

Wawa Timmins Power Line

Join us for a project update

January 2026

Ontario is facing historic growth in electricity demand. To support growth, Hydro One plans to invest in the proposed Wawa Timmins Power Line, which once built, will build a more resilient and secure grid in the northeast. The proposed single-circuit, 500-kilovolt transmission line will run from Hydro One's Wawa Transformer Station (TS) near Wawa to Porcupine TS in Timmins. The proposed work will also include a station near Wawa.

Route refinements

Last summer, Hydro One initiated a Class Environmental Assessment (EA) for the proposed Wawa Timmins Power Line project. Initial route options were identified based on known local data. Since then, we have completed technical studies and received feedback, and based on what we learned, we have made route refinements that we want to share with you.

The planning process

Planning for the proposed project will follow the Class EA for Transmission Facilities, 2024, established in accordance with the Ontario *Environmental Assessment Act*. Following completion of the Class EA, the project will also require Ontario Energy Board (OEB) approval under Section 92 (Leave to Construct) of the *Ontario Energy Board Act, 1998*. The anticipated in-service date for the project is 2030.

We want to hear from you

We value your feedback. We want to hear from Indigenous communities, residents, businesses, government agencies and interest groups to inform all aspects of the Class EA process. Drop in at an upcoming open house to learn about the project, ask questions and provide feedback.
