

Invitation to Community Information Centres

Class Environmental Assessment

Burlington to Westover Transmission Line Refurbishment

In May, 2017, Hydro One Networks Inc. (Hydro One) initiated the Class Environmental Assessment (EA) process to refurbish components of an existing 115 kilovolt (kV) transmission line located between Burlington Transformer Station and Enbridge's Westover South Customer Transformer Station in the City of Hamilton, as shown on the map below. This equipment is reaching its end of life, and requires replacement to ensure a continued and safe power supply. The project involves replacing the wires and some transmission structures on the right-of-way. Refurbishing the transmission lines will ensure the safe and reliable supply of power to your area into the future. An additional low voltage distribution line will also be built on existing equipment, within the road allowance, to ensure reliability throughout construction and for improved reliability into the area once the project is complete. Contingent on the outcome of the Class EA process, work on this project may begin as early as February 2018 and be completed by the end of August 2019.

The Class EA process provides opportunities for consultation, and your feedback is very important to us.

We invite you to drop in to one of our upcoming Community Information Centres. At the sessions, Hydro One will provide more information about the project, discuss environmental considerations and explain the approvals process. We encourage you to attend one of the sessions to provide your input, ask questions and meet the project team.

For more information

If you are interested in hearing more about this project, but are unable to attend any of the Community Information Centres, and/or wish to be added to the project mailing list, please contact:
