Dear Mr. Zych:

Hydro One Networks Inc.'s Application to Establish Rates for Distributed Generators on an Interim Basis

I am attaching five (5) copies of an Application and evidence in support of Hydro One Networks' request for approval of rates applicable to generator customers connected to its distribution system with a specific connection and metering profile.

An electronic copy also will be e-mailed to the Board.

Questions may continue to be addressed to Carolyn Russell (Senior Advisor, Regulatory Affairs), who may be reached by phone (416) 345-5914, fax (416) 345-5866, or e-mail: carolyn.russell@HydroOne.com. Her address is Hydro One Networks Inc., 483 Bay Street, South Tower, 8th Floor, Toronto, Ontario M5G 2P5.

Yours truly,

Susan Frank

cc. Mr. A. Fogwill, Applications Director, Market Operations

1 volumetric basis only. The proposed rates are interim in nature, as it is Hydro One's
2 intent to file for rates based on a cost allocation study in a future rate filing. The
3 identified shortfall from the loss of the monthly service charge revenue, currently
4 estimated to be approximately \$160,000 annually, is proposed to be collected in a
5 deferral account for future disposal.

7 4. Hydro One Distribution requests a written hearing on this issue.

8

9 5. The written evidence, as filed with the Board, may be amended from time to time
10 prior to the Board's final decision on the Application. Further, the Applicant may
11 seek meetings with Board staff and intervenors in an attempt to identify and reach
12 agreements to settle issues arising out of this Application.

13

14 6. The persons affected by this Application are the ratepayers of Hydro One
15 Distribution. It is impractical to set out their names and addresses because they are
16 too numerous.

17

18 7. Hydro One Distribution requests that a copy of all documents filed with the Board by
19 each party to this Application be served on the Applicant and the Applicant's counsel

1 **THE ESTABLISHMENT OF DISTRIBUTED GENERATOR**
2 **CUSTOMER CLASSES ON AN INTERIM BASIS**
3

4
5 **1.0 SUMMARY OF APPLICATION**
6

7 The Government's plan to deal with the shortage of electricity generation in Ontario includes the
8 promotion of renewable generation and other forms of Distributed Generation ("DG"). This
9 Exhibit sets out Hydro One Distribution's proposal to create interim rate classes applicable to
10 distributed generators who have a three-phase connection to Hydro One's distribution system
11 and interval metering in place. These interim rate classes would be offered to eligible generator
12 customers in Hydro One's existing General Service Three-Phase ("G3") class, the Sub-
13 Transmission T-Class ("T-Class") and the General Service ("GS") class of acquired LDCs. The
14 interim rates would have a distribution rate structure consisting of only the volumetric charge
15 already approved for these customer classes, with no fixed monthly charges.

16
17 Currently, distribution-connected generators are billed as any other customer and are applied the
18 appropriate monthly service charge regardless of volumetric use. Hydro One Distribution
19 believes that waiving the service charge for these customers would help remove a financial
20 barrier to the implementation of DG in the Province. Accordingly, these rates, if approved,
21 would assist the Provincial Government's pursuit of its objective in this regard. The new rates
22 are proposed for interim application, however, until Hydro One can further explore the
23 appropriate cost treatment of generator customers at the time it proposes cost-based rates.

24
25 Hydro One also requests permission to track the associated shortfall in its distribution revenues
26 in a deferral account for future disposition.
27
28

1 **2.0 BACKGROUND**

2
3 Ontario currently faces a shortage of generation supply capacity. Therefore, Government policy
4 initiatives with respect to the electricity system include the promotion of distributed generation.
5 All generators require some form of back-up power supply for those periods when the facility is
6 not generating due to outages for routine maintenance, repairs, or through low water or wind
7 conditions. Many generators achieve this back-up supply through station service connected to
8 Hydro One's distribution system. When power is required, the corresponding distribution rates
9 are applicable.

10
11 Three classes of Hydro One's customers currently provide distributed generation and are
12 connected to Hydro One's distribution system. These comprise 52 T-Class customers and 33 G3
13 customers of Hydro One's core Distribution business and one GS customer of one acquired
14 utility, Eganville.

