

Connect New Darlington Project

Hydro One Project Cancellation Update Notice

May 2024

Project Update

Hydro One's Connect New Darlington Project which involved construction of a new transmission line, was launched in February 2023 to support Ontario Power Generation's (OPG) Darlington New Nuclear Project connection to the electricity system. The project consisted of building a new 22-kilometre transmission line that could carry up to 500 kilovolts within an existing transmission corridor to Clarington Transformer Station.

The Independent Electricity Systems Operator (IESO), the organization responsible for planning the province's future energy needs, identified several system changes that will impact the transmission line network throughout the Greater Toronto Area (GTA) and as a result Hydro One will no longer be proceeding with a new transmission line at this time.

Please visit the project website for more information about the project at HydroOne.com/Darlington

We'd like to hear from you
