rider | 20 | – |
| DSC exemption | 10 | 16 |
| Share-based compensation | 10 | – |
| B2M LP start-up costs | 8 | – |
| OEB cost assessment differential | – | 12 |
| Other | 12 | 27 |
| Total regulatory assets | 3,051 | 3,231 |
| Less: current portion | 36 | 31 |
| | 3,015 | 3,200 |
| Regulatory liabilities: | | |
| External revenue variance | 87 | 54 |
| Green Energy expenditure variance | 76 | 83 |
| CDM deferral variance | 53 | 25 |
| Deferred income tax regulatory liability | 23 | 21 |
| PST savings deferral | 4 | 19 |
| Other | 12 | 13 |
| Total regulatory liabilities | 255 | 215 |
| Less: current portion | 19 | 47 |
| | 236 | 168 |

### Deferred Income Tax Regulatory Asset and Liability

Deferred income taxes are recognized on temporary differences between the carrying amount of assets and liabilities in the financial statements and the corresponding tax bases used in the computation of taxable income. The Company has recognized regulatory assets and liabilities that correspond to deferred income taxes that flow through the rate-setting process. In the absence of rate-regulated accounting, the Company's income tax expense would have been recognized using the liability method and there would be no regulatory accounts established for taxes to be recovered through future rates. As a result, the 2015 income tax expense would have been higher by approximately $101 million (2014 – $132 million).

### Pension Benefit Regulatory Asset

In accordance with OEB rate orders, pension costs are recorded on a cash basis as employer contributions are paid to the pension fund in accordance with the *Pension Benefits Act* (Ontario). The Company recognizes the net unfunded status of pension obligations on the Consolidated Balance Sheets with an offset to the associated regulatory asset. A regulatory asset is recognized because management considers it to be probable that pension benefit costs will be recovered in the future through the rate-setting process. The pension benefit obligation is remeasured to its fair value at each year end based on an annual actuarial report, with an offset to the associated regulatory asset, to the extent of the remeasurement adjustment. In the absence of rate-regulated accounting, 2015 OCI would have been higher by $284 million (2014 – lower by $391 million).

## Post-Retirement and Post-Employment Benefits

The Company recognizes the net unfunded status of post-retirement and post-employment obligations on the Consolidated Balance Sheets with an incremental offset to the associated regulatory assets. A regulatory asset is recognized because management considers it to be probable that post-retirement and post-employment benefit costs will be recovered in the future through the rate-setting process. The post-retirement and post-employment benefit obligation is remeasured to its fair value at each year end based on an annual actuarial report, with an offset to the associated regulatory asset, to the extent of the remeasurement adjustment. In the absence of rate-regulated accounting, 2015 OCI would have been higher by $33 million (2014 – $35 million).

## Environmental

Hydro One records a liability for the estimated future expenditures required to remediate environmental contamination. Because such expenditures are expected to be recoverable in future rates, the Company has recorded an equivalent amount as a regulatory asset. In 2015, the environmental regulatory asset decreased by $24 million (2014 – $33 million) to reflect related changes in the Company's PCB liability, and increased by $1 million (2014 – $13 million) due to changes in the land assessment and remediation liability. The environmental regulatory asset is amortized to results of operations based on the pattern of actual expenditures incurred and charged to environmental liabilities. The OEB has the discretion to examine and assess the prudency and the timing of recovery of all of Hydro One's actual environmental expenditures. In the absence of rate-regulated accounting, 2015 operation, maintenance and administration expenses would have been lower by $23 million (2014 – $20 million). In addition, 2015 amortization expense would have been lower by $19 million (2014 – $18 million), and 2015 financing charges would have been higher by $10 million (2014 – $11 million).

## RSVA

Hydro One has deferred certain retail settlement variance amounts under the provisions of Article 490 of the OEB's Accounting Procedures Handbook. In March 2015, the OEB approved the disposition of the total RSVA balance accumulated from January 2012 to December 2013, including accrued interest, to be recovered through the 2015-2017 Rate Rider. In 2015, the Company revised its method to estimate the unbilled accounts receivable based on new technology implemented to improve the accuracy of the estimation process. At December 31, 2015, the change in estimate reduced unbilled accounts receivable by approximately $121 million, with a corresponding offset to various components of RSVA. The change in estimate had no significant impact on 2015 net income.

## Pension Cost Variance

A pension cost variance account was established for Hydro One Networks' transmission and distribution businesses to track the difference between the actual pension expenses incurred and estimated pension costs approved by the OEB. The balance in this regulatory account reflects the excess of pension costs paid as compared to OEB-approved amounts. In March 2015, the OEB approved the disposition of the distribution business portion of the total pension cost variance account at December 31, 2013, including accrued interest, which will be recovered through the 2015-2017 Rate Rider. In the absence of rate-regulated accounting, 2015 revenue would have been lower by $6 million (2014 – $10 million).

## 2015-2017 Rate Rider

In March 2015, as part of its decision on Hydro One Networks' Distribution rate application for 2015-2019 the OEB approved the disposition of certain deferral and variance accounts, including RSVAs and accrued interest. The 2015-2017 Rate Rider account includes the balances approved for disposition by the OEB and will be disposed over a 32-month period in accordance with the OEB decision.

## DSC Exemption

In June 2010, Hydro One Networks filed an application with the OEB regarding the OEB's new cost responsibility rules contained in the OEB's October 2009 Notice of Amendment to the Distribution System Code (DSC), with respect to the connection of certain renewable generators that were already connected or that had received a connection impact assessment prior to October 21, 2009. The application sought approval to record and defer the unanticipated costs incurred by Hydro One Networks that resulted from the connection of certain renewable generation facilities. The OEB ruled that identified specific expenditures can be recorded in a deferral account subject to the OEB's review in subsequent Hydro One Network distribution applications. In March 2015, the OEB approved the disposition of the DSC exemption deferral account at December 31, 2013, including accrued interest, which will be recovered through the 2015-2017 Rate Rider. In addition, the OEB also approved Hydro One's request to discontinue this deferral account, and there were no additions to this regulatory account in 2015.

## Share-based Compensation

The Company recognizes costs associated with stock-based compensation in a regulatory asset as management considers it probable that stock-based compensation costs will be recovered in the future through the rate-setting process. At December 31, 2015 the stock-based compensation costs relate to the share grant plans, are measured at fair value estimated based on grant date share price and recognized using the graded-vesting attribution method. In the absence of rate-regulated accounting 2015 operation, maintenance and administration expenses would have been higher by $5 million (2014 – $nil).

### B2M LP Start-up Costs

In December 2015, OEB issued its decision on B2M LP's application for 2015-2019 and as part of the decision approved the recovery of $8 million of start-up costs relating to B2M LP. The costs will be recovered over a 4 year period beginning in 2016, in accordance with the OEB decision.

### OEB Cost Assessment Differential

In April 2010, the OEB issued its Decision regarding Hydro One Networks' distribution rate application for 2010 and 2011. As part of this decision, the OEB also approved the distribution-related OEB Cost Assessment Differential Account to record the difference between the amounts approved in rates and actual expenditures with respect to the OEB's cost assessments. In March 2015, the OEB approved the disposition of the OEB Cost Assessment Differential Account at December 31, 2013, including accrued interest, which will be recovered through the 2015-2017 Rate Rider. In addition, the OEB also approved Hydro One's request to discontinue this deferral account, and there were no additions to this regulatory account in 2015.

### External Revenue Variance

In May 2009, the OEB approved forecasted amounts related to export service revenue, external revenue from secondary land use, and external revenue from station maintenance and engineering and construction work. In November 2012, the OEB again approved forecasted amounts related to these revenue categories and extended the scope to encompass all other external revenues. The external revenue variance account balance reflects the excess of actual external revenues compared to the OEB-approved forecasted amounts.

### Green Energy Expenditure Variance

In April 2010, the OEB requested the establishment of deferral accounts which capture the difference between the revenue recorded on the basis of Green Energy Plan expenditures incurred and the actual recoveries received.

### CDM Deferral Variance Account

As part of Hydro One Networks' application for 2013 and 2014 transmission rates, Hydro One agreed to establish a new regulatory deferral variance account to track the impact of actual Conservation and Demand Management (CDM) and demand response results on the load forecast compared to the estimated load forecast included in the revenue requirement. At December 31, 2014, the balance in the CDM deferral variance account relates to the actual 2013 CDM compared to the amounts included in 2013 revenue requirement. At December 31, 2015, the balance also includes the difference between the actual 2014 CDM compared to the amounts included in 2014 revenue requirement. The OEB rate order specifically states that the IESO (Ontario Power Authority (OPA) prior to January 1, 2015) data used to calculate the difference between forecasted and actual savings will be provided one year in arrears, and as a result, no amount should be recorded in advance of notification from the IESO of actual results.

### PST Savings Deferral Account

The provincial sales tax (PST) and goods and services tax (GST) were harmonized in July 2010. Unlike the GST, the PST was included in operation, maintenance and administration expenses or capital expenditures for past revenue requirements approved during a full cost-of-service hearing. Under the harmonized sales tax (HST) regime, the HST included in operation, maintenance and administration expenses or capital expenditures is not a cost ultimately borne by the Company and as such, a refund of the prior PST element in the approved revenue requirement is applicable, and calculations for tracking and refund were requested by the OEB. For Hydro One Networks' transmission revenue requirement, PST was included between July 1, 2010 and December 31, 2010 and recorded in a deferral account, per direction from the OEB. For Hydro One Networks' distribution revenue requirement, PST was included between July 1, 2010 and December 31, 2015 and recorded in a deferral account, as directed by the OEB. In March 2015, the OEB approved the disposition of the PST Savings Deferral account at December 31, 2013, including accrued interest, which will be recovered through the 2015-2017 Rate Rider.

## 12. Debt And Credit Agreements

### Short-Term Notes and Credit Facilities

Hydro One meets its short-term liquidity requirements in part through the issuance of commercial paper under Hydro One Inc.'s Commercial Paper Program which has a maximum authorized amount of $1.5 billion. These short-term notes are denominated in Canadian dollars with varying maturities not exceeding 365 days. The Commercial Paper Program is supported by Hydro One Inc.'s committed revolving credit facilities totalling $2.3 billion. At December 31, 2015, Hydro One Inc. had $1,491 million in commercial paper borrowings outstanding (December 31, 2014 – $nil).

