Interrogatory:
Custom IR proceedings are intended to be framed more like performance inquiries resulting in multi-year outcome commitments and measures that facilitate year-over-year performance assessment.

Response:
Hydro One notes that this interrogatory poses no question.

Balsam Lake Coalition Interrogatory # 1

Issue:

Issue 1: Has Hydro One responded appropriately to all relevant OEB directions from previous proceedings?

Reference:

Previous Proceeding
EB-2013-0416/EB-2015-0079, Decision dated December 22, 2015
EB-2016-0315, Procedural Order No. 1 dated November 3, 2016 (as corrected)

Interrogatory:

a) What steps, if any, has Hydro One taken subsequent to the Board's decision EB-2013-0416/EB-2015-0079 dated December 22, 2015 to comply with the Board's order to eliminate the Seasonal Rate class?

b) Please provide any information provided to Hydro One from the OEB with respect to taking steps towards the elimination of the Seasonal Rate class beyond the transition to fully fixed rates in the EB-2015-0079 decision, including but not limited to the continuation of the EB-2016-0315 proceeding.

c) Please confirm that all of Hydro One's rates continue to be interim effective November 3, 2016 pursuant to the Procedural Order No. 1 in EB-2016-0315 dated November 3, 2016 (as corrected). If not confirmed, please provide the OEB order making rates subsequent to November 3, 2016 final.

Response:

a) Subsequent to the Board's decision in EB-2013-0416/EB-2015-0079 dated December 22, 2015 Hydro One prepared a "Report on the Elimination of the Seasonal Class" that was filed with the OEB on August 4, 2015. On September 30, 2015 the OEB issued an Order requiring Hydro One to apply the OEB's policy on distribution rate design (i.e. move to all-fixed rates) for residential customers to its Seasonal class, which Hydro One did in setting 2016 and 2017 distribution rates, and has proposed in this current application. On November 3, 2016 the OEB issued Procedural Order #1 (PO#1), corrected on November 10, for a new OEB-initiated proceeding EB-2016-0315 to consider the remaining steps for elimination of the Seasonal class. On December 1, 2016, in response to PO#1, Hydro One provided an update to the August 4, 2015 Report that addressed the items raised in PO#1, and also filed a draft Notice of Proceeding as requested.

b) Please see the response to Exhibit I-16-CCC-17 for an email exchange with Board staff seeking clarification on information provided in the updated report.

c) Confirmed.

Interrogatory:

What conclusions has Hydro One drawn from the Total Factor Productivity Study and what if any changes has it made to its operations as a result?

Response:

The Total Factor Productivity ("TFP") Study has, among other things, concluded that Hydro One's overall internal productivity has improved in recent years. Further details can be found in the report. The conclusions in the TFP study are also consistent with the results of the PSE's Total Cost Benchmarking study (Exhibit A, Tab 3, Schedule 2, Attachment 2) which shows an improvement in cost performance relative to Hydro One's peers and has resulted in an improvement to Hydro One's assigned stretch factor cohort. Combined, these studies show the improvements that Hydro One has been making in the efficiency of its operations. The Total Factor Productivity study was used to inform Hydro One's proposed Revenue Cap Index, as described in Exhibit A, Tab 3, Schedule 2.

Interrogatory:

Prior to the break-up of Ontario Hydro, vegetation management was a significant program for the Distribution System Division. When was vegetation management program reduced and what were the impacts of doing so on reliability?

Response:

The vegetation management program remains a major component of Hydro One's distribution maintenance budget, accounting for over 43% of the total Sustaining OM&A budget as documented in Table 1 of Exhibit C1, Tab 1, Schedule 2. Furthermore the historical year over year spending on the vegetation management program has been on an upward trend. Despite an increasing budget, tree contact reliability trends have been increasing (as noted in Table 13 and Table 14 in Exhibit B1, Tab 1, Schedule 1, DSP Section 1.4) and this correlation is one of the major drivers of the change in vegetation management approach outlined in Exhibit Q, Tab 1 Schedule 1.

A-03-01-03 Internal Audit Report of Auditor General – Final Report of Internal Auditor, March 31, 2017

Interrogatory:

a) Auditor General ("AG") had seventeen specific issues for Hydro One. How many of the AG's actions did Hydro One accept as valid and requiring action?

b) What are the thirty-seven actions that it corrected, and show which AG recommendation each of the thirty-seven actions related to. What were the seventy-one corrected actions that HONI corrected (p2), and how do they relate to the thirty-seven actions mentioned at p1 and which AG's report engaged; which ones are now accepted, and which are outstanding? Please confirm their description with Appendix A for each of the AG's seventeen recommendations.

Response:

a) Hydro One's responses and actions pertaining to the Auditor General's seventeen recommendations are included in the published Auditor General's 2015 Annual Report.

b) Please refer to Exhibit I-3-SEC-7.

Interrogatory:

a) Please provide the cost benefit analysis of planned maintenance activities conducted by Planning, and indicate why, as noted by the AG, the results were not used in the 2018 Investment Plan.

b) Why were multi-year reliability targets not established?

c) What was the reliability target for 2017? Was it met?

Response:

a) The AG's finding in question relates to AG Recommendation #1 which is in reference to the cost benefit analysis of the planned maintenance activities for Hydro One Transmission, and therefore not relevant to the distribution rate filing.

b) Multi-year distribution reliability targets have been established; please refer to interrogatory response Exhibit I-18-SEC-29.

c) The transmission reliability target for 2017 was met but it is not relevant to this proceeding.

Interrogatory:
What was Hydro One's reply to the AG's claim that assets in good condition were replaced before assets in poor or very poor condition? What are the statistics for each type of asset over each of the last three years? What, if any, is management commitment going forward? Please provide a description of each instance in 2015, 2016, and 2017 where an asset now in poor or very poor condition was replaced, and the reasons for that specific decision.

Response:
None of the AG’s recommendations highlight a concern regarding Hydro One replacing distribution assets in good condition before assets in poor or very poor condition. The AG’s finding in question relates to AG Recommendation #3 (please refer to Exhibit A, Tab 3, Schedule 1, Attachment 3, Appendix A, page 4) which is in reference to Hydro One Transmission’s assets not Hydro One Distribution’s assets and therefore not relevant to the distribution rate filing.

Building Owners and Managers Association Toronto Interrogatory # 44

Issue:

Issue 1: Has Hydro One responded appropriately to all relevant OEB directions from previous proceedings?

Interrogatory:

Please explain the purpose, and terms of reference for the Data Governance Project. How will the report address the shortcomings in data analytics pointed out by AG, in particular, with respect to HONI distribution? Please provide copies of the report, if completed. Have results been used in this filing?

Response:

Data governance provides the framework to continuously improve data quality and completeness. There is no Data Governance report; however, a Data Governance project is currently underway.

The Data Governance project, as noted in AG #11 for Hydro One distribution assets, was to provide data completeness improvements where missing data exists, review data requirement needs, and to clarify ongoing accountability, processes and communication to monitor and remedy data issues.

Hydro One is currently addressing the data analytics shortcomings. Data requirements have been identified and remediation activities are scheduled to be completed in 2018.

Yes, the results carried out in 2016 were used in this filing.

Interrogatory:
Please provide a summary of the Project Charter for the AMIA project. When will the results be available?

Response:
The Advanced Metering Infrastructure for Analytics (AMIA) project built a system that relates operational data with other data (meter, asset, customer, etc.) and provides an ability to perform analytics against the integrated "big data" set.

The project sourced, integrated and stored enterprise data in an efficient "big data" infrastructure and provisioned the query and data extraction needed to perform the following business use cases:

Use Case	Description
Load Analytics	Provides hourly kWh profiles for all transformers on the network.
Feeder Analysis	Provides hourly kWh profiles for all transformers on the network.
DMS Profiles	Provides normalized profiles for mass market customers and average load profiles for large commercial/industrial customers.
High Usage Bill Alerts	Provides data integration for the system to provide customers insights into the electricity usage.
Home Energy Dashboards	Provides data integration for the system that alerting customers when they are consuming above normal electricity.

Along with these specific use cases, the AMIA solution is provided the following benefits to Hydro One:

1. An integrated and consistent store of operational, transactional, and analytical data used for decision-making:
    a) Centralized/single point of data source integration (i.e., ‘touch once’)
    b) Optimized storage and architected for performance
    c) Architected and managed environment
    d) Available to all lines of business, as required
    e) Reusable and leverages existing Hydro One investments
    f) Ability to integrate multiple data sources (internal and external)
2. An adaptable and extensible technical environment to support future business requirements;
3. An efficient and economic storage structure with near-time access to many years of operational and transactional data;
4. Ability to minimize data inconsistencies and replication of errors downstream of various business activities by ensuring business process and data requirements are aligned and managed over time to facilitate positive data quality impacts on all analytics;
5. The planning, managing, and engagement framework for long-term sustainment;

The project results are available in Exhibit I-23-Staff-87.

11

1.0 OBJECTIVE OF STRATEGY DOCUMENT

The objective of this document is to provide strategic direction and establish a framework to manage Hydro One's distribution station operating spare transformer inventory through the following principles:

- Determine optimal number of operating spares using a proven analytical methodology
- Strong and transparent management oversight over operating spare inventory control
- Continuous improvement to minimize carrying costs of operating spares

2.0 EXECUTIVE SUMMARY

Hydro One manages a fleet of approximately 1,220 distribution station (DS) transformers. Operating spares are a strategic investment to mitigate the adverse outcomes resulting from the failure of in-service transformers. These operating spare transformers are required to replace power transformers that have failed, or are failing and must be replaced immediately to maintain the integrity of the system. They are also required to replace transformers which generate customer complaints with noise levels that exceed the guidelines set by the Ministry of Environment and Climate Change (MOECC). Furthermore, operating spare transformers are required to replace in service transformers that have become significantly overloaded due to unexpected customer loading variations.

On average, there have been nine spare transformer deployments per year to support failed transformers, as well as transformers that have high likelihood of failure based on oil samples, demonstrating major oil leaks or violating noise guidelines set by the MOECC. In order to ensure timely response in the event of a failure and maintain system reliability, a sufficient number of spare transformers are required as the lead time to procure transformers can range from 6 to 12 months. If the spare transformer inventory is not maintained, MUSs will be deployed to support failures for prolonged periods of time. As a result of prolonged MUS deployment, planned project and maintenance work would be deferred, resulting in an increase in failures and customer interruptions.

Hydro One uses a proven industry methodology to forecast operating spare requirements for standardized transformers. As of June 2017, the forecast operating spare transformer requirement is 99 standard and non-standard transformers. Hydro One currently has an operating spare pool of 98 distribution system transformers which constitutes 8% of the in-service fleet. In addition, there are 48 engineering reserve transformers which are identified as available for project usage, and will be deployed to planned projects (such as station refurbishments and system development projects) and unplanned projects over the next 10 years.

Since 2016, Hydro One has implemented an inventory management control process. This process uses a centralized system of records to manage inventory levels and minimize carrying costs. Staff from Distribution Asset Management (DAM), Maintenance Technical Services (MTS) and Central Maintenance Shop (CMS) meets regularly to ensure governance and oversight of the inventory management control process.

12

3.0 INTRODUCTION

Hydro One manages a large fleet of distribution system (up to 115 kV) transformers which are essential to the distribution of electricity across the province of Ontario. As a distributor, Hydro One is responsible to operate and maintain its distribution facilities in compliance with the Distribution System Code. This includes maintaining distribution facilities in accordance with good utility practices to ensure safe and reliable operation.

As part of a good utility practice, Hydro One manages an inventory of operating spare transformers that can be deployed in the event of in-service transformer failures. Hydro One also manages an inventory of engineering reserve transformers; some of which are reserved for projects, and others which are available for project usage.

The scope of this strategy is limited to distribution system operating spare transformers, and engineering reserve (ER) transformers identified as being available for project usage. This document establishes strategic direction for management of these transformers to support corporate objectives, explains the analytical methodology used in forecasting spares, risk factors, the current inventory management process and identifies the implementation plan.

The DS spare transformer strategy ensures that optimum quantities and types of replacement transformers are ready for deployment to any DS experiencing an unplanned failure or other emergent need. Emergent needs include replacement of units with internal heating issues, unsatisfactory oil test results, significant oil leaks, tap changer functionality issues, noise levels non-compliant with MOECC guidelines, among other issues that have required a unit to be forced out-of-service or replaced in a short time period. This strategy includes the proper maintenance programming to ensure units are operationally ready for service and deployable to site.

4.0 ABBREVIATION AND DEFINITIONS

4.1 Abbreviations

CMS	Center Maintenance Shop in Pickering
DAM	Distribution Asset Management
DETC	De-Energized Tap Changer
DS	Distribution Station
ER	Engineering Reserve
HONI	Hydro One Networks Inc.
iMDS	Integrated Modular Distribution Station
MOECC	Ministry of Environment and Climate Change

13

MTS	Maintenance Technical Services
MUS	Mobile Unit Substation
OSL	Operating Spare Level (of readiness)
OS-L1	Operating Spare – Level 1
OS-L2	Operating Spare – Level 2
OS-L3	Operating Spare – Level 3
ULTC	Under Load Tap Changer

4.2 Definitions

Available for Project Usage	DS transformers in inventory which are not reserved for any planned or unplanned capital projects, and are not required to be retained as operating spares when there is sufficient operating spare coverage. If there is a shortfall of operating spares to satisfy spare requirements, then these transformers can be reclassified as operating spares. These transformers are a subset of engineering reserves. They can be reserved for station refurbishment projects, system development projects and failure replacement projects. They can be new or used. They receive inspections and maintenance but may not necessarily be of OS-L1 level of readiness.
Distribution System Transformers	DS voltage class power transformers such as step-down transformers and regulators. Distribution system transformers convert a high level voltage (typically 115 kV, 44 kV or 27.6 kV) to a lower distribution voltage (typically 27.6 kV, 25 kV, 13.8 kV, 12.47 kV, 8.32 kV and 4.16 kV).
De-Energized Tap Changer	Transformers tap changer which requires that the transformer be de-energized in order for it to be operated.
Spare Transformer Owner	Accountable distribution asset manager for the operating spare and engineering reserve transformer inventory.
Engineering Reserve	Engineering reserve power equipment is a combination of those purchased or reserved for capital projects, and those which are available for project usage. They include power equipment either newly procured or retained from decommissioned facilities. These units can also be made available for external sale; used as seed equipment for replacement projects, system development projects or reclassified as operating spares as needed. This equipment can be new or old.

Integrated Modular Distribution Station	A station design, construction and commissioning solution that was conceptualized to deliver cost savings, allow for installation where real estate is limited, and improve aesthetics in urban areas.
Mobile Unit Substation	Mobile unit substations (MUSs) are mobile DS's mounted on trailers which are utilized for DS load relief, contingency in the event of failure, and support planned and unplanned maintenance and capital work.
Non-Standard Transformer	Distribution system transformers for which its ratings do not satisfy those found in SS-54410-001 - R1, Table A and Table B under the "Standard Ratings" sections. These include but are not limited to transformers identified as "Non-Standard" in SS-54410-001 - R1 Table A and Table B. Other examples of non-standard transformers include regulators, single-phase transformers, iMDS transformers, padmount transformers and stepdown transformers with side-mounted enclosed bushings.
Operating Spares	Power equipment such as transformers which are reserved and maintained for emergency replacements to maintain system reliability and normal system configuration. Minimum quantities of this class are reserved for this purpose, and are not considered as seed equipment for refurbishment, replacement or development projects. These spares can be new or old.
Operating Spare – Level One	An operating spare identified that is complete in all aspects and will meet all expected system duty requirements. Asset condition evaluation indicates only Acceptable conditions; no ancillary or major parts are missing and will be ready to leave the yard within 7 days.
Operating Spare – Level Two	An operating spare identified that is complete in most aspects and will meet all expected system duty requirements. Asset condition evaluation indicates only deficiencies that can be addressed such that the unit will be ready for dispatch to site within 8 to 30 days.
Operating Spare – Level Three	A unit identified that is not complete, may not meet all expected system duty requirements or may not be ready for service within 30 days. Some minor and major parts or components may be missing but can be replaced. The unit will only be repaired or upgraded if it is technically and financially justified and or; in specific circumstances; a lack of OSL1 or OSL2 unit of the same spare group becomes a need based on urgencies.
Padmount Transformers	Padmount transformers are those for which the primary and secondary bushings are enclosed and the primary and secondary supply to and from the transformer

15

	is through underground cables.
Standard Transformer	Distribution system transformer for which its ratings satisfy those found in SS-54410-001 - R1, Table A – Transformers with ULTC and Table B – Transformers with DETC under the "Standard Ratings" sections.
Strategic Parts and Components Inventory	Essential parts or components of a unit required to ensure reliable operation of power equipment. They are specialty components with long lead times or components that are no longer supported by the original equipment manufacturer. Strategic parts or components are sometimes referred to as safety-stock and are typically kept at minimum levels. Examples of strategic parts and components are tap changers, bushings and cooling fans.
Under Load Tap Changer	Under load tap changers are transformer tap changers which have the ability to maintain the load while changing taps. The transformer remains in service while tap changes are made automatically based on system voltage fluctuations.

5.0 SCOPE OF THE STRATEGY DOCUMENT

This document is intended to establish a strategy for Hydro One's distribution station operating spare transformers, and engineering reserve transformers that are identified as being available for project usage. Engineering reserve transformers that have been reserved for projects, as well as strategic parts and components inventory are not in the scope of this document.

6.0 CORPORATE STRATEGIC OBJECTIVES

The DS spare transformer strategy was developed in accordance with Hydro One's distribution business objectives. Table 1 below outlines the goals and how this strategy will contribute to achieving corporate objectives.

Strategic Objective		Goal	Action
Customer Focus	Customer Satisfaction	Improve current levels of customer satisfaction.	Adequate spare units will ensure replacement of equipment in a timely manner with minimal impact to customers.
		Engage with our customers consistently and proactively. Ensure our investment plan reflects our customers and desired outcomes.	

16

Operational Effectiveness	Cost Control	Actively control and lower costs through OM&A and capital efficiencies.	Standardization in transformer design allows for reduction in spare pool size and minimization of carrying costs
	System Reliability	Maintain reliable operation of the distribution system.	Maintaining an adequate level of operating spare units, installing them in a timely manner and minimizing the utilization of MUSs for extended periods of time will ensure timely restoration of the distribution system to normal configuration and reliability.
Public Policy Responsiveness	Public Policy Responsiveness	Ensure compliance with the Distribution Rate Handbook and Distribution System Code	Maintaining the existing service reliability performance of the system and ensuring that appropriate follow up and corrective action is taken regarding problems identified during inspections of stations and spare inventory.
	Environment	Sustainably manage our environmental footprint	Mitigate potential oil release from failing in-service transformers by removing them from service and replacing them with operating spares prior to failure.
Financial Performance	Financial Performance	Realize cost saving opportunities	Realize cost savings through planned replacements of transformers identified as failing prior to failure as the cost of emergency replacements is more expensive. Also realize cost savings through standardization and elimination of spare transformer categories.

Table 1: Corporate Strategic Objectives

7.0 DISTRIBUTION ASSET DESCRIPTION DETAILS

In 2010, Hydro One performed an assessment of spare transformer requirements for DSs using 2001 to 2008 transformer failure information. Details and results of the spare transformer assessment are contained in Appendix 1. Within the Appendix 1 document, Table 5 summarizes the number of required standard rating spare transformers based on a Markov Model methodology. Standard groups with designation "TA" indicate units equipped with under load tap changers (ULTC). Standard groups with designation "TB" indicate those that do not contain an ULTC, thus have de-energized tap changers (DETC).

The Markov Model performed in 2010 analyzed fifteen standard 3-phase transformer categories; however, there were additional 3-phase non-standard transformer categories which were not analyzed. Furthermore, the study did not analyze 1-phase spare transformers, voltage regulators, padmount style transformers and iMDS transformers. An additional Markov Model analysis will be completed by end of 2018 across all transformer categories.

In 2015, Distribution Asset Management (DAM) re-assessed the in-service population of all 3-phase transformers with consideration to primary side and secondary side voltage, MVA and tap changer capability. A DS Spare Transformer Inventory Excel sheet was produced with two tabs. The first tab “DS Transformer Categories” contains the number of in-service and spare transformers by category to ensure spare transformer availability. The second tab “DS Transformer Inventory at CMS” contains the list of operating spare and engineering reserve transformers. The list of spare transformers in the Excel sheet and in SAP is updated on an ongoing basis when transformers are reserved for projects. Also, when spares are reserved, the number of available spare transformers in the affected category is reviewed to determine if a spare must be purchased. The DS spare transformer strategy will be reviewed and updated annually (by year-end) from 2017 onward. The excel sheet contains the following information:

DS Transformer Categories:

- Transformer / Regulator categories with consideration to MVA, HV/LV voltage, ULTC/DETC capability
- In-service population of transformers for each category
- 2010 Markov Model suggested number of operating spares for standard transformer categories
- Detailed operating spare strategy for standard and non-standard transformer categories
- Required number of operating spares in each category as per strategy
- Number of operating spare and engineering reserve transformers available for project usage that are in inventory at CMS in each category
- Number of operating spares on order and to be ordered to address any operating spare transformer shortfalls

DS Transformer Inventory at CMS:

- List of engineering reserve transformers reserved for projects
- List of engineering reserve transformers available for project usage
- List of operating spare transformers

On a regular basis, the DAM spare transformer owner extracts a list of operating spare and engineering reserve transformers from SAP, places these transformers into the DS Spare Transformer Inventory Excel sheet, and categorizes the transformers based on characteristics.

As DS operating spare and engineering reserve transformers available for project usage are deployed to support failing/failed transformers or those which generate noise complaints, the purchasing strategy is to replenish the spare pool with an adequate number of operating spares, using the "DS Spare Transformer Inventory" Excel sheet as a guide. Because the Markov Model was not performed for all variations of MVA capacity levels (ex. performed for 7.5 MVA, but not 5 & 10 MVA), in certain instances it is prudent to carry more or less than the Markov Model calculated level. More recent failure data also contributes to variation from the recommended number of spares suggested by the 2010 Markov Model results.

From the 2015 assessment, it was identified that some spare transformer categories are overstocked. In 2017, these surplus spare transformers have been reclassified as engineering reserve transformers that are available for project usage. For such categories, the strategy is to deploy these surplus transformers to planned capital projects including DS rebuilds and system reinforcement projects. These surplus engineering reserve transformers which are available for project usage can also be reclassified as operating spares to be deployed to support a failure in an effort to reduce the transformer inventory at CMS.

Moving forward, a new operating spare transformer will be purchased for a category only if the following two conditions are satisfied:

1. There are no engineering reserve transformers identified as being available for project usage.
2. The number of available operating spare transformers is less than the optimized spare level for the category, identified in the DS Spare Transformer Inventory Excel sheet, DS Transformer Categories tab, Column P "Required # of spares as per Strategy".

8.0 OPERATIONAL ASSET MODEL

When DAM planners are developing scopes of work for planned projects involving station transformer replacements or installations, they must first refer to the list of engineering reserve transformers available for project use in the DS Spare Transformer Inventory Excel sheet, "DS Transformer Inventory at CMS" tab, to determine if a suitable available transformer can be assigned to their project. If the DAM planner finds a suitable engineering reserve transformer available for usage, he/she must inform the DAM spare transformer owner so that the transformer can be reserved in the Excel sheet and in SAP. In the "Status" column of the Excel sheet, these transformers are identified as "ER, Available for Project Use". If the planner is unable to locate a suitable engineering reserve transformer available for project usage, then the planner must purchase a new standard rating transformer under his/her project.

Standard DS transformer ratings can be found in SS-54410-001 - R1 - Transformers: Power, Sealed Tank Type Voltage Classification of 123kV and Less, Table A – Transformers with ULTC and Table B – Transformers with DETC (Note, no similar document contains standards for padmount transformers, single-phase transformers, regulators, and transformers for iMDS). No planners are to purchase transformers for projects outside of current standard ratings unless appropriate approvals from DAM Management are provided.

Transformers identified as operating spares shall not be considered for planned project usage, and are to be retained for unplanned emergent replacements.

Transformers identified as engineering reserves are either purchased or reserved for capital projects, or are available for project usage. When a transformer is required for an emergency replacement project, engineering reserve transformers that are not reserved and available for usage can be reserved.

All transformer reservations for planned and unplanned project purposes must be discussed with the DAM spare transformer owner of the DS Spare Transformer Inventory, to allow reservations to be tracked in the Excel sheet, allow MTS and CMS to be notified and to allow SAP to be updated with the reservation. DAM spare transformer owner updates the spare transformer inventory in the Excel sheet, and CMS Inventory Specialist updates the SAP inventory.

9.0 MANAGING RISKS

Condition risks for operating spares are defined as readiness for spare deployment. Condition risks are mitigated through routine maintenance that is performed on operating spares and tracked in SAP for completion. Spares are maintained in the same manner as in-service equipment.

Demographic and utilitization risks for operating spare pertain to the risk of operating spares not being deployed and aging beyond the warranty term. Going forward, Hydro One will utilize a first-in-first-out protocol to ensure operating spare transformers are deployed in a timely manner.

Economic risks are defined as costs that may be incurred if an operating spare unit is not made available and installed in a timely manner. The following are examples of costs associated with economic risk:

- Cost premiums due to accelerated purchase and delivery requirements of transformers under emergency scenarios.
- Additional costs due to extra remediation actions nescessary to restore supply to customer and restore reliability of the system.

10.0 TECHNOLOGY INNOVATION OPPORTUNITIES

Hydro One employs a fleet of 29 Mobile Unit Substations (MUSs) which were purchased to support the following purposes:

- Emergency power restoration in the event of a distribution transformer or DS failure
- Offload DSs during capital projects and maintenance activities

20

- Provide DS transformer load relief in emergency situations when transformers are loaded beyond their planned-loading limits.

Most DSs are operated with one transformer, and rely on the availability of a MUS for contingency. MUSs are stations on trailers that can be dispatched to a DS to restore supply. Of the 29 MUSs, approximately 12 are placed on standby and reserved for emergency deployment. Over 73% of Hydro One DSs (over 730) were built with a single transformer bank and are equipped with MUS connection facilities; relying on the MUS fleet for contingency. This fleet of 29 MUSs allows for the absence of a second transformer bank at these 730 stations, allowing for a cost efficient solution for contingency planning.

Hydro One is in the process of acquiring new additional MUSs to help overcome the challenges associated with contingency planning, system restoration requirements for planned and unplanned transformer replacements, and an increase in the amount of planned DS capital work to keep pace with the deteriorating condition and demographics of DS assets.

11.0 ASSET STRATEGY – OPERATION AND MAINENANCE

11.1 Inventory Management

Hydro One uses SAP as its centralized system of record for inventory management across all lines of business. Asset hierarchy for all operating spare and engineering reserve transformers are contained in SAP. Once per month, the DAM spare transformer owner extracts a list of operating spare and engineering reserve transformers from SAP, and places them into the DS Spare Transformer Inventory Excel sheet. From here, the transformers are categorized based on characteristics such as MVA, primary and secondary voltages, tap changer functionality and conventional versus padmount design.

DS operating spare transformers are designated for emergency deployment when an in-service distribution system transformer has failed, or is failing and must be replaced immediately to maintain the integrity of the system. They are also required to replace transformers which generate customer complaints with noise levels that exceed the guidelines set by the Ministry of Environment and Climate Change (MOECC). Furthermore, operating spare transformers are required to replace in service transformers that have become significantly overloaded due to unexpected customer loading variations.

Based upon review of the transformer inventory, it has been identified that some operating spare transformer categories have been overstocked. In 2017, these surplus spare transformers have been reclassified as engineering reserve transformers that are available for project usage. For such categories, the strategy is to deploy these surplus transformers to planned capital projects including DS rebuilds and system reinforcement projects.

The deployment of the operating spare transformers shall follow a first-in-first-out protocol to optimize use of the service life of the spares. Operating spares shall be maintained in accordance with established practices to ensure they are ready for deployment when required.

Staff from DAM, MTS and CMS meet periodically to jointly review operating spares inventory requirements. The joint review consists of the following:

- Assess inventory levels and spare requirements
- Review units deployed
- Ensure routine maintenance is completed
- Assess and recommend spares that should be surplused

Summary of Short Term Strategic Goals (5 years Outlook)

Currently there are 98 DS operating spare transformers across 46 categories, and 48 DS engineering reserve (ER) transformers that have been identified as available for project usage. By the end of the five year business cycle, the plan is to reduce the number of ER transformers available for project usage from 48 down to 31. This will be achieved by the following:

- Deployment to planned and unplanned capital projects
- Surplus of transformers in inventory where appropriate
- Reclassification of ER transformers available for project usage as operating spares, when there is a shortfall of operating spares
- Identification of surplus transformers in inventory for resale

This long term view excludes spare transformers which may potentially be purchased or acquired to support acquisitions, and newer designs such as iMDS and padmount transformers.

It should be noted that since early 2016 during the process transition year, the inventory of 161 operating spare and ER transformers available for project usage across 60 categories has been reduced to 146 transformers across 46 categories.

Summary of Long Term Strategic Goals (>5 years)

Long term strategic goals beyond the next 5 years include the following:

- Reducing the number of DS engineering reserve transformers available for project usage down to 0 within the next 10 years.
- Reduction of the number of operating spare categories by reducing the number of non-standard voltage combinations and number of MVA capacities.

Further reduction of operating spare categories could be achieved on a long term basis through elimination of lower system voltages, although such voltage conversion projects are costly to implement.

22

11.2 DS Transformer Inventory Maintenance Strategy

DS Operating Spare Preventive and Corrective Maintenance investments are in place to maintain the spare transformers' level of readiness for deployment, to ensure they are available when required to support failures or demand replacements.

Visual inspections and preventive maintenance of the operating spare transformers are performed in accordance with Work Standard Document SM-54-059 - Distribution Class Operating Spare Transformers and Regulators - All Voltages - All Capacities. This work is executed through SAP maintenance plans and work orders created by DAM. Reporting is performed through SAP notifications.

During maintenance, the following tasks are performed:

- *Visual Inspection*: Visual check of the condition of all parts and identification/reporting of parts that are missing. Identification of any oil leaks that are observed.
- *Maintenance Level 1*: Function tests of tap changers and filtration systems, and application of touch up paint on damaged or corroded areas.
- *General Oil Test (GOT)*: Oil samples from the transformer main tanks are obtained and analyzed.
- *Tap Changer Oil Analysis (UTOA)*: Oil samples from the transformer ULTC compartment (where applicable) are obtained and analyzed.

The maintenance strategy is to perform preventive maintenance on all DS operating spares and engineering reserve transformers available for project usage every two years. Following preventive maintenance work and inspections, deficiencies identified are addressed under the DS Operating Spare Corrective Maintenance Program. CMS is required to maintain at least one operating spare transformer in each of the 46 operating spare categories to OS-L1 level of readiness. Furthermore, CMS is expected to maintain as many operating spares to OS-L1 level of readiness as possible as per OM&A budgetary constraints.

The following Capital and OM&A investments support DS spare transformers:

- AIP000165 – AR 19299 DS Transformer Purchase Program. Provides for the purchase of DS spare transformers.
- AIP000155 – AR 19337 DS Demand / Emergency Capital Program. Funds the emergency installation of spare transformers.
- AIP000260 – AR 22157 DS Operating Spare Mtce. & Inspection. Provides for the inspection and diagnostic testing of spare transformers.
- AIP000259 – AR 21256 DS Operating Spare Corrective Maintenance. Upon identification of defects through inspection and diagnostic testing, provides for corrective maintenance activities.
- AIP000258 – AR 19310 DS Transformer Overhaul Program. Provides for mid-life overhaul of in-service transformers, as well as major corrective work on DS operating spare transformers, and ER transformers available for project usage.

12.0 IMPLEMENTATION PLAN

The following are the major components in implenting the DS Operating Spares Transformer Strategy.

1. The DAM spares owner, MTS and CMS will continue to monitor and provide oversight of the DS transformer inventory.
2. Engage relevant lines of business to ensure clear accoutabilities are understood as it pertains to the planning, procuring, maintaining, deploying and surplusing of operating spares and ER transformers that are available for usage.
3. Ensure funding is available for maintenance and capital investment of transformers in inventory, and ensure that transformers in inventory are receiving required maintenance.
4. Provide and maintain clear separation of Tx versus Dx spare transformer inventory, and keep SAP up-to-date with the categorization required for the separation.
5. The DAM spares owner to continue to engage and encourage DAM planners to utilize ER transformers available for project usage for their planned projects in an effort to reduce the overstocked inventory and lower the cost of their planned capital projects.

Ontario Sustainable Energy Association Interrogatory # 1

Issue:

Issue 1: Has Hydro One responded appropriately to all relevant OEB directions from previous proceedings?

Reference:

Previous Proceeding – EB-2011-0118

Interrogatory:

a) Please provide an update to the OEB direction in the following proceeding: Hydro One Networks Inc: Application by Hydro One Networks Inc. for a six-month exemption from the obligations in Section 6.2.6 and 6.2.7 of the Distribution System Code. Please submit a table indicating the annual connection performance compared to the standards in the Distribution System Code from 2009 until the present.

Response:

Annual connection performance, compared to the standards in the Distribution System Code, from 2009 until 2017, are provided below:

Year	**Connection Standards**	**% connected within 5 business days**
2009	100% connected within 5 business days	**35.00%**
2010	100% connection within 5 business days	**97.49%**
2011	Jan to Oct 11 - 100% connected within 5 business days Oct 12 and Onward - 90% connected within 5 business days (under exemption)	**82.61%**
2012	90% connected within 5 business days (under exemption)	**95.95%**
2013	90% connected within 5 business days (DSC amended on Jun 13)	**99.69%**
2014	90% connected within 5 business days	**100.00%**
2015	90% connected within 5 business days	**99.78%**
2016	90% connected within 5 business days	**99.79%**
2017	90% connected within 5 business days	**99.69%**

The Society of Energy Professionals Interrogatory # 1

Issue:
Issue 1: Has Hydro One responded appropriately to all relevant OEB directions from previous proceedings?

Reference:
None

Interrogatory:
Please file Hydro One's relevant updated financial reports as they become publicly available including quarterly and annual MD&A and consolidated financial statements, Networks Distribution annual financial statements, credit rating reports etc.

Response:
Please refer to Exhibit I-32-BOMA-B153 Attachments 1 to 9 for Hydro One Limited and Hydro One Inc. MD&A and consolidated financial statements for Q1, Q2 and Q3 of 2017.

Hydro One will submit the audited 2017 MD&A and consolidated financial statements once available.

Please refer to Exhibit I-36-BOMA-B156 Attachments 1 to 7 for rating agency reports by DBRS, Moody's and S&P, released since those included in the prefiled evidence.

Hydro One Distribution will submit the audited 2017 financial statements once available.

Association of Major Power Consumers in Ontario Interrogatory # 2

Issue:

Issue 2: Has Hydro One adequately responded to the customer concerns expressed in the Community Meetings held for this application?

Reference:

A-04-01
Customer Service Strategy

Interrogatory:

a) Page 2: Hydro One indicates it has made several digital investments which address customer feedback received. Please provide the feedback and identify the specific digital investments.

b) Page 5: Hydro One states, "Through surveys and the Customer Engagement work held in 2016, Hydro One confirmed that it needed a renewed focus on this customer segment." Please explain further the reasons why a renewed focus on Commercial and Industrial customers is required.

c) Page 5: Hydro One states each of its eight zones has a Zone Superintendent for Large Industrial Accounts. Does Hydro One have specific reliability data for each of the eight zones?

d) Page 5: Please confirm the dates in 2016 and in 2017 for the annual Large Customer Conference and provide the agenda, and presentation materials and meeting notes for the 2016 and 2017 Conference.

e) Page 5: Please summarize the key needs and preferences of Large Distribution Accounts (LDA) identified during meetings between Zone Superintendents and LDA, and confirm the resulting expenditures proposed in this application that are specifically directed at LDA.

f) Page 7: With respect to the Ombudsman Office, please provide the number of systemic investigations since inception and summarize any underlying trends of concern relevant to this application and the changes needed.

Response:

a) Hydro One's Distribution Rate Application includes several digital investments to address customer feedback, as outlined below. Additional information can be found in the Investment Summary Documents referenced below:
   - Web & Mobile App (GP-16)
   - Customer Data and Analytics (GP-32)
   - Bill Redesign (GP-29)
   - Call Centre Technology (GP-28)

b) Commercial and Industrial customers are deploying new technology and processes which are increasingly impacted by power quality or reliability issues. In addition, customers are increasingly pursing load displacement and storage projects. As result of these trends, this customer segment relies on Hydro One to help resolve issues and pursue opportunities.

c) Hydro One does not maintain zone specific reliability data.

d) The 2016 Large Customer Conference was held on November 21 and 22. The next Large Customer Conference is scheduled for February 2018. For the requested materials, please refer to attachments 1 and 2 of Exhibit I-2-AMPCO-002.

e) Hydro One does not have a summary of the needs and preferences of Large Distribution Accounts (LDA) identified during meetings between Zone Superintendents and LDAs. These meetings occur informally and regularly throughout the year and are meant to address complex individual customer needs on a case by case basis. The meetings are not intended for the purpose of obtaining a summary of the needs and preferences of LDAs. Hydro One identified and summarized LDA customer needs and preferences through a comprehensive customer engagement process. The engagement process was conducted by Ipsos and obtained LDA needs and preferences through an on-line survey and in-person workshops. Exhibit B1, Tab 1, Schedule 1, DSP Section 1.3.2 (5.2.2 A) Customer Engagement Process explains this customer engagement process. A summary of the LDA customer needs and preferences identified through the customer engagement process forms part of the Large Customer Conclusion section of the report, see Exhibit B1, Tab 1, Schedule 1, DSP section 1.3 Attachment 1: on page 146 and 147. For details on the expenditures Hydro One is proposing to address LDA specific needs and preferences see Exhibit B1, Tab 1, Schedule 1, DSP section 1.3.4 (5.4.1 F) How the Plan Reflects Customer Needs and Preferences, page 19, lines 16-27 and page 20, lines 1-15.

f) The office opened on March 14, 2016. In 2016, the office commenced one formal systemic investigation as defined in the Terms of Reference and Mandate. The investigation focused on the quality of supervision as well as metrics and controls in Hydro One's complaint service, starting with the call agents managed by a third-party contactor through to the escalated complaints centre operated by Hydro One.

The systemic investigation resulted in 28 recommendations covering the following areas:

- improving governance and controls over call centre operations
- providing staff and management with the tools, training, and coaching needed to successfully meet job responsibilities
- streamlining customer complaint processes
- creating a leadership group to identify solutions to process gaps and inefficiencies.

The company is taking steps to implement the office's recommendations including bringing the call centre in-house and by developing a centralized complaints system. In addition to the formal systemic investigation, in 2016 the office also made recommendations on systemic issues that arose during the course of individual investigations – please refer to Exhibit I-38-CCC-037.

In 2017, the office did not commence any formal systemic investigations as defined in the Terms of Reference and Mandate. Nevertheless, while completing individual investigations, the office identified a number of systemic issues and addressed them through recommendations – please refer to Exhibit I-38-CCC-037.

AGENDA

2016 LARGE CUSTOMER CONFERENCE AGENDA

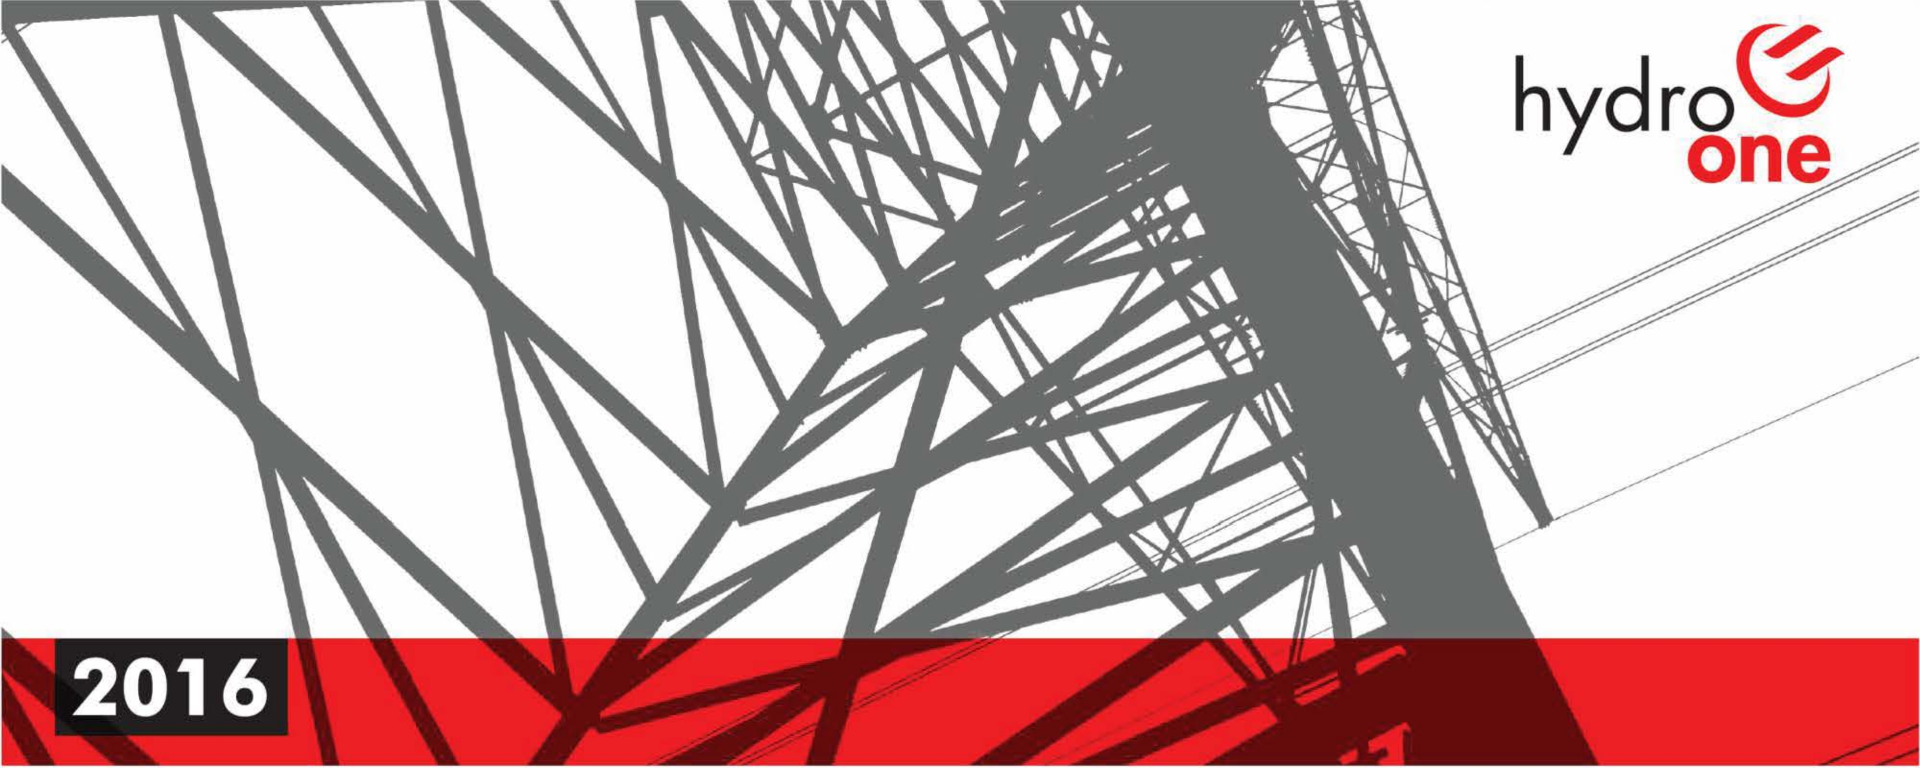
NOVEMBER 21 – DAY 1 (LARGE CUSTOMER SESSION – AMBROISA GRAND BALLROOM)		
Start Time	**Topic**	**Details**
7:00 a.m.	Registration, Coffee and Hot Breakfast	
9:00 a.m.	Opening Conference Remarks by Mike Penstone, Vice President, Planning, Hydro One and Greg Kiraly, Chief Operating Officer, Hydro One	
9:30 a.m.	Hydro One's Transmission Customer Consultation & Proposed Investment Plan	Presentation by Graham, Director, Key Account Management, Hydro One, and Scott McLachlan, Director, Transmission Asset Management, Hydro One
Break		
10:45 a.m.	Increasing Productivity at Hydro One	Presentation by Andy Stenning, Vice President, Stations and Operations, Hydro One and Jon Rebick, Vice President, Lines and Forestry, Hydro One
Break		
1:15 p.m.	Cyber Security in the Power Industry	Presentation by Rick Haier, Chief Security Officer, Hydro One and Francis Bradley, Vice President, Canadian Electricity Association (CEA)
Break		
2:30 p.m.	Long Term Energy Plan (LTEP)	Presentation by Michael Lyle, Vice President, Planning, Legal, Indigenous Relations and Regulatory Affairs, IESO
Extended Break		
5:00 p.m.	Cocktail Reception	
6:00 p.m.	Executive Dinner in the Ambrosia Grand Ballroom	

**Topics and speakers are subject to change without notice.*

NOVEMBER 22 – DAY 2 (BREAKOUT SESSIONS, AMBROSIA ROOMS 1, 2, 3 & 4)				
Start Time	**End Users**	**LDCs**	**Generators**	**LDAs**
7:30 a.m.	Registration, Coffee and Hot Breakfast			
8:30 a.m.	**Voice of the Customer** Facilitated by Mike Penstone, Vice President, Planning, Hydro One and Scott McLachlan, Director, Planning Optimization, Hydro One	**Voice of the Customer** Facilitated by Andy Stenning, Vice President, Stations and Operating, Hydro One	**Voice of the Customer** Facilitated by Brad Bowness, Vice President, Construction Services, Hydro One, and Andrew Spencer, Director of Engineering, Hydro One	**Voice of the Customer** Facilitated by Jon Rebick, Vice President, Lines and Forestry, Hydro One
Break				
9:45 a.m.	**CDM Program Delivery** Declan Doyle, Manager, Direct Customers	**Transmission Reliability** Scott McLachlan, Director, Planning Optimization, Hydro One	**Journey into the Control Room** Aaron Cole, Network Management Officer, Customer and Operating Support, Hydro One, and Mark Artymko, Grid Operations Manager, Hydro One	**Power Quality Audits** Luis Marti, Director, Reliability Studies, Power Quality RD&D, Hydro One
Break				
10:45 a.m.	**Transmission Reliability** Scott McLachlan, Director, Planning Optimization ,Hydro One	**Journey into the Control Room** Aaron Cole, Network Management Officer, Customer and Operating Support, Hydro One, and Mark Artymko, Grid Operations Manager, Hydro One	**Net Metering, Load Displacement Generators and Energy Storage** Jaspreet Nijjar, Settlement Supervisor, Hydro One	**Power Distribution Operations** Tam Kennedy, Superintendent Provincial Lines, Hydro One
Lunch				
12:45 p.m.	**Journey into the Control Room** Aaron Cole. Network Management Officer, Customer and Operating Support, Hydro One, and Mark Artymko, Grid Operations Manager, Hydro One	**Lidar** Presentation by Chong Kiat Ng, Director, Transmission Asset Management, Hydro One	**Power Quality** Luis Marti, Director, Reliability Studies, Power Quality RD&D, Hydro One	**OGCC Business Strategy & Project Delivery** James McGowan, Business Strategy & Project Delivery, Ontario Grid Control Centre, Hydro One
Break				
1:45 p.m.	**Lidar** Presentation by Chong Kiat Ng, Director, Transmission Asset Management, Hydro One	**CCRA True-ups** Presentation by Wade Frost A review of the IE model and CG guidelines.	**Transmission Reliability** Presentation by Scott McLachlan, Director, Planning Optimization, Hydro One	**IESO Update** Presentation by Rouselle Gratela, Business Manager, LDCs, IESO
Break				
2:45 p.m.	**Net Metering, Load Displacement Generators and Energy Storage** Jaspreet Nijjar, Settlement Supervisor, Hydro One	**Power Quality** Luis Marti, Director, Reliability Studies, Power Quality RD&D, Hydro One	**Outage Planning** Jason Boniface, Manager, Grid Operations	**CDM & Co-Gen** Gillian Lind, Conservation Demand Management, Hydro One
Break				
3:45 p.m.	**Power Quality** Luis Marti, Director, Reliability Studies, Power Quality RD&D, Hydro One	**Net Metering, Load Displacement Generators and Energy Storage** William Cheng, Manager, Transmission & Distribution Settlement, Hydro One	**Lidar** Presentation by Chong Kiat Ng, Director, Transmission Asset Management, Hydro One	**Net Metering, Load Displacement Generators and Energy Storage** Monika Amorim, Senior Settlement Analyst, Transmission & Distribution Settlements, Hydro One
Break				
4:30 p.m.	Close of conference, including prizes draw and closing remarks			

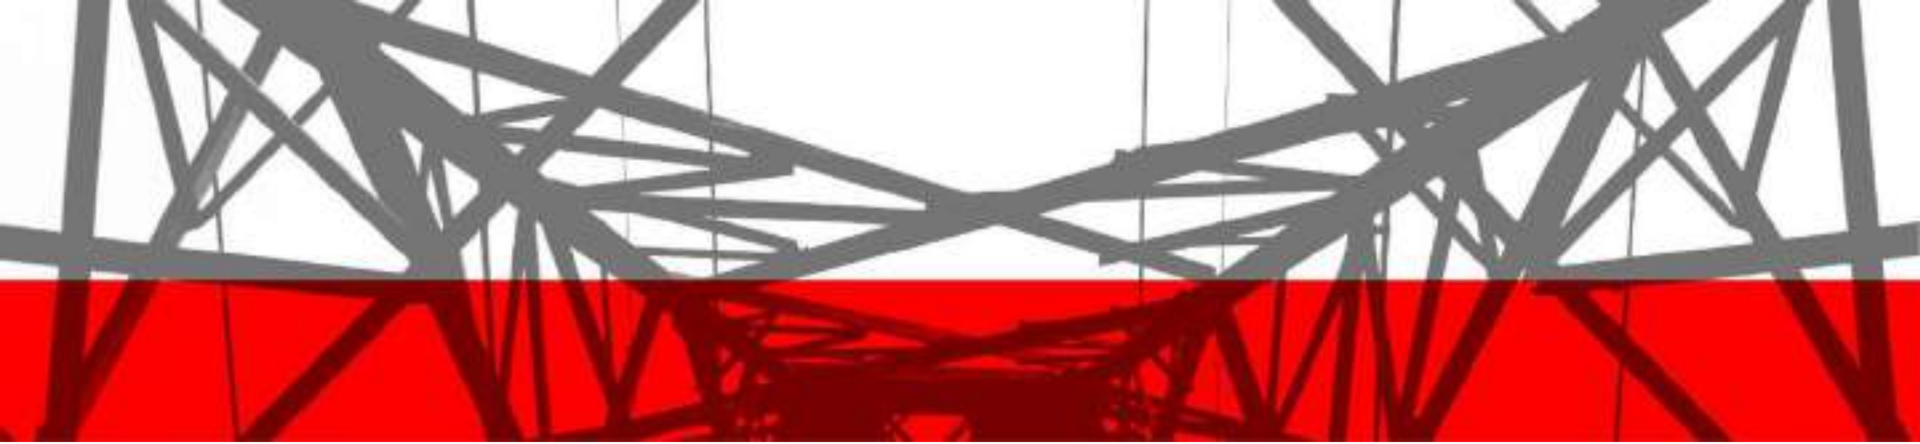
Topics and speakers are subject to change without notice.

Response to IR – I – 02-AMPCO-002



LARGE CUSTOMER CONFERENCE

Productivity & Operational Efficiency

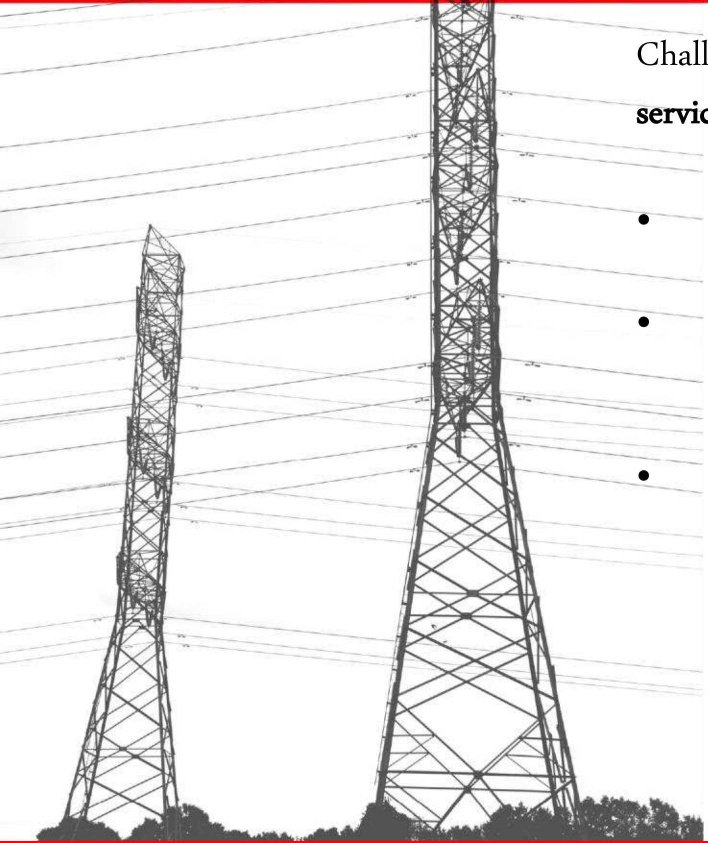


INCREASING PRODUCTIVITY AT HYDRO ONE

Andy Stenning
Vice President, Stations & Operations
Hydro One

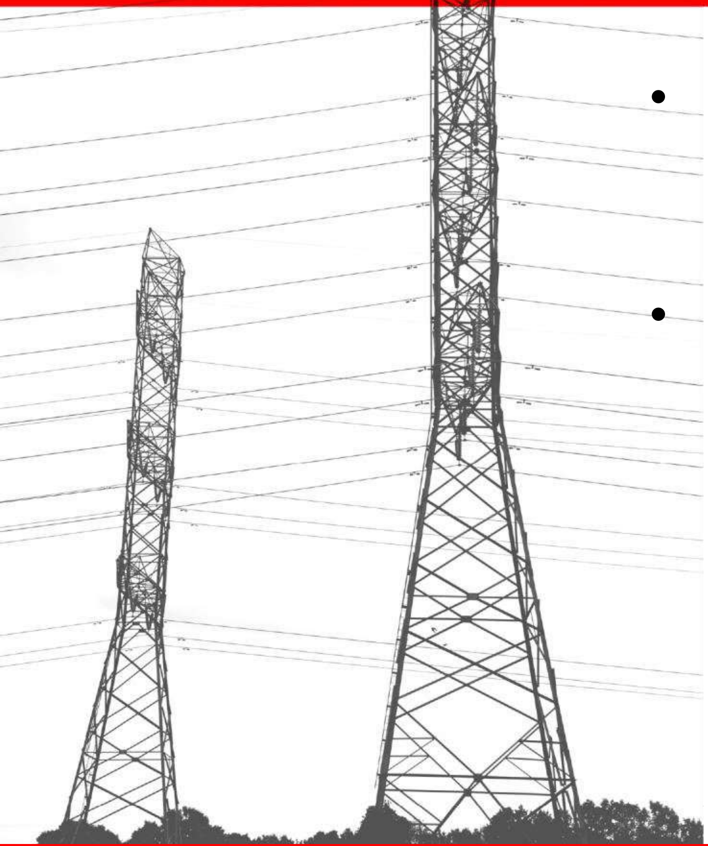
Jon Rebick
Vice President, Lines & Forestry
Hydro One

WHY ARE PRODUCTIVITY IMPROVEMENTS IMPORTANT?