15
16 During the rate unbundling process, distribution rates were required to comprise both a fixed
17 monthly service charge and a volumetric charge. Consequently, distributed generators always
18 pay both of these charges when consuming power from the distribution system. The current
19 distribution rate structures for the three (energy-billed) classes are illustrated below:

20

<i>Core Industrial Commercial Sub-Transmission T-Class</i>	<i>Charges</i>
Service Charge (per Month)	\$230.02
Volumetric	
Energy Charge, including Rate Rider (per kWh)	2.16 cents
<i>Core Industrial Commercial General Service Three Phase (Metered)</i>	
Service Charge (per Month)	\$40.47
Volumetric Charge	
Energy Charge, including Rate Rider (per kWh)	2.73 cents
<i>Acquired General Service (Eganville)</i>	
Service Charge (per Month)	\$16.34
Volumetric	
Energy Charge, including Rate Rider (per kWh)	2.03 cents

1 The rates for the T-Class and G3 customers, approved through the Board's Decision in RP-2005-
2 0013/EB-2005-0098 became effective on March 1, 2005. Those for the GS customers of Hydro
3 One's acquired LDCs, approved through the Board Decision in RP-2005-0014/EB-2005-0099 –
4 0185, also became effective on March 1, 2005.

5
6 The Service Charge is designed to recover fixed costs, such as those for bill processing, call
7 handling and meter reading, which do not depend on system use. This charge has been a source
8 of concern for distributed generators, who typically consume small amounts of power for short
9 intermittent periods (for example, wind turbines that consume about 2,000 kWh per month).

10
11 Generators who connect to the transmission system, on the other hand, are subject only to a
12 volumetric charge when requiring power, since the transmission rate structure consists only of
13 volumetric charges and no fixed monthly charges. This proposal would provide consistent
14 treatment for distributed generators, whether connected to the transmission or distribution
15 systems, by applying a rate structure which consists of only a volumetric charge.

16 17 **3.0 PROPOSAL**

18 19 ***3.1 Establishment of the Proposed Rates***

20 Hydro One proposes to create interim rates based on the existing volumetric rates for the current
21 T-Class, G3 and GS (acquired) customer classes. The interim rates would be the currently
22 approved volumetric energy or demand charge, as applicable, for each of these classes.

23
24 All applicable pass-through charges would continue to be applied as currently approved. These
25 include charges for the commodity, retail transmission service, wholesale market service and
26 debt retirement. These charges are attached to energy consumption and would continue to
27 appear only when the generator is consuming power from the system.

28
29 Exhibit C, Tab 1, Schedule 1 includes the proposed changes to the rate schedules which would

1 accommodate the generator subset of Hydro One Distribution's core G3 and T-Class customers.
2 Exhibit D, Tabs 1 through 87 comprise the current rate schedules (without the interim time-of-
3 use rates) for the acquired utilities, with a second page for each showing the proposed interim
4 rates for the generator subset of their GS customers. (For simplicity, the interim time-of-use
5 rates have been removed from the rate schedules for acquired customers in this application.
6 Should the Board approve the proposed interim rates for distributed generators, the final rate
7 schedules would include them as well as the interim time-of-use rates).

8 9 **3.2 *Qualifications for Eligibility for Such Rates***

10 These interim rates would be limited to current and new generator customers with a three-phase
11 connection to the distribution system, interval metering in place and who are otherwise eligible
12 for the T-Class or G3 rates for Hydro One's core customers or the GS rates for its acquired
13 customers.

14 15 **3.3 *Proposed Deferral Account Treatment***

16 The Distribution revenue reduction as a result of this proposal is estimated to be approximately
17 \$160,000 per year, based on current rates. It is proposed that the shortfall in Hydro One
18 Distribution revenues resulting from the application of the interim proposal be tracked in a
19 deferral account.

20 21 **3.4 *Implementation***

22 Should the Board grant approval, Hydro One Distribution requests an effective implementation
23 date to be determined. While Hydro One will want to effect the appropriate changes as quickly
24 as possible, it will require time to ensure that all needed system changes may be accomplished
25 with as little disruption to customers as possible. Hydro One accordingly requests the flexibility
26 to set an implementation date upon receipt of approval.

4.0 IMPACT ON HYDRO ONE DISTRIBUTION CUSTOMERS

4.1 Participating Generator Customers

The proposed interim rates would affect the 86 generators currently connected to Hydro One's distribution system and new generator customers meeting the class criteria. Qualified customers for these rates will realize savings in distribution charges regardless of the amount of energy consumed while not operating. Table 1.0 below illustrates the potential savings through use of the proposed rates, in contrast to use of the currently approved rates.

