27

Hydro One Networks Inc. has prepared its cost allocation and rate design evidence in accordance with Chapter 2 of the OEB’s Filing Requirements for Electricity Distribution Rate Applications issued on June 24, 2021, and has followed the cost allocation policies outlined in the OEB’s reports and letters, including: (i) OEB Report - Review of Electricity Distribution Cost Allocation Policy (EB-2010-0219), issued on March 31, 2011; (ii) OEB Report - Review of the Board’s Cost Allocation Policy for Unmetered Loads (EB-2012-0383), issued on December 19, 2013; and (iii) OEB Letter – New Cost Allocation Policy for Street Lighting Rate Class (EB-2012-0383), issued on June 12, 2015.

In accordance with the OEB’s policy – A New Distribution Rate Design for Residential Electricity Customers (EB-2012-0410), Hydro One continues the move to all-fixed residential distribution rates over the term of this custom IR application. Due to the timing of the Decision in Hydro One’s 2018-2022 rates application (EB-2017-0049), Hydro One was not able to implement the move to all-fixed rates for the 2018 rate year. As a result, the transition to all-fixed distribution rates for Hydro One’s Urban Residential (UR) class was completed in 2021, while the Medium-Density (R1) and Low-Density (R2) rate classes will complete their transition to all-fixed distribution rates in 2024.

As indicated in Exhibit L-01-02, cost allocation and rate design as presented in this evidence assumes that the elimination of the Seasonal rate class previously approved by the OEB will be implemented on January 1, 2023.¹

Hydro One proposes to make a number of changes related to the rate classifications of its Acquired Utilities’ customers in this Application, as described in Exhibit L-01-02. The changes include the addition of new residential and general service rate classes for the acquired

¹ EB-2013-0416/EB-2014-0247, Decision, March 12, 2015

Witness: LI Clement

1 customers from Norfolk Power Distribution Inc. (Norfolk Power), Haldimand County Hydro Inc.
2 (Haldimand County Hydro) and Woodstock Hydro Services Inc. (Woodstock Hydro) (together,
3 the Acquired Utilities), when the rates for the customers of the Acquired Utilities are
4 harmonized in 2023. Acquired customers in the Street Lights, Sentinel Lights, Unmetered
5 Scattered Load and Large User classes will be merged into Hydro One's existing rate classes in
6 2023. In Exhibit L-01-03, Hydro One describes its proposed cost allocation approach to
7 appropriately reflect the costs of serving these acquired customers. In Exhibit L-02-1, Hydro
8 One discusses its proposed approach for setting the rates for these acquired customers under
9 the new rate structure. Exhibit L-03-01 discusses the benefits of Hydro One's harmonization
10 proposal for the Acquired Utilities.

11

12 In this Application, Hydro One proposes to remove the requirement for Sub-Transmission (ST)
13 customers to own their local transformation from the ST rate class eligibility requirements, as
14 described in Exhibit L-01-02 and Exhibit L-02-01. This proposed change responds to customer
15 feedback and is consistent with other distributors' local transformation options for connecting
16 larger customers.

17

18 Hydro One has prepared a cost allocation model for the 2023 test year, as described in Exhibit L-
19 01-03. During the other years of the Custom IR period (i.e. 2024 to 2027), the total revenue
20 requirement to be collected will be determined using the Custom IR approach described in
21 Exhibit A-04-03 and the revenue requirement by rate class will be determined using the
22 methodology described in Exhibit L-02-01.

23

24 As described in Exhibit L-02-01 (Distribution Rate Design), Hydro One proposes to make
25 necessary revenue-to-cost (R/C) adjustments to maintain R/C ratios for all rate classes within
26 the OEB-prescribed range as specified in the OEB's Filing Requirements for Electricity
27 Distribution Rate Applications issued on June 24, 2021.

1 As discussed in Exhibit L-06-01, without mitigation, some of the Sentinel Light customers of
2 former Norfolk Power and Unmetered Scattered Load customers of former Norfolk Power,
3 Haldimand County Hydro and Woodstock Hydro would see bill impacts greater than 10% in 2023
4 as a result of merging them into Hydro One's existing rate classes. Hydro One proposes to
5 mitigate the total bill impact for customers in these classes by providing bill credits, if and as
6 required. The cost of this credit will not be recovered from ratepayers.

7

8 The total bill impact for the majority of Seasonal customers moving to the Low Density
9 Residential rate class (R2) as a result of eliminating Hydro One's Seasonal rate class is higher
10 than 10% and will require rate mitigation. The mitigation approaches for these Seasonal
11 customers are currently being considered under a separate proceeding initiated by the OEB (EB-
12 2020-0246).

13

14 Rate riders for regulatory asset disposition are discussed in Exhibit L-05-01.

DISTRIBUTION CUSTOMER CLASSIFICATION

1.0 EXISTING HYDRO ONE RATE CLASSES

Hydro One's current rate structure includes four Residential, four General Service, one Distributed Generator, one Sub-Transmission, and three Unmetered rate classes.

Residential Rate Classes:

Currently, Hydro One's year-round residential customers¹ are grouped into one of its 3 density based rate classes as follows:

- Urban (or High) Density (UR): Customers in areas with ≥ 3000 customers and ≥ 60 cust/cct-km
- Medium Density (R1): Customers in areas with ≥ 100 customers and ≥ 15 cust/cct-km
- Low Density (R2): Customers in areas that are not Medium or High Density

Residential customers who do not fall under the definition of a year-round class (for example cottages) are currently grouped into the Seasonal rate class. As per its Decision in Hydro One's 2015 rate application (EB-2013-0416) the OEB has directed Hydro One to eliminate the Seasonal class. Further details are provided in Section 1.2 below.

General Service Rate Classes:

- UGe: General service energy billed customers in urban density areas (as defined for residential rate classes above) with an average monthly demand less than 50kW
- GSe: General service energy billed customers outside of urban density areas with an average monthly demand less than 50kW
- UGd: General service demand customers in urban density areas with an average monthly demand equal to or greater than 50kW

¹Definition of year-round residential customers can be found in Hydro One's 2021 Rate Order at <https://www.rds.oeb.ca/CMWebDrawer/Record/704336/File/document>

- 1 • GSd: General service demand billed customers outside of urban density areas with an
2 average monthly demand equal to or greater than 50kW

3

4 **Distributed Generators (DGen):**

5 Includes all customers with generation capacity above 10kW.

6

7 **Sub-Transmission (ST):**

8 Includes all embedded distribution companies and other end-use customers who meet the
9 eligibility requirements for the ST rate class.²

10

11 **Unmetered Rate Classes:**

- 12 • Street Lights
13 • Sentinel Lights
14 • Unmetered Scattered Load: Includes load such as cable TV amplifiers, bus shelters,
15 telephone booths, railway crossings and other small fixed loads.

16

17 **Reviewing Density-Based Rate Classes**

18 On an annual basis, Hydro One will create or modify rate class boundaries for known areas of
19 customer growth and ensure that affected customers are reclassified accordingly. Outside of
20 the annual review, there is also an opportunity to update the density boundaries in response to
21 customer inquiries to Hydro One's call centre. With these processes in place, all Hydro One
22 customers are maintained in the correct rate classification in accordance with the Company's
23 currently approved density-based rate classes.

² See Section 1.1 for description of, and proposed revision to, the ST class eligibility criteria.

1 **1.1 PROPOSED CHANGE IN ST CLASS ELIGIBILITY REQUIREMENTS**

2 The Sub-Transmission (ST) rate class was established as part of Hydro One's 2008 rate
3 application (EB-2007-0681) and has been approved in all subsequent rate applications. The ST
4 rate class currently includes all three-phase customers with demands above 500 kW that
5 provide their own transformation facilities and are connected at distribution voltages of 13.8 kV
6 or above, as well as all embedded distributor supply points regardless of the voltage at which
7 they are connected.

8
9 In this Application, Hydro One proposes to remove the requirement for ST customers to own
10 their local transformation from the ST rate class eligibility requirements, effective of January 1st,
11 2023. This proposed change responds to customer feedback and is consistent with other
12 distributors' local transformation options for connecting larger customers. In addition, after a
13 review of its General Service rate classes, Hydro One determined that aside from transformer
14 ownership, its General Service customers with demands above 500 kW and a three phase
15 connection at or above 13.8kV do not have any distinguishing factors that should result in
16 different treatment from customers in the ST rate class. Under this new proposal, ST customers
17 will be offered the option of either owning their local transformation or connecting to a Hydro
18 One owned local transformer. ST customers who own their own local transformer will continue
19 to be required to purchase, install and maintain their local transformers. ST customers who
20 choose to use Hydro One owned transformers will be subject to a fixed monthly "local
21 transformation charge" of \$200 and a one-time initial charge (at connection or upgrade) which
22 will depend on the size and the configuration of the local transformer required.

23
24 The derivation of the new monthly "local transformation charge" and the one-time transformer
25 charge is discussed in Exhibit L-02-01 Section 5.2.8.

26
27 Hydro One is host to 45 embedded distributors and proposes to continue to bill these customers
28 under the ST rate class. The embedded distributor connections on the bulk system are
29 indistinguishable from the customer connections included in the Sub-Transmission class. The ST

Witness: LI Clement

1 rate class also includes embedded distributors connected below 13.8 kV. These embedded
2 delivery points are subject to an HVDS low, or an LVDS low charge for the portion of the
3 supplying distribution station costs to transform power from above (or at) 13.8 kV to under 13.8
4 kV, which is described in Exhibit L-02-01.

5

6 **1.2 ELIMINATION OF SEASONAL RATE CLASS**

7 In its Decision dated March 12, 2015 in proceeding EB-2013-0146 (March 2015 Decision), the
8 OEB directed Hydro One to bring forward a plan for elimination of the Seasonal rate class.
9 Hydro One prepared a “Report on Elimination of the Seasonal Class”, which was filed with the
10 OEB on August 4, 2015. The report assessed the impact of eliminating the Seasonal class and
11 included consideration of the OEB’s policy to move residential classes to all-fixed rates starting
12 in 2016, which was issued after the March 2015 Decision.

13

14 This report was subsequently updated in 2016 (filed on December 1, 2016) and then in 2019
15 (filed on July 19, 2019) as per the OEB’s directions under EB-2016-0315. In the 2019 update,
16 Hydro One proposed “An Alternative Approach to Eliminating the Seasonal Class”. The OEB
17 determined that it would treat this new Section of the report as a Motion to Review the OEB’s
18 March 2015 Decision to eliminate the Seasonal class. In its September 2020 Decision (EB-2019-
19 0234), the OEB found that Hydro One’s Motion failed on its merits and that the March 2015
20 Decision stands. The OEB also directed Hydro One to file an updated report reflecting the latest
21 rates. Hydro One filed the updated report on October 15, 2020.

22

23 On January 22, 2021, the OEB issued a Letter of Direction for Hydro One to send out a Notice to
24 each customer in the Seasonal class informing them of the Proceeding to consider the next steps
25 in eliminating the Seasonal rate class (EB-2020-0246), which year-round residential rate class
26 they will move to and the estimated bill impacts. The Notice stated that *“The OEB has yet to
27 decide whether this change will take effect on January 1, 2022 or on a later date.”* However,

1 Hydro One, in the October 2020 update to the Seasonal Report provided supporting arguments
2 for an implementation date of January 1, 2023.³ Consistent with that recommendation, and in
3 the absence of an OEB decision on when the change will take effect, the evidence in this
4 Application assumes that the Seasonal class elimination will be implemented on January 1, 2023.
5 In this Application’s load forecast, the Seasonal Class no longer exists and all “former” seasonal
6 customers have been assigned to the corresponding year round residential classes as of January
7 1, 2023, as shown in Table 1 below.

8
9 **Table 1 - Breakout of Seasonal Customers among Residential Rate Classes**
10 **(2023) Target Class**

	UR	R1	R2	Total
Number of Seasonal Customers	231	63,743	78,677	142,651

11
12
13 **2.0 INTEGRATION OF ACQUIRED UTILITIES**

14 In its decisions on Hydro One’s applications for the acquisitions of Norfolk Power, Haldimand
15 County Hydro and Woodstock Hydro (EB 2013-0187, EB-2014-0244 and EB-2014-0213), the OEB
16 directed that future rates for acquired customers need to be reflective of the costs to serve
17 these acquired customers. In order to best achieve that objective Hydro One proposes creating
18 six new rate classes into which the residential and general service customers formerly served by
19 the Acquired Utilities will be placed. This will allow Hydro One to use the OEB’s cost allocation
20 and rate design principles to set rates for the new rate classes that are reflective of the cost to
21 serve the acquired customers. The option of creating new rate classes for acquired customers is
22 specifically contemplated in the OEB’s Handbook to Electricity Distributor and Transmitter
23 Consolidations.⁴

³ EB-2020-0246, Hydro One Report on Elimination of the Seasonal Class, page 44

⁴ Handbook to Electricity Distributor and Transmitter Consolidations, page 18

Witness: LI Clement

1 The new rate classes Hydro One proposes to create are:

2

3 **Acquired Urban**

- 4 • Acquired Urban Residential (AUR)
- 5 • Acquired Urban General Service Energy (AUGe)
- 6 • Acquired Urban General Service Demand (AUGd)

7

8 **Acquired Mixed Density**

- 9 • Acquired Residential (AR)
- 10 • Acquired General Service Energy (AGSe)
- 11 • Acquired General Service Demand (AGSd)

12

13 These new rate classes allow Hydro One to set rates that appropriately reflect the cost to serve
14 the acquired customers by making it possible to allocate to the acquired customers only the cost
15 of fixed assets used to serve them. The direct allocation of fixed assets, which is a significant
16 driver in the cost allocation model, would not be possible if these customers were merged into
17 existing Hydro One rate classes. Hydro One proposed establishing new rate classes for acquired
18 customers in its application to acquire Orillia Power Distribution Inc. (EB-2018-0270) and
19 Peterborough Distribution Inc. (EB-2018-0242). In its Decisions for both these applications the
20 OEB found that Hydro One's cost allocation proposal for new acquired rate classes was
21 reasonable and, in particular, approved the direct allocation of costs associated with local fixed
22 assets.⁵

23

24 The proposal to create two new sets of acquired rate classes aligns with the fact that the
25 majority of former Woodstock Hydro customers are located in urban areas, with an average

⁵ EB-2018-0270, Decision and Order, April 30, 2020, page 36, and EB-2018-0242, Decision and Order, April 30, 2020, page 36

1 customer density of 63 customers/cct-km, while customers from the former Norfolk Power and
2 Haldimand County Hydro have a mixed density (i.e., customers are found in urban, medium
3 density and low density areas), with an average customer density of 18 customers/cct-km.⁶
4 Hydro One proposes to assign former Woodstock Hydro customers to the Acquired Urban
5 classes; and to assign former Norfolk Power and Haldimand County Hydro customers to the
6 Acquired Mixed Density classes. While costs for former Norfolk Power and Haldimand County
7 Hydro customers are not perfectly aligned, Hydro One submits that some level of cross-
8 subsidization within a rate class is a natural outcome of grouping customers into rate classes and
9 using an allocation methodology to assign costs to those rate classes. Hydro One's proposed
10 approach keeps the number of customer rate classes manageable but at the same time allows
11 differentiation of the costs to serve acquired customers at "urban" and "mixed" density levels.

12

13 The six new rate classes have been incorporated into the 2023 Cost Allocation Model (CAM),
14 which has been populated with all required inputs specific to these new classes. The CAM
15 inputs and results for these six rate classes are discussed in Exhibit L-01-03 (Distribution Cost
16 Allocation). The proposed Total Loss Factors (TLF) for these new rate classes are discussed in
17 Exhibit L-06-02.

18

19 **Merging of Some Acquired Customers into Existing Hydro One Rate Classes**

20 Hydro One proposes that the small number of acquired customers currently in the Unmetered
21 Scattered Load Service Class (USL), Street Lighting Service Class (Street Lights), Sentinel Lighting
22 Service Class (Sentinel Lights) and Large User Class (Woodstock service area)⁷ be merged into
23 the equivalent Hydro One rate classes starting in 2023. The number of acquired customers in
24 these classes represents only a small portion of the existing Hydro One customers in these
25 classes, as shown in Table 2 below.

⁶ Customer density for former Norfolk Power was 25 customers/km of line (Source: 2014 Yearbook of Electricity Distributors), and it was 12 customers/km of line for former Haldimand County Hydro (Source: 2015 Yearbook of Electricity Distributors).

⁷ For those Large Users meeting the requirements of Hydro One's ST Class.

1 **Table 2 - Merging Acquired Customers into Existing Hydro One Rate Classes**

Rate Class	Number of Customers in 2023		
	Acquired Utilities	Hydro One Existing	TOTAL
USL	120	5,632	5,752
Street Lights	7	5,487	5,494
Sentinel Lights	174	19,235	19,409
Large Users to ST	6	904	910

2
3 The current OEB-approved volumetric charges for Hydro One Sentinel Lighting Service and
4 Street Lighting Service customers are based on kWh consumption. For the Acquired Utilities,
5 the current OEB-approved volumetric charges for Sentinel Lighting Service and Street Lighting
6 Service are based on kW demand. Given the small number of acquired customers to be merged
7 with legacy Hydro One customers in these existing rate classes, Hydro One proposes to adopt
8 the kWh consumption from these acquired Street Lighting Service and Sentinel Lighting Service
9 customers as the billing quantities once they are merged into the corresponding Hydro One rate
10 classes. Given the relatively small number of acquired customers that will be migrating to these
11 Hydro One classes, Hydro One expects this migration will have an immaterial impact on the TLFs
12 and other weighting factors of these rate classes. The CAM inputs for these existing classes
13 have been adjusted to include the data from the acquired customers being merged into these
14 existing classes.

15
16 The integration of the Acquired Utilities customers into Hydro One's rate classes in 2023 is
17 summarized in Table 3.

1

Table 3 - Hydro One Rate Classes 2023 to 2027

Rate Class	2022	2023-2027
UR	H1	H1 UR + H1 Seasonal
R1	H1	H1 R1 + H1 Seasonal
R2	H1	H1 R2 + H1 Seasonal

1 **DISTRIBUTION COST ALLOCATION**

2
3 **1.0 INTRODUCTION**

4 Hydro One Networks Inc.'s total annual distribution revenue requirement for the period 2023 to
5 2027 is described in Exhibit D-01-01. Hydro One has populated the cost allocation model for the
6 2023 test year, in accordance with the cost allocation policies outlined in the OEB's reports and
7 letters, including: (i) OEB Report - Review of Electricity Distribution Cost Allocation Policy (EB-
8 2010-0219), issued on March 31, 2011; (ii) OEB Report - Review of the Board's Cost Allocation
9 Policy for Unmetered Loads (EB-2012-0383), issued on December 19, 2013; and (iii) OEB Letter –
10 New Cost Allocation Policy for Street Lighting Rate Class (EB-2012-0383), issued on June 12,
11 2015. The cost allocation model used is consistent with the OEB's 2022 Cost Allocation Model
12 (CAM), and includes modifications that are consistent with those approved in EB-2017-0049, as
13 well as approved and discussed in EB-2013-0416¹ in order to accommodate the Company's
14 specific circumstances, including the breakout of bulk system assets and incorporation of
15 density-based rate classes.

16
17 Unless otherwise noted in this Exhibit, the changes made to the OEB's CAM are the same
18 changes previously approved in the 2018 CAM used by Hydro One in proceeding EB-2017-0049.
19 Hydro One has incorporated the elimination of the seasonal class in the 2023 CAM.

20
21 The 2023 distribution revenue requirement has been allocated to all legacy Hydro One
22 customers and customers from the three Acquired Utilities (Norfolk Power Distribution Inc.,
23 Haldimand County Hydro Inc. and Woodstock Hydro Services Inc.) using the 2023 CAM. The
24 2023 CAM uses the same cost allocation principles embedded within the model to allocate the
25 revenue requirement across both legacy classes and the new acquired classes on the same
26 basis. Attachment 2 to this Exhibit provides the input and output sheets from the 2023 CAM, as

¹ EB-2013-0416, Exhibit G2, Tab 1, Schedule 1, filed December 19, 2013.

Witness: LI Clement

1 specified in the OEB's filing requirements. The full excel model for the 2023 CAM has been filed
2 electronically as Attachment 1.

3

4 Consistent with the approach approved by the OEB in EB-2017-0049, the CAM is not rerun for
5 rate years 2024 to 2027. A description of how the revenue requirement by rate class is
6 determined in these years is provided in Exhibit L-02-01.

7

8 **2.0 COST ALLOCATION MODEL**

9 **2.1 INTRODUCTION**

10 The OEB's CAM is designed based on the principle that costs should be allocated to those
11 customer classes causing them. Cost allocation is generally performed in three steps:
12 functionalization, categorization and allocation.

13

14 In the functionalization step, costs are aggregated into homogenous groups as defined by
15 functions within the utility. Functionalization is achieved by allocating utility costs to the various
16 USofA accounts, with further refinement in some categories for bulk and primary-related costs
17 and station costs.

18

19 In the categorization step, each of the USofA accounts determined in the functionalization step
20 is categorized as demand-related (related to the peak demands on the system), customer-
21 related (related to the number of customers or connections of the utility), or jointly demand and
22 customer-related (related to both demand on the system and number of customers). Where
23 costs are categorized as jointly demand and customer-related, the proportions of each are
24 determined using a minimum system approach. This approach determines the customer-related
25 proportion by estimating the minimum system that would be needed to serve the minimum
26 load requirements of all distribution customers. The remainder of the cost is considered to be
27 demand-related. Hydro One uses a minimum system split specific to its system as determined
28 by the minimum system study reviewed and approved by the OEB as part of Hydro One's 2008
29 and 2015-2017 Rates applications (EB-2007-0681 and EB-2013-0416).

Witness: LI Clement

1 The final step of the cost allocation process is the allocation of the demand and customer-
2 related costs based on various allocators.

3

4 **2.2 2023 COST ALLOCATION MODEL – EXCEL MODEL AND INPUT DATA**

5 The 2023 CAM used in this application is based on the OEB-approved 2018 CAM, used in Hydro
6 One's 2018-2022 Distribution Rate Application (EB-2017-0049) adjusted for the elimination of
7 the Seasonal rate class and the inclusion of the new acquired rate classes. All inputs to the 2023
8 CAM have been reviewed and updated to reflect Hydro One's 2023 proposed revenue
9 requirement, charge determinants and updated load profiles, which are based on the latest
10 hourly metered data results from legacy Hydro One customers and acquired customers. Hydro
11 One has also reviewed all allocators and weighting factors in the 2018 model and has
12 determined that it is appropriate to continue using the same values in the 2023 CAMs with the
13 following exceptions:

14

15 **2.2.1 CHANGES RELATED TO ELIMINATION OF THE SEASONAL RATE CLASS**

16 As noted in Exhibit L-01-02, Hydro One has assumed that the elimination of the Seasonal rate
17 class will be implemented on January 1, 2023. The 2023 CAM reflects this assumption. The
18 number of customers and kWh for the UR, R1, and R2 rate classes have been updated to include
19 the values associated with the Seasonal customers moving into those classes.

1 The Coincident Peak (CP) and Non-coincident Peak (NCP) inputs to the CAM were updated based
2 on the load forecast established for the “new” UR, R1 and R2 residential classes that include the
3 seasonal customers. Hydro One’s approach ensures that the CP values for total distribution
4 system remain the same before and after seasonal elimination.²

5
6 CAM inputs such as bad debt, late payment charges, current rates, billing & collecting weighting
7 factors and meter capital costs for the UR, R1 and R2 residential classes reflect the adjusted
8 values resulting from Seasonal customers moving into those rate classes.

9
10 Seasonal customers have been assigned to the UR, R1 and R2 classes based on sharing similar
11 density characteristics as customers currently in that class, and further the number of Seasonal
12 customers is relatively small when compared to the number of customers in the corresponding
13 residential rate classes.³ As such, Hydro One has maintained the same values for the UR, R1 and
14 R2 rate classes for the following CAM inputs: services weighting factors, meter reading
15 weighting factors, density factors and loss factors.

16

17 **2.2.2 WEIGHTING FACTORS (CAM TAB I5.2)**

18 The Services weighting factors, as well as the Billing and Collecting weighting factors (CAM sheet
19 I5.2), for the six new acquired rate classes, have been established by adopting values from
20 similar existing Hydro One rate classes. The Services weighting factors for all Hydro One existing
21 rate classes remain unchanged from the factors used in the 2018 CAM. These factors reflect an

² To calculate the 2023 CP and NCP inputs assuming no Seasonal Class, the hourly forecasts for each consolidated residential class (UR, R1, and R2) for each forecast year were determined by adding together the portion of hourly forecasts of seasonal customers mapped to that class and the hourly forecasts of customers who were already in that class. Thus, the hourly forecast for each consolidated class over the 2023-2027 forecast period takes into account the load growth and weather sensitivity of each class. The hourly load forecast for each class was then added together (hour by hour) to obtain the total distribution system load forecast and establish the peak dates and hours required in order to determine the 1CP, 4CP and 12CP CAM input values by class.

³ This is particularly true in the case of the less than 300 seasonal customers assigned to the UR class with over 240,000 customers.

1 estimate of the relative cost of services assets provided by Hydro One to its rate classes. The
 2 weighting factors for the residential classes are based on an estimated relative service
 3 connection length of 30, 15 and 10 metres for R2, R1 and UR customers, respectively. All other
 4 rate classes are fully responsible for their service connection assets and as such their weighting
 5 factors are set to zero.

8

9 Hydro One has updated the Billing & Collecting weighting factors. Table 2 provides the
 10 derivation of these revised weighting factors. This approach allocates the forecast 2023 billing
 11 related costs (those in USofA 5305 and 5315) among the rate classes using forecast 2023
 12 number of bills. Forecast collection related costs (those in USofA 5320) are allocated to rate
 13 classes using % share of bad debt. The costs in USofA 5340 (Miscellaneous Customer Account
 14 Expenses) are allocated using the % share of billing & collecting costs (i.e. subtotal for USofA
 15 5305, 5315 and 5320)⁴.

⁴ A similar approach was approved by the OEB in Burlington Hydro Inc's 2021 Distribution rate application (EB-2020-0007).

1 **2.2.3 METER CAPITAL COSTS (CAM TABS I4 AND I7.1)**

2 Meter capital costs in Tab I7.1 of the CAM have been updated to reflect the most recent
 3 information available from Hydro One’s financial reporting system. The system provides the
 4 total capital and installation costs for meters for all customers and this information is used to
 5 calculate average meter costs for each rate class. The CAM then derives the allocator to assign
 6 meter assets in USofA 1860 to the rate classes by multiplying the average meter cost with
 7 forecast 2023 number of customers.

8

9

Table 4 - Average Meter Cost by Rate Class in 2023 CAM

*ST1 is the average meter cost for ST customers connected below 44kV and ST2 is the average meter cost for ST customers connected at 44kV.

