Red Lake Transmission Line project

Notice of Commencement Class Environmental Assessment and community open house 1

September 2026

Ontario's long-term demand for electricity is increasing. To support growth, Hydro One plans to invest in the proposed Red Lake Transmission Line project. Once built, the priority project will provide additional capacity to the area and improve reliability for northern communities.

Project description

Hydro One, in collaboration with First Nation partners, is initiating a Class Environmental Assessment (EA) for the proposed project. The project is a proposed double-circuit, 230-kilovolt transmission line that will run from Dryden to Red Lake, connecting through Ear Falls and includes associated station facilities.

The route alternatives have been identified through a review of Indigenous culture, values and land use, technical, socioeconomic and natural environment considerations. Please see the attached map or visit HydroOne.com/RedLakeTransmissionLine to view a more detailed and interactive map. The route alternatives will be studied and evaluated to identify a preferred route for the new line.

Planning process

Planning for the proposed project will follow the Class EA for Transmission Facilities, 2024, established in accordance with the Ontario *Environmental Assessment Act*. Following completion of the Class EA, the project will also require Ontario Energy Board approval under Section 92 (Leave to Construct) of the *Ontario Energy Board Act, 1998*. The project is expected to be in service by 2033.

We want to hear from you

Early, meaningful and open engagement is important to all of Hydro One's projects. Feedback from local residents, Indigenous communities, businesses, government agencies and interest groups will be instrumental to inform all aspects of the Class EA. We invite you to drop in at our community open houses, where dinner will be provided while supplies last, and learn more about the project, ask our team questions and provide input.