At December 31, 2015, Hydro One's consolidated committed, unsecured and unused credit facilities totalling $2,550 million consisted of the following:

| *(millions of Canadian dollars)* | Maturity | Amount |
|---|---|---|
| Hydro One Inc. | | |
| Revolving standby credit facility | June 2020 | 1,500 |
| Three-year senior, revolving term credit facility | October 2018 | 800 |
| Hydro One | | |
| Five-year senior, revolving term credit facility | November 2020 | 250 |
| Total | | 2,550 |

The Company may use the credit facilities for working capital and general corporate purposes. If used, interest on the credit facilities would apply based on Canadian benchmark rates. The obligation of each lender to make any credit extension under its credit facility is subject to various conditions including, among other things, that no event of default has occurred or would result from such credit extension.

### Long-Term Debt

At December 31, 2015, all of the Company's long-term debt was issued by Hydro One Inc. under Hydro One Inc.'s Medium-Term Note (MTN) Program. The maximum authorized principal amount of notes issuable by Hydro One Inc. under this program is $3.5 billion. At December 31, 2015, $3.5 billion remained available for issuance until January 2018.

The following table presents Hydro One Inc.'s outstanding long-term debt at December 31, 2015 and 2014:

| *December 31 (millions of Canadian dollars)* | 2015 | 2014 |
|---|---|---|
| 2.95% Series 21 notes due 2015[1] | – | 500 |
| Floating-rate Series 22 notes due 2015[2] | – | 50 |
| 4.64% Series 10 notes due 2016 | 450 | 450 |
| Floating-rate Series 27 notes due 2016[2] | 50 | 50 |
| 5.18% Series 13 notes due 2017 | 600 | 600 |
| 2.78% Series 28 notes due 2018 | 750 | 750 |
| Floating-rate Series 31 notes due 2019[2] | 228 | 228 |
| 4.40% Series 20 notes due 2020 | 300 | 300 |
| 1.62% Series 33 notes due 2020[1] | 350 | – |
| 3.20% Series 25 notes due 2022 | 600 | 600 |
| 7.35% Debentures due 2030 | 400 | 400 |
| 6.93% Series 2 notes due 2032 | 500 | 500 |
| 6.35% Series 4 notes due 2034 | 385 | 385 |
| 5.36% Series 9 notes due 2036 | 600 | 600 |
| 4.89% Series 12 notes due 2037 | 400 | 400 |
| 6.03% Series 17 notes due 2039 | 300 | 300 |
| 5.49% Series 18 notes due 2040 | 500 | 500 |
| 4.39% Series 23 notes due 2041 | 300 | 300 |
| 6.59% Series 5 notes due 2043 | 315 | 315 |
| 4.59% Series 29 notes due 2043 | 435 | 435 |
| 4.17% Series 32 notes due 2044 | 350 | 350 |
| 5.00% Series 11 notes due 2046 | 325 | 325 |
| 4.00% Series 24 notes due 2051 | 225 | 225 |
| 3.79% Series 26 notes due 2062 | 310 | 310 |
| 4.29% Series 30 notes due 2064 | 50 | 50 |
| | 8,723 | 8,923 |
| Add: Unrealized mark-to-market loss[1] | 1 | 2 |
| Less: Long-term debt payable within one year | (500) | (552) |
| Long-term debt | 8,224 | 8,373 |

1 The unrealized mark-to-market loss relates to $50 million of the Series 33 notes due 2020 (2014 – $250 million of the Series 21 notes due 2015). The unrealized mark-to-market loss is offset by a $1 million (2014 – $2 million) unrealized mark-to-market gain on the related fixed-to-floating interest-rate swap agreements, which are accounted for as fair value hedges. See Note 13 – Fair Value of Financial Instruments and Risk Management for details of fair value hedges.

2 The interest rates of the floating-rate notes are referenced to the 3-month Canadian dollar bankers' acceptance rate, plus a margin.

In 2015, Hydro One Inc. issued $350 million (2014 – $628 million) of long-term debt under the MTN Program, and repaid $550 million of long-term debt MTN Program notes (2014 – $750 million).

Long-term debt totalling $35 million assumed by Hydro One Inc. as part of the Haldimand Hydro and Woodstock Hydro acquisitions was repaid in 2015.

The long-term debt is unsecured and denominated in Canadian dollars. The long-term debt is summarized by the number of years to maturity in Note 13 – Fair Value of Financial Instruments and Risk Management.

## 13. Fair Value of Financial Instruments and Risk Management

Fair value is considered to be the exchange price in an orderly transaction between market participants to sell an asset or transfer a liability at the measurement date. The fair value definition focuses on an exit price, which is the price that would be received in the sale of an asset or the amount that would be paid to transfer a liability.

Hydro One classifies its fair value measurements based on the following hierarchy, as prescribed by the accounting guidance for fair value, which prioritizes the inputs to valuation techniques used to measure fair value into three levels:

Level 1 inputs are unadjusted quoted prices in active markets for identical assets or liabilities that Hydro One has the ability to access. An active market for the asset or liability is one in which transactions for the asset or liability occur with sufficient frequency and volume to provide ongoing pricing information.

Level 2 inputs are those other than quoted market prices that are observable, either directly or indirectly, for an asset or liability. Level 2 inputs include, but are not limited to, quoted prices for similar assets or liabilities in an active market, quoted prices for identical or similar assets or liabilities in markets that are not active and inputs other than quoted market prices that are observable for the asset or liability, such as interest-rate curves and yield curves observable at commonly quoted intervals, volatilities, credit risk and default rates. A Level 2 measurement cannot have more than an insignificant portion of the valuation based on unobservable inputs.

Level 3 inputs are any fair value measurements that include unobservable inputs for the asset or liability for more than an insignificant portion of the valuation. A Level 3 measurement may be based primarily on Level 2 inputs.

## Non-Derivative Financial Assets and Liabilities

At December 31, 2015 and 2014, the Company's carrying amounts of accounts receivable, due from related parties, cash and cash equivalents, bank indebtedness, short-term notes payable, accounts payable, and due to related parties are representative of fair value because of the short-term nature of these instruments.

## Fair Value Measurements of Long-Term Debt

The fair values and carrying values of the Company's long-term debt at December 31, 2015 and 2014 are as follows:

| *December 31* *(millions of Canadian dollars)* | 2015 Carrying Value | 2015 Fair Value | 2014 Carrying Value | 2014 Fair Value |
|---|---|---|---|---|
| Long-term debt | | | | |
| $250 million of MTN Series 21 notes[1] | – | – | 252 | 252 |
| $50 million of MTN Series 33 notes[1] | 51 | 51 | – | – |
| Other notes and debentures[2] | 8,673 | 9,942 | 8,673 | 10,159 |
| | 8,724 | 9,993 | 8,925 | 10,411 |

[1] The fair value of the $50 million MTN Series 33 notes and $250 million of the MTN Series 21 notes subject to hedging is primarily based on changes in the present value of future cash flows due to a change in the yield in the swap market for the related swap (hedged risk).

[2] The fair value of other notes and debentures, and the portion of the MTN Series 21 notes that are not subject to hedging, represents the market value of the notes and debentures and is based on unadjusted period-end market prices for the same or similar debt of the same remaining maturities.

## Fair Value Measurements of Derivative Instruments

At December 31, 2015, Hydro One Inc. had an interest-rate swap in the amount of $50 million (2014 – $250 million) that was used to convert fixed-rate debt to floating-rate debt. This swap is classified as a fair value hedge. Hydro One Inc.'s fair value hedge exposure was equal to about 1% (2014 – 3%) of its total long-term debt of $8,724 million (2014 – $8,925 million). At December 31, 2015, Hydro One Inc.'s interest-rate swap designated as a fair value hedge was as follows:

- a $50 million fixed-to-floating interest-rate swap agreement to convert $50 million of the $350 million MTN Series 33 notes maturing April 30, 2020 into three-month variable rate debt.

At December 31, 2015, the Company had no interest-rate swaps classified as undesignated contracts (2014 – $409 million).

As part of the Norfolk Power and Woodstock Hydro acquisitions, Hydro One Inc. assumed liabilities associated with unrealized losses on derivative instruments (interest-rate swaps) totalling $6 million. Hydro One Inc. extinguished the interest rate swaps and repaid these liabilities in 2015.

## Fair Value Hierarchy

The fair value hierarchy of financial assets and liabilities at December 31, 2015 and 2014 is as follows:

| *December 31, 2015* *(millions of Canadian dollars)* | Carrying Value | Fair Value | Level 1 | Level 2 | Level 3 |
|---|---|---|---|---|---|
| Assets: | | | | | |
| Cash and cash equivalents | 94 | 94 | 94 | – | – |
| Derivative instruments | | | | | |
| Fair value hedge – interest-rate swap | 1 | 1 | 1 | – | – |
| | 95 | 95 | 95 | – | – |
| Liabilities: | | | | | |
| Short-term notes payable | 1,491 | 1,491 | 1,491 | – | – |
| Long-term debt | 8,724 | 9,993 | – | 9,993 | – |
| | 10,215 | 11,484 | 1,491 | 9,993 | – |

| *December 31, 2014* *(millions of Canadian dollars)* | Carrying Value | Fair Value | Level 1 | Level 2 | Level 3 |
|---|---|---|---|---|---|
| Assets: | | | | | |
| Cash and cash equivalents | 100 | 100 | 100 | – | – |
| Derivative instruments | | | | | |
| Fair value hedges – interest-rate swaps | 2 | 2 | – | 2 | – |
| | 102 | 102 | 100 | 2 | – |
| Liabilities: | | | | | |
| Bank indebtedness | 2 | 2 | 2 | – | – |
| Derivative instruments | | | | | |
| Undesignated contracts – interest-rate swaps | 3 | 3 | – | 3 | – |
| Long-term debt | 8,925 | 10,411 | – | 10,411 | – |
| | 8,930 | 10,416 | 2 | 10,414 | – |

Cash and cash equivalents include cash and short-term investments. The carrying values are representative of fair value because of the short-term nature of these instruments.