10

11 **2.2.4 METER READING COSTS (CAM TAB I7.2)**

12 Table 5 provides the forecast number of manual meter reads by rate class in 2023. The meter
 13 reading weighting factors, as approved in Hydro One’s last distribution rate application (EB-
 14 2017-0049), were discussed with the subject matter experts in Hydro One’s Customer Service
 15 team and were found to be appropriate as there have been no material changes to the meter
 16 reading process.

17

18 **Table 5 - Number of Manual Meter Reads and Meter Reading Weighting Factors by Rate Class**
 19 **in 2023 CAM**

	UR	R1	R2	GSe	GSd	UGe	UGd	St Lgt	Sen Lgt	USL	DGen	ST	AUR	AUGe	AUGd	AR	AGSe	AGSd

1 **2.2.5 DENSITY FACTORS (CAM TAB E2)**

2 No density adjustment is required for the six new acquired rate classes, as these classes are not
 3 distinguished based on density. The value “1” has been input in the 2023 CAM sheet E2 for the
 4 six acquired rate classes. The density factors for all existing density-based rate classes remain
 5 unchanged from the factors used in the 2018 CAM given there have been no material changes
 6 to the relative asset use, maintenance and operation of the distribution system by rate class.

7

8 **Table 6 - Density Factors in 2023 CAM (CAM Sheet E2)**

Number of customers	1,413,905
PLCC- Transformers (Watts Per Customer)	2,977

2

3 **2.2.7 DIRECT ALLOCATION**

4 **2.2.7.1 DIRECT ALLOCATION IN CAM (TAB I9)**

5 The following USoA accounts were directly allocated:

- 6 • 5065 Meter Expense (\$2.0 million),
- 7 • 5315 Customer Billing (\$0.9 million),
- 8 • 5610 Management Salaries and Expenses (\$1.0 million),
- 9 • 5615 General Administrative Salaries and Expenses (\$7.2 million),
- 10 • 5665 Miscellaneous General Expenses (\$0.7 million)

11

12 These expenses relate to staff dealing with distributed generators, large customers and interval
13 meters costs. This same direct allocation methodology has been used by Hydro One and
14 approved by the OEB in previous Hydro One rate applications (EB-2017-0049, EB-2013-0416, EB-
15 2009-0096 and EB-2007-0681).

16

17 **2.2.7.2 DIRECT ALLOCATION OF ASSET-RELATED COSTS FOR NEW ACQUIRED RATE**
18 **CLASSES**

19 The revenue requirement and fixed assets associated with serving the customers of the
20 Acquired Utilities in 2023 have been included as part of the inputs to the 2023 CAM. Six new
21 rate classes have also been added to the 2023 CAM to accommodate the rate harmonization of
22 the acquired utilities. All inputs to the 2023 CAM have been reviewed to ensure that the model
23 is appropriately assigning costs to Hydro One's existing and new acquired rate classes.

Witness: LI Clement

1 ***Allocation of Costs Based on Actual Fixed Asset Cost***

2 The allocation of fixed assets within the CAM is the key factor driving the allocation of the bulk
3 of a utility's revenue requirement, including: a large portion of OM&A, depreciation, net
4 income, and interest costs. Given this critical role of fixed assets in the allocation of costs, and
5 the fact that the customers in the new acquired rate classes are located in a defined service area
6 for which the fixed assets used within the service area are known, Hydro One has proposed an
7 approach that directly allocates the fixed asset costs to the acquired rate classes in the CAM.
8 This is the best means of ensuring the CAM appropriately allocates all of the costs required to
9 serve the new acquired rate classes on the same basis as all other rate classes.

10

11 Using input factors to adjust the allocation of costs to rate classes is not a new concept within
12 the context of cost allocation models. Since 2012, the OEB has approved the use of density
13 factors to adjust the amount of costs allocated across Hydro One's density-based rate classes. A
14 Street Light Adjustment Factor is used to adjust the number of customer connections associated
15 with the streetlight class for cost allocation purposes. Weighting factors for Services and for
16 Billing and Collections are used within the OEB's CAM to ensure that rate classes are allocated
17 an appropriate share of costs related to those functions. Accordingly, Hydro One proposes to
18 use direct allocation adjustment factors within the 2023 CAM to determine the amount of gross
19 fixed assets allocated to the new acquired rate classes. Given that depreciation and net fixed
20 assets are directly associated with the value of gross fixed assets, Hydro One also proposes
21 corresponding adjustments for those quantities.

22

23 ***Adjustment to Directly Allocate Gross Fixed Assets (GFA)***

24 A direct allocation adjustment factor has been applied to the amount of GFA in USofA accounts
25 1815 to 1860 to align the costs allocated by the CAM to these USofA accounts with the amount
26 of GFA specifically required to serve the new acquired rate classes. The amount of GFA that
27 should appropriately be allocated to the new acquired rate classes is calculated from the GFA in
28 these USofA accounts for the acquired utilities prior to acquisition plus the in-service additions
29 to these accounts up to 2023. The total GFA that should appropriately be assigned to the new

Witness: LI Clement

1 acquired rate classes also takes into consideration that a portion of Hydro One’s bulk
2 distribution assets associated with serving customers in each of the new acquired rate classes
3 should also be allocated to these classes based on the share of acquired utilities’ load that is
4 supplied through Hydro One’s upstream bulk distribution facilities. The share of Acquired
5 Utilities’ load that is supplied through Hydro One’s upstream bulk distribution facilities is based
6 on total annual billing demand information from the Acquired Utilities’ 2021 IRM Rate
7 Generator (EB-2020-0031).⁵ This share is then used to allocate a portion of bulk asset related
8 costs to the new acquired rate classes.⁶

9
10 Assets in all other USofA fixed asset accounts (e.g. land, buildings, general plant, etc.) are
11 considered to be commonly shared among all classes served by Hydro One. The amount of
12 these common assets is allocated to all rate classes, including the new acquired classes, using
13 the normal cost allocation principles underlying the CAM and is not adjusted.

14
15 The GFA direct allocation factors are shown in Table 9. These direct allocation factors are
16 applied to the GFA in USofAs 1815 to 1860 as shown in rows 437-507 of the 2023 CAM’s “E2
17 Allocators” tab.

18
19 **Table 9 - GFA Direct Allocation Factors**

AUR	AUGe	AUGd	AR	AGSe	AGSd
36.2%	32.8%	17.4%	54.4%	43.0%	29.5%

20
21 The amount of GFA not assigned to the new acquired rate classes as a result of applying the
22 direct allocation factors shown above is subsequently redistributed to all other rate classes in
23 proportion to the amounts already assigned to those classes.

⁵ Tab 12 (“RTSR – Historical Wholesale”), Rate Generator Model for former Norfolk Power and Haldimand County Hydro, as approved by the OEB on December 17, 2020 in EB-2020-0031.

⁶ Former Woodstock Hydro Services Inc. is a transmission-connected distribution company, and hence, the three urban acquired rate classes (i.e. AUR, AUGe and AUGd) are not allocated any costs related to bulk assets.

1 ***Net Fixed Asset (NFA) Direct Allocation***

2 The NFA and NFA Excluding credit for Capital Contribution (NFA ECC) allocators in the CAM's "E2
3 Allocator" tab are also adjusted to reflect the GFA direct allocation for USofA's 1815-1860 as
4 described above. GFA values assigned to the new acquired rate classes are translated to NFA
5 values based on the relationship between total GFA and NFA determined from rows 112 to 116
6 in the CAM's "O6 Source Data for E2" tab. The NFA adjustment factors that have been applied
7 are shown in Table 10 below.

8
9 **Table 10 - NFA and NFA ECC Direct Allocation Factors**

AUR	AUGe	AUGd	AR	AGSe	AGSd
37.9%	34.4%	20.2%	55.7%	44.5%	31.6%

10
11 The amount of NFA and NFA ECC not assigned to the new acquired rate classes as a result of
12 applying the direct allocation factors shown above is subsequently redistributed to all other rate
13 classes in proportion to the amounts already assigned to those classes.

14
15 ***Depreciation Direct Allocation***

16 An adjustment is applied to the depreciation assigned by the CAM to USofA accounts 1815 to
17 1860 for the new acquired rate classes to reflect the direct allocation of GFA as discussed above.
18 The depreciation amounts assigned to the new acquired rate classes as shown in sheet "O7
19 Amortization" of the CAM are reduced by the same GFA direct allocation factors shown in Table
20 9 in order to reduce the depreciation amount assigned to the new acquired rate classes
21 consistent with the reduction in the GFA for those USofA accounts.

22
23 The depreciation amount not assigned to the new acquired rate classes as a result of applying
24 the direct allocation factors shown above is subsequently redistributed to all other rate classes
25 in proportion to the amounts already assigned to those classes. Table 11 shows the unadjusted
26 depreciation amounts, before the direct allocation of GFA, compared to the adjusted amounts,

1 after the direct allocation of GFA, for each rate class included in row 216 of the “O4 Summary by
 2 Class & Accounts” tab of the CAM.

3

DISTRIBUTION RATE DESIGN

1.0 INTRODUCTION

This Exhibit presents the proposed rate design methodology for collecting the distribution revenue requirement and setting distribution rates for the 2023 to 2027 period. As discussed in Exhibit L-01-03, Hydro One has populated a Cost Allocation Model (CAM) for the 2023 test year. The revenue requirement allocated to each rate class in 2023 is established by the CAM. For rate years 2024, 2025, 2026 and 2027, the revenue requirement allocated to each rate class is based on the overall Hydro One year-over-year change in revenue requirement and load forecast in a given test year, as detailed later in this Exhibit.

The proposed rates over the Custom IR period are calculated based on the rate class revenue requirement after adjustments to the R/C ratios, if necessary, as described in Section 2.0. Calculation details are provided in Exhibits L-02-01, Attachment 1 for all rate classes except the ST class, for which calculation details are provided in Exhibit L-02-01, Attachment 4.

The proposed distribution rates over the Custom IR period are summarized in Table 1 for Hydro One Distribution legacy customers and in Tables 2, 3 and 4 for customers of the former Norfolk Power Distribution Inc. (NPDI), Haldimand County Hydro Inc. (HCHI) and Woodstock Hydro Services Inc. (WHSI) (the Acquired Utilities). The rates for 2024 through 2027 are shown for illustrative purposes only and are calculated consistent with the assumptions outlined in this Exhibit. Final rates for those rate years will be approved by the OEB in subsequent annual update rate applications and are dependent on changes to parameters such as the OEB's inflation factor, which is updated annually. Further details on how the revenue requirement for 2024-2027 will be determined can be found in Exhibit A-04-03.

** See Table 10 for ST rates.

1 The proposed 2023 rate schedules reflecting the rates shown in Tables 1-4 are provided in
2 Exhibit L-07-02. The currently approved rate schedules for Hydro One Distribution and the
3 Acquired Utilities are provided in Exhibit L-07-01. The rate schedules for 2024 to 2027 will be
4 determined as part of the annual process for setting rates, taking into account any changes as a
5 result of the annual adjustments discussed in Section 2 and Exhibit A-04-03.

6

7 **2.0 RATE DESIGN PROCESS**

8 Hydro One's development of distribution rates for this application follows generally accepted
9 ratemaking principles. Those principles are best summarized by James Bonbright's *Principles of*
10 *Public Utility Rates*. OEB Staff's March 31, 2008, discussion paper, *Rate Design for Recovery of*
11 *Electricity Distribution Costs* (EB-2007-0031), cited these principles and summarized them as:

12

- 13 1. Full Cost Recovery – the level and design of rates should be sufficient to provide a
14 distributor with a reasonable opportunity to recover its revenue requirement, and for
15 rates to be effective they should be practical, clear and uncontroversial;
- 16 2. Fairness – customers should, in general, pay rates for distribution service that reflects
17 the costs they “cause” as determined by a OEB-approved cost allocation study;¹ and
- 18 3. Efficiency – rates should encourage customers to maximize use of existing distribution
19 assets, and encourage existing and new customers to use the system in ways that lead
20 to rational growth.

21

22 **2.1 REVENUE REQUIREMENT BY RATE CLASS**

23 As discussed in Exhibit L-01-03, Hydro One has populated a CAM for the 2023 rate year, which is
24 used to determine the 2023 revenue requirement by rate class.

¹ A further consideration is that the revenues collected through rates fall within the OEB's approved revenue-to-cost ratio ranges as specified in EB-2010-0219 and updated in EB-2012-0383.

1 For rate years, 2024, 2025, 2026 and 2027, a custom revenue cap index approach is used to
2 determine the total revenue requirement that is to be allocated to individual rate classes, as
3 described below.

4

5 Allocating Revenue Requirement to Individual Rate Classes for Rate Years 2024 to 2027

6 The 2024 revenue requirement by rate class, as shown in Table 5, was derived as follows:

- 7 1. The total prior year's (2023) revenue requirement is used as the starting point;
- 8 2. As detailed in Exhibit A-04-03, total revenue requirement for 2024 is determined by
9 applying the Custom Revenue Cap Index² to the 2023 revenue requirement
10 (i.e., \$1,632M x 1.0483 = \$1,711M);
- 11 3. The revenue that needs to be collected from distribution rates (rates revenue
12 requirement) is then derived by subtracting total external revenues for 2024³ from the
13 total revenue requirement (i.e. \$1,711M - \$46M = \$1,665M);
- 14 4. Using a similar approach as in the CAM, the next step is to determine the revenue
15 deficiency by applying 2023 rates to 2024 charge determinants (resulting in total
16 revenue in 2024 at current (2023) rates of \$1,594M as shown in Column 1, Table 5);
- 17 5. The multiplier required to collect the 2024 rates revenue requirement calculated in step
18 3 above is established (i.e. \$1,665M / \$1,594M = 1.0445) and applied uniformly to
19 Column 1 to determine 2024 rates revenue requirement by rate class as shown in
20 Column 2.
- 21 6. External revenue by rate class for 2024 (Column 4) is derived by applying the % increase
22 in total external revenues from 2023 to 2024 (i.e. \$46,455,760 / \$46,419,183 = 1.0008)
23 to external revenue by rate class as calculated by the 2023 CAM (Column 3).
- 24 7. The revenue requirement by rate class for 2024 is derived by adding 2024 rates revenue
25 requirement in Column 2 and 2024 external revenues in Column 4.

² Table 2, Exhibit A, Tab 4, Schedule 3.

³ Exhibit D-02-02 Table 2. Any differences are due to rounding.

3

4 The same approach described for 2024 is used to determine the 2025-2027 revenue
 5 requirements by rate classes, as shown in Exhibit L-02-01, Attachment 1.

2.2 REVENUE-TO-COST RATIO

If required, Hydro One proposes to adjust the rate class revenues as determined by the CAM and rate design as necessary to move the revenue-to-cost (R/C) ratios for all rate classes within the OEB-approved ranges, as specified in EB-2010-0219 – Review of Electricity Distribution Cost Allocation Policy, Report of the Board, issued on March 31, 2011 and EB-2012-0383 – OEB Letter – New Cost Allocation Policy for Street Lighting Rate Class, issued on June 12, 2015.

Table 6 shows the proposed R/C ratios for 2023 to 2027.

Table 6 - Proposed Revenue-to-Cost Ratios for 2023-2027

As shown in Table 6, the R/C ratios calculated by the CAM for most existing and new acquired rate classes are already within the OEB prescribed ranges and therefore do not require further adjustments as part of the rate design process, except as noted below.

Witness: LI Clement

1 In 2023, the R/C ratio for the AUGe, AUGd and AGSd classes are outside the OEB-prescribed
2 ranges and will need to be adjusted. Hydro One proposes to increase the revenue collected from
3 these three classes to bring the R/C ratio for each class to 0.80, which is within the OEB-
4 prescribed range. The increase in revenue collected from these classes will be used to offset the
5 revenue collected from the USL class, which had the highest R/C ratio of 1.19, and also to offset
6 the revenue collected from the Sentinel Light class which had a R/C ratio of 1.12. Hydro One
7 proposes to use the revenue being shifted to adjust the R/C ratio for the USL and Sentinel Light
8 classes instead of the R1 class because of the small amount of revenue being shifted, which
9 would not result in a material impact to R1 class rates, but does represent a material reduction
10 in the USL and Sentinel Light class rates.

11

12 In 2024 and 2026, the estimated R/C ratio for the AGSd class is estimated to be 0.79, which is
13 just outside the OEB-prescribed range. Only a small increase to the revenue collected from the
14 AGSd class is required to bring the R/C ratio within the OEB range. This increase in revenue has
15 been offset by reducing the revenue collected from the USL class.

16

17 In 2025, the estimated R/C ratios for the AUGD and AGSd classes are estimated to be 0.79,
18 which is just outside the OEB-prescribed range. Only a small increase to the revenue collected
19 from these classes is required to bring the R/C ratios within the OEB-prescribed range. Hydro
20 One proposes to offset this increase in revenue by reducing the revenue collected from the USL
21 class.

22

23 In 2027, the estimated R/C ratio for the AUGd and AGSd rate classes, as well as the R1 rate class,
24 are just outside the OEB-prescribed ranges. Hydro One proposes to increase the AUGd and
25 AGSd R/C ratio to 0.80 and to decrease the R/C ratio for the R1 class to 1.15, in order to bring
26 them both within the OEB-prescribed range. Given the relatively large amount of revenue
27 collected from the R1 class, even the small adjustment of bringing the R/C ratio to 1.15 for this
28 class results in \$3.1 M in revenue that will have to be collected from other rate classes in order
29 to offset the revenue reduction for the R1 class. A small amount of the revenue offset will come

1 from increasing the R/C to 0.80 for the AUGd and AGSd class, and Hydro One proposes to collect
2 the balance of the R1 revenue offset by increasing the R/C ratio for the ST class from 0.86 to
3 0.90. Hydro One does not propose collecting the R1 revenue offset from the acquired rate
4 classes, some of which have lower R/C ratios than the ST class, as this would result in a
5 disproportionately large rate impact for the acquired classes given the relatively small total
6 revenue being collected from those classes.

7
8 **2.3 FIXED VERSUS VOLUMETRIC CHARGES**

9 **2.3.1 MOVE TO ALL-FIXED RATES FOR RESIDENTIAL CLASSES**

10 In the Report of the Board: A New Distribution Rate Design for Residential Electricity Customers
11 (EB-2012-0410) issued April 2, 2015, the OEB confirmed that rates for residential customers will
12 migrate to a fixed monthly distribution (“all-fixed”) charge over a transition period commencing
13 in 2016.

14
15 Hydro One Existing Residential Rate Classes

16 In its Decision on Hydro One’s 2016 Draft Rate Order (EB-2013-0416/EB-2015-0079), the OEB
17 approved Hydro One’s proposed mitigation plan to extend the phase-in period to five years for
18 the UR class and ordered an eight-year phase-in period for the R1, R2 and Seasonal rate classes,
19 commencing in 2016. The move to all-fixed distribution rates was suspended for the 2018 rate
20 year⁴ and, as a result, the transition to all-fixed distribution rates for the UR class was completed
21 in 2021 and for the R1 and R2 rate classes will be completed in 2024.

22
23 In this application, Hydro One continues to use the methodology, as prescribed by the OEB in
24 Tab 12 of the Revenue Requirement Work Form (RRWF), to calculate the proposed monthly
25 fixed service charges and corresponding volumetric charges for 2023 rates for R1 and R2 rate

⁴ Decision and Order in EB-2017-0049

1 classes. Starting in 2024, distribution rates for all residential rate classes will be fully-fixed and
2 therefore will not require the use of the RRWF.⁵

3
4 The detailed calculations of 2023 and 2024 fixed charges for the R1 and R2 rate classes are
5 shown in Exhibit L-02-01, Attachment 2.

6
7 Acquired Residential Rate Classes

8 In its Decisions on the 2016 distribution rates applications for NPDI (EB-2015-0269), HCHI (EB-
9 2015-0259), and WHSI (EB-2015-0271), the OEB ordered multi-year phase-in periods for the
10 transition to all-fixed residential rates, commencing in 2016. Specifically, the OEB ordered a
11 four-year phase-in for NPDI and a five-year phase-in for each of HCHI and WHSI. The phase-in
12 period ended in 2019 for NPDI, and in 2020 for HCHI and WHSI. As such, the proposed 2023-
13 2027 residential rates for the customers formerly served by the Acquired Utilities are 100%
14 fixed.

15
16 **2.3.2 FIXED-TO-VARIABLE SPLIT FOR NON-RESIDENTIAL CLASSES**

17 Hydro One Existing Non-Residential Rate Classes

18 Hydro One proposes to maintain the same fixed-to-variable revenue split for all non-residential
19 rate classes that were approved by the OEB in Hydro One's last distribution rate application and
20 subsequent Draft Rate Orders (EB-2017-0049, EB-2018-0041, EB-2019-0043 and EB-2020-0030).
21 The fixed-to-variable split for these classes will remain unchanged over the 2023 to 2027 period
22 to provide stability in customer rates and revenue mix.

23
24 Acquired Non-Residential Rate Classes

25 The AUGe and AUGd classes consist of customers formerly served by WHSI. Hydro One
26 proposes to maintain the same fixed-to-variable split in revenue, approved by the OEB in WHSI's
27 last cost-of-service distribution rate application. The fixed-to-variable split for these classes will

⁵ Refer to Exhibit L-02-01, Attachment 1

1 remain unchanged over the 2023 to 2027 period to provide stability in customer rates and
 2 revenue mix.

3
 4 The AGSe and AGSd classes consist of customers formerly served by NPDI and HCHI. Hydro One
 5 proposes to use a blended fixed-to-variable split, which is a revenue weighted average of the
 6 two ratios approved by the OEB in NPDI and HCHI’s last cost-of-service distribution rate
 7 applications. The fixed-to-variable split for AGSe and AGSd will remain unchanged over the
 8 2023 to 2027 period to provide stability in customer rates and revenue mix.

9
 10 Table 7 below summarizes the current and proposed fixed and volumetric revenue split.

11
 12 **Table 7 - Current and Proposed Fixed and Volumetric Revenue Split – 2021 to 2027**

Rate Class	2021 (Current)		2022 (Estimated)		2023 Proposed		2024-2027 Proposed

13
 14

15 **3.0 TRANSFORMER OWNERSHIP ALLOWANCE**

16 There are circumstances under which Hydro One does not supply customers with
 17 transformation equipment, but rather the customer provides their own equipment. This usually
 18 occurs when the customer has unique consumption characteristics that require the use of

Witness: LI Clement

1 special equipment not normally provided by Hydro One. Since the rates developed for most
2 customer classes assume that Hydro One provides transformation to the customer, customers in
3 classes that provide their own transformation are entitled to receive a credit equivalent to the
4 costs of transformation included in their rates.

5

6 The transformation allowance has been set on a generic basis for LDCs throughout the province.
7 Hydro One is proposing to maintain the currently approved Transformer Ownership Allowance
8 at the established rate of \$0.60/kW. This is the same rate that currently applies to demand
9 customers of the Acquired Utilities that own their own transformation. The Acquired Utilities
10 take the same approach to transformer cost allowance and therefore no change is required in
11 2023 as a result of rate harmonization. Some customers that provide their own transformation
12 may be energy billed, therefore, in order to be able to provide these customers with a
13 Transformer Ownership Allowance, an equivalent 0.0014 \$/kWh rate previously approved by
14 the OEB will be maintained.

15

16 The projected cost of the Customer Supplied Transformer Allowance (CSTA) credit results in the
17 rate adders shown in Table 8, which are included in the volumetric rates shown on the proposed
18 rates in Exhibit L-07-02 for the GSd, UGd, AUGd, AGSd, and DGen rate classes.

19

20

Table 8 - CSTA Rate Adders

Year	CSTA Credit Amount to be Recovered (\$)	Rate Adder for CSTA (\$/kW)
2023	1,364,741	0.1291
2024	1,367,633	0.1292
2025	1,370,820	0.1293
2026	1,373,669	0.1295
2027	1,376,187	0.1296

1 **4.0 HOPPER FOUNDRY RATE ADJUSTMENT**

2 In accordance with the OEB's Decision in Hydro One's cost-of-service application EB-2007-0681,
3 Hydro One continues to levy the General Service Demand rates applicable to Hopper Foundry
4 using monthly kW billing determinants determined on a time-of-use basis. As a result of using
5 this approach, Hydro One will collect less revenue from Hopper Foundry in each year of the
6 Custom IR period. The lost revenue amounts and associated adder to be included in the
7 volumetric rates for the GSd class are provided in Table 9, which are included in the volumetric
8 rates shown on the proposed rates calculated in Exhibit L-07-02.

9
10 **Table 9 - Hopper Foundry Rate Adders**

Year	Lost Revenue Amount (\$)	Hopper Foundry Rate Adder (\$/kW)
2023	86,316	0.0122
2024	90,193	0.0128
2025	93,751	0.0132
2026	98,543	0.0139
2027	102,614	0.0145

11
12 **5.0 CALCULATION OF SUB-TRANSMISSION (ST) RATES**

13 **5.1 INTRODUCTION**

14 The proposed 2023 ST charges for the use of Hydro One-owned metering facilities, Common ST
15 lines, High Voltage Distribution Stations (HVDS), Low Voltage Distribution Stations (LVDS) and
16 Specific ST Line, were derived using the results of the 2023 CAM. The proposed ST charges for
17 2024-2027 reflect the changes in revenue requirement and load forecast in each respective rate
18 year. The methodology used in this application for the allocation of costs to the ST rate class, as
19 well as for the design of the existing ST rates has not changed from the methodology that was
20 approved by the OEB in Hydro One's 2018-2022 Distribution Rate Application (EB-2017-0049).
21 Hydro One has had approved ST rates, which are applicable to its larger customers and to all
22 embedded distributors, since 2008. As such, embedded distributors have had the opportunity

Witness: LI Clement

1 to review the cost allocation and rate design of the rates applicable to them as part of the
2 regulatory approval process for Hydro One’s previous rate applications.

3

4 The customers supplied from multiple feeders connected to the same Transmission Station (TS)
5 or HVDS are billed the HVDS and Common ST line charges based on their aggregated billing
6 demand. The use of aggregated billing demand for these charges was most recently reviewed
7 and approved in Hydro One’s 2018 to 2022 distribution rate application (EB-2017-0049).

8

9 As indicated in Exhibit L-01-02, Section 1.1, Hydro One proposes to remove the requirement for
10 ST customers to own their local transformation, effective January 1st, 2023. This new option
11 responds to customer feedback and preference for having the utility be responsible for all
12 elements of its distribution connection. Under this proposal, while ST customers will continue
13 to be fully responsible for the costs of the local transformation, they will be offered an option to
14 connect to Hydro One owned local transformation. Customers who choose this new option will
15 be subject to a fixed monthly “local transformation charge” and a one-time transformation
16 capital contribution. The derivation of this new charge does not affect the methodology used to
17 establish the existing ST rates. Details on this new charge are provided in Section 5.2.7 below.

18

19 As previously reviewed and approved by the OEB in Hydro One’s most recent distribution rate
20 application, ST customers with load displacement generation above 1 MW, or 2 MW for
21 renewable generation, installed after October 1998, are billed volumetric charges on a gross
22 load basis.

