Notes:

a) Crossing locations labelled as "Nil" include crossing locations with no defined channel observed during field reconnaissance activities. Crossing may convey flows at some point throughout the year.

b) Crossing locations represent a small unmapped watercourse or drainage feature that appears to be runoff pathway or low lying swampy/marshy area.

c) Not assessed. Crossing location was either not visited during field reconnaissance activities or no defined channel was observed.

d) Reliable estimates of drainage area were not possible due to the small size of these features and the generally muted (flat) topography in the local area. Crossing locations represent a small unmapped watercourse or drainage feature that appears to be runoff pathway or low lying swampy/marshy area.

e) No reliable surficial geology was available for this specific sites.

f) Not assessed. Crossing location was not visited during field reconnaissance.

g) Data sources for crossing locations consist of desktop information (Background) or both desktop and field surveys (Both), which includes a combination of collated data from various background resources and field data (see Surface Water Baseline Report [2023] for the details on sources used). ha = hectares; m = metres; m² = square metres; N/A = not applicable; Nil = N
All Universal Transverse Mercators are provided in NAD 83.