The fair value of the derivative instruments is determined using inputs other than quoted prices that are observable for these assets. The fair value is primarily based on the present value of future cash flows using a swap yield curve to determine the assumptions for interest rates.

The fair value of the hedged portion of the long-term debt is primarily based on the present value of future cash flows using a swap yield curve to determine the assumption for interest rates. The fair value of the unhedged portion of the long-term debt is based on unadjusted period-end market prices for the same or similar debt of the same remaining maturities.

There were no significant transfers between any of the fair value levels during the years ended December 31, 2015 and 2014.

## Risk Management

Exposure to market risk, credit risk and liquidity risk arises in the normal course of the Company's business.

### Market Risk

Market risk refers primarily to the risk of loss that results from changes in costs, foreign exchange rates and interest rates. The Company is exposed to fluctuations in interest rates as its regulated return on equity is derived using a formulaic approach that takes into account anticipated interest rates, but is not currently exposed to material commodity price risk or material foreign exchange risk.

The OEB-approved adjustment formula for calculating return on equity in a deemed regulatory capital structure of 60% debt and 40% equity provides for increases and decreases depending on changes in benchmark rates of return for Government of Canada debt. The Company estimates that a 1% decrease in the forecasted long-term Government of Canada bond yield used in determining its rate of return would reduce the Company's transmission business' 2015 net income by approximately $20 million (2014 – $20 million) and its distribution business' 2015 net income by approximately $13 million (2014 – $10 million). The Company's net income is adversely impacted by rising interest rates as the Company's maturing long-term debt is refinanced at market rates. The Company periodically utilizes interest rate swap agreements to mitigate elements of interest rate risk.

The Company uses a combination of fixed and variable-rate debt to manage the mix of its debt portfolio. The Company also uses derivative financial instruments to manage interest-rate risk. The Company utilizes interest-rate swaps, which are typically designated as fair value hedges, as a means to manage its interest rate exposure to achieve a lower cost of debt. In addition, the Company may utilize interest-rate derivative instruments to lock in interest-rate levels in anticipation of future financing.

A hypothetical 10% increase in the interest rates associated with variable-rate debt would not have resulted in a significant decrease in Hydro One's net income for the years ended December 31, 2015 or 2014.

## Fair Value Hedges

For derivative instruments that are designated and qualify as fair value hedges, the gain or loss on the derivative as well as the offsetting loss or gain on the hedged item attributable to the hedged risk are recognized in the Consolidated Statements of Operations and Comprehensive Income. The net unrealized loss (gain) on the hedged debt and the related interest-rate swaps for the years ended December 31, 2015 and 2014 are included in financing charges as follows:

| *Year ended December 31*<br>*(millions of Canadian dollars)* | 2015 | 2014 |
|---|---|---|
| Unrealized loss (gain) on hedged debt | (1) | (3) |
| Unrealized loss (gain) on fair value interest-rate swaps | 1 | 3 |
| Net unrealized loss (gain) | – | – |

At December 31, 2015, Hydro One had $50 million (2014 – $250 million) of notional amounts of fair value hedges outstanding related to interest-rate swaps, with assets at fair value of $1 million (2014 – $2 million). During the years ended December 31, 2015 and 2014, there was no significant impact on the results of operations as a result of any ineffectiveness attributable to fair value hedges.

## Credit Risk

Financial assets create a risk that a counterparty will fail to discharge an obligation, causing a financial loss. At December 31, 2015 and 2014, there were no significant concentrations of credit risk with respect to any class of financial assets. The Company's revenue is earned from a broad base of customers. As a result, Hydro One did not earn a significant amount of revenue from any single customer. At December 31, 2015 and 2014, there was no significant accounts receivable balance due from any single customer.

At December 31, 2015, the Company's provision for bad debts was $61 million (2014 – $66 million). Adjustments and write-offs were determined on the basis of a review of overdue accounts, taking into consideration historical experience. At December 31, 2015, approximately 6% (2014 – 6%) of the Company's net accounts receivable were aged more than 60 days.

Hydro One manages its counterparty credit risk through various techniques including: entering into transactions with highly-rated counterparties; limiting total exposure levels with individual counterparties consistent with the Company's Board-approved Credit Risk Policy; entering into master agreements which enable net settlement and the contractual right of offset; and monitoring the financial condition of counterparties. In addition to payment netting language in master agreements, the Company establishes credit limits, margining thresholds and collateral requirements for each counterparty. Counterparty credit limits are based on an internal credit review that considers a variety of factors, including the results of a scoring model, leverage, liquidity, profitability, credit ratings and risk management capabilities. The determination of credit exposure for a particular counterparty is the sum of current exposure plus the potential future exposure with that counterparty. The current exposure is calculated as the sum of the principal value of money market exposures and the market value of all contracts that have a positive mark-to-market position on the measurement date. The Company would offset the positive market values against negative values with the same counterparty only where permitted by the existence of a legal netting agreement such as an International Swap Dealers Association master agreement. The potential future exposure represents a safety margin to protect against future fluctuations of interest rates, currencies, equities, and commodities. It is calculated based on factors developed by the Bank of International Settlements, following extensive historical analysis of random fluctuations of interest rates and currencies. To the extent that a counterparty's margining thresholds are exceeded, the counterparty is required to post collateral with the Company as specified in each agreement. The Company monitors current and forward credit exposure to counterparties both on an individual and an aggregate basis. The Company's credit risk for accounts receivable is limited to the carrying amounts on the Consolidated Balance Sheets.

Derivative financial instruments result in exposure to credit risk since there is a risk of counterparty default. The credit exposure of derivative contracts, before collateral, is represented by the fair value of contracts at the reporting date. At December 31, 2015, the counterparty credit risk exposure on the fair value of these interest-rate swap contracts was $1 million (2014 – $3 million). At December 31, 2015, Hydro One's credit exposure for all derivative instruments, and applicable payables and receivables, had a credit rating of investment grade, with one financial institution as the counterparty.

## Liquidity Risk

Liquidity risk refers to the Company's ability to meet its financial obligations as they come due. Hydro One meets its short-term liquidity requirements using cash and cash equivalents on hand, funds from operations, the issuance of commercial paper, and the revolving standby facilities totaling $2,550 million. The short-term liquidity under the Commercial Paper Program, and anticipated levels of funds from operations should be sufficient to fund normal operating requirements.

At December 31, 2015, accounts payable and accrued liabilities in the amount of $753 million (2014 – $784 million) were expected to be settled in cash at their carrying amounts within the next 12 months.

At December 31, 2015, Hydro One Inc. had long-term debt in the principal amount of $8,723 million (2014 – $8,923 million). Principal repayments and related weighted average interest rates are summarized by the number of years to maturity in the following table:

| Years to Maturity | Long-term Debt Principal Repayments *(millions of Canadian dollars)* | Weighted Average Interest Rate *(%)* |
|---|---|---|
| 1 year | 500 | 4.3 |
| 2 years | 600 | 5.2 |
| 3 years | 750 | 2.8 |
| 4 years | 228 | 1.2 |
| 5 years | 650 | 2.9 |
| | 2,728 | 3.5 |
| 6 – 10 years | 600 | 3.2 |
| Over 10 years | 5,395 | 5.4 |
| | 8,723 | 4.7 |

Interest payments on long-term debt are summarized by year in the following table:

| Year | Interest Payments *(millions of Canadian dollars)* |
|---|---|
| 2016 | 397 |
| 2017 | 386 |
| 2018 | 355 |
| 2019 | 332 |
| 2020 | 322 |
| | 1,792 |
| 2021-2025 | 1,496 |
| 2026 + | 4,080 |
| | 7,368 |

## 14. Capital Management

The Company's objectives with respect to its capital structure are to maintain effective access to capital on a long-term basis at reasonable rates, and to deliver appropriate financial returns. In order to ensure ongoing access to capital, the Company targets to maintain strong credit quality. The Company considers its capital structure to consist of shareholders' equity, including preferred shares, long-term debt, short-term notes payable, and cash and cash equivalents. At December 31, 2015 and 2014, the Company's capital structure was as follows:

| *December 31*<br>*(millions of Canadian dollars)* | 2015 | 2014 |
|---|---|---|
| Long-term debt payable within one year | 500 | 552 |
| Short-term notes payable | 1,491 | – |
| Less: cash and cash equivalents | 94 | 100 |
| | 1,897 | 452 |
| Long-term debt | 8,224 | 8,373 |
| Preferred shares | 418 | 323 |
| Common shares | 5,623 | 3,314 |
| Retained earnings | 3,806 | 4,249 |
| | 9,429 | 7,563 |
| Total capital | 19,968 | 16,711 |

Hydro One Inc. has customary covenants typically associated with long-term debt. Among other things, Hydro One Inc.'s long-term debt and credit facility covenants limit the permissible debt to 75% of its total capitalization, limit the ability to sell assets and impose a negative pledge provision, subject to customary exceptions. At December 31, 2015 and 2014, Hydro One Inc. was in compliance with all of these covenants and limitations.

## 15. Pension and Post-retirement and Post-Employment Benefits

Hydro One has a defined benefit pension plan, a supplementary pension plan, and post-retirement and post-employment benefit plans. The defined benefit pension plan (Pension Plan) is contributory and covers all regular employees of Hydro One and its subsidiaries, except employees of Haldimand Hydro and Woodstock Hydro. Employees of Haldimand Hydro and Woodstock Hydro participate in the OMERS Plan. The supplementary pension plan provides members of the Pension Plan with benefits that would have been earned and payable under the Pension Plan but for limitations imposed by the *Income Tax Act* (Canada). The supplementary pension plan obligation is included with other post-retirement and post-employment benefit obligations on the Consolidated Balance Sheets.

### The OMERS Plan

Hydro One contributions to the OMERS Plan for the year ended December 31, 2015 were $2 million (2014 – $2 million). At December 31, 2015, Company contributions payable included in accrued liabilities on the Consolidated Balance Sheets were less than $1 million (2014 – less than $1 million). Hydro One contributions do not represent more than 5% of total contributions to the OMERS Plan, as indicated in OMERS' most recently available annual report for the year ended December 31, 2014.