23

24 **5.2 DERIVATION OF ST RATES**

25 This Application uses the same methodology previously reviewed and approved by the OEB
26 since Hydro One’s 2008 distribution rate application to determine the proposed ST charges.
27 Table 10 shows the proposed 2023 ST charges and the estimated 2024-2027 ST charges. Details
28 of the derivation of the proposed ST Charges are provided as Attachment 4 to this exhibit.

1

Table 10 - Current and Proposed Monthly ST Charges

Charge Description	Unit	Current	Estimate	Proposed				
		2021	2022	2023	2024	2025	2026	2027
Service Charge	\$	582.74	607.11	771.22	803.08	831.69	870.86	941.42
Meter Charge	\$	729.56	762.69	391.31	407.45	421.97	441.84	477.64
ST Common Line	\$/kW	1.5335	1.6077	1.4638	1.5349	1.6005	1.6886	1.8426
HVDS-high	\$/kW	2.1154	2.2969	2.6926	2.6926	2.6926	2.6926	2.6926
HVDS-low	\$/kW	3.7825	3.9857	4.5298	4.6110	4.6859	4.7862	4.9622
LVDS-low	\$/kW	1.6671	1.6888	1.8372	1.9184	1.9933	2.0936	2.2696
Specific ST lines	\$/kM	626.0882	626.0882	476.8722	499.8863	521.2132	549.1965	597.2611

2

3 **5.2.1 FIXED SERVICE CHARGE AND METER CHARGE**

4 As discussed in Section 2.3.2, Hydro One proposes to maintain the same fixed-to-variable
 5 revenue split by class for all non-residential rate classes, which includes the ST rate class. As
 6 such, the fixed-to-variable split for the ST rate class will remain unchanged over the 2023 to
 7 2027 period to provide stability in customer rates and revenue mix.

8

9 The ST fixed revenue requirement includes costs related to metering facilities owned by Hydro
 10 One. In recognition of the customers in the ST group that provide their own metering facilities,
 11 the fixed service charge is set to recover the fixed revenue requirement, adjusted to exclude
 12 meter costs allocated to the ST rate class in the 2023 CAM. The monthly fixed service charge is
 13 applied to each ST delivery point that uses Common ST lines or HVDS facilities. The costs for
 14 metering are then recovered through a fixed Meter Charge per metering facility, which is
 15 applicable to customers for whom Hydro One provides metering facilities. The 2023 Meter
 16 Charge reflects the updated installed costs for metering facilities in the 2023 CAM for the ST rate
 17 class, which more accurately represent the range of ST customer connections.

18

19 For rate years 2024 to 2027, the revenue requirement increases to the ST class are determined
 20 using the methodology described in Section 2.1. The fixed charge revenue requirement is
 21 determined by applying the same fixed-to-variable revenue split, and then divided between the

Witness: LI Clement

1 fixed service charge and the meter charge using the same proportion as in 2023. The fixed
2 service charge and meter charge in 2024 is determined by dividing the 2024 corresponding
3 revenue requirement by the associated 2024 charge determinants. The same approach is used
4 for determining the fixed service charges for the remaining years of the Custom IR period.

5 6 **5.2.2 COMMON ST LINE RATE**

7 The CAM and rate design process applied to all rate classes is used to determine the total rates
8 revenue requirement to be collected from the ST rate class. The amount that is not recovered
9 through the ST fixed service, meter, HVDS-high, HVDS-low, LVDS-low and Specific ST Line
10 charges is recovered through the Common ST Line charge. The Common ST Line charge is a
11 volumetric charge, the derivation of which is detailed in Attachment 4.

12
13 The Common ST Line rate will be adjusted to reflect changes to the HVDS-high charge, as a part
14 of Hydro One's expected annual applications from 2024 for 2027. The HVDS-high charge is
15 described in Section 5.2.3.

16 17 **5.2.3 HVDS-HIGH RATE**

18 Customers in the ST class can obtain transformation from above 50 kV to a voltage between 44
19 kV and 13.8 kV either through the use of a High Voltage Distribution Station, referred to as an
20 "HVDS-high" station, or a TS owned by Hydro One Transmission. Customers that obtain supply
21 through a TS are charged Retail Transmission Service Rate (RTSR) – Transformation. Therefore,
22 for consistency purposes, the HVDS-high rate is set equivalent to the RTSR – Transformation rate
23 adjusted for losses. HVDS-high is a volumetric charge.

24
25 The HVDS-high charge will be adjusted to reflect updates to the RTSR-Transformation charge, as
26 a part of Hydro One's expected annual applications from 2024 for 2027. The RTSR-
27 Transformation charge is described in Section 8.4.

1 **5.2.4 HVDS-LOW RATE**

2 A High Voltage Distribution Station that transforms power from above 50 kV to under 13.8 kV, is
3 referred to as an “HVDS-low” station. Consistent with the current rate structure, the HVDS-low
4 rate is set to be the sum of the HVDS-high rate and LVDS-low rate (discussed in next section).
5 This ensures that the rate for transformation from above 50 kV to below 13.8 kV is equivalent
6 for all delivery points, regardless of the type of upstream transformation facilities used. HVDS-
7 low is a volumetric charge.

8
9 The HVDS-low rate will be adjusted to reflect changes to the HVDS-high charge, as a part of
10 Hydro One’s expected annual applications from 2024 for 2027. The HVDS-high charge is
11 described in Section 5.2.3.

12
13 **5.2.5 LVDS-LOW RATE**

14 A Low Voltage Distribution Station, referred to as an “LVDS-low” station, transforms power from
15 above (or at) 13.8 kV to under 13.8 kV. The rate is set to recover the LVDS-low portion of the
16 costs attributable to distribution stations that are allocated to the ST rate class. The ST LVDS-
17 low portion of the distribution stations costs is based on the gross book value of assets
18 associated with providing ST service from LVDS-low stations as a share of the total LVDS station
19 assets. LVDS-low is a volumetric charge. Consistent with the approach previously approved by
20 the OEB, the output from the 2023 CAM is used to derive 2023 LVDS-low rates. The annual
21 increases in revenue requirement for the ST class in in the Custom IR period are applied to the
22 LVDS-low rates in those years. Details of the derivation of the LVDS-low rate are provided in
23 Attachment 4.

24
25 The LVDS-low rate will be adjusted to reflect changes to the HVDS-high charge, as a part of
26 Hydro One’s expected annual applications from 2024 for 2027.⁶ The HVDS-high charge is
27 described in Section 5.2.3.

⁶ See Exhibit A, Tab 4, Schedule 3

1 **5.2.6 SPECIFIC ST LINE RATE**

2 An ST line section between 44 kV and 13.8 kV is “specific” if it supplies only one LDC and is
3 within that LDC’s territory. The Specific ST line rate is set to the average per kilometer cost for
4 all ST lines on Hydro One’s distribution system.

5
6 The annual increases in revenue requirement for the ST class from 2023 to 2027 are reflected in
7 the increases in Specific ST Line Rates for those years.

8
9 The Specific ST line rate is applied to the length of the specific line section (km) rather than to
10 demand (kW). Details of the derivation of the Specific ST Line rate are provided in Attachment
11 4.

12

13 **5.2.7 ST LOCAL TRANSFORMATION CHARGE**

14 Currently, ST customers are required to purchase, install and maintain their local
15 transformation. In this Application, Hydro One proposes to revise this requirement and offer a
16 new local transformer option. This new option responds to customer feedback and preference
17 for having the utility be responsible for all elements of its distribution connection. It is also
18 consistent with other distributors’ local transformation options for connecting large customers.
19 Under this proposal, all ST customers will continue to be responsible for the costs associated
20 with their local transformation. However, they will have the choice to either continue to use
21 their own local transformation, or to have Hydro One provide the local transformer.⁷ ST
22 customers who choose to use Hydro One owned transformers will be subject to a fixed monthly
23 “local transformation charge” of \$200, and a one-time local transformation capital contribution
24 at the time the customer connects or requests an upgrade, as described in Section 5.2.7.1.

⁷ Hydro One plans to offer transformers with capacity up to 3MVA

1 **5.2.7.1 DERIVATION OF MONTHLY LOCAL TRANSFORMATION CHARGE**

2 The monthly fixed charge recovers the installed capital cost of a 501 kVA overhead transformer,
3 which represents the maximum overhead transformer type/size included in the basic
4 connection for general service customers.⁸ To ensure consistent treatment, the basic
5 connection currently built into the distribution rates for non-ST general service customers will
6 also apply to ST class customers that elect to have Hydro One own their local transformation.
7 The incremental costs associated with installing local transformation in excess of 501 kVA
8 overhead transformer are not included in the derivation of the monthly local transformation
9 charge, but rather will be collected through a capital contribution.⁹

10

11 In addition to the installed capital costs described above, the calculation of the transformation
12 charge also includes the costs associated with keeping spare transformers for ST customers, the
13 costs associated with replacing failed transformers and the cost associated with the on-going
14 visual inspection of these ST transformers.

15

16 A forecast of the costs described above based on the estimated number of ST customers that
17 will opt to connect to Hydro One owned transformers over the 2023 to 2027 period results in a
18 proposed Local Transformation Charge of \$200 per customer per month. The derivation of the
19 Local Transformation Charge is shown in Table 11 below.

⁸ As per Hydro One's Conditions of Service, issued March 1, 2019, section 2.1 part G, page 22 of 102.

⁹ The capital contribution amount will depend on the size and the configuration of the local transformer required.

Witness: LI Clement

1 **Table 11 - Derivation of the Monthly Local Transformation Charge**

	2023	2024	2025	2026	2027	2028	2029	2030	2031	2032
Estimated Annual Costs with Overhead applied¹ (in 1,000s)	\$336	\$358	\$164	\$185	\$182	\$205	\$213	\$212	\$222	\$251

Estimated Revenue Requirement (2023 to 2032)	[a]	\$1.2 M
Average number of ST customers with Hydro One Local Transformers (2023 to 2032)	[b]	51
Estimated Monthly Local Transformation Charge per customer	$[c] = [a]/10/[b]/12$	\$200

2 **Note 1: Includes installed capital costs, spare transformers costs, costs associated with replacing*
 3 *failed transformers and the cost associated with the on-going visual inspection of these ST transformers.*

4

5 **5.2.7.2 REVENUE FROM THE FIXED MONTHLY LOCAL TRANSFORMATION CHARGE**

6 Since the establishment of the ST rate class in 2008, ST customers have owned and maintained
 7 their local transformers. As such, costs associated with local transformers have not been
 8 allocated to the ST rate class in Hydro One’s CAM. In this Application, Hydro One proposes to
 9 continue to not allocate any costs associated with local transformers to the ST rate class in its
 10 CAM. The additional costs of supplying local transformation to ST customers will be fully
 11 recovered by the revenue from the monthly local transformation charge and the transformer
 12 capital contribution, if applicable. For the purposes of cost allocation, the revenue from this
 13 new charge will be recorded as a revenue off-set in USofA Account 4220 – “Other Electric
 14 Revenue”. This revenue off-set has been allocated to all non-ST rates classes in the 2023 CAM
 15 to ensure that the incremental costs of supplying local transformation to ST customers are not
 16 borne by non-ST customers.¹⁰

¹⁰ See 2023 CAM, Tab “E2 Allocators”, Row 137 for the allocator used for USofA 4220.

Witness: LI Clement

1 **5.2.7.3 ONE-TIME LOCAL TRANSFORMATION CAPITAL CONTRIBUTION (AT CONNECTION**
2 **OR UPGRADE)**

3 ST customers who choose to use Hydro One owned transformers in excess of 501 kVA will be
4 subject to a one-time (at connection or upgrade) capital contribution, in addition to the on-
5 going monthly local transformation charge. As discussed in the section 5.2.7.1 above, the on-
6 going monthly local transformation charge only covers the capital and installation costs of a 501
7 kVA overhead transformer. When a pad-mounted transformer or a transformer with capacity
8 over 501 kVA is requested, the ST customer will receive a credit equal to a 501 kVA overhead
9 transformer and will need to pay the incremental equipment and installation costs as capital
10 contribution.

11
12 **5.2.7.4 IMPLEMENTATION OF ST LOCAL TRANSFORMATION CHARGES**

13 Hydro One proposes to implement the new local transformer option for the ST rate class
14 effective January 1, 2023.

15
16 Current non-ST customers that are connected to Hydro One owned local transformation, and
17 meet all of the ST class requirements, will be reclassified as ST customers. These customers will
18 be subject to the monthly fixed local transformation charge of \$200, and are not subject to the
19 one-time local transformation capital contribution.

20
21 Current ST customers will have the option to sell their existing local transformers to Hydro One.
22 At a customer's request, Hydro One will assess the customer's transformer, and offer to
23 purchase for those that meet Hydro One's standards. These customers will be subject to the
24 monthly fixed local transformation charge of \$200.

25
26 New customers that meet the ST rate class requirements, and elect to connect to Hydro One
27 owned local transformation, will be subject to the monthly fixed local transformation charge of
28 \$200 and the one-time local transformation capital contribution.

Witness: LI Clement

1 **6.0 REVENUE RECONCILIATION**

2 A reconciliation of the revenue at proposed rates and the revenue requirements by rate class, as
3 per Chapter 2, section 2.8.11 of the OEB's Filing Requirements, is provided in Attachment 3.

4

5 **7.0 BILLING DETERMINANTS**

6 Hydro One is not proposing any changes to the type of billing determinants currently approved
7 for its existing Hydro One customer classes. Customers will continue to be billed a monthly fixed
8 charge and a kWh or kW volumetric charge. For the Streetlight, Sentinel light and Unmetered
9 Scattered Load classes, customers will continue to be charged a monthly per account service
10 charge and a volumetric charge based on estimated kWh.

11

12 As discussed in Section 2.0 of Exhibit L-01-02, Hydro One proposes that customers from the
13 Acquired Utilities currently in the Street Lighting and Sentinel Lighting classes be merged into
14 the equivalent Hydro One rate classes in 2023. While the current OEB-approved distribution
15 volumetric charges for customers in these classes from the Acquired Utilities are based on kW
16 consumption, Hydro One proposes that customers from the Acquired Utilities adopt the Hydro
17 One convention in 2023 when they are merged into the equivalent Hydro One rate classes. The
18 existing kWh consumption from these acquired Street Lights and Sentinel Lights customers will
19 be used as the billing determinants.

20

21 **8.0 RETAIL TRANSMISSION SERVICE RATES**

22 **8.1 INTRODUCTION**

23 The proposed Retail Transmission Service Rates (RTSRs) in this application reflect the existing
24 Uniform Transmission Rates (UTR) effective January 1, 2021, which were approved by the OEB in
25 EB-2020-0251. As new UTRs are approved over the Custom IR period, Hydro One will update
26 the proposed RTSRs to reflect the new UTRs as a part of its annual applications. Changes to the
27 UTRs will also affect some ST rates, as discussed in section 5.2.

1 Aggregation of customer load across multiple feeders emanating from the same transformer
2 station for purposes of billing RTSR charges was approved by the OEB in EB-2004-0451 and
3 subsequent distribution rate applications, most recently in EB-2017-0049. Hydro One proposes
4 to continue to bill eligible customers for RTSR charges based on aggregate demand from the
5 same transformer station.

6 7 **8.2 APPROVED TRANSMISSION RATES**

8 The UTRs approved in EB-2020-0251 are effective as of January 1, 2021, and comprise the
9 following charges:

- 10 • A Transmission Network charge of \$4.67/kW to be applied to the demand at each
11 transmission delivery point based on billed demand which is defined to be the larger of:
12 a) 85% of non-coincident peak from 7 a.m. to 7 p.m. IESO business days; and b) the peak
13 coincident with the transmission system peak.
- 14 • Line and Transformation Connection charges of \$0.77/kW and \$2.53/kW, respectively,
15 which are applied to the non-coincident peak at each transmission delivery point.

16
17 These rates apply to the load at the transmission delivery point, which is defined as the high
18 voltage side of the transmission station transformer. Since metering is typically on the low
19 voltage side of a transmission station, appropriate loss factors have been applied to adjust the
20 meter readings to the high voltage side of the transformer.

21 22 **8.3 RTSR CALCULATION METHODOLOGY**

23 The IESO charges Hydro One the applicable UTRs at each of its transmission delivery points for
24 wholesale transmission line connection, transformation connection and network charges.
25 Hydro One applies RTSRs to its distribution rate classes to recover the IESO-levied transmission
26 charges.

27
28 The total IESO transmission charges are allocated to each of the distribution rate classes in
29 proportion to their coincident demand to Hydro One's network and connection peaks at the

Witness: LI Clement

1 transmission delivery points. Hydro One does not use the OEB’s RTSR Workform approach for
2 establishing its RTSR. Rather, Hydro One proposes to continue to use the coincident demand to
3 establish RTSRs, in accordance with the methodology that has been reviewed and approved by
4 the OEB for Hydro One’s distribution rate filings since 2008. The use of Hydro One’s RTSR
5 methodology is important to ensure that ST customers, which include all embedded LDCs
6 supplying their own customers’ load, pay an appropriate share of transmission charges levied to
7 Hydro One. This methodology is described further below.

8

9 **8.3.1 2023 TRANSMISSION CHARGES FROM THE IESO**

10 To estimate the transmission charges from the IESO, the currently approved Transmission rates
11 provided in section 8.2 are applied to the 2023 forecast charge determinants at each of Hydro
12 One Distribution’s transmission delivery points. The resulting Network, Transformation
13 Connection and Line Connections charges in 2023 are shown as the “IESO Bill” in Table 12.

14

15 **8.3.2 ALLOCATING TRANSMISSION CHARGES TO RATE CLASSES**

16 The estimated 2023 transmission charges from the IESO are recovered from all Hydro One
17 distribution customers. Hydro One allocates these transmission charges to all rate classes using
18 a two-step approach.

19 1) ST rate class – There is good connectivity and hourly load forecast information for this
20 group of customers. As such Hydro One uses this hourly data to determine the total ST
21 customers’ load that is coincident with the IESO’s monthly billing peaks for their
22 transmission delivery points. This information is then used to establish the ST rate class’
23 contribution to the transmission charge determinants, and their share of the
24 transmission charges. In 2023, 39% of the transmission charges have been allocated to
25 the ST class.

26 2) Non-ST rate classes - The remaining 61% of the transmission charges is allocated among
27 the other rate classes in proportion to their coincident demand to the transmission
28 charge determinants, based on the 2023 forecast hourly rate class load shapes.

1 The methodology proposed in this Application has not changed from what was approved by the
 2 OEB in the Decision in EB-2017-0049.

3

4 For the 2024 to 2027 rate years, the transmission charges will be adjusted to incorporate
 5 updates to approved UTRs as a part of the annual applications described in Exhibit A-04-02. The
 6 adjusted transmission charges will be allocated to all rate classes using the 2023 percentages.

7

8 Table 12 shows the estimated 2023 IESO charges, based on the UTR effective January 1, 2021,
 9 allocated to the customer classes.

10

11

Table 12 - Forecast 2023 IESO Transmission Charges by Rate Class

	Transmission Network	Transmission Line	Transmission Transformation	Total IESO Bill	Share
IESO Bill	\$299,208,560	\$45,012,783	\$166,095,270	\$510,316,613

Witness: LI Clement

1 **8.4 PROPOSED 2023 TO 2027 RTSR**

2 The transmission charges allocated to each rate class shown in Table 12 are divided by the
 3 corresponding charge determinants for each rate class. For the purpose of calculating RTSRs for
 4 rate classes other than ST, the line and transformation UTR charges are combined and collected
 5 through a single RTSR. The resulting proposed 2023 RTSRs, as well as the currently approved
 6 2021 RTSRs and estimated 2022 RTSRs for Hydro One’s current and acquired rate classes are
 7 shown in Tables 13, 14, 15 and 16.

8
 9 Customers in Hydro One’s energy-billed rate classes are charged RTSRs on metered
 10 consumption uplifted for losses, and demand-billed customers will be charged the rates shown,
 11 uplifted for losses. For customers that installed load displacement generation after October
 12 1998, the RTSR connection rates are applied to gross demand consistent with section 11.3.2.5 of
 13 the Distribution Rate Handbook.

14
 15

1 **BENEFITS OF CONSOLIDATION**

2
3 **1.0 INTRODUCTION AND BACKGROUND**

4 In Exhibit L-01-02, Hydro One describes its proposal to place customers formerly served by
5 Norfolk, Haldimand and Woodstock local distribution companies (the Acquired Utilities) into
6 new rate classes. Exhibit L-01-03 describes Hydro One's proposed cost allocation approach to
7 appropriately reflect the costs of serving these acquired customers. In Exhibit L-02-1, Hydro
8 One discusses its proposed approach for setting the rates for these acquired customers under
9 the new rate structure.

10
11 This exhibit describes the benefits of Hydro One's proposal to integrate the customers of the
12 Acquired Utilities into Hydro One's distribution rate structure (Rate Harmonization Proposal).
13 The benefits to both the customers of the Acquired Utilities and Hydro One's legacy customers
14 are discussed.

15
16 Section 7 of this exhibit also provides information on the actual OM&A and capital savings
17 achieved for each of the Acquired Utilities over the 5-year deferral period approved in the
18 respective MAAD applications.

19
20 **2.0 DETERMINING THE BENEFITS FOR ACQUIRED AND LEGACY CUSTOMERS**

21 As discussed in Exhibit L-01-02, Hydro One proposes to create two new sets of acquired rate
22 classes into which residential and general service customers of the Acquired Utilities will be
23 placed. The introduction of new rate classes allows Hydro One to appropriately capture the
24 costs specifically associated with serving the Acquired Utilities' customers and set rates that will
25 reflect the cost to serve them. As described in Exhibit L-01-03, Hydro One proposes to use direct
26 allocation factors, which are based on the amount of fixed assets required to serve these new
27 acquired customers, to align the costs allocated by the OEB cost allocation model with the costs
28 required to serve these acquired customers. The resulting rates for these acquired rate classes
29 are discussed in Exhibit L-02-01.

Witness: LI Clement

1 To demonstrate the benefits of Hydro One’s Rate Harmonization Proposal for both the
2 customers of the Acquired Utilities (the acquired customers) and legacy customers, this exhibit
3 describes the extent to which the total costs to be collected from acquired customers falls
4 within defined “goal posts”, as described below.

5

6 The “goal post” approach was found to be of assistance by the OEB in Hydro One’s MAAD
7 applications to purchase Orillia Power Distribution Corporation (EB-2018-0270) and
8 Peterborough Distribution Inc. (EB-2018-0242). This approach is used in the present Application
9 to demonstrate how the total revenue to be collected from acquired customers as a result of
10 Hydro One’s Rate Harmonization Proposal compares to: (a) the total revenue that would
11 otherwise have been collected from the Acquired Utilities customers in the absence of the
12 transactions; and (b) the incremental revenue requirement Hydro One incurs in serving the
13 Acquired Utilities customers. To perform this assessment, Hydro One therefore calculated (a)
14 the 2023 estimated revenue requirement for the Acquired Utilities in the circumstances where
15 the distribution system continued to be owned by the local distribution company (i.e. the
16 “upper goal post”); and (b) the incremental increase in Hydro One’s revenue requirement as a
17 result of harmonizing the Acquired Utilities into Hydro One (i.e. the “lower goal post”).¹

18

19 If the revenue to be collected from the acquired customers falls between the goal posts, this
20 indicates that there will be a benefit to both the acquired and legacy customers. The extent to
21 which revenues to be collected from the acquired customers exceed the lower goal post
22 represents a benefit to legacy customers by virtue of the fact that some of the revenue
23 requirement that legacy customers would otherwise have to pay is now being collected from
24 the acquired customers. The extent to which revenues to be collected from the acquired
25 customers come in below the upper goal post represents a benefit to the acquired customers by

¹ LV costs will also need to be included in calculating both the lower and upper goal posts to reflect that these are costs that would have been otherwise collected from the acquired customers.

1 virtue of the fact that they are paying less than they would have otherwise paid had they not
2 been acquired by Hydro One.

3
4 **3.0 CALCULATING THE UPPER GOAL POST**

5 In order to demonstrate the benefits of the Rate Harmonization Proposal it is necessary to
6 estimate what the revenue requirement for the Acquired Utilities would have been in 2023, had
7 they not been acquired.

8
9 Prior to being acquired by Hydro One in 2014 and 2015, the last rebasing of rates for the
10 Acquired Utilities were 2012 for Norfolk, 2014 for Haldimand and 2011 for Woodstock. Hydro
11 One's MAAD applications for these acquisitions were approved under the OEB's Report of the
12 Board – Rate-Making Associated with Distributor Consolidation, July 23, 2007, which allowed 5-
13 year deferred rebasing periods. Therefore, a status quo forecast of OM&A and capital spending
14 was provided by each of the previous LDCs for five years only – that is, by Norfolk for the years
15 2014-2018, and by each of Haldimand and Woodstock for the years 2015-2019. To calculate the
16 upper goal post, Hydro One has used the following three step approach.

- 17
- 18 • Step 1 – starting with each acquired utility's last approved cost of service rate base,
19 update actual capital additions incurred by each utility to determine a starting rate base
20 at the acquisition date.
 - 21 • Step 2 – calculate each acquired utility's rate base (see Attachment 1) and revenue
22 requirement (see Attachment 2) at the end of the OEB-approved deferred rebasing
23 period using the 5-year status quo forecast provided in the MAAD application for each
24 acquired utility.
 - 25 • Step 3 - calculate an estimated revenue requirement for 2023, being the year of rate
26 integration, by applying a compound annual growth rate (CAGR) to the status quo
27 revenue requirement calculated in Step 2 (described below). This serves as a proxy for
28 what each acquired utility's revenue requirement would have been in absence of the
29 consolidation transaction, in other words, the upper goal post.

Witness: LI Clement

1 **3.1 CALCULATION OF CAGR**

2 As noted above, each of the Acquired Utilities provided Hydro One with a status quo forecast for
3 the five-year period following the anticipated date of acquisition by Hydro One. Therefore, to
4 bridge the status quo revenue requirement calculated at the end of the 2018 or 2019 deferral
5 period (Step 2) and to determine the upper goal post in 2023 (Step 3), Hydro One calculated the
6 average CAGR of all approved distributor revenue requirement applications reviewed by the
7 OEB over the last 5 years (2016-2020), and applied that five-year average CAGR to each
8 Acquired Utility's calculated status quo revenue requirement.² The CAGR was applied to
9 Norfolk's 2018 calculated status quo revenue requirement and to each of Haldimand's and
10 Woodstock's 2019 calculated status quo revenue requirement to calculate each utility's 2023
11 status quo revenue requirement. Detailed CAGR calculations are provided in Attachment 3. The
12 CAGR methodology was introduced by OEB Staff³ and discussed in both the PDI and OPDC
13 MAADs applications, and was of assistance to the OEB panel in those proceedings in evaluating
14 the benefits of the proposed acquisitions.⁴ It was used to help illustrate that the status quo
15 OM&A and capital forecasts provided by each utility and the resulting forecast revenue
16 requirements were reasonable, compared to revenue requirements that the OEB had approved
17 for other distributors over a 5-year IRM period.

