

# Western Brampton Transmission Reinforcement Notice of Study Initiation and Public Information Centre

Hydro One Networks Inc. (Hydro One) is proposing to build a new 230-kilovolt (kV) underground transmission line to reinforce the electricity supply in the City of Brampton. This project will address increased electricity demand resulting from strong economic growth and development in the community, and ensure a reliable supply of power for future growth.

The proposed underground line would be constructed completely within an existing transmission corridor, which extends from Hydro One Brampton's Jim Yarrow Municipal Transformer Station (MTS) at Steeles Ave and Chinguacousy Rd. to Hydro One's planned Hurontario Station located on the Parkway Belt near Hurontario St. and Hwy 407. The new transmission line will extend about 3 kilometres in length (see map below). There is currently an existing 230 kV overhead transmission line located on this corridor, which will not be modified.

The project is subject to provincial Environmental Assessment (EA) Act approval in accordance with the Class EA for Minor Transmission Facilities. The project also requires approvals under the Ontario Energy Board OEB Act. Pending these approvals, the expected in-service date for the project would be mid-2009.

Hydro One invites you to attend a Public Information Centre that will provide you with the opportunity to review display panels of the proposed facility and provide your input to our project team.

## Public Information Centre

Wednesday February 7, 2007

Time: 5:00 – 9:00 pm

Mississauga Convention Centre

75 Derry Road West

Mississauga