At December 31, 2014, the OMERS Plan was 90.8% funded, with an unfunded liability of $7.1 billion. This unfunded liability could result in future payments by participating employers and members. Hydro One future contributions could be increased substantially if other entities withdraw from the plan.

### Pension Plan, Post-Retirement and Post-Employment Plans

The Pension Plan provides benefits based on highest three-year average pensionable earnings. For new management employees who commenced employment on or after January 1, 2004, and for new Society of Energy Professionals-represented staff hired after November 17, 2005, benefits are based on highest five-year average pensionable earnings. After retirement, pensions are indexed to inflation.

Company and employee contributions to the Pension Plan are based on actuarial valuations performed at least every three years. Annual Pension Plan contributions for 2015 of $177 million (2014 – $174 million) were based on an actuarial valuation effective December 31, 2013 and the expected level of pensionable earnings. Estimated annual Pension Plan contributions for 2016 are approximately $180 million, based on the actuarial valuation as at December 31, 2013 and projected levels of pensionable earnings. Future minimum contributions beyond 2016 will be based on an actuarial valuation effective no later than December 31, 2016. Contributions are payable one month in arrears. All of the contributions are expected to be in the form of cash.

Hydro One recognizes the overfunded or underfunded status of the Pension Plan, and post-retirement and post-employment benefit plans (Plans) as an asset or liability on its Consolidated Balance Sheets, with offsetting regulatory assets and liabilities as appropriate. The underfunded benefit obligations for the Plans, in the absence of regulatory accounting, would be recognized in AOCI. The impact of changes in assumptions used to measure pension, post-retirement and post-employment benefit obligations is generally recognized over the expected average remaining service period of the employees. The measurement date for the Plans is December 31.

| *Year ended December 31* | Pension Benefits | | Post-Retirement and Post-Employment Benefits | |
|---|---|---|---|---|
| *(millions of Canadian dollars)* | **2015** | 2014 | **2015** | 2014 |
| Change in projected benefit obligation | | | | |
| Projected benefit obligation, beginning of year | **7,535** | 6,576 | **1,582** | 1,531 |
| Current service cost | **186** | 145 | **43** | 41 |
| Interest cost | **302** | 312 | **64** | 73 |
| Benefits paid | **(334)** | (319) | **(47)** | (45) |
| Net actuarial loss (gain) | **(6)** | 821 | **(27)** | (18) |
| Change due to Hydro One Brampton spin-off | **–** | – | **(5)** | – |
| Projected benefit obligation, end of year | **7,683** | 7,535 | **1,610** | 1,582 |
| Change in plan assets | | | | |
| Fair value of plan assets, beginning of year | **6,299** | 5,731 | **–** | – |
| Actual return on plan assets | **582** | 703 | **–** | – |
| Benefits paid | **(334)** | (319) | **–** | – |
| Employer contributions | **177** | 174 | **–** | – |
| Employee contributions | **40** | 35 | **–** | – |
| Administrative expenses | **(33)** | (25) | **–** | – |
| Fair value of plan assets, end of year | **6,731** | 6,299 | **–** | – |
| Unfunded status | **952** | 1,236 | **1,610** | 1,582 |

Hydro One presents its benefit obligations and plan assets net on its Consolidated Balance Sheets within the following line items:

| *December 31* | Pension Benefits | | Post-Retirement and Post-Employment Benefits | |
|---|---|---|---|---|
| *(millions of Canadian dollars)* | **2015** | 2014 | **2015** | 2014 |
| Accrued liabilities | **–** | – | **50** | 49 |
| Pension benefit liability | **952** | 1,236 | **–** | – |
| Post-retirement and post-employment benefit liability | **–** | – | **1,560** | 1,533 |
| Unfunded status | **952** | 1,236 | **1,610** | 1,582 |

The funded or unfunded status of the pension, post-retirement and post-employment benefit plans refers to the difference between the fair value of plan assets and the projected benefit obligations for the Plans. The funded/unfunded status changes over time due to several factors, including contribution levels, assumed discount rates and actual returns on plan assets.

The following table provides the projected benefit obligation (PBO), accumulated benefit obligation (ABO) and fair value of plan assets for the Pension Plan:

| *December 31*<br>*(millions of Canadian dollars)* | 2015 | 2014 |
|---|---|---|
| PBO | 7,683 | 7,535 |
| ABO | 7,020 | 6,887 |
| Fair value of plan assets | 6,731 | 6,299 |

On an ABO basis, the Pension Plan was funded at 96% at December 31, 2015 (2014 – 91%). On a PBO basis, the Pension Plan was funded at 88% at December 31, 2015 (2014 – 84%). The ABO differs from the PBO in that the ABO includes no assumption about future compensation levels.

## Components of Net Periodic Benefit Costs

The following table provides the components of the net periodic benefit costs for the years ended December 31, 2015 and 2014 for the Pension Plan:

| *Year ended December 31*<br>*(millions of Canadian dollars)* | 2015 | 2014 |
|---|---|---|
| Current service cost, net of employee contributions | 146 | 110 |
| Interest cost | 302 | 312 |
| Expected return on plan assets, net of expenses | (406) | (369) |
| Actuarial loss amortization | 119 | 103 |
| Prior service cost amortization | 2 | 2 |
| Net periodic benefit costs | 163 | 158 |
| Charged to results of operations[1] | 81 | 81 |

[1] The Company follows the cash basis of accounting consistent with the inclusion of pension costs in OEB-approved rates. During the year ended December 31, 2015, pension costs of $177 million (2014 – $174 million) were attributed to labour, of which $81 million (2014 – $81 million) was charged to operations, and $96 million (2014 – $93 million) was capitalized as part of the cost of property, plant and equipment and intangible assets.

The following table provides the components of the net periodic benefit costs for the years ended December 31, 2015 and 2014 for the post-retirement and post-employment benefit plans:

| *Year ended December 31*<br>*(millions of Canadian dollars)* | 2015 | 2014 |
|---|---|---|
| Current service cost, net of employee contributions | 43 | 41 |
| Interest cost | 64 | 73 |
| Actuarial loss amortization | 14 | 18 |
| Prior service cost amortization | – | 2 |
| Net periodic benefit costs | 121 | 134 |
| Charged to results of operations | 55 | 62 |

## Assumptions

The measurement of the obligations of the Plans and the costs of providing benefits under the Plans involves various factors, including the development of valuation assumptions and accounting policy elections. When developing the required assumptions, the Company considers historical information as well as future expectations. The measurement of benefit obligations and costs is impacted by several assumptions including the discount rate applied to benefit obligations, the long-term expected rate of return on plan assets, Hydro One's expected level of contributions to the Plans, the incidence of mortality, the expected remaining service period of plan participants, the level of compensation and rate of compensation increases, employee age, length of service, and the anticipated rate of increase of health care costs, among other factors. The impact of changes in assumptions used to measure the obligations of the Plans is generally recognized over the expected average remaining service period of the plan participants. In selecting the expected rate of return on plan assets, Hydro One considers historical economic indicators that impact asset returns, as well as expectations regarding future long-term capital market performance, weighted by target asset class allocations. In general, equity securities, real estate and private equity investments are forecasted to have higher returns than fixed-income securities.

The following weighted average assumptions were used to determine the benefit obligations at December 31, 2015 and 2014:

| | Pension Benefits | | Post-Retirement and Post-Employment Benefits | |
|---|---|---|---|---|
| *Year ended December 31* | **2015** | 2014 | **2015** | 2014 |
| Significant assumptions: | | | | |
| Weighted average discount rate | **4.00%** | 4.00% | **4.10%** | 4.00% |
| Rate of compensation scale escalation (without merit) | **2.50%** | 2.50% | **2.50%** | 2.50% |
| Rate of cost of living increase | **2.00%** | 2.00% | **2.00%** | 2.00% |
| Rate of increase in health care cost trends[1] | **–** | – | **4.36%** | 4.36% |

[1] 6.38% per annum in 2016, grading down to 4.36% per annum in and after 2031 (2014 – 6.52% in 2015, grading down to 4.36% per annum in and after 2031)

The following weighted average assumptions were used to determine the net periodic benefit costs for the years ended December 31, 2015 and 2014. Assumptions used to determine current year-end benefit obligations are the assumptions used to estimate the subsequent year's net periodic benefit costs.

| *Year ended December 31* | **2015** | 2014 |
|---|---|---|
| Pension Benefits: | | |
| Weighted average expected rate of return on plan assets | **6.50%** | 6.50% |
| Weighted average discount rate | **4.00%** | 4.75% |
| Rate of compensation scale escalation (without merit) | **2.50%** | 2.50% |
| Rate of cost of living increase | **2.00%** | 2.00% |
| Average remaining service life of employees *(years)* | **13** | 11 |
| Post-Retirement and Post-Employment Benefits: | | |
| Weighted average discount rate | **4.00%** | 4.75% |
| Rate of compensation scale escalation (without merit) | **2.50%** | 2.50% |
| Rate of cost of living increase | **2.00%** | 2.00% |
| Average remaining service life of employees *(years)* | **13.8** | 12 |
| Rate of increase in health care cost trends[1] | **4.36%** | 4.39% |

[1] 6.52% per annum in 2015, grading down to 4.36% per annum in and after 2031 (2014 – 6.81% in 2014, grading down to 4.39% per annum in and after 2031)

The discount rate used to determine the current year pension obligation and the subsequent year's net periodic benefit costs is based on a yield curve approach. Under the yield curve approach, expected future benefit payments for each plan are discounted by a rate on a third party bond yield curve corresponding to each duration. The yield curve is based on "AA" long-term corporate bonds. A single discount rate is calculated that would yield the same present value as the sum of the discounted cash flows.