18
19 **3.2 RESULTS OF THREE-STEP APPROACH**

20 Table 1 shows how Hydro One has determined the estimated 2023 revenue requirements for
21 Norfolk, Haldimand and Woodstock under a status quo scenario, individually and an on a
22 combined basis, using the methodology described above.

² Hydro One notes that the use of estimating a utility's revenue requirement using the CAGR methodology is not a replacement for a utility's own forecast, if available. A utility is in the best position to determine both its short- and long-term asset needs. In the case of these three acquired utilities, Hydro One did not receive a long-term forecast (either in the form of an OM&A or capital forecast or through a DSP) at the time of acquisition. Therefore, the use of the CAGR methodology to determine what their status quo forecast would have been has been used as a proxy for that information.

As embedded distribution customers of Hydro One, NPDI and HCHI would also have had to pay Hydro One Sub-Transmission charges, which would then have been recovered via LV charges on their customers' monthly bills. The LV charge reflects Hydro One's upstream distribution cost to serve embedded utilities. Therefore, LV charges are not part of an embedded utility's forecast revenue requirement, as set out in Table 1 above, however they do represent a real cost paid by their customers. The estimated 2023 LV charges for NPDI and HCHI were derived by applying

Witness: LI Clement

1 Hydro One's proposed 2023 Sub-Transmission charges to NPDI and HCHI load in 2012⁵ and
2 2014,⁶ respectively. This amount was then adjusted to account for the change in load between
3 2012 and 2023 for NPDI and between 2014 and 2023 for HCHI. The resulting estimated LV
4 charges are shown in Table 2.⁷

5

6

Table 2 - Estimated 2023 LV Charges

	2023 Estimate
Norfolk	\$455,629
Haldimand	\$429,938
Total	\$885,567

7

8 To determine the total cost to serve the customers of the Acquired Utilities had they not been
9 acquired, the estimated 2023 revenue requirements and the LV charges (if applicable) must be
10 added together.⁸ Table 3 provides an estimate of the upper goal posts, which represents the
11 maximum revenue that could be collected from the customers of each Acquired Utility to
12 ensure that they are not harmed by the Hydro One's Rate Harmonization proposal. For the
13 purposes of the goal post comparison, the estimated revenue which would have been collected
14 from Norfolk and Haldimand customers is added together as it will be compared to the revenue
15 collected from the new acquired rate classes into which former Norfolk and Haldimand
16 customers are combined under Hydro One's Rate Harmonization proposal. Woodstock
17 customers will be transitioned to the new urban acquired rates classes.

⁵ 2012 is the date of NPDI's last rebasing rate application, where its current LV rate was set and approved by the OEB.

⁶ 2014 is the date of HCHI's last rebasing rate application, where its current LV rate was set and approved by the OEB.

⁷ All of Woodstock Hydro's load is directly served from the transmission system and therefore they do not pay ST charges or levy LV charges.

⁸ This is also necessary given that the Sub-Transmission costs are implicitly included in the costs allocated to the Acquired Utility customers as part of the cost allocation process described in Exhibit L-01-03.

1

Table 3 - Estimate of 2023 Upper Goal Post

	Norfolk and Haldimand	Woodstock⁵	TOTAL
2023 Estimated Revenue Requirement	\$31,988,844	\$9,294,535	\$41,283,379
2023 Estimated LV Charges	\$885,567	n/a	\$885,567
Total Estimated 2023 Cost to Serve	\$32,874,411	\$9,294,535	\$42,168,946

2

3 **4.0 CALCULATING THE LOWER GOAL POST**

4 As discussed in Section 2.0, the lower goal post refers to the incremental increase in Hydro
5 One's revenue requirement as a result of harmonizing the Acquired Utilities into Hydro One. As
6 per Exhibit D-01-01⁹, this additional revenue requirement is broken down as:

- 7 • Norfolk: \$9.8M
- 8 • Haldimand: \$ 13.1M
- 9 • Woodstock: \$7.0M

10

11 Table 4 shows the total estimated 2023 lower goal post figures, which also includes the
12 estimated 2023 LV costs previously shown in Table 2. This is necessary given that the LV charges
13 represent costs that would have been paid to Hydro One by the acquired customers, and
14 therefore would not have been borne by legacy customers if the Acquired Utilities had not been
15 acquired. Accordingly, the LV costs need to be included in determining the minimum amount of
16 revenue that will need to be recovered from the acquired customers in order to ensure that
17 legacy customers are not harmed by Hydro One's Rate Harmonization proposal.

⁹ See Exhibit D-1-1, footnote 4.

Witness: LI Clement

1

Table 4 - Estimate of 2023 Lower Goal Post

	Norfolk and Haldimand	Woodstock	Total
Incremental Revenue Requirement	\$22,972,156	\$7,014,125	\$29,986,281
2023 Estimated LV Charges	\$885,567	n/a	\$885,567
Lower Goal Post	\$23,857,724	\$7,014,125	\$30,871,849

2

3 **5.0 REVENUES TO BE COLLECTED FROM ACQUIRED UTILITY CUSTOMERS UNDER HYDRO ONE'S**
4 **HARMONIZATION PROPOSAL**

5 The revenues to be collected from the Acquired Utility customers is an outcome of the cost
6 allocation and rate design process described in Exhibits L-01-03 and L-02-01.

7

8 The revenues to be collected from the Acquired Utility customers in the new acquired classes
9 can be found in Exhibit L-02-01, Attachment 1, page 1, and are included in Table 5 below. In
10 order to fully capture the revenues paid by all acquired utility customers it is necessary to also
11 include the revenues from acquired customers that are merged into Hydro One's legacy classes
12 (e.g. USL, Streetlight, Sentinel light, ST). Based on consumption, demand and other billing
13 information, Hydro One is able to estimate the revenues associated with the acquired
14 customers that are being merged into existing Hydro One unmetered and large user rate
15 classes.¹⁰ These numbers are included in Table 5 below.

16

17 The total revenues to be collected from the Acquired Utility customers are summarized in Table
18 5.

¹⁰ As shown in L-01-02, Hydro One proposes that the small number of acquired customers currently in the Unmetered Scattered Load Service Class (USL), Street Lighting Service Class (Street Lights), Sentinel Lighting Service Class (Sentinel Lights) and Large User Class (Woodstock service area) be merged into the equivalent Hydro One rate classes starting in 2023.

1 **Table 5 - 2023 Revenues to be Collected from Acquired Utility Customers following Rate**
2 **Harmonization**

	Norfolk and Haldimand	Woodstock	Total
Revenues Collected from Customers in New Acquired Rate Classes	\$23,920,166	\$7,668,380	\$31,588,546
Revenues Collected from Acquired Customers moving to Hydro One's Legacy Rate Classes*	\$399,585	\$808,902	\$1,208,487
Total Revenues Collected from Acquired Customers	\$24,319,751	\$8,477,283	\$32,797,034

**Includes estimated cost charged to the acquired customers that will be moving to Hydro One's existing Street Light, Sentinel Light, Unmetered Scattered Load and Sub-Transmission rate classes.*

3

4 **6.0 CALCULATING THE BENEFITS TO ACQUIRED AND LEGACY CUSTOMERS**

5 The benefits to Hydro One legacy customers and customers of the Acquired Utilities can be
6 demonstrated by comparing how the revenues proposed to be collected from the acquired
7 customers compare to both the lower goal post (i.e. the minimum costs that need to be
8 collected from the acquired customers in order to cause no harm to Hydro One's legacy
9 customers) and the upper goal post (i.e. the maximum costs that can be collected from the
10 acquired customers without causing harm to the acquired customers). These comparisons are
11 summarized in Table 6.

1 **Table 6 - Hydro One Legacy and Acquired Customer Benefits under 2023 Rate Harmonization**

2

	Norfolk and Haldimand	Woodstock	Total
Upper Goal Post (Per Table 3)	\$32,874,411	\$9,294,535	\$42,168,946
Lower Goal Post (Per Table 4)	\$23,857,724	\$7,014,125	\$30,871,849
Proposed Revenues to be Collected from Acquired Customers (Per Table 5)	\$24,319,751	\$8,477,283	\$32,797,034
Total Benefits (Difference between upper and lower goal posts)	\$9,016,688	\$2,280,410	\$11,297,098
Benefits to Acquired Customers (Difference between upper goal post and revenues to be collected)	\$8,554,661	\$817,252	\$9,371,913
Benefits to Legacy Customers (Difference between revenues to be collected and lower goal post)	\$462,027	\$1,463,158	\$1,925,185

3

4 As described in the sections above and summarized in Table 6:

5

- 6 1. The total revenue to be collected from the acquired customers through proposed rates
7 is \$32.8M, with \$24.3M to be collected from former Norfolk and Haldimand customers,
8 and \$8.5M to be collected from former Woodstock customers.
- 9 2. The total incremental revenue requirement to serve the acquired customers is \$30.9M
10 (“lower goal post”), with \$23.9M associated with serving the former Norfolk and
11 Haldimand customers, and \$7.0M for serving the former Woodstock customers.
- 12 3. The total revenue that would otherwise have been collected from the acquired
13 customers, had they not been acquired by Hydro One, is \$42.2M (upper goal post), with
14 \$32.9M to be collected from the former Norfolk and Haldimand customers, and \$9.3M
15 to be collected the former Woodstock customers.

16

17 The results noted above demonstrate that the acquisition and rates harmonization of the three
18 Acquired Utilities has resulted in an overall reduction of \$11.3M (i.e. \$42.2-30.9) in the total
19 revenue requirement that would otherwise need to be collected from distribution customers
20 had the acquisitions not taken place.

Witness: LI Clement

1 The total revenue of \$32.8M to be collected from the acquired customers demonstrates that
2 acquired customers, as a group, benefit from the fact that they will pay \$9.4M (\$42.2 - \$32.8M)
3 less in revenue collected through their rates as compared to what they would otherwise have
4 been paying had they not been acquired. This represents a reduction of 22% ($\$9.4/\42.2) in the
5 average rates that acquired customers would otherwise have paid had they not been acquired.

6
7 Hydro One legacy customers benefit from the fact that \$1.9M (i.e. $\$32.8 - 30.9$) in revenues that
8 are over and above the incremental revenue requirement driven by the rate harmonization of
9 the Acquired Utilities will now be recovered from the acquired customers instead of Hydro One
10 legacy customers. This is the equivalent of a 0.1% reduction in the average rates that would
11 otherwise have been paid by legacy customers (i.e. $\$1.9\text{M}/2023$ Revenue Requirement of
12 \$1.5B).

13
14 In addition to the above assessment of benefits from a revenue requirement perspective, Hydro
15 One has considered the estimated bill impacts for acquired customers with and without the
16 acquisition. The estimated distribution rates and bill impacts for the acquired customers
17 assuming the acquisition had not taken place were determined by following the steps below:

- 18 • 2023 estimated status quo revenue requirement for the acquired utilities, as shown
19 in Table 3, were allocated to their Residential, GS<50kW and GS>50kW rate classes
20 based on the allocation proposed for 2023 rate year;¹¹
- 21 • Total revenue for the rate class is then divided between revenue from fixed and
22 volumetric rates using the current fixed/variable split;
- 23 • 2023 load forecast for each acquired utility is then used to derive the estimated
24 2023 distribution rates as shown in Table 7 below.

¹¹ The reason for using proposed allocation, rather than the utilities' last approved allocation, is that 2023 allocation more accurately reflects the current customer composition.

Witness: LI Clement

1 **Table 7 - 2023 Distribution Charges Under Status Quo and Proposed Harmonization Plan**

Service Area	Rate Class	2023 Escalated Charges_Status Quo		2023 Proposed Charges	
		Fixed Charge (\$/month)	Volumetric Charge (\$/kWh or \$/kW)	Fixed Charge (\$/month)	Volumetric Charge (\$/kWh or \$/kW)
Norfolk	Residential	\$49.29	\$0.0000	\$35.94	\$0.0000
	GS < 50kW	\$60.61	\$0.0189	\$37.65	\$0.0171
	GS 50-4,999 kW*	\$318.56	\$4.7781	\$171.20	\$3.9595
Haldimand	Residential	\$47.97	\$0.0000	\$35.94	\$0.0000
	GS < 50kW	\$40.02	\$0.0281	\$37.65	\$0.0171
	GS 50-4,999 kW*	\$136.66	\$5.9808	\$171.20	\$3.9595
Woodstock	Residential	\$32.45	\$0.0000	\$29.59	\$0.0000
	GS < 50kW	\$27.80	\$0.0161	\$25.36	\$0.0147
	GS 50-999 kW*	\$165.38	\$2.5488	\$150.84	\$2.3247

2 * Volumetric rates for the demand-billed rate classes differ from those shown in Exhibit L-2-1 because the rates in this table are excluding rate adders for transformer allowance.

3 The distribution charges and total bills for acquired customers with and without the acquisition
 4 are summarized in Table 8.

5
 6 **Table 8 - Comparison of 2023 Distribution Charges and Total Bills for the Acquired**
 7 **Customers under Status Quo and Hydro One's Proposed Harmonization Plan**

Service Area	Rate Class	Monthly Consumption (kWh/kW)	2023 Escalated Charges_No Acquisition		2023 Proposed Charges_with Acquisition		2023 Proposed Charges vs 2023 Escalated Charges	
			DX Bill (\$)	Total Bill (\$)	DX Bill (\$)	Total Bill (\$)	Dx Bill (%)	Total Bill (%)
Norfolk	Residential	750	\$54.91	\$136.90	\$41.47	\$128.32	-24.5%	-6.3%
	GS < 50kW	2,000	\$112.25	\$330.12	\$85.66	\$311.52	-23.7%	-5.6%
	GS 50-4,999 kW	70,294/181	\$1,238.60	\$12,518.95	\$887.87	\$12,185.56	-28.3%	-2.7%
Haldimand	Residential	750	\$53.92	\$137.42	\$41.47	\$128.32	-23.1%	-6.6%
	GS < 50kW	2,000	\$111.14	\$333.14	\$85.66	\$311.52	-22.9%	-6.5%
	GS 50-4,999 kW	57,529/175	\$1,210.43	\$10,874.76	\$864.11	\$10,262.08	-28.6%	-5.6%
Woodstock	Residential	750	\$36.36	\$121.80	\$33.50	\$121.01	-7.9%	-0.6%
	GS < 50kW	2,000	\$69.48	\$295.99	\$64.22	\$291.03	-7.6%	-1.7%
	GS 50-999 kW	47,636/134	\$506.92	\$8,331.71	\$462.35	\$8,109.47	-8.8%	-2.7%

1 The results in Table 8 show the following:

2

- 3 • All residential customers in the new acquired rate classes will see 8-25% lower
4 distribution charges, and 1-7% lower total bills.
- 5 • All GS<50 kW customers in the new acquired rate classes will see 8-24% lower
6 distribution charges, and 2-7% lower total bills.
- 7 • All GS>50 kW customers in the new acquired rate classes will see 9-29% lower
8 distribution charges, and 3-6% lower total bills.

9

10 **7.0 ILLUSTRATION OF SAVINGS RESULTING FROM THE CONSOLIDATION**

11 The integration of the Acquired Utilities has allowed Hydro One to realize sustainable
12 efficiencies through reduced overhead duplication, and common back office support services
13 and systems. Work is undertaken by an integrated workforce to address asset, system and
14 customer needs in a cost efficient manner.

15

16 In each of the Decisions and Orders for the Norfolk, Haldimand and Woodstock MAAD
17 applications, the OEB included a condition requiring that Hydro One, at the time of the first
18 rates application that includes costs for the Acquired Utilities, file information with the OEB
19 delineating: (a) the costs for each utility's service area, tracked separately, and (b) the savings
20 achieved as a result of consolidation.

21

22 The tables below detail the actual savings achieved as a result of consolidation compared to the
23 forecast savings provided in the MAAD applications. In Hydro One Distribution's 2018-2022 rate
24 application (EB-2017-0049), Hydro One filed the achieved service area savings information with
25 the actual savings that were available at the time. Included below are the savings achieved for
26 each service area for the 5-year deferral period approved in the respective MAAD applications.

Witness: LI Clement

1 **7.1 NORFOLK POWER DISTRIBUTION INC.**

2 Table 9 below illustrates the forecast and actual OM&A and capital cost savings to serve the
3 NPDI service area over the time horizon approved in the NPDI MAAD application. In the MAAD
4 application Hydro One provided a High, Medium and Low forecast of savings. The numbers
5 below represent the Medium Case forecast.

6
7 **Table 9 - NPDI Service Area Savings (\$/million)**

	2014	2015	2016	2017	2018
OM&A					
Status Quo Forecast	5.7	5.8	5.9	6.0	6.1
Hydro One MAAD Forecast	5.8	2.6	2.7	2.7	2.8
Hydro One Actual	7.2	5.9	2.7	2.2	2.8
Projected Savings	(0.1)	3.2	3.2	3.3	3.3
Actual Savings	(1.5)	(0.1)	3.2	3.8	3.3
Capital					
Status Quo Forecast	5.0	4.7	4.6	4.4	4.5
Hydro One MAAD Forecast	3.1	2.9	2.9	3.0	3.1
Hydro One Actual	3.5	2.1	0.9	1.7	2.0
Projected Savings	1.9	1.8	1.7	1.4	1.4
Actual Savings	1.5	2.6	3.7	2.7	2.5

8
9 Due to the delay in approval of the NPDI MAAD application, approximately 14 months after
10 filing, which resulted in NPDI not being fully integrated into Hydro One until September 2015,
11 OM&A cost savings anticipated in 2014 did not materialize. The delay also impacted savings in
12 2015, which reflects only 4 months of NPDI's full integration into Hydro One's distribution
13 business. 2016 represents the first 12-month period of tracked costs for NPDI once fully
14 integrated into Hydro One.

1 **7.2 HALDIMAND COUNTY HYDRO INC.**

2 Table 10 below illustrates the forecast and actual OM&A and capital costs savings to serve the
 3 HCHI service area over the time horizon approved in the HCHI MAAD application. In the MAAD
 4 application Hydro One provided a High, Medium and Low forecast of savings. The numbers
 5 below represent the Medium Case forecast.

6
 7

Table 10 - HCHI Service Area Savings (\$/million)

	2015	2016	2017	2018	2019
OM&A					
Status Quo Forecast	8.2	8.3	8.5	8.6	8.8

Actual Savings	0.5	2.3	4.6	5.6	6.0
Capital					
Status Quo Forecast	6.4	6.1	5.4	5.6	5.3
Hydro One MAAD Forecast	4.2	3.2	3.3	3.4	5.9
Hydro One Actual	6.9	4.6	3.5	3.5	2.8
Projected Savings	2.2	2.9	2.1	2.2	(0.6)
Actual Savings	(0.5)	1.5	1.9	2.1	2.5

8

9 2015 actual results reflect six months of HCHI operating under the ownership of
 10 Haldimand County Utilities Inc., and the remaining half of the year operating under the
 11 ownership of Hydro One, but not fully integrated into its distribution business, thereby
 12 reducing achieved savings. 2016 includes eight months of costs for the former HCHI
 13 service area operating as a separate entity and four months of costs operating fully
 14 integrated into Hydro One. 2017 represents the first 12-month period of tracked costs
 15 for HCHI once fully integrated into Hydro One.

1 **7.3 WOODSTOCK HYDRO SERVICES INC.**

2 Table 11 below illustrates the forecast and actual OM&A and capital costs savings (with and
 3 without overhead corporate costs) to serve the WHSI service area over the time horizon
 4 approved in the WHSI MAAD application. In the MAAD application Hydro One provided a High,
 5 Medium and Low forecast of savings. The numbers below represent the Medium Case forecast.

6
 7

Table 11 - WHSI Service Area Savings (\$/Million)

	2015	2016	2017	2018	2019
OM&A					
Status Quo Forecast	3.9	4.6	4.0	4.1	4.2

Hydro One Actual (including overhead corporate costs)	N/A	3.2	2.3	2.5	1.8
Projected Savings	0.2	(0.5)	(0.7)	0.8	0.5
Actual Savings (excluding overhead corporate costs)	0.2	(0.6)	0.8	0.8	1.2
Actual Savings (including overhead corporate costs)	N/A	(0.7)	0.2	0.1	0.8

8

9 2015 actual results reflect ten months of WHSI operating under the ownership of Woodstock
 10 Hydro Holdings Inc., and two months operating under the ownership of Hydro One, but not fully
 11 integrated into its distribution business. 2016 includes eight months of costs for the former
 12 WHSI service area operating as a separate entity and four months of costs operating fully
 13 integrated into Hydro One. 2017 represents the first 12-month period of tracked costs for WHSI
 14 once fully integrated into Hydro One.

Witness: LI Clement

- 1 Hydro One has provided the savings both with and without overhead costs as required by the
- 2 Board's decision in EB-2014-0213. The "without" costs show results consistent with the costs
- 3 presented in the MAAD Application.

1 In this Application, Hydro One is not requesting any new SSCs, and proposes to maintain SSCs at
2 the 2022 OEB-approved amount for the 2023 to 2027 period, as explained in Section 3.0.

3

4 Descriptions of Hydro One's SSCs and levels of charges for the 2023 to 2027 period are included
5 as Attachment 2 and Attachment 3, respectively, to this exhibit.

6

7 **2.0 CUSTOMER ENGAGEMENT ON SSCS**

8 **2.1 CUSTOMER ENGAGEMENT DESIGN**

9 In its Decision and Order in EB-2017-0049, the OEB directed Hydro One to consult with its
10 customers on SSCs and report back to the OEB at the time of its next rebasing application. The
11 OEB indicated that Hydro One could determine the method of consultation but that an element
12 of this should include feedback from customers on what types of services should have cost
13 recovery through distribution rates versus SSCs.⁷ Hydro One worked with Innovative Research
14 Group (IRG) to consider the OEB's direction and design an engagement process that would
15 solicit meaningful and actionable feedback.

16

17 The customer engagement survey asked customers about activities that were approved by the
18 OEB to be recovered via distribution rates in its last application, as well as a selection of
19 activities for which Hydro One currently applies SSCs. Specifically, the following specific services
20 were included in the customer engagement:

21

- 22 • Services that were approved to be recovered in rates in EB-2017-0049 (such as account
23 related information and credit checks);
- 24 • Returned cheque;
- 25 • Account set up;
- 26 • Easement letter request (non-web); and
- 27 • After-hour reconnection (customer/contract-driven).

⁷ See EB-2017-0049 Decision and Order, p 150.

1 **2.2 METHOD OF ENGAGEMENT**

2 Hydro One engaged IRG to carry out the customer engagement process. In order to gather
3 feedback from a representative sample of customers and obtain statistically significant results
4 that are reflective of Hydro One’s broader customer base, IRG proposed a survey methodology
5 for this engagement. This survey was conducted online among Hydro One’s residential and small
6 business (GS<50kW) customers. Customers were selected randomly from Hydro One’s customer
7 database to receive an email invitation to the survey. In total, 1,200 residential and 300 small
8 business customers completed the online survey in February 2021.

9
10 **2.3 ENGAGEMENT RESULTS**

11 As explained in greater detail in the IRG Report on Specific Services Charges (Exhibit L-04-01-01)
12 customers are generally supportive of the status quo when it comes to SSCs. A majority of
13 residential and small business customers support the continuation of the current approved
14 charges and the overall approach to SSCs for the 2023-2027 rate period. Customers also
15 expressed their support for the current approach regarding services that are recovered via
16 specific service charge, including a returned cheque charge, an account setup/change of
17 occupancy charge, an easement letter request, and after-hours reconnections
18 (customer/contract driven). The IRG Report on SSCs is provided as Attachment 1.

19
20 **3.0 PROPOSED SSCS**

21 Hydro One is not proposing any new SSCs in this Application.

22
23 Hydro One proposes to continue to apply the levels of charges set by the OEB for access to
24 power poles (telecom),⁸ and Non-Payment of Account Services⁹ for the 2023-2027 period. The
25 annual inflationary rate adjustment for access to power poles (telecom) is currently suspended
26 and therefore the charge will remain at \$44.50 per attacher per year per pole, until further

⁸ See EB-2020-0288, Order for Wireline Pole Attachment Charges, dated December 10, 2020
⁹ See EB-2017-0183 Rate Order for Non-Payment of Account Service Charges, dated March 14, 2019

Witness: LI Clement

1 notice.¹⁰ Hydro One proposes to maintain non-payment of account services charges and Meter
2 Dispute charge at the levels approved in the EB-2017-0049 Decision and Order.

3

4 All other approved SSCs applied in the 2018-2022 period were informed by the Time Study.¹¹
5 Hydro One proposes that the approved SSCs in effect for 2022 remain in place for the 2023-
6 2027 period.

7

8 Descriptions of the specific service charges that are on Hydro One's proposed OEB approved
9 tariff schedule are included in Attachment 2 to this exhibit, and the proposed specific service
10 charges for the 2023-2027 period are provided in Attachment 3.

11

12 **4.0 OTHER RATES AND CHARGES**

13 The tariff schedule consists of SSCs with an OEB-approved fixed rate charge. Charges that are
14 included in Hydro One's Conditions of Service, but do not appear on the OEB-approved tariff
15 sheet are for customer requests to connect new load to the distribution system, and to upgrade
16 services for existing load customers. The cost for these services are charged on a time and
17 materials basis. An explanation for the nature of the costs and determination of the customer
18 contributions from the requesting customer are provided in Exhibit ISD D-SA-02.

¹⁰ EB-2020-0288, Order for Wireline Pole Attachment Charges, dated December 10, 2020

¹¹ See EB-2017-0049 Exhibit H1-02-01 for the Time Study and EB-2017-0049 Decision and Order, pp 147-150 for OEB-approved levels

Introduction and Summary of Findings

Innovative Research Group Inc. (INNOVATIVE) was engaged by Hydro One Networks Inc. to help design, execute, and document the results of Hydro One's specific service charges customer engagement, as part of Hydro One's Joint Rate Application (JRAP) to the Ontario Energy Board (OEB) for the years 2023 to 2027.

The results below and throughout this report summarize the findings from Hydro One's Specific Service Charges Survey.

Standard Level of Service

Overall, there is not strong awareness that the OEB has outlined a standard level of service for electricity distributors in Ontario. Key elements of the standards were outlined in the survey. Despite this reminder, residential customers are largely split on awareness, while a slim majority of small business customers say they are aware that the OEB has outlined a standard level of service.

"Additional Service" Charges

Most customers do not believe that they have requested or been charged for an "additional service". Small Business customers are more likely than residential ones to say they have been charged.

Charges Currently Included in Rates

The first substantive section of the survey focused on charges that are currently included in rates. With regards to these charges, a majority of residential and small business customers prefer the status quo. This is true for all residential control groups including LEAP-qualified customers. About 1-in-4 believe that Hydro One should be charging individual customers for these services.

Charges that are Paid Individually

The next section gathered feedback on charges that are currently paid individually, but could be included in rates (i.e., spread across the entire Hydro One customer base).