**Table 1.0
 Distribution Bill Comparison (With Consumption of 2,000 kWh per Month)**

	Existing Rates			Proposed Rates			Difference (C-F)
	Monthly Service Charge A	Volumetric Charge (cents/kWh) B	Distribution Bill C	Monthly Service Charge D	Volumetric Charge (cents/kWh) E	Distribution Bill F	%
T-Class	\$230.02	2.16	\$273.22	\$0.00	2.16	\$43.20	-84%
G3	\$40.47	2.73	\$95.07	\$0.00	2.73	\$54.60	-43%
GS (Eganville)	\$16.34	2.03	\$56.94	\$0.00	2.03	\$40.60	-29%

It is clear that the benefit of the new proposed customer classification can be quite substantial with respect to distribution charges. When viewed from the perspective of the total bill impact for the T-Class customer, the corresponding reduction would be approximately 50% on a total monthly bill of \$437.

4.2 Non-Participating Customers

There would be no change to the existing distribution rates for non-participating Hydro One Distribution customers. The shortfall in Distribution revenues would be addressed in a future Hydro One Distribution rate submission or at the time when the Board deals with the recovery of

1 costs accumulated in deferral accounts, at which time the impact on non-participating customers
2 would be assessed.

4 **4.3 Implementation Costs**

5 The implementation costs of the proposal include one-time costs of billing, communication and
6 monitoring changes, estimated to be approximately \$25,000.

8 **5.0 CONSIDERATION OF PERMANENT IMPLEMENTATION**

9
10 Hydro One recognizes that generator customers should pay appropriate costs for distribution
11 services. These appropriate costs, however, may be determined only through a full cost-of-
12 service study. Hydro One intends to file for rates based on full cost-of-service studies, but
13 believes that there is some urgency in the meantime to lessen the financial barrier for distributed
14 generators. Hydro One believes that this proposal, accordingly, will help to support the
15 Government's energy initiatives during the interim.

16
17 As this industry attempts to establish a base in the Province, Hydro One believes that the issue of
18 customer classification for distributed generators and its resolution on a permanent basis should
19 be referred to related initiatives. Hydro One suggests that the Board-initiated Cost Allocation
20 Review Process consider and provide a generic solution, which would be useful to all
21 distributors. The shared mandate of the Board and the Ontario Power Authority to develop the
22 terms and conditions for a standard offer program for small generators using clean or renewable
23 resources might also be affected by such a consideration.

25 **6.0 DECISION REQUESTED**

26
27 Hydro One Distribution requests the Board's approval of this submission on an interim basis
28 with an effective implementation date to be determined upon receipt of the Board's approval.

1
2
3 **HYDRO ONE NETWORKS INC.**
4 **RATES FOR DISTRIBUTION SERVICE**
5 Effective Date: To Be Determined

6 **1.0 APPLICABILITY**

7
8 These rates are applicable to Hydro One Networks' core retail customers, who are
9 customers of Networks' retail distribution system, excluding those customers previously
10 served by acquired distribution utilities.

11
12 **1.1 Customer Classifications**

13
14 **Residential - Year-round** customer classification applies to a customer's main place of
15 abode and may include additional buildings served through the same meter, provided they
16 are not rental income units. All of the following criteria must be met:

- 17
18 1. Occupants must state that this is their principal residence for purposes of the
19 Income Tax Act.
20 2. The occupant must live in this residence for at least 8 months of the calendar
21 year.
22 3. The address of this residence must appear on documents such as the occupant's
23 electric bill, driver's licence, credit card invoice, property tax bill, etc.
24 4. Occupants who are eligible to vote in Provincial or Federal elections must be
25 enumerated for this purpose at the address of this residence.

26
27 **Seasonal Residential** customer classification is defined as any residential service not
28 meeting the Residential Year-Round criteria. It includes dwellings such as cottages,
29 chalets and camps.

30
31 **Farm** classification is applicable to properties actively engaged in agricultural production
32 as defined by Statistics Canada. It does not include tree, sod, or pet farms. Services to year-
33 round pumping stations or other ancillary services remote from the main farm shall be
34 classed as farm.

35
36 **Industrial Commercial** classification applies to any service that does not fit the
37 description of Residential or Farm classes. It includes combination type services where a
38 variety of uses are made of the service by the owner of one property, and all multiple
39 services except residential.