The effect of a 1% change in health care cost trends on the projected benefit obligation for the post-retirement and post-employment benefits at December 31, 2015 and 2014 is as follows:

| *December 31*<br>*(millions of Canadian dollars)* | 2015 | 2014 |
|---|---|---|
| Projected benefit obligation: | | |
| Effect of a 1% increase in health care cost trends | 252 | 248 |
| Effect of a 1% decrease in health care cost trends | (196) | (193) |

The effect of a 1% change in health care cost trends on the service cost and interest cost for the post-retirement and post-employment benefits for the years ended December 31, 2015 and 2014 is as follows:

| *Year ended December 31*<br>*(millions of Canadian dollars)* | 2015 | 2014 |
|---|---|---|
| Service cost and interest cost: | | |
| Effect of a 1% increase in health care cost trends | 22 | 23 |
| Effect of a 1% decrease in health care cost trends | (16) | (17) |

The following approximate life expectancies were used in the mortality assumptions to determine the projected benefit obligations for the pension and post-retirement and post-employment plans at December 31, 2015 and 2014:

| December 31, 2015<br>Life expectancy at 65 for a member currently at | | | | December 31, 2014<br>Life expectancy at 65 for a member currently at | | | |
|---|---|---|---|---|---|---|---|
| Age 65 | | Age 45 | | Age 65 | | Age 45 | |
| Male | Female | Male | Female | Male | Female | Male | Female |
| 23 | 25 | 24 | 26 | 23 | 25 | 24 | 26 |

## Estimated Future Benefit Payments

At December 31, 2015, estimated future benefit payments to the participants of the Plans were:

| *(millions of Canadian dollars)* | Pension Benefits | Post-Retirement and Post-Employment Benefits |
|---|---|---|
| 2016 | 316 | 53 |
| 2017 | 328 | 55 |
| 2018 | 339 | 57 |
| 2019 | 350 | 59 |
| 2020 | 360 | 61 |
| 2021 through to 2025 | 1,928 | 342 |
| Total estimated future benefit payments through to 2025 | 3,621 | 627 |

## Components of Regulatory Assets

A portion of actuarial gains and losses and prior service costs is recorded within regulatory assets on Hydro One's Consolidated Balance Sheets to reflect the expected regulatory inclusion of these amounts in future rates, which would otherwise be recorded in OCI. The following table provides the actuarial gains and losses and prior service costs recorded within regulatory assets:

| *Year ended December 31*<br>*(millions of Canadian dollars)* | 2015 | 2014 |
|---|---|---|
| **Pension Benefits:** | | |
| Actuarial loss (gain) for the year | (181) | 511 |
| Actuarial loss amortization | (119) | (103) |
| Prior service cost amortization | (2) | (2) |
| | (302) | 406 |
| **Post-Retirement and Post-Employment Benefits:** | | |
| Actuarial loss (gain) for the year | (27) | (18) |
| Actuarial loss amortization | (14) | (18) |
| Prior service cost amortization | – | (2) |
| | (41) | (38) |

The following table provides the components of regulatory assets that have not been recognized as components of net periodic benefit costs for the years ended December 31, 2015 and 2014:

| *Year ended December 31*<br>*(millions of Canadian dollars)* | 2015 | 2014 |
|---|---|---|
| **Pension Benefits:** | | |
| Prior service cost | – | 2 |
| Actuarial loss | 952 | 1,234 |
| | 952 | 1,236 |
| **Post-Retirement and Post-Employment Benefits:** | | |
| Actuarial loss | 240 | 273 |
| | 240 | 273 |

The following table provides the components of regulatory assets at December 31 that are expected to be amortized as components of net periodic benefit costs in the following year:

| *December 31*<br>*(millions of Canadian dollars)* | Pension Benefits 2015 | Pension Benefits 2014 | Post-Retirement and Post-Employment Benefits 2015 | Post-Retirement and Post-Employment Benefits 2014 |
|---|---|---|---|---|
| Prior service cost | – | 2 | – | – |
| Actuarial loss | 96 | 119 | 8 | 10 |
| | 96 | 121 | 8 | 10 |

## Pension Plan Assets

### Investment Strategy

On a regular basis, Hydro One evaluates its investment strategy to ensure that Pension Plan assets will be sufficient to pay Pension Plan benefits when due. As part of this ongoing evaluation, Hydro One may make changes to its targeted asset allocation and investment strategy. The Pension Plan is managed at a net asset level. The main objective of the Pension Plan is to sustain a certain level of net assets in order to meet the pension obligations of the Company. The Pension Plan fulfills its primary objective by adhering to specific investment policies outlined in its Summary of Investment Policies and Procedures (SIPP), which is reviewed and approved by the Human Resource Committee of Hydro One's Board of Directors. The Company manages net assets by engaging knowledgeable external investment managers who are charged with the responsibility of investing existing funds and new funds (current year's employee and employer contributions) in accordance with the approved SIPP. The performance of the managers is monitored through a governance structure. Increases in net assets are a direct result of investment income generated by investments held by the Pension Plan and contributions to the Pension Plan by eligible employees and by the Company. The main use of net assets is for benefit payments to eligible Pension Plan members.

### Pension Plan Asset Mix

At December 31, 2015, the Pension Plan target asset allocations and weighted average asset allocations were as follows:

| | Target Allocation (%) | Pension Plan Assets (%) |
|---|---|---|
| Equity securities | 55.0 | 58.2 |
| Debt securities | 35.0 | 36.4 |
| Other[1] | 10.0 | 5.4 |
| | 100.0 | 100.0 |

[1] Other investments include real estate and infrastructure investments.

At December 31, 2015, the Pension Plan held $9 million Hydro One corporate bonds (2014 – $nil) and $420 million of debt securities of the Province (2014 – $340 million).

### Concentrations of Credit Risk

Hydro One evaluated its Pension Plan's asset portfolio for the existence of significant concentrations of credit risk as at December 31, 2015 and 2014. Concentrations that were evaluated include, but are not limited to, investment concentrations in a single entity, concentrations in a type of industry, and concentrations in individual funds. At December 31, 2015 and 2014, there were no significant concentrations (defined as greater than 10% of plan assets) of risk in the Pension Plan's assets.

The Pension Plan manages its counterparty credit risk with respect to bonds by investing in investment-grade and government bonds and with respect to derivative instruments by transacting only with financial institutions rated at least "A+" by Standard & Poor's Rating Services, DBRS Limited, and Fitch Ratings Inc., and "A1" by Moody's Investors Service, and also by utilizing exposure limits to each counterparty and ensuring that exposure is diversified across counterparties. The risk of default on transactions in listed securities is considered minimal, as the trade will fail if either party to the transaction does not meet its obligation.

## Fair Value Measurements

The following tables present the Pension Plan assets measured and recorded at fair value on a recurring basis and their level within the fair value hierarchy at December 31, 2015 and 2014:

| *December 31, 2015* *(millions of Canadian dollars)* | Level 1 | Level 2 | Level 3 | Total |
|---|---|---|---|---|
| Pooled funds | – | 23 | 299 | 322 |
| Cash and cash equivalents | 191 | – | – | 191 |
| Short-term securities | – | 80 | – | 80 |
| Real estate | – | – | 2 | 2 |
| Corporate shares – Canadian | 923 | – | – | 923 |
| Corporate shares – Foreign | 2,931 | – | – | 2,931 |
| Bonds and debentures – Canadian | – | 2,074 | – | 2,074 |
| Bonds and debentures – Foreign | – | 199 | – | 199 |
| Total fair value of plan assets[1] | 4,045 | 2,376 | 301 | 6,722 |

[1] At December 31, 2015, the total fair value of Pension Plan assets excludes $27 million of interest and dividends receivable, and $18 million relating to accruals for pension administration expense and foreign exchange contracts payable.

| *December 31, 2014* *(millions of Canadian dollars)* | Level 1 | Level 2 | Level 3 | Total |
|---|---|---|---|---|
| Pooled funds | – | 18 | 142 | 160 |
| Cash and cash equivalents | 166 | – | – | 166 |
| Short-term securities | – | 176 | – | 176 |
| Real estate | – | – | 2 | 2 |
| Corporate shares – Canadian | 1,008 | – | – | 1,008 |
| Corporate shares – Foreign | 2,766 | – | – | 2,766 |
| Bonds and debentures – Canadian | – | 1,799 | – | 1,799 |
| Bonds and debentures – Foreign | – | 211 | – | 211 |
| Total fair value of plan assets[1] | 3,940 | 2,204 | 144 | 6,288 |

[1] At December 31, 2014, the total fair value of Pension Plan assets excludes $18 million of interest and dividends receivable, and $7 million relating to accruals for pension administration expense.

See Note 13 – Fair Value of Financial Instruments and Risk Management for a description of levels within the fair value hierarchy.

## Changes in the Fair Value of Financial Instruments Classified in Level 3

The following table summarizes the changes in fair value of financial instruments classified in Level 3 for the years ended December 31, 2015 and 2014. The Pension Plan classifies financial instruments as Level 3 when the fair value is measured based on at least one significant input that is not observable in the markets or due to lack of liquidity in certain markets. The gains and losses presented in the table below may include changes in fair value based on both observable and unobservable inputs.

| *Year ended December 31 (millions of Canadian dollars)* | 2015 | 2014 |
|---|---|---|
| Fair value, beginning of year | 144 | 119 |
| Realized and unrealized gains | 51 | 30 |
| Purchases | 106 | 23 |
| Sales and disbursements | – | (28) |
| Fair value, end of year | 301 | 144 |

There were no significant transfers between any of the fair value levels during the years ended December 31, 2015 and 2014.

The Company performs sensitivity analysis for fair value measurements classified in Level 3, substituting the unobservable inputs with one or more reasonably possible alternative assumptions. These sensitivity analyses resulted in negligible changes in the fair value of financial instruments classified in this level.