Challenges: Increase **system performance** with **reduced costs** amidst **increasing customer service expectations**

- The recent Auditor General Report challenged Hydro One to improve reliability
- The Ontario Energy Board (OEB) has challenged Hydro One to increase productivity in the field to self-fund future projects
- Our province-wide customer base has challenged us to deliver transparent, reliable, and best-in-class customer service



CUSTOMERS

- Reality is we cannot continue to increase budgets and impact customer rates to perform needed maintenance and upgrades to the system

- Must use available funding in the most efficient manner possible, while benefiting the highest number of customers in terms of reliability
  and affordability

OPERATIONS AND MAINTENANCE

- Operations and Maintenance (O&M) activities are the largest cost of the company which impact our bottom line, customer and OEB

- Looking to improve the performance of our O&M activities

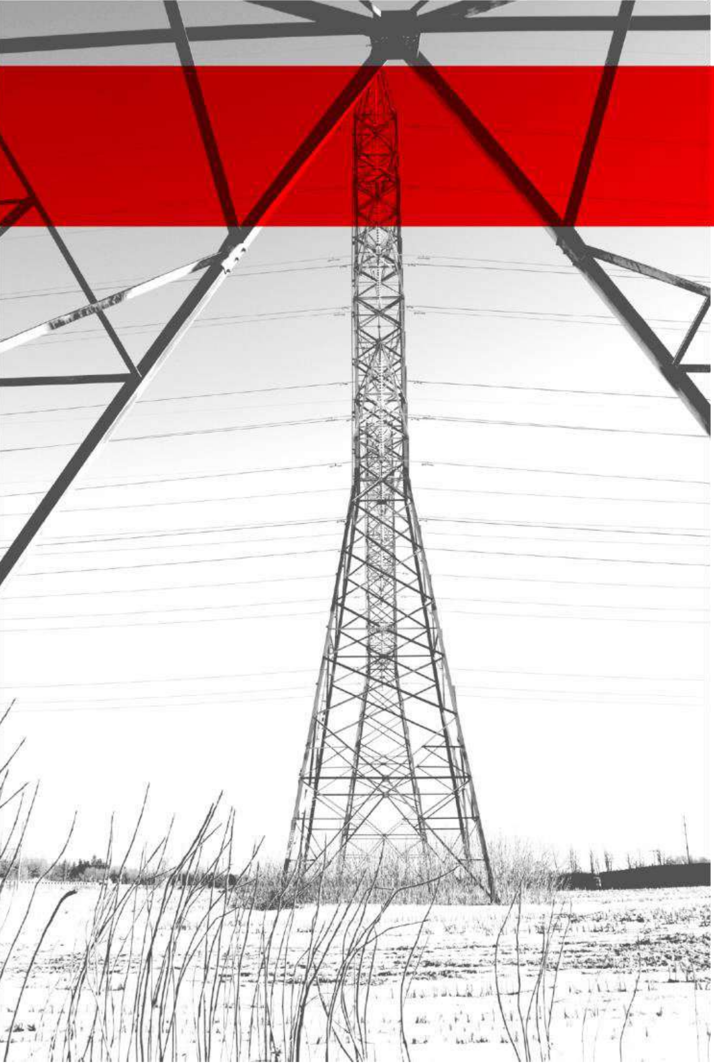
- Accomplish more work for the same dollar amount

- Success means:
  - Grow by focusing on core capabilities
  - Be a top-tier operator delivering safe & reliable power cost-effectively

LINES AND FORESTRY

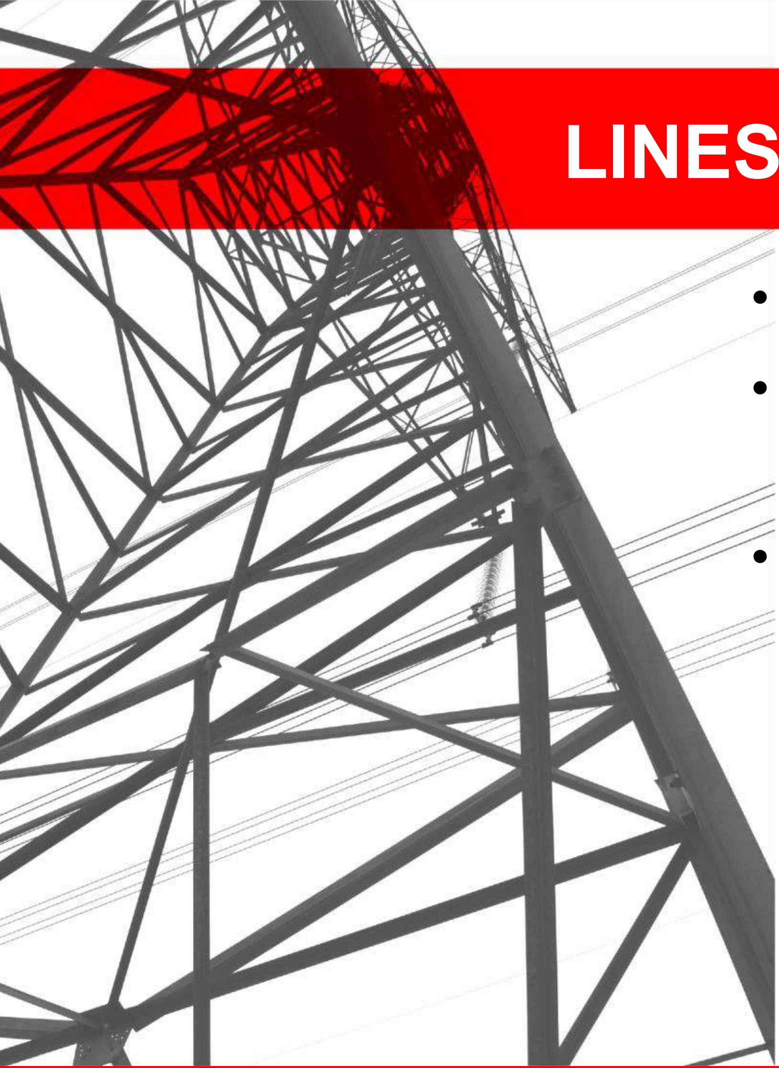
FORESTRY

- We are the only utility in North America with an in-house Forestry division
- Hydro One Forestry Services trims or removes over one million trees per year, managing Hydro One's Transmission and Distribution rights of way
- Largest single controllable OM&A cost at Hydro One.



FORESTRY INITIATIVES

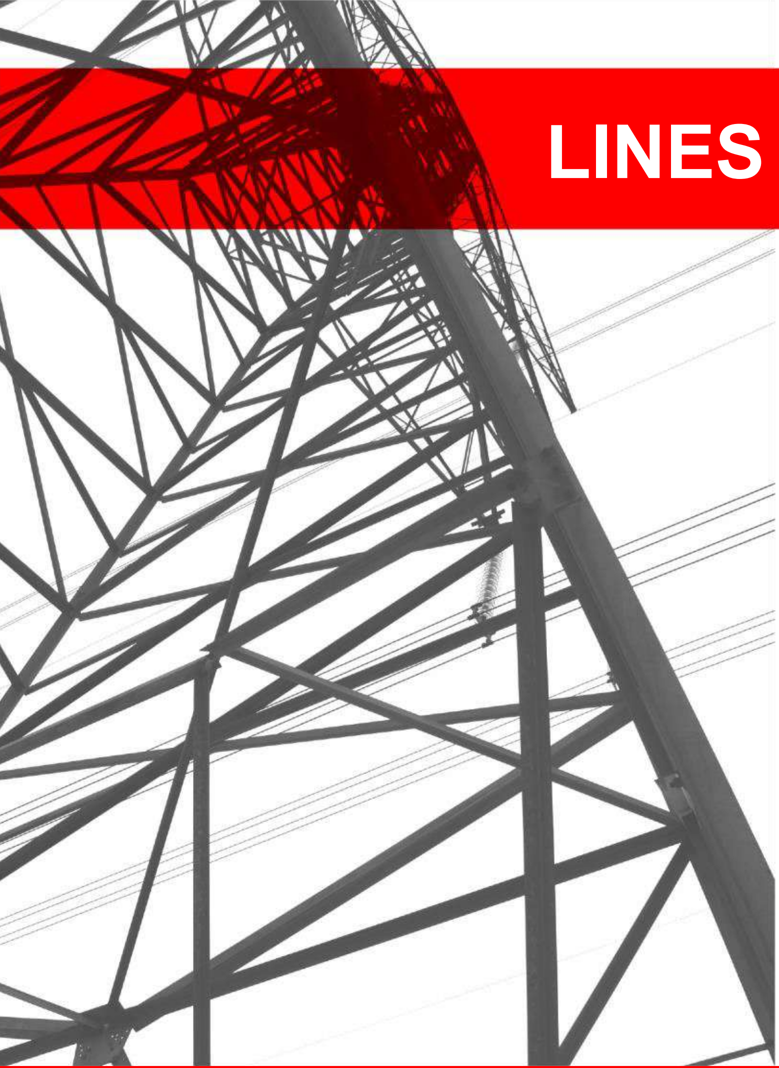
- Brush Control Optimization
- Customer Notification Optimization
- Inclement Weather Initiative
- Muskoka-Parry Sound Initiative
- Switching and Grounding Initiative



LINES

- Largest work group in the Company
- Many different types of work
  - Mix of Capital and O&M
- Landscape:
  - Unique challenges due to scale of operation, varied geography and rural customer base
  - No obvious comparator although OEB and others compare us to “peer” utilities

LINES INITIATIVES



- Cable Locate Outsourcing
- Perform
- Move to Mobile

STATIONS
AND OPERATING

GRID CONTROL CENTER

Operating the Transmission and Distribution systems of Hydro One

16

Cable Locates Process

Objective: Improve workflow, streamline processes to efficiently manage cable locates and increase safety awareness for transmission Cable Locates.

Goal: Create a ticketing tool/application to streamline the process to efficiently manage cable locates. Also, to reduce safety incidents related to transmission cable locates.

Benefits:

- Improved workflow processes with HOULTT (Hydro One Underground Locate Ticket Tool) ticketing system; Moved away from paper based process
- Improved communication with Ontario One Call
- Improved communication between all internal and external LOBs
- Improvement in safety with consistent tool and processes
- Improved with consistent standards and procedures

Initiatives:

- HOULTT (Hydro One Underground Locate Ticket Tool)
- Ticketing tool designed and implemented in house to create efficiencies, increase productivity and increase safety
- Predecessor process was paper based, fax driven, etc....

System Event Investigations and Operating Experience

Objective: Investigate system events to determine what occurred and identify any corrective actions with the intent to make improvements to existing processes and procedures. Hydro One shares this Operating Experience and lessons learned with other external entities to benefit the industry. Hydro One also benefits from industry Operating Experience and lessons learned to ascertain if the same conditions or risks are present within Hydro One and to initiate the appropriate mitigation.

Goal: Reduce the number and impact of system events through the monitoring and completion of lessons learned and action items.

Benefits:

- Increased reliability and power quality to customers
- Productivity and efficiency improvements resulting from review and implementation of industry experience and lessons learned
- Apply industry best practices to reduce recurring events

Outcomes:

- Number of System Event Investigations is declining indicating a positive impact to event reduction
  - 2012 – 22; 2013 – 13; 2014 – 13; 2015 – 7; 2016 – 3 (YTD)
- Number of System Event Investigation action items:
  - 415 action items completed since 2012
- 2016 Operating Experience (YTD):
  - Disseminated and shared 42 industry reports internally to Hydro One
  - Produced and shared 6 System Event Reports externally (includes 3 reports from 2015)

Reducing the Impact of Planned Outages on Large Customers

Objective:

- Use better planning to reduce the impact of planned outages on Hydro One customers
- Where possible, schedule outages to coincide with customer shutdowns

Goal: 20% reduction in outage cancellations in 2017

Benefits:

- Reduced impacts on customers by sharing Hydro One capital and maintenance plans
- Improved accuracy for 12 month outlook, providing improved long range
- Reduced costs due to switching and workgroup efficiencies

OPERATING PLANNING GOOD TO GREAT (CONT'D)

Reducing the Impact of Planned Outages on Large Customers

Initiatives:

- Customer Conferences
  - Long term plans to bundle outages with various Hydro One workgroups
  - Customer conferences to scheduling outages that coincide with their shutdowns
  - Weekly updates throughout the year
- Provincial Scheduling Tech Training
  - Improved training to maintain and build scheduling skills for all internal workgroups (Stations, Lines)
  - Results in better quality outage submissions
  - Mandatory annual training for all schedulers
- SE-109 (Stakeholder Engagement)
  - IESO driven change that forces long term planning and provides a "System Check" upon submissions
  - Provides early indication of success with an implementation date of October 26th
  - First session of training provided during the first week of November
- NMS Study Tool Improvements
  - Close identified gaps in planning studies leading to cancelled outages

Program Enhancements – 2016 and beyond

Objective: Reduce the costs of training for the Controller and Controller Trainee programs in the Network Operating Division

Goal: To be as efficient and cost effective as possible

Benefits: Reduced costs associated with training

Program Enhancements:

- Reduced the Controller in Training Program from 3 years to 2 years
  - Require 3 year Electrical/Electronic Technologist or equivalent as minimum educational requirements
  - New hires into the Controller In Training Program are able to become full fledged Controllers one year earlier and therefore have a positive impact on schedule and by extension Overtime

- Reduced the number of available training sessions for Controllers by 18 days per year.
  - Assuming 2 Subject Matter Experts from the Control Room complement per training session/day, this represents 24 twelve hour shifts that that will not have to be covered off in the schedule

STATION SERVICES

hydro one

WHO WE ARE!

Provide maintenance, commissioning, repair, installation and trouble response services at approx. 290 Transmission Stations, approx. 1006 Distribution Stations and CMS:

- Station Services is a **multi-functional, multi-skilled** team of over 850 trades, technical and support staff
- Engineers, Technologists, Electrical Maintainers, Mechanical Maintainers, Civil Maintainers, Maintenance Inspectors, Welders
- Recognized technical expertise with multi-OEM equipment experience
- 29 staffed locations
- Bruce Power, Pickering, Darlington

Chief Information Officer,

Hydro One

ELECTRICITY SECTOR CYBER SECURITY

- Power systems are high value targets
- Attacks on the energy industry can cause widespread outages spurring global media attention
- Although state/terrorist sponsored activities are advancing, a disruption from a "lone wolf" attack remains the largest threat

THREATS: UKRAINE ATTACK

12/24/2015

Dear customers!

Dec. 23, 2015, from 15:35 - 16:30, third parties were made illegal entry into information-technological system of remote access to equipment telecontrol substations of 35-110 kV JSC "Kyivoblenergo."

As a result, it was disconnected 7 (seven) 110 kV substations and 23 (twenty three) substation 35 kV. This led to the repayment of about 80,000 different categories of customers on the reliability of electricity supply.

Electricity was restored to all consumers employees of the Company at **18:56** the same day.

We apologize for the situation and thank you for your understanding.

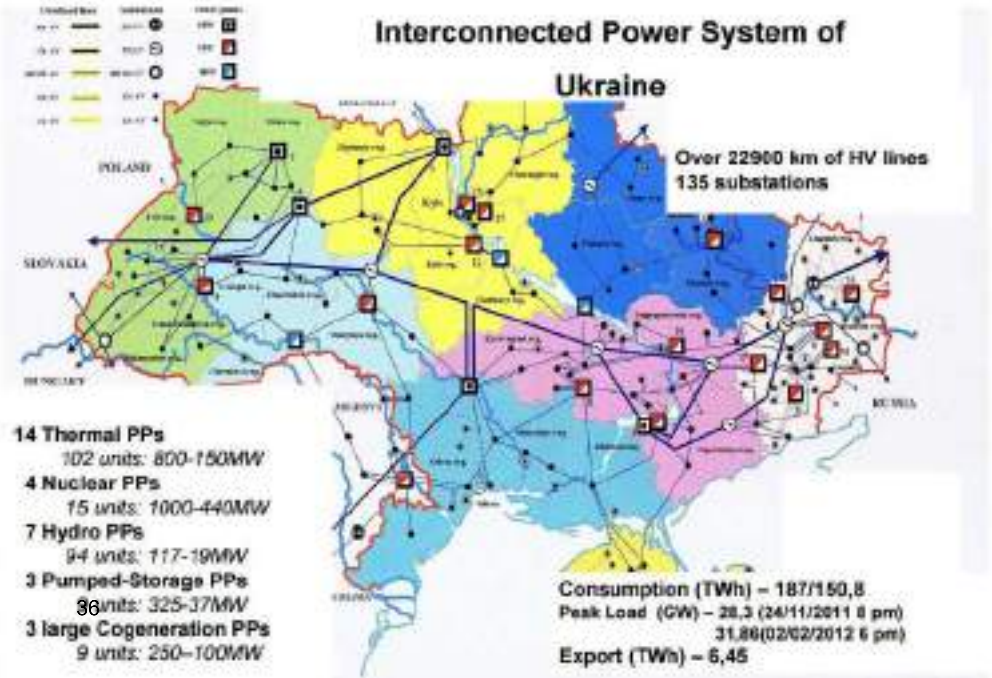
PJSC "Kyivoblenergo"

THREATS: UKRAINE ATTACK

- Ukraine is a nation of about 44 million people
  - Total area of 603,550 sq km, and is just slightly smaller than the province of Manitoba
  - Bordered by Belarus, Hungary, Moldova, Poland, Romania, Russia and Slovakia

- 2012 estimates – Ukraine produced 187.1 billion kWh, with an installed generating capacity of 55.19 million kW

- The country was a net electric power exporter
  - Importing a total of 89 million kWh
  - Exporting 6 billion kWh

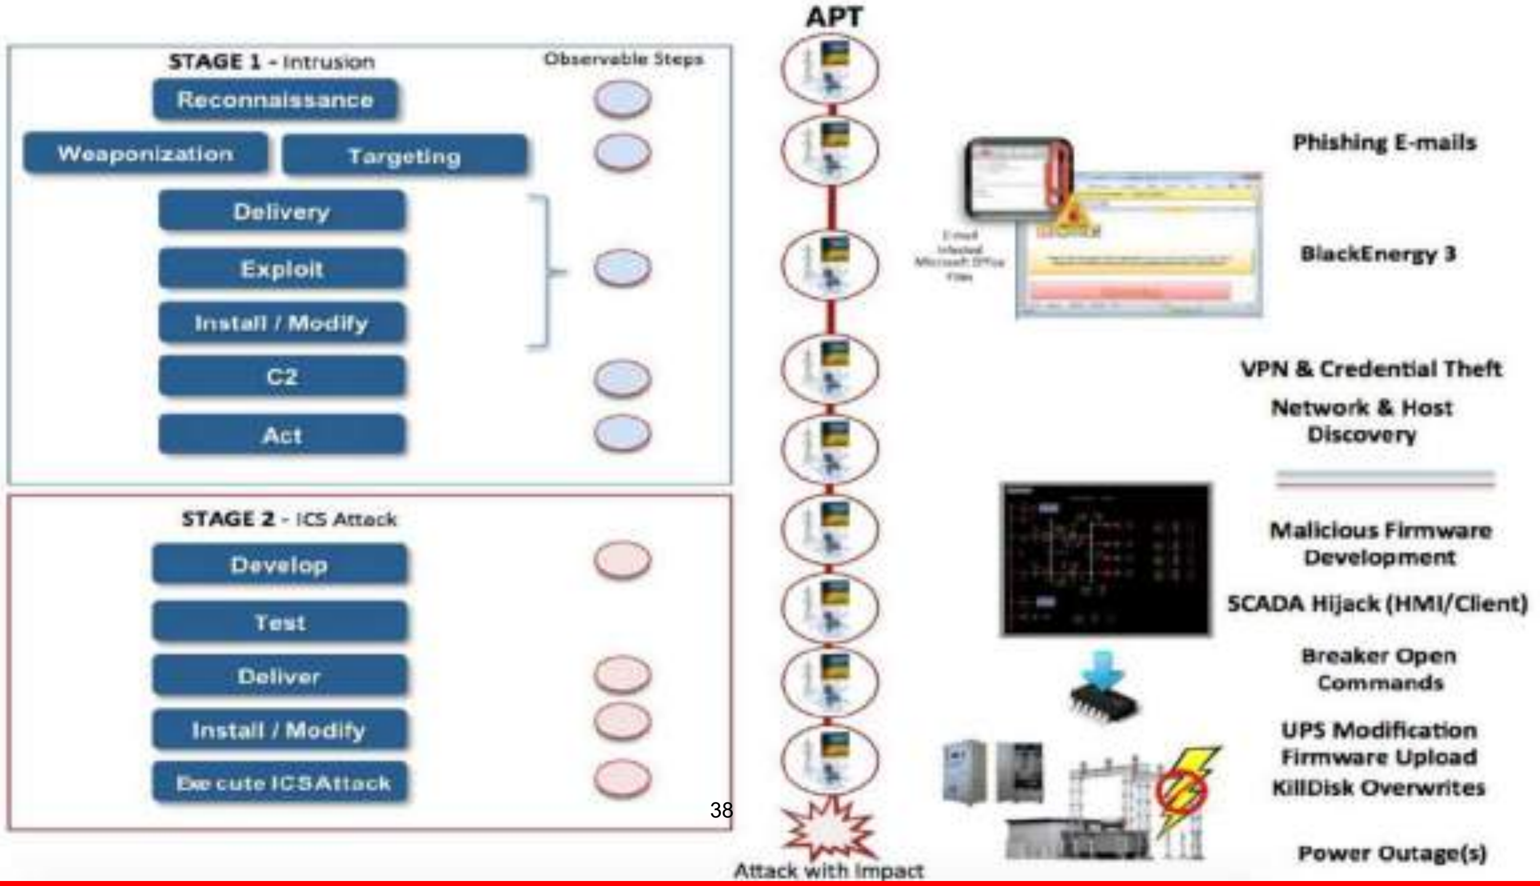


THREATS: UKRAINE ATTACK (CONT'D)

- On December 23, 2015, three Ukrainian power companies (called "oblenergos") experienced an unprecedented cyber attack causing power outages, which impacted over 225,000 customers in Ukraine

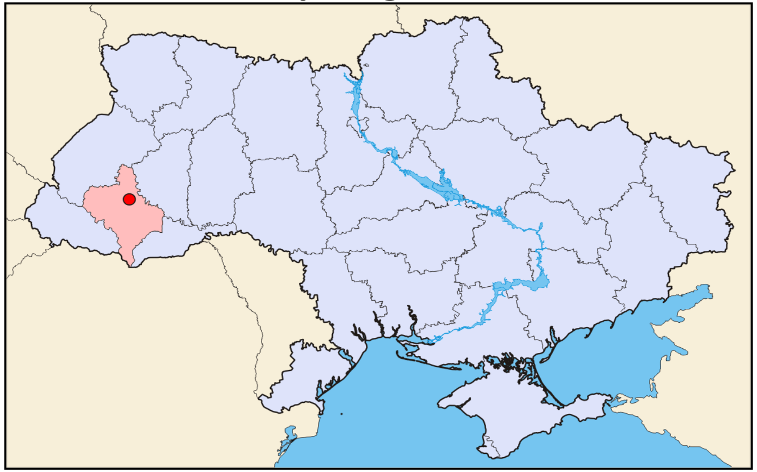
- These attacks were conducted by remote cyber attackers who, leveraging legitimate credentials obtained via unknown means, remotely operated breakers to disconnect power. Within the Ukrainian electrical system,
these attacks were directed at
the regional distribution level only.

ATTACK EXECUTION SUMMARY (KILL CHAIN)



CYBER ATTACK IN THE UKRAINE

Multi-pronged Attack



Dec 23, 2015: Three electricity distribution systems in Ukraine were disrupted, leaving more than 225,000 customers without power for as long as six hours. The incident affected more than 50 substations, and 134 megawatts of load were shed. Simultaneously, a telephony Denial of Service attack on call centers hindered communication — as customers were trying to report their outages.

Hydro One Security Measures

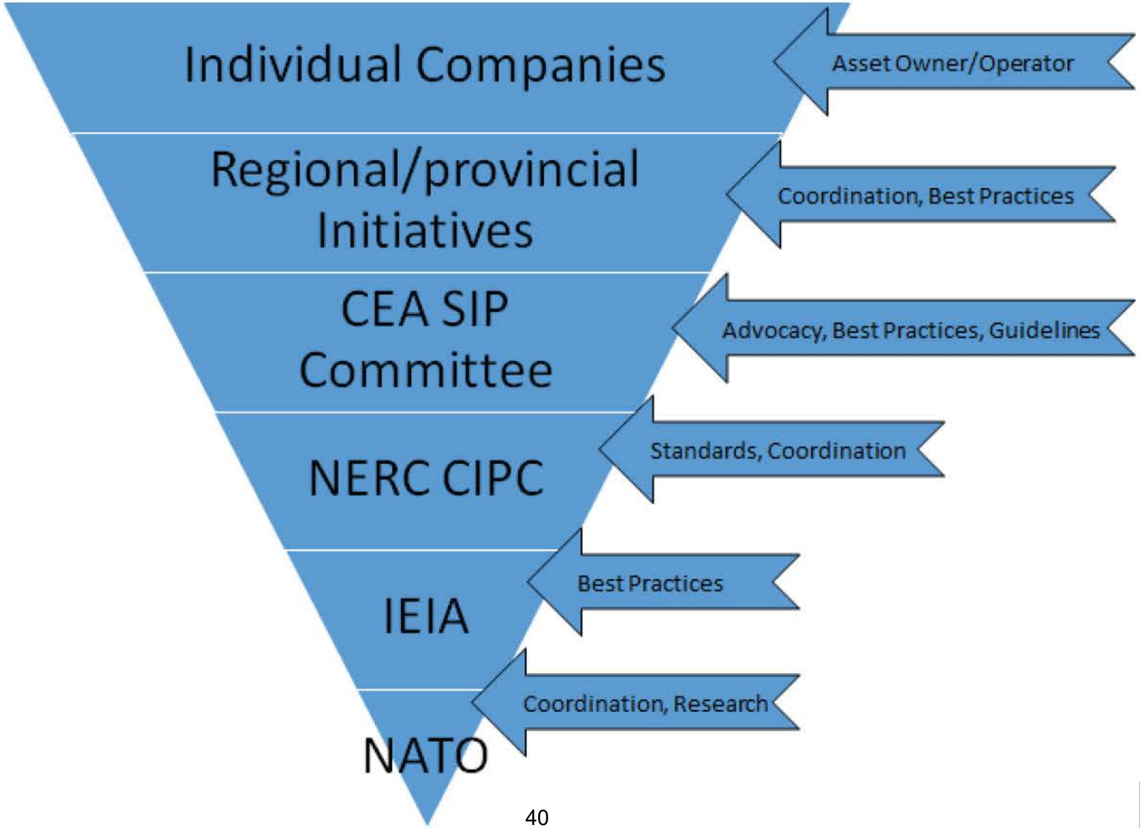
Hydro One and other North American Grid Operators have security controls in place that would have prevented the Ukraine scenario:

Grid control systems separate from enterprise systems

Specific solutions to block malware

Hydro One recently participated in an assessment of Canadian Electric Utilities to review the Ukraine scenario and that our approach is aligned with the Canadian Electric Industry.

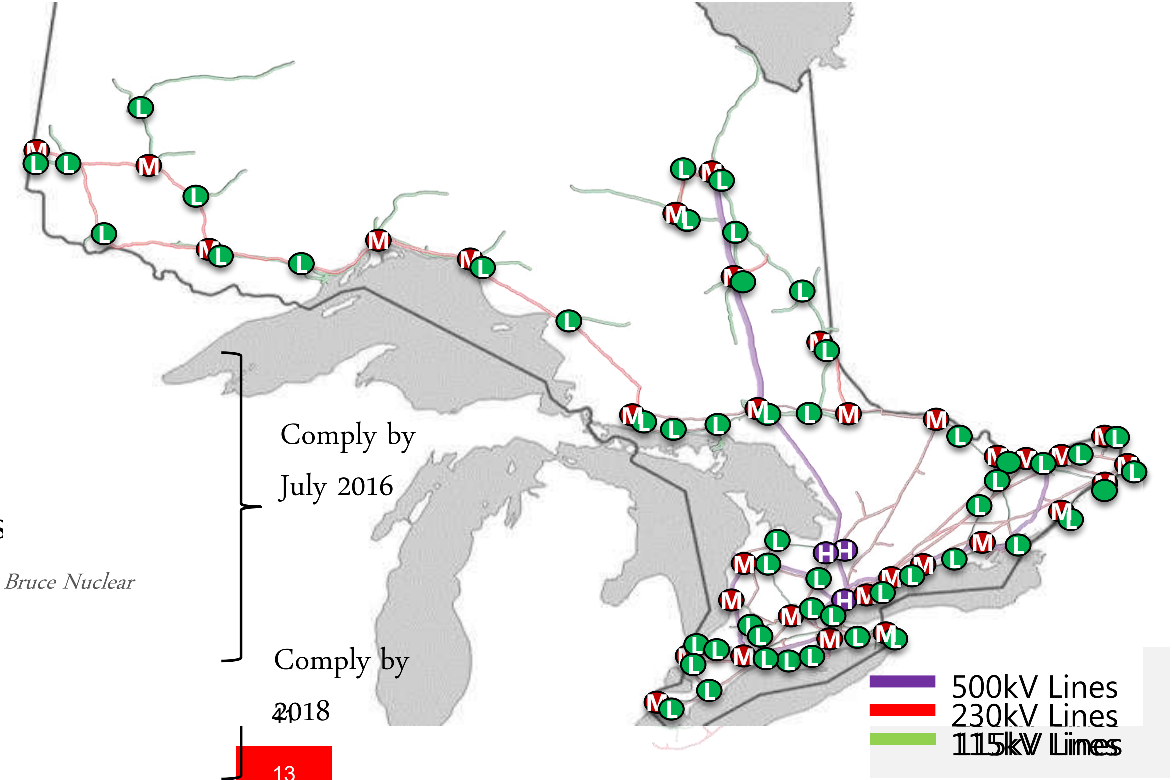
CANADIAN ELECTRICITY ASSOCIATION COLLABORATION MODEL: ADDRESSING SECURITY



The North American Electricity Reliability Corporation (NERC) has developed Critical Infrastructure Protection (CIP) standards. For CIP, controls are scaled to the criticality of the facility

Bulk Electric System (BES)

The electrical generation resources, transmission lines, interconnections with neighbouring systems, and associated equipment, generally operated at voltages of 100 kV or higher.



H High Impact Facilities

Control Centers, Data Centers

M Medium Impact Facilities

500kV Facilities, IESO-identified 230kV Facilities, Bruce Nuclear Protection Facilities, Hub Sites

FRAMEWORK FOR ADDRESSING CYBER SECURITY

Prepare

Predict

Prevent

Respond

Recover

Restore

CYBER SECURITY: OPERATIONS

- Hydro One monitors systems for operational and security events 24x7 at the Ontario Grid Control Centre and Telecom Operations Centre
- We continuously look for opportunities for improvement by monitoring the quality of security processes through internal audits, exercises and external assessments. We use expert security organizations to perform many of these activities

Mock audits by expert organizations:
Compliance related reviews for NERC regulations

Table top incident response simulations:
Internal scenario driven exercises to identify process gaps and maturity levels across the company

Annual vulnerability assessments:
Compliance requirement to annually scan critical systems for known vulnerabilities, confirm system configuration and documentation

IESO Market Assessment & Compliance Division (MACD) reviews:
Audit authority in Ontario mandates a compliance program and reporting obligations

White Hat exercises:
Hydro One has been aggressive in performing reviews of control effectiveness and personnel with ongoing multi-year White Hat exercises

Ontario Provincial Police site threat risk assessments & exercises:
Comprehensive security reviews at critical facilities; advises on internal physical security standards and OPP response plans at our facilities

43

BUSINESS CONTINUITY

- Hydro One takes a proactive approach to mitigate risks to our transmission and distribution system and to the continuous delivery of our critical functions
- We have an experienced and exercised Emergency Response Organization trained to coordinate our emergency response regardless of cause

Preparing for Emergencies
Continually monitoring weather to implement preemptive measures at our stations

Mutual Assistance Agreements
Provide mutual aid to and ask public utilities to assist with restoration (Ontario and North America)

Learning from Actual Events
Undertake reviews of actual events and implement recommendations

Fire Tours

Fire Services have been provided with tours of many of our stations across the province

44

Partnerships

Working proactively with market participants, emergency services, communities, news media and stakeholders

Emergency Response and Business Continuity Plans
Tested annually and full scale exercises
(e.g. GridEx and Polar Vortex)

Continuously improve our ability to respond to emergencies
Preemptive strategies to reduce any impact on our system

Build Relationships with Police Services
Work with police services across the province on Critical Infrastructure Protection

CONFIDENTIAL AND FORWARD-LOOKING INFORMATION

CONFIDENTIAL INFORMATION

In this presentation, "Hydro One" or "the Company" refers to Hydro One Networks Inc. and its affiliates, taken together as a whole.

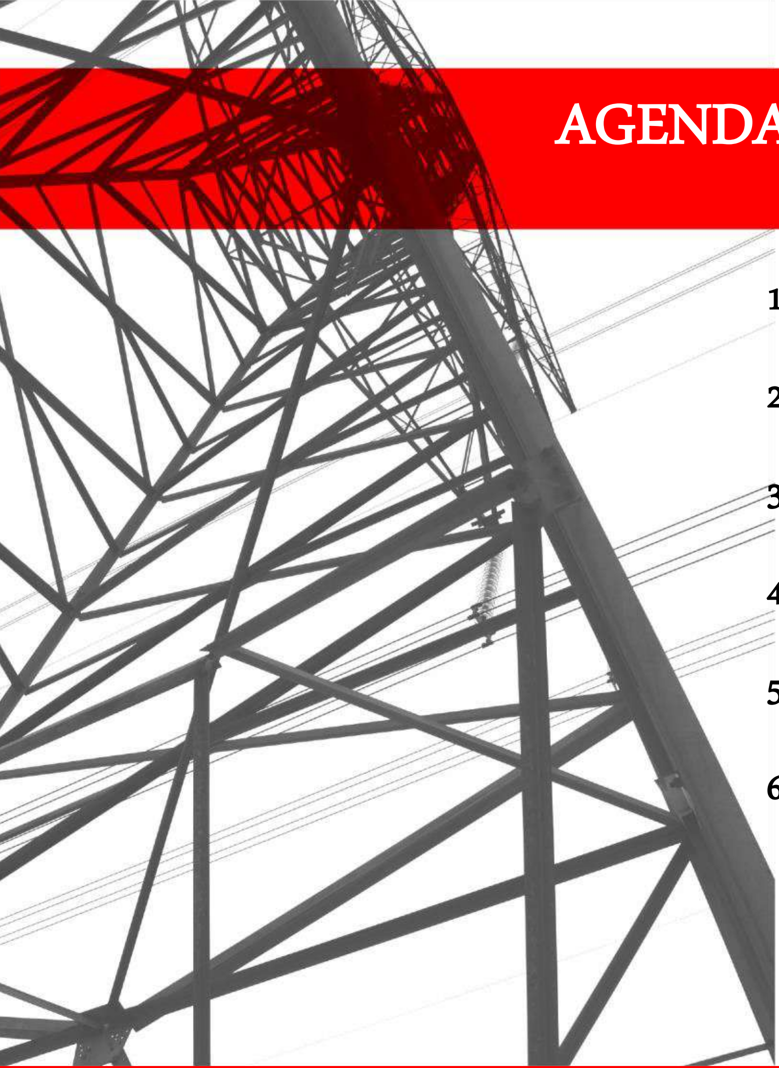
In this presentation, all amounts are in Canadian dollars, unless otherwise indicated. Any graphs, tables or other information in this presentation demonstrating the historical performance of Hydro One is intended only to illustrate past performance and is not necessarily indicative of future performance.

Forward-Looking Information

This presentation contains "forward-looking information" within the meaning of applicable Canadian securities laws. Forward-looking information in this presentation is based on current expectations, estimates, forecasts and projections about Hydro One's business and the industry in which Hydro One operates and includes beliefs of and assumptions made by management. Such statements include, but are not limited to: statements regarding expected or projected capital and development expenditures, the timing of these expenditures and the Company's investment plans; the use of customer feedback from the consultation process and its impact on the Company's investment plans; the impact of future investments on customer risk, reliability performance and risk, and service interruptions; statements about asset condition, the average ages of critical assets, and their future expected condition; statements about types of asset replacements and their expected associated costs; anticipated rate impacts; and statements about illustrative scenarios and their impact on capital spend, expected outcomes, rates, changes in risk profile according to asset class, and increased or decreased system risk impact.

Words such as "aim", "could", "would", "expect", "anticipate", "intend", "attempt", "may", "plan", "will", "believe", "seek", "estimate", "goal", "target", "project" and variations of such words and similar expressions are intended to identify such forward-looking information. These statements are not guarantees of future performance and involve assumptions and risks and uncertainties that are difficult to predict. Therefore, actual outcomes and results may differ materially from what is expressed, implied or forecasted in such forward-looking information. Hydro One does not intend, and it disclaims any obligation to update any forward-looking information, except as required by law.

The forward-looking information in this presentation is based on a variety of factors and assumptions. Actual results may differ materially from those predicted by such forward-looking information. While Hydro One does not know what impact any of these differences may have, Hydro One's business, results of operations and financial condition may be materially adversely affected if any such differences occur. Factors that could cause actual results or outcomes to differ materially from the results expressed or implied by forward-looking information are: the risk that previously granted regulatory approvals may be subsequently challenged, appealed or overturned; the risk of public opposition to and delays or denials of requisite approvals and accommodations for the Company's planned projects; the risk that the Company is not able to arrange sufficient cost-effective financing to fund capital expenditures; the risk that the Company may not be able to execute plans for capital projects necessary to maintain the performance of the Company's assets or to carry out projects in a timely manner; the risk that the Company's Board of Directors may not approve the projected expenditures; and the risk that the regulator may alter or deny approval for requested investments and recoverability in rates.



AGENDA

1. **Introduction:** Engagement Strategy

2. **Review:** System Performance (Reliability)

3. **Review:** Investment Scenarios (Illustrative)

4. **Review:** Summary Report (Ipsos – Third Party)

5. **Discussion:** Submitted Plan (i.e. Rate Impacts)

6. **Discussion:** Future Engagement (Feedback)

WHO WE ARE AND WHAT WE DO

Hydro One

is one of the largest transmission utilities in North America

In 2015, Hydro One transported 137 TWh of electricity

- Hydro One's transmission customers include 47 transmission-connected local distribution companies (LDCs), Hydro One's distribution system, and 90 large industrial customers directly connected to the transmission system.
- Hydro One's transmission system totals approximately 292 transmission stations and approximately 29,000 circuit kilometres of high-voltage lines, operating at 500 kV, 230 kV or 115 kV. It represents ~$12B in assets.
- The transmission system is linked to the five adjacent jurisdictions: Manitoba, Minnesota, Michigan, New York and Quebec.
- It must comply with standards established by the North American Electric Reliability Corporation (NERC).
- Hydro One's transmission operations are regulated by the Ontario Energy Board (OEB) and the National Energy Board (NEB), together with an operating agreement with the IESO.

CONTEXT

Factors Affecting Development of Hydro One's Transmission Investment Plan

- New management and independent Board of Directors
- Better line of sight to specific system risks and new approaches to address certain risks
- Benchmarking suggests that Hydro One's total spending on its transmission system has been less than comparators
- Greater focus on understanding the needs and preferences of customers
- Many types of customer interactions but not specific to Hydro One's investment plan

WE TAKE A RISK-BASED APPROACH TO INVESTMENT

We are accountable to plan, operate, build, and maintain an affordable, robust and flexible transmission system that serves Ontario's needs and meets our obligations as part of the North American grid

Our investment plan identifies, prioritizes, and schedules the investments we make in our system.

We aim to create value by:

- Ensuring our investment plan considers and reflects the needs and preferences of our customers by achieving a balance between managing reliability risk, service and cost
- Recognizing every dollar we spend comes at a cost to our customers and the people of Ontario
- Making prudent, cost-effective, short and long-term investments to meet the electricity needs of Ontario now and into the future
- Addressing emerging risks of our system, and always looking for ways to economically extend the life of existing transmission assets
- Being innovative by adapting new/proven technologies, equipment and processes that contribute to the efficiency of our operation

OUR ENGAGEMENT STRATEGY FOR CUSTOMER INPUT

Development of Transmission Investment Plan

for 2017 and beyond

This investment plan in turn, underpins our **Transmission Rate Application** to the OEB

- Increased focus on customers resulted in a decision that development of the Transmission Investment Plan would include customer input
- Our Investment Plan would be based on our customers' needs and preferences, our analysis of assets' needs and of our ability to resource, schedule and execute work
- All transmission-connected customers would have the opportunity to provide input that would support the development of the Investment Plan
- The approach would be consistent with the OEB's Renewed Regulatory Framework

OUR CUSTOMER ENGAGEMENT PROCESS

Use of Independent 3rd Party to develop and implement Customer Engagement Process

- To ensure an inclusive and unbiased process, a decision was made to use an independent 3rd party to help develop methodology, facilitate discussions and document customer input

- Ipsos was engaged as this independent 3rd party

- Methodology was developed to ensure all transmission-connected customers had the opportunity to provide input:

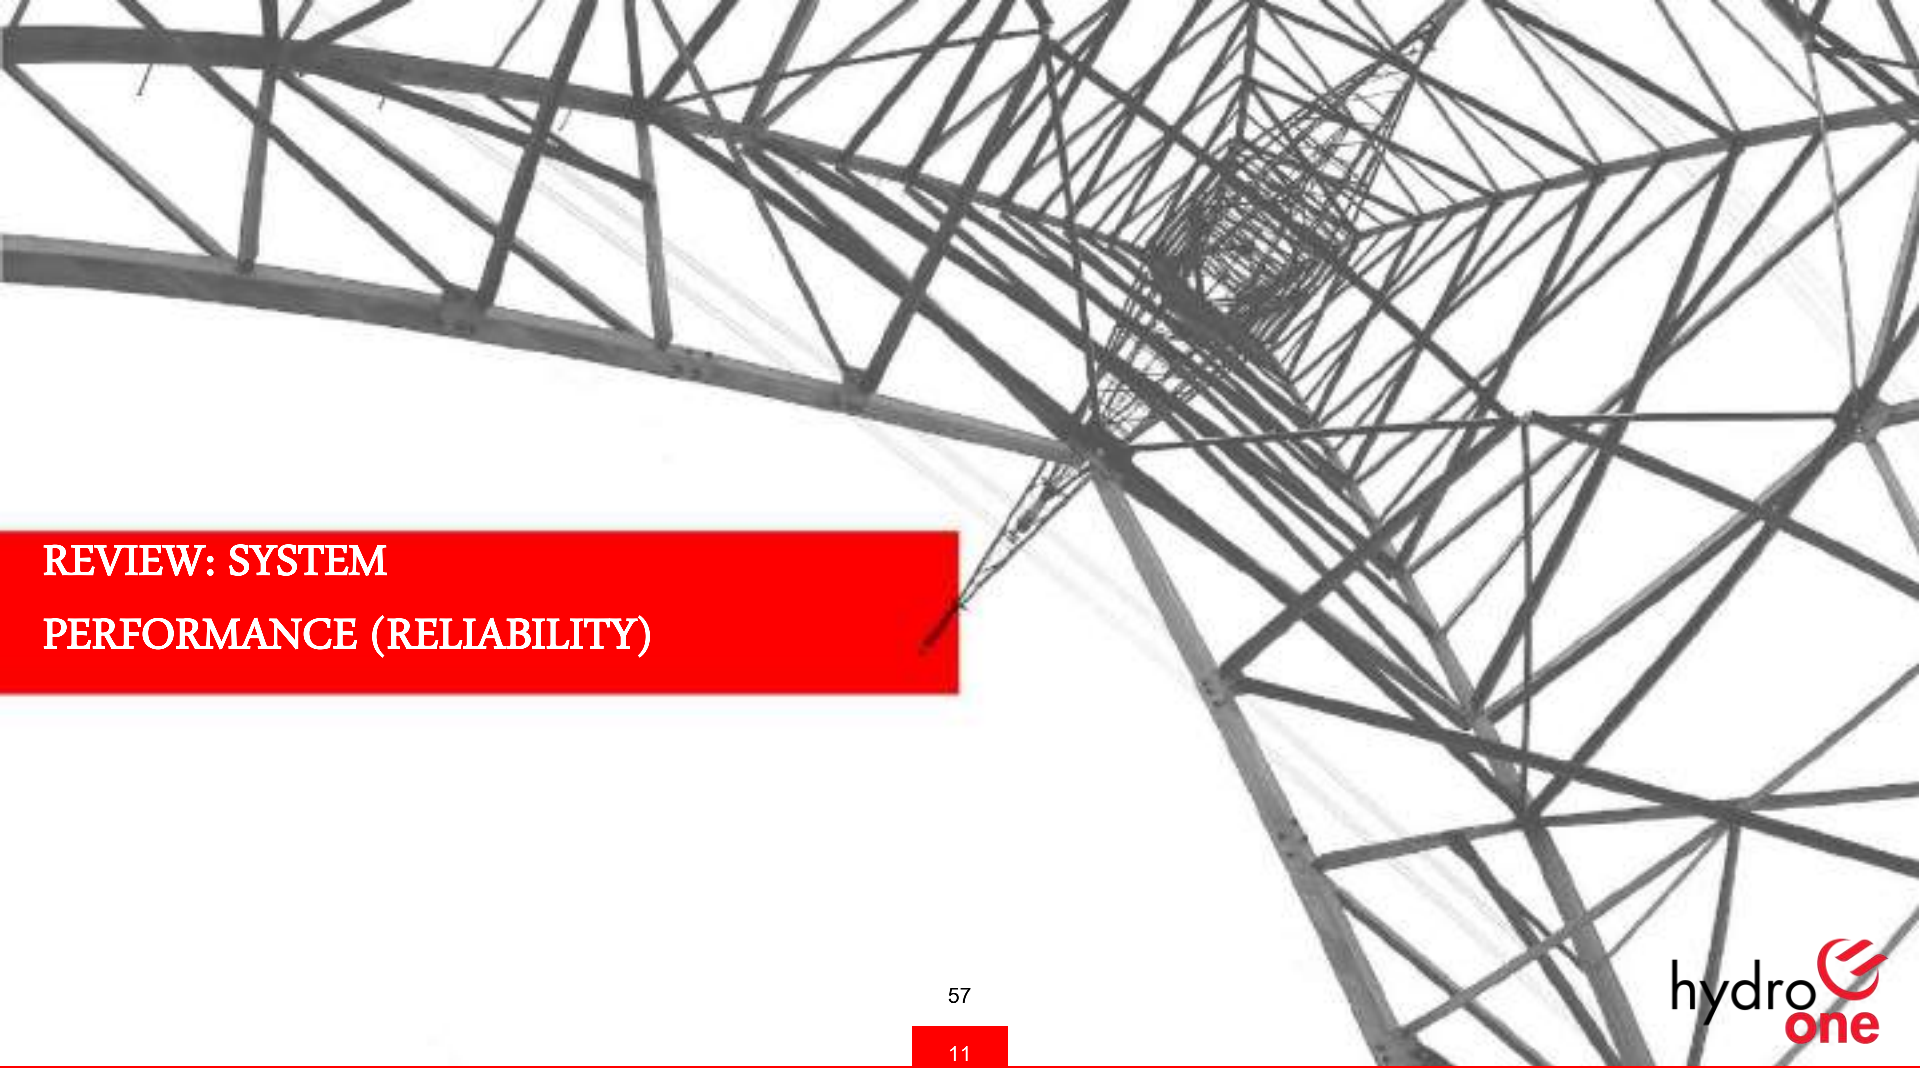
    - One-on-one discussions
    - Larger, professionally facilitated customer engagement sessions held in Toronto, London, Ottawa, Thunder Bay, and Sudbury
    - An online consultation tool

- Consultation materials were developed with a focus on a range of potential sustainment investments and the related impacts to reliability risk and rates.

OUR CUSTOMER ENGAGEMENT PROCESS

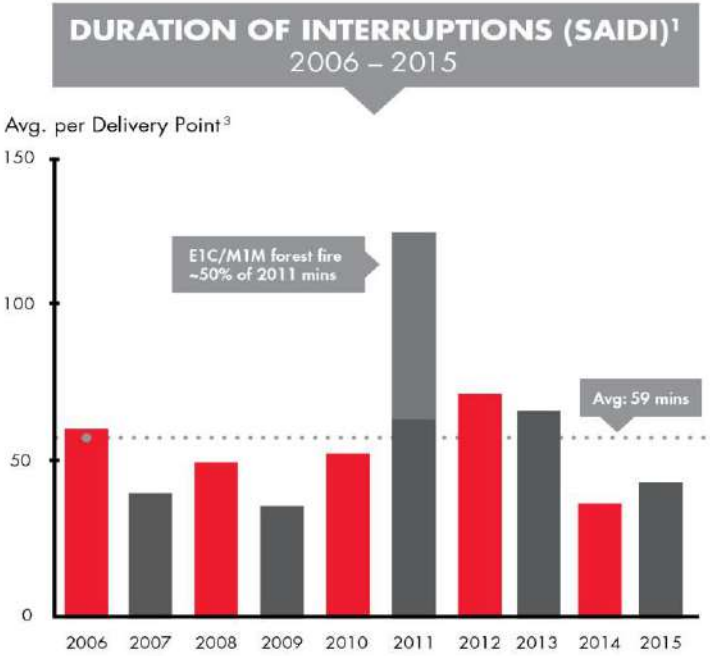
Facilitate and Document Customer Input to inform development of Hydro One's investment plan.

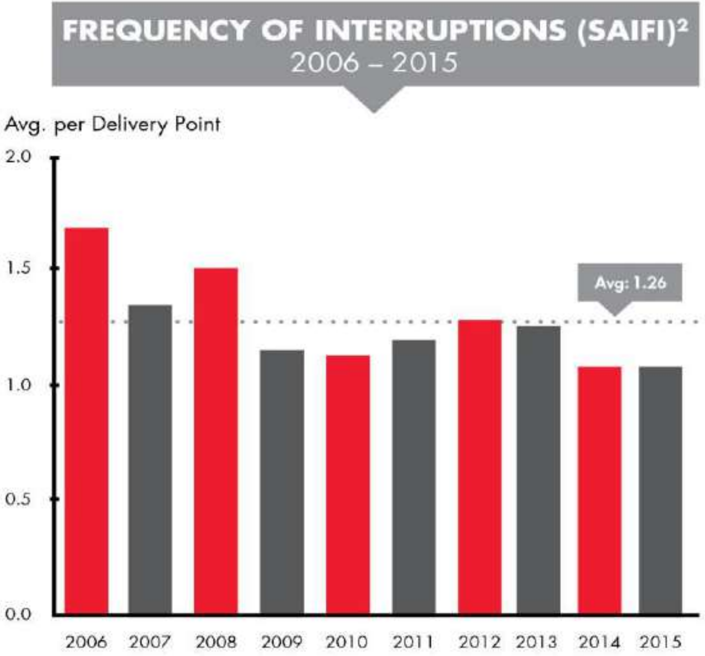
- Consultation materials were developed with a focus on a range of potential sustainment investments and the related impacts to reliability risk and rates
- Customers were provided with identical information regardless of the venue in which they participated
- Ipsos summarized the results from all customer input and wrote a report
- Both the presentation materials and the Ipsos report were filed as part of Hydro One's transmission rate filing



REVIEW: SYSTEM PERFORMANCE (RELIABILITY)

OVERALL TRANSMISSION RELIABILITY HAS REMAINED FLAT



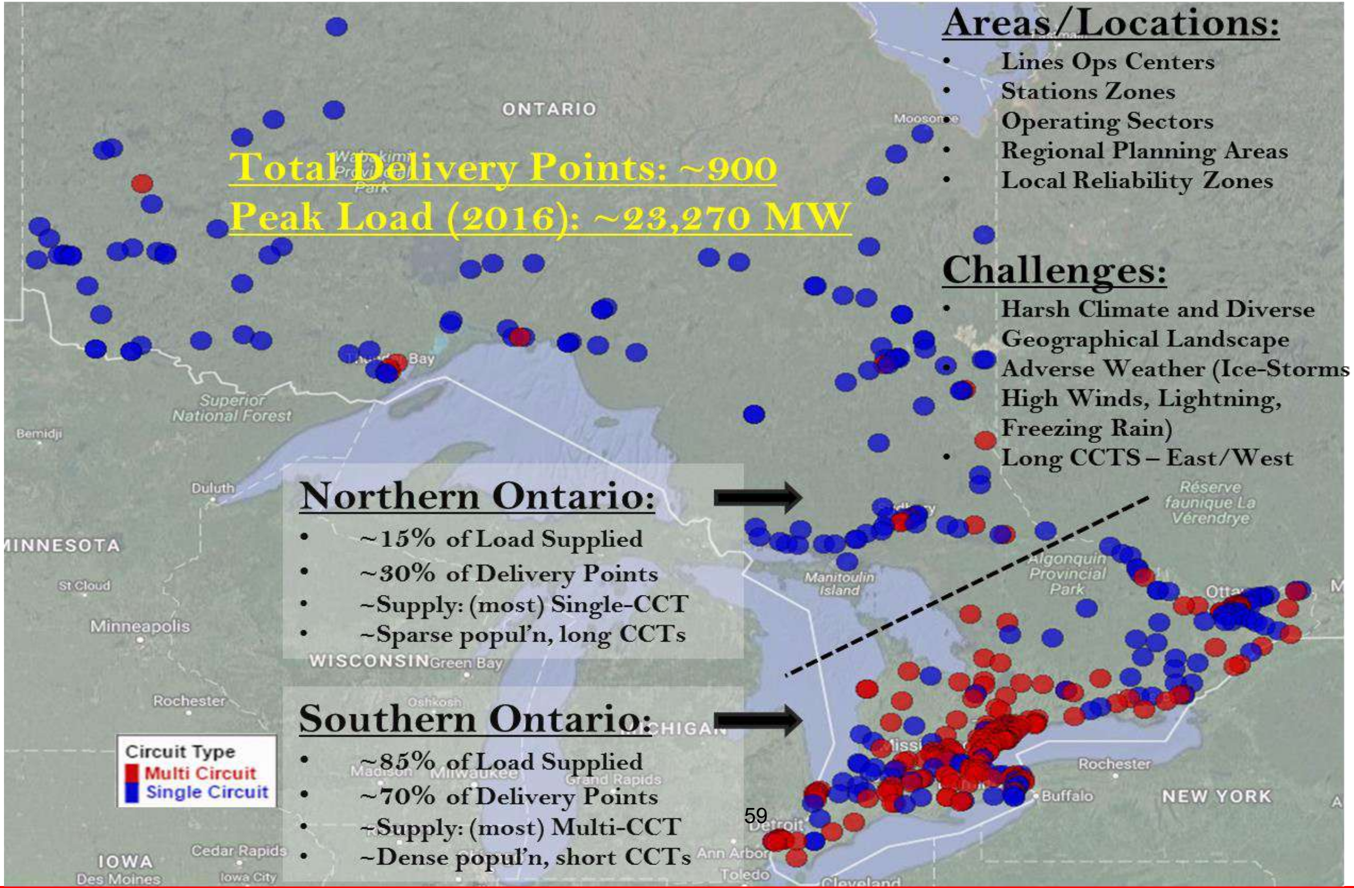


Note: Includes both sustained and momentary interruptions. Excludes planned interruptions and interruptions due to customer activity. Excludes 2013 GTA flood (extreme Force Majeure event - a natural consequence of external forces that are beyond reasonable control).

