

Chatham to Lakeshore Line Project Update – Winter 2023

Good afternoon,

As we enter the holiday season and approach the end of the year, we are pleased to share an update on the progress of our Chatham to Lakeshore Line Project, a new double-circuit 230 kilovolt transmission line in the region.

What's new

Photo of an access road and tower being assembled in Chatham

Since our [last update](#), we announced that the new line will be **completed by the end of 2024 – a full year ahead of schedule**. We are proud to be able to advance this project by working closely with communities, along with advancing procurement activities.

Over the last few months, most access roads have been completed and crews have now started installing foundations and towers along the route.

Starting in Chatham and moving west towards Lakeshore, crews will assemble approximately 170 towers using cranes, aerial lifts and climbing techniques. We anticipate this phase of construction will be complete by mid-2024.

What's next

Following tower assembly, crews will install other equipment including 20,000 insulators and approximately 49km of power line with a helicopter.

Stay in touch

We will continue to provide updates to our construction contact list as the project progresses.

If you have any property specific questions or would like additional information, please connect with our Community Relations team at 1.877.345.6799 or

Community.Relations@HydroOne.com.

Until next year, we wish you have a safe and wonderful holiday season.
