Project Update: Tillsonburg Station and Line Refurbishment Project

Dear Resident,

Hydro One invites you to view our narrated presentation online, which will provide an overview of our planned investment at Tillsonburg Transformer Station (TS) required to ensure a safe and reliable electricity supply in your community.

Due to current health restrictions, Hydro One had to cancel a planned in-person community meeting in March 2020. We remain committed to share information while we are currently unable to meet in person and invite you to view this presentation available on our project website at www.HydroOne.com/Tillsonburg.

As you may recall from notices earlier this year, Hydro One is planning to refurbish and expand Tillsonburg TS, located at the intersection of Tillson Avenue and Joseph Street, and refurbish the existing 115 kilovolt transmission line (circuit WT1T) between Tillsonburg TS and Cranberry Junction, as shown on the map. The proposed project is subject to the Class Environmental Assessment (EA) for Minor Transmission Facilities (Hydro One, 2016), in accordance with the Ontario *Environmental Assessment Act*, which was initiated in February 2020. The EA is a streamlined process to ensure that transmission projects that have a predictable range of effects have feasible environmental mitigation and/or protection measures in place. An important aspect of the EA process includes sharing project information and considering community feedback.

The narrated presentation provides further details about the project work and what community members can expect.

We are seeking your feedback!

After viewing the project update presentation, please share your feedback with us by July 31, 2020 using the online comment form on the project website or by contacting Community Relations directly.

We look forward to hearing from you.

Sincerely,

Hydro One Community Relations