1. System Average Interruption Duration Index
2. System Average Interruption Frequency Index
3. Interface between the Hydro One transmission system and its load customers. Delivery points consist of: (a) all Hydro One owned step-down transformer stations' low-voltage buses, and (b) stations owned by end-use transmission customers, including LDCs and other transmitters operating at 115kV or higher.

ONTARIO LANDSCAPE: CUSTOMER DELIVERY POINTS

TWO SUB SYSTEMS: MULTI CIRCUIT AND SINGLE CIRCUIT



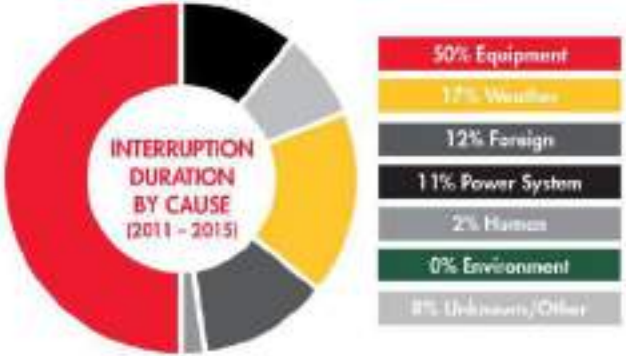
hydro one

DURATION OF INTERRUPTIONS:
SAIDI CONTRIBUTION BY CAUSE (2011-2015)

Equipment failure is the single largest driver of customer interruption minutes across both systems.

MULTI-CIRCUIT SYSTEM (SAIDI)

KEY FACTS:
• ~70% of delivery points • ~85% of total load
• Located primarily in Southern Ontario

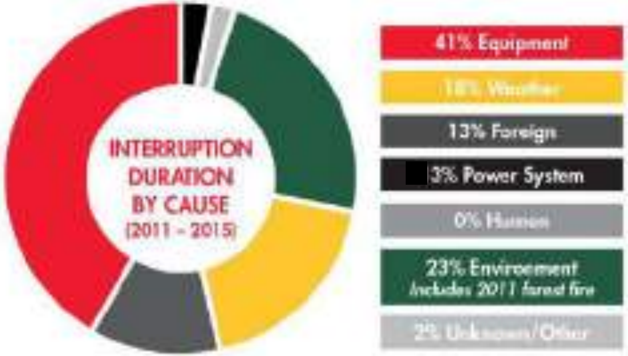


Average interruption duration per delivery point: **10 mins**

Duration of interruptions limited by redundancy in the multi-circuit network

SINGLE-CIRCUIT SYSTEM (SAIDI)[1]

KEY FACTS:
• ~30% of delivery points • ~15% of total load
• Located primarily in Northern Ontario



Average interruption duration per delivery point: **211 mins**

Lack of redundancy drives increased duration of interruptions

Note: Excludes planned interruptions and interruptions due to customer activity. Excludes Force Majeure events.

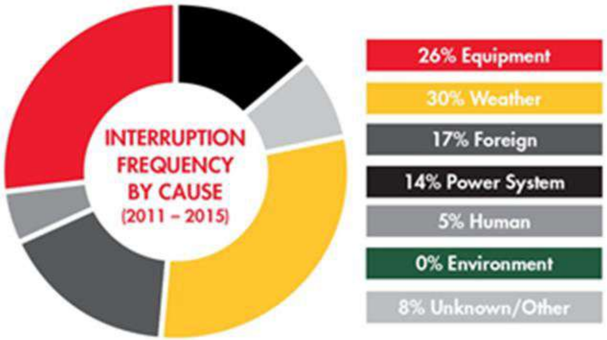
1. D livery points served by sole transmission circuit, leading to limited redundancy; tend to be located in the northern areas of the province.

FREQUENCY OF INTERRUPTIONS:
SAIFI CONTRIBUTION BY CAUSE (2011-2015)

Weather is the single largest driver of customer interruption frequency across both systems.

MULTI-CIRCUIT (SAIFI)

KEY FACTS:
- ~70% of delivery points • ~85% of total load
- Located primarily in Southern Ontario

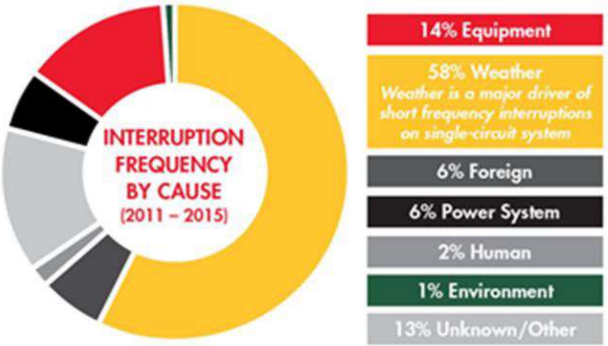


Average interruption frequency per delivery point: **0.27**

Built-in redundancy in the network limits the impact of adverse weather

SINGLE-CIRCUIT (SAIFI)

KEY FACTS:
- ~30% of delivery points • ~15% of total load
- Located primarily in Northern Ontario



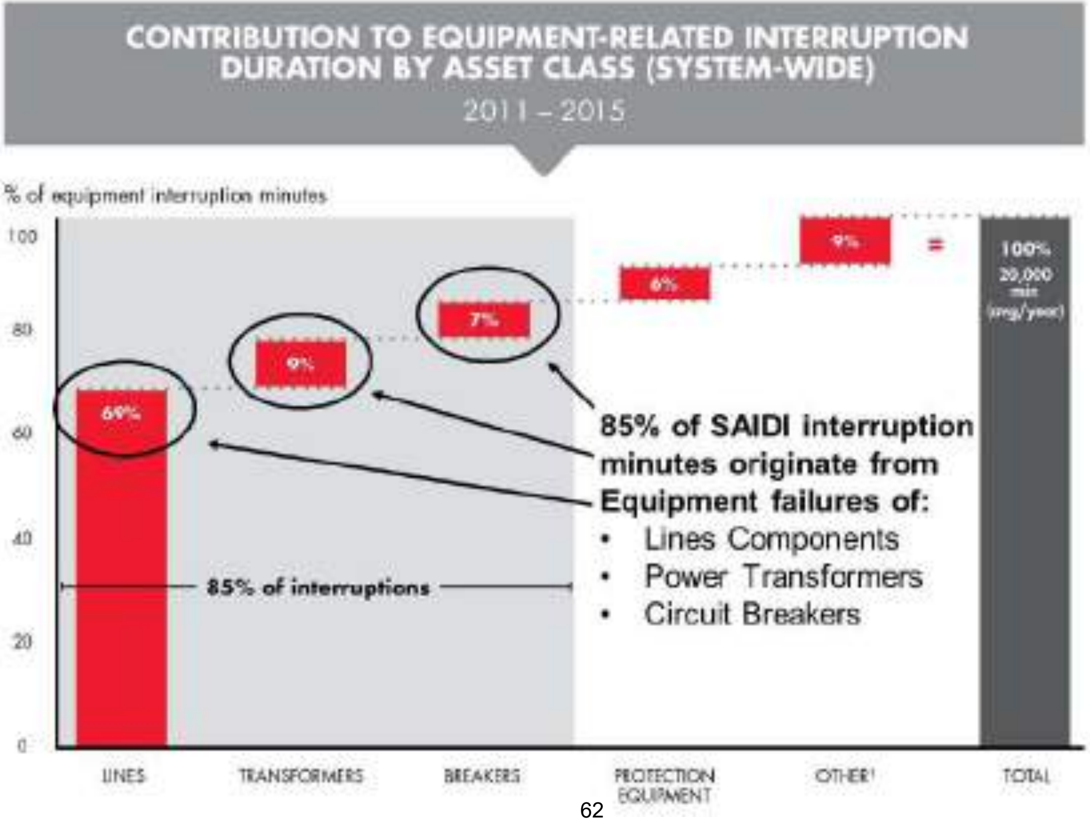
Average interruption frequency per delivery point: **3.26**

Lack of redundancy leads to direct impact from adverse weather

Note: Includes both sustained and momentary interruptions. Excludes planned interruptions and interruptions due to customer activity. Excludes interruptions due to Force Majeure events.

hydro one

LINES, TRANSFORMERS AND BREAKERS ACCOUNT FOR 85% OF EQUIPMENT RELATED INTERRUPTION DURATION



62

1. Other includes switches, instrument transformers, surge arrestors, system auxiliaries

THE AVERAGE AGE OF CRITICAL ASSETS HAS INCREASED IN RECENT YEARS, AND TESTING HAS IDENTIFIED PRIORITY ASSETS FOR REPLACEMENT

HISTORICAL REPLACEMENT RATE HAS BEEN INSUFFICIENT TO ADDRESS SYSTEM AGING...

	CONDUCTORS	STEEL TOWERS	TRANSFORMERS	BREAKERS
% beyond expected service life[1]	30%	22%	28%	9%
# beyond expected service life	5,800 cct-km	12,000	203	299

+

CONDITION ASSESSMENTS HAVE IDENTIFIED SPECIFIC ASSETS FOR REPLACEMENT.

ASSET	CONDITION
CONDUCTORS	• Based on actual conductor sample testing, 2,300 cct-km of transmission lines known to be at or approaching end of useful life
STEEL TOWERS	• 9,100 steel structures located in known high-corrosion areas based on inventory assessment
TRANSFORMERS	• 31 transformers (4.3%) rated high-risk or very high-risk based on condition assessment
BREAKERS	• ~470 breakers rated high-risk or very high-risk based on condition assessment
INSULATORS	• ~25% of insulators at greater risk of failure • Ongoing testing will determine remaining insulator strength

1. The average time in years that an asset can be expected to operate under normal system conditions.

hydro one

HYDRO ONE IS UNDERTAKING
A NUMBER OF ACTIONS TO MITIGATE RELIABILITY RISK

ONGOING ACTIVITY TO ADDRESS RELIABILITY RISK

1 Unplanned Outages: Equipment Failure

The risk due to unplanned outages is being managed by:

- Continued focus on asset condition assessments and data-driven risk analysis
- Assessing maintenance programs and CapEx spend vs. transmission reliability contributions from asset classes
- Evaluating assets that may be run--to-failure candidates (those not directly affecting transmission reliability)

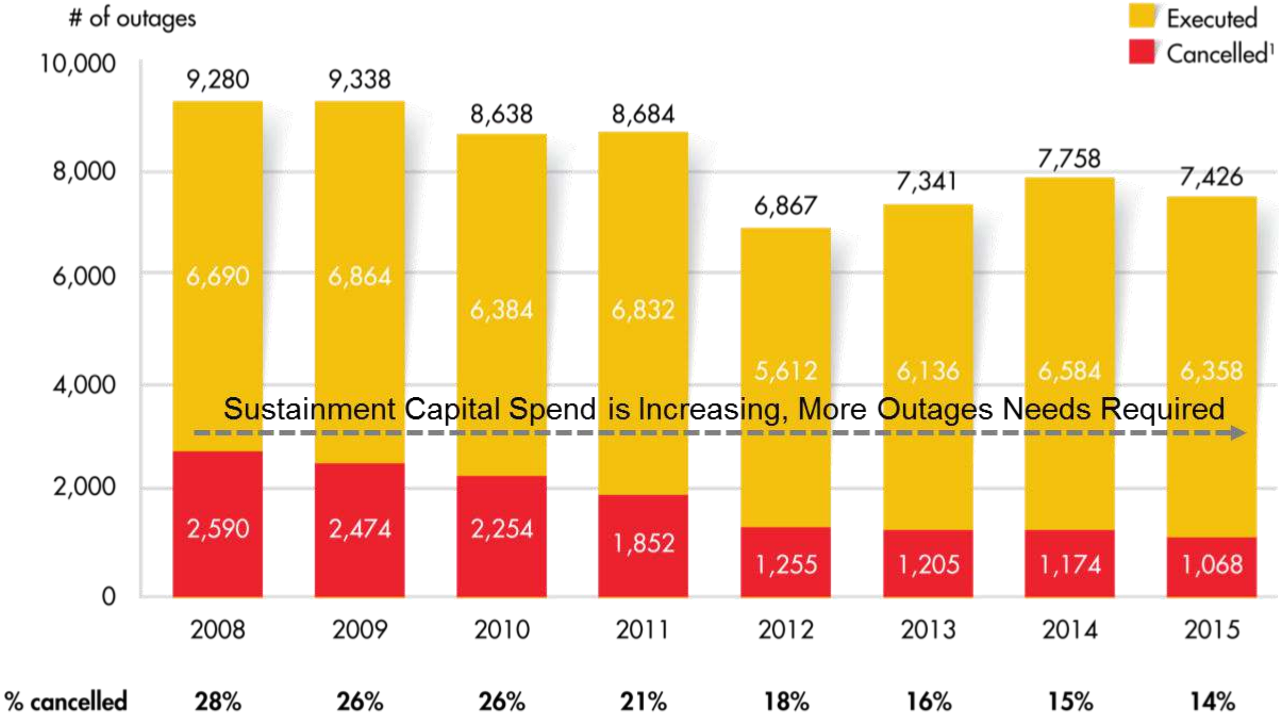
2 Planned Outages: Equipment Repair and Replacement

The risk due to planned outages is being managed by continued prudent planning and work processes, such as:

- Station-centric work approach
- Re-evaluating maintenance program cycles
- Focusing on identifying and enabling work bundling opportunities
- Transmission System Outage Groups process
- Multi-disciplinary planning
- Pre-outage inspections on companion assets (e.g., transformers) for multi-circuit outage requirements

Next slide shows the positive effect these have

HYDRO ONE BULK ELECTRICITY SYSTEM OUTAGES SENT TO IESO (2008 – 2015)



1. Actual number of canceled outages may be lower in reality; some canceled outages are for work no longer required

hydro one

SUMMARY OF SYSTEM PERFORMANCE

Hydro One's transmission reliability has remained flat

The **transmission system faces increasing challenges** due to asset condition

1. Outages on the transmission system that interrupt the supply of energy to transmission customers.
2. The average time in years that an asset can be expected to operate under normal system conditions.
3. The removal of facilities from service, unavailability for connection of facilities, temporary de-rating, restriction of use or reduction in the performance of facilities for any reason, including to permit the inspection, testing, maintenance or repair of facilities.
4. Delivery points served by multiple transmission circuits, creating system redundancy; tend to be located in the southern areas of the province.
5. As asset-specific determination based on an asset's condition, criticality, performance, demographics, utilization and economics.

Equipment performance is the largest controllable factor, contributing 42% of system *interruption*[1] minutes. Assets continue to age (e.g., 20% of conductors now beyond *expected service life*[2] of 70 years).

Evidence suggests that underlying reliability risk is increasing:

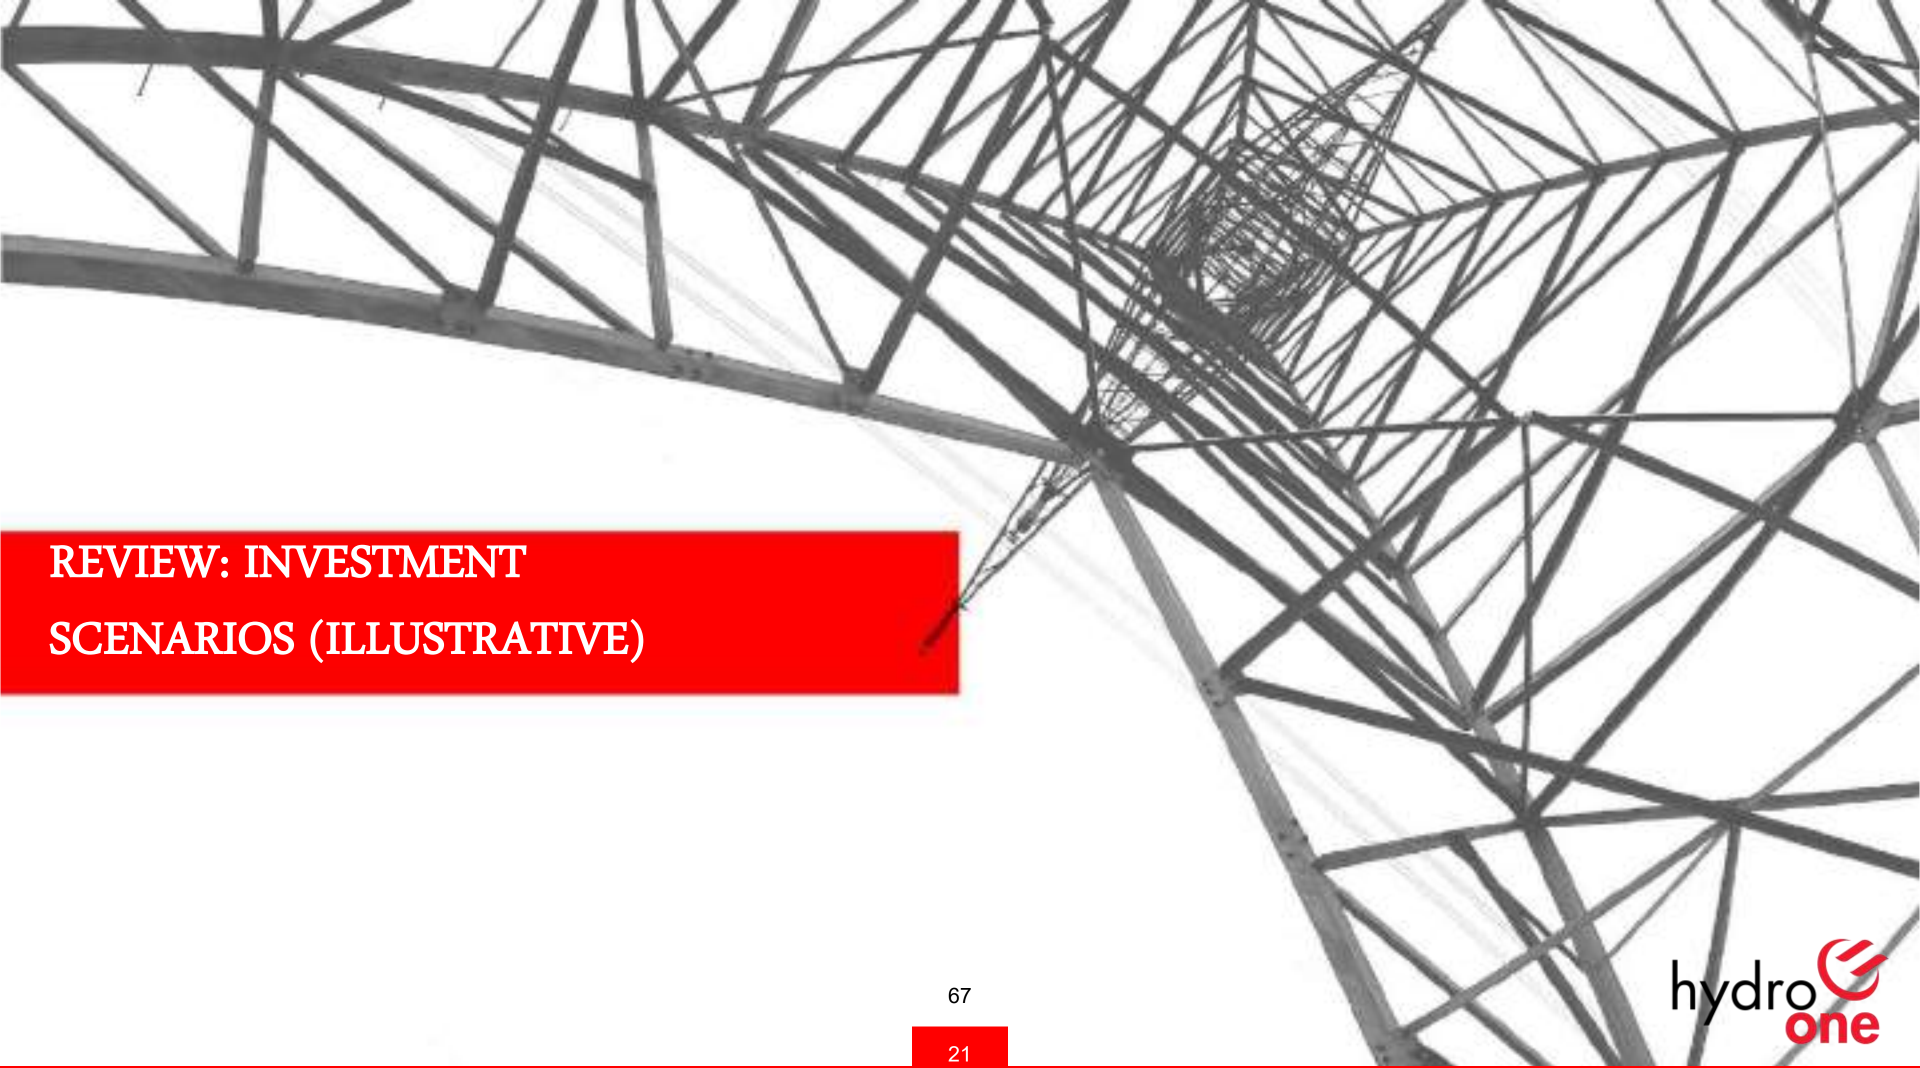
- Equipment outages[3] caused by failure or necessary repairs/replacements increased ~300% from 2011 – 2015.
- Increased duration of placing customers, normally served by a multi-circuit system[4] on single supply, increasing interruption risk by ~400%.

Condition assessments have identified critical replacement needs, for example:

- 2,300 cct-km of conductors identified for priority replacement due to being at or near end of useful life[5].
- 9,100 steel towers at heightened failure risk due to depletion of their corrosion protection layer.

Hydro One continues to take action to mitigate reliability risk by:

- Managing equipment performance through robust, condition-based asset replacement programs.
- Reducing customer exposure to single-supply through improved planning and work processes.



REVIEW: INVESTMENT SCENARIOS (ILLUSTRATIVE)

INVESTMENT SCENARIOS

Illustrative scenarios were developed for various levels of sustainment expenditures

These result in different rate impacts and reliability risks

- These illustrative scenarios focused on the Sustainment Capital portion of our Investment Plan and were meant to represent a spectrum of potential investments
- **We did not have a recommended scenario, nor did we ask customers to choose from the scenarios presented**
- The asset solutions identified are flexible. The inclusion and pacing of investments in the plan may vary from what is presented in the scenarios
- Through this conversation, we sought to better understand your business needs and preferences to inform our 5-year Investment Plan
- Hydro One presented this information in order to solicit feedback on potential alternate investment scenarios and their expected impact on the reliability of our transmission system. The scenarios were illustrative only; none of the scenarios presented were represented to be an exact scenario to be presented to the regulator. The feedback from this consultation was considered when making our regulatory filings

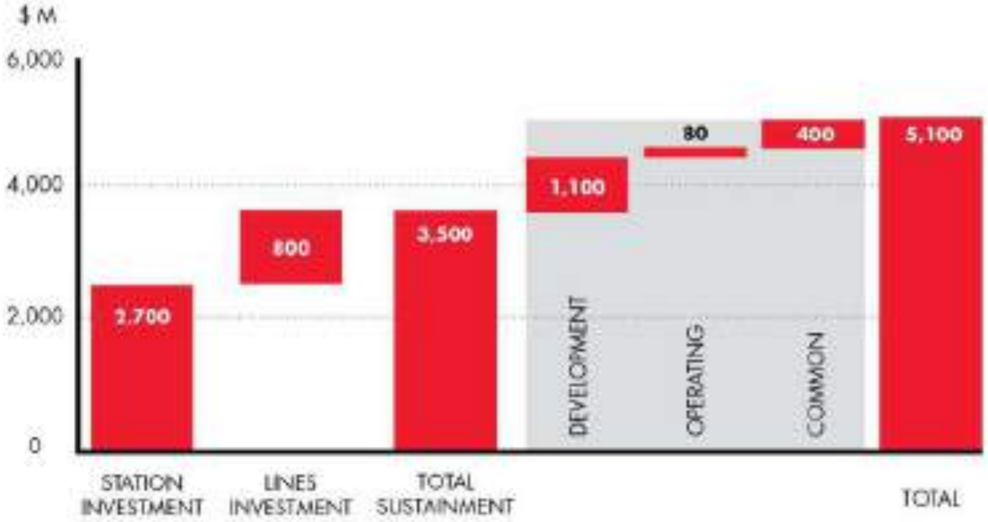
hydro one

SCENARIO ONE

SCENARIO 1
~$5,100M (2016 – 2020)

KEY ELEMENTS OF SCENARIO 1

- Coordinated replacement of multiple elements at stations to reduce outages
- Investment to replace high risk air-blast circuit breakers
- Replacement of aging transformer population
- Does not fully address increasing risk due to line asset aging/conditions



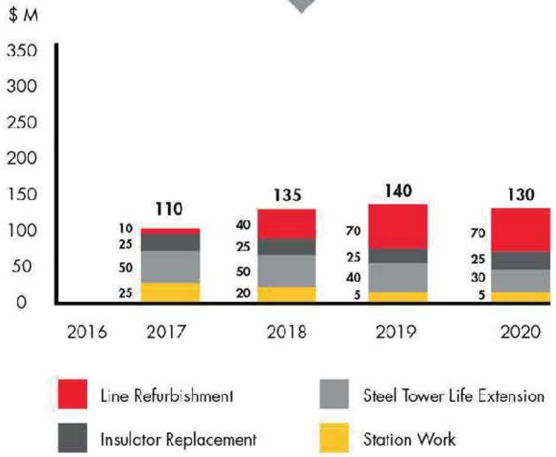
Overall risk profile:

Reliability risk expected to increase

69

SCENARIOS TWO AND THREE

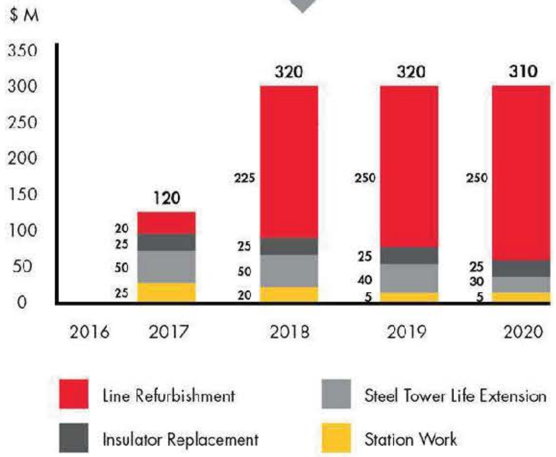
SCENARIO 2
~$520M in incremental CapEx from 2016 – 2020



- Scenario 1 and additional station work, insulator replacement, and steel tower life extension program
- Projected replacement of 1,200 cct-km of conductors, including all copper conductors at end of useful life

Overall risk profile:
Current reliability risk expected to remain unchanged

SCENARIO 3
~$1.1B in incremental CapEx from 2016 – 2020



- Scenario 1 and additional station work, insulator replacement, and steel tower life extension program
- Projected replacement of 2,300 cct-km of conductors, including all copper conductors at end of useful life

Overall risk profile:
Reliability risk expected to decrease

hydro one

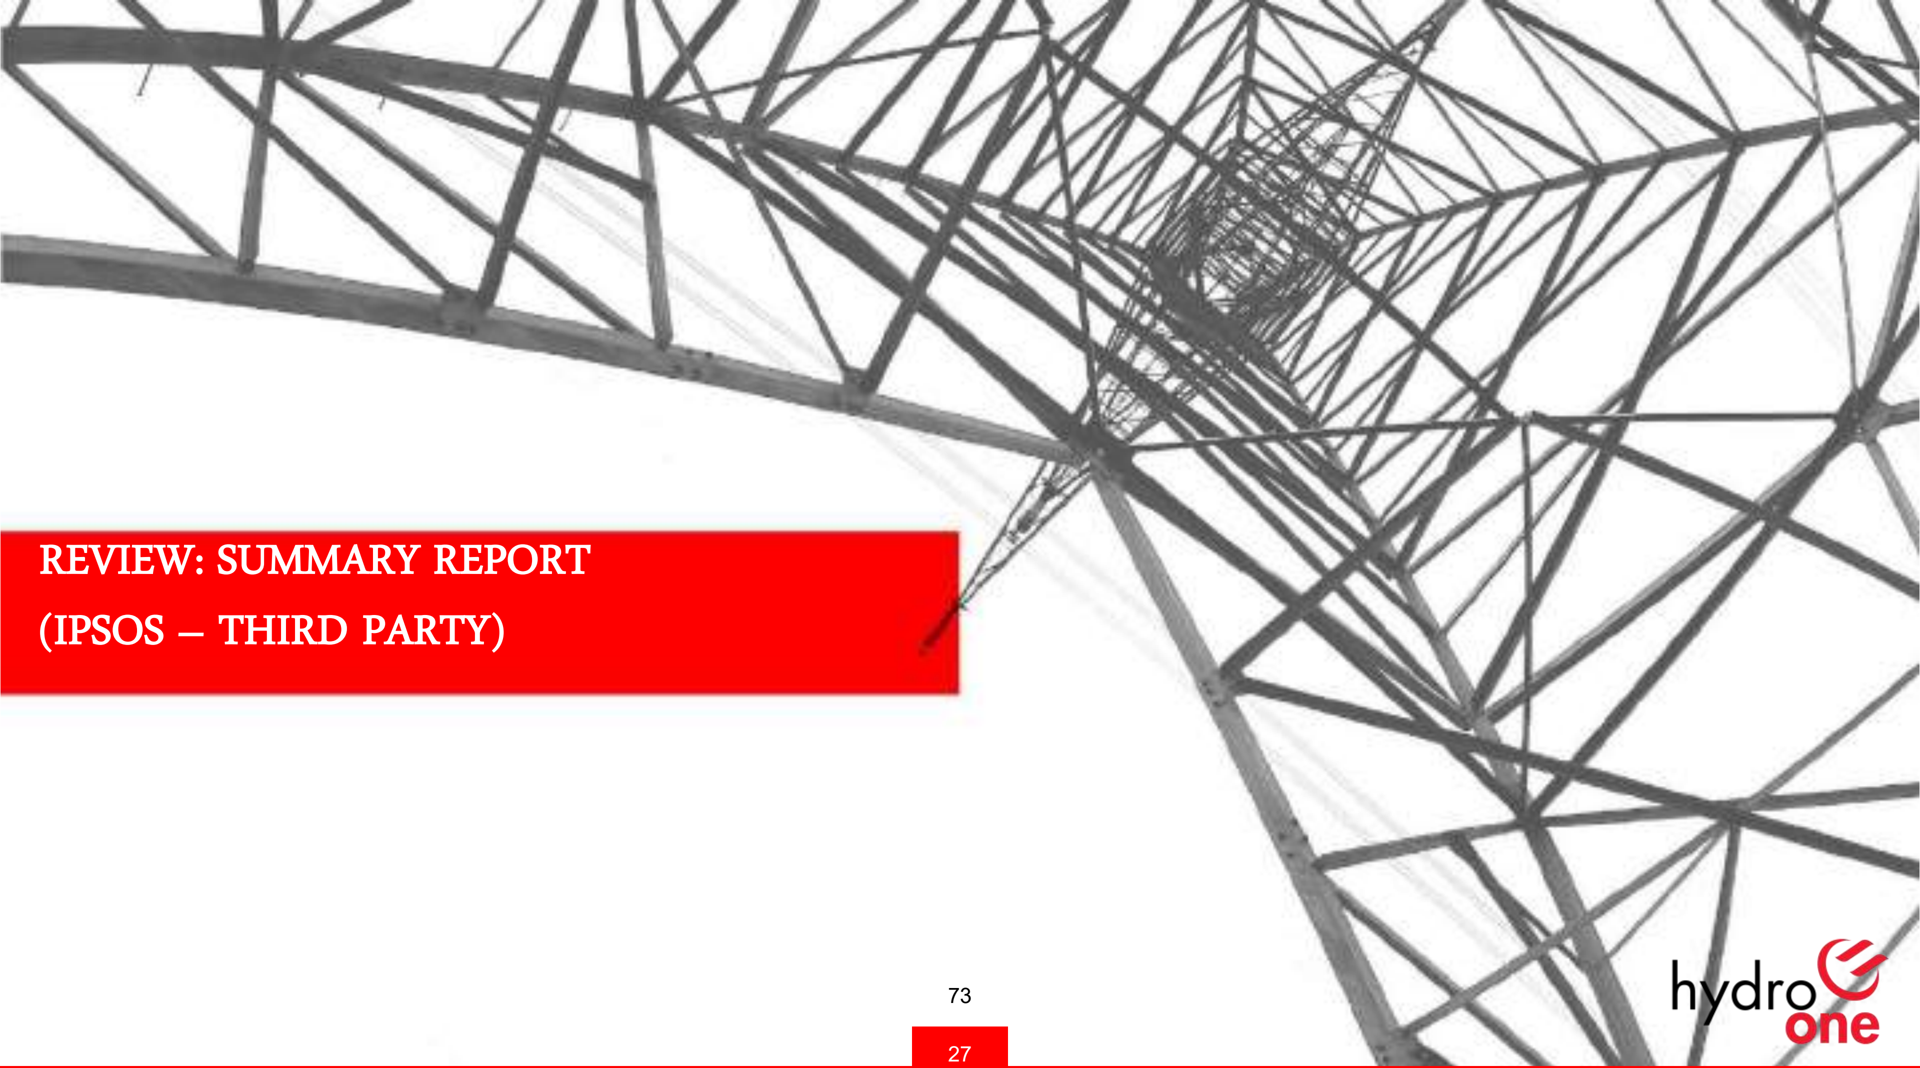
SCENARIOS BASED ON FOUR MAJOR ASSET REPLACEMENT PROGRAMS

	DESCRIPTION	RATIONALE
STATION WORK	Additional replacement of air-blast circuit breakers (ABCB) with new SF6[1] breakers	• Air-blast circuit breakers known to have 5-7x higher likelihood of unplanned outage than new SF6 breakers • ABCB is an obsolete technology and manufacturers will cease support by 2020
LINE REFURBISHMENT	Accelerated replacement of lines, based on asset condition	• 20% of conductors beyond end of service life (70 years) will reach ~40% by 2024 under historic replacement rates • Historic average replacement rate of 60 cct-km lags rate required to maintain system age • Condition assessments of conductor fleet identified 2,300 cct-km conductors are either at or near end of useful life based on actual conductor sample testing
STEEL TOWER LIFE EXTENSION	Coating of select steel tower structures to extend useful life	• 25% of towers located in high-corrosion regions • Corrosion rate for high-corrosion regions is ~10x higher than in lower corrosion regions • 20% of towers in high-corrosion regions are > 80 years old • Coating extends tower life by 25 years, deferring the need for replacement, with a net present value of $100-200M
INSULATOR REPLACEMENT	Replacement of insulators with known increased risk of failure	• Insulators installed between 1965 and 1982 have a known increased risk of failure • The insulator failure in March 2015 in the GTA reinforces the need to accelerate replacement of insulators • Condition testing underway to better quantify increased risk

		SCENARIO 1	SCENARIO 2	SCENARIO 3
Capital Spend	Sustainment ($B)	3.5	4.0	4.6
	Development ($B)	1.1	1.1	1.1
	Other ($B)	0.5	0.5	0.5
Expected Outcomes	Frequency and duration of interruptions	▲ Expected increase in line-related interruptions	► Some increase in lines risk offset by limiting unplanned outages and improved station performance	▼ Reduce risk from lines and continue to limit exposure to unplanned outages
	Reliability risk[1]	▲ Risk is expected to increase	► Current risk expected to remain essentially unchanged	▼ Risk is expected to decrease
Rates	Transmission rate impact (Compound Annual Growth Rate for 2017 – 2020)[2]	▲ ~5.8%	▲ ~6.3%	▲ ~6.8%

1. Reliability risk is a probabilistic calculation based on asset demographics and the historical relationship between its age and its failure or replacement.
2. Excludes impacts of potential changes in load forecast and any potential change to operations and maintenance spending.

hydro one



REVIEW: SUMMARY REPORT
(IPSOS – THIRD PARTY)

Summary of Process and Customer Participation

- Ipsos was engaged to ensure the methodology, the development of research and questions, and the report writing provided an unbiased, unvarnished, evidence-based consultation report
- The Ipsos Customer Consultation Report was finalized prior to the investment plan being finalized
- The approach supported collection of qualitative insight in 3 waves over the period of March to April:
    - 1st wave of 1-on-1 meetings with 12 selected customers
    - 2nd wave of five larger, facilitated group sessions
    - 3rd wave using Ipsos' online consultation tool
    - All participants were emailed an advance copy of the consultation materials

IPSOS CUSTOMER CONSULTATION REPORT (CONT'D)

Summary of Process and Customer Participation

- Wave 1 customers were among the largest customers in each segment and represented:
  - A range of customer satisfaction scores
  - A range of reliability performance
  - Geographic diversity

- All customers were invited to Wave 2 formal facilitated group sessions which were held in Ottawa, Thunder Bay, Sudbury, London and Toronto

- All customers were also invited to participate in the Wave 3 online consultation

- In total, 62 customer organizations participated which represents 34% of transmission connected customers

- The customer organizations were represented by 106 of their staff

Summary of Customer Needs and Preferences

Reliability was the most frequently and consistently mentioned need

- Industrial customers focused on frequency
- LDCs were more concerned with duration
- Improvement in both are among the top needs for all customers
- Planned outages are less of a concern than unplanned interruptions

All customers desire good reliability at a competitive or low cost

Interruptions and rates (specifically increases > 5%) were mentioned as the top 2 concerns

IPSOS CUSTOMER CONSULTATION REPORT (CONT'D)

Summary of Customer Needs and Preferences (Cont'd)

- Most customers believe Hydro One needs to be more proactive in addressing current and emerging reliability risk
- Majority of customers indicated increased reliability risk is unacceptable
- Most customers support investment required to at least maintain the current level of reliability
- General sentiment was that the right balance between reliability risk and rates is somewhere between Illustrative Scenario 2 and Scenario 3
- Positive feedback about the consultation process and had a high level of interest in learning more about Hydro One's system performance, asset age, condition assessments and plans to mitigate reliability risk

DISCUSSION: SUBMITTED PLAN
(I.E. RATE IMPACTS)

HYDRO ONE'S BUSINESS PLAN SUBMISSION FOR 2017 / 2018 RATE FILING

Business Plan Submitted:

Final Plan – Sustainment investment spend is between Illustrative Scenario 2 and 3, based on Customer feedback and reliability risk considerations. The key changes from previous plan / proposal that impact reliability risk are:

Station Sustainment

Small decrease in funding levels, based on re-prioritization review

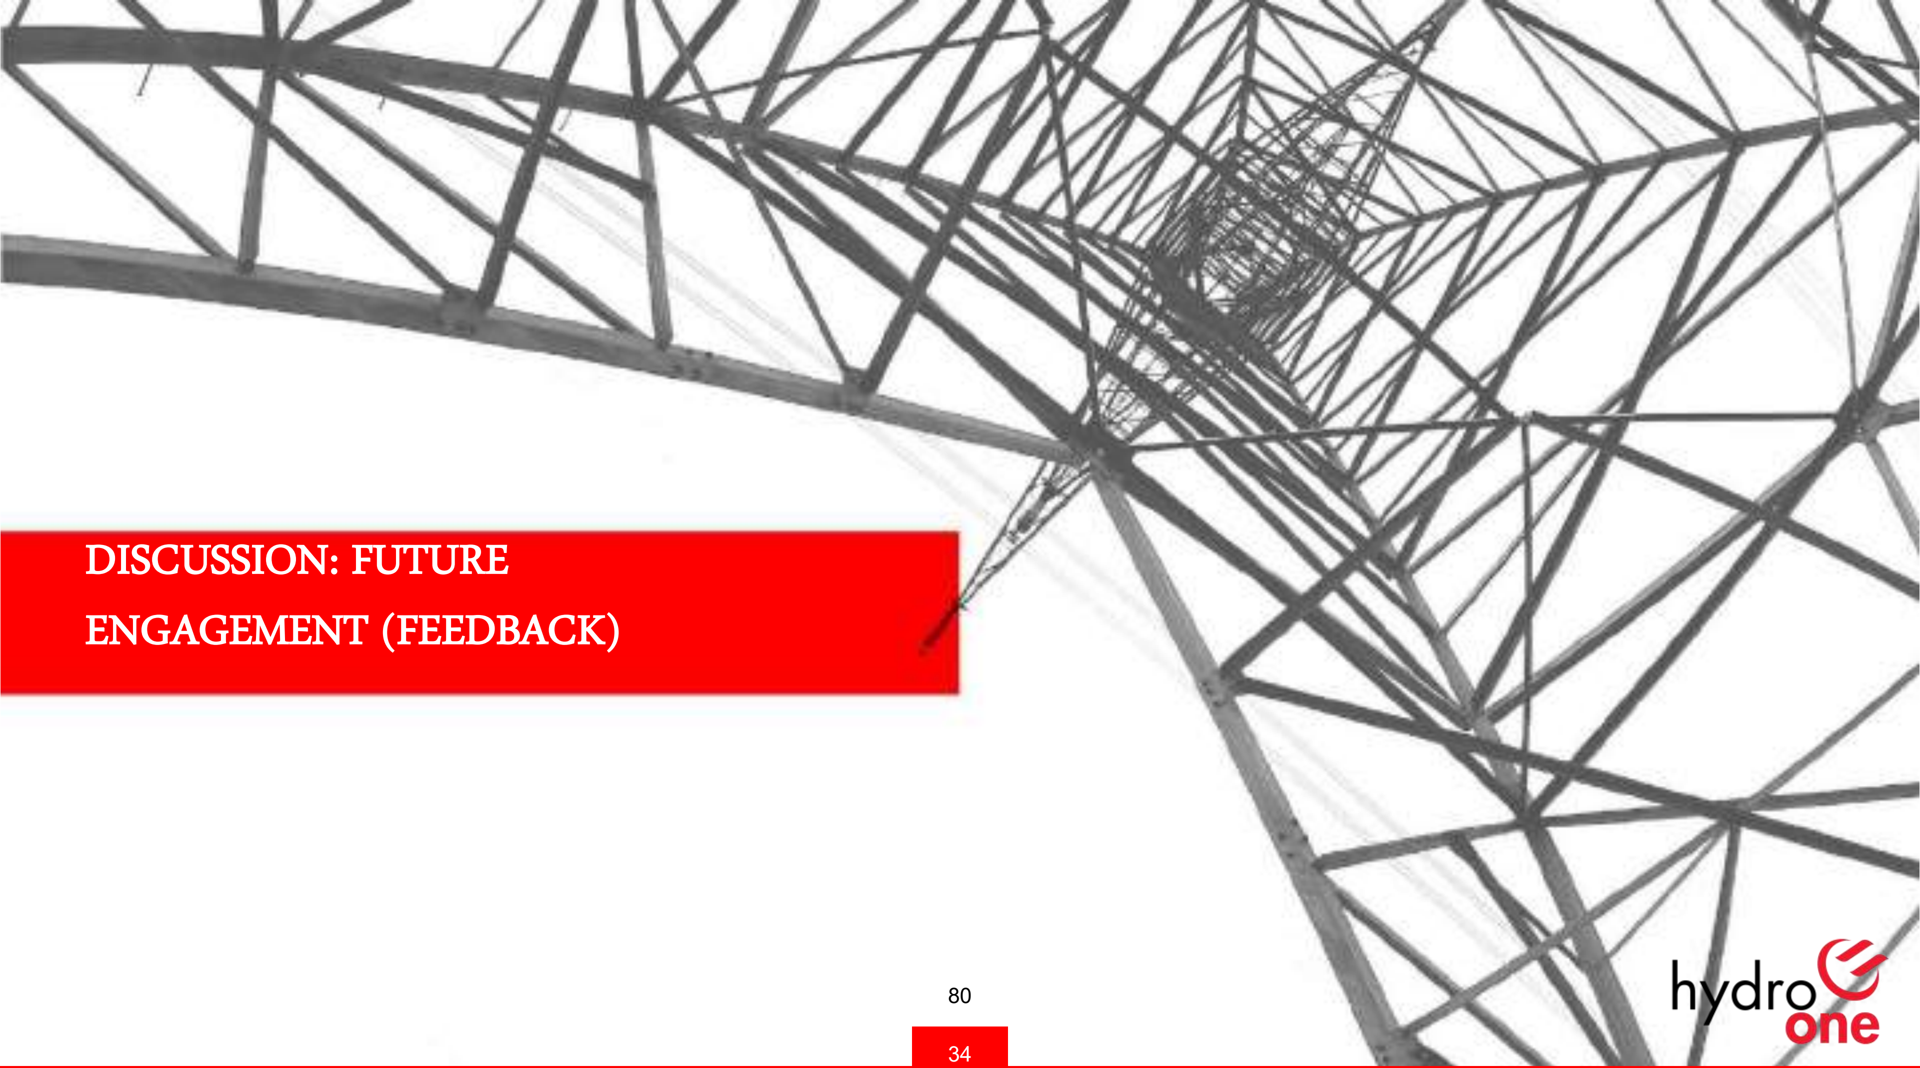
Lines Sustainment

Increase in funding levels to above historical annual levels, to align with desired reliability risk profile outcomes

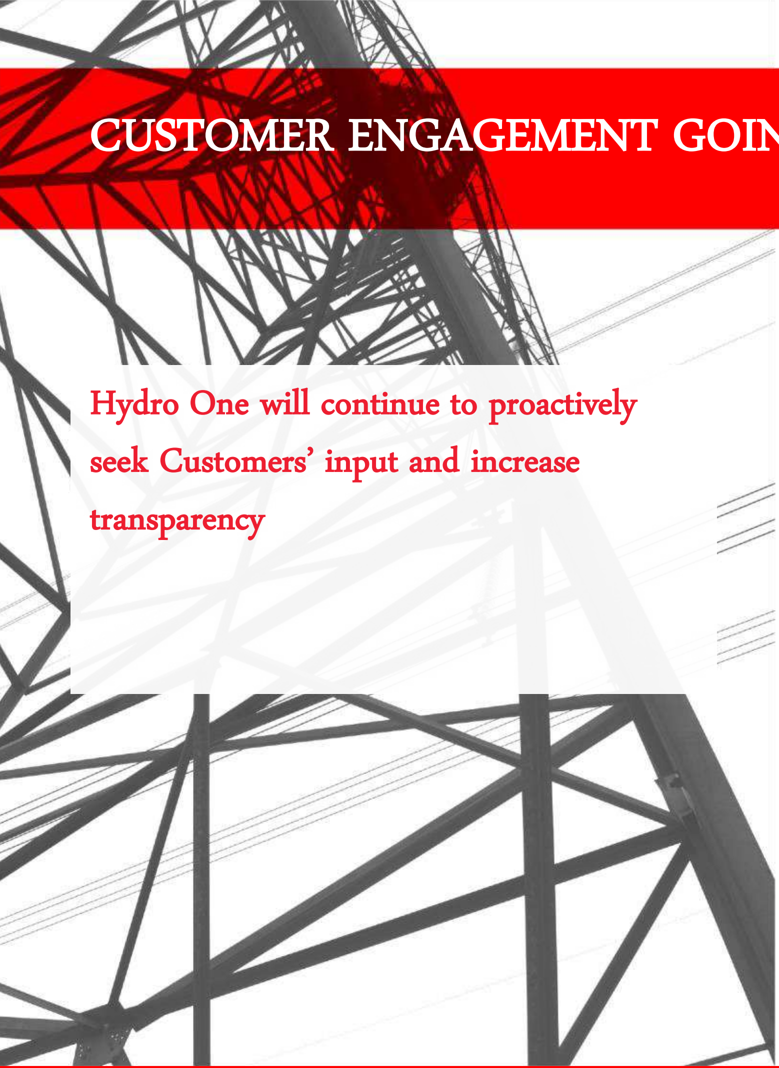
- Insulators Replacements
- Conductor Replacements
- Steel Tower Coating

Anticipated Rates Impact (if OEB approved as submitted)

Transmission portion of the bill: 2017 = 4.2%, 2018 = 5.2%



DISCUSSION: FUTURE ENGAGEMENT (FEEDBACK)



CUSTOMER ENGAGEMENT GOING FORWARD

Hydro One will continue to proactively seek Customers' input and increase transparency

All of the existing interactions and touch points between Hydro One and our transmission customers will continue:

- Connection and sustainment projects
- Outage planning
- Real time operating events & follow-up
- Regional system planning
- Customer conference

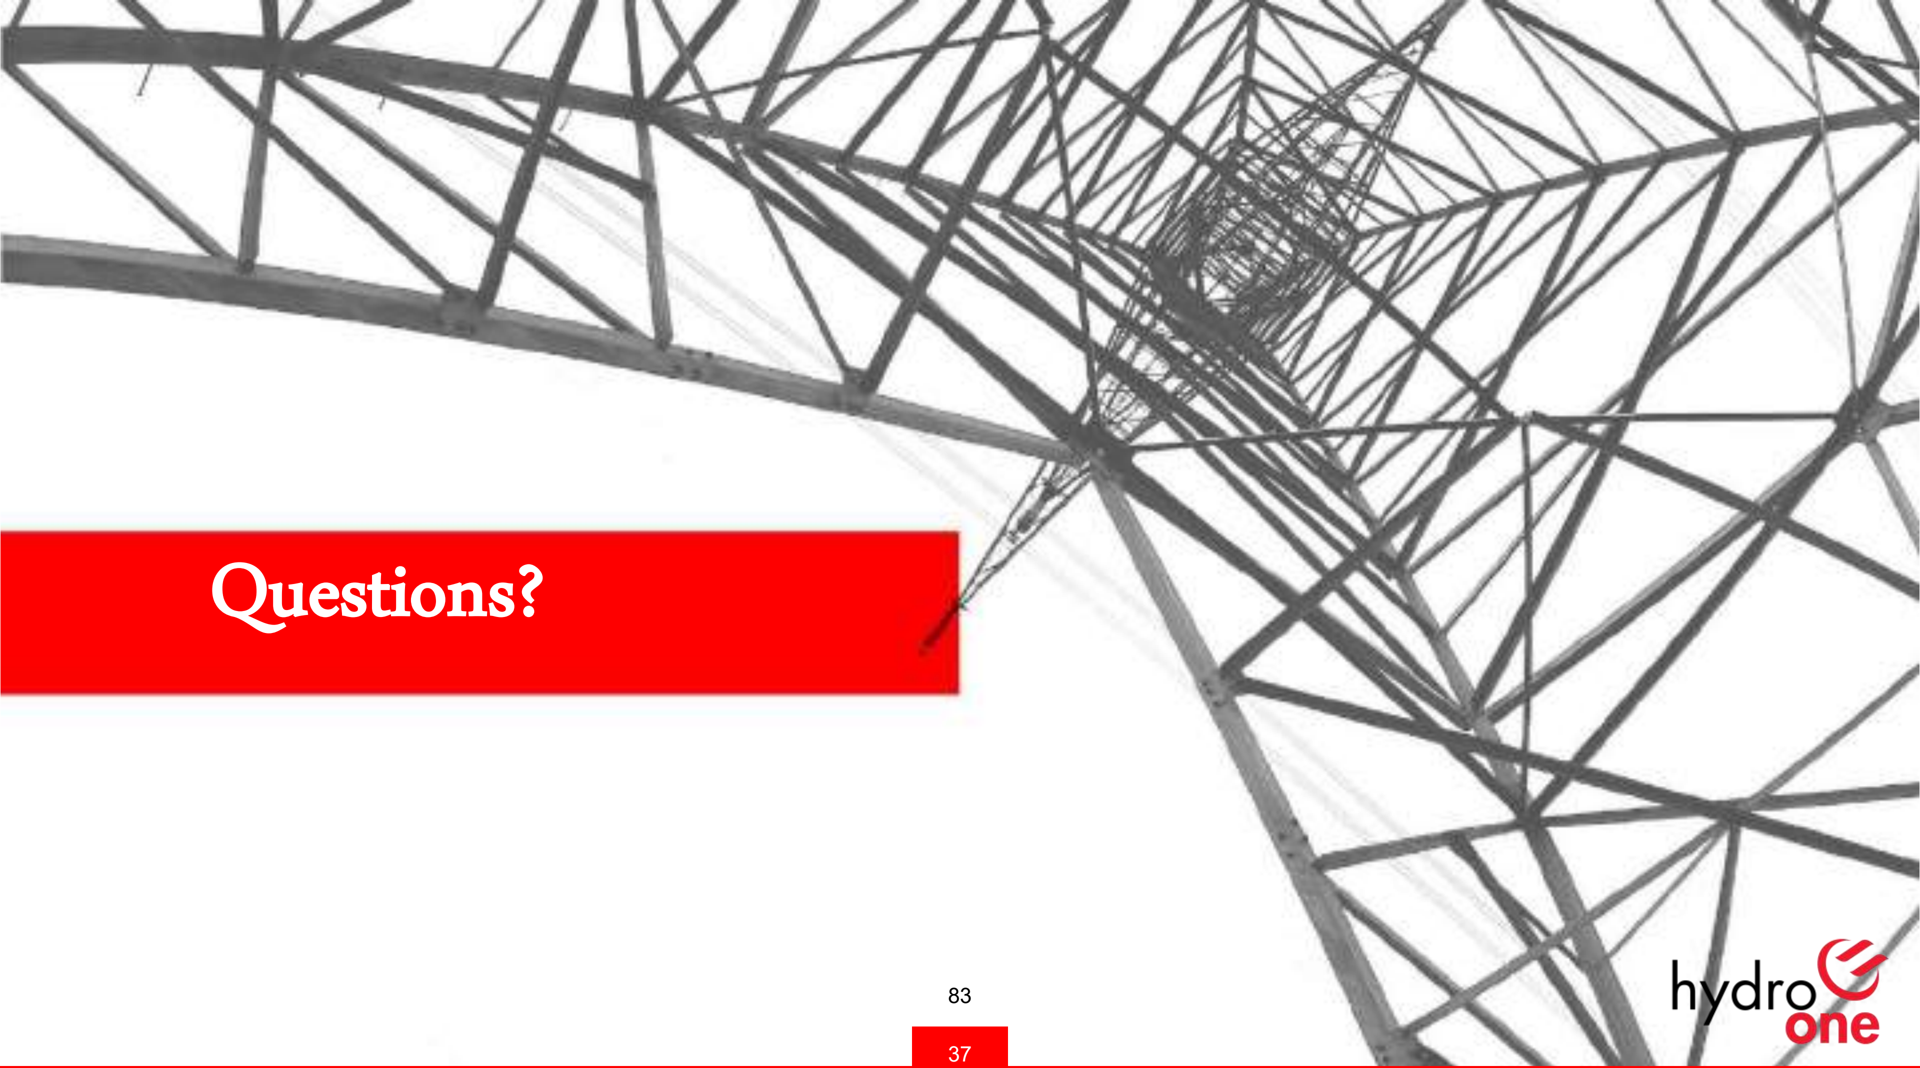
Hydro One is also focused on enhancing our proactive communications to you:

- More robust and comprehensive Reliability Reports
- Customer Delivery Point Performance Standards Reports
- Information regarding major sustainment projects
- More granular reliability statistics and information
- Large customer web portal in 2017

CUSTOMER ENGAGEMENT GOING FORWARD (CONT'D)

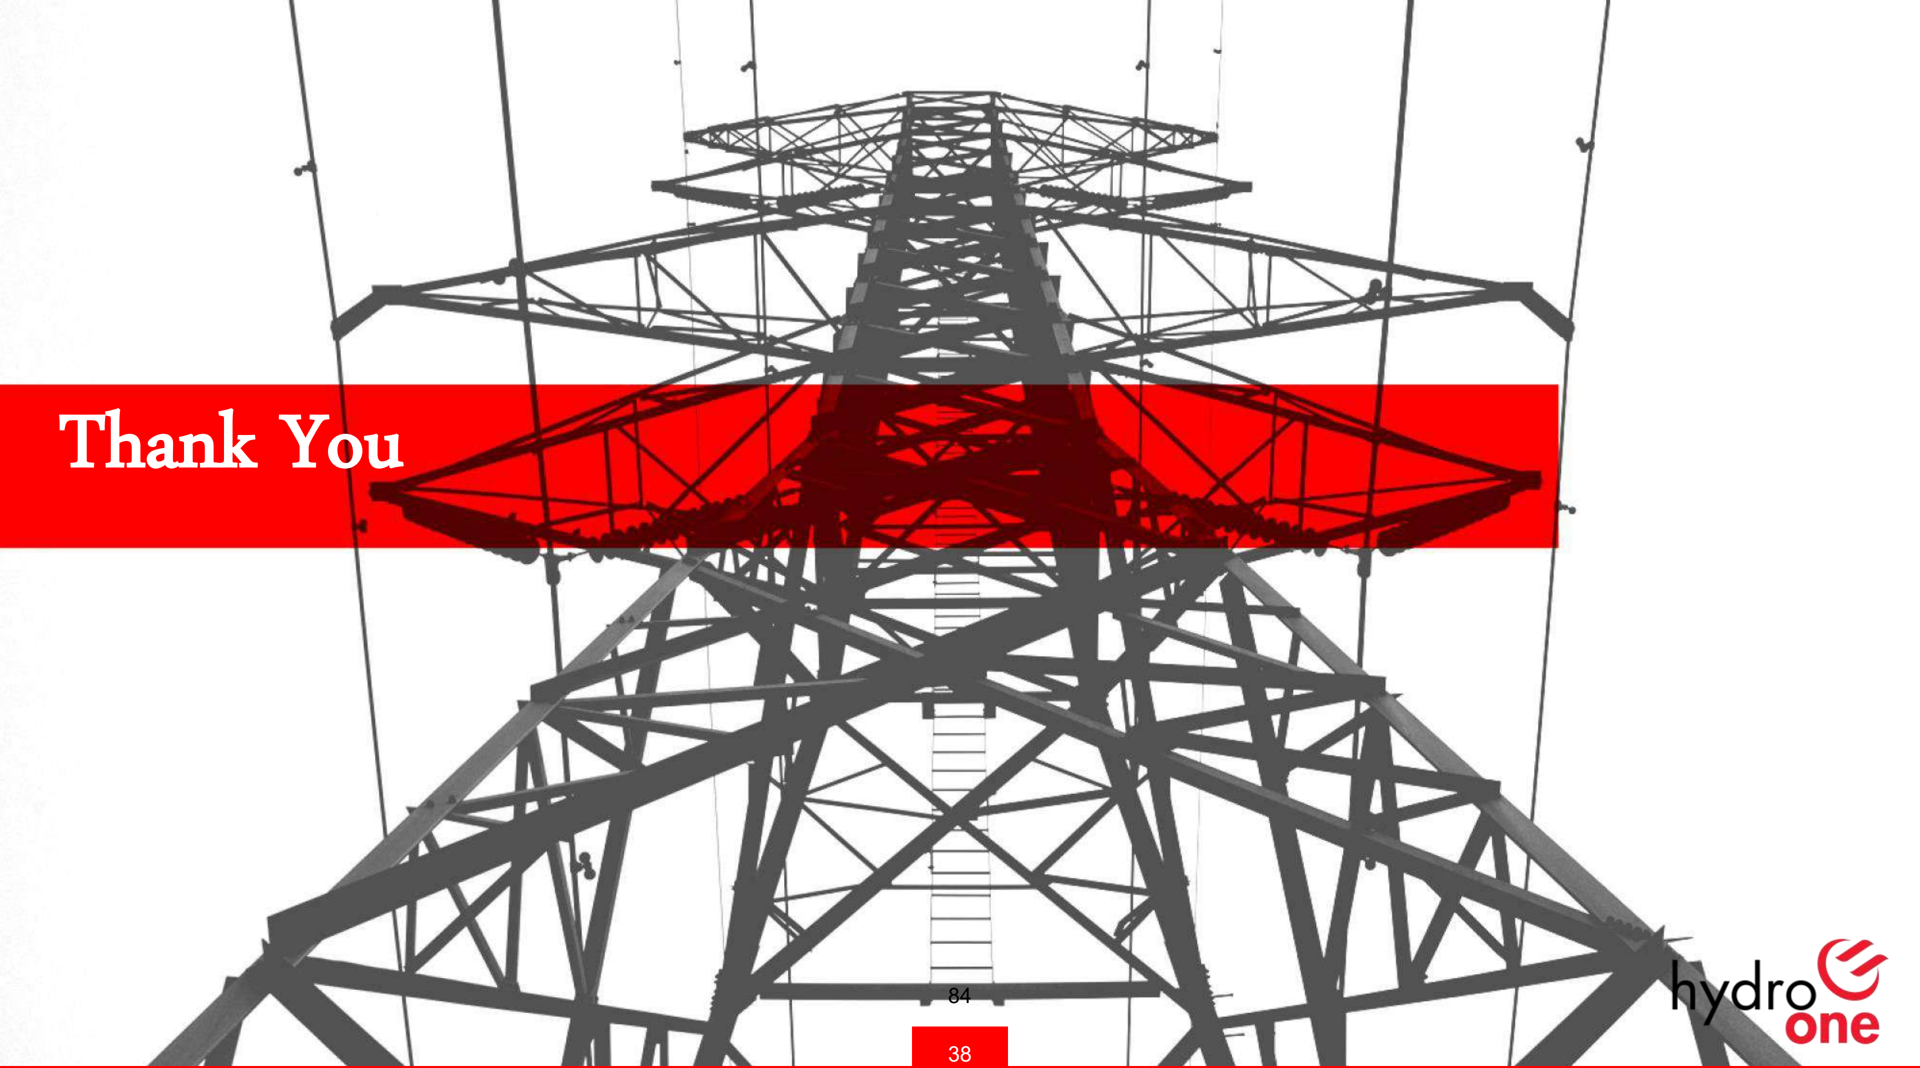
Hydro One will continue to proactively seek Customers' input and increase transparency

- The customer input received this year regarding your needs and preferences with respect to the development of Hydro One's investment plan was very valuable
- Hydro One is committed to continue a formal exercise to provide information and seek Customer's input as future investment plans are developed
- The methodology used may be different.
- We welcome your suggestions to ensure such exercises are inclusive and effective

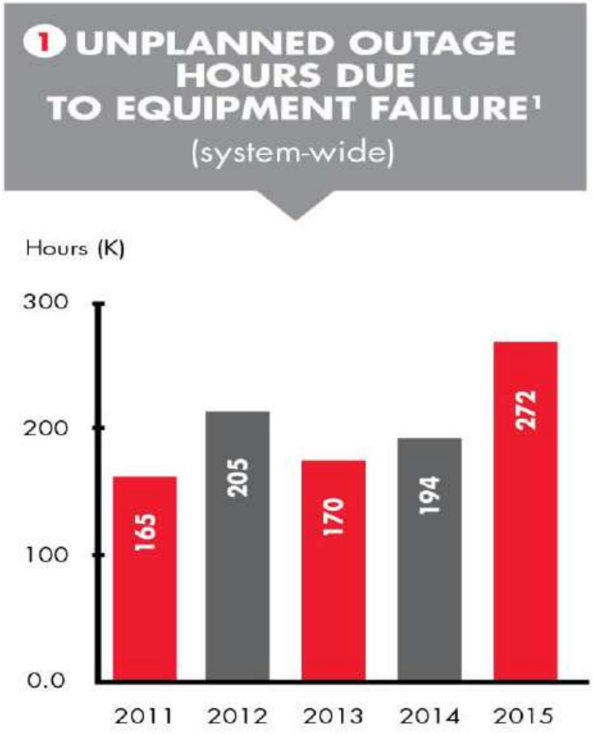


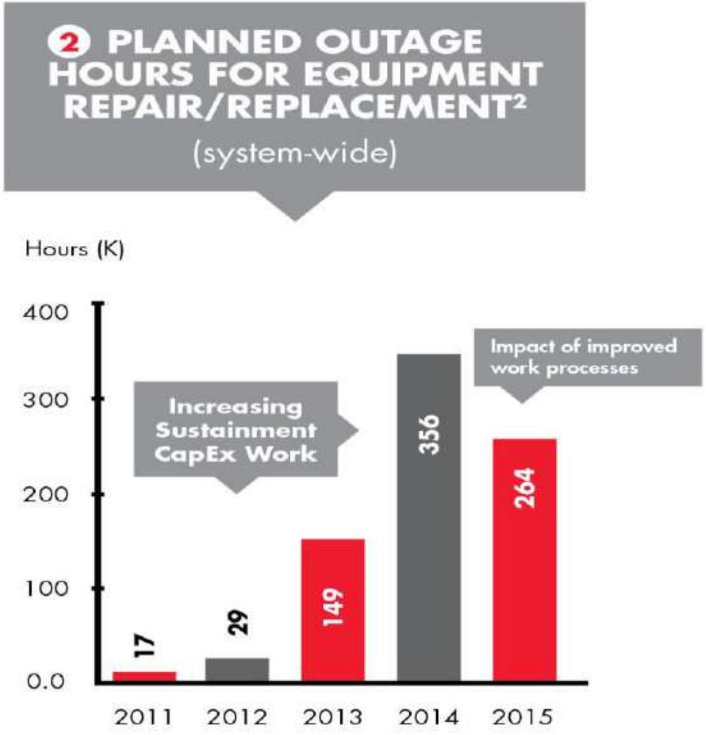
Questions?

Thank You



ASSET CONDITION IS INCREASING OUTAGES ACROSS THE SYSTEM





Implications of outages:

Single-circuit system: Increased duration of interruptions

Multi-circuit system:

Greater time on single supply → increased interruption risk

1. Includes direct outages caused by power equipment or protection equipment failure
2. Includes total duration of planned outages designated as for repair or replacement across all equipment types

Ontario Planning Outlook

Planning Context Under Bill 135

Bill 135, the *Energy Statute Law Amendment Act, 2016*

Received Royal Assent on June 09, 2016

IESO Technical Report, "Ontario Planning Outlook"

↓

Ontario Government's Long-Term Energy Plan (LTEP)

↓

IESO Implementation Plan

ieso Connecting Today. Powering Tomorrow.

IESO's Ontario Planning Outlook

- The Ontario Planning Outlook is a technical report that provides a 10-year review (2005-2015) and a 20-year outlook (2016-2035) for Ontario's electricity system
- The report responds to a June 10, 2016, request from the Minister of Energy to have the IESO submit a technical report on the adequacy and reliability of Ontario's electricity resources
- The report will serve as an objective baseline for the Ministry of Energy and sector stakeholders in terms of electricity demand and supply outlooks, and will inform the Ministry's formal consultation process for the development of the LTEP

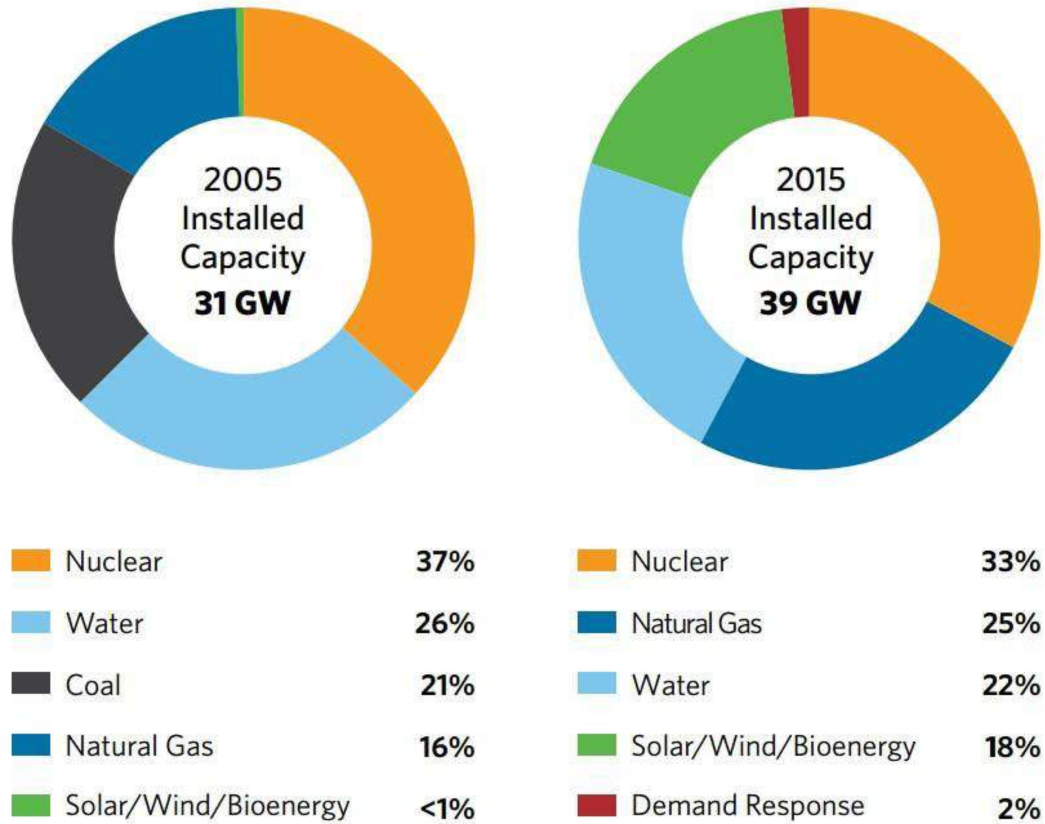
The report can be found on the main page of the IESO's website @ ieso.ca

ieso Connecting Today. Powering Tomorrow.

State of the System > 10-Year Review

Changes over the last decade have:

- Have addressed the reliability concerns of a decade ago
- Coal-fired generation has been retired and at the same time Ontario saw additions in non-carbon emitting and natural gas-fired generation
- Reduced greenhouse gas emissions in Ontario's electricity sector by more than 80 percent
- With current planned investments, will meet the province's electricity needs well into the next decade



20-Year Outlook

- The IESO has considered a range for electricity demand in Ontario, reflected in four outlooks that provide context for long-term integrated planning and discussion
- The outlooks all reflect the actions identified in the government's recently announced Climate Change Action Plan

Four Outlooks

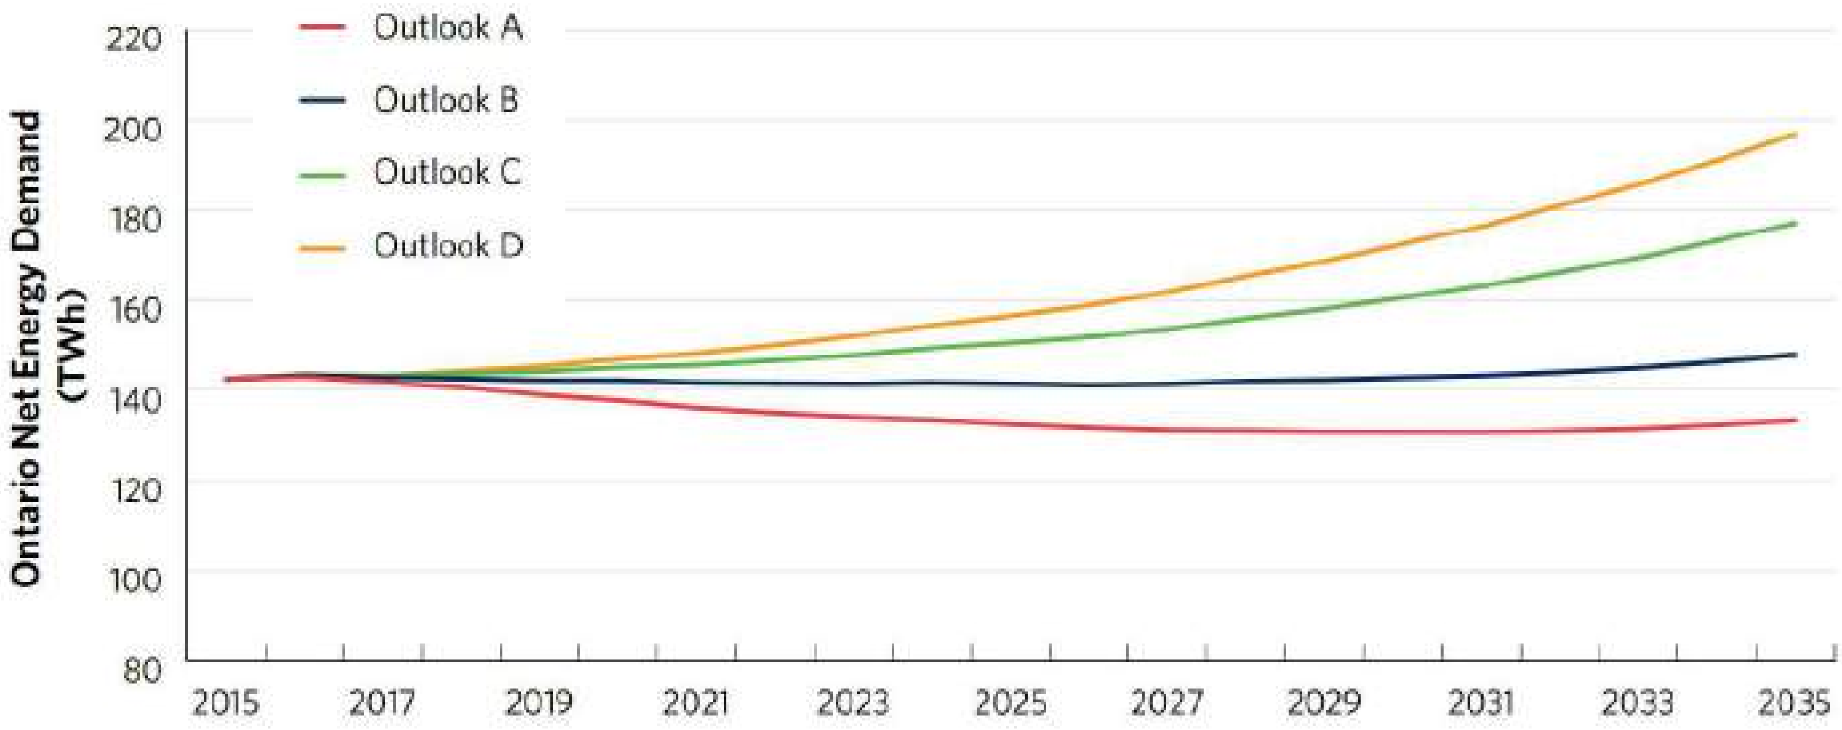
Outlook A (or low demand outlook), which explores the implications of lower electricity demand

Outlook B (or flat demand outlook), which explores a level of long-term demand that roughly matches the level of demand that exists today

Outlooks C and D (or higher demand outlooks), which explore higher levels of demand driven by different levels of electrification associated with policy choices on climate change

ieso
Connecting Today.
Powering Tomorrow.

Four Demand Outlooks



ieso
Connecting Today.
Powering Tomorrow.

Demand Outlooks > Cont'd

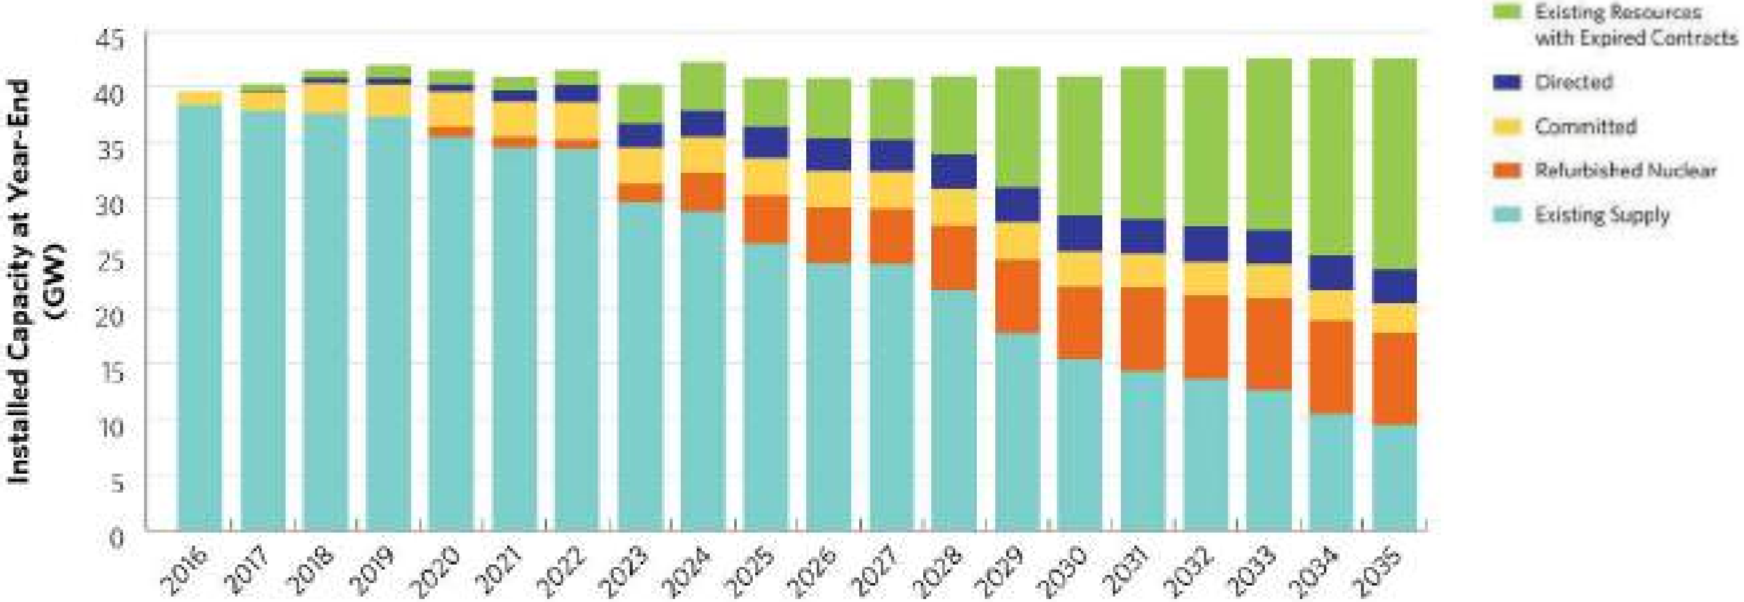
Sector	Outlook A	Outlook B	Outlook C	Outlook D
Residential (52 TWh in 2015)	48 TWh in 2035	51 TWh in 2035	Oil heating switches to heat pumps, electric space and water heating gain 25% of gas market share (58 TWh in 2035)*	Oil heating switches to heat pumps, electric space and water heating gain 50% of gas market share (64 TWh in 2035)
Commercial (51 TWh in 2015)	49 TWh in 2035	54 TWh in 2035	Oil heating switches to heat pumps, electric space and water heating gain 25% of gas market share (63 TWh in 2035)	Oil heating switches to heat pumps, electric space and water heating gain 50% of gas market share (69 TWh in 2035)
Industrial (35 TWh in 2015)	29 TWh in 2035	35 TWh in 2035	5% of 2012 fossil energy switches to electric equivalent (43 TWh in 2035)	10% of 2012 fossil energy switches to electric equivalent (51 TWh in 2035)
Electric Vehicles (<1 TWh in 2015)	2 TWh in 2035	3 TWh in 2035	2.4 million electric vehicles (EVs) by 2035 (8 TWh in 2035)	2.4 million EVs by 2035 (8 TWh in 2035)
Transit (<1 TWh in 2015)	1 TWh in 2035	1 TWh in 2035	Planned projects, 2017-2035 (1 TWh in 2035)	Planned projects, 2017-2035 (1 TWh in 2035)
Other**	5 TWh	5 TWh	5 TWh	5 TWh
Total* (143 TWh in 2015)**	**133 TWh in 2035**	**148 TWh in 2035**	**177 TWh in 2035**	**197 TWh in 2035**

Connecting Today.
Powering Tomorrow.

Supply Outlook

Ontario is in a strong starting position to reliably address the range of demand outlooks

- If all existing resources continue to operate after contract expiry and if planned resources come into service as scheduled, Ontario would have a total installed capacity of **~43 GW by 2035**
- In contrast, if all existing resources are removed from service after contract expiry, Ontario would have a total installed capacity of **~25 GW by 2035**
- Potential implementation delays, including with the nuclear refurbishment program, and the effect of aging on the performance of the generation fleet could affect the availability of supply over the planning outlook



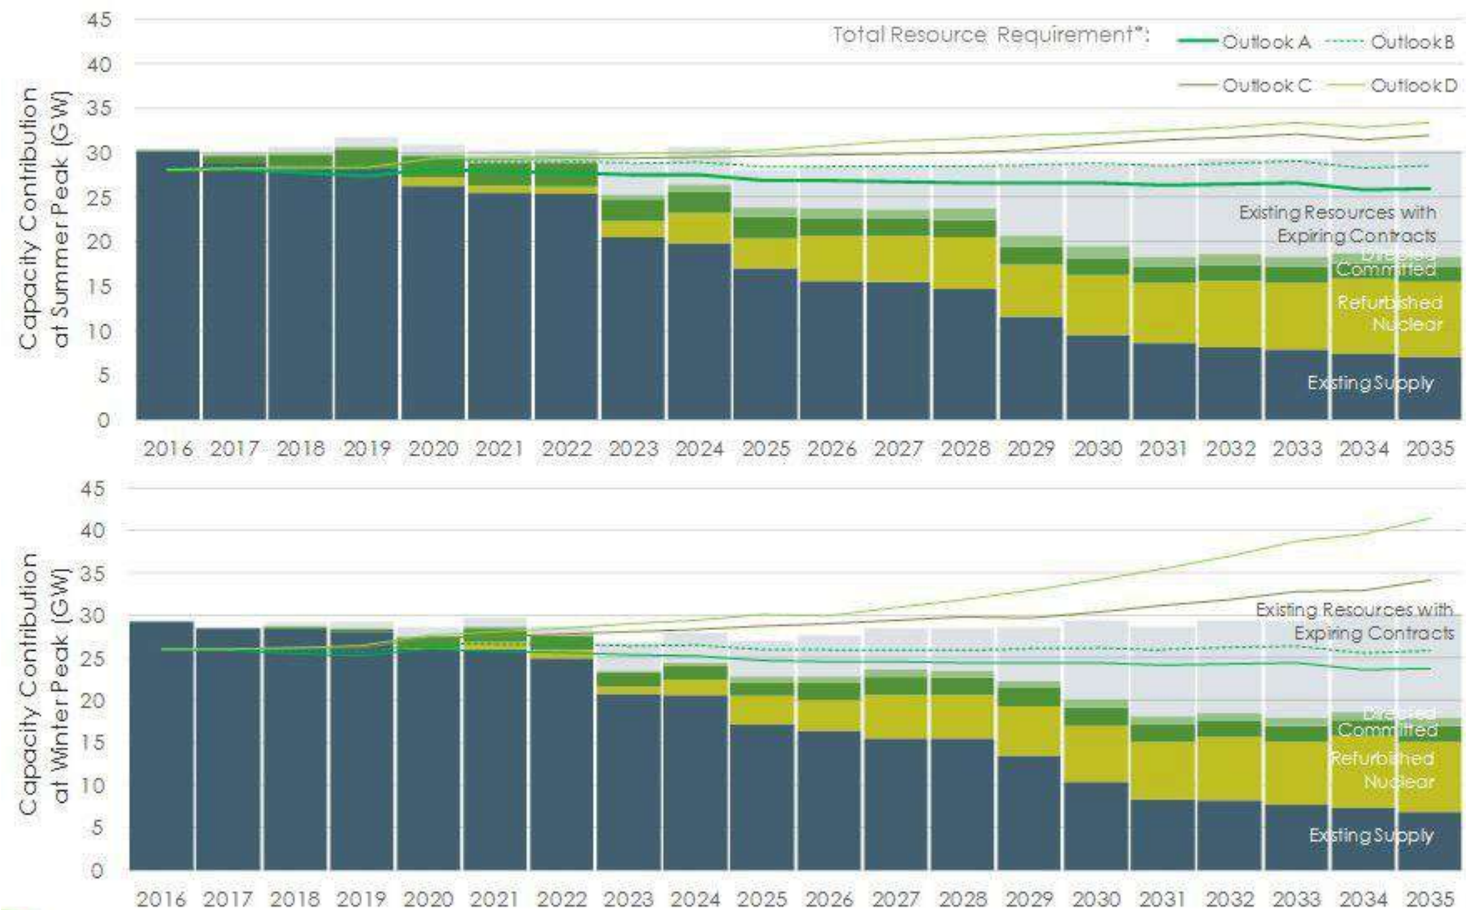
Connecting Today. Powering Tomorrow.

Resource Adequacy Outlook

- Ontario's existing, committed and directed resources would be sufficient, at the provincial level, to meet the flat demand outlook

- There is enough flexibility to address a lower growth in demand or to adapt to new opportunities or priorities

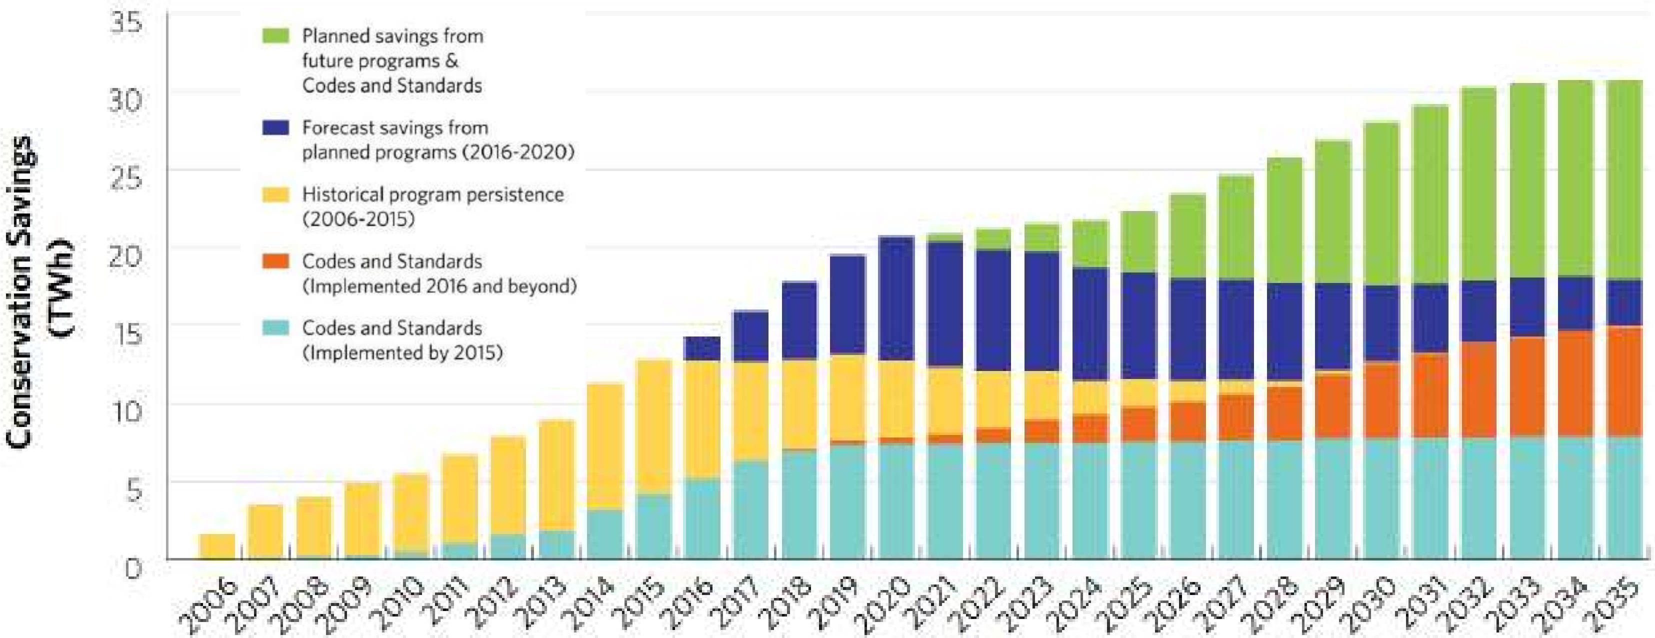
- Additional resources would be required to meet any increased growth in demand



Connecting Today. Powering Tomorrow.

Conservation Outlook

All four outlooks reflect achievement of LTEP 2013 conservation targets and the Conservation First Framework



- Targets will be achieved through a combination of conservation programs and building codes and equipment standards addressing current electricity end uses
- Half the target is expected to be achieved through existing and planned programs and codes/standards. Remaining would be achieved through new programs and/or new codes/standards yet to be developed.
- In the flat demand outlook, conservation effectively offsets all growth due to economic activity

ieso Connecting Today. Powering Tomorrow.

Distributed Energy Resources > Key Considerations

- Evolutions in technology and policy are expanding opportunities for customer engagement and participation

- Distributed energy resources (DERs) are contributing to a system more characterized by two-way flows, rather than only one-way delivery from large central stations

- A number of communities are now developing community energy plans and DER is becoming a key component of those plans

- Higher growth outlooks provide greater opportunities for harnessing DER and reducing the need for new grid-connected resources

- Addressing barriers to the adoption of distributed energy resources, such as cost allocation and integration issues, could help to better realize their potential benefits

Transmission and distribution outlook

- Beyond current projects, no significant new transmission investments would be required in the flat electricity demand outlook served by existing and currently planned resources.

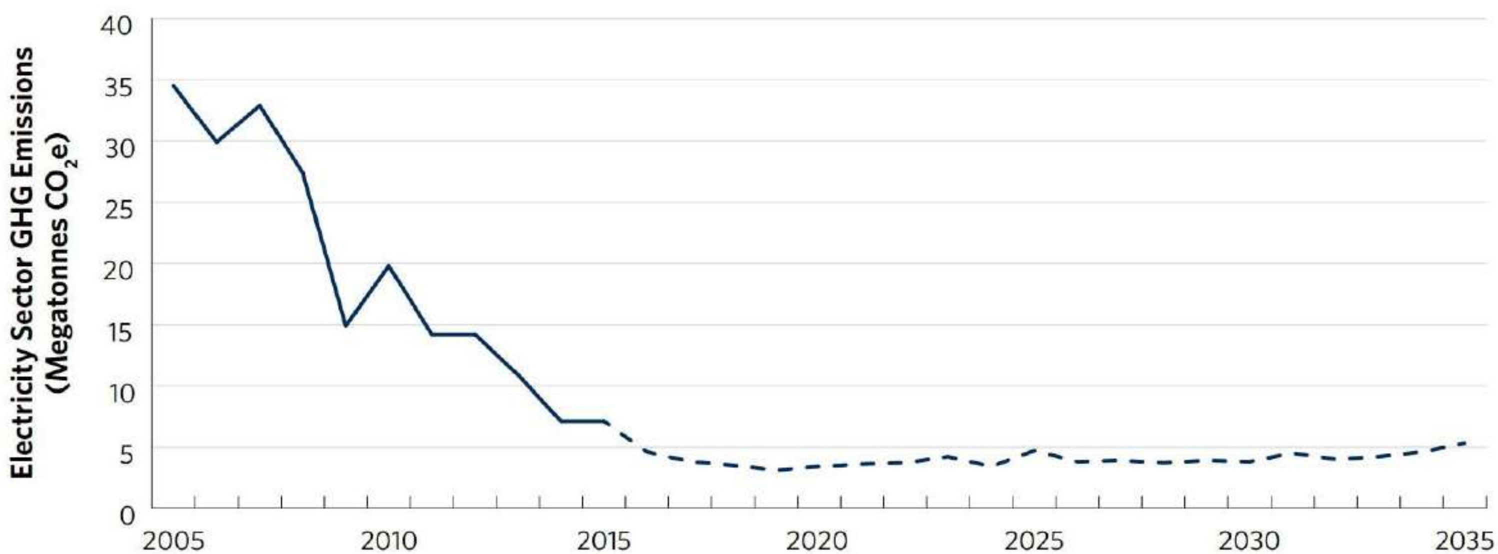
- However the amount of remaining transmission availability is limited - in higher demand outlooks, long lead-time investments in transmission will be required to accommodate new resources.

- In the near term, while the system could manage some overall increases in demand, LDCs and regional transmission may be more significantly impacted as local peak demands grow.
  - Strategies and options to address local issues could be addressed in regional planning processes, working together with transmitters and LDCs

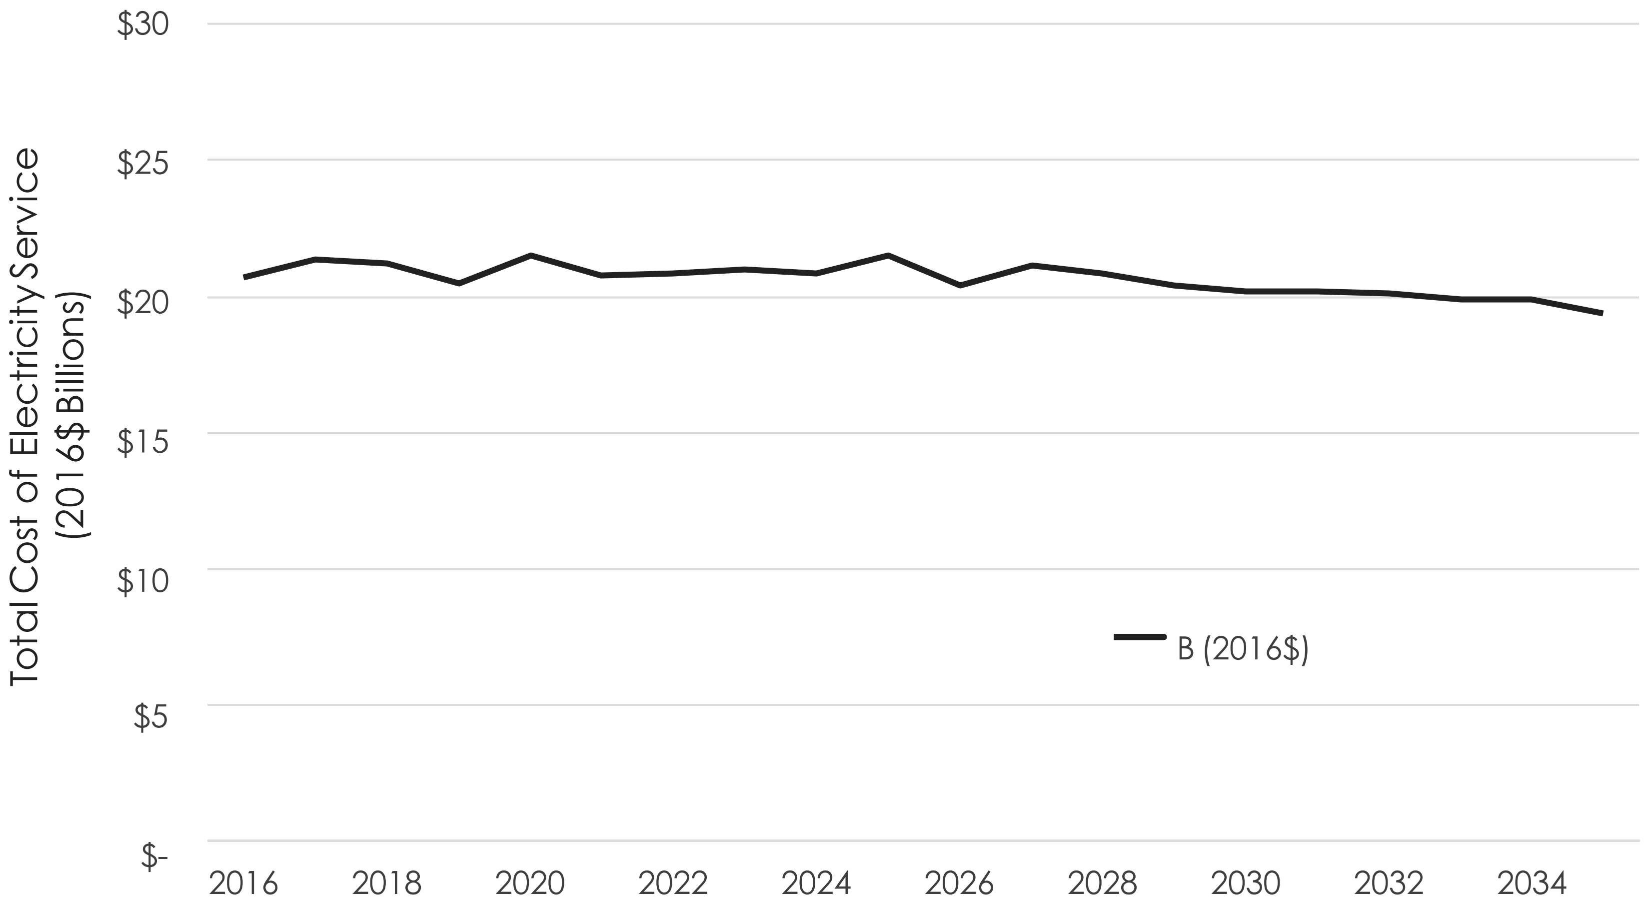
Emissions Outlook

- Emissions are expected to continue to decline over the next five years
- With Cap and Trade takes effect in 2017, emissions will be lower than what they otherwise would have been
- In the flat demand outlook, emissions rise slightly following Pickering retirement but remain well below historical levels and relatively flat through to 2035
- Consideration of how to address the higher demand outlooks was based on keeping GHG emissions in the electricity sector within the range of the flat demand outlook

Figure 18: Electricity Sector GHG Emissions in Outlook B



Total Cost of Electricity Service: Outlook B



Electricity System Cost Outlook

- In the flat demand outlook, total cost averages ~$21B/year over the next decade and is estimated to decrease to about $19B by 2035 (2016$)

- In higher demand outlooks, investments in new resources (conservation, generation, and transmission) would be required to meet the increase in demand and to reduce increases in emissions
  - Annual cost of electricity service would rise by $4B to $9B by 2035 (2016$)
  - This would be associated with an increase in energy consumption in the province
  - As a result, the average unit cost of electricity service would be within the range of the flat demand outlook

Conclusion

- Electrification of the economy in support of climate change actions could see long-term provincial electricity demands that are up to 40% higher than today. Meeting this scale of electricity demand growth would require the coordinated deployment of multiple low carbon options.
- The scale, cost and practical challenge of implementing options to meet higher demands further highlights the importance of conservation as a method of moderating electricity demand growth.
- In brief, Ontario has access to options for meeting electrification-driven demand growth in ways that result in significant economy-wide carbon emission reductions. In addressing the associated planning issues, the IESO is committed to supporting the Ministry's consultations as the new LTEP is developed.

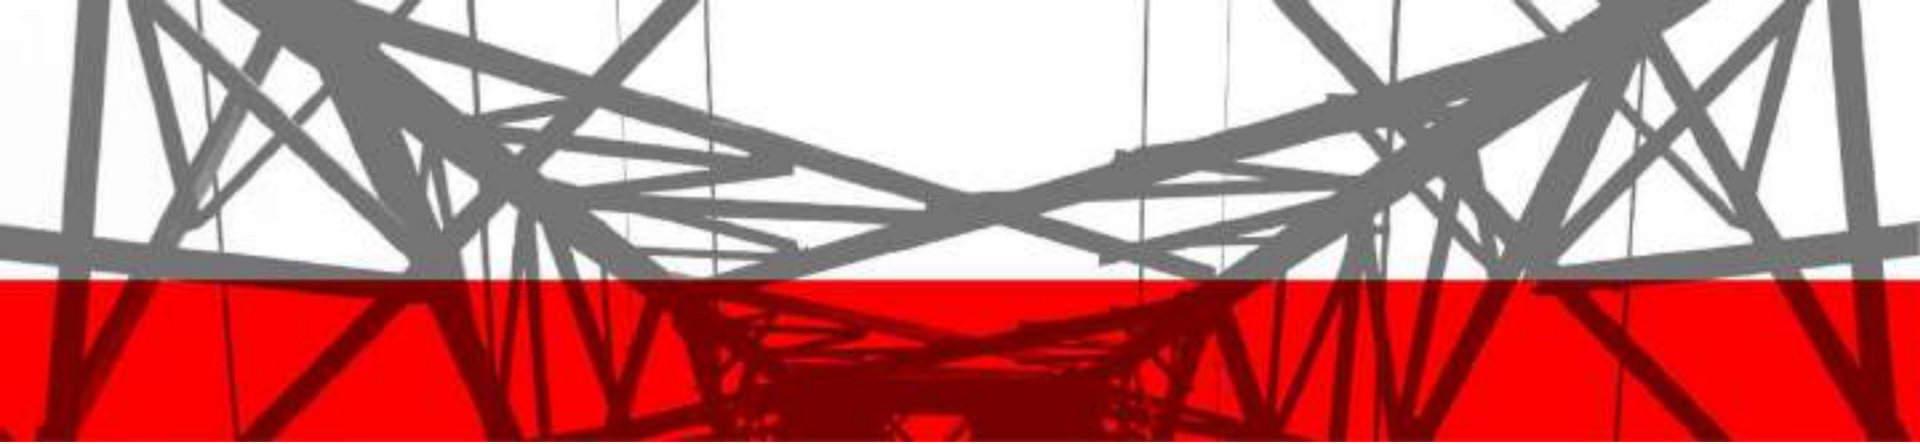
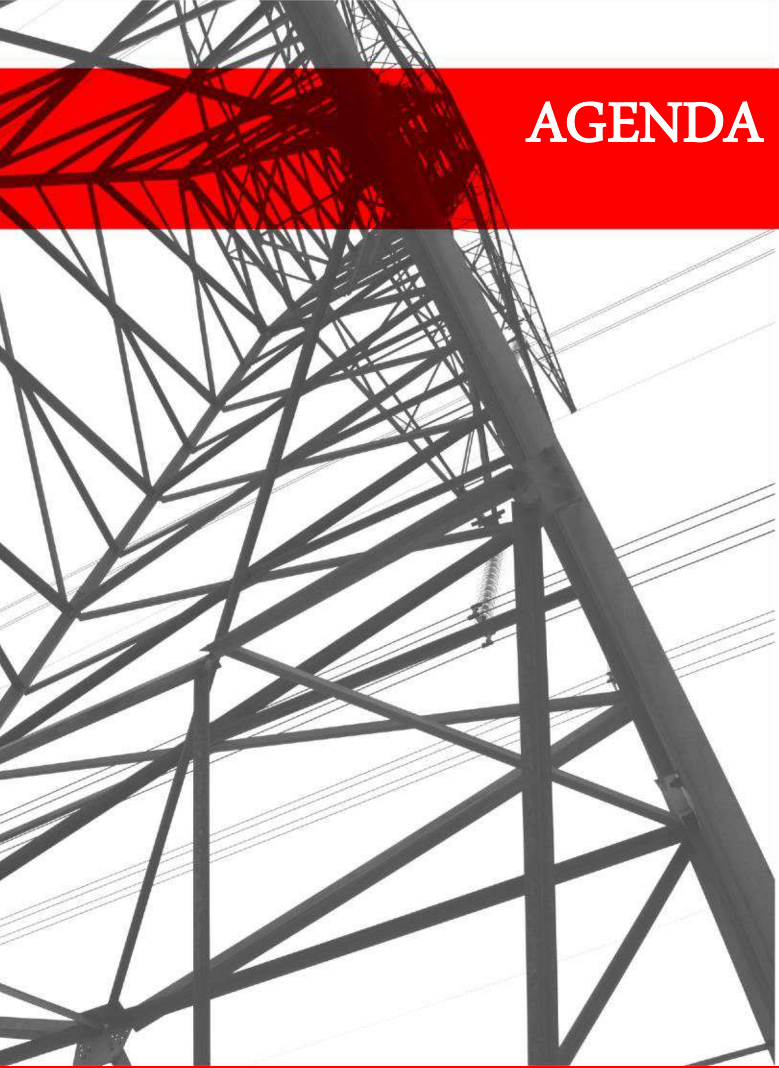
LARGE CUSTOMER CONFERENCE

Productivity & Operational Efficiency



VOICE OF THE CUSTOMER

2016 Large Customer Conference



AGENDA

1. Purpose of today's session
2. Our commitment to large customers
3. What we've heard from you
4. What we've done to meet your needs
5. Now, it's your turn
6. It doesn't end today

VOICE OF THE CUSTOMER

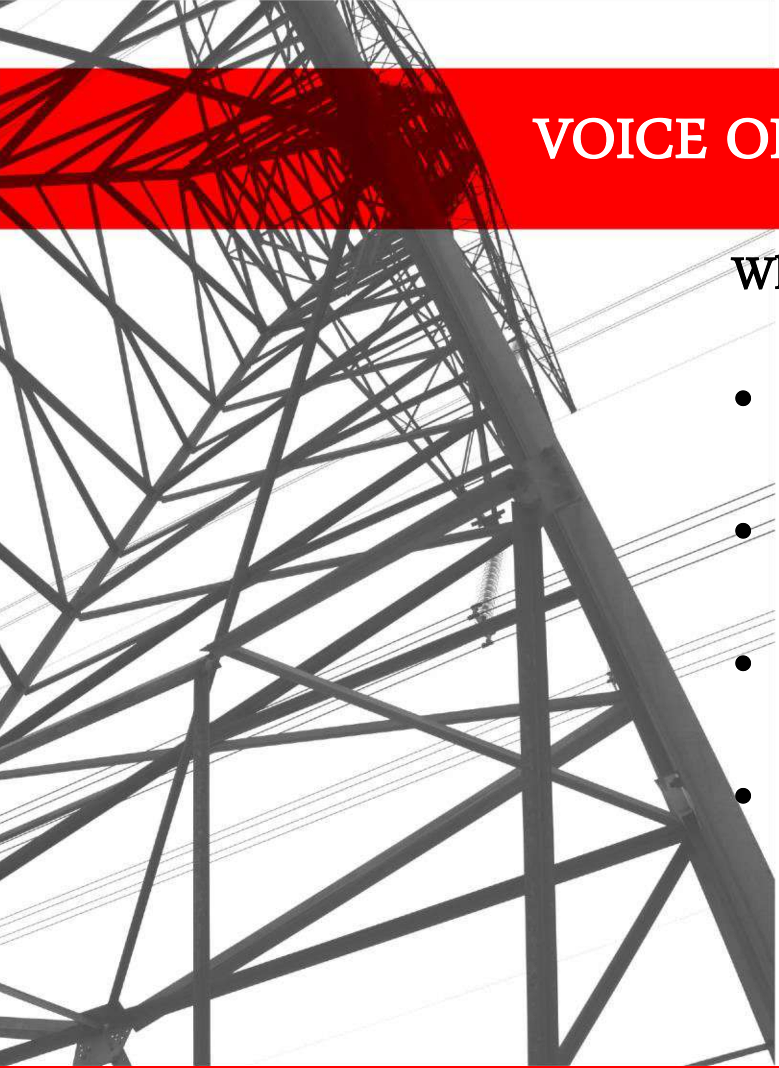
Purpose of today's session

- Listen to your concerns and better understand your needs
- Identify any opportunities to add value to your business
- Capture your feedback and ensure follow-up by your Account Executive

VOICE OF THE CUSTOMER

Our commitment to large customers

- Large customers are a major driver of our success
- We are fully committed to continuous improvement



VOICE OF THE CUSTOMER

What we've heard from you last year

- Customer service, response timeliness
- Communications
- Equipment failures
- Power Quality and reliability

VOICE OF THE CUSTOMER

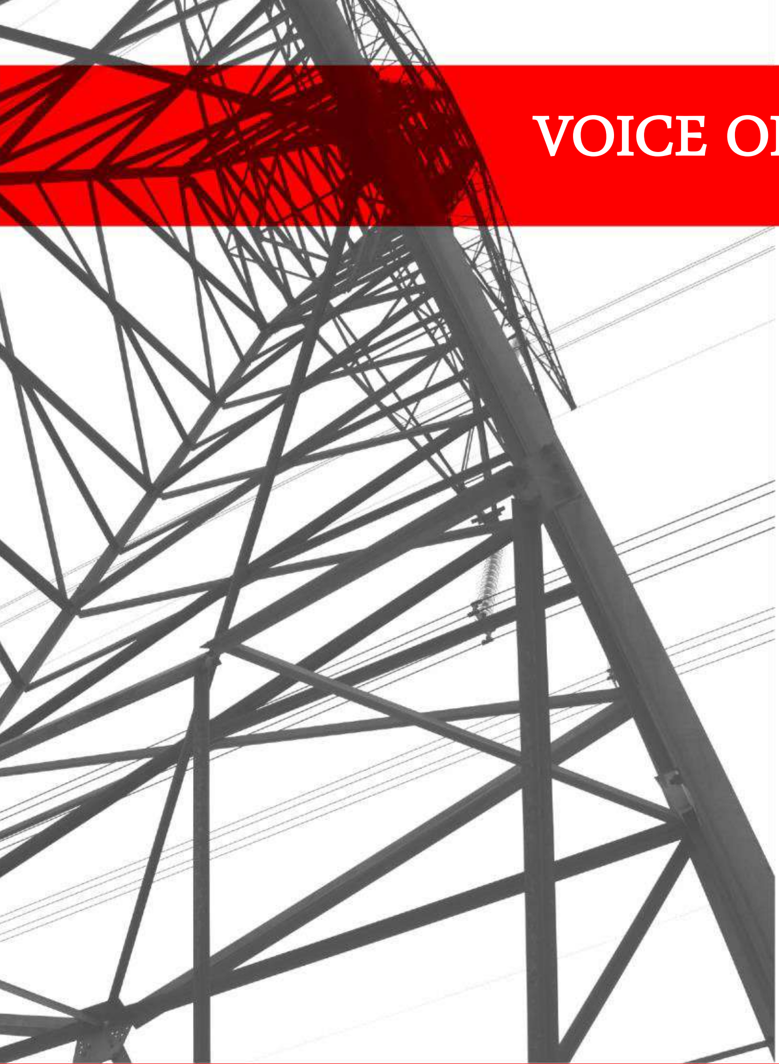
What we've done to meet your needs

- Drive process, reporting and communication improvements to identify and respond to your needs
    - Tx Customer Consultation sessions
    - Working groups, Reliability Reports and Customer Delivery Point Performance Standard