40
41 **Industrial Commercial General Service** customer classification is applicable for
42 Industrial Commercial customers not directly supplied by the sub-transmission system.
43

1 **Industrial Commercial Sub-Transmission** customer classification is applicable for
2 Industrial Commercial customers supplied directly by the sub-transmission system.

3
4 **Generator** customer classification, a sub-set of the **Industrial Commercial, Industrial**
5 **Commercial General Service**, and **Industrial Commercial Sub-Transmission**
6 classification, is applicable to Generator customers who have a three-phase connection to
7 the distribution or LV system, with interval metering in place.

8
9 **1.2 Density Zones**

10
11 **Urban Density Zone** is defined as areas containing 3,000 or more customers with a line
12 density of at least 60 customers per kilometre.

13
14 **High Density Zone** is defined as areas containing 100 or more customers with a line
15 density of at least 15 customers per kilometre.

16
17 **Normal Density Zone** is defined as areas other than Urban or High Density Zone.

18
19 **2.0 RATES FOR DISTRIBUTION SERVICE¹**

20
21 Networks' distribution service rates are as follows:

22
23 **Residential UR2** - Year-round residence in an Urban Density Zone, and Farm Single
24 Phase customers which are energy-billed in an Urban Density Zone.

25

Distribution Charges	Base	Rider 1	Final
Service Charge (per month)	\$ 11.82	\$ -	\$ 11.82
Volumetric Charge Energy Charge [cent/kWh]	1.61	0.20	1.81

26
27 **Residential R1** - Year-round Residence in a High Density Zone

28

Distribution Charges	Base	Rider 1	Final
Service Charge (per month)	\$ 15.99	\$ -	\$ 15.99
Volumetric Charge Energy Charge [cent/kWh]	2.10	0.15	2.25

29
¹ With respect to the volumetric charge, two charge determinants are shown. A customer who is energy-metered will pay the energy rate, whereas a customer who is demand- or interval-metered, will pay the demand rate.

1 **Residential R2 - Year-round Residence in a Normal Density Zone**
 2

Distribution Charges	Base	Rider 1	Final
Service Charge (per month) ²	\$ 50.12	\$ -	\$ 50.12
Volumetric Charge Energy Charge [cent/kWh]	1.71	0.12	1.83

3
 4 **Seasonal Residential R3 - Seasonal Occupancy in a High Density Zone**
 5

Distribution Charges	Base	Rider 1	Final
Service Charge (per month)	\$ 16.40	\$ -	\$ 16.40
Volumetric Charge Energy Charge [cent/kWh]	2.42	0.35	2.77

6
 7 **Seasonal Residential R4 - Seasonal Occupancy in a Normal Density Zone**
 8

Service Charge (per month)	\$ 31.27	\$ -	\$ 31.27
Volumetric Charge Energy Charge [cent/kWh]	1.69	0.36	2.05

9

² Under the *Ontario Energy Board Act, 1998* and associated regulations, every qualifying year-round residence and farm with a principal residence is eligible to receive Rural or Remote Rate Protection (RRRP). The service charge shown for eligible R2 customers would be reduced by the applicable RRRP credit.

1 **Farm Single Phase F1** – Single Phase Farm Customers actively engaged in agricultural
 2 production, in areas other than Urban Density Zones

3

Distribution Charges	Base	Rider 1	Final

8

³ Under the *Ontario Energy Board Act, 1998* and associated regulations, every qualifying year-round residence and farm with a principal residence is eligible to receive Rural or Remote Rate Protection (RRRP). The service charge shown for eligible F1 customers would be reduced by the applicable RRRP credit.

⁴ Under the *Ontario Energy Board Act, 1998* and associated regulations, every qualifying year-round residence and farm with a principal residence is eligible to receive Rural or Remote Rate Protection (RRRP). The service charge shown for eligible F3 customers would be reduced by the applicable RRRP credit.

Transformer Loss Allowance – Applicable to customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side):

- (a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA,
- (b) 1.0% for bank capacities over 400 kVA.

Alternatively, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly.

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several

1 transformers are involved, the bank capacity is assumed to be the arithmetic sum of all
2 transformer capacities.

3

4 **Customer-Supplied Transformation Allowance** – Applicable to customers providing
5 their own transformers. They will be allowed the following monthly billing amounts:
