Mayor Randy Hope
Civic Centre
315 King Street West
Chatham ON, N7M 5K8

Dear Mayor Hope:

RE: Rodney Transformer Station

This letter is to inform you that Hydro One Networks Inc. (Hydro One) has identified a proposed location for the Rodney Transformer Station (TS). The site is located southwest of Duart Road and Spence Line, just north of the Highway 401, in the Municipality of Chatham –Kent (see attached map). The transformer station will be connected to the existing 230 kV transmission line that runs parallel to Hwy 401 just south of the site.

This station is needed to address local supply issues. Currently the area is supplied from Kent TS and St Thomas TS. St. Thomas TS is reaching its end of life, and Kent TS is operating at its capacity, which is resulting in voltage problems, as well as an inability to transfer loads between the two stations.

A Class Environmental Assessment (EA) was initiated for the proposed station in spring 2007. As part of this process, we are holding our second Public Information Centre (PIC) on Tuesday, April 7, 2009 at the Highgate Community Hall. At the PIC, we will present the proposed site to area residents, explaining the site selection process for the station, get public feedback and address questions.

To advise the community about the preferred site and PIC the attached Notice will appear in the *Ridgetown Independent* and *The Dresden Bothwell Spirit Leader* (March 25 and April 1) the *Thamesville Herald* (April 1), and the *West Lorne Elgin Chronicle* (March 26 and April 2). We will also distribute this Notice via Canada Post AdMail to homes and businesses within the project study area as well as to individuals that registered for our mailing list.

The Class EA process provides the public, government agencies and other stakeholders an opportunity to comment on Hydro One's Draft Environmental Study Report (ESR) for the transformer station. Following the PIC, another notice will appear in the local newspapers advising that the Draft ESR is available for a 30-day review period and explain the process for providing comments. If no concerns are expressed during the review period, the ESR will be finalized and filed with the Ministry of the Environment, at which time the project is considered to be acceptable and would proceed as described in the ESR. We expect to begin construction in April 2010 contingent upon receiving the necessary permits and approvals as required.

If you have any questions regarding this project please feel free to contact me at (416) 345-5892, or Marylena Stea, Community Relations Officer at 416-345-5706 or toll free 1-877-345-6799, or by email at: Community.Relations@HydroOne.com

Sincerely,

A handwritten signature in black ink, appearing to read "Enza Cancilla".