VOICE OF THE CUSTOMER

Now it's your turn

- Raise your hand so we can see you
- Please introduce yourself by stating your name and organization

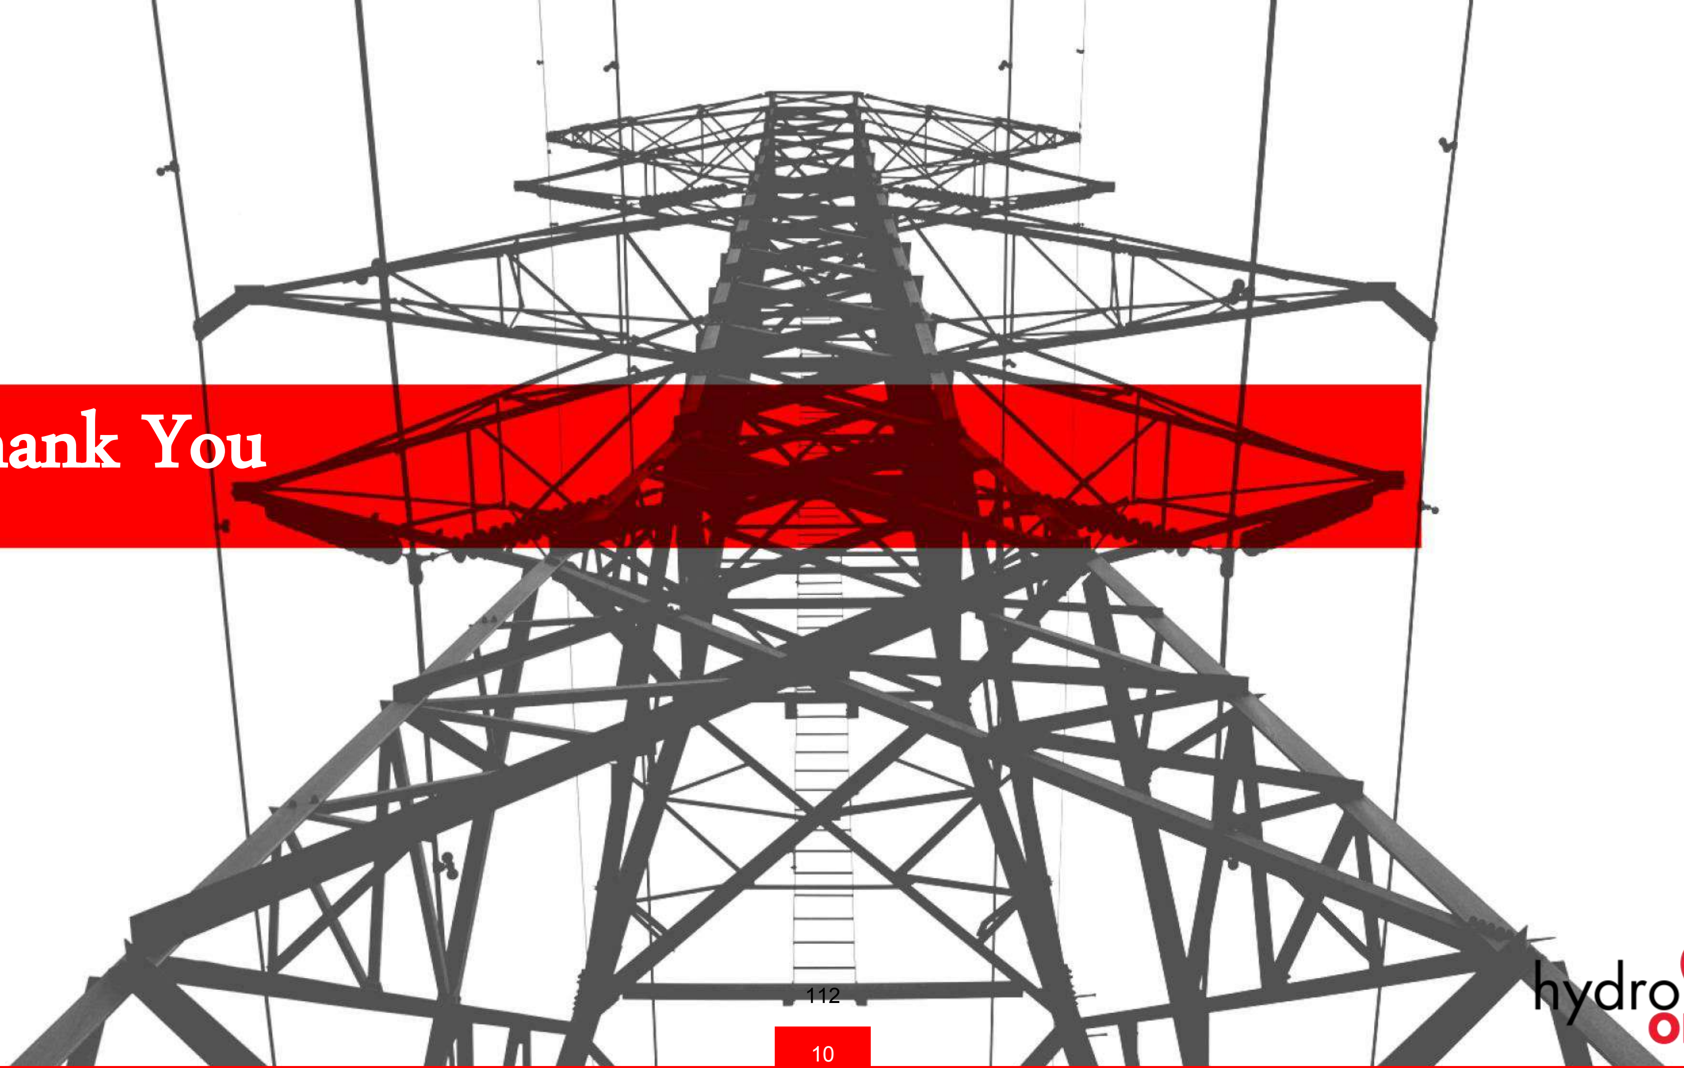


VOICE OF THE CUSTOMER

It doesn’t end today

- Your Account Executive, Executive Sponsor and/or other staff will follow-up with you directly

Thank You



LARGE CUSTOMER CONFERENCE

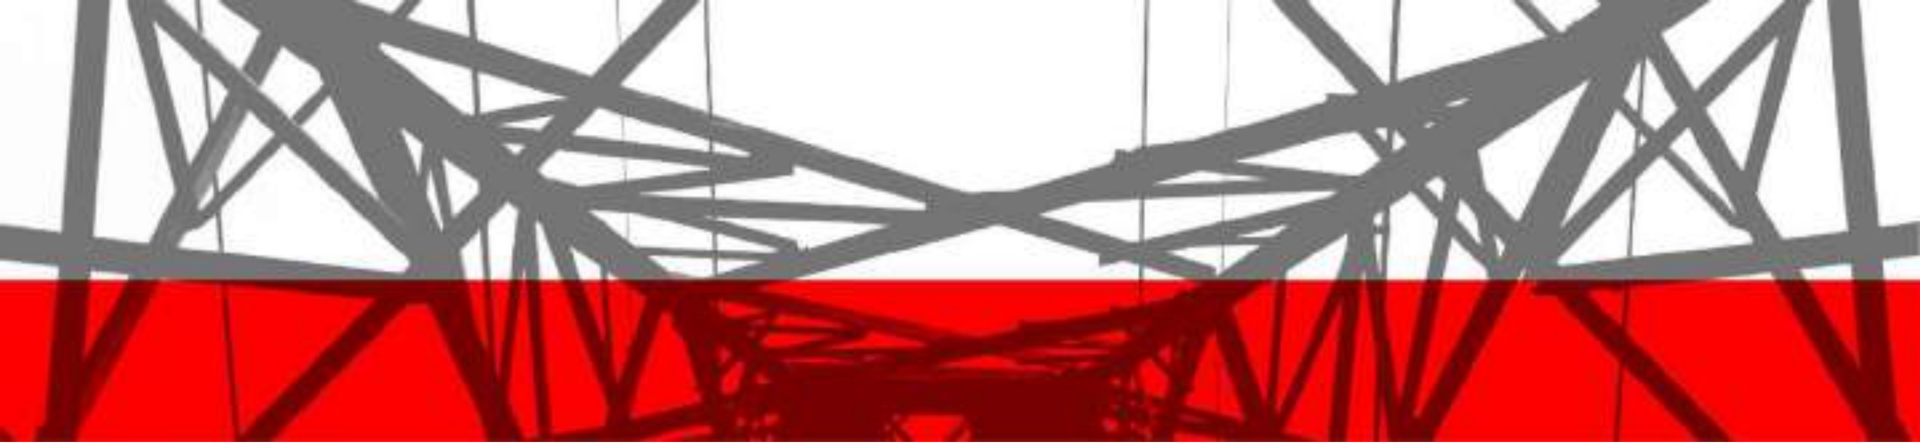
LARGE CUSTOMER CONFERENCE

Productivity & Operational Efficiency

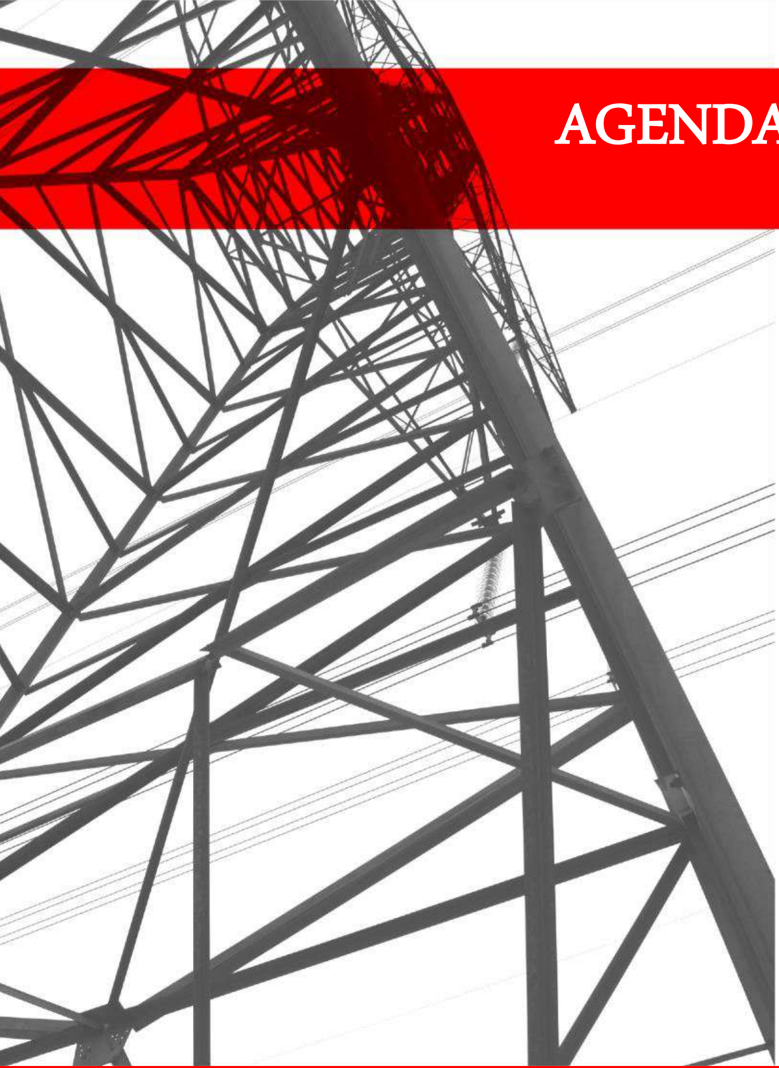


APPLICATION OF LiDAR

CK Ng

Director, Transmission Asset Management

Hydro One



AGENDA

- Hydro One’s Current Vegetation Practices
- Overview of LiDAR Technology
- Applications to Vegetation Management
- LiDAR Pilot
- Future Implementation

VEGETATION MANAGEMENT PRACTICES

- Hydro One's current vegetation management practice is to manage ROW's on a cyclical basis of 6 or 8 years, depending on the region
    - Line Clearing- remove or trim any trees along the edge of or off the ROW which may fall into an overhead conductor
    - Brush Control – removal of any non-compatible brush or trees located under a transmission line ROW
    - Condition Patrol – mid cycle inspection to identify and eliminate any vegetation that will not hold until the next LC/BC maintenance
- Minimum Vegetation Clearing Distance (MVCD) – the minimum distance between vegetation and a conductor that must be maintained to prevent flashover

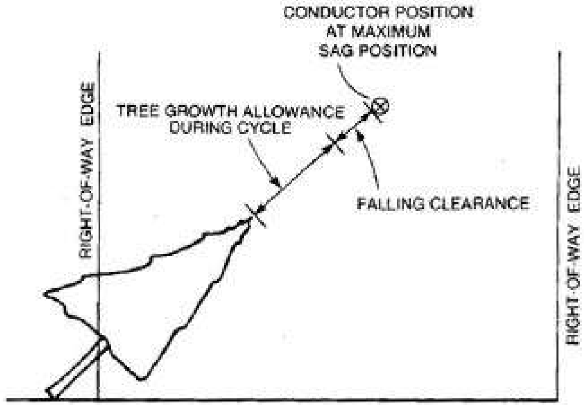
VEGETATION MANAGEMENT PRACTICES (CONT'D)

Voltage	HONI Falling Clearance		HONI Standing Clearance	FAC-003-4 MVCD
	Sound Trees	Danger Trees		
115 kV	N/A	1.0 m (3 ft.)	3.0 m (10 ft.)	0.6 m (2.0 ft.)
230 kV	N/A	2.0 m (7 ft.)	4.5 m (15 ft.)	1.3 m (4.3 ft.)
500 kV	3.0 m (10 ft.)	3.0 m (10 ft.)	6.0 m (20 ft.)	2.3 m (7.4 ft.)

VEGETATION MANAGEMENT PRACTICES (CONT'D)

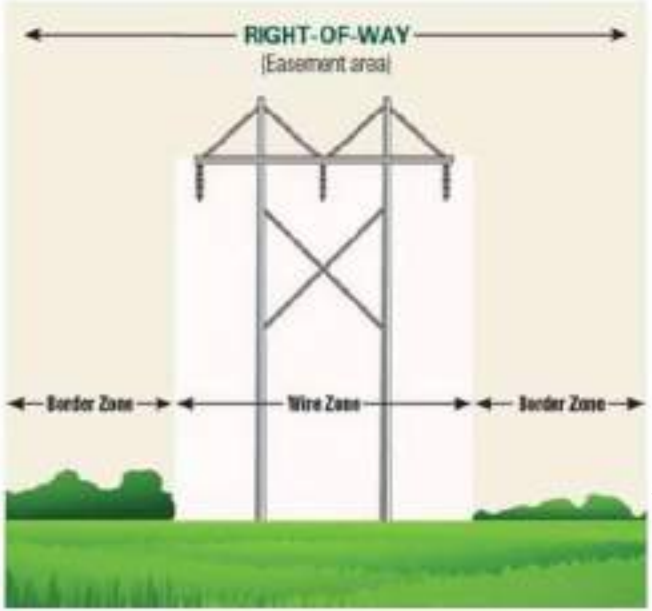
- All non-compatible vegetation is removed from the Wire Zone, the area directly beneath the conductor
- All unhealthy vegetation with the potential to fall into the conductor is removed from the Border Zone
- Hydro One's clearances account for vegetation growth until the next maintenance cycle

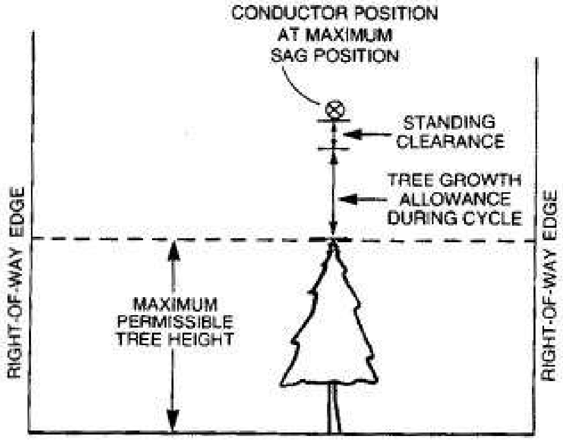
VEGETATION MANAGEMENT PRACTICES (CONT'D)



FALLING CLEARANCE

The minimum distance that can exist between the nearest conductor at its maximum sag position and a tree that may fall towards it from a position off the Right of Way.



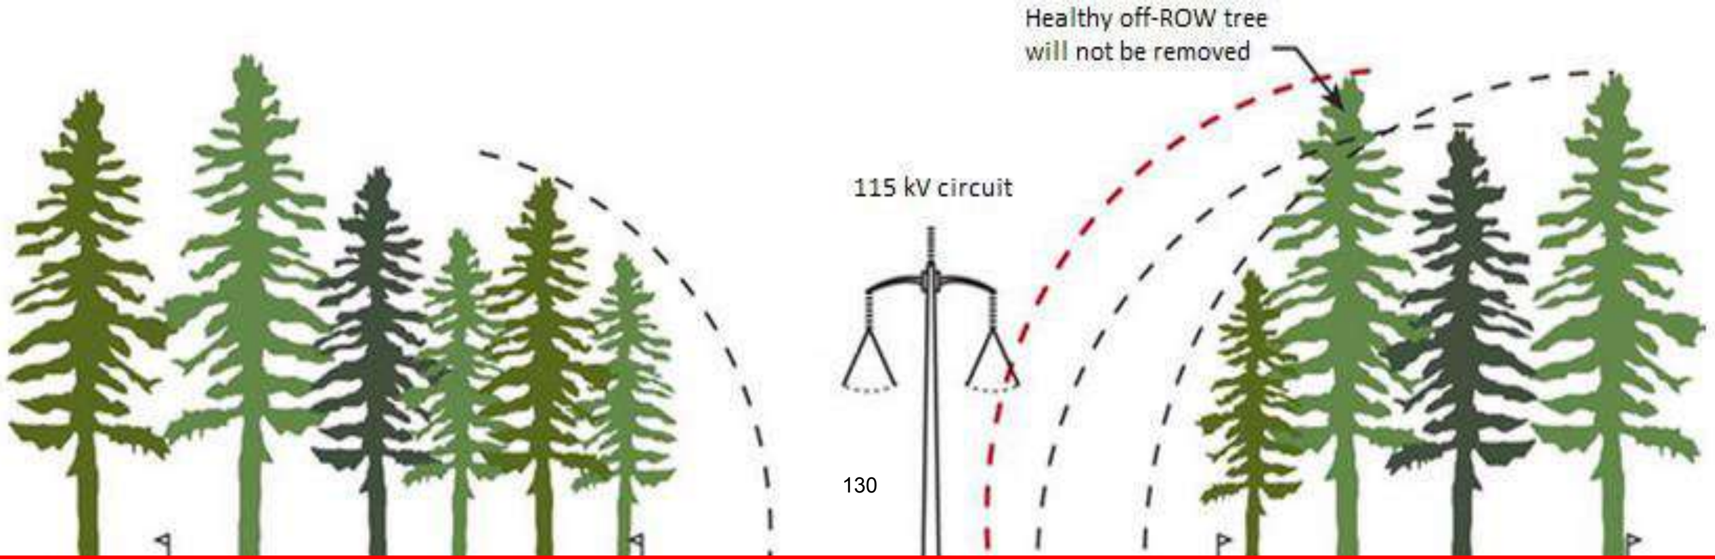


STANDING CLEARANCE

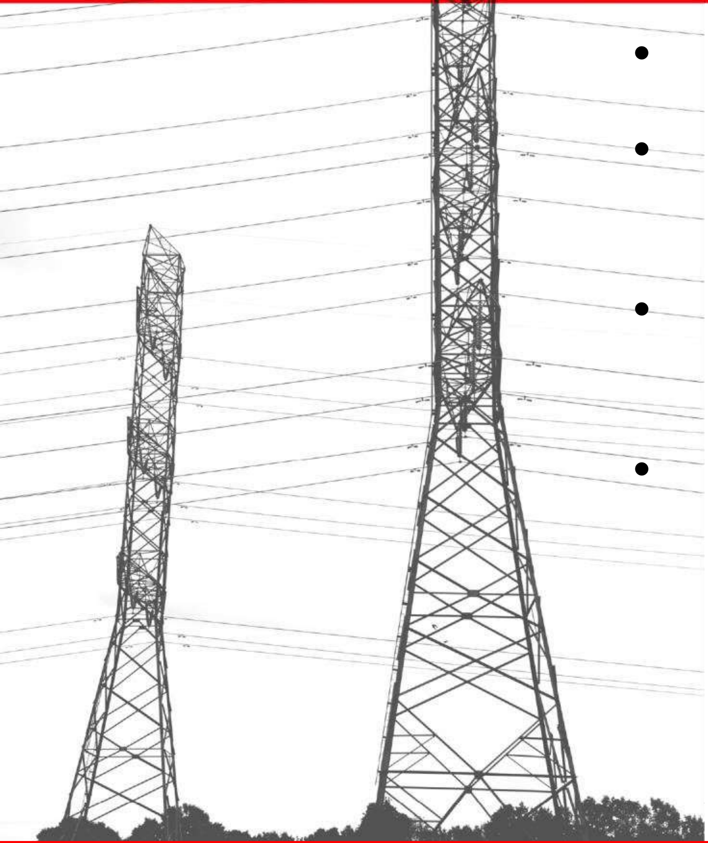
The minimum distance that can exist between a conductor at its maximum sag position and any vegetation. This clearance applies to any vegetation than can grow into the wire zone.

LINE CLEARING STANDARD

- 500 kV – Trees tall enough to fall within the 10ft falling clearance during the maintenance cycle are to be removed, regardless if they are healthy or not
- 115 & 230 kV – *only danger trees* tall enough to impede falling clearances during the maintenance cycle are to be removed
- Danger trees include split, hanging, uprooted, dead and diseased trees

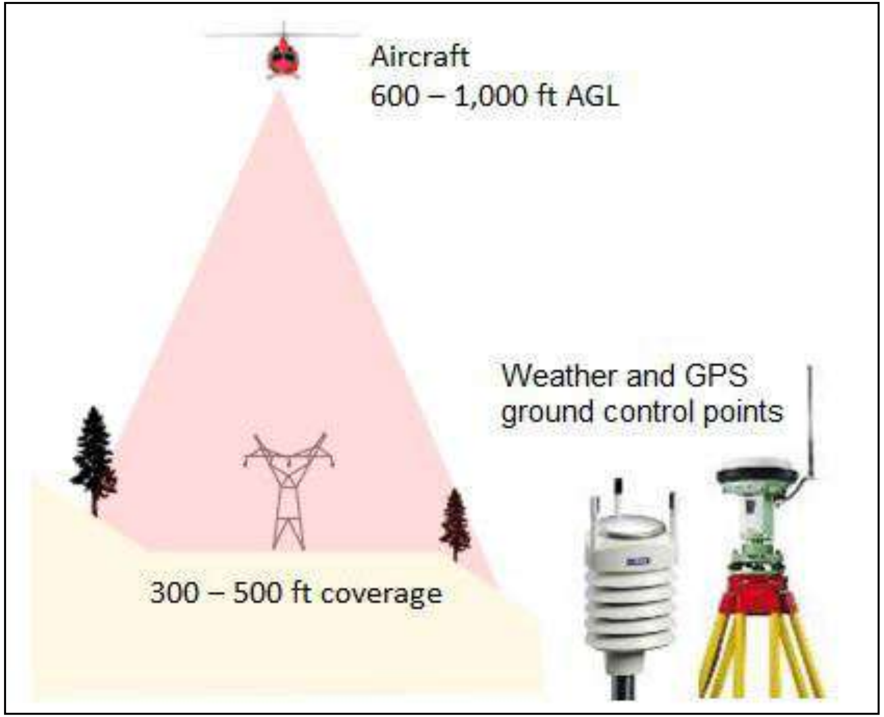


LiDAR TECHNOLOGY



- LiDAR – Light Detection and Ranging
- LiDAR technology is completed via aircraft and involves the use of light to calculate object distance and position
- The scanning laser is used to create high resolution maps of transmission lines
- Maps are used to:
  - develop engineering models
  - analyze maximum conductor swing and thermal ratings to detect vegetation growth

DATA COLLECTION



- Data collection can be completed via helicopter or a fixed wing aircraft
- Typical flying speed of 90 km/hr to create PLS-CADD engineering models
- Data points are collected at a rate of 30 points per square meter
- Horizontal accuracy of 0.3 m and vertical accuracy of 0.1 m
- GPS ground control points are used to determine precise coordinates and elevation for all transmission line components and vegetation

DATA PROCESSING

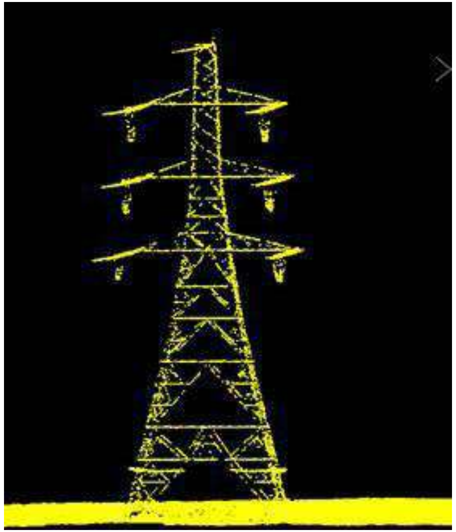
Basic Feature Code	Description
200	Ground
201	DTM Key
400	Water/Swamp
500	Wire
521-529	Shield Wire (project specific)
530-599	Phase Conductor (project specific)
600	Transmission Structure Centroid (under study)
610	Transmission Structure Centroid (other)
650	Shield Wire Point of Attachment (under study)
655	Shield Wire Point of Attachment (other)
660	Phase Conductor Point of Attachment (under study)
665	Phase Conductor Point of Attachment (other)
800	Vegetation Low (<1 m)
805	Vegetation High (>1 m)
810	Constructed Plant

- All data collected is processed with a basic feature code, classifying the data into categories
- Land below and adjacent to a transmission line ROW is grouped by land class, i.e. woody vegetation, parking lot, or residential

hydro one

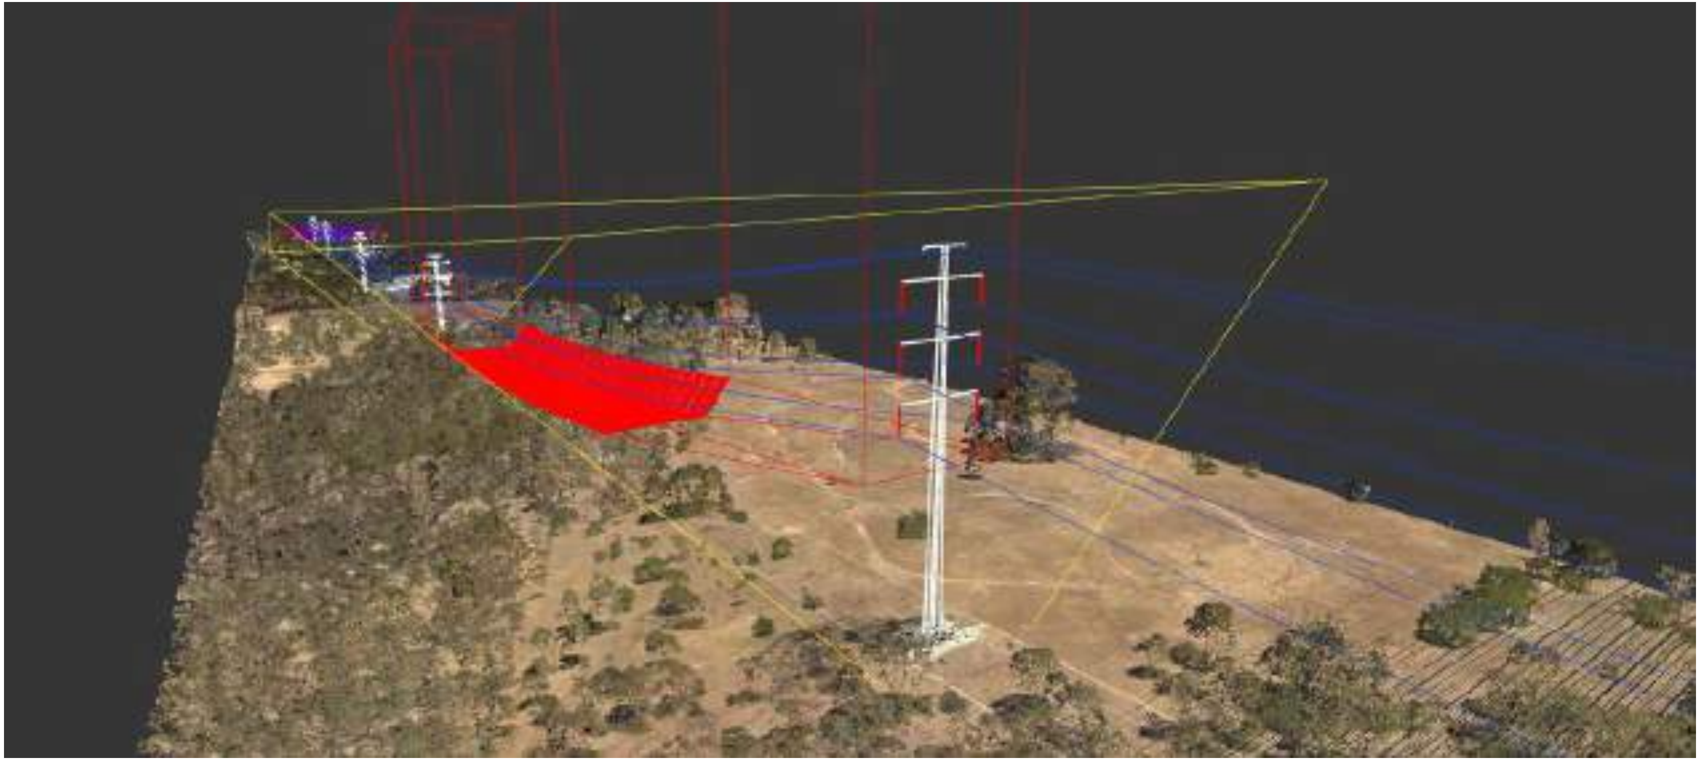
DATA PROCESSING

- The result of this data processing is a detailed engineering model of the transmission line and its surrounding vegetation
- Data processing results in an "as-built" model of the transmission line, clearing identifying conductor maximum sag and thermal ratings



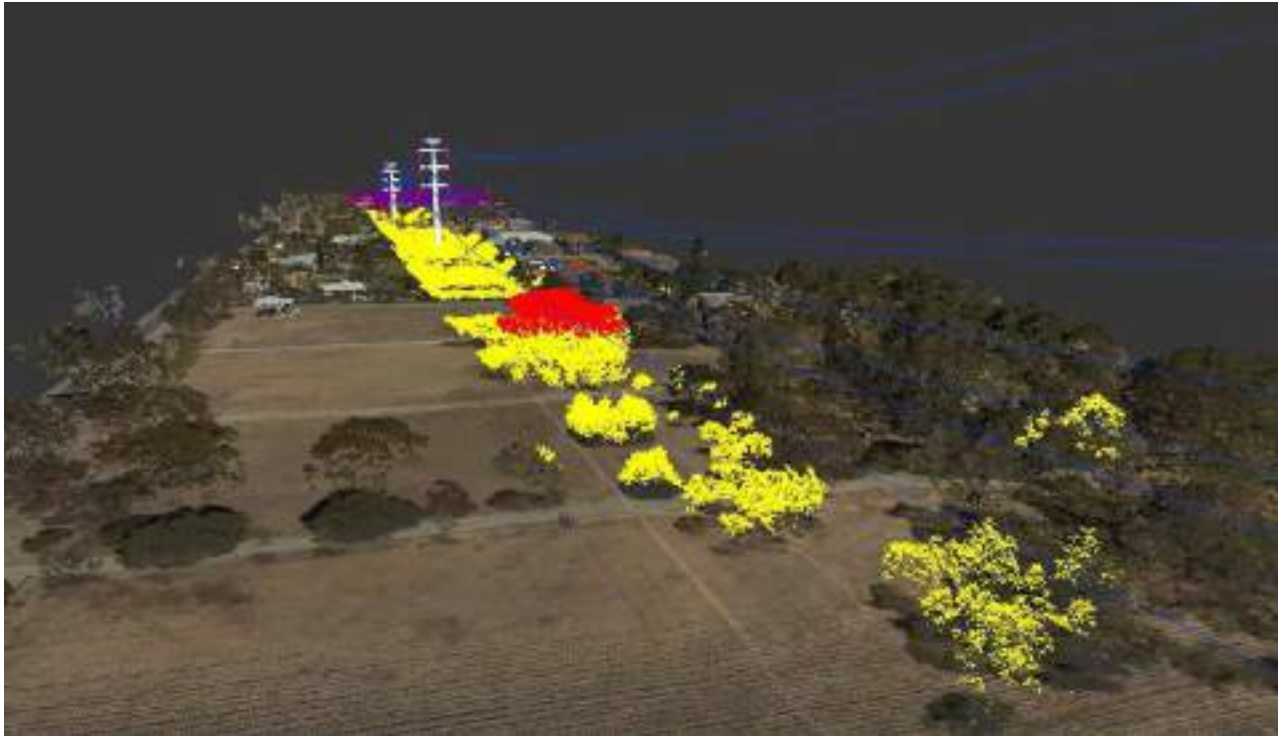
- Vegetation height, density, and type are all recorded and classified through LiDAR
- Tree height is compared to both Hydro One and NERC clearance standards. Any vegetation infringing upon these standards is flagged
- On the Australian circuit below, there are no violations to the minimum voltage clearing standards (MVCD)

APPLICATION TO VEGETATION MANAGEMENT (CONT'D)



APPLICATION TO VEGETATION MANAGEMENT (CONT'D)

- In this model of an Australian circuit, the vegetation highlighted in red is in violation of the MVCD
- Vegetation with the potential to grow into the MVCD in future is highlighted in yellow

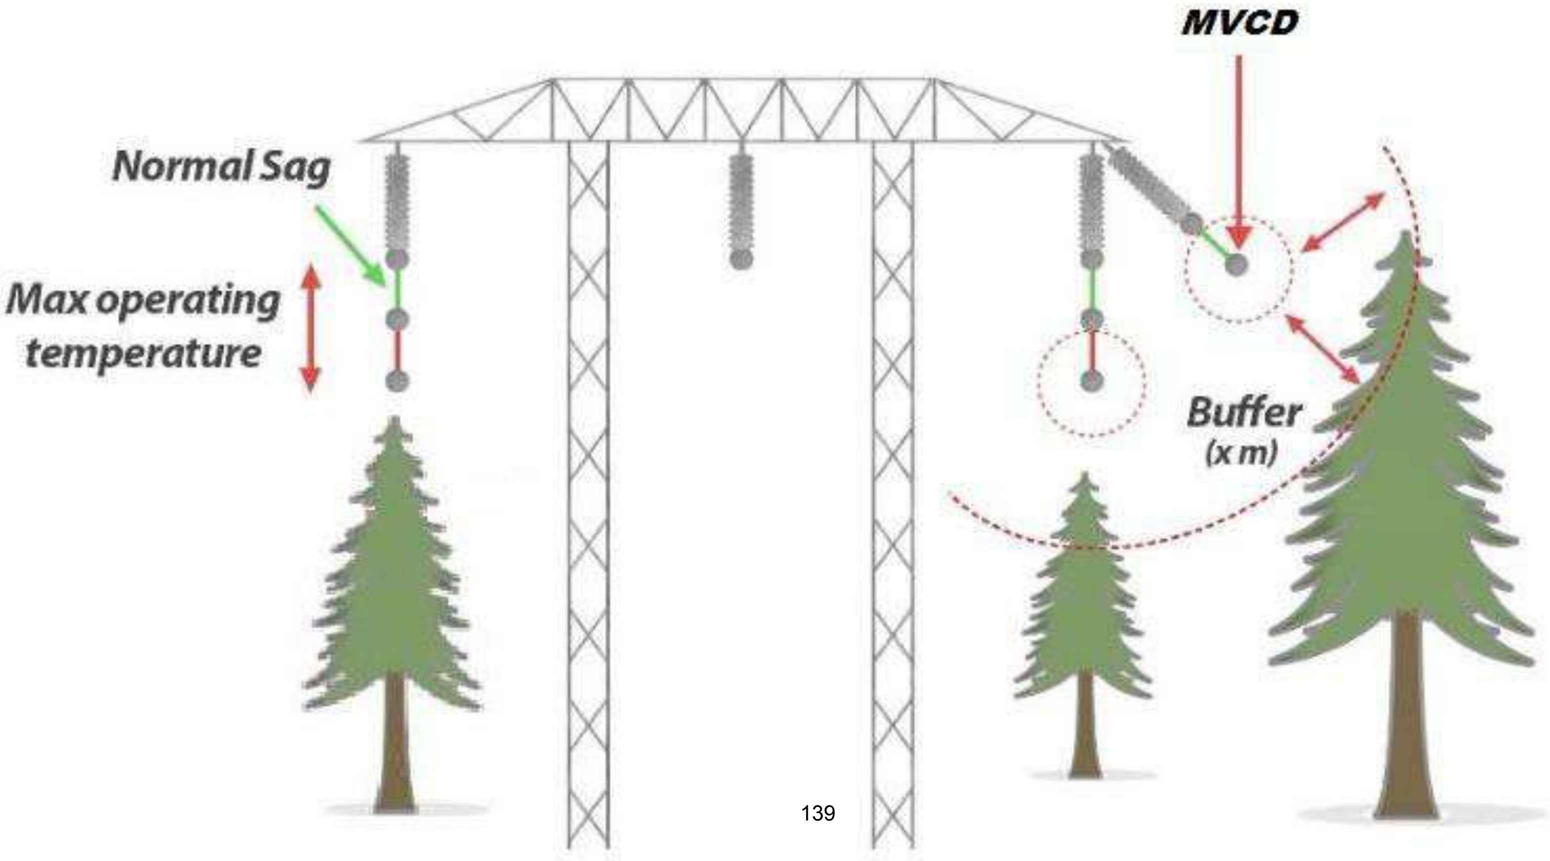


APPLICATION TO VEGETATION MANAGEMENT (CONT'D)

- Hydro One's clearance standards are more stringent than NERC FAC-003 compliance regulations. This allows us to create a buffer zone around the MVCD

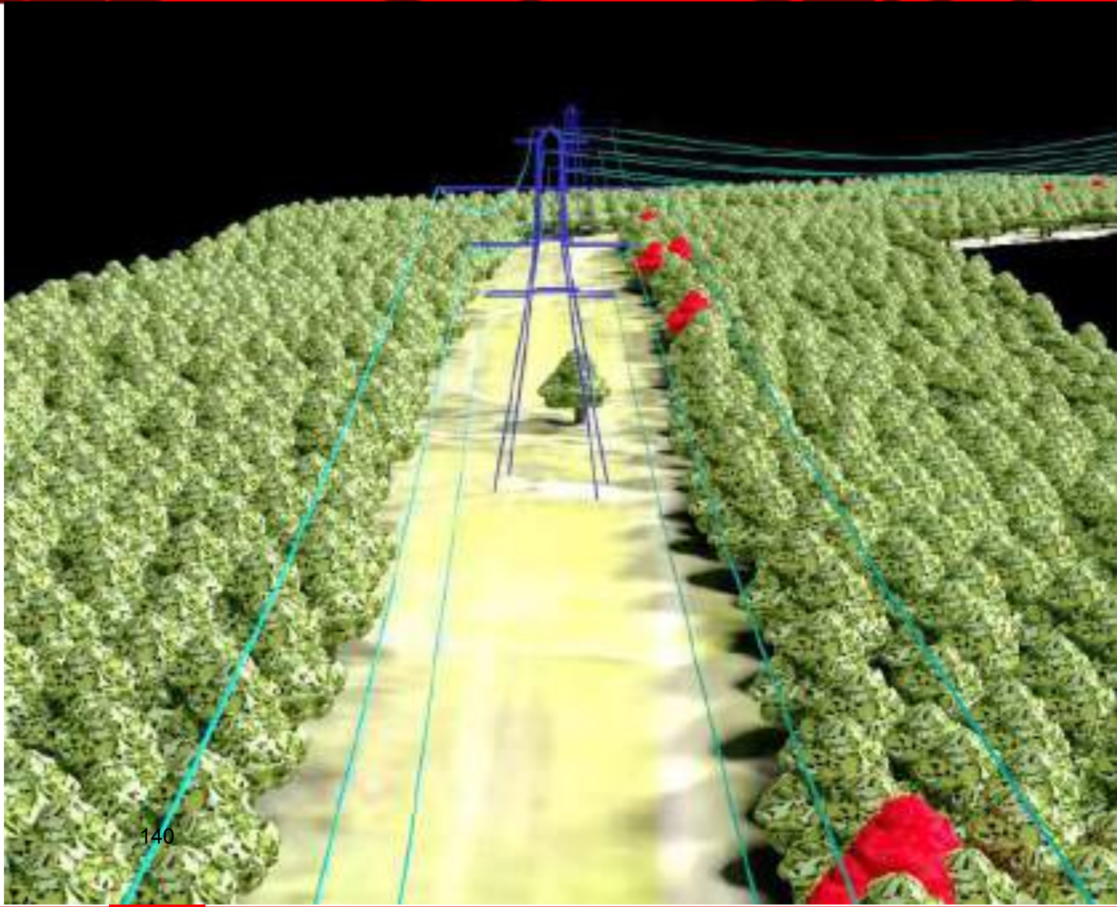
- LiDAR will identify any trees located within the buffer zone or that have the potential to exceed the MVCD when the line is operating at maximum sag

APPLICATION TO VEGETATION MANAGEMENT (CONT'D)



IMPROVEMENTS TO VEGETATION MANAGEMENT EFFICIENCY

- Prediction of tree growth patterns- optimization of maintenance cycle
- Identification of danger trees - unhealthy trees are flagged by LiDAR
- Identification of potential grow-ins and fall-ins
- Effective estimating of cost and labor required to complete maintenance
- Clear compliance to NERC standard FAC-003



ENVIRONMENTAL IMPACT

- Despite Hydro One's best efforts there is still some risk of vegetation related outages due to environmental factors

- As healthy, off-ROW trees are not removed when bordering a 115 or 230 kV corridor, the trees may fall into the conductor as a result of storms or animal activity

LiDAR PILOT

- Hydro One surveyed approximately 400 km of transmission and 100km of distribution circuits with LiDAR in 2016
- These circuits are located in the regions of Sarnia, London, Chatham-Kent, and Goderich
- LiDAR data was collected in June and processing has just been completed. Hydro One received PLS-CADD models and vegetation analysis for the pilot circuits in October
- Vegetation data is currently being analyzed and field verified to determine if any mitigation actions are required

hydro one

FUTURE IMPLEMENTATION

- Hydro One will schedule the mitigation of any vegetation risks identified during the LiDAR patrol
- Hydro One is currently developing a business case to justify the flying of our transmission lines with LiDAR
- Annual refresh using LiDAR will help to optimize maintenance cycle
- Potentially combine existing helicopter patrols with the LiDAR refresh to further optimize maintenance

Energy Efficiency Incentives through the Industrial Accelerator Program

Hydro One Customer Conference

Declan Doyle, Manager – Direct Customers, Conservation and Corporate Relations

November 22, 2016

Independent Electricity System Operator

Who We Are and What We Do

The Independent Electricity System Operator (IESO) – ensuring there is enough power to meet the province's energy needs in real time while also planning and securing energy for the future. It does this by:

- Long term and short term planning
- Enabling conservation by overseeing funding of Save on Energy programs offered by LDCs and Industrial Accelerator Program
- Ensuring supply through contracts, real time energy and operating reserve market and ancillary services such as regulation and blackstart
- Operating the IESO-controlled grid
- Engaging stakeholders and communities

ieso
Independent Electricity System Operator

Conservation Goals

Almost all electricity demand growth to 2032 to be met by energy efficiency & improved codes and standards

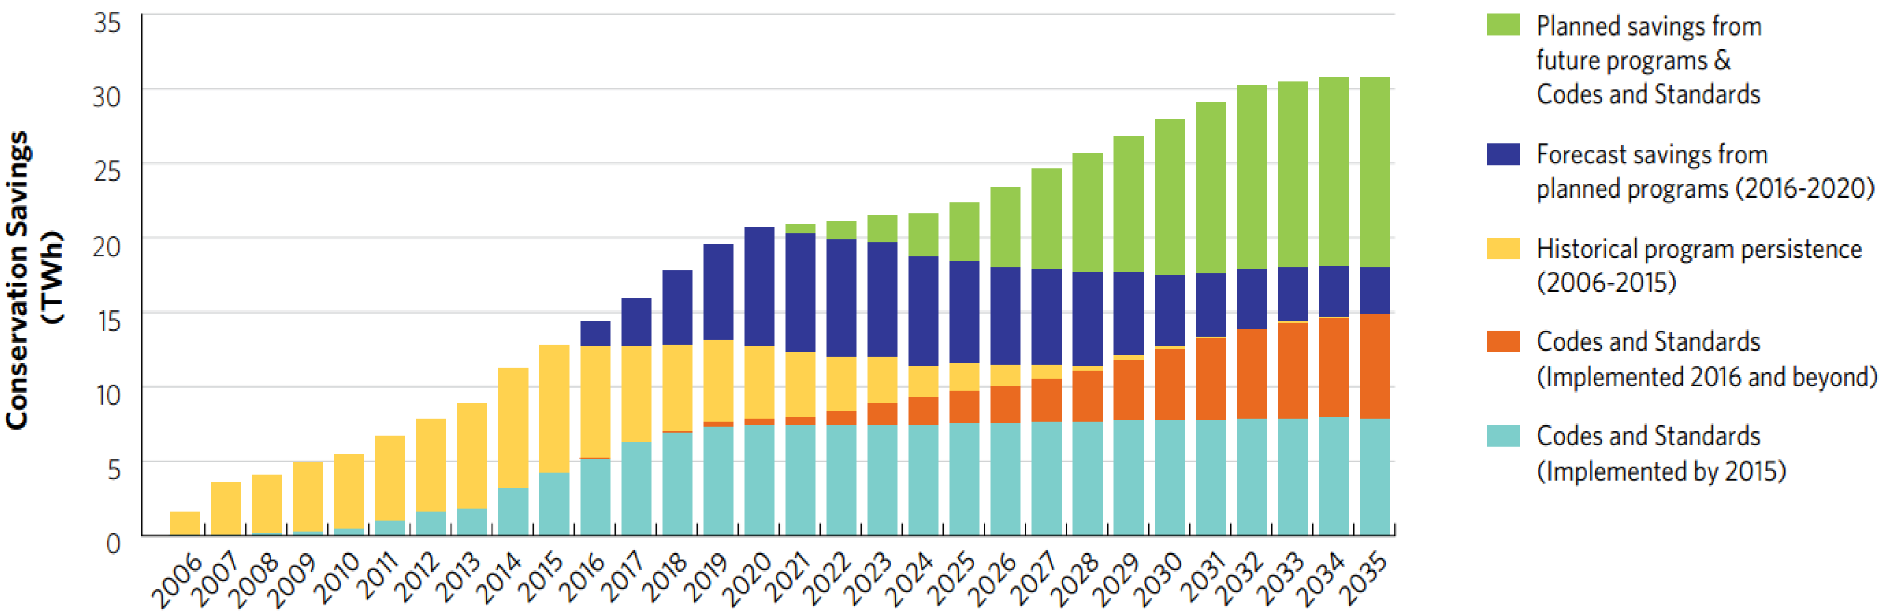
Goals:
8.7 TWh in 2020;
30 TWh in 2032

Demand Response to meet 10% of peak demand by 2025

ieso
Independent Electricity System Operator

Conservation Outlook

- All four outlooks reflect achievement of LTEP 2013 conservation targets and the Conservation First Framework



Building a Culture of Conservation

Pre-2011 Conservation → **2011-2014 Framework** → **2015-2020 Conservation First**

Success to Date

- **9.9 billion kilowatt-hours** of electricity savings through SOE programs and changes to codes and standards in the past 10 years
- **6,553 gigawatt-hours** of energy savings between 2011 and 2014 through the SOE suite of programs
- **928 megawatts** of demand reduction for the province
- **9.8 million products** purchased using Save on Energy coupons
- **5,000 people** participated in IESO-supported training programs between 2011 and 2014
- **12 LDCs** achieved over 80% of both energy and demand targets

Conservation Programs for Industrial Customers

Industrial Accelerator

- For transmission-connected facilities
- Must apply through your IESO Business Manager

SAVE ON ENERGY
POWER WHAT'S NEXT

- For distribution-connected facilities
- Must apply through your LDC

*Minor differences in incentives and contracts between the two programs

Program Streams

Process & Systems

Small Capital Projects

Retrofit

High Performance New Construction

Energy Managers

Why Invest in Energy Efficiency?

- Improve productivity and competitiveness
- Cost and energy savings
- Reduced maintenance
- Longer equipment life
- Incentives improve payback and ROI
- Fast-track capital investment in major energy-efficiency projects

Solving your CFO's Concern

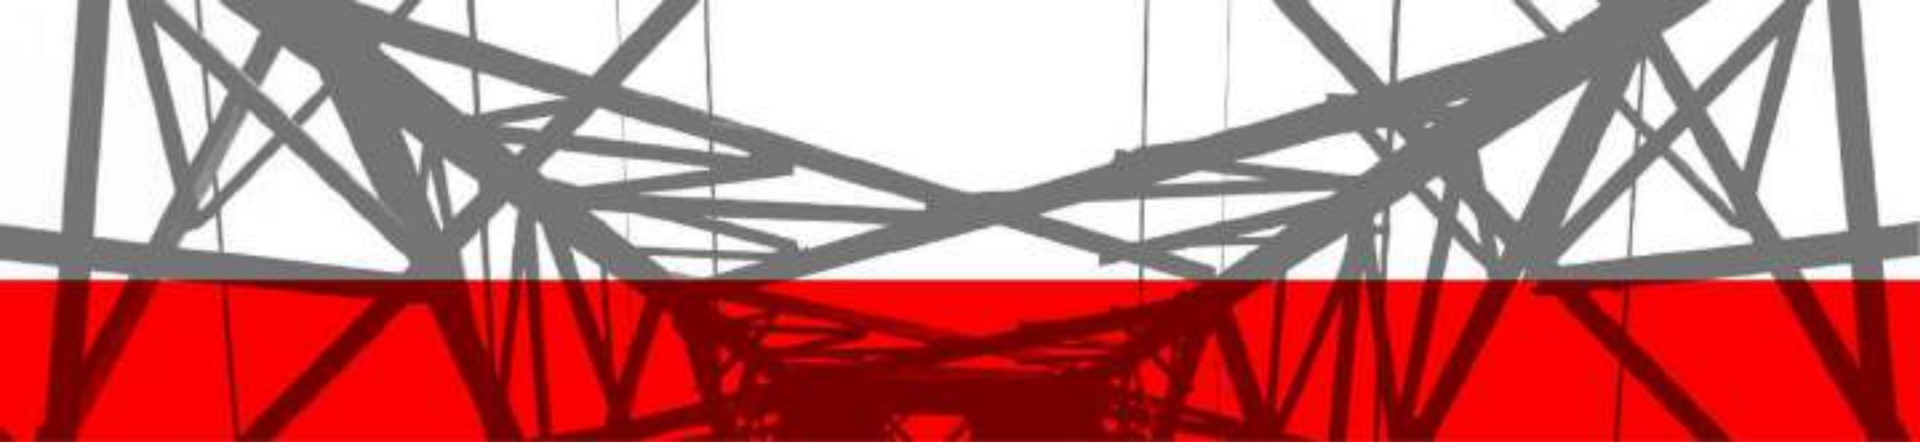
LARGE CUSTOMER CONFERENCE

Productivity & Operational Efficiency



OUTAGE PLANNING

Jason Boniface

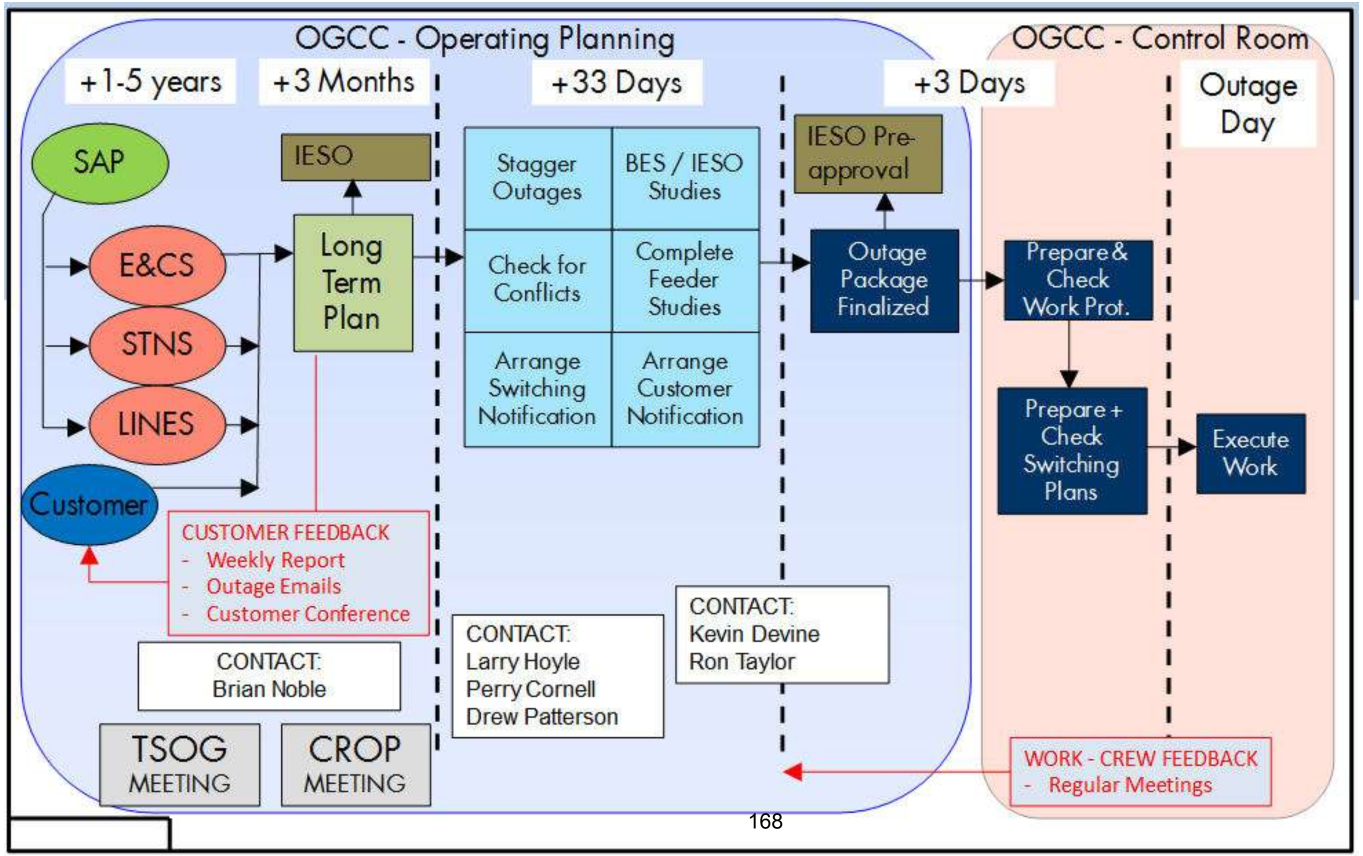
Manager, Grid Operations

Hydro One

OUTAGE PLANNING GOALS

- Engage all customers in outage planning process
- Meet customers' outage needs
- Meet Hydro One's outage needs
- Gain efficiencies, and reduce multiple outages, bundling of outages is a key driver
- Collectively create a successful outage plan as far ahead as possible
- TSOG (Transmission System Outage Grouping) is the platform used to achieve this

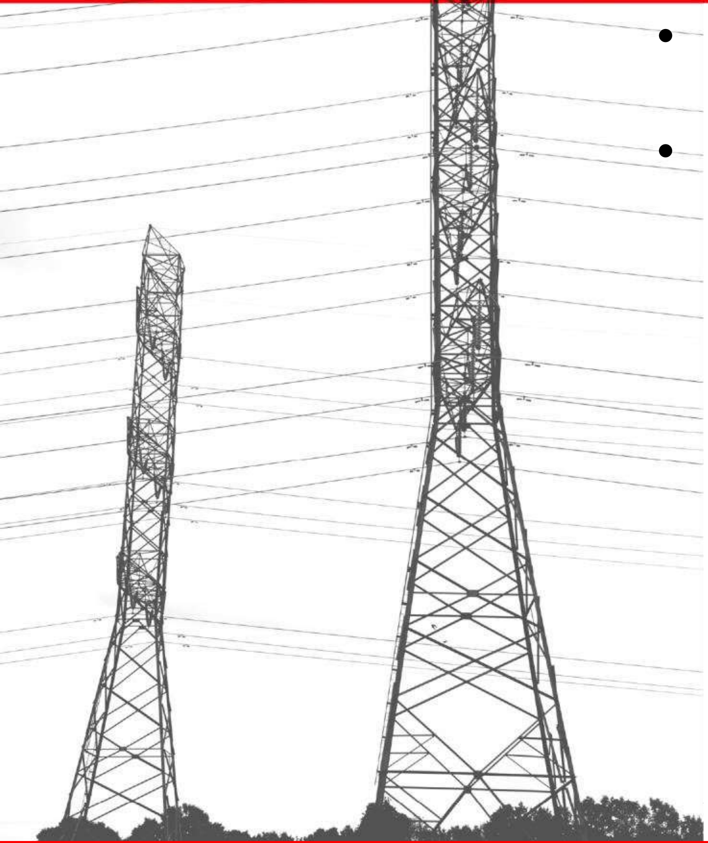
HYDRO ONE OUTAGE TIMELINE- Sector 4



PLANNING PROCESS FOR GENERATORS

- Beginning of Q3, letters sent requesting customers to provide Hydro One details of outage planning in 2017
    - Feedback allows Hydro One to coordinate outages based on customer outage times
        - ✓ Bundling opportunities
        - ✓ Avoid conflicts with other outages
        - ✓ Avoid impact to elements that may not be directly connected, however impacted by system constraints
    - Awareness of outages that may impact Hydro One equipment
- TSOG meetings are Bi-annual and outage discussions commence in the Spring and Fall

HOW CAN CUSTOMERS HELP?