Overall, both residential and small business customers strongly believe that Hydro One should stick with the status quo, continuing to charge individual customers for a returned cheque charge, an account set up charge/change of occupancy charge (non-web), an easement letter request (non-web), and after-hour reconnections. In every control group, including LEAP-qualified customers, support is at least at the 66% level and often much higher.

On average, 90% of residential and 89% small business customers agree that Hydro One should continue charging individual customers for a returned cheque. This charge received the strongest level of support to continue with the current approach.

With regards to the remaining three services that are currently charged individually, between 76% and 80% of both residential and small business customers feel that Hydro One should continue with the current approach. Feedback is consistent across all three charges.

Understanding Customer Segmentation

Customer Segmentation

It is important to be able to identify factors that may influence customer preferences and distinguish between what is within, and what is outside of Hydro One's influence or control.

Perceptions of LDCs often tend to move with general perceptions of the sector rather than in response to the local utility.

Throughout this report, environmental control questions are used to help distinguish whether opinions regarding specific service charges are general perceptions or preferences specific to Hydro One.

Segmentation has been used throughout this report to look beyond the topline numbers to analyze the results for key segments. The makeup of this segmentation varies based on rate class.

1. **Bill Impact on Finances:** For both residential and small business customers, segmentation that INNOVATIVE refers to as "Bill Impact on Finances" is provided. This segment is determined based on the extent to which customers agree with the following statement:
 - a) Residential: *The cost of my electricity bill has a major impact on my finances and requires I do without some other important priorities.*
 - b) Small Business: *The cost of my electricity bill has a major impact on the bottom line of my organization and results in some important spending priorities and investments being put off.*
2. **Sector Confidence:** Both residential and small business customers are segmented based on the extent to which customers agree with the following statement: *Customers are well served by the electricity system in Ontario.*
3. **Vulnerable Consumers:** For residential customers, using a combination of household size and combined household income, the residential portion of this report identifies customers who would be eligible for financial assistance programs. The methodology used to calculate this segmentation is based on the OEB's *Low-income Energy Assistance Program (LEAP)* criteria.

Understanding Segmentation

Segmentation is an effective way of looking past the topline numbers and digging deeper into the opinions and preferences of the customer segments above. It is important to understand opinions and preferences based on perceptions that may be outside of the utility's influence or control. Segmentation allows readers of this report to quickly look past the topline numbers and understand how various segments of customers feel about various issues.

Residential Customers

Specific Service Charges

Field Dates

A random sample of Hydro One customers were invited to complete the online survey between February 2nd and February 15th, 2021. The residential online survey could be reached via a unique link that was emailed to a random sample of residential customers with email addresses on file.

Residential Online Workbook Completes

A total of 1,501 (unweighted) Hydro One residential customers completed the online workbook. The weighted n-size for Residential customers is n=1,200.

Sample Weighting

The residential online survey sample has been weighted proportionately by region and consumption quartiles in order to be representative of the broader Hydro One service territory.

The tables below summarize the weighted and unweighted sample breakdown by region and consumption quartile.

Unweighted Sample	Consumption Quartiles				Total
	Low	Medium-Low	Medium High	High	
Southern	66	104	108	90	368
Central	99	108	110	128	445

The cost of my electricity bill has a major impact on my finances and requires I do without some other important priorities.

n=1,200

Q

To what extent do you agree or disagree with the following statements?

Customers are well served by the electricity system in Ontario.

n=1,200

Q

LEAP Qualification

LEAP Qualification

n=1,200

These first few questions are about Hydro One generally.

As you may know, Ontario's electricity system is operated by public, private, and municipal companies across the province. It is made up of three components: generation, transmission and distribution. Hydro One is Ontario's largest electricity transmission and distribution service provider but does not generate electricity.

Like other Ontario electricity companies, Hydro One is regulated by the Ontario Energy Board (OEB) and must obtain approval from the OEB for the rates it charges for its services.

Generation

Where electricity comes from.

Ontario gets its electricity from a mix of energy sources. About half comes from nuclear power. The rest comes from a mix of hydroelectric and natural gas and, to a lesser extent, wind and solar.

Transmission

Hydro One transports electricity across Ontario.

Once electricity is generated, it must be transported to urban and rural communities across the province. This is done by high voltage transmission lines that serve as highways for electricity. Often these lines are suspended on large steel towers. Hydro One owns and operates almost all of the more than 30,000 km of these lines in Ontario and provides transmission services to most electricity customers in Ontario.

Local Distribution

Hydro One delivers power to homes and businesses in your community.

In your community, Hydro One is also responsible for the last step of the journey: delivering electricity to customers through its local distribution system. This system includes transformer stations that decrease the voltage of the electricity so it can be used safely in your home or business.

While there are many distributors in different areas of Ontario, Hydro One builds, operates and maintains the local distribution system that serves you. Hydro One reads meters, calculates and collects bills for all parts of the electricity system and answers customer calls.

Familiarity with Hydro One's Role

Q

Before this survey, how familiar were you with Hydro One's role of running the transmission system across Ontario and providing local distribution in your community?

n=1,200

Customers are well-served

Familiarity with Amount of Bill Going to Hydro One

Q

Every item and charge on your bill is mandated by the Ontario government or regulated by the Ontario Energy Board (OEB).

Although Hydro One is responsible for collecting payment from you for your entire electricity bill, for a typical residential customer only about **31%** goes to Hydro One.

The portion that goes to Hydro One consists of: 23% for distribution services, and 8% for transmission services.

The rest of your bill payment goes to power generation companies, taxes, and regulatory agencies.

Before this survey, how familiar were you with the amount of your electricity bill that went to Hydro One?

n=1,200

In Rates | Question Text

For services that could be considered part of Hydro One's standard level of service, Hydro One has the discretion to ask all customers to share in the cost of providing the service, so that if any customer including you requests the service, they will not have to pay for it.

Hydro One would like your input on what service costs should be included in your electricity rates, thereby shared by all customers, and what service costs should be paid for by the customer requesting the service.

First, we are going to discuss some charges that are considered by Hydro One to be part of the standard level of service and are currently included in rates.

Those charges include:

1. Requesting an account statement
2. Requesting another invoice for a previous billing period
3. Requesting other billing information
4. Requesting account history
5. Requesting a credit or reference check; and,
6. Requesting that electricity be reconnected at the meter or the pole for a premise that was previously vacant and was disconnected

The Ontario Energy Board has approved keeping these service charges "in rates" (i.e., spread across the entire Hydro One customer base) until the end of 2022. Hydro One would like your opinion on whether, starting in 2023, it should continue with the current approach or charge individual customers for each service request.

This year, it is projected that more than 8,800 customers will request these additional services. The charges for these services are currently included on your monthly bill. That means continuing with the current approach would not result in a change to your monthly bill.

Which of the following options do you prefer?

Option	Description	Bill impact for all Customers	Impact for customers requesting the service
Continue with current approach	The cost of these administrative services will continue to be distributed among all Hydro One customers.	These services are currently included in your bill. There will be no change.	Individual customers will not be charged for these services.
Individual Service Charge	The individual or organization that requests one of these services will bear the cost.	This approach would result in a decrease of one cent on the typical residential customer's monthly bill.	The charges to individual customers making the request range from \$15 for account statements to \$300 for a reconnection at the pole for a premise that was previously vacant and was disconnected.

Returned Cheque Charge Question Text

Now we would like your feedback on charges that are currently paid individually, but could be included in rates (i.e., spready across the entire Hydro One customer base). The amount of these charges is based on an extensive year-long study of the work and costs to provide these services which the Ontario Energy Board asked Hydro One to undertake.

The first charge that is currently paid individually is a “returned cheque charge”.

This \$7.00 charge is charged to customers when a cheque payment is declined due to insufficient funds. It is estimated that about 8,000 customers will receive this charge at some point throughout this year.

Hydro One would like to know whether customers think that Hydro One should continue to charge individual customers \$7.00 for a “returned cheque” or spread these costs across the broader customer base.

Based on this, which of the following options do you prefer?

Option	Description	Bill impact for all Customers	Impact for customers requesting the service
In rates	Starting in 2023, spread the cost of the service charge throughout Hydro One’s customer base.	This approach would result in an increase of one cent on the typical residential customer’s monthly bill.	Individual customers will no longer be charged for a “returned cheque”.
Individual Service Charge (Current Approach)	Continue to charge the individual customer if their cheque is declined.	Continuing with the current approach would not have an impact on customer bills.	Individual customers will continue to be charged \$7.00 for a “returned cheque”.
Don’t know

Account Set Up Charge Question Text

The second charge that is currently paid individually is an “**account set up or change of occupancy charge**”.

Hydro One applies this charge when a new account is set up or an account is transferred from one person to another. This charge also applies when a customer moves from one property within Hydro One’s service territory to another, except when a customer submits a moving request electronically, in which case the charge is not applied.

It is estimated that this \$38.00 service charge will be issued to approximately 36,000 Hydro One customers this year.

Hydro One would like to know whether customers think that Hydro One should continue to charge individual customers \$38.00 when setting up a new account/making an occupancy change to an existing account or spread these costs across the broader customer base.

Based on this, which of the following options do you prefer?

Option	Description	Bill impact for all Customers	Impact for customers requesting the service
In rates	Starting in 2023, spread the cost of the service charge throughout Hydro One’s customer base.	This approach would result in an increase of 6 cents on the typical residential customer’s monthly bill.	Individual customers will no longer be charged an “account set up or change of occupancy charge”.
Individual Service Charge (Current Approach)	Continue to charge the individual customer making the service request.	Continuing with the current approach would not have an impact on customer bills.	Individual customers will continue to be charged a \$38.00 “account set up or change of occupancy charge”.
Don’t know

Easement Letter Request Question Text

The third charge that Hydro One would like your opinion on that is currently paid individually is an “**easement letter request charge**”.

Hydro One charges this charge when a customer initiates a request, via mail, to inquire whether there is a Hydro One easement on their property. This is often required when a customer is completing work on their property and either needs new electricity infrastructure or for existing equipment to be moved.

It is estimated that this \$90 service charge will be issued to approximately 660 Hydro One customers this year.

Hydro One would like to know whether customers think that Hydro One should continue to charge individual customers \$90 for an “easement letter request” or spread the charges across the customer base.

Based on this, which of the following options do you prefer?

Option	Description	Bill impact for all Customers	Impact for customers requesting the service
In rates	Starting in 2023, spread the cost of the service charge throughout Hydro One’s customer base.	This approach would result in an increase of one cent on the typical residential customer’s monthly bill.	Individual customers will no longer be charged an “easement letter request” charge.
Individual Service Charge (Current Approach)	Continue to charge the individual customer making the service request.	Continuing with the current approach would not have an impact on customer bills.	Individual customers will continue to be charged \$90.00 for an “easement letter request”.
Don’t know

After-Hour Reconnections

Question Text

Finally, Hydro One would also like to know your opinion on “**after-hours reconnections**”. Some customers have power equipment on their property that must be maintained so that the power equipment remains safe. Hydro One provides one yearly service disconnection and re-connection during regular business hours so that customers can conduct maintenance on their equipment.

The “after-hours reconnection” charge, which ranges from \$245 to \$475 based on the complexity of the request, is for a reconnection performed after regular hours when the customer is not ready for reconnection during regular hours due to the customer or contractor.

With this specific charge, Hydro One would like to know whether customers think that Hydro One should charge the individual customer making the request or include the service in your electricity rates, thereby sharing the cost of the service among all customers.

Based on this, which of the following options do you prefer?

Option	Description	Bill impact for all Customers	Impact for customers requesting the service
In rates	Spread the cost of the service charge throughout Hydro One’s customer base.	This approach would result in an increase of one cent on the typical residential customer’s monthly bill.	Individual customers will not be charged an “after-hours reconnection” charge.
Individual Service Charge	Charge the individual customer making the service request.	This approach would not have an impact on customer bills.	Individual customers will be charged between \$245 and \$475 for an after-hours reconnection.

Small Business Customers

Specific Service Charges

Field Dates

A random sample of Hydro One small business (GS<50kW) customers were invited to complete the online survey between February 3rd and February 16th, 2021. The small business online survey could be reached via a unique link that was emailed to a random sample of small business customers with email addresses on file.

Small Business Workbook Completes

A total of **346** (unweighted) Hydro One small business customers completed the online workbook. The weighted n-size for small business customers is n=300.

Sample Weighting

The small business online survey sample has been weighted proportionately by region and consumption quartiles in order to be representative of the broader Hydro One service territory.

The tables below summarize the weighted and unweighted sample breakdown by region and consumption quartile.

Unweighted Sample	Consumption Quartiles				Total
	Low	Medium-Low	Medium High	High

Environmental Controls

Q

To what extent do you agree or disagree with the following statements?

The cost of my organization's electricity bill has a major impact on the bottom line of my organization and results in some important spending priorities and investments being put off.

n=300

To what extent do you agree or disagree with the following statements?

Customers are well served by the electricity system in Ontario.

n=300

Specific Service Charges Survey

These first few questions are about Hydro One generally.

As you may know, Ontario's electricity system is operated by public, private, and municipal companies across the province. It is made up of three components: generation, transmission and distribution. Hydro One is Ontario's largest electricity transmission and distribution service provider but does not generate electricity.

Like other Ontario electricity companies, Hydro One is regulated by the Ontario Energy Board (OEB) and must obtain approval from the OEB for the rates it charges for its services.

Generation

Where electricity comes from.

Ontario gets its electricity from a mix of energy sources. About half comes from nuclear power. The rest comes from a mix of hydroelectric and natural gas and, to a lesser extent, wind and solar.

Transmission

Hydro One transports electricity across Ontario.

Once electricity is generated, it must be transported to urban and rural communities across the province. This is done by high voltage transmission lines that serve as highways for electricity. Often these lines are suspended on large steel towers. Hydro One owns and operates almost all of the more than 30,000 km of these lines in Ontario and provides transmission services to most electricity customers in Ontario.

Local Distribution

Hydro One delivers power to homes and businesses in your community.

In your community, Hydro One is also responsible for the last step of the journey: delivering electricity to customers through its local distribution system. This system includes transformer stations that decrease the voltage of the electricity so it can be used safely in your home or business.

While there are many distributors in different areas of Ontario, Hydro One builds, operates and maintains the local distribution system that serves you. Hydro One reads meters, calculates and collects bills for all parts of the electricity system and answers customer calls.

Familiarity with Hydro One's Role

Q Before this survey, how familiar were you with Hydro One's role of running the transmission system across Ontario and providing local distribution in your community?

	Total	Customers are well-served		Bill has a major impact	
		Agree	Disagree	Agree	Disagree

Don't know	3%	2%	3%	2%	3%

Familiarity with Amount of Bill Going to Hydro One

Every item and charge on your organization’s bill is mandated by the Ontario government or regulated by the Ontario Energy Board (OEB).

Although Hydro One is responsible for collecting payment from your organization for your entire electricity bill, for a typical small business customer only about **38%** goes to Hydro One.

The portion that goes to Hydro One consists of: 33% for distribution services, and 8% for transmission services.

The rest of your organization’s bill payment goes to power generation companies, taxes, and regulatory agencies.

Before this survey, how familiar were you with the amount of your electricity bill that went to Hydro One?

In Rates | Question Text

For services that could be considered part of Hydro One's standard level of service, Hydro One has the discretion to ask all customers to share in the cost of providing the service, so that if any customer including you requests the service, they will not have to pay for it.

Hydro One would like your input on what service costs should be included in your electricity rates, thereby shared by all customers, and what service costs should be paid for by the customer requesting the service.

First, we are going to discuss some charges that are considered by Hydro One to be part of the standard level of service and are currently included in rates.

Those charges include:

1. Requesting an account statement
2. Requesting another invoice for a previous billing period
3. Requesting other billing information
4. Requesting account history
5. Requesting a credit or reference check; and,
6. Requesting that electricity be reconnected at the meter or the pole for a premise that was previously vacant and was disconnected

The Ontario Energy Board has approved keeping these service charges "*in rates*" (i.e., spread across the entire Hydro One customer base) until the end of 2022. Hydro One would like your opinion on whether, starting in 2023, it should continue with the current approach or charge individual customers for each service request.

This year, it is projected that more than 8,800 customers will request these additional services. The charges for these services are currently included on your monthly bill. That means continuing with the current approach would not result in a change to your monthly bill.

Which of the following options do you prefer?

Option	Description	Bill impact for all Customers	Impact for customers requesting the service
Continue with current approach	The cost of these administrative services will continue to be distributed among all Hydro One customers.	These services are currently included in your bill. There will be no change.	Individual customers will not be charged for these services.
Individual Service Charge	The individual or organization that requests one of these services will bear the cost.	This approach would result in a decrease of less than one cent on the typical small business customer's monthly bill.	The charges to individual customers making the request range from \$15 for account statements to \$300 for a reconnection at the pole for a premise that was previously vacant and was disconnected.

Returned Cheque Charge Question Text

Now we would like your feedback on charges that are currently paid individually, but could be included in rates (i.e., spready across the entire Hydro One customer base). The amount of these charges is based on an extensive year-long study of the work and costs to provide these services which the Ontario Energy Board asked Hydro One to undertake.

The first charge that is currently paid individually is a “returned cheque charge”.

This \$7.00 charge is charged to customers when a cheque payment is declined due to insufficient funds. It is estimated that about 8,000 customers will receive this charge at some point throughout this year.

Hydro One would like to know whether customers think that Hydro One should continue to charge individual customers \$7.00 for a “returned cheque” or spread these costs across the broader customer base.

Based on this, which of the following options do you prefer?

Option	Description	Bill impact for all Customers	Impact for customers requesting the service
In rates	Starting in 2023, spread the cost of the service charge throughout Hydro One’s customer base.	This approach would result in an increase of less than one cent on the typical small business customer’s monthly bill.	Individual customers will no longer be charged for a “returned cheque”.
Individual Service Charge (Current Approach)	Continue to charge the individual customer if their cheque is declined.	Continuing with the current approach would not have an impact on customer bills.	Individual customers will continue to be charged \$7.00 for a “returned cheque”.
Don’t know

Account Set Up Charge Question Text

The second charge that is currently paid individually is an “**account set up or change of occupancy charge**”.

Hydro One applies this charge when a new account is set up or an account is transferred from one person to another. This charge also applies when a customer moves from one property within Hydro One’s service territory to another, except when a customer submits a moving request electronically, in which case the charge is not applied.

It is estimated that this \$38.00 service charge will be issued to approximately 36,000 Hydro One customers this year.

Hydro One would like to know whether customers think that Hydro One should continue to charge individual customers \$38.00 when setting up a new account/making an occupancy change to an existing account or spread these costs across the broader customer base.

Based on this, which of the following options do you prefer?

Option	Description	Bill impact for all Customers	Impact for customers requesting the service
In rates	Starting in 2023, spread the cost of the service charge throughout Hydro One’s customer base.	This approach would result in an increase of 3 cents on the typical small business customer’s monthly bill.	Individual customers will no longer be charged an “account set up or change of occupancy charge”.
Individual Service Charge (Current Approach)	Continue to charge the individual customer making the service request.	Continuing with the current approach would not have an impact on customer bills.	Individual customers will continue to be charged a \$38.00 “account set up or change of occupancy charge”.
Don’t know

Other	1.6

*Note: percentages shown out of entire sample

Easement Letter Request Question Text

The third charge that Hydro One would like your opinion on that is currently paid individually is an “**easement letter request charge**”.

Hydro One charges this charge when a customer initiates a request, via mail, to inquire whether there is a Hydro One easement on their property. This is often required when a customer is completing work on their property and either needs new electricity infrastructure or for existing equipment to be moved.

It is estimated that this \$90 service charge will be issued to approximately 660 Hydro One customers this year.

Hydro One would like to know whether customers think that Hydro One should continue to charge individual customers \$90 for an “easement letter request” or spread the charges across the customer base.

Based on this, which of the following options do you prefer?

Option	Description	Bill impact for all Customers	Impact for customers requesting the service
In rates	Starting in 2023, spread the cost of the service charge throughout Hydro One’s customer base.	This approach would result in an increase of less than one cent on the typical small business customer’s monthly bill.	Individual customers will no longer be charged an “easement letter request” charge.
Individual Service Charge (Current Approach)	Continue to charge the individual customer making the service request.	Continuing with the current approach would not have an impact on customer bills.	Individual customers will continue to be charged \$90.00 for an “easement letter request”.

After-Hour Reconnections

Question Text

Finally, Hydro One would also like to know your opinion on “**after-hours reconnections**”. Some customers have power equipment on their property that must be maintained so that the power equipment remains safe. Hydro One provides one yearly service disconnection and re-connection during regular business hours so that customers can conduct maintenance on their equipment.

The “after-hours reconnection” charge, which ranges from \$245 to \$475 based on the complexity of the request, is for a reconnection performed after regular hours when the customer is not ready for reconnection during regular hours due to the customer or contractor.

With this specific charge, Hydro One would like to know whether customers think that Hydro One should charge the individual customer making the request or include the service in your electricity rates, thereby sharing the cost of the service among all customers.

Based on this, which of the following options do you prefer?

Option	Description	Bill impact for all Customers	Impact for customers requesting the service
In rates	Spread the cost of the service charge throughout Hydro One’s customer base.	This approach would result in an increase of less than one cent on the typical small business customer’s monthly bill.	Individual customers will not be charged an “after-hours reconnection” charge.
Individual Service Charge	Charge the individual customer making the service request.	This approach would not have an impact on customer bills.	Individual customers will be charged between \$245 and \$475 for an after-hours reconnection.

DESCRIPTION OF SPECIFIC SERVICE CHARGES

1.0 CUSTOMER ADMINISTRATION

1.1 EASEMENT LETTERS (RATE CODES 6A AND 6B)

Prior to 1999, the Hydro-Electric Power Commission of Ontario (HEPC)/Ontario Hydro were granted rights-of-way or easements that did not need to be registered with a land registry office. These rights-of-ways or easements, which allow HEPC/Ontario Hydro and the successor, Hydro One to place electrical infrastructure on them, are still legally valid today. On the request of the owner of the land or a person intending to acquire an interest in the land, HEPC/Ontario Hydro and its successor, Hydro One is obligated to provide such record whether a piece of land has any of these pre-1999 rights-of-way on it. A search can be conducted on-line or by sending a letter of request to Hydro One with a legal description of the property in question. Customers are charged based on the type of request.

1.2 RETURNED CHEQUE CHARGE (RATE CODE 11)

Hydro One charges customers a fee if insufficient funds are available in the account on which the money was drawn. There are no other pass-through costs; the banks invoice their fees directly to the customer.

1.3 ACCOUNT SET UP CHARGE/CHANGE OF OCCUPANCY CHARGE (RATE CODE 14)

Hydro One applies this charge when a new account is set up or an account is transferred from one person to another. This charge also applies when a customer moves from one property within Hydro One's service territory to another, except when a customer submits a moving request electronically, in which case the charge is not applied.

1.4 SPECIAL METER READS - RETAILER REQUESTED OFF-CYCLE READ (RATE CODE 15)

A switch bill is issued to a customer when a Service Transfer Request is made. This bill is based on an actual meter read unless the Customer, Hydro One and the Retailer agree in writing to an alternative. The effective date of the service transfer shall be the next scheduled meter reading date, unless the retailer requests a special meter reading and Hydro One can accommodate the request.

1.5 METER DISPUTE CHARGE – MEASUREMENT CANADA (RATE CODE 24)

Meter dispute testing is typically the last step in a multi-stage escalation process between the customer and Hydro One. The process typically begins with a customer high bill inquiry, the object of which is to validate that the bill calculations, charges and bill determinants are accurate.

If Hydro One is satisfied with meter operation and accuracy of billing, and the customer is not satisfied, the customer will be referred to Measurement Canada. If the services of Measurement Canada are requested by the customer or retailer to resolve the issue, Hydro One may charge the customer for the costs of processing the application to Measurement Canada and removing and transporting the meter to a testing location. If the dispute is substantiated by Measurement Canada and the resolution is in the favour of the customer, Hydro One shall bear such costs.

Measurement Canada may charge an additional fee.

2.0 NON-PAYMENT OF ACCOUNT

2.1 LATE PAYMENT

Bills are due on the billing date. A late payment charge is applied, and is owed by the Customer, if payment is not received within 20 calendar days after the billing date. Customers are provided with a 17-day payment period, plus 3 days for the bill to be sent. Late payment charges are calculated from the billing date to the date the next bill is issued. Late payment charges are applied to the outstanding balance.

If the customer payment is received up to 3 days after the Due Date, they will not be charged a late payment charge. Details are provided in Hydro One's Conditions of Service, Section 2.4.6.

2.2 COLLECTION OF ACCOUNT CHARGE – RECONNECT AT METER – DURING REGULAR HOURS (RATE CODE 18)

When a customer has not paid their electricity bill for an extensive period (45 days) of time, an electricity disconnection notice is issued. If payment is still not received, a disconnection is performed. These activities are performed in accordance with Subsection 31(1) of the Electricity Act, 1998 which provides that:

A distributor may shut off the distribution of electricity to a property if any amount payable by a person for the distribution or retail of electricity to the property pursuant to Section 29 is overdue. Low-income customers do not have to pay this charge.

**2.3 COLLECTION OF ACCOUNT CHARGE – RECONNECT AT METER – AFTER REGULAR HOURS
(RATE CODE 20)**

Charges are incurred when a customer has been disconnected for non-payment, and they later make payment on their current bill and agree to pay the after hours fee to have the meter reconnected after regular hours.

**2.4 COLLECTION OF ACCOUNT CHARGE – RECONNECT AT POLE – DURING REGULAR HOURS
(RATE CODE 22)**

When a customer has not paid their electricity bill for an extensive period (45 days) of time, an Electricity Disconnection Notice is issued. If payment is still not received a disconnection is performed. At times, a disconnection cannot be performed at the meter due to type of the meter or the meter is not accessible (e.g. located inside a locked building), therefore disconnection must be performed at the pole. These activities are performed in accordance with Subsection 31(1) of the Electricity Act, 1998 which provides that:

A distributor may shut off the distribution of electricity to a property if any amount payable by a person for the distribution or retail of electricity to the property pursuant to Section 29 is overdue. Low-income customers do not have to pay this charge.

**2.5 COLLECTION OF ACCOUNT CHARGE – RECONNECT AT POLE – AFTER REGULAR HOURS (RATE
CODE 23)**

Charges are incurred when a customer has been disconnected at the pole for non-payment, and they later make payment on their current bill and agree to pay the after hours fee to have their service reconnected.

3.0 OTHER

3.1 SERVICE CALL - CUSTOMER OWNED EQUIPMENT – DURING/AFTER REGULAR HOURS (RATE CODE 25 & 26)

If Hydro One determines that the cause of a power issue is related to customer-owned equipment, Hydro One crews may perform corrective service at the customer's request. The Specific Service Charge covers only the administration and travel costs of this service. It does not cover any work associated with work on the customer-owned equipment, as it applies whether Hydro One crews work on the customer-owned equipment or not. Hydro One will charge the customer additional amounts, at actual costs, for performing any work on their equipment.