## Valuation Techniques Used to Determine Fair Value

### *Pooled Funds*

The pooled fund category mainly consists of private equity, real estate and infrastructure investments. Private equity investments represent private equity funds that invest in operating companies that are not publicly traded on a stock exchange. Investment strategies in private equity include limited partnerships in businesses that are characterized by high internal growth and operational efficiencies, venture capital, leveraged buyouts and special situations such as distressed investments. Real estate and infrastructure investments represent funds that invest in real assets which are not publicly traded on a stock exchange. Investment strategies in real estate include limited partnerships that seek to generate a total return through income and capital growth by investing primarily in global and Canadian limited partnerships. Investment strategies in infrastructure include limited partnerships in core infrastructure assets focusing on assets that generate stable, long-term cash flows and deliver incremental returns relative to conventional fixed-income investments. Private equity, real estate and infrastructure valuations are reported by the fund manager and are based on the valuation of the underlying investments which includes inputs such as cost, operating results, discounted future cash flows and market-based comparable data. Since these valuation inputs are not highly observable, private equity and infrastructure investments have been categorized as Level 3 within pooled funds.

### *Cash Equivalents*

Demand cash deposits held with banks and cash held by the investment managers are considered cash equivalents and are included in the fair value measurements hierarchy as Level 1.

### *Short-Term Securities*

Short-term securities are valued at cost plus accrued interest, which approximates fair value due to their short-term nature. Short-term securities have been categorized as Level 2.

### *Real Estate*

Real estate investments represent investments in holding companies that invest in real estate properties. The investments in the holding companies are valued using net asset values reported by the fund manager. Real estate investments are categorized as Level 3.

### *Corporate Shares*

Corporate shares are valued based on quoted prices in active markets and are categorized as Level 1. Investments denominated in foreign currencies are translated into Canadian currency at year-end rates of exchange.

### *Bonds and Debentures*

Bonds and debentures are presented at published closing trade quotations, and are categorized as Level 2.

## 16. Environmental Liabilities

The following tables show the movements in environmental liabilities for the years ended December 31, 2015 and 2014:

| *Year ended December 31, 2015 (millions of Canadian dollars)* | PCB | Land Assessment and Remediation | Total |
|---|---|---|---|
| Environmental liabilities, January 1 | 172 | 67 | 239 |
| Interest accretion | 8 | 2 | 10 |
| Expenditures | (8) | (11) | (19) |
| Revaluation adjustment | (24) | 1 | (23) |
| Environmental liabilities, December 31 | 148 | 59 | 207 |
| Less: current portion | 12 | 10 | 22 |
| | 136 | 49 | 185 |

| Year ended December 31, 2014 *(millions of Canadian dollars)* | PCB | Land Assessment and Remediation | Total |
|---|---|---|---|
| Environmental liabilities, January 1 | 201 | 65 | 266 |
| Interest accretion | 9 | 2 | 11 |
| Expenditures | (5) | (13) | (18) |
| Revaluation adjustment | (33) | 13 | (20) |
| Environmental liabilities, December 31 | 172 | 67 | 239 |
| Less: current portion | 8 | 10 | 18 |
| | 164 | 57 | 221 |

The following tables show the reconciliation between the undiscounted basis of the environmental liabilities and the amount recognized on the Consolidated Balance Sheets after factoring in the discount rate:

| December 31, 2015 *(millions of Canadian dollars)* | **PCB** | **Land Assessment and Remediation** | **Total** |
|---|---|---|---|
| Undiscounted environmental liabilities | **168** | **61** | **229** |
| Less: discounting accumulated liabilities to present value | **20** | **2** | **22** |
| Discounted environmental liabilities | **148** | **59** | **207** |

| December 31, 2014 *(millions of Canadian dollars)* | PCB | Land Assessment and Remediation | Total |
|---|---|---|---|
| Undiscounted environmental liabilities | 195 | 70 | 265 |
| Less: discounting accumulated liabilities to present value | 23 | 3 | 26 |
| Discounted environmental liabilities | 172 | 67 | 239 |

At December 31, 2015, the estimated future environmental expenditures were as follows:

| *(millions of Canadian dollars)* | |
|---|---|
| 2016 | 22 |
| 2017 | 25 |
| 2018 | 26 |
| 2019 | 28 |
| 2020 | 30 |
| Thereafter | 98 |
| | 229 |

Hydro One records a liability for the estimated future expenditures for land assessment and remediation and for the phase-out and destruction of PCB-contaminated mineral oil removed from electrical equipment when it is determined that future environmental remediation expenditures are probable under existing statute or regulation and the amount of the future expenditures can be reasonably estimated.

There are uncertainties in estimating future environmental costs due to potential external events such as changes in legislation or regulations, and advances in remediation technologies. In determining the amounts to be recorded as environmental liabilities, the Company estimates the current cost of completing required work and makes assumptions as to when the future expenditures will actually be incurred, in order to generate future cash flow information. A long-term inflation rate assumption of approximately 2% has been used to express these current cost estimates as estimated future expenditures. Future expenditures have been discounted using factors ranging from approximately 2.0% to 6.3%, depending on the appropriate rate for the period when expenditures are expected to be incurred. All factors used in estimating the Company's environmental liabilities represent management's best estimates of the present value of costs required to meet existing legislation or regulations. However, it is reasonably possible that numbers or volumes of contaminated assets, cost estimates to perform work, inflation assumptions and the assumed pattern of annual cash flows may differ significantly from the Company's current assumptions. In addition, with respect to the PCB environmental liability, the availability of critical resources such as skilled labour and replacement assets and the ability to take maintenance outages in critical facilities may influence the timing of expenditures.

## PCBs

The Environment Canada regulations, enacted under the *Canadian Environmental Protection Act,* 1999, govern the management, storage and disposal of PCBs based on certain criteria, including type of equipment, in-use status, and PCB-contamination thresholds. Under current regulations, Hydro One's PCBs have to be disposed of by the end of 2025, with the exception of specifically exempted equipment. Contaminated equipment will generally be replaced, or will be decontaminated by removing PCB-contaminated insulating oil and retro filling with replacement oil that contains PCBs in concentrations of less than 2 ppm.

The Company's best estimate of the total estimated future expenditures to comply with current PCB regulations is $168 million (2014 – $195 million). These expenditures are expected to be incurred over the period from 2016 to 2025. As a result of its annual review of environmental liabilities, the Company recorded a revaluation adjustment in 2015 to reduce the PCB environmental liability by $24 million (2014 – $33 million).

## Land Assessment and Remediation

The Company's best estimate of the total estimated future expenditures to complete its land assessment and remediation program is $61 million (2014 –$70 million). These expenditures are expected to be incurred over the period from 2016 to 2023. As a result of its annual review of environmental liabilities, the Company recorded a revaluation adjustment in 2015 to increase the land assessment and remediation environmental liability by $1 million (2014 – $13 million).

# 17. Asset Retirement Obligations

Hydro One records a liability for the estimated future expenditures for the removal and disposal of asbestos-containing materials installed in some of its facilities and for the decommissioning of specific switching stations located on unowned sites. Asset retirement obligations, which represent legal obligations associated with the retirement of certain tangible long-lived assets, are computed as the present value of the projected expenditures for the future retirement of specific assets and are recognized in the period in which the liability is incurred, if a reasonable estimate of fair value can be made. If the asset remains in service at the recognition date, the present value of the liability is added to the carrying amount of the associated asset in the period the liability is incurred and this additional carrying amount is depreciated over the remaining life of the asset. If an asset retirement obligation is recorded in respect of an out-of-service asset, the asset retirement cost is charged to results of operations. Subsequent to the initial recognition, the liability is adjusted for any revisions to the estimated future cash flows associated with the asset retirement obligation, which can occur due to a number of factors including, but not limited to, cost escalation, changes in technology applicable to the assets to be retired, changes in legislation or regulations, as well as for accretion of the liability due to the passage of time until the obligation is settled. Depreciation expense is adjusted prospectively for any increases or decreases to the carrying amount of the associated asset.

In determining the amounts to be recorded as asset retirement obligations, the Company estimates the current fair value for completing required work and makes assumptions as to when the future expenditures will actually be incurred, in order to generate future cash flow information. A long-term inflation assumption of approximately 2% has been used to express these current cost estimates as estimated future expenditures. Future expenditures have been discounted using factors ranging from approximately 3.0% to 5.0%, depending on the appropriate rate for the period when expenditures are expected to be incurred. All factors used in estimating the Company's asset retirement obligations represent management's best estimates of the cost required to meet existing legislation or regulations. However, it is reasonably possible that numbers or volumes of contaminated assets, cost estimates to perform work, inflation assumptions and the assumed pattern of annual cash flows may differ significantly from the Company's current assumptions. Asset retirement obligations are reviewed annually or more frequently if significant changes in regulations or other relevant factors occur. Estimate changes are accounted for prospectively.

At December 31, 2015, Hydro One had recorded asset retirement obligations of $9 million (2014 – $9 million), consisting of $8 million (2014 – $8 million) related to the estimated future expenditures associated with the removal and disposal of asbestos-containing materials installed in some of its facilities, as well as $1 million (2014 – $1 million) related to the future decommissioning and removal of two switching stations. The amount of interest recorded is nominal.

## 18. Share Capital

### Common Shares

The Company is authorized to issue an unlimited number of common shares. At December 31, 2015, the Company had 595,000,000 common shares issued and outstanding.

The amount and timing of any dividends payable by Hydro One is at the discretion of the Hydro One Board of Directors and is established on the basis of Hydro One's results of operations, maintenance of its deemed regulatory capital structure, financial condition, cash requirements, the satisfaction of solvency tests imposed by corporate laws for the declaration and payment of dividends and other factors that the Board of Directors may consider relevant.

### Preferred Shares

The Company is authorized to issue an unlimited number of preferred shares, issuable in series. At December 31, 2015, two series of preferred shares are authorized for issuance: the Series 1 preferred shares and the Series 2 preferred shares. At December 31, 2015, the Company had 16,720,000 Series 1 preferred shares and no Series 2 preferred shares issued and outstanding.

Hydro One may from time to time issue preferred shares in one or more series. Prior to issuing shares in a series, the Hydro One Board of Directors is required to fix the number of shares in the series and determine the designation, rights, privileges, restrictions and conditions attaching to that series of preferred shares. Holders of Hydro One's preferred shares are not entitled to receive notice of, to attend or to vote at any meeting of the shareholders of Hydro One except that votes may be granted to a series of preferred shares when dividends have not been paid on any one or more series as determined by the applicable series provisions. Each series of preferred shares ranks on parity with every other series of preferred shares, and are entitled to a preference over the common shares and any other shares ranking junior to the preferred shares, with respect to dividends and the distribution of assets and return of capital in the event of the liquidation, dissolution or winding up of Hydro One.

For the period commencing from the date of issue of the Series 1 preferred shares and ending on and including November 19, 2020, the holders of Series 1 preferred shares are entitled to receive fixed cumulative preferential dividends of $1.0625 per share per year, if and when declared by the Board of Directors, payable quarterly. The dividend rate will reset on November 20, 2020 and every five years thereafter at a rate equal to the sum of the then five-year Government of Canada bond yield and 3.53%. The Series 1 preferred shares will not be redeemable by Hydro One prior to November 20, 2020, but will be redeemable by Hydro One on November 20, 2020 and on November 20 of every fifth year thereafter at a redemption price equal to $25.00 for each Series 1 preferred share redeemed, plus any accrued or unpaid dividends. The holders of Series 1 preferred shares will have the right, at their option, on November 20, 2020 and on November 20 of every fifth year thereafter, to convert all or any of their Series 1 preferred shares into Series 2 preferred shares on a one-for-one basis, subject to certain restrictions on conversion. At December 31, 2015, Series 1 preferred dividends of $3 million or $0.18 per share were in arrears.

The holders of Series 2 preferred shares will be entitled to receive quarterly floating rate cumulative dividends, if and when declared by the Board of Directors, at a rate equal to the sum of the then three-month Government of Canada treasury bill rate and 3.53% as reset quarterly. The Series 2 preferred shares will not be redeemable by Hydro One prior to November 20, 2020, but will be redeemable by Hydro One at a redemption price equal to $25.00 for each Series 2 preferred share redeemed, if redeemed on November 20, 2025 or on November 20 of every fifth year thereafter, or $25.50 for each Series 2 preferred share redeemed, if redeemed on any other date after November 20, 2020, in each case plus any accrued or unpaid dividends. The holders of Series 2 preferred shares will have the right, at their option, on November 20, 2025 and on November 20 of every fifth year thereafter, to convert all or any of their Series 2 preferred shares into Series 1 preferred shares on a one-for-one basis, subject to certain restrictions on conversion.

Prior to October 31, 2015, the Company had 12,920,000 issued and outstanding 5.5% cumulative preferred shares held by the Province, with a redemption value of $25 per share or $323 million total value. These preferred shares were entitled to an annual cumulative dividend of $18 million, or $1.375 per share, which was payable on a quarterly basis. These preferred shares had conditions for their redemption that were outside the control of the Company because the Province could exercise its right to redeem in the event of change in ownership without approval of the Company's Board of Directors. At December 31, 2014, these preferred shares were classified on the Consolidated Balance Sheet as temporary equity because the redemption feature was outside the control of the Company. On October 31, 2015, these preferred shares were purchased and cancelled by Hydro One Inc. See "Reorganization" below for further details.

## Reorganization

Prior to the completion of the IPO, Hydro One and Hydro One Inc. completed a series of transactions (Pre-IPO Transactions) that resulted in, among other things, on October 31, 2015, Hydro One acquiring all of the issued and outstanding shares of Hydro One Inc. from the Province and issuing new common shares and preferred shares to the Province.

The following tables present the changes to common and preferred shares as a result of Pre-IPO Transactions, as well as the movement in the number of common and preferred shares during the year ended December 31, 2015. There was no movement in common or preferred shares during the year ended December 31, 2014.

| | | Preferred Shares | |
|---|---|---|---|
| *(millions of Canadian dollars)* | Common Shares | Equity | Temporary Equity |
| Common shares issued – purchase and cancellation of preferred shares *(c)* | 323 | – | (323) |
| Acquisition of Hydro One Inc. *(d)* | | | |
| Common shares of Hydro One Inc. acquired by Hydro One | (3,441) | – | – |
| Common shares of Hydro One issued to Province | 3,023 | – | – |
| Preferred shares of Hydro One issued to Province | – | 418 | – |
| Common shares issued *(e)* | 2,600 | – | – |
| Total Pre-IPO Transactions adjustment | 2,505 | 418 | (323) |

| | | Preferred Shares | |
|---|---|---|---|
| *(number of shares)* | Common Shares | Equity | Temporary Equity |
| Number of shares – January 1, 2015 *(a)* | 100,000 | – | 12,920,000 |
| Common shares issued *(b)* | 100,000 | – | – |
| Pre-IPO Transactions: | | | |
| Common shares issued – purchase and cancellation of preferred shares *(c)* | 2,640 | – | (12,920,000) |
| Acquisition of Hydro One Inc. *(d)* | | | |
| Common shares of Hydro One Inc. acquired by Hydro One | (102,640) | – | – |
| Common shares of Hydro One issued to Province | 12,197,500,000 | – | – |
| Preferred shares of Hydro One issued to Province | – | 16,720,000 | – |
| Common shares issued *(e)* | 2,600,000,000 | – | – |
| Common shares consolidation *(f)* | (14,202,600,000) | – | – |
| Number of shares – December 31, 2015 | 595,000,000 | 16,720,000 | – |

(a) At January 1, 2015, all common and preferred shares represent the shares of Hydro One Inc.

(b) On August 31, 2015, Hydro One was incorporated under the *Business Corporations Act* (Ontario) and issued 100,000 common shares to the Province for proceeds of $100,000.

(c) On October 31, 2015, Hydro One Inc. purchased and cancelled 12,920,000 preferred shares of Hydro One Inc. previously held by the Province for cancellation at a price equal to the redemption price of the preferred shares totaling $323 million, which was satisfied by the issuance to the Province of 2,640 common shares of Hydro One Inc.

(d) On October 31, 2015, all of the issued and outstanding common shares of Hydro One Inc. were acquired by Hydro One from the Province in return for 12,197,500,000 common shares of Hydro One and 16,720,000 Series 1 preferred shares of Hydro One.

(e) On November 4, 2015, Hydro One issued 2.6 billion common shares to the Province for proceeds of $2.6 billion.

(f) On November 4, 2015, the common shares of Hydro One were consolidated by way of articles of amendment approved by the Province as sole shareholder so that, after such consolidation, 595,000,000 common shares of Hydro One were issued and outstanding.

## Share Ownership Restrictions

The *Electricity Act* imposes share ownership restrictions on securities of Hydro One carrying a voting right (Voting Securities). These restrictions provide that no person or company (or combination of persons or companies acting jointly or in concert) may beneficially own or exercise control or direction over more than 10% of any class or series of Voting Securities, including common shares of the Company (Share Ownership Restrictions). The Share Ownership Restrictions do not apply to Voting Securities held by the Province, nor to an underwriter who holds Voting Securities solely for the purpose of distributing those securities to purchasers who comply with the Share Ownership Restrictions.

## 19. Dividends

In 2015, preferred share dividends in the amount of $13 million (2014 – $18 million) and common share dividends in the amount of $875 million (2014 – $269 million) were declared.

In August 2015, Hydro One declared a dividend in-kind on its common shares payable in all of the issued and outstanding shares of Hydro One Brampton. See Note 4 – Business Combinations.

## 20. Earnings Per Share

Basic earnings per common share (EPS) is calculated by dividing net income attributable to common shareholders of Hydro One by the weighted average number of common shares outstanding.

Diluted EPS is calculated by dividing net income attributable to common shareholders of Hydro One by the weighted average number of common shares outstanding adjusted for the effects of potentially dilutive share grant plans, which is calculated using the treasury stock method.

| *Year ended December 31* | 2015 | 2014 |
|---|---|---|
| Net income attributable to common shareholders *(millions of Canadian dollars)* | 690 | 731 |
| Weighted average number of shares | | |
| Basic | 496,272,733 | 477,837,100 |
| Effect of dilutive share grant plans *(Note 21)* | 94,691 | – |
| Diluted | 496,367,424 | 477,837,100 |
| EPS | | |
| Basic | $1.39 | $1.53 |
| Diluted | $1.39 | $1.53 |

### Pro forma Adjusted non-GAAP Basic and Diluted EPS

The following pro forma adjusted non-GAAP basic and diluted EPS has been prepared by management on a supplementary basis which assumes that the total number of common shares outstanding was 595,000,000 in each of the years ended December 31, 2015 and 2014. The supplementary pro forma disclosure is used internally by management subsequent to the IPO of Hydro One to assess the Company's performance and is considered useful because it eliminates the impact of the issuance of common shares to the Province prior to the IPO. Prior to the IPO, the Province was the sole shareholder of Hydro One and disclosure of EPS did not provide meaningful information. EPS is considered an important measure and management believes that presenting it for all periods based on the number of outstanding shares on, and subsequent to, the IPO provides users with a basis to evaluate the operations of the Company with comparable companies.

| *Year ended December 31* *(unaudited)* | 2015 | 2014 |
|---|---|---|
| Net income attributable to common shareholders *(millions of Canadian dollars)* | 690 | 731 |
| Pro forma weighted average number of common shares | | |
| Basic | 595,000,000 | 595,000,000 |
| Effect of dilutive share grant plans *(Note 21)* | 94,691 | – |
| Diluted | 595,094,691 | 595,000,000 |
| Pro forma adjusted non-GAAP EPS | | |
| Basic | $1.16 | $1.23 |
| Diluted | $1.16 | $1.23 |

The above pro forma adjusted non-GAAP basic and diluted EPS does not have any standardized meaning in US GAAP.

## 21. Stock-based Compensation

### Share Grant Plans

At December 31, 2015, Hydro One had two share grant plans, one for the benefit of certain members of the Power Workers' Union (the PWU Share Grant Plan) and one for the benefit of certain members of The Society of Energy Professionals (the Society Share Grant Plan).

The PWU Share Grant Plan provides for the issuance of common shares of Hydro One from treasury to certain eligible members of the Power Workers' Union annually, commencing on April 1, 2017 and continuing until the earlier of April 1, 2028 or the date an eligible employee no longer meets the eligibility criteria of the PWU Share Grant Plan. To be eligible, an employee must be a member of the Pension Plan on April 1, 2015, be employed on the date annual share issuance occurs and continue to have under 35 years of service. The requisite service period for the PWU share grant plan begins on July 3, 2015, which is the date the share grant plans were ratified by the PWU. The number of common shares issued annually to each eligible employee will be equal to 2.7% of such eligible employee's salary as at April 1, 2015, divided by $20.50, being the price of the common shares of Hydro One in the IPO. The aggregate number of common shares issuable under the PWU Share Grant Plan shall not exceed 3,981,763 common shares. In 2015, 3,979,062 common shares were granted under the PWU Share Grant Plan.

The Society Share Grant Plan provides for the issuance of common shares of Hydro One from treasury to certain eligible members of The Society of Energy Professionals annually, commencing on April 1, 2018 and continuing until the earlier of April 1, 2029 or the date an eligible employee no longer meets the eligibility criteria of the Society Share Grant Plan. To be eligible, an employee must be a member of the Pension Plan on September 1, 2015, be employed on the date annual share issuance occurs and continue to have under 35 years of service. Therefore the requisite service period for the Society Share Grant Plan begins on September 1, 2015. The number of common shares issued annually to each eligible employee will be equal to 2.0% of such eligible employee's salary as at September 1, 2015, divided by $20.50, being the price of the common shares of Hydro One in the IPO. The aggregate number of common shares issuable under the Society Share Grant Plan shall not exceed 1,434,686 common shares. In 2015, 1,433,292 common shares were granted under the Society Share Grant Plan.

The fair value of the share grants is estimated based on the grant date share price of $20.50 and is recognized using the graded-vesting attribution method as the share grant plans have both a performance condition and a service condition. Total fair value of shares granted in 2015 is $111 million (2014 – $nil). Total share based compensation recognized during 2015 was $10 million (2014 – $nil) and was recorded as a regulatory asset. The historical turnover rate relating to members of the Power Workers' Union and The Society of Energy Professionals is not believed to be reflective of a future turnover rate due to benefits conferred by the share grant plans. At December 31, 2015 the Company expects all eligible employees to receive the share grants until such time that they no longer meet the eligibility criteria and therefore, a forfeiture rate of 0% is assumed in amounts recognized during 2015. The Company will reevaluate this assumption in subsequent periods based on actual experience.

A summary of share grant activity under the Plan as of December 31, 2015 is presented below:

| *Years ended December 31, 2015* | Share Grants *(Number)* | Weighted-Average Price |
|---|---|---|
| **Outstanding – beginning of year** | – | – |
| Granted (non-vested) | 5,412,354 | $20.50 |
| **Outstanding – end of year** | 5,412,354 | – |

### Directors' DSU Plan

Under the Company's Directors' DSU Plan, directors can elect to receive credit for their annual cash retainer in a notional account of DSUs in lieu of cash. Hydro One's Board of Directors may also determine from time to time that special circumstances exist that would reasonably justify the grant of DSUs to a director as compensation in addition to any regular retainer or fee to which the director is entitled.

Each DSU represents a unit with an underlying value equivalent to the value of one common share of the Company and is entitled to accrue common share dividend equivalents in the form of additional DSUs at the time dividends are paid, subsequent to declaration by Hydro One's Board of Directors.

| *(number of DSUs)* | **2015** | 2014 |
|---|---|---|
| DSUs outstanding – January 1 | **–** | – |
| DSUs granted | **20,525** | – |
| DSUs outstanding – December 31 | **20,525** | – |

For the year ended December 31, 2015, an expense of less than $1 million (2014 – $nil) was recognized in earnings with respect to the DSU Plan. At December 31, 2015, a liability of less than $1 million (December 31, 2014 – $nil), related to outstanding DSUs has been recorded at the closing price of the Company's common shares of $22.29 and is included in accrued liabilities on the Balance Sheet.

### Employee Share Ownership Plan

Effective December 15, 2015, Hydro One established an Employee Share Ownership Plan (ESOP). Under the ESOP, certain eligible management and non-represented employees may contribute between 1% and 6% of their base salary towards purchasing common shares of Hydro One. The Company will match 50% of the employee's contributions, up to a maximum Company contribution of $25,000 per calendar year. No contributions were made under the ESOP during 2015.

### Long-term Incentive Plan

Effective August 31, 2015, the Board of Directors of Hydro One adopted a Long-term Incentive Plan (LTIP). Under the LTIP, long-term incentives will be granted to certain executive and management employees, and all equity-based awards will be settled in newly-issued shares of Hydro One from treasury, consistent with the provisions of the plan. The aggregate number of shares issuable under the LTIP shall not exceed 11,900,000 shares.

The LTIP provides flexibility to award a range of vehicles, including restricted share units, performance share units, stock options, share appreciation rights, restricted shares, deferred share units and other share-based awards. The mix of vehicles is intended to vary by role to recognize the level of executive accountability for overall business performance. No long-term incentives were awarded during 2015.

## 22. Noncontrolling Interest

On December 16, 2014, the relevant Bruce to Milton Line transmission assets totalling $526 million were transferred from Hydro One Networks to B2M LP. This was financed by 60% debt ($316 million) and 40% equity ($210 million). On December 17, 2014, the Saugeen Ojibway Nation (SON) acquired a 34.2% equity interest in B2M LP for consideration of $72 million, representing the fair value of the equity interest acquired. The SON's initial investment in B2M LP consists of $50 million of Class A units and $22 million of Class B units.

The Class B units have a mandatory put option which requires that upon the occurrence of an enforcement event (i.e. an event of default such as a debt default by the SON or insolvency event), Hydro One purchase the Class B units of B2M LP for net book value on the redemption date. The noncontrolling interest relating to the Class B units is classified on the Consolidated Balance Sheet as temporary equity because the redemption feature is outside the control of the Company. The balance of the noncontrolling interest is classified within equity.

The following tables show the movements in noncontrolling interest for the years ended December 31, 2015 and December 31, 2014:

| *Year ended December 31, 2015*<br>*(millions of Canadian dollars)* | Temporary Equity | Equity | Total |
|---|---|---|---|
| Noncontrolling interest – January 1, 2015 | 21 | 49 | 70 |
| Distributions to noncontrolling interest | (1) | (4) | (5) |
| Net income attributable to noncontrolling interest | 3 | 7 | 10 |
| Noncontrolling interest – December 31, 2015 | 23 | 52 | 75 |

| *Year ended December 31, 2014* *(millions of Canadian dollars)* | Temporary Equity | Equity | Total |
|---|---|---|---|
| Noncontrolling interest – January 1, 2014 | – | – | – |
| Amount contributed by noncontrolling interest | 22 | 50 | 72 |
| Net income (loss) attributable to noncontrolling interest | (1) | (1) | (2) |
| Noncontrolling interest – December 31, 2014 | 21 | 49 | 70 |

## 23. Related Party Transactions

The Province is the majority shareholder of Hydro One. The OEFC, IESO, Ontario Power Generation Inc. (OPG), the OEB, and Hydro One Brampton are related parties to Hydro One because they are controlled or significantly influenced by the Province. Effective January 1, 2015, the OPA and IESO have merged and are now operating as IESO.

### The Province

- During 2015, Hydro One paid dividends to the Province totalling $888 million (2014 – $287 million). In addition, on August 31, 2015, Hydro One declared a dividend in-kind on its common shares payable in all of the issued and outstanding shares of Hydro One Brampton. See Note 4 – Business Combinations.
- On November 4, 2015, Hydro One issued common shares to the Province for proceeds of $2.6 billion. See Note 18 – Share Capital.
- During 2015, Hydro One Inc. incurred certain IPO related expenses totaling $7 million, which will be reimbursed to the Company by the Province.

### IESO

- In 2015, Hydro One purchased power in the amount of $2,318 million (2014 – $2,601 million) from the IESO-administered electricity market.
- Hydro One receives revenues for transmission services from the IESO, based on OEB-approved uniform transmission rates. Transmission revenues for 2015 include $1,548 million (2014 – $1,556 million) related to these services.
- Hydro One receives amounts for rural rate protection from the IESO. Distribution revenues for 2015 include $127 million (2014 – $127 million) related to this program.
- Hydro One also receives revenues related to the supply of electricity to remote northern communities from the IESO. Distribution revenues for 2015 include $32 million (2014 – $32 million) related to these services.
- The IESO (OPA prior to January 1, 2015) funds substantially all of the Company's CDM programs. The funding includes program costs, incentives, and management fees. During 2015, Hydro One received $70 million (2014 – $33 million) related to these programs.

### OPG

- In 2015, Hydro One purchased power in the amount of $11 million (2014 – $23 million) from OPG.
- Hydro One has service level agreements with OPG. These services include field, engineering, logistics and telecommunications services. In 2015, revenues related to the provision of construction and equipment maintenance services with respect to these service level agreements were $7 million (2014 – $12 million), primarily for the Transmission Business. Operation, maintenance and administration costs in 2015 and 2014 related to the purchase of services with respect to these service level agreements were not significant.

### OEFC

- In 2015, Hydro One made PILs to the OEFC totalling $2.9 billion (2014 – $86 million), including Departure Tax of $2.6 billion (2014 – $nil).
- In 2015, Hydro One purchased power in the amount of $6 million (2014 – $9 million) from power contracts administered by the OEFC.
- During 2015, Hydro One paid a $8 million (2014 – $5 million) fee to the OEFC for indemnification against adverse claims in excess of $10 million paid by the OEFC with respect to certain of Ontario Hydro's businesses transferred to Hydro One on April 1, 1999. Hydro One has not made any claims under the indemnity since it was put in place in 1999. Hydro One and the OEFC, with the consent of the Minister of Finance, terminated the indemnity fee effective October 31, 2015.
- PILs and payments in lieu of property taxes were paid to the OEFC.

### OEB

- Under the *Ontario Energy Board Act, 1998*, the OEB is required to recover all of its annual operating costs from gas and electricity distributors and transmitters. In 2015, Hydro One incurred $12 million (2014 – $12 million) in OEB fees.

## Hydro One Brampton

- Effective August 31, 2015, Hydro One Brampton is no longer a subsidiary of Hydro One, but is indirectly owned by the Province. For change in ownership of Hydro One Brampton, see Note 4 – Business Combinations.