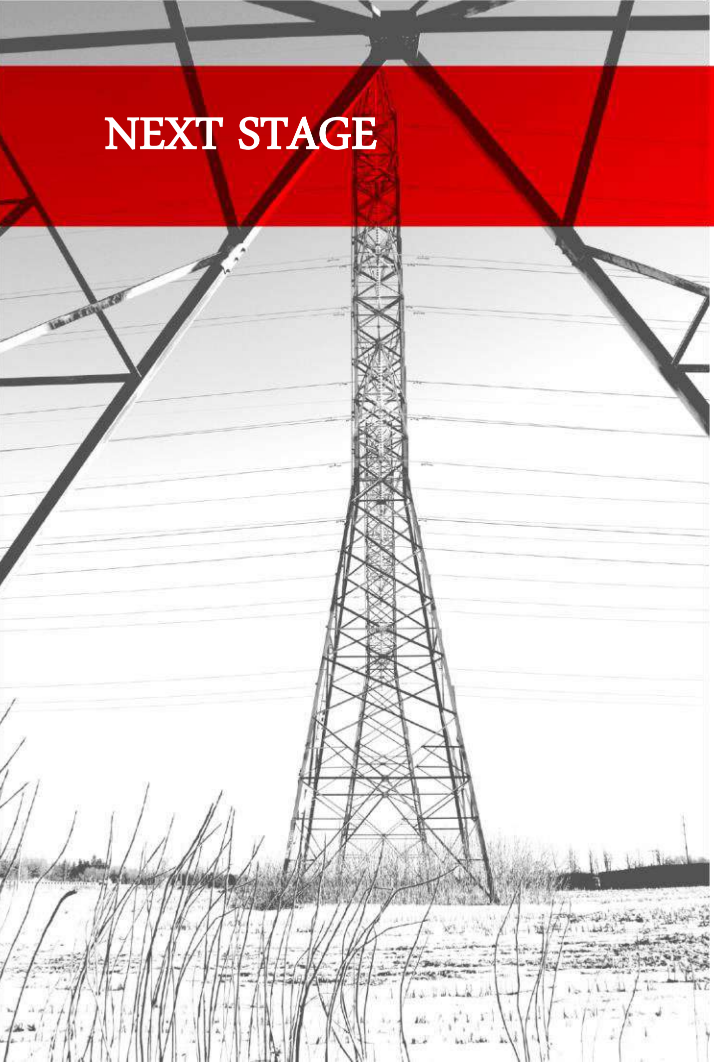
- Advise Hydro One of your outage plans for the following year
- Hydro One requests to provide outage requirements as far ahead as possible beyond
  1 year if possible
  - Results = better coordination of outages
  - Available for use during the TSOG meeting at end of Q3
    - ✓ Hydro One can develop outage plans with your available requirements

HOW CAN CUSTOMERS HELP? (CONT'D)

- Observations
  - Some entities have a 5 year plan available at time of request
  - Some entities do not have a plan until within the year
- Risks
  - Hydro One may not be able to adjust schedules for short notice outages
  - IESO requests outages involving Critical Equipment* for a Weekly or Quarterly Advanced Approval, therefore 17 days prior to 3 months respectively

**Critical Equipment is defined as equipment that impacts power system stability limits as listed in the System Control Orders*

- Requests
  - Take the time to complete the requests and advise Hydro One of your outage plans
  - Ensure that you apply to both the IESO and Hydro One for your outage requests that impact the Bulk Electric System



NEXT STAGE

End of Q3

- Planning groups within Hydro One all meet for 1 week to develop the outage plan for the upcoming year
  - Hydro One internal Lines of Business come to the meeting with planned work for upcoming year to schedule
  - Long Term NMOs have the customer outages that were provided
  - If we did not receive feedback from customers,
    the planning group will attempt to plan
    as per historical past practices

NEXT STAGE (CONT'D)

- Outages are captured into our Network Outage Management System- NOMS
- Upon entry into NOMS:
  - Requests from Hydro One are forwarded to IESO for approval
  - Weekly customer reports are now generated for outages impacting your facility
  - The NMOs will attempt to include customers on a report even if not directly impacted by the outage, however we are aware that an outage to this system element will still impact- P502X will effect output of multiple generators

CUSTOMER CONFERENCES

- October – November
    - Long Term Planners meet with smaller regional groups of customer to review outage plans
        - Opportunity for more detailed discussions
        - Customers can provide input on outage time to better respect their operations
        - Advise customers of our planned work that may impact their operations
        - Review opportunity to bundle Hydro One and Customers planned work

- Throughout the year for large complex projects involving customers, Planning will hold specific project meetings to
  keep all groups engaged and aware of on going work

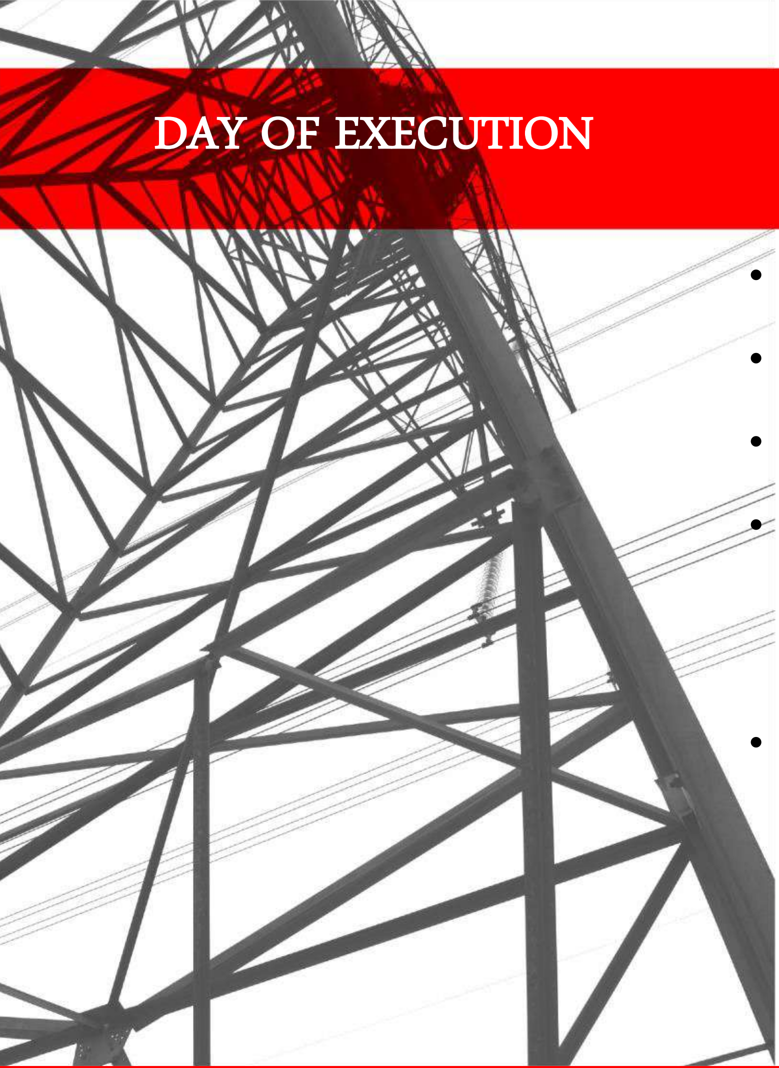
33 DAYS TO EXECUTION

- Operating Planning within this time frame will have the Short Term Planner review system conditions for outage to proceed
  - Review if any changes in system have occurred such as a forced outage
  - Load forecasts closer in

- Advise Customers of outage and impact

- Controllers will prepare all Work Protection and should have received all requested Supporting Guarantee request with a minimum of 10 days prior to outage date

DAY OF EXECUTION



- Outage is executed in the Control Room
- IESO still provides day of approval
- IESO will contact Generators if there are requirements to change output of units
- Shift Controllers will contact customer prior to outage commencing
    - Critical that contact details for real time operations are available for Hydro One to contact
- If issues occur day of, contact your Real Time contact as per the connection agreement

TAKEAWAYS

- IESO dictates limits
  - Hydro One can advise of upcoming outages, IESO will provide direct details on maneuvering of units
- Attend the Customer Conferences
  - Allows your input into the outage plans
- Plan ahead and provide details to Hydro One as far ahead as possible
  - Opportunity to minimize outages
  - Opportunity to better bundle work
- Become familiar with your Planning Contacts

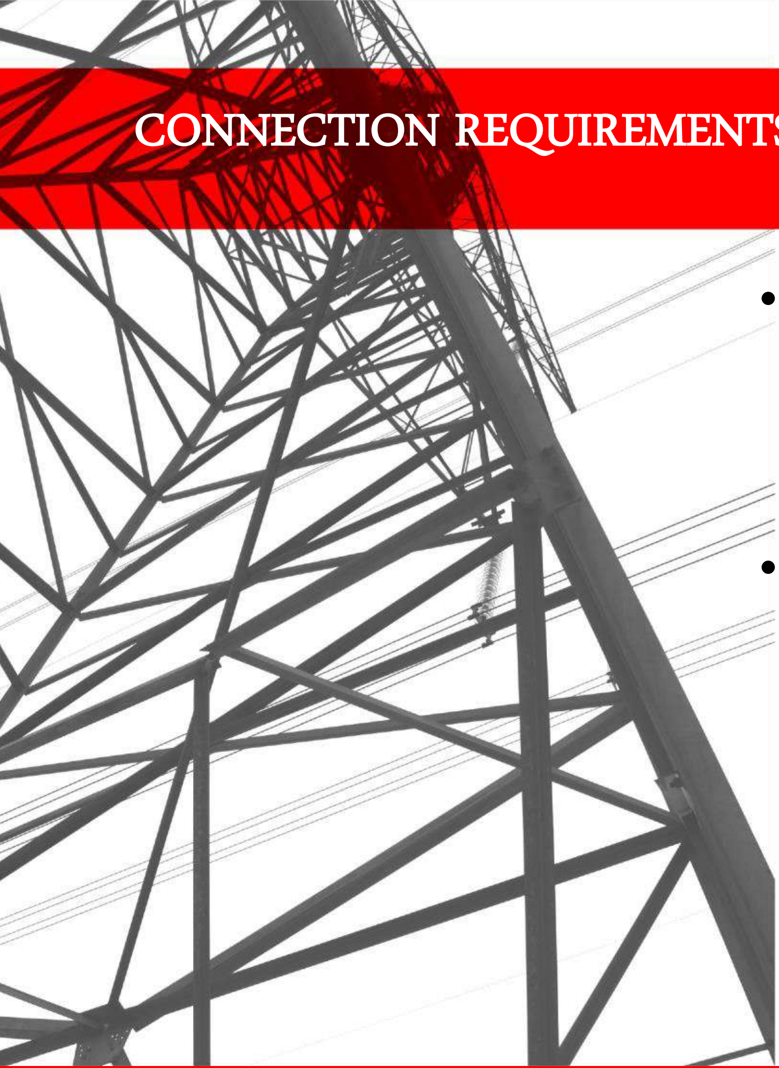
LOAD DISPLACEMENT GENERATION

- Load displacement generator and existing load have same owner
    - Please see Large Distribution Account (LDA) presentation

- Load displacement generator owner is different than existing load customer
    - Existing load customer will continue to be a customer of Hydro One
    - Hydro One is not a party in the agreement between load owner and load displacement generator owner



CONNECTION REQUIREMENTS

- A Customer Impact Assessment (CIA) is needed for installing any load displacement or back-up generator >10 kW as per Hydro One's Conditions of Service

- A Distribution Connection Agreement (DCA) must be executed for connecting any >10 kW generator

LOAD DISPLACEMENT IMPLICATIONS ON HYDRO ONE BILL

- A customer wants to reduce their electricity bill, in particular Global Adjustment
  - Class B customers want to reduce the total kWh based Global Adjustment charges
  - Class A customers want to avoid or reduce demand during the IESO system peaks to lower their Peak Demand Factor
  - Utilize waste heat from electricity generation

- Customer could be incented by IESO to install generator under Conservation Demand Management

- Customer needs to self declare Debt Retirement payment to Ministry of Finance
  - Current forecasted Debt Retirement Charge expiry is March 31, 2018

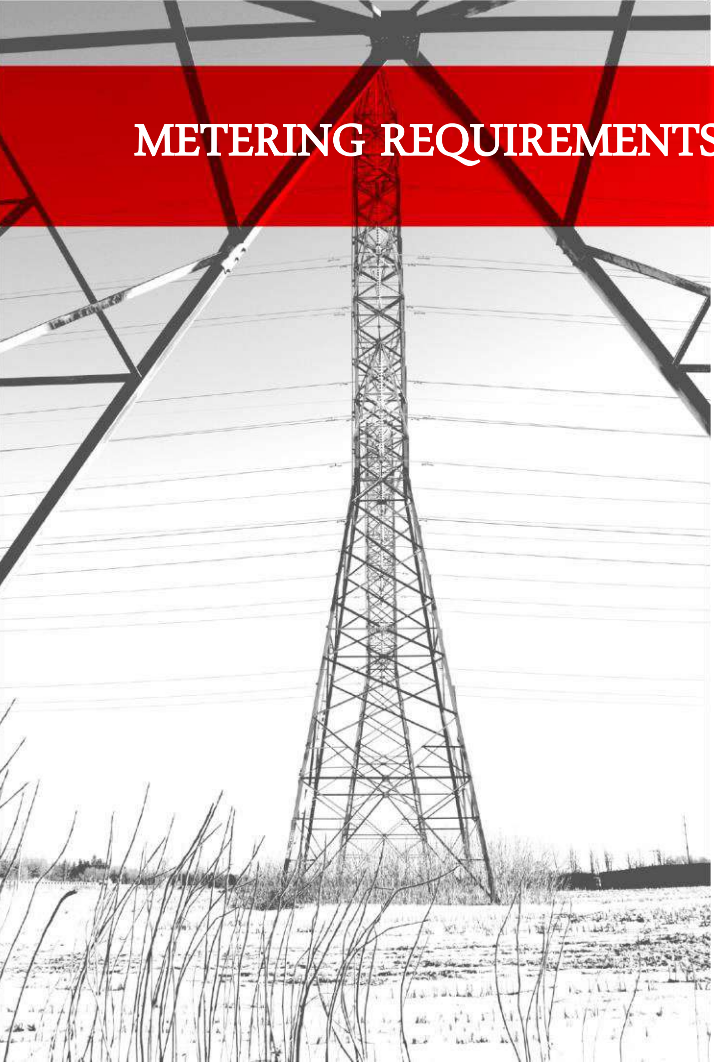
- Load Displacement generation may impact Class A qualification
  - Please consult Meghan Atkinson (Meghan.Atkinson@HydroOne.com) for more information

- Depending on type and size of the generator, customer may or may not attract Gross Loading Billing

POTENTIAL TRANSMISSION AND DISTRIBUTION CHARGES IMPLICATION FOR INSTALLING LOAD DISPLACEMENT GENERATOR

- Depending on the type and size per unit of the load displacement generator, it may trigger Gross Load Billing (GLB) of Transmission Line and Transformation Connection charges, but not Network charge
- Gross Load Billing applies to Distribution Common Sub-transmission Rate but not to the General Service Rates
- GLB thresholds: (1 MW for non-renewable and 2 MW for renewable) refer to unit capacity (in the case of solar, inverter capacity), not site capacity
  - Eg. A solar farm with 10 MW (20 x 0.5 MW inverter) capacity would not trigger GLB
- GLB also applies to the incremental capacity of a refurbished legacy generator
  - Eg. GLB applies to the 5 MW incremental capacity of a refurbished 7 MW Legacy generator with 2 MW old capacity

METERING REQUIREMENTS



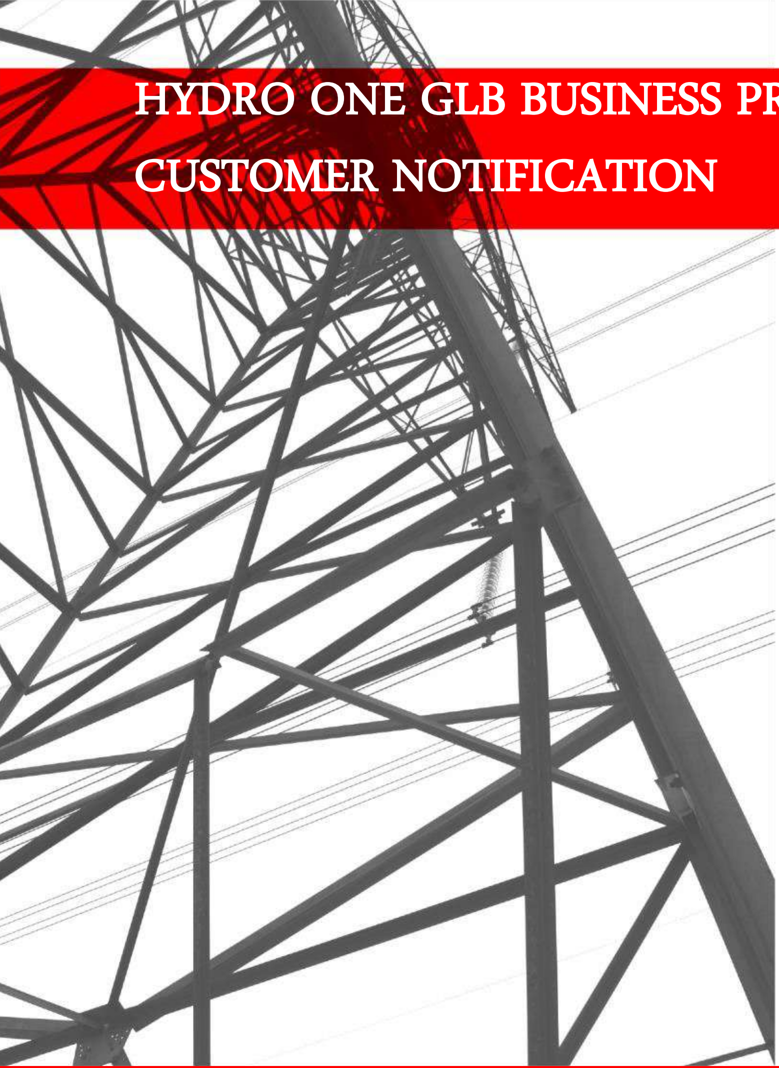
- Sub-transmission Customer
  - Hydro One will install a retail revenue meter to measure the generator’s output (only for sub-transmission customers) for gross load billing calculation
  - An additional meter charge will be applied
- General Service Demand Customer
  - Customer will need to install their own meter for Debt Retirement Charge declaration to the Ministry of Finance

GROSS LOAD BILLING FOR ISLANDING OPERATION WITH LOAD DISPLACEMENT GENERATOR

- A Customer with a load displacement generator operating off-grid is still subject to Gross Load Billing if they are connected to the grid for any back-up supply

- For complete off-grid operation, 365/7/24, Hydro One will not Gross Load Bill the customer but will remove all of the distribution assets from the connection and does not provide back-up support

HYDRO ONE GLB BUSINESS PROCESS – CUSTOMER NOTIFICATION



- Hydro One Connection Impact Assessment (CIA) process now includes GLB assessment for any generators with a size of 1MW or more, to make customers aware of GLB eligibility and the settlement impacts

UPCOMING POTENTIAL CHANGES

- OEB is initiating a policy review to address the question of how a commercial and industrial customers should be billed when they have a Load Displacement Generator (LDG) behind the meter

- http://www.ontarioenergyboard.ca/oeb/_Documents/Documents/OEBltr_Gross_Load_Billing_Tx_20160329.pdf

hydro one

NET METERING – EXISTING FRAMEWORK

- Our Net Metering program is available to any Hydro One customer who generates electricity primarily for their own use from a renewable energy source (wind, water, solar radiation or agricultural biomass) using equipment with a total nameplate rating of **500 kW or less**

- Net metering allows you to send electricity generated from Renewable Energy Technologies (RETs) to Hydro One's distribution system for a credit towards your electricity costs
    - Excess generation credits can be carried forward for up to 11 months, including the 11th month, to offset future electricity costs

NET METERING – PROPOSED AMENDMENTS

- Remove the capacity limit of 500 kW
- Extend credit carry forward period from 11 months to 12 months
- Virtual Net Metering – credits transfer within multiple accounts, within the same LDC, within the distance requirement
  - Proposed: 3km
- Pairing of renewable energy sources with energy storage which allows for flexible injection

ENERGY STORAGE

- Energy Storage License is required by OEB
- Proponent is subject to the same Hydro One connection process for distribution generator
- Hydro One will settle Energy Storage as non-contract generator:
  - Bill all charges (delivery, energy and global adjustments) for energy withdrawn from the grid
  - Pay spot prices when injected energy
- Industry estimates 20% loss for kWh transaction – for every 100 kWh withdrawn, only 80 kWh injected back to the grid
- Potential Cost Mitigation if energy storage is allowed as stand alone source for Net Metering – injection will receive both global adjustment and energy credit

BILLING AND PAYMENT SCENARIOS FOR DIFFERENT TYPE OF DISTRIBUTION CONNECTED GENERATORS

Program Type \ Charge Type	Billable Power	Payable Power Injection	Creditable Power Injection
LOAD DISPLACEMENT GENERATOR	(↓ Indicates Charges Offset)		
Commodity Charge (HOEP $/KWH)	YES ↓	NOT APPLICABLE	NOT APPLICABLE (No Injection Allowed)
Global Adjustment ($/MWH)	YES ↓		
Fixed Regulatory Charges ($)	YES		
Fixed Delivery Charges ($)	YES		
Variable Regulatory Charges ($/KWH)	YES ↓		
Variable Delivery Charges ($/KW or $/KWH)	YES ↓		
NET METERING GENERATOR	(↓ Indicates Charges Offset)		Roll Over Credits Over A Year Span
Commodity Charge (HOEP $/KWH)	YES ↓	NOT APPLICABLE	YES
Global Adjustment ($/MWH)	YES ↓		YES
Fixed Regulatory Charges ($)	YES		NO
Fixed Delivery Charges ($)	YES		NO
Variable Regulatory Charges ($/KWH)	YES ↓		YES
Variable Delivery Charges ($/KW or $/KWH)	YES ↓		YES ($/KWH), No ($/KW)
RETAIL GENERATOR			
Commodity Charge (HOEP $/KWH)	YES	YES	NOT APPLICABLE

Fixed Regulatory Charges ($)	YES	NOT APPLICABLE	
Fixed Delivery Charges ($)	YES	NOT APPLICABLE	
Variable Regulatory Charges ($/KWH)	YES	NOT APPLICABLE	
Variable Delivery Charges ($/KW or $/KWH)	YES	NOT APPLICABLE	

COMMON QUESTIONS- EXPANSION DEPOSIT REFUNDS

- http://www.hydroone.com/Generators/Pages/ExpansionDepositRefunds.aspx
- Capital contribution towards expansion projects is referred as ‘Expansion Deposit’
- Hydro One shall perform an annually assessment and return the percentage of expansion deposit in proportion to the actual demand
  - Assessment performed after the first anniversary and second anniversary date from letter of authorization to generate date (milestone #3)

$$\textit{Refund Percentage}\ \% = \frac{\textit{Actual Demand}}{\textit{Forecasted Demand}} \times 100\%$$

- If expansion deposit is in the form of cash, expansion deposit refund amount is determined by:

$$\textit{Expansion Deposit Refund Amount} = \textit{Refund Percentage} \times \textit{Expansion Deposit on File(Incl.HST)} + \textit{Accumulated Interest}$$

COMMON QUESTIONS – PAYMENT SETOFFS

- Project cost true up/true down
- Avoid cross subsidization for capital cost expenditure
- Hydro One Conditions of Service: "**K.3 Distributors right to deduct**"
- Please contact your Account Executive as soon as possible for capital cost disputes

COMMON QUESTIONS – OPERATIONAL ISSUES

- Over-generation: Hydro One distribution connection agreement (DCA) describes maximum kW capacity allocated to the generator
- System availability: No re-imbursement for outages
- Metering issues: Hydro One takes over meter ownership after installation:
    - Limited stock due to cost: Typical PMU cost for 10 MW unit:
        - 44 kV: approximately $32 k to $35K
        - 27 kV: approximately $22 or $25K
- Manufacturing and regulatory delays
- Billing inquires: HydroOneBCC@HydroOne.com
- Other issues: Account Executive

COMMON QUESTIONS – PAYMENTS

- MyAccount: Review current and historical generation payment statements

  http://www.hydroone.com/MyHome/MyAccount/Manage/Pages/home.aspx

- View my hourly interval meter data:

  https://www.elogin.hydroone.com/selfserv/fcs/main.jsp

BILLING & PAYMENT: LOAD DISPLACEMENT GENERATION, NET METERING

Jaspreet Nijjar

Settlement Supervisor

Transmission and Distribution Settlements

LOAD DISPLACEMENT GENERATOR

Rationale for installing Load Displacement Generator:

- A customer wants to reduce their electricity bill, in particular Global Adjustment
  - Class B customers want to reduce the total kWh based Global Adjustment charges
  - Class A customers want to avoid or reduce demand during the IESO system peaks to lower their Peak Demand Factor
- Customer could be incented by IESO to install generator under Conservation Demand Management

Load Displacement Generator impact:

- IESO performs settlement for transmission connected customers
- Customer needs to self declare Debt Retirement payment to Ministry of Finance
  - Current forecasted Debt Retirement Charge expiry is March 31, 2018
- Load Displacement generation may impact Class A qualification
  - Please consult IESO
- Customers with a load displacement generator cannot backfeed into the grid
- Depending on type and size of the generator:
  - CCRA true-up might be impacted
  - Or customer may not avoid certain delivery charges in their monthly bill

DISTRIBUTION GENERATION LOAD ADJUSTMENT GUIDELINES FOR CCRA TRUE UPS

Transmission System Code Section 6.5.9

When carrying out a true-up calculation for a load customer other than a distributor, a transmitter:

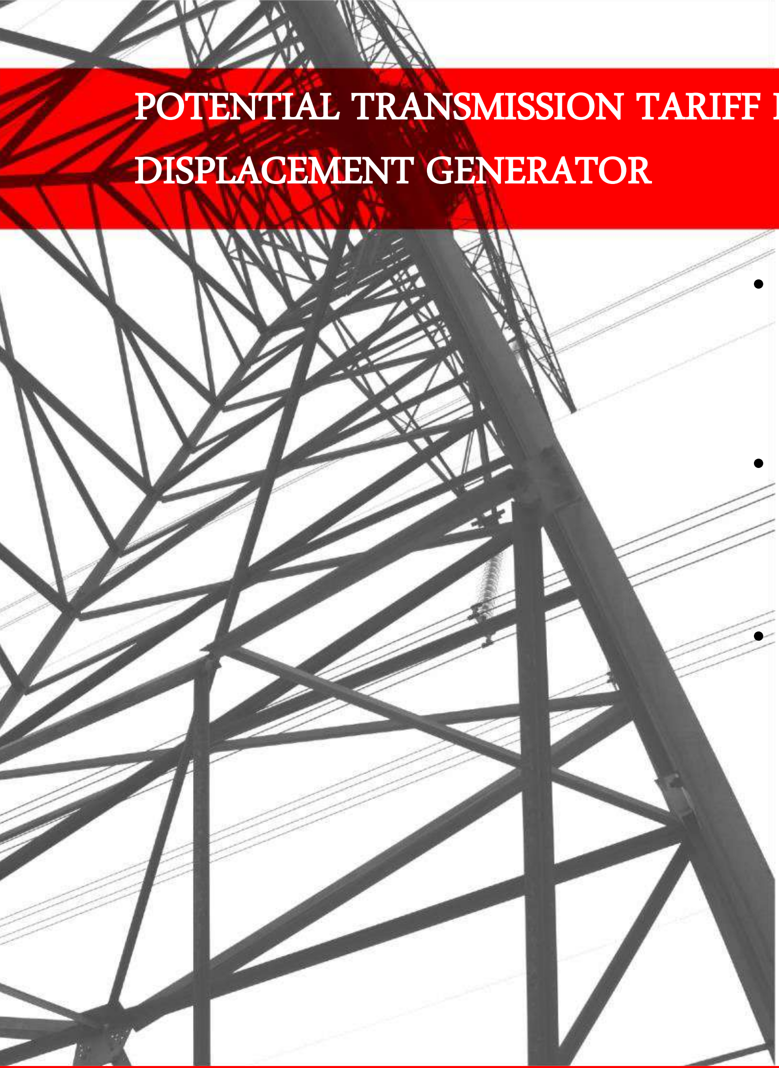
a) *shall add to the actual load the amount of any embedded generation (determined in accordance with section 11.1) of 1 MW or less per unit, or any embedded renewable generation of 2 MW or less per unit, that was installed during the true-up period; and*

b) *shall not reduce the updated load forecast as a result of any embedded generation (determined in accordance with section 11.1) of 1MW or less per unit, or any embedded renewable generation of 2 MW or less per unit, that was installed during the true-up period*

http://www.hydroone.com/IndustrialLDCs/ConnectionProcess/Pages/Getting-Started-2.aspx

hydro one

POTENTIAL TRANSMISSION TARIFF IMPLICATION FOR INSTALLING LOAD DISPLACEMENT GENERATOR



- Depending on the type and size per unit of the load displacement generator, it may trigger Gross Load Billing (GLB) of Transmission Line and Transformation Connection charges, but not Network charge

- GLB thresholds (1 MW for non-renewable and 2 MW for renewable) refer to unit capacity (in the case of solar, inverter capacity), not site capacity
  - Eg. A solar farm with 10 MW (20 x 0.5 MW inverter) capacity would not trigger GLB

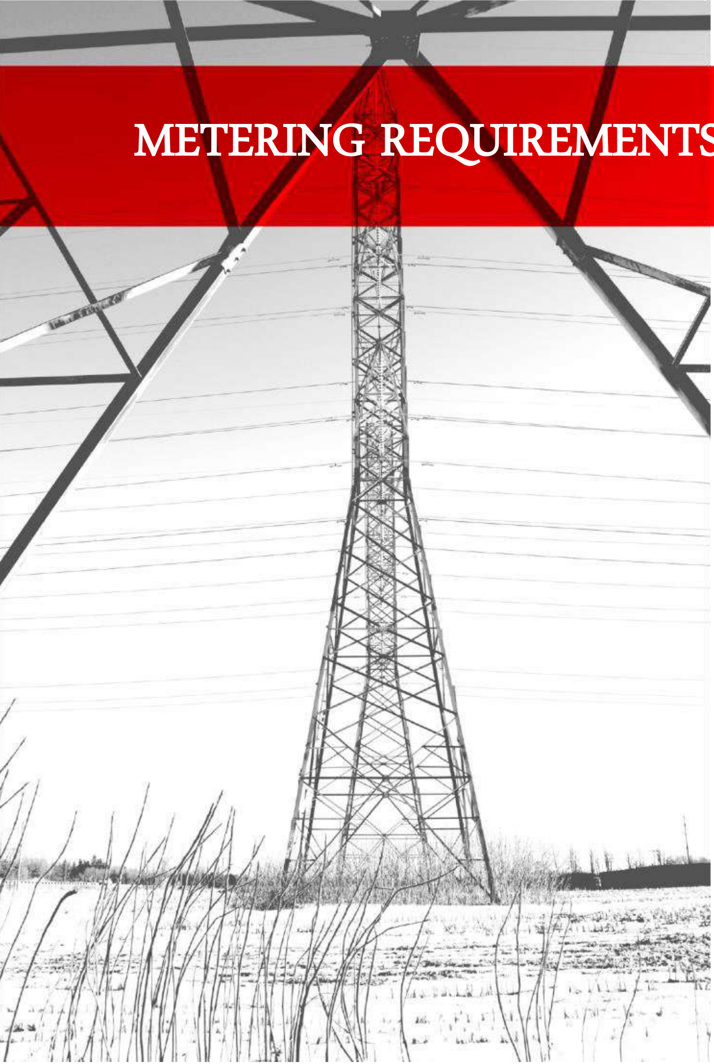
- GLB also applies to the incremental capacity of a refurbished legacy generator
  - Eg. GLB applies to the 5 MW incremental capacity of a refurbished 7 MW Legacy generator with 2 MW old capacity

GROSS LOAD BILLING REFERENCE IN ONTARIO UNIVERSAL TRANSMISSION RATE SCHEDULE

The following, in the OEB approved Ontario Universal Transmission Rate Schedule, authorizes Gross Load Billing of Transmission Line and Transformation Connection Charges:

The Billing Demand for Line and Transformation Connection Services is defined as the Non-Coincident Peak demand (MW) in any hour of the month. The customer demand in any hour is the sum of (a) the loss-adjusted demand supplied from the transmission system plus (b) the demand that is supplied by embedded generation for which the required government approvals are obtained after October 30, 1998 and which have installed capacity of 2MW or more for renewable generation and 1 MW or higher for non-renewable generation. The term renewable generation refers to a facility that generates electricity from the following sources: wind, solar, Biomass, Bio-oil, Bio-gas, landfill gas, or water. The demand supplied by embedded generation will not be adjusted for losses.

http://www.hydroone.com/RegulatoryAffairs/Documents/EB-2014-0357/Rate%20Order_%202015%20UTR_20150108.pdf



METERING REQUIREMENTS

Section 4.5

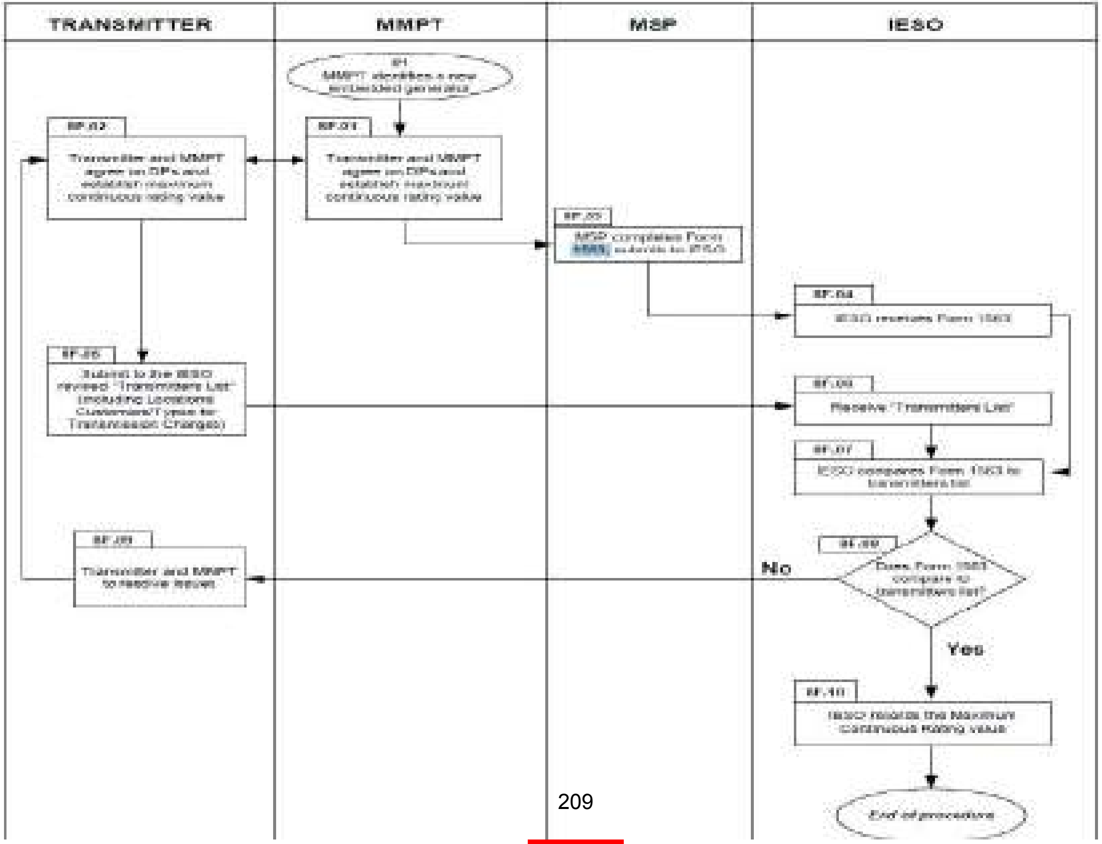
- Install and include wholesale revenue meter in totalization table

OR

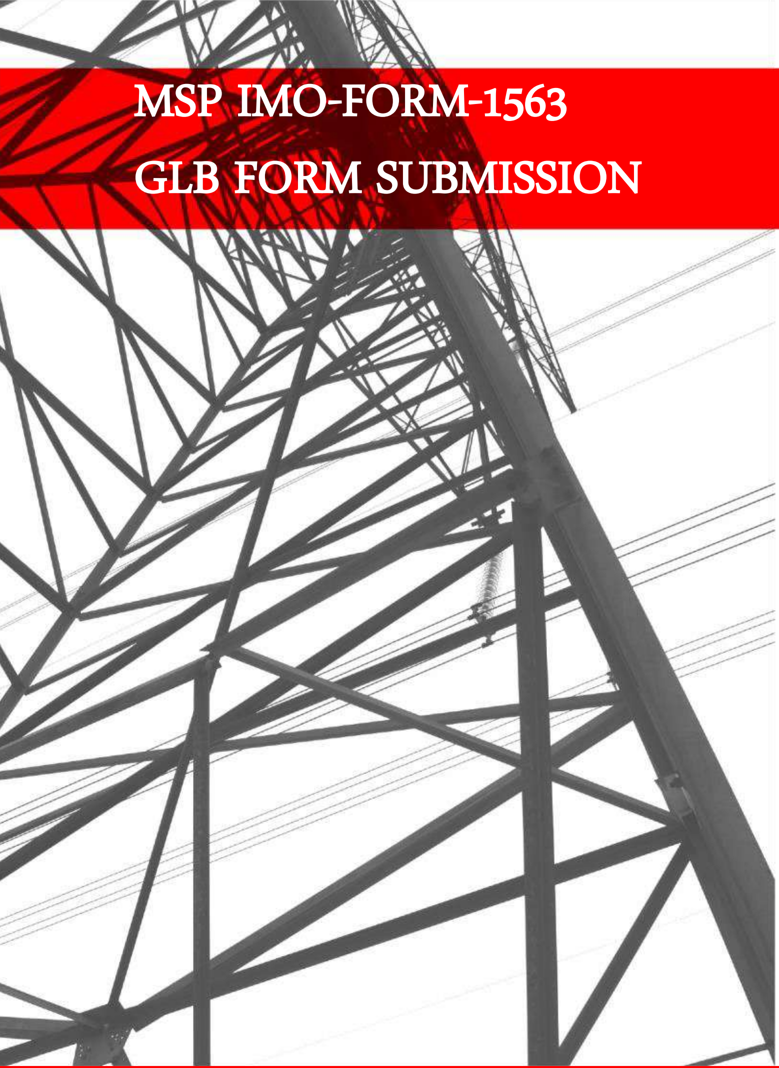
- Submit form IMO-FORM-1563
    - GLB adjustment performed on annual basis

http://www.ieso.ca/Documents/marketRules/mr_chapter6.pdf

IESO Gross Load Billing Embedded Generator Reporting Process



209



MSP IMO-FORM-1563
GLB FORM SUBMISSION

- Hydro One is receiving a large number of transmitter list rejections from IESO due to IMO-FORM-1563 and transmitter list mismatch

- Request MMPTs/MSPs to confirm generator name, maximum continuous rating, and generation start dates with transmitter prior to IESO submission

- Request MSPs to CC transmitter (TxDx.HydroOne@HydroOne.com) when MSPs send form IMO-FORM-1563 email to IESO

NO GROSS LOAD BILLING FOR EMERGENCY BACKUP GENERATOR

- GLB does not apply to emergency backup generator
  https://www.ontario.ca/laws/regulation/r07516

- "Standby power source" means equipment that is intended to be used for the purpose of producing power to maintain operating conditions when the power produced by the normal sources of power is cut off or reduced

CUSTOMER IMPACT ASSESSMENT (CIA) FOR INSTALLING LOAD DISPLACEMENT GENERATOR

- CIA is needed for installing load displacement generator
- Transmission Connected Customer Small Embedded Generation Assessment (TCCSEGA) can be used only for Transmission Embedded Generators that are 10 MW or less
    - This study should typically takes 90 calendar days
- Customer generating station (CGS) vs Customer transmission station (CTS).
- Key Account Management

DMS SYSTEM EVENT REPORT

Feeder: Owen [illegible]

Outage [illegible] 10, 2[illegible]

1. SUMMARY OF [illegible]ASE

At 12:31:56 the Owen Sound TS M25 locked out on [illegible] the ON Controller attempted to close the M2[illegible] at 1[illegible] feeder. The attempt to re-energize the feeder [illegible] crew [illegible] contacted to patrol the Owen Sound M25 feeder to [illegible] the fault [illegible] the ON Controller noticed that the DMS alarm page [illegible] downstream of the DER-2 mid-feeder [illegible] several Fault Current [illegible] were activated. The DER-2 is SCADA [illegible] the DMS Control[illegible] opened the DER-2 and successfully [illegible] Owen Sound M25 [illegible] restoring power to 3049 customers.

On the DMS, the Controll[illegible] FCI1, FCI2, and FCI5 had detected a fault [illegible] FCI5 is the furthest indicat[illegible] downstream so the Controller notified the [illegible] fault [illegible] downstream of this Fault Indicator. At 12:49, the field staff [illegible] downstream of FCI5. At 13:17 the Field staff [illegible] closed the DER-2 from the DMS, restoring all 8336 [illegible] on the [illegible] feeder.

At 15:00 the [illegible] at 15:17 the SAU-SB was closed.

It should also be [illegible] the DMS - DMS ICCP interface operated as expected, creating an incident and allowing all power off calls to group to the M25 feeder breaker.

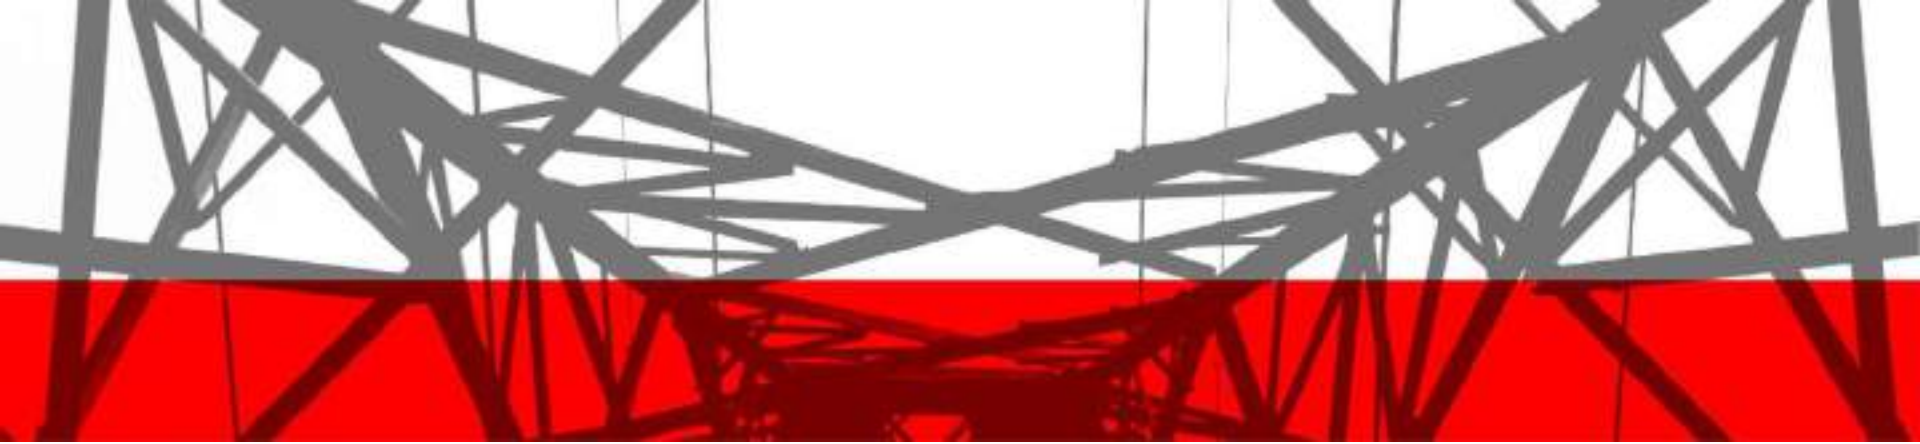
LARGE CUSTOMER CONFERENCE

Productivity & Operational Efficiency



LOAD DISPLACEMENT GENERATION, NET METERING AND ENERGY STORAGE

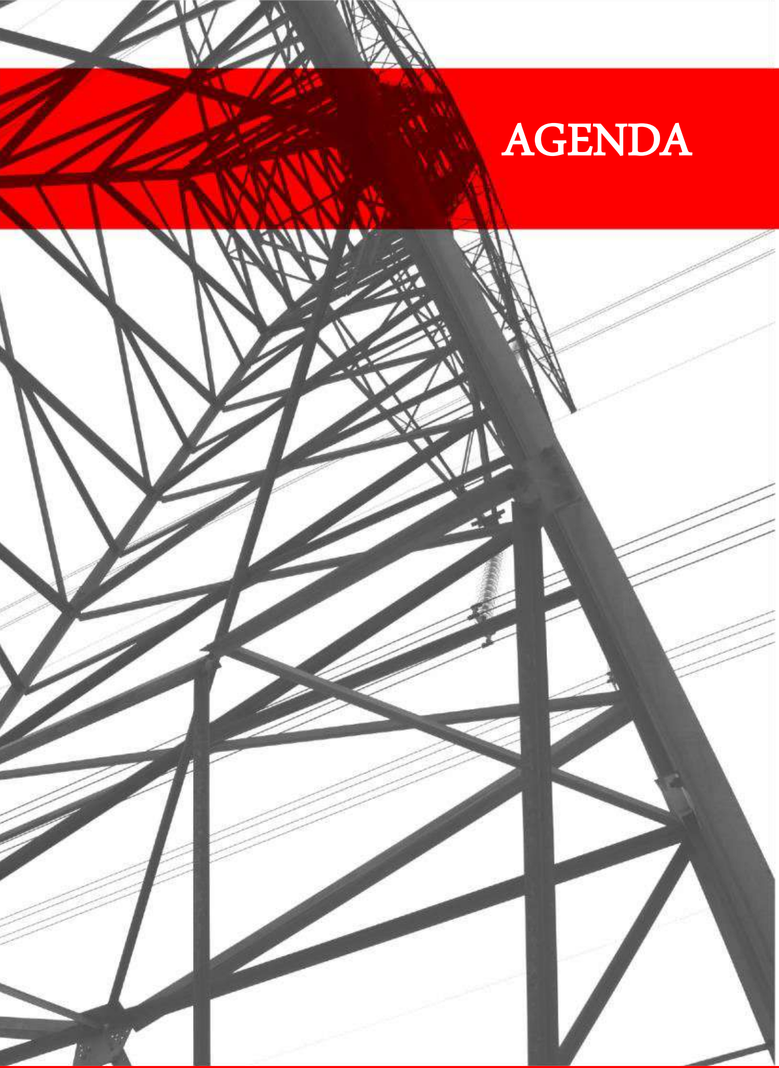
Monika Amorim

Senior Settlement Analyst

Transmission and Distribution Settlements

Hydro One

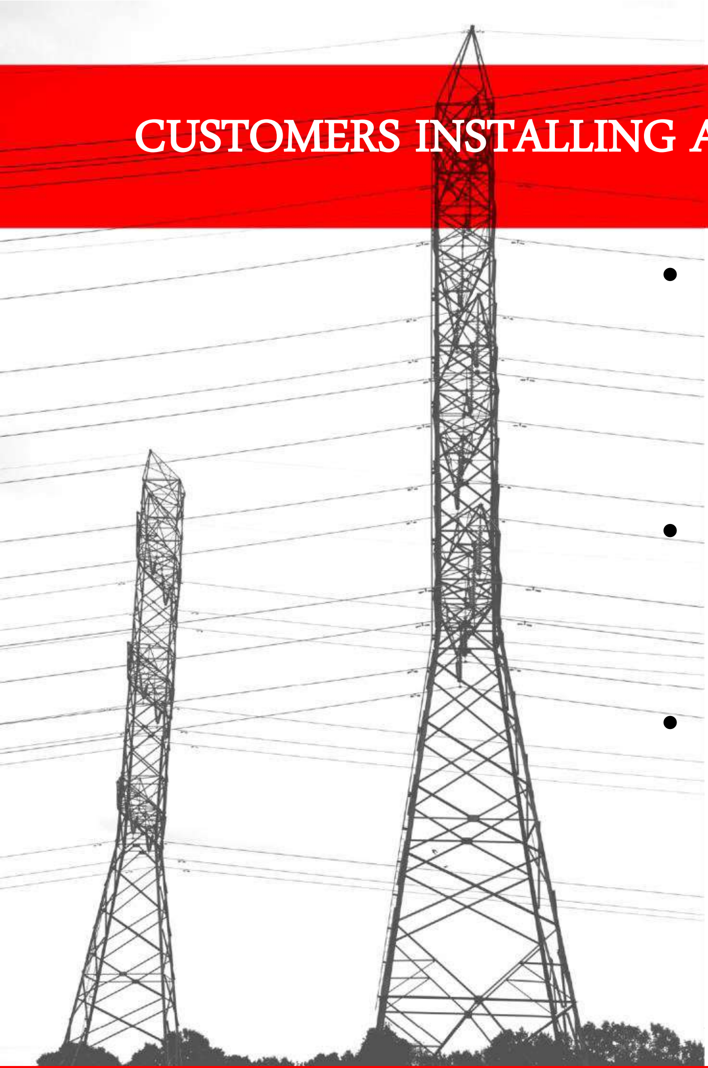
AGENDA



- Gross Load Billing
- Net Metering
- Energy Storage

GROSS LOAD BILLING

CUSTOMERS INSTALLING A GENERATOR



- Customer Impact Assessment is needed for installing load displacement/backup generator >10 kW as per Hydro One's Condition of Services

- Distribution Connection Agreement must be executed for connecting any >10 kW generator