3.2 RECONNECT COMPLETED AFTER HOURS (CUSTOMER/CONTRACT DRIVEN) – AT METER OR AT POLE (RATE CODE 32 & 33)

All customers are responsible for maintaining their own equipment; therefore, Hydro One provides one yearly (calendar year January to December) Service Disconnection and Re-Connection (isolation and restoration) during regular business hours for customer maintenance purposes. The specific service charge for a reconnection at the meter or pole performed after hours is applied when the service is not ready to reconnect during regular hours due to the customer or contractor.

3.3 ADDITIONAL SERVICE LAYOUT FEE – BASIC/COMPLEX – MORE THAN ONE HOUR (RATE CODE 34 & 35)

When a customer determines that their distribution service requirement has changed from what was originally submitted and planned, Hydro One will determine the work required to modify the existing service layout to meet the customer's new needs. If work is required in excess of one hour, the fee for an additional service layout will be applied.

3.4 PIPELINE CROSSINGS (RATE CODE 36)

Permission is required from the pipeline company before installing new wires (overhead or underground) crossing a pipeline Right of Way (ROW), or installing poles, anchors, or other equipment on a pipeline ROW. To generate the drawings, a great deal of information such as pipe depth, diameter, ROW width, and position of the line within the ROW must be collected at the site with a pipeline

representative. The pipeline representative will determine what steps need to be taken and make suggestions for the best possible design. Hydro One charges the customer a fee that includes creation of the drawing, signing of the agreement, review of standards, obligations and conditions.

3.5 WATER CROSSINGS (RATE CODE 37)

Water Crossing fees are only charged when approval is being requested to cross the Rideau Canal and Trent Severn Waterway. Under emergency conditions, work may proceed but due diligence is required to prevent damage to fish habitats resulting in fines. Under normal circumstances, Hydro One staff will perform a self-assessment for Transport Canada (TC) and the Department of Fisheries and Oceans (DFO). The results of the self-assessment will dictate further interactions between Hydro One, the DFO, and TC in regards to new applications, special permits and guidance to prevent damage to fish habitat. The results of the self-assessment will also outline any concerns with the proposed work and if any timing restrictions apply (e.g., fish spawning season).

3.6 RAILWAY CROSSINGS (RATE CODE 38)

A new agreement is required from a railway authority before installing new wire across railway tracks or rights-of-way, or reconfiguring or modifying existing crossings of railway tracks or rights-of-way. Additional fees incurred from the railway authority application, the actual railway agreement, and flagging fees will be collected from the customer.

3.7 LINE STAKING PER METER (RATE CODE 39A, B, C)

For Hydro One to bring electrical service to a customer's property, an expansion from the existing distribution line to the customer's property may have to be designed and built. Hydro One will perform the staking of the line route according to the type of line to be built: overhead, underground or submarine cable. The line staking per meter service is divided into three categories: overhead line, underground line and submarine cable.

3.8 CENTRAL METERING

Customers may opt for central metering (CM) to avoid having to pay for service located in one building to supply several separate buildings on one property, or to reduce having a meter on each building. If

the customer requests, Hydro One will install a CM service on a customer-owned pole. A maximum of four service connections can be connected at the CM location. If this is for a new service, where the load is greater than or equal to 45 kW, the CM service will be installed free of charge.

3.9 CENTRAL METERING

CENTRAL METERING – NEW SERVICE < 45 KW (RATE CODE 40)

When the load supplied by the central metering service is less than 45 kW, the load does not justify the higher metering costs resulting from the use of instrument transformers, therefore the customer must pay to cover the instrument transformer costs.

CONVERSION TO CENTRAL METERING < 45 KW (RATE CODE 41)

Customers who request a conversion from conventional metering to CM require a new service layout, a change in their account, the removal of existing meters and equipment and installation of new equipment. This involves site visits for the layout, equipment modifications and administrative work. If the installation is to supply a load of less than 45 kW, the customer is charged for the associated labour plus the incremental cost of the instrument transformers.

CONVERSION TO CENTRAL METERING >= 45 KW (RATE CODE 42)

Customers who request a conversion from conventional metering to central metering require a new service layout, a change in their account, the removal of existing meters and equipment, and installation of new equipment. This involves site visits for the layout, equipment modifications, and administrative work. Loads greater than or equal to 45 kW justify the costs for the required instrument transformer. Therefore, only the labour costs associated with performing this service are charged to the customer.

3.10 CONNECTION IMPACT ASSESSMENTS

The connection process of distributed energy resources (DER) involves a number of stages, including technical assessments. Hydro One assesses the technical impact of a DER to its distribution system through a Connection Impact Assessment (CIA). A CIA is a more detailed assessment of a project's impact on the distribution system. The results include a technical report outlining project feasibility, technical specifications needed for the project and the impact the project would have on the distribution grid and any of its customers, in accordance with Section 6.2.14 of the DSC.

CONNECTION IMPACT ASSESSMENTS – NET METERING (RATE CODE 45A)

A net metering generator, as defined in section 7(1) of the Net Metering Regulation (O. Reg. 541 / 05), generates electricity primarily for its own use from a renewable generation facility. Net metering involves the measurement of the quantity of electricity a generator uses against the quantity of electricity it generates resulting in a net total. This category applies to net metering projects which are capacity allocation exempt small embedded generation (CAE) facility as defined by the DSC.

As per the DSC, a CAE facility is an embedded generation facility which is not a micro-embedded generation facility and which has a name-plate rated capacity of 250 kW or less in the case of a facility connected to a less than 15 kV line and 500 kW or less in the case of a facility connected to a 15 kV or greater line.

CONNECTION IMPACT ASSESSMENTS – EMBEDDED LDC GENERATORS (RATE CODE 45B)

This type of CIA is completed by Hydro One at the request of a downstream (embedded) LDC for the connection of a CAE-sized project to a Hydro One shared feeder.

CONNECTION IMPACT ASSESSMENTS – SMALL PROJECTS < =500 KW (RATE CODE 45C)

This category covers CIA completed for CAE-sized DER projects proposed for connection to Hydro One distribution system. When no LDC is involved, this type of CIA is completed by Hydro One at the request of an applicant.

CONNECTION IMPACT ASSESSMENTS – SMALL PROJECTS <= 500 KW, SIMPLIFIED (RATE CODE 45D)

The following CAE-sized, three-phase projects are eligible for a simplified CIA based on size of the DER and its connecting voltage:

- 10 kW < DER project ≤ 30 kW if connecting to < 15 kV
- 10 kW < DER project ≤ 100 kW if connecting to ≥ 15 kV

The size of the three-phase project under each category is small enough that the impact on the system is not significant. Hence, the DER applicant receives a simplified CIA along with the class-C estimate. Single-phase projects are not eligible for the simplified CIA.

CONNECTION IMPACT ASSESSMENTS – GREATER THAN CAPACITY ALLOCATION EXEMPT PROJECTS – CAPACITY ALLOCATION REQUIRED PROJECTS (RATE CODE 45E)

The category covers the Capacity Allocation Required (CAR) CIAs for all DER projects, including net metering, load displacement and energy storage facilities, greater than CAE size. CAR projects have a

capacity greater than 250 kW if connecting to less than 15 kV line, and greater than 500 kW if connecting to a line greater than or equal to 15 kV.

CONNECTION IMPACT ASSESSMENTS – GREATER THAN CAPACITY ALLOCATION EXEMPT PROJECTS – TS REVIEW FOR LDC CAPACITY ALLOCATION REQUIRED PROJECTS (RATE CODE 45F)

The Transformer Station (TS) review CIAs are completed for all DER projects greater than 500 kW, connecting to LDC dedicated and/or express feeders. TS review CIAs are performed to determine if any upgrades are required at an upstream TS in order to facilitate the connection of the DER projects to the LDC distribution system.

4.0 JOINT USE

4.1 JOINT USE – TELECOMMUNICATIONS (RATE CODE 30)

Hydro One's application for electricity distribution rates EB-2017-0049 originally included a request for a custom pole attachment charge. Following the decision by the OEB regarding EB-2015-0304 (Wireline Pole Attachment Charges) the OEB released a report on March 22, 2018 outlining the new province-wide wireline pole attachment charge. On November 2, 2018, Hydro One filed a letter¹ with the OEB stating that Hydro One had elected to apply for the OEB's province-wide pole attachment charge, which Hydro One has decided to continue to utilize for this Application.

4.2 JOINT USE – LOCAL DISTRIBUTION COMPANIES (LDCS) AND GENERATORS (RATE CODE 47 & 48)

This SSC is charged to local distribution companies and generators who seek to use the space on Hydro One's poles to affix their assets. As referenced in EB-2013-0416, LDCs and generators both use power space, and require the same space allocation.

4.3 JOINT USE – MUNICIPAL STREETLIGHTS & ATTACHMENTS (RATE CODE 49)

Where road authorities wish to affix their attachments to Hydro One's poles for the purposes of providing municipal street lighting. The method of attachment and their location is subject to Hydro One's approval, and the road authority must enter into an Agreement for Licensed Occupancy of Power

¹ EB-2017-0049, Response to Procedural Order (PO) 11

Utility Distribution Poles with Hydro One, which is subject to specific annual pole attachment charges as defined in the agreement.

4.4 SENTINEL LIGHTS & POLES

4.4.1 SENTINEL LIGHTS (RATE CODE 50)

The sentinel light rental program is designed to provide rural customers with low-cost security lighting. The service is provided primarily to rural residential, farm, and cottage customers, for whom street lighting is not available.

4.4.2 SENTINEL LIGHT POLES (RATE CODE 51)

The sentinel light pole rental program is designed to provide rural customers with a pole to attach a light. The service is provided primarily to rural residential, farm, and cottage customers.

1 **RATE RIDERS**

2

3 **1.0 REGULATORY ASSET RATE RIDERS**

4 This Exhibit describes the methodology used to allocate the distribution Regulatory Asset
5 balances shown in Exhibit G-01-01 among customer classes and the methodology used to
6 calculate the associated rate riders.

7

8 In this application, Hydro One is proposing separate rate riders for Group 1 and Group 2
9 regulatory accounts for the reasons detailed in Section 1.2 of this Exhibit.¹ Hydro One
10 Distribution's Group 1 and Group 2 accounts are identified and described in Exhibit G-01-01. As
11 noted in Exhibit G-01-04, Hydro One proposes to dispose of its Distribution regulatory account
12 balances for all Group 1 and Group 2 accounts over the five-year Custom IR period (i.e. 2023-
13 2027). Hydro One proposes to use the average forecasts of the number of customers, annual
14 energy and peak demand by rate class over the 2023-2027 period as charge determinants to
15 derive the monthly rate rider amounts that will be in effect from January 1, 2023 to December
16 31, 2027.

17

18 **1.1 DISPOSITION OF GROUP 1 REGULATORY ACCOUNTS**

19 As described in Exhibit G-01-01, Hydro One Distribution is proposing to dispose of the audited
20 2020 balances in its Group 1 regulatory accounts, which includes the amounts for Hydro One
21 Distribution and the acquired service areas of Norfolk, Haldimand and Woodstock. In its
22 Inspection Report of March 4, 2019, OEB Staff validated Hydro One's allocation methodology for
23 Group 1 Deferral and Variance Accounts (DVAs) for the acquired service areas of Norfolk,
24 Haldimand and Woodstock.

¹ As described in the Report of the Board on Electricity Distributors' Deferral and Variance Account Review Initiative (EDDVAR) (EB-2008-0046), Group 1 Accounts are those that do not require a prudence review, including account balances that are cost pass-through and accounts whose original balances were approved by the Board in a previous proceeding. Group 2 Accounts are those that require prudence review.

Witness: LI Clement

1 The Inspection Report also concluded that

2
 3 *after all the acquired utilities are integrated into HONI's financial systems, this*
 4 *proposed RSVA allocation methodology resulted in the same set of rate riders,*
 5 *whether the RSVA balances are allocated to HONI, Norfolk Power, Haldimand*
 6 *County Hydro and Woodstock Hydro separately, or to all utilities together as one*
 7 *single entity.*
 8

9 **1.1.1 ACCOUNT 1595 (2018) FOR FORMER NPDI AND WHSI CUSTOMERS**

10 As shown in Exhibit G-01-05-02 (Tab 2a), the total 2020 year-end balance for all Group 1
 11 accounts is a credit of \$69.5M. Of this amount, a credit of \$0.05M is associated with the former
 12 NPDI's 1595 (2018) account, and a credit of \$0.03M is associated with the former WHSI's 1595
 13 (2018) account. Hydro One proposes to return these amounts to the customers of those specific
 14 acquired utilities through separate rate riders. Details on the derivation of these rate riders are
 15 shown in Attachment 1 of this Exhibit. Table 1 provides the proposed rate rider amounts.
 16

17 **Table 1 - Rate Riders for Disposition of Account 1595 (2018) – 2023-2027**

Rate Class	Unit	Volumetric Rate Rider (\$kWh or \$/kW)	
		Norfolk	Woodstock
Residential	kWh	-0.0001	-0.0001
GS < 50kW	kWh	-0.0001	-0.0001
GS 50-4,999 kW	kW	0.0196	
GS 50-999 kW	kW		0.0196
GS > 1,000kW	kW		0.0166
St Lgt	kWh	-0.0003	0.0001
Sen Lgt	kWh	-0.0003	
USL	kWh	-0.0005	-0.0001

18 Hydro One has completed the OEB's DVA workform² to dispose of the rest of the Group 1
 19 account balances among all Hydro One existing and new acquired rate classes. The workform
 20 has been provided as Attachment 2 to this Exhibit.

² Modified to accommodate disposition of YE 2020 balances.

Witness: LI Clement

1 **1.1.2 SUB-ACCOUNT FOR GLOBAL ADJUSTMENT (1589)**

2 As per the OEB's methodology,³ a portion of the Global Adjustment (GA) balance has been
3 allocated to customers who transitioned between Class A and Class B during the balance
4 accumulation period (i.e. 2020) based on customer specific consumption levels. Transition
5 customers are only responsible for the customer specific amount allocated to them and will not
6 be charged/refunded the general GA rate rider. Hydro One identified 89 such GA transition
7 customers. Based on the kWh consumption of these customers during the balance accumulation
8 period, Hydro One determined that \$0.6 million from the total GA variance account balance of
9 \$13.8 million should be refunded to these transition customers, which will be settled with each
10 customer individually.⁴ The remaining GA variance account balance of \$13.2 million will be
11 refunded through class-specific GA rate riders to all Class B, non-regulated price plan (Non-RPP),
12 non-wholesale market participant (Non-WMP), non-local distribution company (Non-LDC)
13 customers as shown in Table 2.

14
15 **1.1.3 SUB-ACCOUNT FOR CAPACITY BASED RECOVERY (CBR) - CLASS B (1580)**

16 As can be seen in Attachment 2 to this exhibit, the balance in Account 1580 CBR Class B sub-
17 account results in a volumetric rate rider that rounds to zero at the fourth decimal place in more
18 than one rate class. Consequently, the entire balance in this sub-account has been moved to
19 Account 1580 – WMS control account in accordance with the OEB's Filing Requirements.⁵ This
20 balance will be disposed of through the general-purpose Group 1 DVA rate riders shown in Table
21 2.

22 Table 2 provides a summary of the proposed volumetric rate riders by rate class for the Group 1
23 account balances (excluding those applicable only to former NPDI and WHSI as shown in Table
24 1).

³ Filing Requirements for Electricity Distribution Rate Applications - 2021 Edition for 2022 Rate Applications - Chapter 2, Cost of Service, June 24, 2021, s.2.9.1.1

⁴ Refer to tab 6.1a of the Group 1 DVA work form in Exhibit L-05-01-02 for the refund amounts for each transition customer.

⁵Filing Requirements for Electricity Distribution Rate Applications - 2021 Edition for 2022 Rate Applications - Chapter 2, Cost of Service, June 24, 2021, s.2.9.1.3

AGSd	kW	-0.0584	-0.0810	-0.0007

2 **1.2 DISPOSITION OF GROUP 2 REGULATORY ACCOUNTS**

3 As discussed in Exhibit G-01-01, Hydro One is proposing in the current application to dispose of
 4 Group 2 regulatory account balances relating to Hydro One Distribution only, and not those
 5 relating to the Acquired Utilities. Group 2 account balances for the Acquired Utilities will be
 6 brought forward for disposition in their 2022 rate applications. As such, the rate rider for Group

⁶ Using all-volumetric rate riders for Group 1 accounts is consistent with the OEB's IRM model.

1 2 accounts will be only applicable to Hydro One’s legacy customers.⁷ Since the Group 1 and
 2 Group 2 rate riders are applicable to different sets of customer rate classes, Hydro One has
 3 completed a separate DVA work form for the Group 2 accounts. This work form is provided as
 4 Attachment 3 to this Exhibit. Table 3 provides a summary of the proposed regulatory account
 5 riders by rate class for all Hydro One Distribution Group 2 accounts.

6

7 **Table 3 - 2023 to 2027 Regulatory Asset Rate Riders by Rate Class (Group 2 Accounts)⁸**

Rate Class	Unit	Group 2 Fixed Rate Rider (\$/month)	Group 2 Volumetric Rate Rider Applicable to Non-WMP Only (\$/kWh or \$/kW)
UR	kWh	-0.08	
R1	kWh	-0.14	
R2	kWh	-0.29	
GSe	kWh		-0.0002
UGe	kWh		-0.0001
GSd	kW		-0.0466
UGd	kW		-0.0276
St Lgt	kWh		-0.0003
Sen Lgt	kWh		-0.0003
USL	kWh		-0.0002
DGen	kW		-0.0593
ST	kW		-0.0048

⁷ Hydro One will ensure that the Group 2 rate riders are not applied to the acquired customers moving to existing Hydro One rate classes (i.e. Unmetered Scattered Load, Street Light, Sentinel Lights, and Sub-Transmission).

⁸ As per the Board's letter issued July 16, 2015 outlining details regarding the implementation of the transition to fully fixed distribution charges for residential customers, Residential rates for group 2 accounts are to be on a per customer basis.

Witness: LI Clement

2.0 RECALCULATION OF RIDERS TO RECOVER MISALLOCATED FUTURE TAX SAVINGS

In its Decision in EB-2020-0194, the OEB approved rate riders that enable Hydro One Distribution to recover misallocated Future Tax Savings. Those riders will be in effect from July 1, 2021 to June 30, 2023. As a result of the assumption used in this application that the Seasonal class elimination will be implemented on January 1st, 2023, it is necessary to recalculate the amounts of the misallocated Future Tax Savings to be recovered from each rate class. This is accomplished by using the Net Fixed Assets allocator from the 2018 CAM under the ‘No Seasonal’ scenario as prepared in the Seasonal Class Elimination proceeding (EB-2020-0246). The Base Rate Adjustment Riders are then derived using the proposed 2023 charge determinants. Table 4 provides the updated monthly base rate adjustment rate riders that will be in effect between January 1, 2023 and June 30, 2023.

Table 4 - Updated Base Rate Adjustment Riders by Rate Class

Rate Class	Unit	Fixed (\$/month)	Volumetric (\$/kWh or \$/kW)
UR	kWh	0.80	
R1	kWh	1.44	
R2	kWh	4.00	
GSe	kWh	1.10	0.0023
UGe	kWh	0.82	0.0011
GSd	kW	4.43	0.8111
UGd	kW	4.01	0.4638
St Lgt	kWh	0.11	0.0041
Sen Lgt	kWh	0.16	0.0090
USL	kWh	0.87	0.0005
DGen	kW	1.77	0.0913
ST	kW	32.54	0.0504

1

BASE RATE ADJUSTMENT RIDER

2

3 This exhibit has been filed separately in MS Excel format.

1 Under the Distribution Rate Protection (DRP) program per O.Reg 198/17, the OEB sets a
2 maximum monthly base distribution charge for remote customers of seven local distribution
3 companies in Ontario, including Hydro One's R1 and R2 rate classes.³ The current DRP cap is
4 \$36.86.⁴ The year-round R1 and R2 customer bill impacts have been calculated assuming the
5 current DRP remains in place over the 2023-2027 period. For illustrative purposes, the bill
6 impact for year-round R1 and R2 customers have also been calculated assuming there was no
7 DRP.

8

9 Tables 1 to 5 provide a summary of distribution and total bill impacts for all Hydro One legacy
10 and acquired customers for the 2023-2027 period.

³ The other six utilities are Algoma, Atikokan, Chapleau, InnPower, Northern Ontario Wires and Sioux Lookout.

⁴ Decision and Order, EB-2021-0189.

1

** In 2027, customers of R1 and R2 rate classes will be fully protected by the DRP credit against any changes in distribution rates and will not see any year-over-year change in their distribution charges.*

1

2

3 **2.0 RATE IMPACT MITIGATION**

4 The total bill impacts across most rate classes resulting from the distribution revenue
 5 requirement, regulatory asset disposition and rate harmonization requested in this Application
 6 are below the 10% value established by the Board in in Chapter 2, section 2.8.13 of the Filing
 7 Requirements for customers with typical consumption. As a result, no bill impact mitigation is
 8 required except for the following rate classes:

- 9 1) Seasonal customers moving to R2 class
- 10 2) Sentinel Lights customers of the former Norfolk Power Distribution Inc. (NPDI)
- 11 3) USL customers of the former Woodstock Hydro Services Inc. (WHSI), NPDI and
 12 Haldimand County Hydro Inc. (HCHI)

13

14 **2.1 SEASONAL CUSTOMERS MOVING TO R2 CLASS**

15 As shown in Table 1, the total bill impacts for Seasonal customers moving to the R2 rate class as
 16 a result of eliminating Hydro One's Seasonal rate class are higher than 10%. As such, these
 17 customers will require rate mitigation. Mitigation approaches for these seasonal customers are
 18 currently being considered under the separate proceeding initiated by the OEB to implement
 19 the Seasonal class elimination (EB-2020-0246). As part of subsequent phases of this Application,
 20 Hydro One will provide mitigation details for Seasonal customers being moved to the R2 class
 21 (e.g. amount of mitigation, duration of mitigation required) that reflect the OEB's decision in EB-
 22 2020-0246 and the proposals in this application with respect to revenue requirement, regulatory
 23 assets, load forecast and cost allocation.

Witness: LI Clement

1 **2.2 SENTINEL LIGHT AND USL CUSTOMERS FROM ACQUIRED UTILITIES**

2 As discussed in Exhibit L-01-02, Street Light, Sentinel Light and USL customers from the Acquired
3 Utilities will be integrated into the corresponding existing Hydro One rate classes in 2023.

4
5 Some of the former WHSI's USL customers, NPDI's Sentinel Light and USL customers, and HCHI's
6 USL customers would experience total bill impacts in excess of 10% in 2023 due to being
7 integrated into the Hydro One rate classes. Hydro One proposes a rate mitigation plan to limit
8 total bill impacts to 10%, as follows:

- 9 • The bills will be calculated using the approved rates but a bill credit will be applied to
10 each affected customer to limit the total bill impact to 10%.
- 11 • For each affected customer, the bill credit will be calculated before January 1, 2023,
12 based on the average monthly consumption level during the previous twelve months.
13 The same monthly credit will be applied to all bills for the year.
- 14 • The bill credit calculation will be an annual exercise (before January 1 of each year,
15 commencing in 2023), until the total bill impact is less than 10% per year.

16
17 An illustrative calculation of the monthly mitigation credit for an average customer in each of
18 the affected classes is provided in Table 6 below.

1 **Table 6 - Illustrative Monthly Mitigation Credit for Acquired Sentinel Light and Unmetered**
 2 **customers in 2023 to 2025**

Rate Class	Monthly Consumption (kWh)	Monthly Peak (kw)	2022 Total Bill	2023			2024			2025		
				2023 Total Bill (\$)	Mitigation Credit (Total Bill Impact 10%)	2023 Total Bill including Mitigation Credit (\$)	2024 Total Bill (\$) Without 2023 Mitigation Credit	Mitigation Credit (Total Bill Impact 10%)	2024 Total Bill Including Mitigation Credit (\$)	2025 Total Bill (\$) Without 2024 Mitigation Credit	Mitigation Credit (Total Bill Impact 10%)	2025 Total Bill Including Mitigation Credit (\$)
			a	b	$c = b - (a * 1.1)$	$d = b - c$	b1	$c1 = b1 - (d * 1.1)$	$d1 = c1 - b1$	b2	$c2 = b2 - (d1 * 1.1)$	$d2 = c2 - b2$
WHSI to HONI												
USL	1,349	-	\$191.88	\$227.86	\$16.80	\$211.07	\$229.84	\$0.00	\$229.84	\$231.34	\$0.00	\$231.34

USL	471	-	\$74.83	\$96.96	\$14.64	\$82.31	\$98.36	\$7.81	\$90.55	\$99.44	\$0.00	\$99.44

3
 4
 5 The total mitigation credit for these acquired customers is estimated to be less than \$50,000
 6 over the 2023-2024 period. Hydro One will not recover the cost of this credit from ratepayers.

7
 8 **3.0 COMBINED (TRANSMISSION AND DISTRIBUTION) BILL IMPACTS**

9 In light of the nature of this combined application, Hydro One is providing illustrative combined
 10 bill impacts for its R1 (at 750 kWh per month) and GSe (at 2,000kWh per month) rate classes.
 11 Table 7 provides the total bill impacts for R1 and GSe customers over the 2023-2027 period
 12 assuming that customers would experience both the transmission and distribution rate impacts
 13 of this Application in the same year.

1 **Table 7 - Illustrative Combined Bill Impacts of the Proposed Changes in Transmission (in the**
 2 **table below, TX) and Distribution (in the table below, DX) Revenue Requirements⁵**

* DX Impacts shown here can be found in Tables 1 to 5 of this Exhibit.

** TX Impacts shown here can be found in Tables 3 and 4 of Exhibit H-10-01.

⁵ Bill impacts shown in this table are for illustrative purpose only. In reality, there typically is a lag between when the approved Uniform Transmission Rates (UTRs) are reflected in the RTSRs for distribution customers. For example, Hydro One's approved 2021 RTSRs are based on 2020 Interim UTRs.

1 **LOSS FACTORS**

2

3 **1.0 INTRODUCTION**

4 The Total Loss Factors (TLF) are used to uplift, or adjust, the customers' Commodity, Retail
5 Transmission Service Rate, Wholesale Market Service-related charges, and Rural or Remote
6 Electricity Rate Protection charges to the wholesale level at which Hydro One settles these
7 charges with the IESO. Distribution charges are not subject to loss adjustments.

8

9 For energy-billed customers, OEB guidelines dictate that loss adjustments be applied to metered
10 or estimated energy billing quantities. For demand-billed customers, loss adjustments are
11 applied to the corresponding demand-billed tariffs and the billed quantities used are the
12 metered quantities.

13

14 For the 2023 to 2027 Custom IR period, Hydro One proposes to continue to use the TLFs
15 approved by the OEB in EB-2017-0049 for all existing Hydro One rate classes. For the three new
16 Mixed Density Acquired Rate Classes (AR, AGSe and AGSd), which consist of customers from the
17 former Norfolk Power and Haldimand County Hydro, Hydro One proposes new TLFs. For the
18 three new Urban Acquired Rate Classes (AUR, AUGe and AUGd), which consist of customers
19 from the former Woodstock Hydro, Hydro One proposes to continue to use the TLFs approved
20 by the OEB in EB-2010-0145 for Woodstock Hydro. All proposed and current TLFs are listed in
21 Table 1 and Table 2 below.

22

23 A description of how Hydro One addresses distribution system losses is provided in Exhibit B-3-
24 1, section 3.6.4.

1 **2.0 TOTAL LOSS FACTORS FOR THE NEW MIXED DENSITY ACQUIRED RATE CLASSES (AR, AGSe,**
2 **AGSd)**

3 Norfolk Power and Haldimand County Hydro were integrated into Hydro One's distribution
4 system in 2015 and 2016 and now make use of a portion of the "bulk" (sub-transmission or ST)
5 assets that deliver electricity to all Hydro One customers. As such, Hydro One proposes that the
6 loss factors for these three acquired rate classes also include a share of the losses associated
7 with use of the "bulk" system, consistent with how the loss factors are determined for all other
8 existing Hydro One rate classes. The current "bulk" loss factor for Hydro One's existing
9 customer classes is 3.4%. Since only about a quarter¹ of Norfolk Power and Haldimand Hydro's
10 load is supplied through Hydro One Distribution's bulk assets (the rest is supplied directly from
11 the transmission system), Hydro One proposes to replace only a quarter of Norfolk Power and
12 Haldimand Hydro's estimated bulk loss (based on their current OEB approved TLFs) with Hydro
13 One's bulk loss of 3.4%. The rest of their estimated bulk loss will remain at the current levels.

14
15 Local distribution assets are used to deliver electricity from the bulk system to customers.
16 Hydro One proposes no change to the acquired utilities' existing loss factors for use of these
17 "local" assets because: (i) these assets will continue to deliver electricity solely to the acquired
18 customers; and (ii) there has not been any significant change in the type of local assets.

19
20 These new rate classes are comprised of customers from the former Norfolk Power and
21 Haldimand Hydro, which each had different OEB-approved TLFs. As such, Hydro One proposes
22 to use a "kWh weighted average" approach to estimate an average TLF for these new classes.
23 The resulting loss factors proposed for the new Mixed Density Acquired Classes are shown in
24 Table 1.

¹ As per the OEB approved Norfolk Power Rate Generator Model (EB-2020-0031, Tab "13. RTSR – Current Wholesale"), 27.7% of Norfolk Power's Network Demand is supplied by Hydro One's bulk facilities. Similarly, the OEB approved Haldimand County Hydro Rate Generator Model shows that 28.5% of Haldimand County Hydro's Network Demand is supplied by Hydro One's bulk facilities.

1 **3.0 TOTAL LOSS FACTORS FOR THE NEW URBAN ACQUIRED RATE CLASSES (AUR, AUGe, AUGd)**

2 Unlike Norfolk Hydro and Haldimand County Hydro, Woodstock Hydro’s load was entirely
3 supplied from the transmission system. Woodstock Hydro was integrated into the Hydro One
4 distribution system in 2016 but Hydro One continues to rely solely on Woodstock Hydro’s “bulk”
5 and “local” distribution assets to deliver electricity to customers of Woodstock Hydro. As such,
6 Hydro One proposes no change to the existing loss factors for use of the Woodstock Hydro
7 assets because: (i) these assets will continue to deliver electricity solely to the acquired
8 customers; and (ii) there has not been any significant change in these assets.

9
10 The proposed TLFs for the urban acquired classes are unchanged from the current OEB-
11 approved Woodstock Hydro TLFs, as shown in Table 1.

12
13 **4.0 TOTAL LOSS FACTORS FOR EXISTING HYDRO ONE RATE CLASSES**

14 Hydro One proposes to continue to use the TLFs approved by the OEB (as per EB-2017-0049) for
15 all existing Hydro One rate classes for the 2023 to 2027 Custom IR period. Hydro One’s existing
16 TLFs are based on the methodology and recommendations of a line loss study that was
17 submitted in EB-2013-0416.

18
19 In EB-2017-0049, the OEB expressed concern about the variation in distribution losses from year
20 to year, from a low of 5.3% in 2012 to a high of 10.4% in 2013. Hydro One notes that this
21 variation was the result of changes to Hydro One billing systems over that time. Customers
22 received multiple bills in 2012 due to problems with computer billing systems, which increased
23 the measured sales and, thereby, reduced the loss factor. Changes to correct the billing issues in
24 2013 reduced the measured sales and, thereby, increased the loss factor. After 2013, Hydro
25 One’s loss factors remain stable as demonstrated by the data in Attachment 1 which provides
26 the actual line losses for the 2016-2020 period.

27
28 Given the clarification regarding the variations observed in 2012 and 2013 and data in
29 Attachment 1 which demonstrates that the 5-year average (2016 – 2020) historical Hydro One

Witness: LI Clement

1 loss factor is consistent and aligns with the current approved weighted average loss factor,
2 Hydro One did not prepare an updated study for this Application.

3

4 As discussed in Exhibit L-01-02, Hydro One proposes that customers from the Acquired Utilities
5 in the Unmetered Scattered Load Service Class, Street Lighting Service Class, Sentinel Lighting
6 Service Class and General Service Class (those that meet the Hydro One Sub-Transmission Class
7 requirements) be merged into the corresponding Hydro One rate classes in 2023. The numbers
8 of customers and loads of these new additions are small as compared to the numbers of
9 customers and loads of the existing Hydro One rate classes. As such, it is expected that the
10 addition of these acquired customers to the existing classes will not materially impact the
11 existing TLFs and therefore no changes are proposed.

12

13 In Exhibit L-01-02, Hydro One proposes that the Seasonal Class elimination be implemented on
14 January 1, 2023 and that all existing Seasonal Class customers move to a corresponding
15 residential year round rate classes based on density. A significant portion of seasonal customers
16 will be moved to the R2 residential class, which has a very similar loss factor as the former
17 Seasonal Class, as such Hydro one does not expect that the elimination of the Seasonal Class will
18 significantly impact Hydro One's existing TLFs. However, Hydro One proposes to monitor the
19 actual total losses versus the weighted average of its approved total loss factors over the
20 Custom IR period and will propose an adjustment to the loss factors at its next rate application,
21 if warranted.

1

Table 1 - Loss Factors

Customer Class	DLF %	TLF%	DLF %	TLF%
	Proposed (2023 to 2027)		Current OEB Approved

Street Lights	3.7	4.3
USL	3.7	4.3

**Supply Facility Loss Factor ("SFLF") = 0.6%*

Distribution Loss Factor ("DLF") + SFLF = Total Loss Factor ("TLF")

NOTE: TLFs are shown for Secondary Metered Customers < 5,000 kW. For details regarding applicable losses for Primary Metered Customers and Secondary Metered Customers > 5,000 kWh, please see the current tariff schedules approved by the OEB in EB-2020-0031.

2

3 **5.0 SUPPLY FACILITY LOSS FACTOR**

4 Consistent with that which the OEB approved in Hydro One's previous rate applications (EB-
 5 2013-0416 and EB-2017-0049), Hydro One proposes that in situations in which a customer's
 6 metering is at the supplying Transmission Station (TS) or High-Voltage Distribution Station
 7 (HVDS), either inside the fence or immediately outside the fence, only the losses associated with
 8 the transformation at the station be applied (i.e. the approved Supply Facility Loss Factor). For

Witness: LI Clement

1 situations in which a feeder delivers to solely one supply point (i.e. express feeders²), and the
2 metering is located away from the supplying station, applicable losses should be calculated
3 based on engineering studies provided by the customer. Hydro One will add non-technical
4 losses to the calculated technical losses, consistent with the non-technical losses inherent in the
5 existing Distribution Loss Factors.

6

7 There are situations in which there is no metering at the customer supply point, and quantities
8 are calculated by taking the differences between other metering points (for example, feeder
9 total minus the only other customer on the feeder). In such situations, as previously approved
10 in EB-2013-0416 and EB-2017-0049, losses are applied to the meter quantities separately, prior
11 to calculating the differences, in order to avoid the potential double-counting of feeder losses
12 that could occur if the Distribution Loss Factors was applied to the difference in metering
13 quantities.

14

15 **6.0 TRANSFORMER LOSS ALLOWANCE**

16 A transformer loss allowance is applicable to non-ST customers that are metered on the primary
17 side of a transformer. The following uniform values are applied to reduce measured demand
18 and energy to adjust for transformer losses for voltages up to and including 50 kV (as metered
19 on the primary side):

- 20 a) 1.5% for transformer installations up to an individual bank capacity of 400 kVA; and
21 b) 1.0% for bank capacities over 400 kVA.

² Feeder used by only one customer

Witness: LI Clement

1 A transformer loss allowance is applicable to ST customers that are metered on the secondary
2 side of a transformer. The following uniform value is applied to increase measured demand and
3 energy (as metered on the secondary side) to adjust for transformer losses:

4 a) 1.0%

5

6 Alternatively, transformer losses may be determined from transformer test data, and measured
7 demand and energy adjusted accordingly.

8

9 **7.0 HISTORICAL LOSS FACTORS**

10 As required by Appendix 2-R of the Filing Requirements, Attachment 1 to this Exhibit provides
11 Hydro One's overall historical loss data for 2016 to 2020. The calculated 5-year average
12 historical total loss factor of 8.3% is consistent with the weighted average loss factor across all
13 Hydro One rate classes based on the proposed loss factors for each rate class during the period
14 2023 to 2027.

Appendix 2-R Loss Factors

		Historical Years					5-Year Average
		2016	2017	2018	2019	2020	
Losses Within Distributor's System							
A(1)	"Wholesale" kWh delivered to distributor (higher value)	18,305,442,849	19,991,288,894	21,964,429,769	22,057,189,680	22,221,972,820	20,908,064,802
A(2)	"Wholesale" kWh delivered to distributor (lower value)	24,979,028,192	24,558,159,136	27,141,119,390	27,326,594,008	27,749,770,956	26,350,934,336
B	Portion of "Wholesale" kWh delivered to distributor for its Large Use Customer(s)	5,212,527,082	5,218,091,800	5,607,604,197	5,870,269,059	5,881,401,462	5,557,978,720
C	Net "Wholesale" kWh delivered to distributor = A(2) - B	19,766,501,110	19,340,067,336	21,533,515,194	21,456,324,949	21,868,369,494	20,792,955,617
D	"Retail" kWh delivered by distributor	23,400,160,662	22,996,714,554	25,631,315,713	25,653,281,979	25,791,686,269	24,694,631,835
E	Portion of "Retail" kWh delivered by distributor to its Large Use Customer(s)	5,041,128,706	5,046,510,445	5,423,214,890	5,677,242,804	5,688,009,151	5,375,221,199
F	Net "Retail" kWh delivered by distributor = D - E	18,359,031,956	17,950,204,109	20,208,100,822	19,976,039,175	20,103,677,118	19,319,410,636
G	Loss Factor in Distributor's system = C / F	1.0767	1.0774	1.0656	1.0741	1.0878	1.0763
Losses Upstream of Distributor's System							
H	Supply Facilities Loss Factor	1.0060	1.0060	1.0060	1.0060	1.0060	1.0060
Total Losses							
I	Total Loss Factor = G x H	1.0831	1.0839	1.0720	1.0805	1.0943	1.0827

Notes:

A(1) If directly connected to the IESO-controlled grid, kWh pertains to the virtual meter on the primary or high voltage side of the transformer at the interface with the transmission grid. This corresponds to the "With Losses" kWh value provided by the IESO's MV-WEB. It is the higher of the two values provided by MV-WEB.

If fully embedded within a host distributor, kWh pertains to the virtual meter on the primary or high voltage side of the transformer, at the interface between the host distributor and the transmission grid. For example, if the host distributor is Hydro One Networks Inc., kWh from the Hydro One Networks' invoice corresponding to "Total kWh w Losses" should be reported. This corresponds to the higher of the two kWh values provided in Hydro One Networks' invoice.

If partially embedded, kWh pertains to the sum of the above.

A(2) If directly connected to the IESO-controlled grid, kWh pertains to a metering installation on the secondary or low voltage side of the transformer at the interface with the transmission grid. This corresponds to the "Without Losses" kWh value provided by the IESO's MV-WEB. It is the lower of the two kWh values provided by MV-WEB.

If fully embedded with the host distributor, kWh pertains to a metering installation on the secondary or low voltage side of the transformer at the interface between the embedded distributor and the host distributor. For example, if the host distributor is Hydro One Networks Inc., kWh from the Hydro One Networks' invoice corresponding to "Total kWh" should be reported. This corresponds to the lower of the two kWh values provided in Hydro One Networks' invoice.

If partially embedded, kWh pertains to the sum of the above.

Additionally, kWh pertaining to distributed generation directly connected to the distributor's own distribution network should be included in **A(2)**.

B If a Large Use Customer is metered on the secondary or low voltage side of the transformer, the default loss is 1% (i.e., **B** = 1.01 X **E**). This value should not include supply facility losses. However, the total loss factor on the tariff of rate and charges and applied to customers consumption should include the supply facility loss factor.

D kWh corresponding to D should equal metered or estimated kWh at the customer's delivery point.

E Metered consumption of Large Use customers.

G and I These loss factors pertain to secondary-metered customers with demand less than 5,000 kW.

H Actual Supply Facility Loss Factor as calculated by dividing A(1) by A(2).

CURRENT RATE SCHEDULES

Included in this Exhibit are the OEB-approved Tariffs of Rates and Charges for Hydro One Networks Inc. and the Acquired Utilities for 2021. The Tariffs of Rates and Charges are included as follows:

- Attachment 1: Hydro One Networks Inc.
- Attachment 2: Acquired Utilities (Former Norfolk Power Distribution Inc. Service Area, Former Haldimand County Hydro Inc. Service Area, Former Woodstock Hydro Services Inc. Service Area)
- Attachment 3: Hydro One Networks Inc. (MS Excel file only)
- Attachments 4-6: Acquired Utilities (Former Norfolk Power Distribution Inc. Service Area, Former Woodstock Hydro Services Inc. Service Area, Former Haldimand County Hydro Inc. Service Area) (MS Excel files only)

The Tariff of Rates and Charges for Hydro One Networks Inc. is included as approved in EB-2020-0194. The Tariffs of Rates and Charges for the Acquired Utilities are included as approved in EB-2020-0031.

approved schedules of Rates, Charges and Loss Factors

EB-2020-0194

RESIDENTIAL SERVICE CLASSIFICATIONS

A year-round residential customer classification applies to a customer's main place of abode and may include additional buildings served through the same meter, provided they are not rental income units. All of the following criteria must be met:

1. Occupant represents and warrants to Hydro One Networks Inc. that for so long as he/she has year-round residential rate status for the identified dwelling, he/she will not designate another property that he/she owns as a year-round residence for purposes of Hydro One rate classification.
2. Occupier must live in this residence for at least four (4) days of the week for eight (8) months of the year and the Occupier must not reside anywhere else for more than three (3) days a week during eight (8) months of the year.
3. The address of this residence must appear on documents such as the occupant's electric bill, driver's licence, credit card invoice, property tax bill, etc.
4. Occupants who are eligible to vote in Provincial or Federal elections must be enumerated for this purpose at the address of this residence.

Seasonal Residential customer classification is defined as any residential service that does not meet residential year-round criteria. It includes dwellings such as cottages, chalets and camps.

Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's conditions of Service.

APPLICATION

Hydro One Networks' residential service area is sub-divided into three density zones according to the following:

- Urban Density Zone is defined as areas containing 3,000 or more customers with a line density of at least 60 customers per circuit kilometer.
- Medium Density Zone is defined as areas containing 100 or more customers with a line density of at least 15 customers per circuit kilometer.
- Low Density Zone is defined as areas other than Urban or Medium Density Zone.

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

EB-2020-0194

GENERAL SERVICE CLASSIFICATIONS

General Service classification applies to any service that does not fit the description of residential classes. It includes combination type services where a variety of uses are made of the service by the owner of one property, and all multiple services except residential. Class A and Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

APPLICATION

Hydro One Networks' General Service area is sub-divided into two density zones according to the following:

- Urban Density Zone is defined as areas containing 3,000 or more customers with a line density of at least 60 customers per circuit kilometer.
- Non-Urban Density Zone is defined as areas other than Urban Density Zone.

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

If included in the following listing of monthly rates and charges, the rate rider for the disposition of WMS - Sub-account CBR Class B is not applicable to wholesale market participants (WMP), customers that transitioned between Class A and Class B during the variance account accumulation period, or to customers that were in Class A for the entire period. Customers who transitioned are to be charged or refunded their share of the variance disposed through customer specific billing adjustments. This rate rider is to be consistently applied for the entire period to the sunset date of the rate rider. In addition, this rate rider is applicable to all new Class B customers.

If included in the following listing of monthly rates and charges, the rate rider for the disposition of Global Adjustment is only applicable to non-RPP Class B customers. It is not applicable to WMP, customers that transitioned between Class A and Class B during the variance account accumulation period, or to customers that were in Class A for the entire period. Customers who transitioned are to be charged or refunded their share of the variance disposed through customer specific billing adjustments. This rate rider is to be consistently applied for the entire period to the sunset date of the rate rider. In addition, this rate rider is applicable to all new non-RPP Class B customers.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

URBAN GENERAL SERVICE DEMAND BILLED - UGd

This classification applies to a non-residential account located in an Urban Density Zone whose average monthly maximum demand is equal to or greater than, or is forecast to be equal to or greater than, 50 kW. Hydro One establishes billing determinants for demand customers' Distribution charges at the greater of 100 per cent of kW and 90 per cent of kVA where kVA metering is installed. When a customer's power factor is known to be less than 90 per cent, a kVA meter of equivalent electronic meter shall be used for measuring and billing.

GENERAL SERVICE DEMAND BILLED - GSd

This classification applies to a non-residential account not located in an Urban Density Zone whose average monthly maximum demand is equal to or greater than, or is forecast to be equal to or greater than, 50 kW. Hydro One establishes billing determinants for demand customers' Distribution charges at the greater of 100 per cent of kW and 90 per cent of kVA where kVA metering is installed. When a customer's power factor is known to be less than 90 per cent, a kVA meter or other equivalent electronic meter shall be used for measuring and billing.

DISTRIBUTED GENERATION - DGen

This classification applies to an embedded retail generation facility connected to the distribution system that is not classified as MicroFIT generation. Hydro One establishes billing determinants for demand customers' Distribution charges at the greater of 100 per cent of kW and 90 per cent of kVA where kVA metering is installed. When a customer's power factor is known to be less than 90 per cent, a kVA meter or other equivalent electronic meter shall be used for measuring and billing. Class A and Class B consumers are defined in accordance with O. Reg. 429/04.

SUB TRANSMISSION - ST

This classification applies to either:

- Embedded supply to Local Distribution Companies (LDCs). "Embedded" meaning receiving supply via Hydro One Distribution assets, and where Hydro One is the host distributor to the embedded LDC. Situations where the LDC is supplied via Specific Facilities are included. OR
- Load which:
 - is three-phase; and
 - is directly connected to and supplied from Hydro One Distribution assets between 44 kV and 13.8 kV inclusive; the meaning of "directly includes Hydro One not owning the local transformation; and
 - is greater than 500 kW (monthly measured maximum demand averaged over the most recent calendar year or whose forecasted monthly average demand over twelve consecutive months is greater than 500 kW).

Hydro One establishes billing determinants for demand customers' Distribution charges at the greater of 100 per cent of kW and 90 per cent of kVA where kVA metering is installed. When a customer's power factor is known to be less than 90 per cent, a kVA meter or other equivalent electronic meter shall be used for measuring and billing.

Class A and Class B consumers are defined in accordance with O. Reg. 429/04.

UNMETERED SCATTERED LOAD SERVICE CLASSIFICATION

This classification applies to an account taking electricity at 750 volts or less whose average monthly maximum demand is less than, or is forecast to be less than, 50 kW and the consumption is unmetered. The amount of electricity consumed by unmetered connections will be based on detailed information/documentation provided by the device's manufacturer and will be agreed to by Hydro One and the customer and may be subject to periodic monitoring of actual consumption. Eligible unmetered loads include cable TV amplifiers, bus shelters, telephone booths, traffic signals, railway crossings and other small fixed loads. Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

MONTHLY RATES AND CHARGES - Delivery Component

SENTINEL LIGHTING SERVICE CLASSIFICATION

This classification is applicable to all Hydro One Networks' customers who have separate service to a sentinel light. The energy consumption for sentinel lights is estimated based on Networks' profile for sentinel lighting load, which provides the amount of time each month that the sentinel lights are operating. Class B consumers are defined in accordance to O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, it should be noted that the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

STREET LIGHTING SERVICE CLASSIFICATION

This classification is applicable to all Hydro One Networks' customers who have streetlights, which are devices owned by or operated for a road authority and/or municipal corporation. The energy consumption for street lights is estimated based on Networks' profile for street lighting load, which provides the amount of time each month that the street lights are operating. Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

ALLOWANCES**CUSTOMER-SUPPLIED TRANSFORMATION ALLOWANCE**

Applicable to customers providing their own transformers and the primary voltage is under 50 kV

Demand Billed - per kW of billing demand/month	\$/kW	(0.60)
Energy Billed - per kWh of billing energy/month	\$/kWh	(0.0014)

TRANSFORMER LOSS ALLOWANCE

Applicable to non-ST customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side).

For installations up to and including bank capacity of 400 kVA	%	(1.50)
For bank capacities over 400 kVA	%	(1.00)

Applicable to ST customers requiring a billing adjustment for transformer losses as the result of being metered on the secondary side of a transformer. The uniform value of 1% shall be added to measured demand and energy (as measured on the secondary side) to adjust for transformer losses.

Alternately, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly.

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities.

RETAIL SERVICE CHARGES (if applicable)**APPLICATION**

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

Retail Service Charges refer to services provided by a distributor to retailers or customers related to the supply of competitive electricity

One-time charge, per retailer, to establish the service agreement between the distributor and the retailer	\$	104.24
Monthly fixed charge, per retailer	\$	41.70
Monthly variable charge, per customer, per retailer	\$	1.04
Distributor-consolidated billing monthly charge, per customer, per retailer	\$	0.62
Retailer-consolidated billing monthly credit, per customer, per retailer	\$	(0.62)
Service Transaction Requests (STR)		
Request fee, per request, applied to the requesting party	\$	0.52
Processing fee, per request, applied to the requesting party	\$	1.04
Request for customer information as outlined in Section 10.6.3 and Chapter 11 of the Retail Settlement Code directly to retailers and customers, if not delivered electronically through the Electronic Business Transaction (EBT) system, applied to the requesting party		
Up to twice a year	\$	no charge
More than twice a year, per request (plus incremental delivery costs)	\$	4.17
Notice of switch letter charge, per letter (unless the distributor has opted out of applying the charge as per the Ontario Energy Board's Decision and Order EB-2015-0304, issued on February 14, 2019)	\$	2.08

Approved on an Interim Basis
This schedule supersedes and replaces all previously
approved schedules of Rates, Charges and Loss Factors

EB-2020-0194

NOTES

1. The basis of the charge is the customer's monthly maximum demand. For an ST customer with multiple delivery points served from the same Transformer Station or High Voltage Distribution Station, the aggregated demand will be the applicable billing determinant. Demand is not aggregated between stations.
2. The basis of the charge is the customer's monthly maximum demand. For an ST customer with multiple delivery points served from the same Transformer Station or High Voltage Distribution Station, the aggregated demand will be the applicable billing determinant. Demand is not aggregated between stations.
3. The basis of the charge is the "non-coincident demand" at each delivery point of the customer supplied by the station. This is measured as the kW demand at the delivery point at the time in the month of maximum load on the delivery point. For a customer connected through two or more distribution stations, the total charge for the connection to the shared distribution stations is the sum of the relevant charges for each of the distribution stations.
4. The monthly billing determinant for the RTSR Network Service rate is:
 - a. For energy-only metered customers: the customer's metered energy consumption adjusted by the total loss factor as approved by the Ontario Energy Board.
 - b. For interval-metered customers: the peak demand from 7 AM to 7 PM (local time) on IESO business days in the billing period. The rates shown are to be adjusted by the total loss factor as approved by the Ontario Energy Board.
 - c. For non-interval-metered demand billed customers: the non-coincident peak demand in the billing period. The rates shown are to be adjusted by the total loss factor as approved by the Ontario Energy Board.
5. The monthly billing determinant for the RTSR Line and Transformation Connection Service rates:
 - a. For energy-only metered customers: the customer's metered energy consumption adjusted by the total loss factor as approved by the Ontario Energy Board.
 - b. For all demand billed customers: the non-coincident peak demand in the billing period. The rates shown are to be adjusted by the total loss factor as approved by the Ontario Energy Board.
 - c. For customers with load displacement generation above 1 MW, or 2 MW for renewable generation, installed after October 1998, RTSR connection is billed at the gross demand level.
6. Delivery point with respect to RTSR is defined as the low side of the Transformer Station that steps down voltage from above 50 kV to below 50 kV. For customer with multiple interval-metered delivery points served from the same Transformer Station, the aggregated demand at the said delivery points on the low side of the Transformer Station will be the applicable billing determinant.
7. The loss factors, and which connection service rates are applied, are determined based on the point at which the distribution utility or customer is metered for its connection to Hydro One Distribution's system. Hydro One Distribution's connection agreements with these distribution utilities and customers will establish the appropriate loss factors and connection rates to apply from Hydro One Distribution's tariff schedules.
8. The Common ST Lines rate also applies to Distributors which use lines in the 12.5 kV to 4.16 kV range from HVDSs or LVDSs.
9. Rate Rider for Disposition of Deferral/Variance Accounts (General) is charged based on appropriate billing kW.
10. Rate Rider for Disposition of Deferral/Variance Account (non-WMP customers) applies to non-WMP Class A or Class B customers.
11. The Meter charge is applied per metering facility at delivery points for which Hydro One owns the metering.
12. The Wholesale Market Service Rate and the Rural or Remote Electricity Rate Protection Charge are applied solely to non-Wholesale Market Participants. For Class A customers, distributors shall bill the actual CBDR costs to Class A customers in proportion to their contribution to peak. These rates pertain to the IESO's defined point of sale; consequently, appropriate loss factors as approved by the Ontario Energy Board must be applied to the customers metered energy.
13. The Global Adjustment rate rider applies to metered energy consumption adjusted by the total loss factor, as approved by the Ontario Energy Board, for non-LDC, non-RPP and Class B customers that are charged Wholesale Market Service Charges by Hydro One Distribution.
14. For customers with load displacement generation at 1MW or above, or 2MW or above for renewable generation, installed after October 1998, the ST volumetric charges are billed at the gross demand level.

RESIDENTIAL SERVICE CLASSIFICATION

This classification applies to an account taking electricity at 750 volts or less where the electricity is used exclusively in a separate metered living accommodation. Customers shall be residing in single-dwelling units that consist of a detached house or one unit of a semi-detached, duplex, triplex or quadruplex house, with a residential zoning. Separately metered dwellings within a town house complex or apartment building also qualify as residential customers. All customers are single-phase. Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

GENERAL SERVICE LESS THAN 50 KW SERVICE CLASSIFICATION

This classification applies to a non residential account taking electricity at 750 volts or less whose average monthly maximum demand is less than, or is forecast to be less than, 50 kW. Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

approved schedules of Rates, Charges and Loss Factors

GENERAL SERVICE 50 TO 4,999 KW SERVICE CLASSIFICATION

This classification applies to a non residential account whose average monthly maximum demand used for billing purposes is equal to or greater than, or is forecast to be equal to or greater than, 50 kW but less than 5,000 kW. Class A and Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable.

If included in the following listing of monthly rates and charges, the rate rider for the disposition of WMS - Sub-account CBR Class B is not applicable to wholesale market participants (WMP), customers that transitioned between Class A and Class B during the variance account accumulation period, or to customers that were in Class A for the entire period. Customers who transitioned are to be charged or refunded their share of the variance disposed through customer specific billing adjustments. This rate rider is to be consistently applied for the entire period to the sunset date of the rate rider. In addition, this rate rider is applicable to all new Class B customers.

If included in the following listing of monthly rates and charges, the rate rider for the disposition of Global Adjustment is only applicable to non-RPP Class B customers. It is not applicable to WMP, customers that transitioned between Class A and Class B during the variance account accumulation period, or to customers that were in Class A for the entire period. Customers who transitioned are to be charged or refunded their share of the variance disposed through customer specific billing adjustments. This rate rider is to be consistently applied for the entire period to the sunset date of the rate rider. In addition, this rate rider is applicable to all new non-RPP Class B customers.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

UNMETERED SCATTERED LOAD SERVICE CLASSIFICATION

This classification applies to an account taking electricity at 750 volts or less whose average monthly maximum demand is less than, or is forecast to be less than, 50 kW and the consumption is unmetered. Such connections include cable TV power packs, bus shelters, telephone booths, traffic lights, railway crossings, etc. The level of the consumption will be agreed to by the distributor and the customer, based on detailed manufacturer information/ documentation with regard to electrical consumption of the unmetered load or periodic monitoring of actual consumption. Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

TARIFF OF RATES AND CHARGES

Effective and Implementation Date January 1, 2021

This schedule supersedes and replaces all previously
approved schedules of Rates, Charges and Loss Factors

RETAIL SERVICE CHARGES (if applicable)

APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

Retail Service Charges refer to services provided by a distributor to retailers or customers related to the supply of competitive electricity.

One-time charge, per retailer, to establish the service agreement between the distributor and the retailer	\$	104.24
Monthly fixed charge, per retailer	\$	41.70
Monthly variable charge, per customer, per retailer	\$/cust.	1.04
Distributor-consolidated billing monthly charge, per customer, per retailer	\$/cust.	0.62
Retailer-consolidated billing monthly credit, per customer, per retailer	\$/cust.	(0.62)
Service Transaction Requests (STR)		
Request fee, per request, applied to the requesting party	\$	0.52
Processing fee, per request, applied to the requesting party	\$	1.04
Request for customer information as outlined in Section 10.6.3 and Chapter 11 of the Retail Settlement Code directly to retailers and customers, if not delivered electronically through the Electronic Business Transaction (EBT) system, applied to the requesting party		
Up to twice a year		no charge
More than twice a year, per request (plus incremental delivery costs)	\$	4.17
Notice of switch letter charge, per letter (unless the distributor has opted out of applying the charge as per the Ontario Energy Board's Decision and Order EB-2015-0304, issued on February 14, 2019)	\$	2.08

LOSS FACTORS

If the distributor is not capable of prorating changed loss factors jointly with distribution rates, the revised loss factors will be implemented upon the first subsequent billing for each billing cycle.

Total Loss Factor - Secondary Metered Customer < 5,000 kW	1.0564
Total Loss Factor - Secondary Metered Customer > 5,000 kW	1.0564
Total Loss Factor - Primary Metered Customer < 5,000 kW	1.0464
Total Loss Factor - Primary Metered Customer > 5,000 kW	1.0464

RESIDENTIAL SERVICE CLASSIFICATION

This classification applies to a customer's main place of abode and may include additional buildings served through the same meter, provided they are not rental income units. Residential includes Urban, Suburban and Farm customer's premises which can be occupied on a year-round and seasonal basis. Farm applies to properties actively engaged in agricultural production as defined by Statistics Canada. These premises must be supplied from a single phase primary line. The farm definition does not include tree, sod, or pet farms. Services to year-round pumping stations or other ancillary services remote from the main farm shall be classed as farm. Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

GENERAL SERVICE 50 TO 4,999 KW SERVICE CLASSIFICATION

General Service does include farms supplied from polyphase primary lines. General Service includes commercial, industrial, educational, administrative, auxiliary and government services. It also includes combination services where a variety of uses are made of the service by the owner of one property. This classification applies to a non-residential account whose average monthly maximum demand used for billing purposes is equal to or greater than, or is forecast to be equal to or greater than, 50 kW but less than 5,000 kW. Class A and Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

If included in the following listing of monthly rates and charges, the rate rider for the disposition of WMS - Sub-account CBR Class B is not applicable to wholesale market participants (WMP), customers that transitioned between Class A and Class B during the variance account accumulation period, or to customers that were in Class A for the entire period. Customers who transitioned are to be charged or refunded their share of the variance disposed through customer specific billing adjustments. This rate rider is to be consistently applied for the entire period to the sunset date of the rate rider. In addition, this rate rider is applicable to all new Class B customers.

If included in the following listing of monthly rates and charges, the rate rider for the disposition of Global Adjustment is only applicable to non-RPP Class B customers. It is not applicable to WMP, customers that transitioned between Class A and Class B during the variance account accumulation period, or to customers that were in Class A for the entire period. Customers who transitioned are to be charged or refunded their share of the variance disposed through customer specific billing adjustments. This rate rider is to be consistently applied for the entire period to the sunset date of the rate rider. In addition, this rate rider is applicable to all new non-RPP Class B customers.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

TARIFF OF RATES AND CHARGES

Effective and Implementation Date January 1, 2021

This schedule supersedes and replaces all previously
approved schedules of Rates, Charges and Loss Factors

RETAIL SERVICE CHARGES (if applicable)

APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

Retail Service Charges refer to services provided by a distributor to retailers or customers related to the supply of competitive electricity.

One-time charge, per retailer, to establish the service agreement between the distributor and the retailer	\$	104.24
Monthly fixed charge, per retailer	\$	41.70
Monthly variable charge, per customer, per retailer	\$/cust.	1.04
Distributor-consolidated billing monthly charge, per customer, per retailer	\$/cust.	0.62
Retailer-consolidated billing monthly credit, per customer, per retailer	\$/cust.	(0.62)
Service Transaction Requests (STR)		
Request fee, per request, applied to the requesting party	\$	0.52
Processing fee, per request, applied to the requesting party	\$	1.04
Request for customer information as outlined in Section 10.6.3 and Chapter 11 of the Retail Settlement Code directly to retailers and customers, if not delivered electronically through the Electronic Business Transaction (EBT) system, applied to the requesting party		
Up to twice a year		no charge
More than twice a year, per request (plus incremental delivery costs)	\$	4.17
Notice of switch letter charge, per letter (unless the distributor has opted out of applying the charge as per the Ontario Energy Board's Decision and Order EB-2015-0304, issued on February 14, 2019)	\$	2.08

LOSS FACTORS

If the distributor is not capable of prorating changed loss factors jointly with distribution rates, the revised loss factors will be implemented upon the first subsequent billing for each billing cycle.

Total Loss Factor - Secondary Metered Customer < 5,000 kW	1.0655
Total Loss Factor - Primary Metered Customer < 5,000 kW	1.0548
Total Loss Factor - Embedded Distributor - Hydro One Networks Inc.	1.0288

RESIDENTIAL SERVICE CLASSIFICATION

This classification applies to an account taking electricity at 750 volts or less where the electricity is used exclusively in a separate metered living accommodation. Customers shall be residing in single-dwelling units that consist of a detached house or one unit of a semi-detached, duplex, triplex or quadruplex house, with a residential zoning. Separately metered dwellings within a town house complex or apartment building also qualify as residential customers. Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

GENERAL SERVICE 50 TO 999 KW SERVICE CLASSIFICATION

This classification applies to a non residential account whose average monthly maximum demand used for billing purposes is equal to or greater than, or is forecast to be equal to or greater than, 50 kW but less than 1,000 kW. Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

If included in the following listing of monthly rates and charges, the rate rider for the disposition of WMS - Sub-account CBR Class B is not applicable to wholesale market participants (WMP), customers that transitioned between Class A and Class B during the variance account accumulation period, or to customers that were in Class A for the entire period. Customers who transitioned are to be charged or refunded their share of the variance disposed through customer specific billing adjustments. This rate rider is to be consistently applied for the entire period to the sunset date of the rate rider. In addition, this rate rider is applicable to all new Class B customers.

If included in the following listing of monthly rates and charges, the rate rider for the disposition of Global Adjustment is only applicable to non-RPP Class B customers. It is not applicable to WMP, customers that transitioned between Class A and Class B during the variance account accumulation period, or to customers that were in Class A for the entire period. Customers who transitioned are to be charged or refunded their share of the variance disposed through customer specific billing adjustments. This rate rider is to be consistently applied for the entire period to the sunset date of the rate rider. In addition, this rate rider is applicable to all new non-RPP Class B customers.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

TARIFF OF RATES AND CHARGES

Effective and Implementation Date January 1, 2023

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

EB-2021-0110

RESIDENTIAL SERVICE CLASSIFICATIONS - HYDRO ONE NETWORKS INC. SERVICE AREA

These classifications apply to year-round and seasonal residential properties. A year-round residential property, located in Hydro One Networks Inc.'s service area excluding former Norfolk Power Distribution Inc., Haldimand County Hydro Inc. and Woodstock Hydro Service Inc.'s service areas., is considered to be customer's main place of abode and may include additional buildings served through the same meter, provided they are not rental income units. All of the following criteria must be met:

1. Occupant represents and warrants to Hydro One Networks Inc. that for so long as he/she has year-round residential rate status for the identified dwelling, he/she will not designate another property that he/she owns as a year-round residence for purposes of Hydro One rate classification.
2. Occupier must live in this residence for at least four (4) days of the week for eight (8) months of the year and the Occupier must not reside anywhere else for more than three (3) days a week during eight (8) months of the year.
3. The address of this residence must appear on documents such as the occupant's electric bill, driver's licence, credit card invoice, property tax bill, etc.
4. Occupants who are eligible to vote in Provincial or Federal elections must be enumerated for this purpose at the address of this residence.

A seasonal property is defined as any residential service that does not meet residential year-round criteria. It includes dwellings such as cottages, chalets and camps.

Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's conditions of Service.

APPLICATION

Hydro One Networks' residential service area is sub-divided into three density zones according to the following:

- Urban Density Zone is defined as areas containing 3,000 or more customers with a line density of at least 60 customers per circuit kilometer.
- Medium Density Zone is defined as areas containing 100 or more customers with a line density of at least 15 customers per circuit kilometer.
- Low Density Zone is defined as areas other than Urban or Medium Density Zone.

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

EB-2021-0110

GENERAL SERVICE CLASSIFICATIONS - HYDRO ONE NETWORKS INC. SERVICE AREA

These classifications apply to properties located in Hydro One Networks Inc.'s service area, which excludes former Norfolk Power Distribution Inc., Haldimand County Hydro Inc. and Woodstock Hydro Service Inc.'s service areas with one exception - Sub-Transmission (ST). The ST rate class applies to properties located in Hydro One Networks Inc. service area as well as former Norfolk Power Distribution Inc., Haldimand County Hydro Inc. and Woodstock Hydro Service Inc.'s service areas. General Service classification applies to any service that does not fit the description of residential classes. It includes combination type services where a variety of uses are made of the service by the owner of one property, and all multiple services except residential. Class A and Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

APPLICATION

Hydro One Networks' General Service area is sub-divided into two density zones according to the following:

- Urban Density Zone is defined as areas containing 3,000 or more customers with a line density of at least 60 customers per circuit kilometer.
- Non-Urban Density Zone is defined as areas other than Urban Density Zone.

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

If included in the following listing of monthly rates and charges, the rate rider for the disposition of WMS - Sub-account CBR Class B is not applicable to wholesale market participants (WMP), customers that transitioned between Class A and Class B during the variance account accumulation period, or to customers that were in Class A for the entire period. Customers who transitioned are to be charged or refunded their share of the variance disposed through customer specific billing adjustments. This rate rider is to be consistently applied for the entire period to the sunset date of the rate rider. In addition, this rate rider is applicable to all new Class B customers.

If included in the following listing of monthly rates and charges, the rate rider for the disposition of Global Adjustment is only applicable to non-RPP Class B customers. It is not applicable to WMP, customers that transitioned between Class A and Class B during the variance account accumulation period, or to customers that were in Class A for the entire period. Customers who transitioned are to be charged or refunded their share of the variance disposed through customer specific billing adjustments. This rate rider is to be consistently applied for the entire period to the sunset date of the rate rider. In addition, this rate rider is applicable to all new non-RPP Class B customers.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

SUB TRANSMISSION - ST

This classification applies to either:

- Embedded supply to Local Distribution Companies (LDCs). "Embedded" meaning receiving supply via Hydro One Distribution assets, and where Hydro One is the host distributor to the embedded LDC. Situations where the LDC is supplied via Specific Facilities are included. OR
- Load which:
 - is three-phase; and
 - is connected to and supplied from Hydro One Distribution assets between 44 kV and 13.8 kV inclusive; and
 - is greater than 500 kW (monthly measured maximum demand averaged over the most recent calendar year or whose forecasted monthly average demand over twelve consecutive months is greater than 500 kW).

Hydro One establishes billing determinants for demand customers' Distribution charges at the greater of 100 per cent of kW and 90 per cent of kVA where kVA metering is installed. When a customer's power factor is known to be less than 90 per cent, a kVA meter or other equivalent electronic meter shall be used for measuring and billing.

Class A and Class B consumers are defined in accordance with O. Reg. 429/04.

UNMETERED SCATTERED LOAD SERVICE CLASSIFICATION

This classification applies to properties located in Hydro One Networks Inc. service area as well as former Norfolk Power Distribution Inc., Haldimand County Hydro Inc. and Woodstock Hydro Service Inc.'s service areas. Unmetered Scattered Load classification applies to an account taking electricity at 750 volts or less whose average monthly maximum demand is less than, or is forecast to be less than, 50 kW and the consumption is unmetered. The amount of electricity consumed by unmetered connections will be based on detailed information/documentation provided by the device's manufacturer and will be agreed to by Hydro One and the customer and may be subject to periodic monitoring of actual consumption. Eligible unmetered loads include cable TV amplifiers, bus shelters, telephone booths, railway crossings and other small fixed loads. Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

SENTINEL LIGHTING SERVICE CLASSIFICATION

This classification is applicable to all Hydro One Networks' customers, including customers in former Norfolk Power Distribution Inc., Haldimand County Hydro Inc. and Woodstock Hydro Service Inc.'s service areas who have separate service to a sentinel light. The energy consumption for sentinel lights is estimated based on Networks' profile for sentinel lighting load, which provides the amount of time each month that the sentinel lights are operating. Class B consumers are defined in accordance to O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, it should be noted that the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

ACQUIRED GENERAL SERVICE CLASSIFICATIONS

Acquired General Service classification applies to any service that does not fit the description of acquired residential classes. It includes combination type services where a variety of uses are made of the service by the owner of one property, and all multiple services except residential. Class A and Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

If included in the following listing of monthly rates and charges, the rate rider for the disposition of WMS - Sub-account CBR Class B is not applicable to wholesale market participants (WMP), customers that transitioned between Class A and Class B during the variance account accumulation period, or to customers that were in Class A for the entire period. Customers who transitioned are to be charged or refunded their share of the variance disposed through customer specific billing adjustments. This rate rider is to be consistently applied for the entire period to the sunset date of the rate rider. In addition, this rate rider is applicable to all new Class B customers.

If included in the following listing of monthly rates and charges, the rate rider for the disposition of Global Adjustment is only applicable to non-RPP Class B customers. It is not applicable to WMP, customers that transitioned between Class A and Class B during the variance account accumulation period, or to customers that were in Class A for the entire period. Customers who transitioned are to be charged or refunded their share of the variance disposed through customer specific billing adjustments. This rate rider is to be consistently applied for the entire period to the sunset date of the rate rider. In addition, this rate rider is applicable to all new non-RPP Class B customers.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

This classification applies to an electricity generation facility, located in Hydro One Networks Inc. service area as well as former Norfolk Power Distribution Inc., Haldimand County Hydro Inc. and Woodstock Hydro Service Inc.'s service areas, contracted under the Independent Electricity System Operator's microFIT program and connected to the distributor's distribution system. Further servicing details are available in the distributor's Conditions of Service.

APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

Energy Billed - per kWh of billing energy/month	\$/kWh	(0.0014)

TRANSFORMER LOSS ALLOWANCE

Applicable to non-ST customers requiring a billing adjustment for transformer losses as the result of being metered on the primary side of a transformer. The following uniform values shall be applied to measured demand and energy to calculate transformer losses for voltages up to and including 50 kV (as metered on the primary side).

For installations up to and including bank capacity of 400 kVA	%	(1.50)
For bank capacities over 400 kVA	%	(1.00)

Applicable to ST customers requiring a billing adjustment for transformer losses as the result of being metered on the secondary side of a transformer. The uniform value of 1% shall be added to measured demand and energy (as measured on the secondary side) to adjust for transformer losses.

Alternately, transformer losses may be determined from transformer test data, and measured demand and energy adjusted accordingly.

For services which are not demand metered, an assumed demand of 50% of the transformer capacity will be used to calculate the loss allowance. Where several transformers are involved, the bank capacity is assumed to be the arithmetic sum of all transformer capacities.

LOSS FACTORS

Residential - UR	1.057

TARIFF OF RATES AND CHARGES

Effective and Implementation Date January 1, 2023

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

EB-2021-0110

SPECIFIC SERVICE CHARGES

APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

Customer Administration

Easement letter - letter request	\$	92.51
Easement letter - web request	\$	25.00
Returned cheque charge	\$	7.00
Account set up charge/change of occupancy charge (plus credit agency costs, if applicable)	\$	38.00
Special meter reads (retailer requested off-cycle read)	\$	90.00
Meter dispute charge plus Measurement Canada fees (if meter found correct)	\$	30.00

Non-Payment of Account ~~(see Note 15)~~

Late payment - per month (effective annual rate 19.56% per annum or 0.04896% compounded daily rate)	%	1.50
Collection - reconnect at meter - during regular hours	\$	65.00
Collection - reconnect at meter - after regular hours	\$	185.00
Collection - reconnect at pole - during regular hours	\$	185.00
Collection - reconnect at pole - after regular hours	\$	415.00

Other

Service call - customer owned equipment - during regular hours	\$	210.00*
Service call - customer owned equipment - after regular hours	\$	775.00*
Specific charge for access to power poles - telecom	\$	44.50
Reconnect completed after regular hours (customer/contract driven) - at meter	\$	245.00
Reconnect completed after regular hours (customer/contract driven) - at pole	\$	475.00
Additional service layout fee - basic/complex (more than one hour)	\$	595.20
Pipeline crossings	\$	2,499.29
Water crossings	\$	3,717.21
	\$	
		\$4,965.66 plus
Railway crossings		Railway Feedthrough Costs

EB-2021-0110

Overhead line staking per meter	\$	4.42
Underground line staking per meter	\$	3.18
Subcable line staking per meter	\$	2.78
Central metering - new service <45 kw	\$	100.00
Conversion to central metering <45 kw	\$	1,612.75
Conversion to central metering >=45 kw	\$	1,512.75
Connection impact assessments - net metering	\$	3,329.86
Connection impact assessments - embedded LDC generators	\$	2,996.97
Connection impact assessments - small projects <= 500 kw	\$	3,405.38
Connection impact assessments - small projects <= 500 kw, simplified	\$	2,054.41
Connection impact assessments - greater than capacity allocation exempt projects - capacity allocation required projects	\$	9,011.83
Connection impact assessments - greater than capacity allocation exempt projects - TS review for LDC capacity allocation required projects	\$	5,969.89
Specific charge for access to power poles - LDC	\$	see below
Specific charge for access to power poles - generators	\$	see below
Specific charge for access to power poles - municipal streetlights	\$	2.04
Sentinel light rental charge	\$	10.00
Sentinel light pole rental charge	\$	7.00

*Base Charge only. Additional work on equipment will be based on actual costs.

Specific Charge for LDCs Access to the Power Poles (\$/pole/year)

LDC rate for 10' of power space	\$	90.60
LDC rate for 15' of power space	\$	108.72
LDC rate for 20' of power space	\$	120.80
LDC rate for 25' of power space	\$	129.43
LDC rate for 30' of power space	\$	135.90
LDC rate for 35' of power space	\$	140.93
LDC rate for 40' of power space	\$	144.96
LDC rate for 45' of power space	\$	148.25
LDC rate for 50' of power space	\$	151.00
LDC rate for 55' of power space	\$	153.32
LDC rate for 60' of power space	\$	155.31

Specific Charge for Generator Access to the Power Poles (\$/pole/year)

Generator rate for 10' of power space	\$	90.60
Generator rate for 15' of power space	\$	108.72
Generator rate for 20' of power space	\$	120.80
Generator rate for 25' of power space	\$	129.43
Generator rate for 30' of power space	\$	135.90
Generator rate for 35' of power space	\$	140.93
Generator rate for 40' of power space	\$	144.96
Generator rate for 45' of power space	\$	148.25
Generator rate for 50' of power space	\$	151.00
Generator rate for 55' of power space	\$	153.32
Generator rate for 60' of power space	\$	155.31

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

EB-2021-0110

RETAIL SERVICE CHARGES (if applicable)*

APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

Retail Service Charges refer to services provided by a distributor to retailers or customers related to the supply of competitive electricity

One-time charge, per retailer, to establish the service agreement between the distributor and the retailer	\$	104.24
Monthly fixed charge, per retailer	\$	41.70
Monthly variable charge, per customer, per retailer	\$	1.04
Distributor-consolidated billing monthly charge, per customer, per retailer	\$	0.62
Retailer-consolidated billing monthly credit, per customer, per retailer	\$	(0.62)
Service Transaction Requests (STR)		
Request fee, per request, applied to the requesting party	\$	0.52
Processing fee, per request, applied to the requesting party	\$	1.04
Request for customer information as outlined in Section 10.6.3 and Chapter 11 of the Retail Settlement Code directly to retailers and customers, if not delivered electronically through the Electronic Business Transaction (EBT) system, applied to the requesting party		
Up to twice a year	\$	no charge
More than twice a year, per request (plus incremental delivery costs)	\$	4.17
More than twice a year, per request (plus incremental delivery costs)	\$	4.17

* RSCs shown are currently approved (2021) values and will be updated in the subsequent phases of this application, as and when new inflation factors are issued by the OEB (as required by the Report of the OEB on Energy Retailer Services Charges, EB-2015-0304, November 29th, 2018).

Hydro One Networks Inc.

TARIFF OF RATES AND CHARGES

Effective and Implementation Date January 1, 2023

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

EB-2021-0110

NOTES

1. The basis of the charge is the customer's monthly maximum demand. For an ST customer with multiple delivery points served from the same Transformer Station or High Voltage Distribution Station, the aggregated demand will be the applicable billing determinant. Demand is not aggregated between stations.
2. The basis of the charge is kilometers of line, within the supplied LDC's service area, supplying solely that LDC.
3. The basis of the charge is the "non-coincident demand" at each delivery point of the customer supplied by the station. This is measured as the kW demand at the delivery point at the time in the month of maximum load on the delivery point. For a customer connected through two or more distribution stations, the total charge for the connection to the shared distribution stations is the sum of the relevant charges for each of the distribution stations.
4. The monthly billing determinant for the RTSR Network Service rate is:
 - a. For energy-only metered customers: the customer's metered energy consumption adjusted by the total loss factor as approved by the Ontario Energy Board.
 - b. For interval-metered customers: the peak demand from 7 AM to 7 PM (local time) on IESO business days in the billing period. The rates shown are to be adjusted by the total loss factor as approved by the Ontario Energy Board.
 - c. For non-interval-metered demand billed customers: the non-coincident peak demand in the billing period. The rates shown are to be adjusted by the total loss factor as approved by the Ontario Energy Board.
5. The monthly billing determinant for the RTSR Line and Transformation Connection Service rates:
 - a. For energy-only metered customers: the customer's metered energy consumption adjusted by the total loss factor as approved by the Ontario Energy Board.
 - b. For all demand billed customers: the non-coincident peak demand in the billing period. The rates shown are to be adjusted by the total loss factor as approved by the Ontario Energy Board.
 - c. For customers with load displacement generation above 1 MW, or 2 MW for renewable generation, installed after October 1998, RTSR connection is billed at the gross demand level.
6. Delivery point with respect to RTSR is defined as the low side of the Transformer Station that steps down voltage from above 50 kV to below 50 kV. For customer with multiple interval-metered delivery points served from the same Transformer Station, the aggregated demand at the said delivery points on the low side of the Transformer Station will be the applicable billing determinant.
7. The loss factors, and which connection service rates are applied, are determined based on the point at which the distribution utility or customer is metered for its connection to Hydro One Distribution's system. Hydro One Distribution's connection agreements with these distribution utilities and customers will establish the appropriate loss factors and connection rates to apply from Hydro One Distribution's tariff schedules.
8. The Common ST Lines rate also applies to Distributors which use lines in the 12.5 kV to 4.16 kV range from HVDSs or LVDSs.
9. Rate Rider for Disposition of Group 1 Deferral/Variance Accounts (General) is charged based on appropriate billing kW.
10. Rate Rider for Disposition of Group 1 Deferral/Variance Account (non-WMP) applies to non-WMP Class A or Class B customers.
11. The Meter charge is applied per metering facility at delivery points for which Hydro One owns the metering.
12. The Wholesale Market Service Rate and the Rural or Remote Electricity Rate Protection Charge are applied solely to non-Wholesale Market Participants. For Class A customers, distributors shall bill the actual CBDR costs to Class A customers in proportion to their contribution to peak. These rates pertain to the IESO's defined point of sale; consequently, appropriate loss factors as approved by the Ontario Energy Board must be applied to the customers metered energy.
13. The Global Adjustment rate rider applies to metered energy consumption, as approved by the Ontario Energy Board, for non-LDC, non-RPP and Class B customers that are charged Wholesale Market Service Charges by Hydro One Distribution.
14. For customers with load displacement generation at 1MW or above, or 2MW or above for renewable generation, installed after October 1998, the ST volumetric charges are billed at the gross demand level.
15. Local Transformation Charge applies to customers in the ST class who make use of Hydro One owned local transformation facilities.