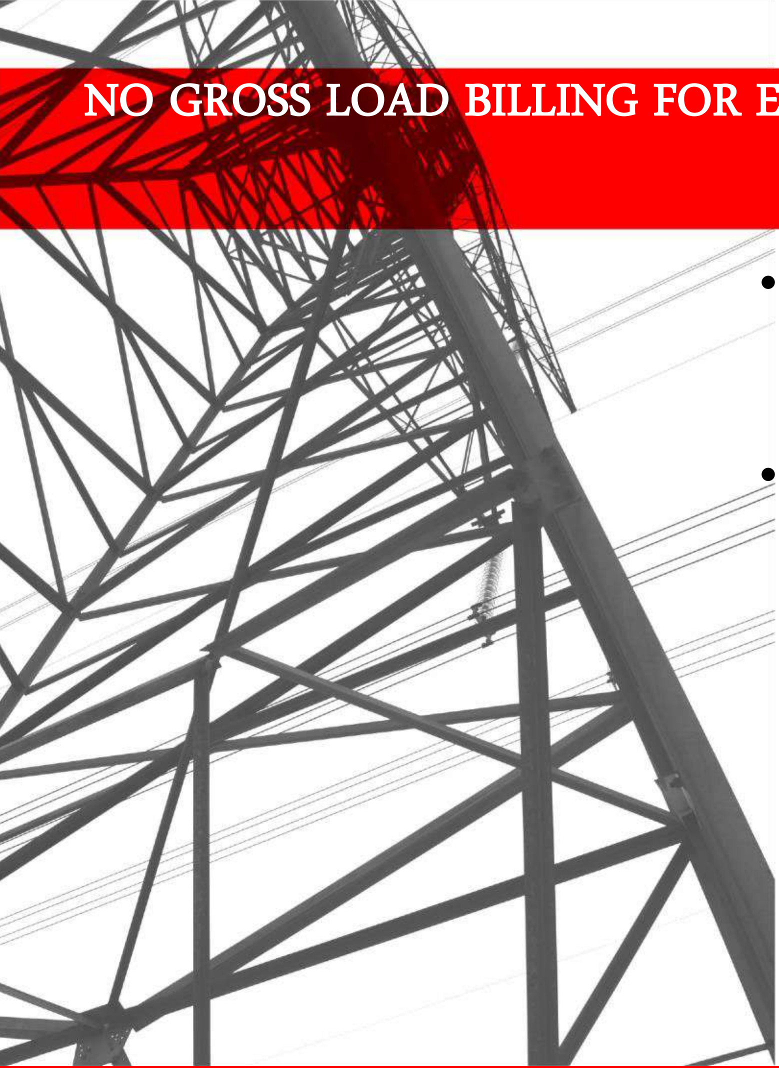
- Customers with a load displacement generator cannot backfeed into the grid

hydro one

KEY NOTES FOR LOAD DISPLACEMENT GENERATORS

- A customer wants to reduce their electricity bill, in particular Global Adjustment
  - Class B customers want to reduce the total kWh based Global Adjustment charges
  - Class A customers want to avoid or reduce demand during the IESO system peaks to lower their Peak Demand Factor
- Customer is incented by IESO to install a generator under Conservation Demand Management
- Customer needs to self declare Debt Retirement payment to Ministry of Finance
  - Current forecasted Debt Retirement Charge expiry is March 31, 2018
- Load Displacement generation may impact a customer's Class A qualification
  - Please consult Meghan Atkinson (Meghan.Atkinson@HydroOne.com) for more information
- Depending on type and size of the generator, customer may or may not attract Gross Loading Billing

NO GROSS LOAD BILLING FOR EMERGENCY BACKUP GENERATOR



- GLB does not apply to emergency backup generator
  https://www.ontario.ca/laws/regulation/r07516

- "standby power source" means equipment that is intended to be used for the purpose of producing power to maintain operating conditions when the power produced by the normal sources of power is cutoff or reduced

hydro one

GROSS LOAD BILLING

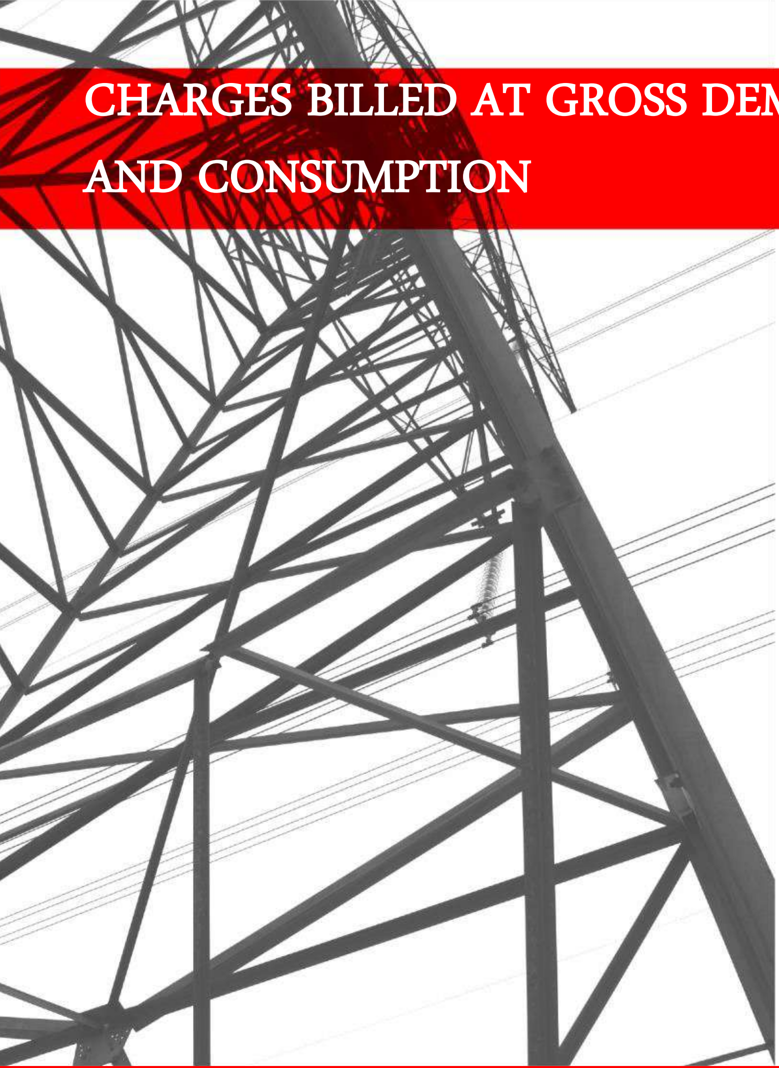
- Gross Load Billing is triggered where:
  - A generator is connected to an existing load

- Where the generator exceeds
  - 2 MW for renewable, or
    - wind, solar, biomass, bio-oil, bio-gas, landfill gas, or water
  - 1 MW for non-renewable

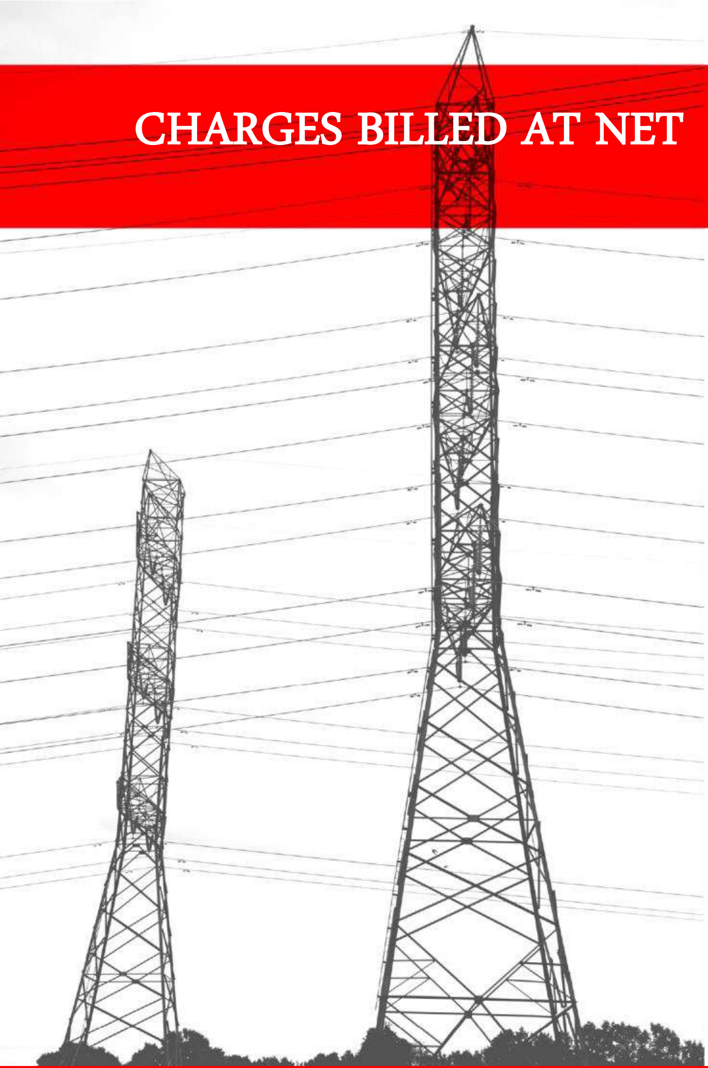
- A meter must be installed to measure the generator output

- As per OEB-approved Hydro One Distribution Rate Schedule: GLB recovers the costs of Hydro One built assets in order to meet customer's maximum demand

CHARGES BILLED AT GROSS DEMAND AND CONSUMPTION



- Delivery
  - Common ST
  - Transmission Line Connection
  - Transmission Transformation Connection / HVDS High Facility Charge
  - Volumetric Rate Riders
- The above are all based on the overall peak for a billing period
- Debt Retirement Charge
  - Customers with a generator must self-declare for Debt Retirement Charge
  - http://www.fin.gov.on.ca/en/guides/drc/101.html



CHARGES BILLED AT NET

- Transmission Network Service Charge
  - Net Demand
  - Based on the peak reached on business days from 7am to 7pm – local time
  - The optimum time to run generator would be on Business Days from 7am to 7pm, if it is not running 24/7
- Commodity & Regulatory Charges
  - Net consumption (kWh)

GLB BILLING IMPACT EXAMPLE 1

- Class B customer with an average 2MW demand
- Potential monthly savings of **$107,606.25**

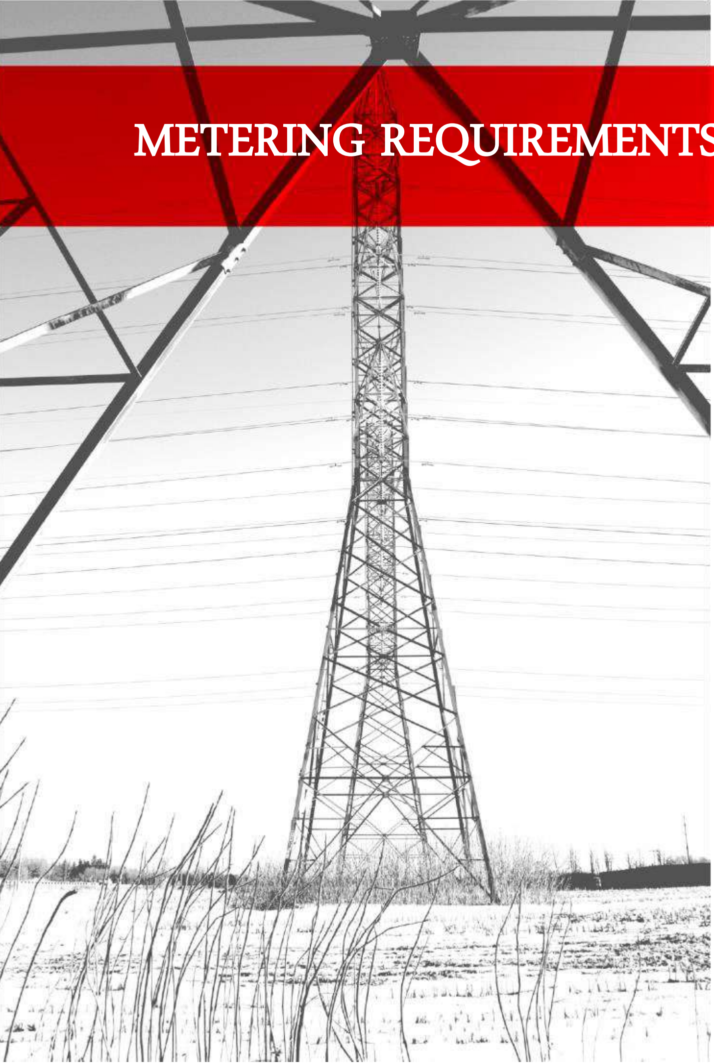
GROSS LOAD BILLING FOR ISLANDING OPERATION WITH LOAD DISPLACEMENT GENERATOR

- A Customer with a load displacement generator operating off-grid is still subject to Gross Load Billing if they are connected to the grid for any back-up supply

- For complete off-grid operation, 365/7/24, Hydro One will not Gross Load Bill the customer but will remove all of the distribution assets from the connection and does not provide back-up support

METERING REQUIREMENTS



- Sub-transmission Customer
  - Hydro One will install a retail revenue meter to measure the generator’s output for Gross Load Billing calculation
  - An additional meter charge will be applied

- General Service Demand Customer
  - Customer will need to install their own meter for Debt Retirement Charge declaration to the Ministry of Finance

HYDRO ONE GLB BUSINESS PROCESS – CUSTOMER NOTIFICATION

- Hydro One's Connection Impact Assessment (CIA) process now includes GLB assessment for any generators with a size of 1MW or more, to make customers aware of GLB eligibility and the settlement impacts

UPCOMING POTENTIAL CHANGES

- OEB is initiating a policy review to address the question of how a commercial and industrial customer should be billed when they have a Load Displacement Generator (LDG) behind the meter

http://www.ontarioenergyboard.ca/oeb/_Documents/Documents/OEBltr_Gross_Load_Billing_Tx_20160329.pdf

NET METERING

NET METERING – EXISTING FRAMEWORK

- Our Net Metering program is available to any Hydro One customer who generates electricity primarily for their own use from a renewable energy source (wind, water, solar radiation or agricultural biomass) using equipment with a total nameplate rating of 500 kW or less

- Net metering allows you to send electricity generated from Renewable Energy Technologies (RETs) to Hydro One's distribution system for a credit towards your electricity costs
    - Excess generation credits can be carried forward for up to 11 months, including the 11th month, to offset future electricity costs

NET METERING – PROPOSED AMENDMENTS

- Remove the capacity limit of 500 kW

- Extend credit carry forward period from 11 months to 12 months

- Virtual Net Metering – credits transfer within multiple accounts within the same LDC within the distance requirement
    - Proposed: 3km

- Pairing of renewable energy sources with energy storage which allows for flexible injection

https://www.ebr.gov.on.ca/ERS-WEB-External/displaynoticecontent.do?noticeId=MTI5NTIx&statusId=MTk2Mjg5&language=env

ENERGY STORAGE

ENERGY STORAGE

- Unlike other forms of energy, historically electricity has not been easily stored in large quantities
- Accordingly, the electricity system has operated on a "just-in-time" basis, with decisions about generation output based on real-time demand and the availability of grid capacity to deliver it
- With the emergence of new energy storage technologies this is now changing to allow electricity to be captured and dispatched to the grid whenever it is required
- As required, energy storage systems can act as a load or a generator to balance real-time supply and demand fluctuations
- Energy storage can also benefit the system in the following ways:
  - Smoothing out fluctuations of solar and wind generators, for added stability to the electricity system
  - Easing points of congestion in transmission and distribution networks by temporarily absorbing surges and excess power flow, allowing utilities to defer, or even avoid, expensive system upgrades
  - Absorbing surplus base-load generation when the output from renewable energy sources is high during off-peak hours

Source: http://www.ieso.ca/Pages/Ontario%27s-Power-System/Smart-Grid/Energy-Storage.aspx

ENERGY STORAGE (CONT'D)

Opportunities for Energy Storage in Ontario

The IESO has outlined 3 types of energy storage based on how they interact with the electricity system:

Type 1 – Re-inject stored energy back into the grid (minus reasonable losses)

- Examples: flywheels, batteries, compressed air and pumped hydroelectric

Type 2 – Instead of injecting it back into the grid, use the stored energy to displace electricity consumption (demand) of the host facility at a later time

- Examples: heat storage or ice production for space heating or cooling

Type 3 – Stored energy used in an industrial, commercial or residential process or to displace a secondary form of energy

- They're generally integrated with a host process that uses that secondary form of energy directly or are connected to a transmission or distribution network for their secondary form of energy (e.g., natural gas, steam or coolant)
- Examples: fuel production (hydrogen or methane), steam production and electric vehicles

Source: http://www.ieso.ca/Documents/Energy-Storage/IESO-Energy-Storage-Report_March-2016.pdf

ENERGY STORAGE (CONT'D)

- Reduce demand based charges
    - Lower Network Charge by reducing "on-peak" peak
- Lower the Peak Demand Factor for Class A Global Adjustment by utilizing stored energy during top 5 system peaks
- Optimize hourly pricing rates
- Reduce fossil fuel consumption for backup power

ENERGY STORAGE (CONT'D)

- Proponent is subject to the same Hydro One connection process for distribution generator

- Industry estimates of 20% loss for kwh transaction – for every 100 kwh withdrawn from the grid, only 80 kwh is injected

- Please check with OEB regarding the requirement of Energy Storage License

ONTARIO GRID CONTROL CENTRE

38

ABOUT THE ONTARIO GRID CONTROL CENTRE

- Manages the transmission and distribution networks in Ontario
- 24/7 shift operation & back office support
- Ensures reliable power system to supply customers in real time
- Monitors system conditions, responding to contingencies and unforeseen situations
- Executes outages, both planned and emergent
- Dispatch and response coordination

REAL TIME CUSTOMER SUPPORT

- Whenever a large customer experiences an unplanned outage, Controllers and Dispatchers (DOMC) work in conjunction to re-energize the circuit

- The Controllers analyze the problem using the Network Management System and respond accordingly

- If equipment has failed, DOMC will dispatch field staff to investigate. Further work orders will be created depending on the issue

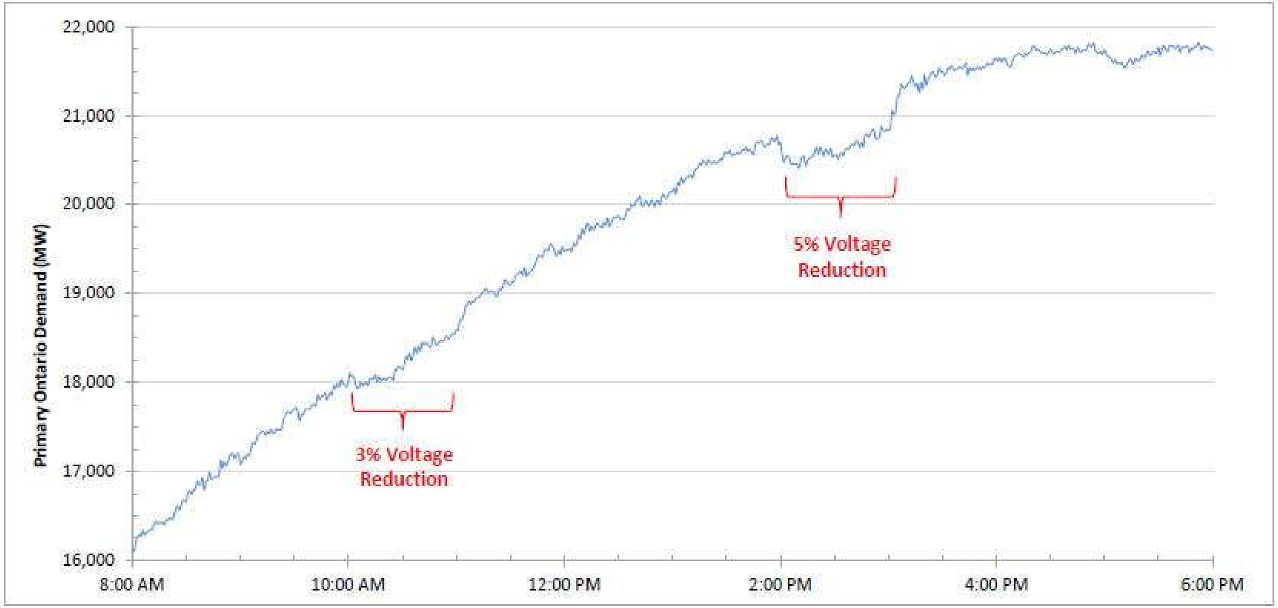
Highlights of this time line:

1. 07:10 load growth stalled as game began.
2. 07:43 end of first period saw a 140MW load increase.
3. 07:58 second period starts and load growth stalls again.
4. 08:31 end of 2nd period saw a 300MW load increase.
5. 08:46 3rd period begins and people are again glued to the TV. (load stalled)
6. 09:40 Medals and anthem are done and people begin to return to normal routines.

3% & 5% VOLTAGE REDUCTION(AUG 9 2016)

Initial data analysis for the August 9th voltage reduction exercise was a drop of 194 MW or 1.1% in primary demand for the 3% test and 375 MW or 1.8% reduction in primary demand for the 5% voltage reduction test.



Special points of interest:

- At the height of the storm over 112,742 customers were without power.
- Over 1,200 Hydro One personnel assisted in restoration operations.
- 7 Helicopters were patrolling feeders at the height of restoration operations.

Hydro One Wind Storm Response

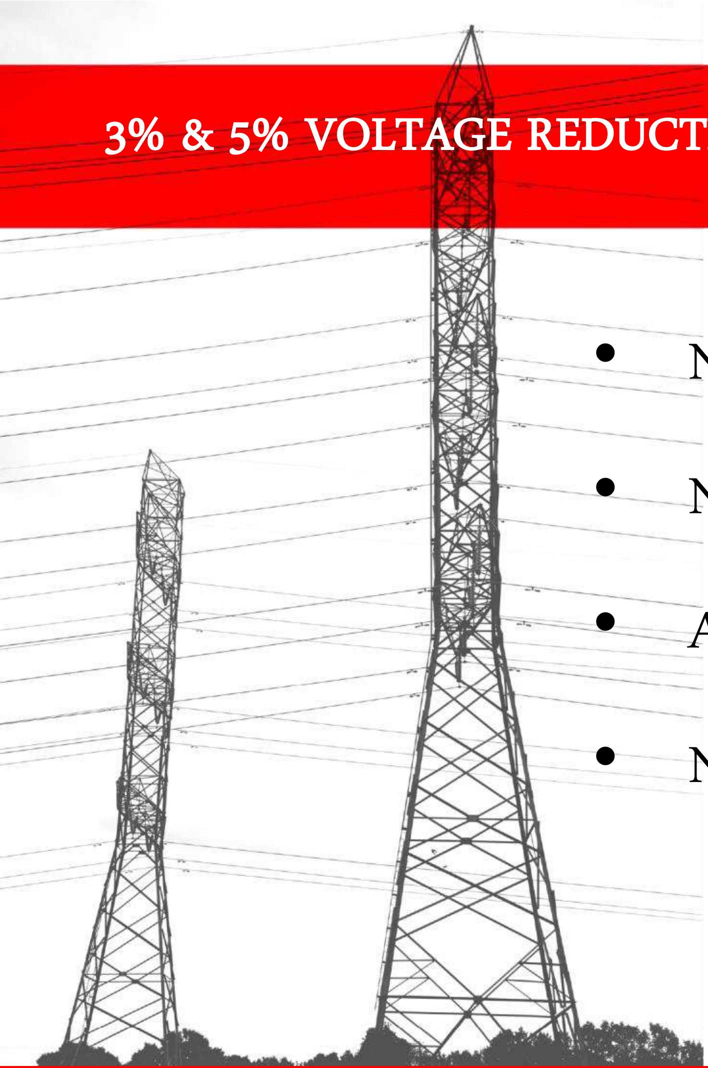
(Above) Over 40 broken poles along the route to Burks Falls DS near Huntsville were toppled over by the wind storm.

Starting at 7:30 a.m. on November 6, high winds approaching 100 km/h unexpectedly appeared in Southwestern Ontario. The storm quickly swept through the Georgian Bay area and into Northeastern Ontario. In response, Hydro One quickly mobilized over 1,200 personnel along the path of the storm. Within a few hours the storm reached its pinnacle with 112,742 Hydro One customers interrupted simultaneously.

On the first day, even with over 100 damaged poles, we were able to restore over half of the customers who lost power. Cottage country was the hardest hit area with multiple interruptions, including the toppling of over 40 poles near Huntsville. To further assist restoration efforts, Hydro One reached out to its many mutual assistance partners who sent crews to help restore power.

Hydro One and assisting LDCs continued to work through the weekend to restore customers. As Monday approached, the bulk of the affected customers had been restored, however many water access and seasonal customers remained without power. The clean-up continued into Tuesday morning, giving crews a short break before a new predicted storm arrives this weekend.

3% & 5% VOLTAGE REDUCTION(AUG 9 2016)



- Number of Broken Poles: 101
- Number of Transformers: 32
- Amount of Conductor: 9,200 meters
- Number of Cross Arms: 51

Customers Affected By Area

This screen provides a list of customers served, customers without power, and an estimate of when power will be restored in each area. For each area, the estimated restoration time represents the longest duration outage within that region. A specific customer's estimated restoration time may be different from the area restoration time.

Region	Customers Affected	Customers Served	Estimated Restoration
1 West	325	261,390	Pending
2 West Central	<20	180,043	Pending
3A Central	730	187,800	Pending
3B East Central	210	192,426	Pending

Managing Costs and the Conservation First Framework

Hydro One Networks Inc.: Large Customer Conference

Alexandra Campbell, Director, Alliances and Marketing

November 22, 2016

ieso
Independent Electricity System Operator

Today's Agenda

- Who is the IESO?
- Ontario Planning Outlook
- Global Adjustment
- Ontario's Conservation Landscape
  - Past Performance
  - 2015-2020 Conservation First Framework

Who We Are and What We Do

The Independent Electricity System Operator (IESO) – ensuring there is enough power to meet the province's energy needs in real time while also planning and securing energy for the future. It does this by:

- Long term and short term planning
- Enabling conservation by overseeing funding of Save on Energy programs offered by LDCs
- Ensuring supply through contracts, real time energy and operating reserve market and ancillary services such as regulation and blackstart
- Operating the IESO-controlled grid
- Engaging stakeholders and communities

ieso
Independent Electricity System Operator

ieso
Independent Electricity
System Operator

Ontario at a Glance

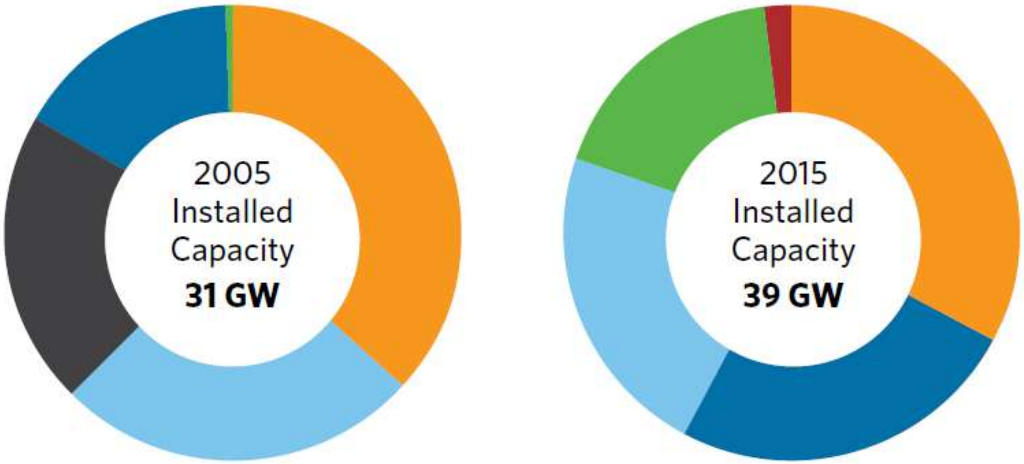
Installed Capacity	35,221 MW (December 2015)
Record Summer Peak	27,005 MW (August 1, 2006)
Record Winter Peak	24,979 MW (December 20, 2004)
Total Annual Energy Consumed	137 TWh (2015)
Energy Savings Through Conservation (2011-2014)	6,553 gigawatt-hours (GWh)
Customers	4.9 million
Ontario Import Capability	4,800 MW
Transmission Lines	30,000 km
Interconnections	New York, Quebec, Manitoba, Michigan, Minnesota

The IESO is the reliability coordinator for Ontario and works closely with other jurisdictions to ensure energy adequacy across North America.

Installed Capacity: then and now

- Changes over the last decade have:
  - Over six GW of installed coal-fired capacity was replaced with over 14 GW of renewable, natural gas-fired, nuclear and demand response resources
  - Reduced greenhouse gas emissions in Ontario's electricity sector by more than 80 percent
  - Ensured Ontario's electricity needs will be met well into the next decade, with current planned investments

Figure 1: Ontario Installed Supply Mix in 2005 and 2015



2005		2015	
Nuclear	37%	Nuclear	33%
Water	26%	Natural Gas	25%
Coal	21%	Water	22%
Natural Gas	16%	Solar/Wind/Bioenergy	18%
Solar/Wind/Bioenergy	<1%	Demand Response	2%

ieso Independent Electricity System Operator

IESO's Ontario Planning Outlook

The report can be found on the main page of the IESO's website @ ieso.ca

- The Ontario Planning Outlook provides a 10-year review (2005-2015) and a 20-year outlook (2016-2035)
- It is one of the technical documents being used for the Ministry's consultation process on the Long Term Energy Plan

ieso
Independent Electricity System Operator

Net Energy Demand Across Demand Outlooks

Four Outlooks

— Outlook A

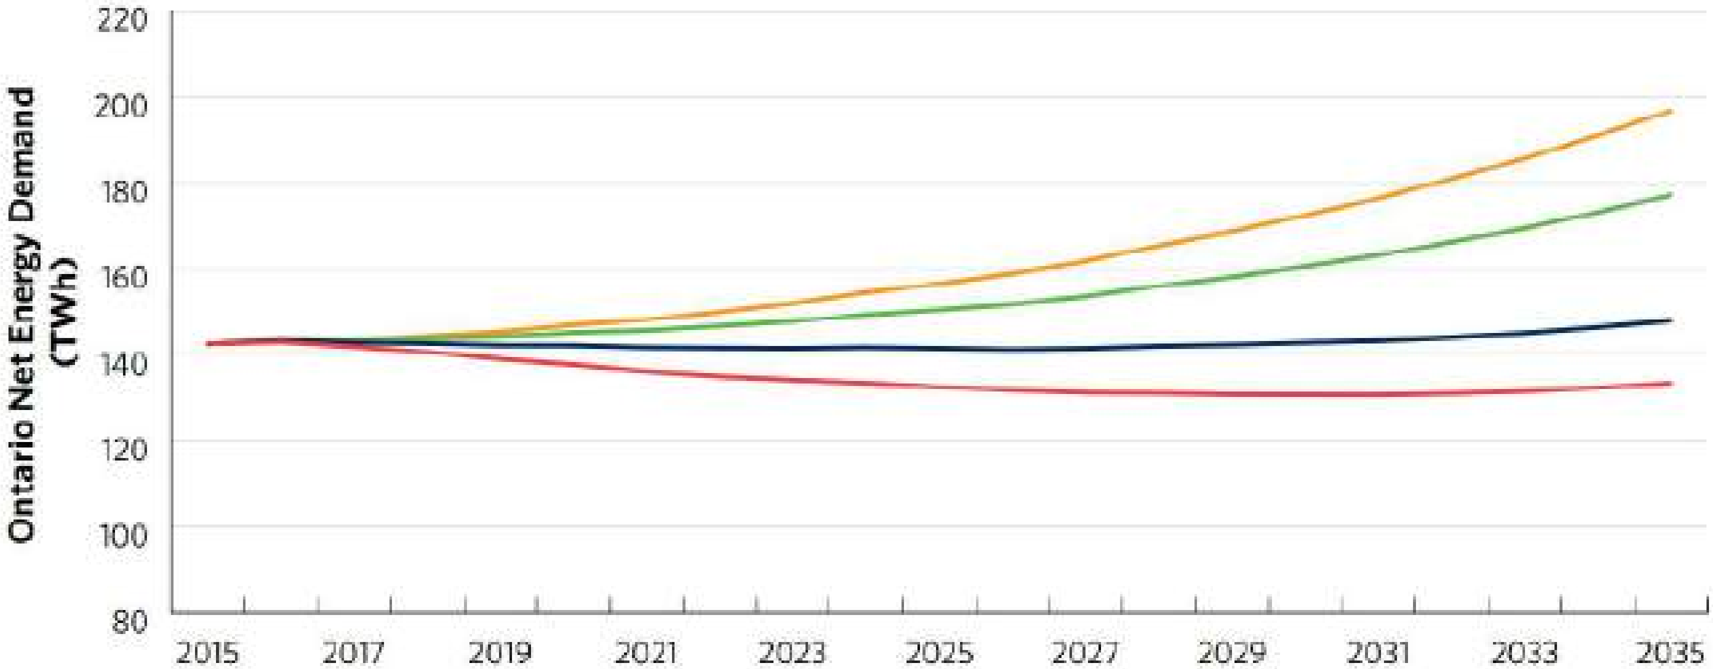
(or low demand outlook), which explores the implications of lower electricity demand

— Outlook B

(or flat demand outlook), which explores a level of long-term demand that roughly matches the level of demand that exists today

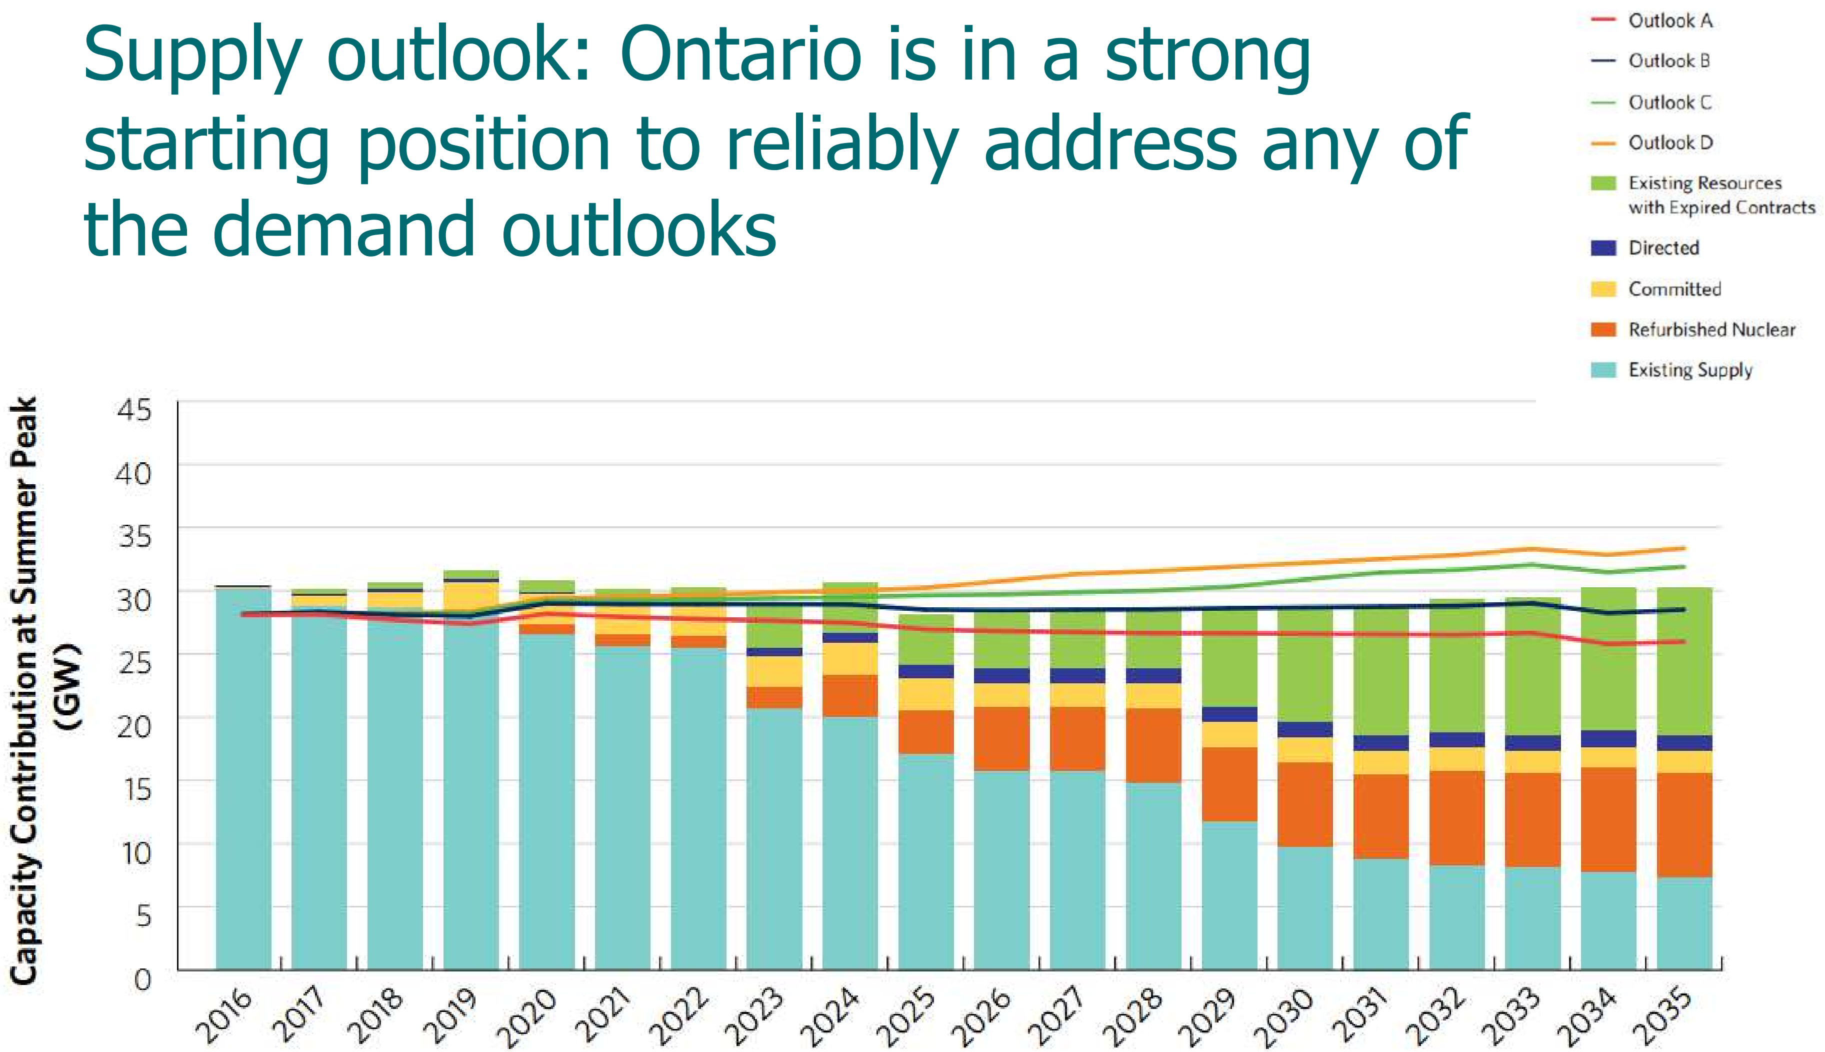
— Outlook C — Outlook D

(or higher demand outlooks), which explore higher levels of demand driven by different levels of electrification associated with policy choices on climate change



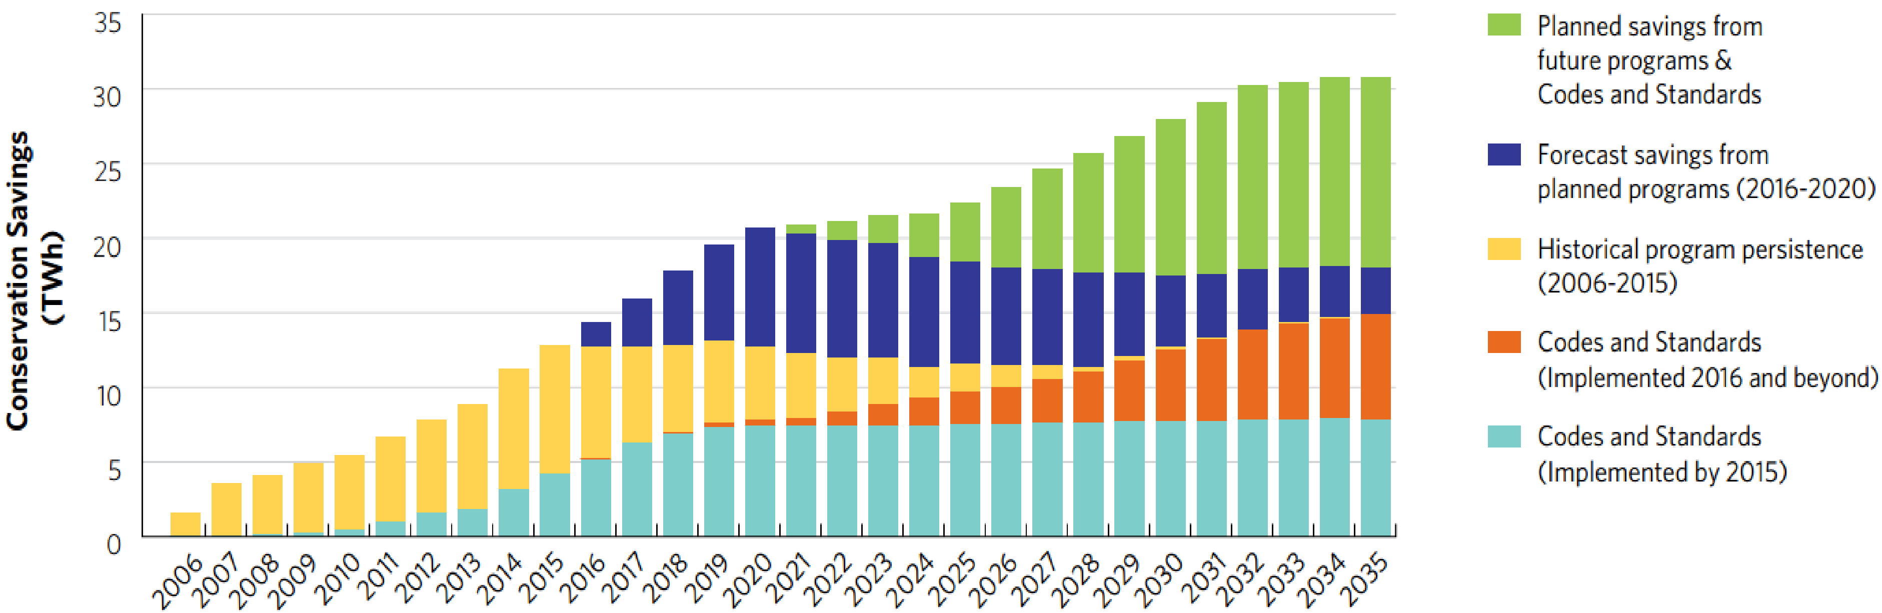
ieso
Independent Electricity System Operator

Supply outlook: Ontario is in a strong starting position to reliably address any of the demand outlooks



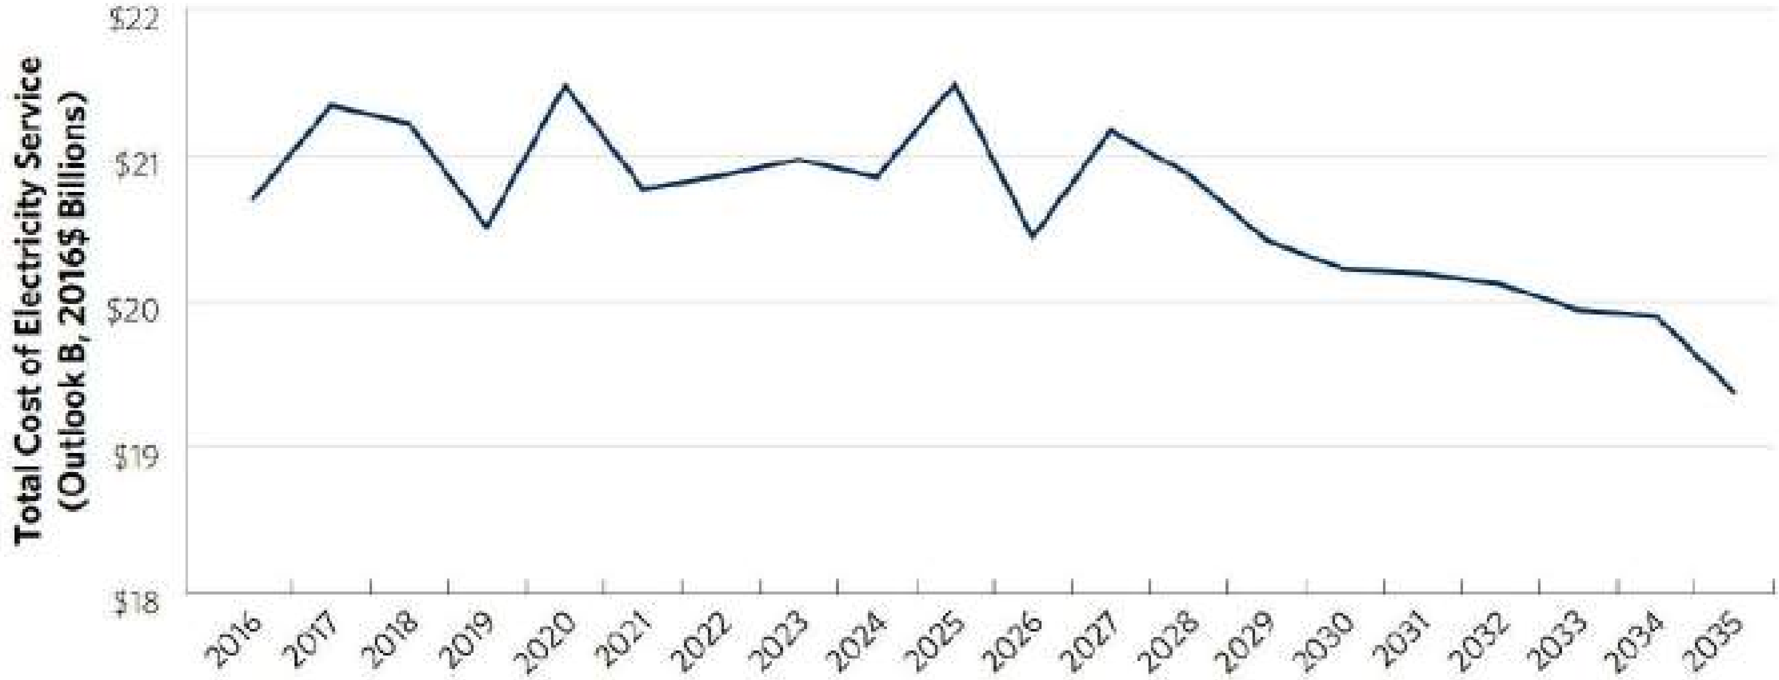
Conservation Outlook

- All four outlooks reflect achievement of LTEP 2013 conservation targets and the Conservation First Framework



ieso Independent Electricity System Operator

Total Cost of Electricity Service in Outlook B



Independent Electricity System Operator

Wholesale Market Price and Global Adjustment

Wholesale Price (HOEP)

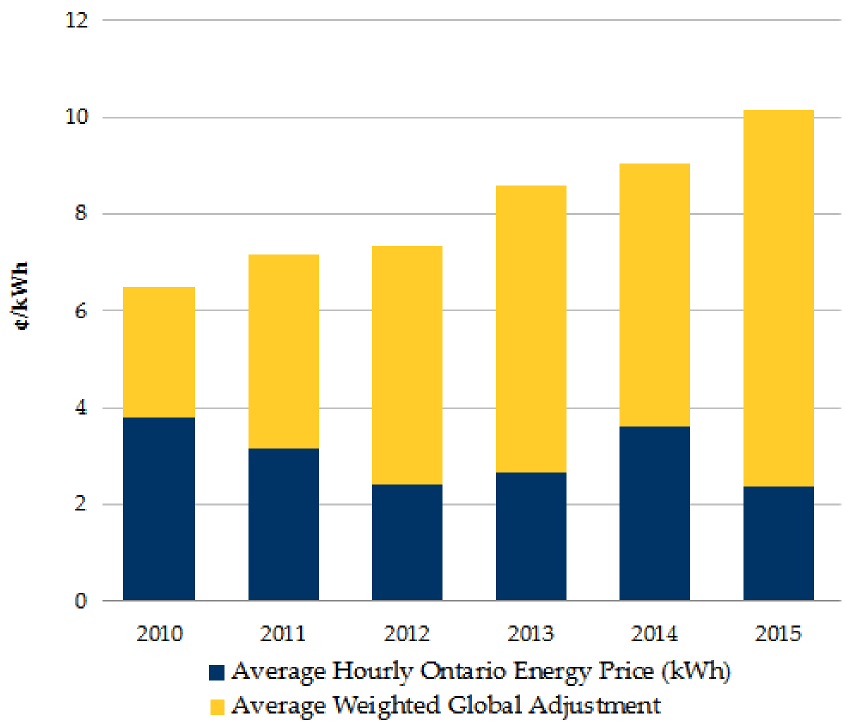
- Signals current supply and demand situation
- Covers operational costs of production – such as fuel
- Varies by hour and impacted by weather, time of day, year or day of the week

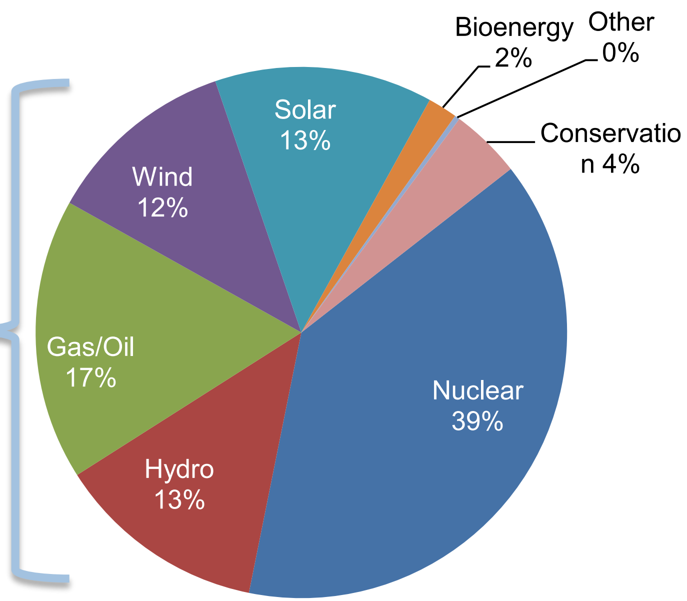
Global Adjustment

- Investment or capacity costs to build or refurbish infrastructure – that are not covered through market revenues
- Includes contracts, and regulated rates to generators and other suppliers as well as conservation
- Generally speaking, when the HOEP is lower, then the GA is higher in order to cover all system costs.
- The GA also changes when new projects come into service, contract payments take effect or as a result of charges in demand

ieso Independent Electricity System Operator

Electricity Pricing Trends and Global Adjustment Contributors





2015 Global Adjustment by Fuel Source

ieso
Independent Electricity System Operator

Why is the Global Adjustment high lately?

- The primary reason is that the wholesale market price for electricity is currently very low, largely reflecting low natural gas fuel costs
- As a result, resources earn less from the wholesale market and require a greater contribution from Global Adjustment to ensure they are made whole on their contracts
- The opposite can also be true. Recall earlier in the spring when market prices were high (high gas prices), actual Global Adjustment costs were a small credit to consumers

ieso Independent Electricity System Operator

How long will the Global Adjustment last?

- In Ontario wholesale market revenues are insufficient to sustain the level of investment required to maintain a reliable electricity system that consumers expect
- As such, some form of out-of-market payment mechanism such as Global Adjustment, is required to ensure reliability and pay for new investments
- The IESO is currently looking at ways to bend the electricity cost curve through the implementation of a capacity auction and other approaches to reduce costs that would otherwise have been included in Global Adjustment

ieso Independent Electricity System Operator

Industrial Conservation Initiative Overview

- Most customers pay global adjustment based on the amount of electricity they consume in a month (kWh). They are referred to as **Class B**.

- **Class A** consumers pay global adjustment based on their percentage contribution to the top five peak Ontario demand hours (i.e. peak demand factor) over a year-long period. ICI requirements are established in Ontario Regulation 429/04

ICI threshold changes over the years:

- **2010** - ICI introduced to customers with peak demand greater than 5 MW
- **Spring 2014** - expanded to include customers with a peak demand above 3MW and less than or equal to 5 MW (with certain NAICS required)
- **September 2016** - government proposed expansion to the ICI threshold to include consumers >1MW and remove the NAICS restrictions on 3-5MW group

Calculating GA for Class A Customers

- A Class A customer's PDF is used to calculate monthly GA charges during the adjustment period
- This is done by multiplying the monthly, Ontario-wide total GA costs (both Class A and Class B totals) by the customer's PDF
  - E.g. The system-wide GA costs for February 2016 were $1063.7 M. Using the PDF in the earlier example:

    $1063.7 M x **0.00017378** = $184,849.79 (customer's GA charge for February 2016)

2016	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sept	Oct	Nov	Dec
GA-OEFC-NUG (M$)	74.2	73.3	76.5	61.2								
GA-OPG (M$)	327.9	339.6	378	335.1								
GA-OPA (M$)	668.5	650.8	665.6	694.4								
Total GA (M$)	1070.6	1063.7	1120.1	1090.7								

ieso Independent Electricity System Operator

Peak Calculation

- The top five hours of peak demand in a year are those occurring on different days in which the greatest number of MW of electricity was withdrawn from the IESO-controlled grid by all market participants in Ontario.

- They are established after the end of the base period by the IESO and posted on the IESO's website at http://www.ieso.ca/Pages/Participate/Settlements/Global-Adjustment-for-Class-A.aspx.

Base Period: May 1, 2014 to April 30, 2015

Date	Hour Ending	Allocated Quantity of Energy Withdrawn (MW)	Embedded Generation (MW)	Total (MW)*
January 7, 2015	19	21,118.57	491.570	21,610.14
February 19, 2015	20	20,976.23	440.031	21,416.30
August 26, 2014	17	20,967.23	682.792	21,650.03
February 23, 2015	20	20,862.40	539.973	21,402.37
September 5, 2014	17	20,830.89	884.740	21,715.63

*The value in the Total (MW) column is the number used to calculate a customer's Peak Demand Factor.

ieso Independent Electricity System Operator

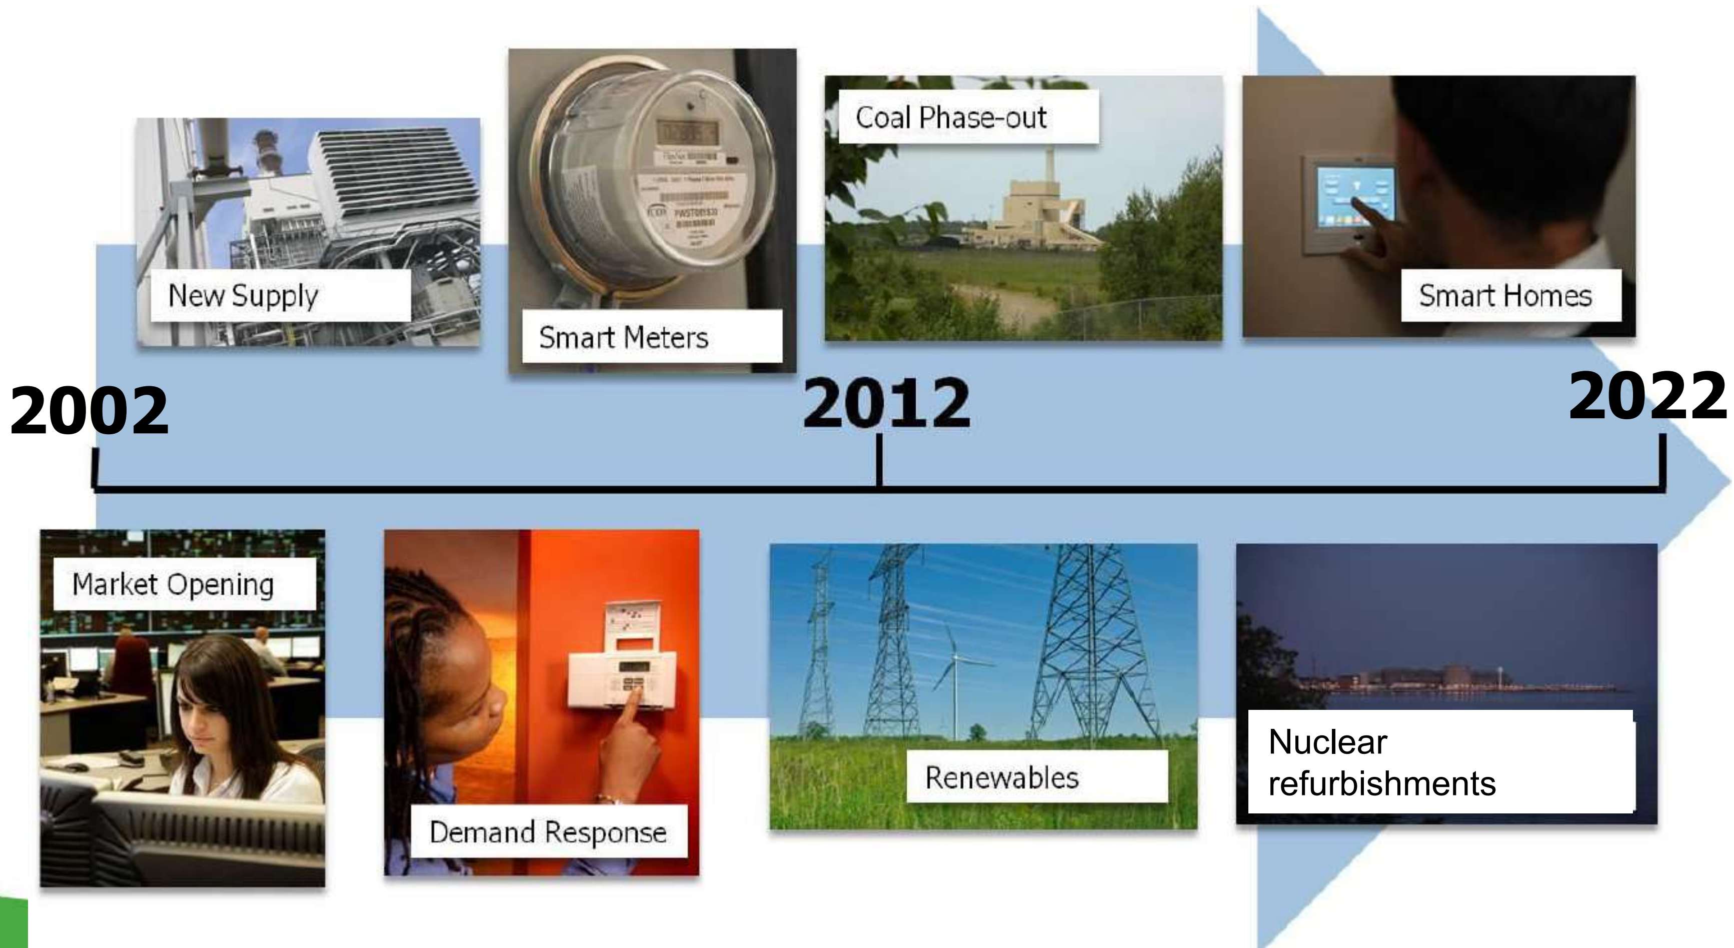
Two Decades of Change



ieso
Independent Electricity System Operator

Long Term Conservation Goals

Almost all electricity demand growth to 2032 to be met by energy efficiency & improved codes and standards

Goals:
8.7 TWh in 2020;
30 TWh in 2032

Demand Response to meet 10% of peak demand by 2025

ieso
Independent Electricity System Operator

Putting Conservation First

- Conservation provides the **cleanest and most cost-effective** alternative to new generation at less than 4 cents/kWh
- Conservation lowers peak demand, deferring or avoiding the need to build new infrastructure
- Helps Ontarians better manage their energy costs
- Favourable return on investment for customers

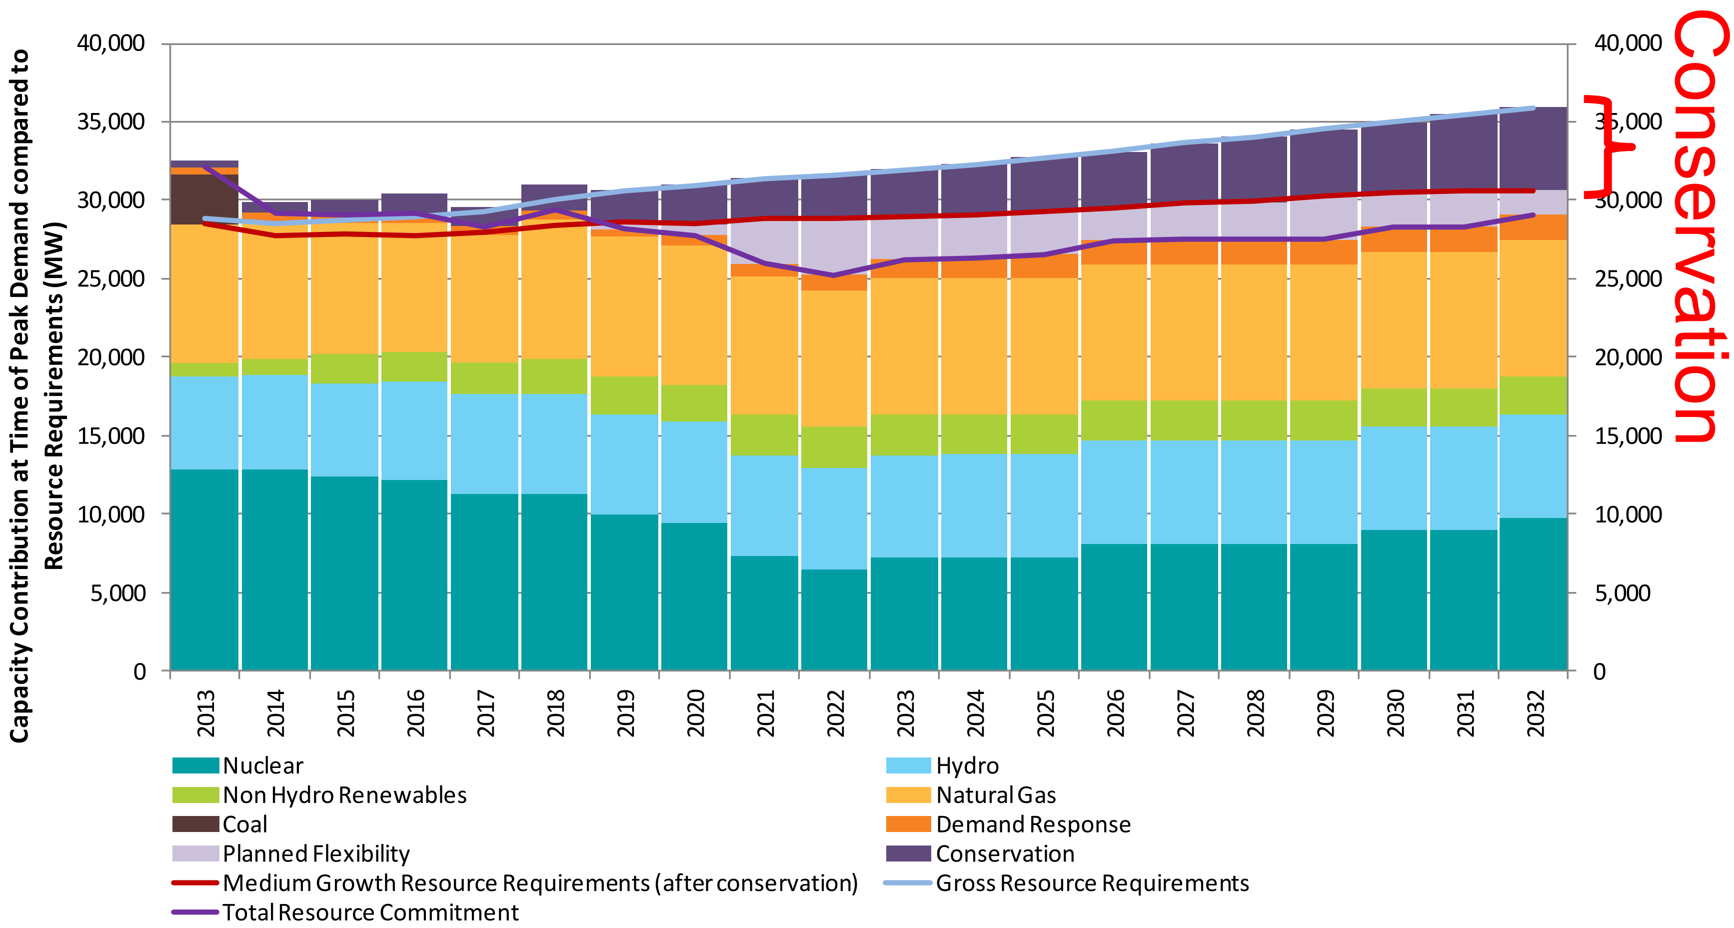
Independent Electricity System Operator

Impact of Conservation in Energy Planning



ieso
Independent Electricity System Operator

Conservation Success in Ontario

saveONenergy

2011 TO 2014

416,000 Inefficient Appliances Collected Since 2006

6,400 GWh In Electricity saved from 2011 to 2014 Across Ontario

9.9 Million Energy Saving Products Purchased With saveONenergy Coupons

2,100 Energy Audits

81,000 Small Business Direct Install Lighting Projects

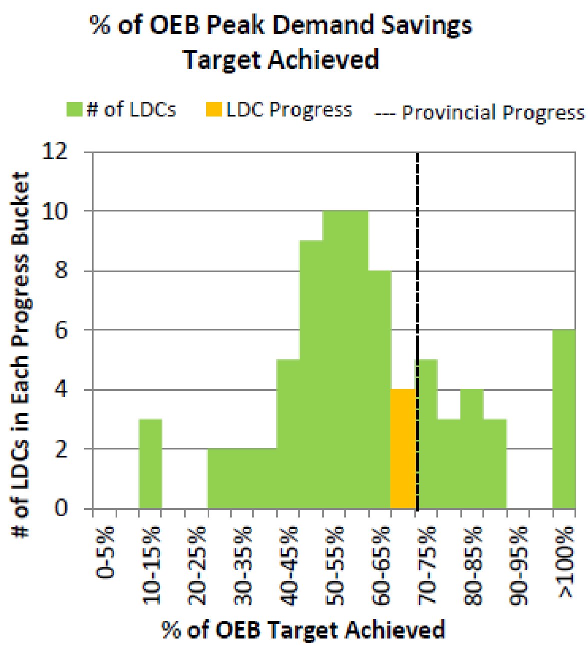
30,000 Retrofit Projects

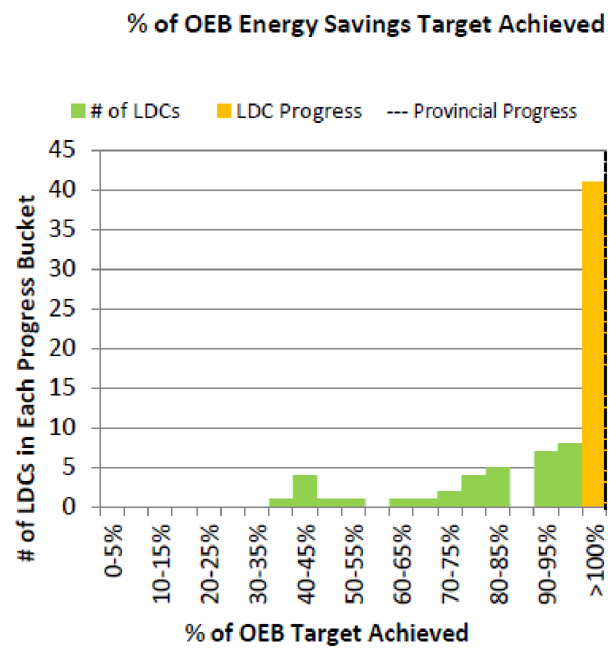
Customers invested over $2 billion into Conservation Programs and saved over $4 billion in avoided costs

ieso Independent Electricity System Operator

Collectively, LDCs Exceeded 2011-2014 Energy Savings Target

- 70% (928 MW) of full Peak Demand Target (1,330 MW) achieved
- 109% (6,553 GWh) of full Energy Target (6,000 GWh) achieved





Based on Final 2011 -2014 Verified Results, *Results presented at the end-user level .*

ieso
Independent Electricity System Operator

Conservation First Framework *At a Glance*

- 7 TWh of energy savings by end of 2020
- $2.2 billion over a six-year term, administered by IESO
  - $1.8B for LDC Delivery Costs
  - $0.4B for Central Services Costs
- Evolving IESO-LDC relationships
- $500 million Industrial Accelerator Program, targeting 1.7 TWh reduction, delivered by IESO to transmission-connected customers
- LDC CDM 6-yr plans support consideration of CDM in local/regional planning

ieso Independent Electricity System Operator

Conservation First Framework Focus

- The new Conservation First Framework is focused on:
  - Providing electric utilities with long-term **stable funding** and budgets
  - **Cost-effective** electric utility conservation plans
  - Greater electric **utility autonomy**
  - Making **province-wide programs** available for delivery
  - Flexibility to align conservation programs to **local needs**
  - **Streamlined approvals** and administrative requirements
  - Encouraging **innovation**
  - Regional and natural gas utility **collaboration**

Conservation First Framework Roles & Responsibilities

IESO

- **Provide LDCs with funding options for CDM programs**
- **Provide program design and delivery support for LDCs**
  - Funding for local/regional pilots
  - Capability building initiatives
  - Funding for collaboration activities between LDCs
- **Conduct mid-term review including new conservation Achievable Potential Study**
- **Conservation with large industrials connected to the transmission grid**
- **Existing/planned centrally delivered initiatives:**
  - Energy Managers for multi-site customers
  - Province-wide pay-for-performance program for multi-site customers
  - Province-wide whole home pilot program for residential customers

LDCs

- **Develop and implement a CDM Plan to meet target over six years**
- **Design and deliver CDM programs**
- **Deliver programs cost-effectively**
  - Exceptions for low-income and on-reserve First Nation customers, as well as education programs

2015 and 2016 Achievements

Highest annual energy savings to date achieved in 2015

Fourth consecutive year of increased energy savings results

- LDCs achieved 1.1 TWh of net annual energy savings that persist to 2020 (or 1.2 TWh of net first year energy savings) in 2015
    - Residential sector: 233 GWh (21%)
    - Business sector: 884 GWh (79%)
- Over two-thirds of LDCs exceeded 2015 forecasted savings from CDM Plan
- On track to meet the CFF 2020 Energy Savings Target

As of Q3 2016, 23% (1.63TWh) of 7TWh CFF target has been achieved

- Portfolio remains cost-effectiveness - within 4¢/kWh as of Q2 2016; only 8.6% ($157M) of $1.8B LDC CDM Plan budget spent

ieso Independent Electricity System Operator

New Programs - 2017

- Per the June 10, 2016 Direction from the Minister of Energy, the IESO shall, in consultation with distributors, centrally design, fund and deliver…

  "a province-wide pay-for-performance Conservation and Demand Management (CDM) program for Multi-Distributor Consumers ("Multi-Distributor Program") "

- The new programs will be funded out of the existing Conservation First Framework (CFF) Centralized Value-Added Services budget
- Energy savings achieved through program will count towards Local Distribution Company (LDC) CDM targets with savings from each participant site going to the respective LDC
- IESO shall, where appropriate, deliver program in coordination with natural gas distributors
- Implementation of program shall commence by end of Fall 2016

Independent Electricity System Operator

Conservation Mid-Term Review

- Per March 2014 Direction, CFF mid-term review must be completed by June 1, 2018
- Between June and October 2016, IESO developed a draft plan and reviewed with and revised based on input from LDCs, MoE, IESO Stakeholder Advisory Committee
- Draft Mid-Term review engagement plan to be posted along with Terms of Reference and invitation for members for Mid Term Review Advisory Group
  - First meeting of Advisory Group to be held in January 2017
- IESO issued an Request for Proposals on October 28 for a vendor to support completion of review
- Outcomes of LTEP will be integrated into mid-term review
  - E.g. if LTEP target is adjusted, mid-term review options will look at corresponding adjustments to CFF targets

Demand Response (DR)

Provides an opportunity for customers to participate, reduce consumption and help mitigate costs

- Enables consumers to reduce their electricity consumption in response to prices and system needs
  - already has had impact on energy demand and helped reduced peaks
  - provides a valuable and cost-effective resource to the system

- What is the IESO doing with DR?
  - Demand Response Pilot Projects
  - Demand Response Auction
  - First DR auction Dec 2015; contribute 391.5 MW for 2016 summer and 403.7 MW for 2016-17 winter

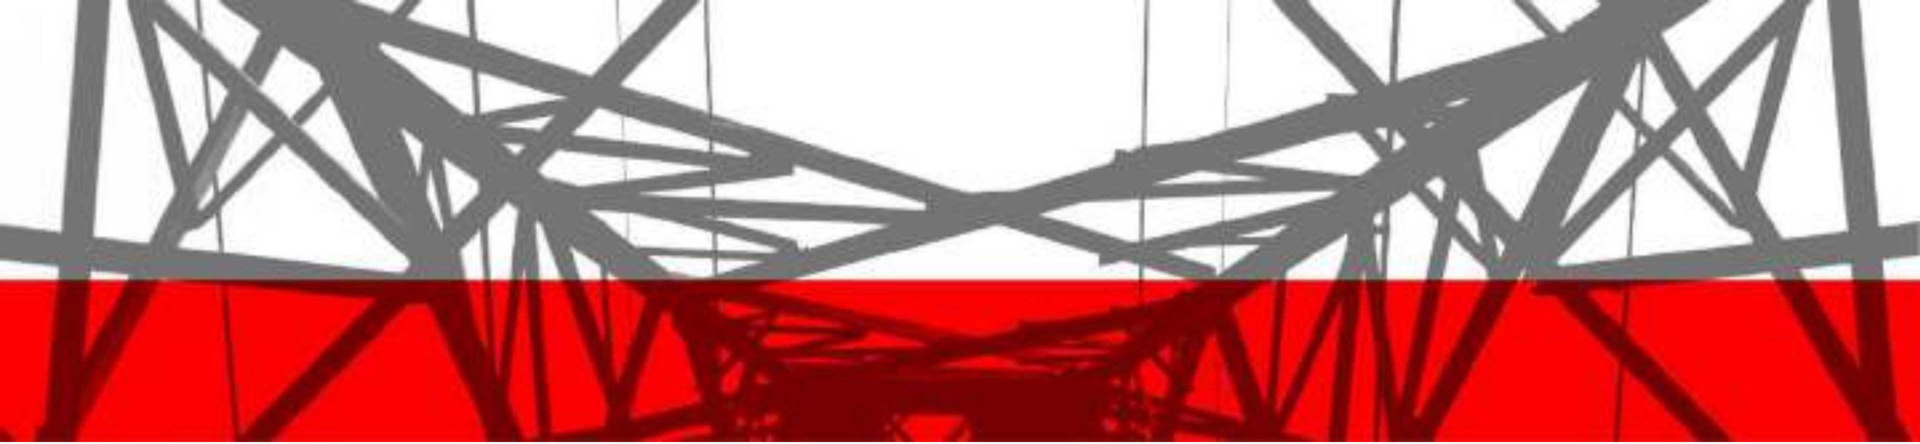
LARGE CUSTOMER CONFERENCE

Productivity & Operational Efficiency

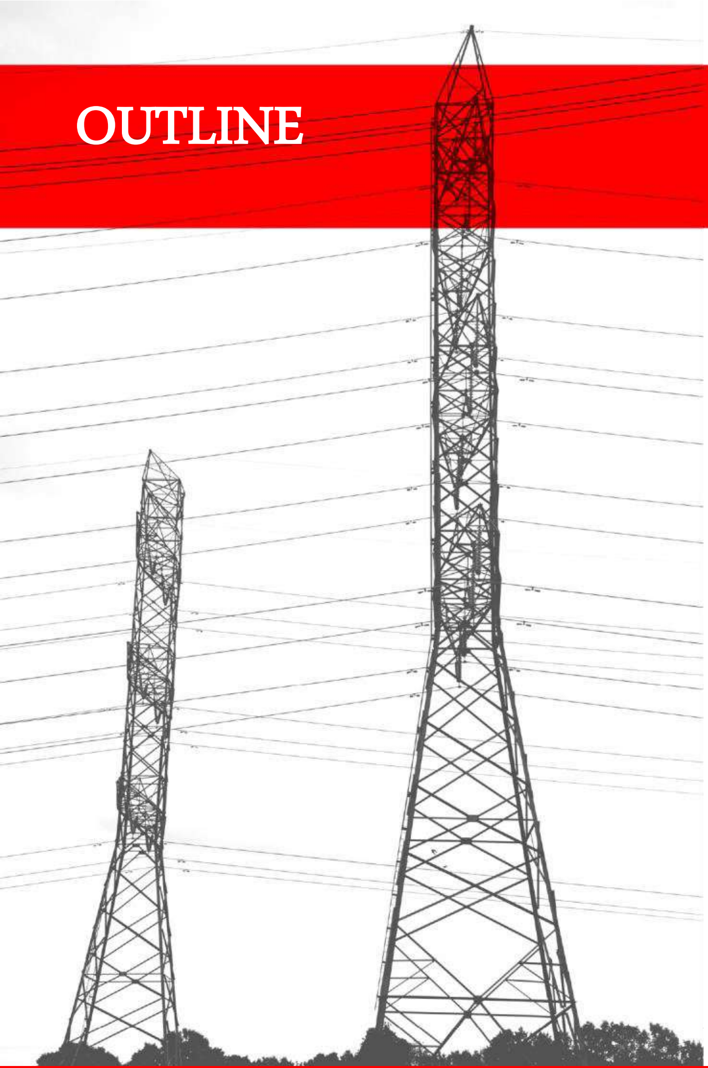


POWER QUALITY

Luis Marti

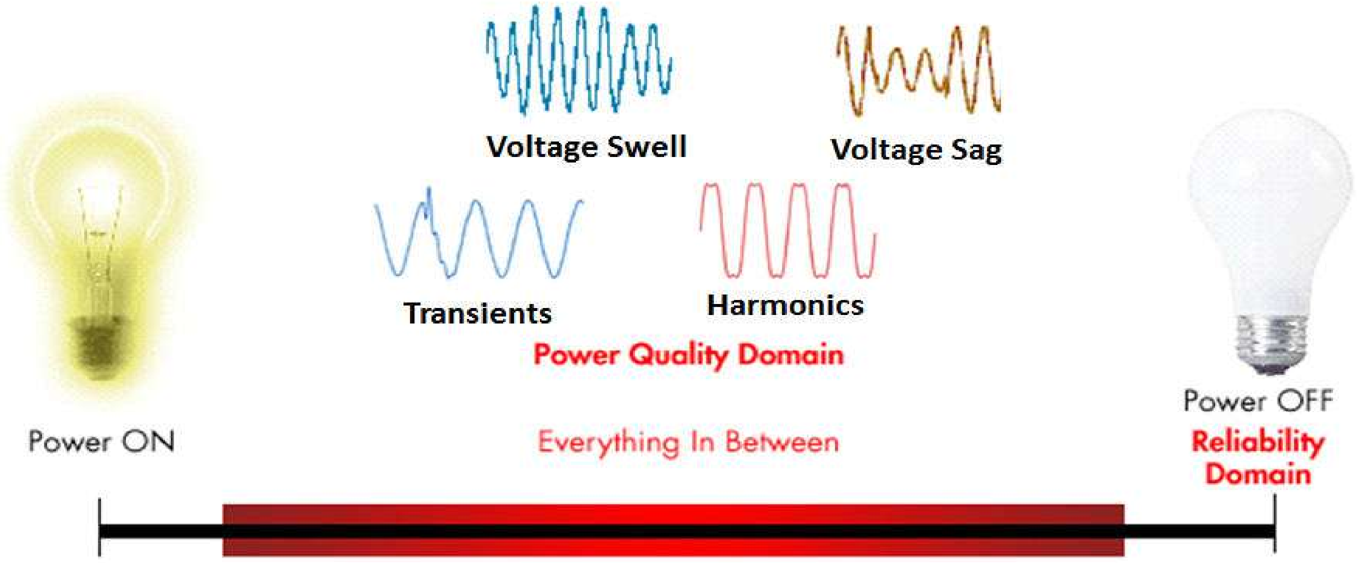
Director, Reliability Studies, Power Quality, RD&D

OUTLINE



- Power Quality vs. Reliability
  - Resiliency vs. Delivery Point Interruptions
  - Types of Power Quality issues
  - Voltage Sag
- Initiatives
  - Voltage sag reports
  - Revenue meter leverage
  - PQ audits

POWER QUALITY VS. RELIABILITY



Traditional Reliability Measures

- SAIDI (System Average Interruption Duration Index)
- SAIFI (System Average Interruption Frequency Index)

POWER QUALITY

- Power Quality (PQ) is a term used to describe harmonics, flicker, voltage imbalance, transients etc., excluding Delivery Point interruptions

- Formal PQ Definition: "Any problem that is manifested in voltage, current or frequency deviations [or tripping] that result in failure or misoperation of utility or end user equipment"

- PQ events can have high cost impact for industrial customers depending on the individual plant and internal processes

- Within the Hydro One system, the most common PQ issues that affect loads are:
  - Voltage sag events
  - Transient overvoltages caused by sub-transmission capacitor bank switching. Capacitor bank switching is not an issue in transmission – IPO breakers have been used since the 90s.

- To a lesser extent:
  - Flicker
  - Harmonics

POWER QUALITY

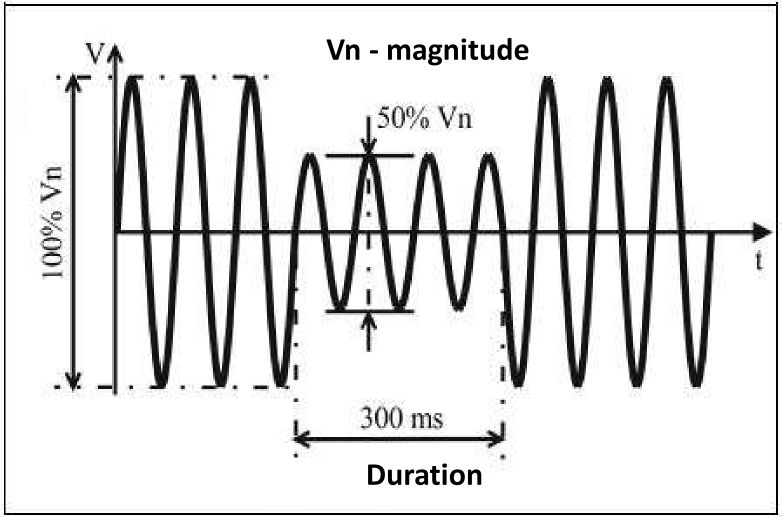
- Momentary % drop in voltage magnitude due to a fault in the system

- System dependent :“zone of influence”

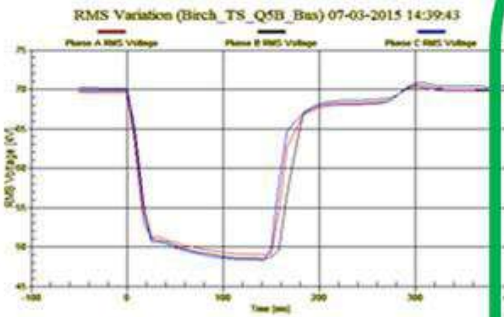
- If customer’s equipment cannot “ride through” the momentary drop in the voltage, equipment would generally disconnect automatically

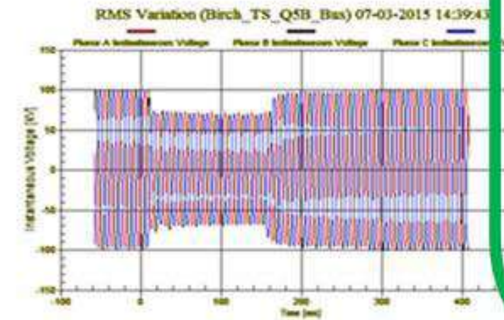
- Unlike delivery point interruptions (which are a measure of system reliability), the effects of voltage sag events are a combination of:

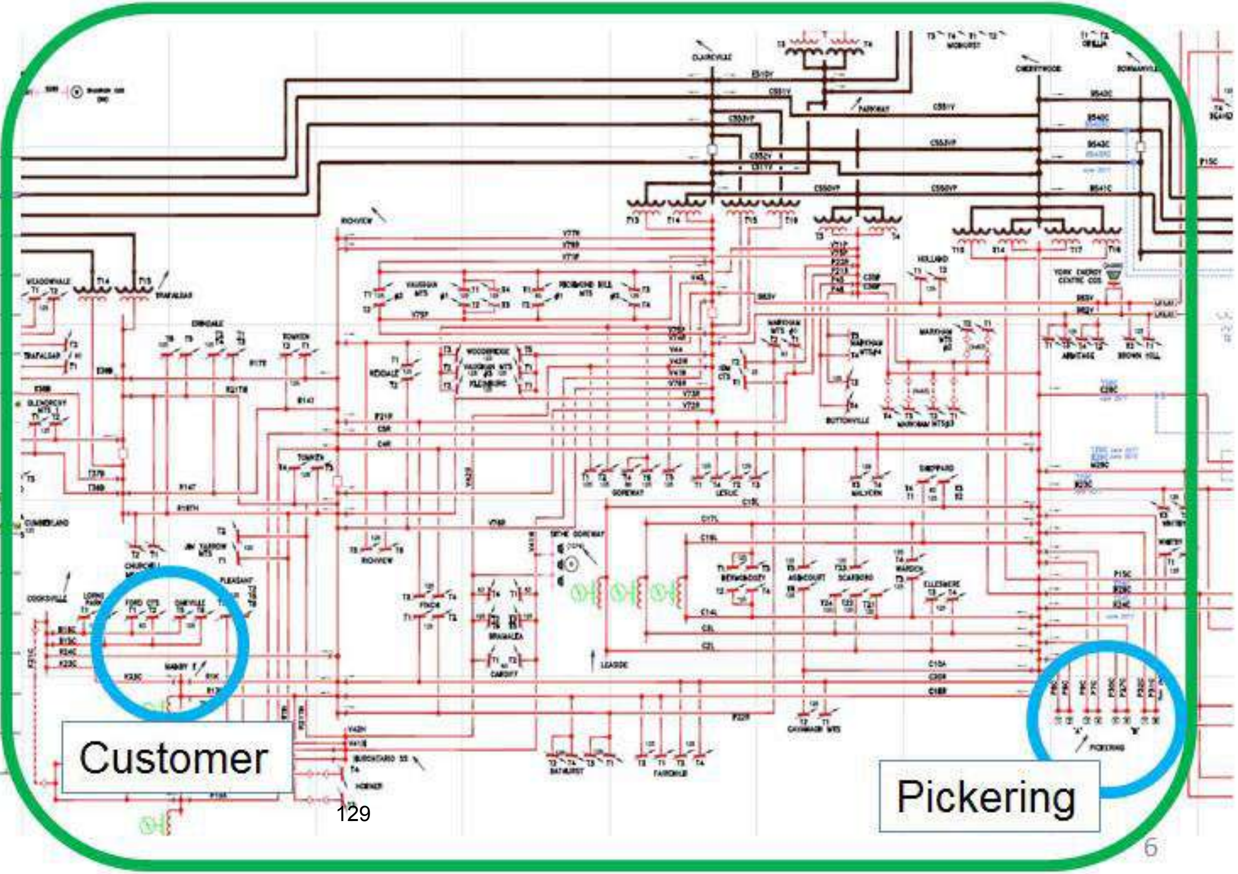
  - Severity of the sag
  - Duration of the sag
  - Resilience of the load



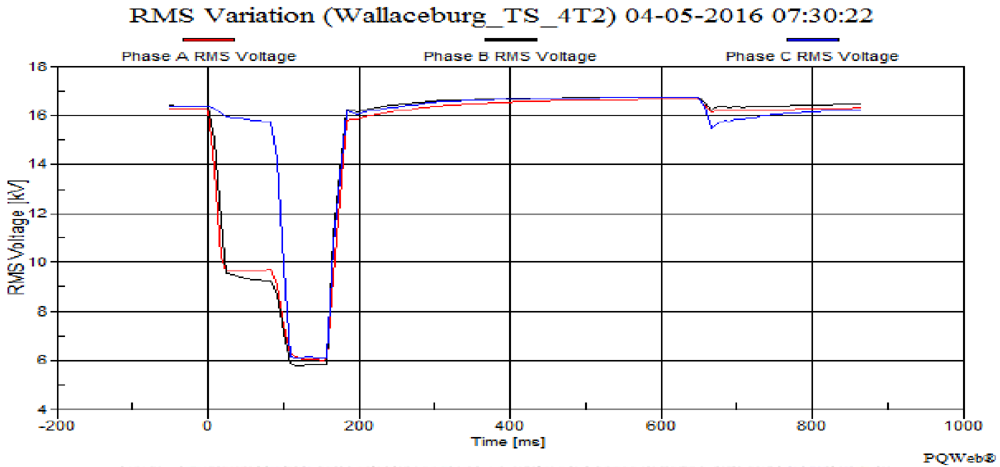
A FAULT WITHIN THE ZONE OF INFLUENCE CAN CAUSE A VOLTAGE SAG EVENT AT A CUSTOMER'S SITE

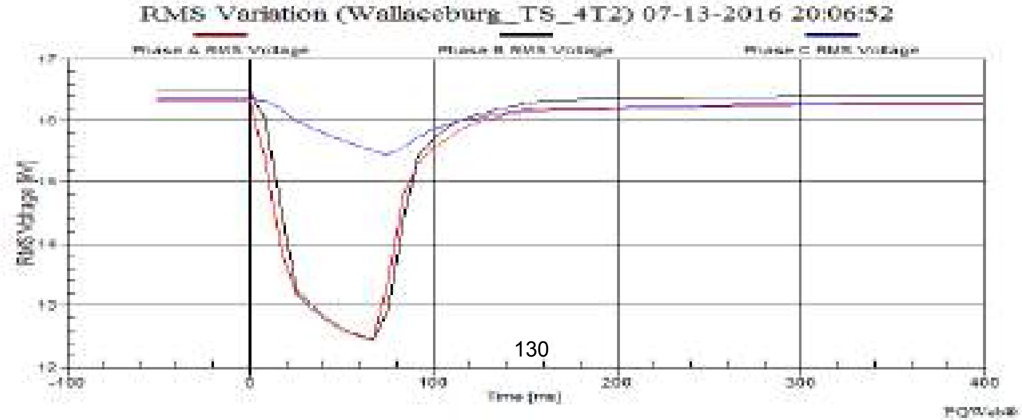






TYPICAL EVENTS CAPTURED





VOLTAGE SAG

- Standard IEEE1668 provides some guidance regarding load resilience in the form of recommended practices (not requirements / standards / compliance requirements)

- It is intended for customers to specify equipment procurement with OEMs. It carefully avoids suggesting any type of required utility / customer interface compatibility or performance

- All references to voltage sag pertain to the load side

Table 10—Recommended test points for Type I and Type II voltage sags

Minimum test point No.	Residual voltage in percent nominal	Duration in seconds	Duration at 50 Hz	Duration at 60 Hz
1	50%	0.2	10 cycles	12 cycles
2	70%	0.5	25 cycles	30 cycles
3	80%	2.0	100 cycles	120 cycles

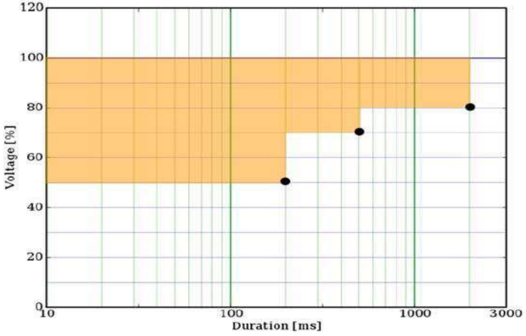


Figure 22—Recommended Type I and Type II test levels

Table 11—Recommended test points for Type III voltage sags

Minimum test point No.	Residual voltage in percent nominal	Duration in seconds	Duration at 50 Hz	Duration at 60 Hz
1	50%	0.05	2.5 cycles	3 cycles
2	70%	0.1	5 cycles	6 cycles
3	80%	2.0	100 cycles	120 cycles

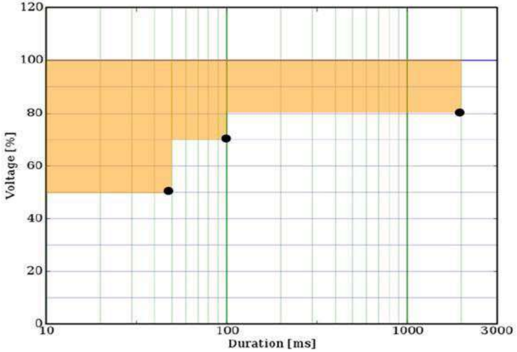

Figure 23—Recommended Type III test levels

VOLTAGE SAG (CONT'D)

- There are no metrics for the frequency of sag events for a number of reasons:
  - Sag events are logged in PQ meters but there is no way to know if the events are impactful to a customer
  - Impact of a sag event depends on the load's ride-through capability. There are no North American standards that mandate a specific level of resiliency.

- Standard IEEE1668 is a good guidance reference point

- With station PQ meters, Hydro One has no direct visibility on whether a load is affected by voltage sag issues and relies on customer-provided information to assess whether ride-through was successful or not

PQ VS. DELIVERY POINT PERFORMANCE

- Hydro One's experience is consistent with the findings of EPRI's distributive power quality study (DPQ III): voltage sags are the most common power quality event

- DPQ III showed that a facility is 8 to 20 times more likely to receive a voltage sag than an interruption

- The ratio of sags to interruptions found in the DPQ III study based on circuit type:
  - Transmission: 8 to 1 (> 100 kV)
  - Sub-Transmission: 20 to 1 (100 kV & > 34.5 kV)
  - Distribution: 15 to 1 (< 34.5 & > 1 kV)
  - Low Voltage: 8 to 1 (< 1 kV)

- Average transmission customer site is 8 times more likely to experience a voltage sag than an outage or momentary interruption

RESILIENCE – EXTENDING THE OPERATING ENVELOPE

“Extending the operating envelope” of equipment means reducing the area of equipment malfunctions by enabling the equipment to ride through deeper and longer voltage sags

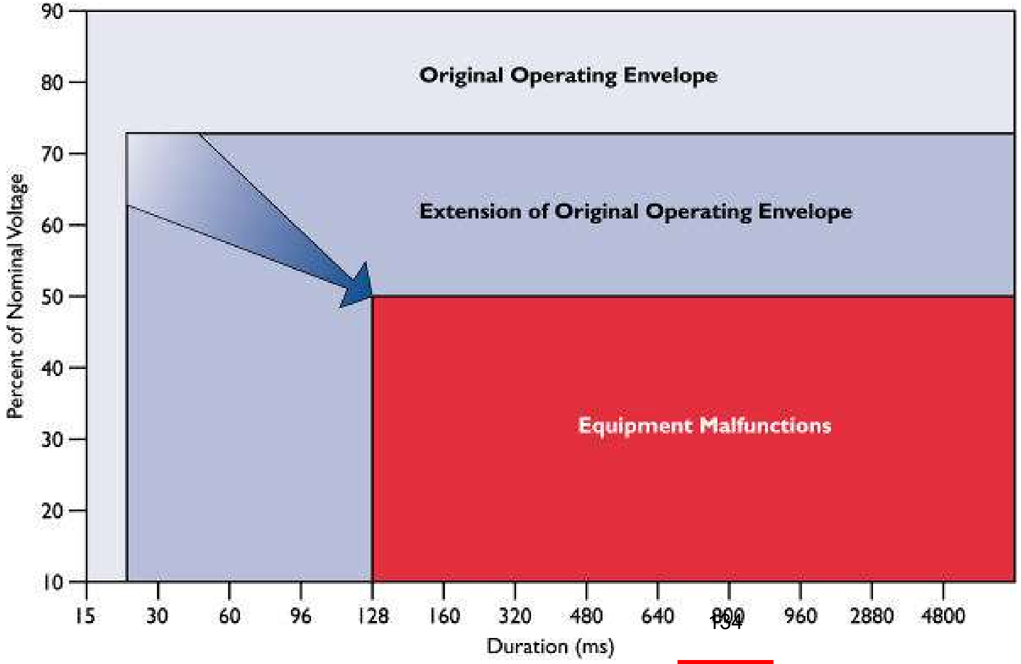

Table 10 —Recommended test points for Type I and Type II voltage sags

Minimum test point No.	Residual voltage in percent nominal	Duration in seconds	Duration at 50 Hz	Duration at 60 Hz
1	50%	0.2	10 cycles	12 cycles
2	70%	0.5	25 cycles	30 cycles
3	80%	2.0	100 cycles	120 cycles

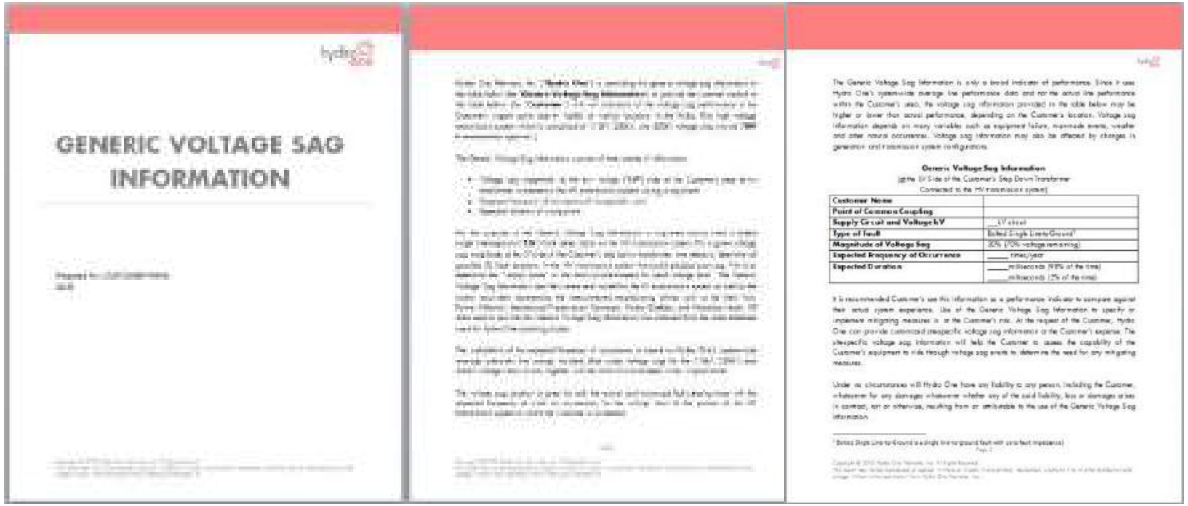
WHAT IS HYDRO ONE DOING ABOUT PQ?

VOLTAGE SAG REPORTS –
TRANSMISSION-CONNECTED CUSTOMERS



Customer Name	
Point of Common Coupling	
Supply Circuit and Voltage kV	___kV circuit
Type of Fault	Bolted Single Line-to-Ground
Magnitude of Voltage Sag	30% (70% voltage remaining)
Expected Frequency of Occurrence	_______ times/year
Expected Duration	136 _______milliseconds (98% of the time) _______milliseconds (2% of the time)

hydro one

IMPROVING PQ VISIBILITY

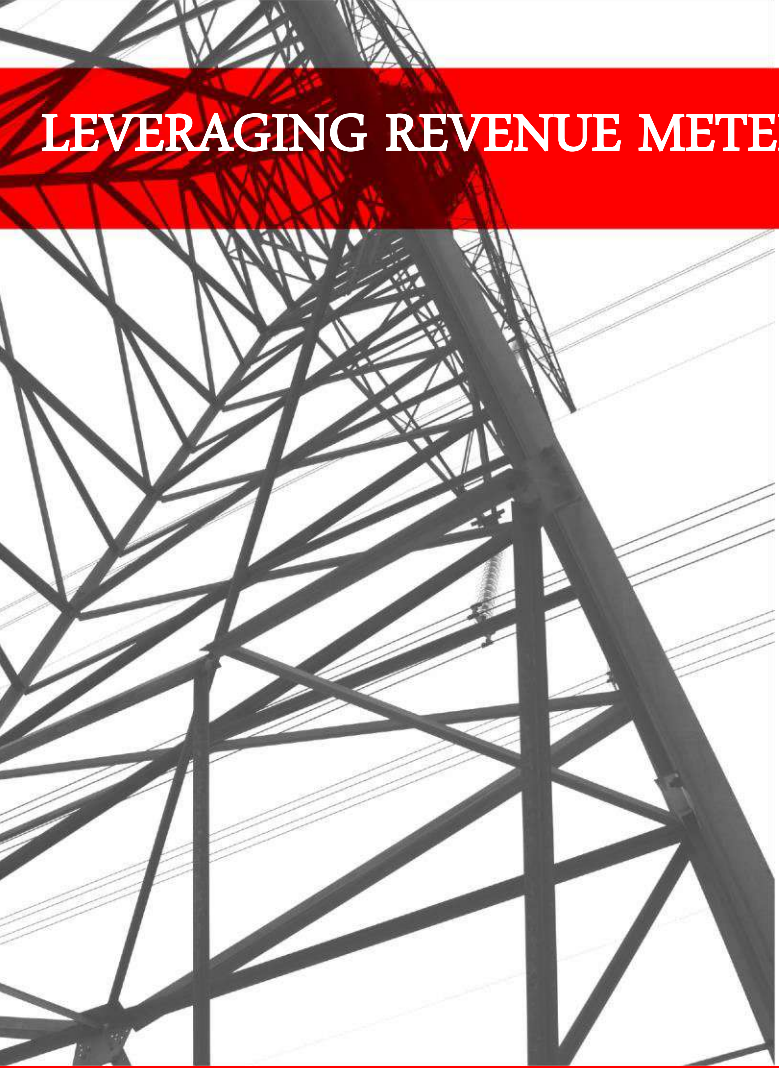
- Increasing visibility of PQ measurements both in Tx and Dx
    - PQ meters installed to date = 345 Tx,
      331 Dx (DG)
    - Average installed per year to Dx = 50 (DG)
    - Planned installations for Tx = 49 (by end of 2020)

- Program to leverage/integrate Customer revenue meters into PQWeb
  (12 Tx end users to date)

LEVERAGING REVENUE METERS

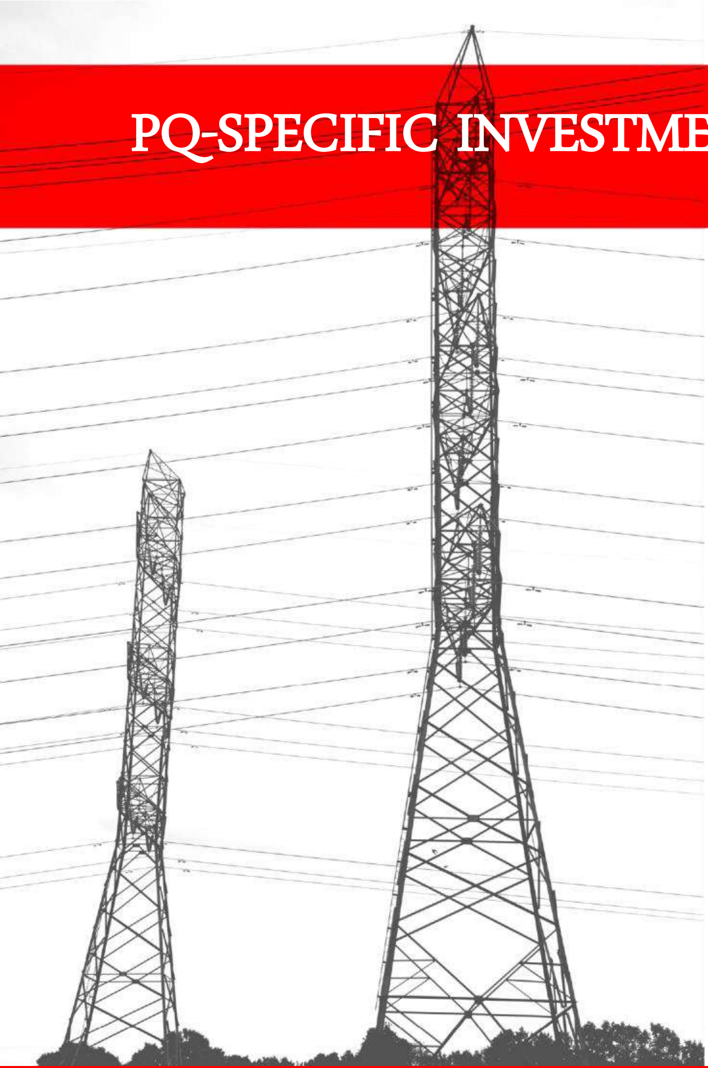
- Program to be reviewed December 2020
- Installation and telecom costs are paid by Hydro One
- Measurements at the metering point are more accurate and do not require reverse engineering from station measurements, if available
- Speeds up PQ investigations and resolution. Allows evaluation of long term PQ performance

LEVERAGING REVENUE METERS (CONT'D)

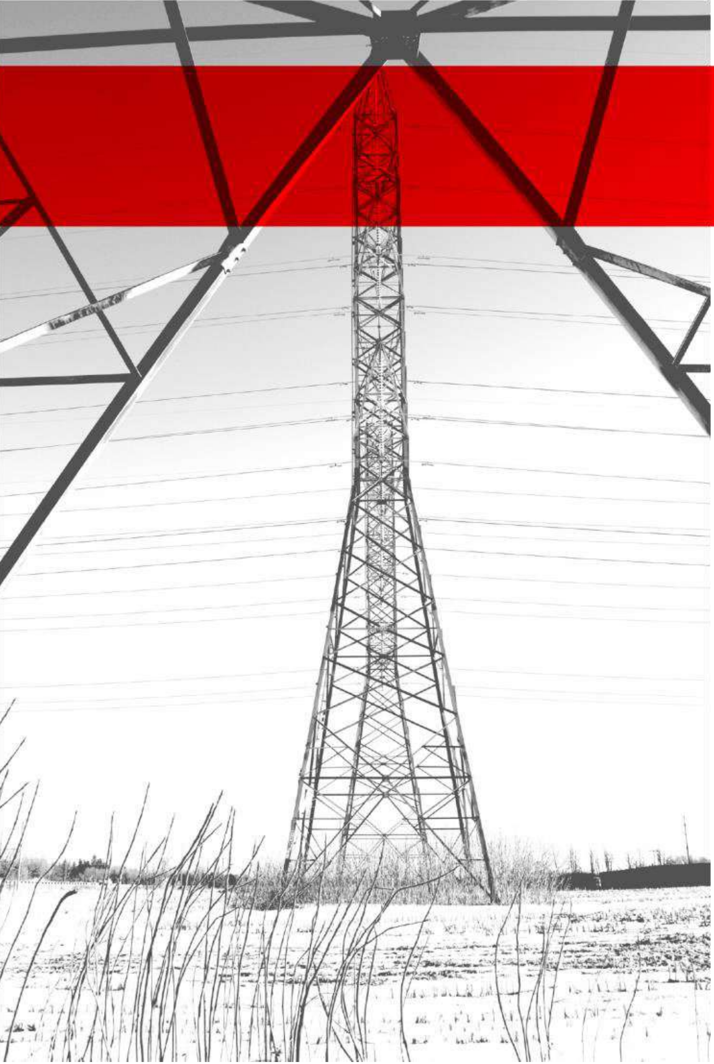


- Customers can review their own PQ data (free software available)
- Customers can potentially take control of their own resilience

PQ-SPECIFIC INVESTMENTS



- Dedicated PQ investment drivers
- Investigate and invest in practical and financially prudent non-reactive measures that improve PQ
- Support of 3rd party Power Quality Audits



WHAT DOES A PQ AUDIT LOOK LIKE?

1. Utility Side Analysis

2. Plant System Analysis and Recommendations

141

UTILITY-SIDE ANALYSIS:
SARFI DATA

$$SARFI_x = \frac{\sum N_i}{N_T}$$

- System Average RMS (Variation) Frequency Index
- Typically normalized to per site/per year data
- The index provides a count of all events with magnitudes and durations outside or below the index threshold
  - SARFI-70 provides a normalized count of all voltage sags with a retained voltage less than 70% of nominal (regardless of duration) in a time period
  - SARFI-10 represents a normalized count of the number of interruptions experienced at the site

Table 10—Recommended test points for Type I and Type II voltage sags

Minimum test point No.	Residual voltage in percent nominal	Duration in seconds	Duration at 50 Hz	Duration at 60 Hz
1	50%	0.2	10 cycles	12 cycles
2	70%	0.5	25 cycles	30 cycles
3	80%	2.0	100 cycles	120 cycles

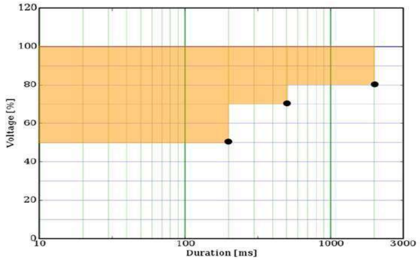


Figure 22—Recommended Type I and Type II test levels

Table 11—Recommended test points for Type III voltage sags

Minimum test point No.	Residual voltage in percent nominal	Duration in seconds	Duration at 50 Hz	Duration at 60 Hz
1	50%	0.05	2.5 cycles	3 cycles
2	70%	0.1	5 cycles	6 cycles
3	80%	2.0	100 cycles	120 cycles

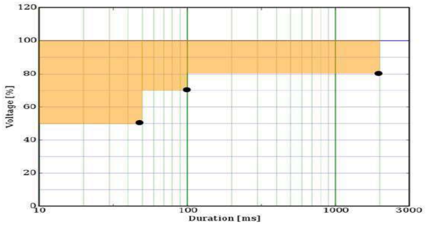

Figure 23—Recommended Type III test levels

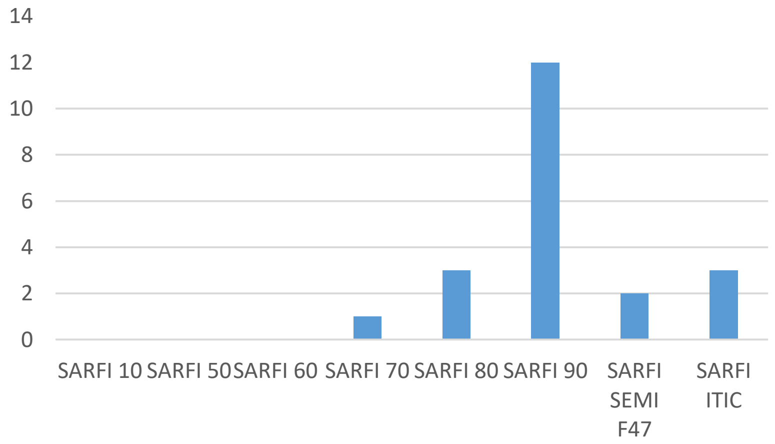
142

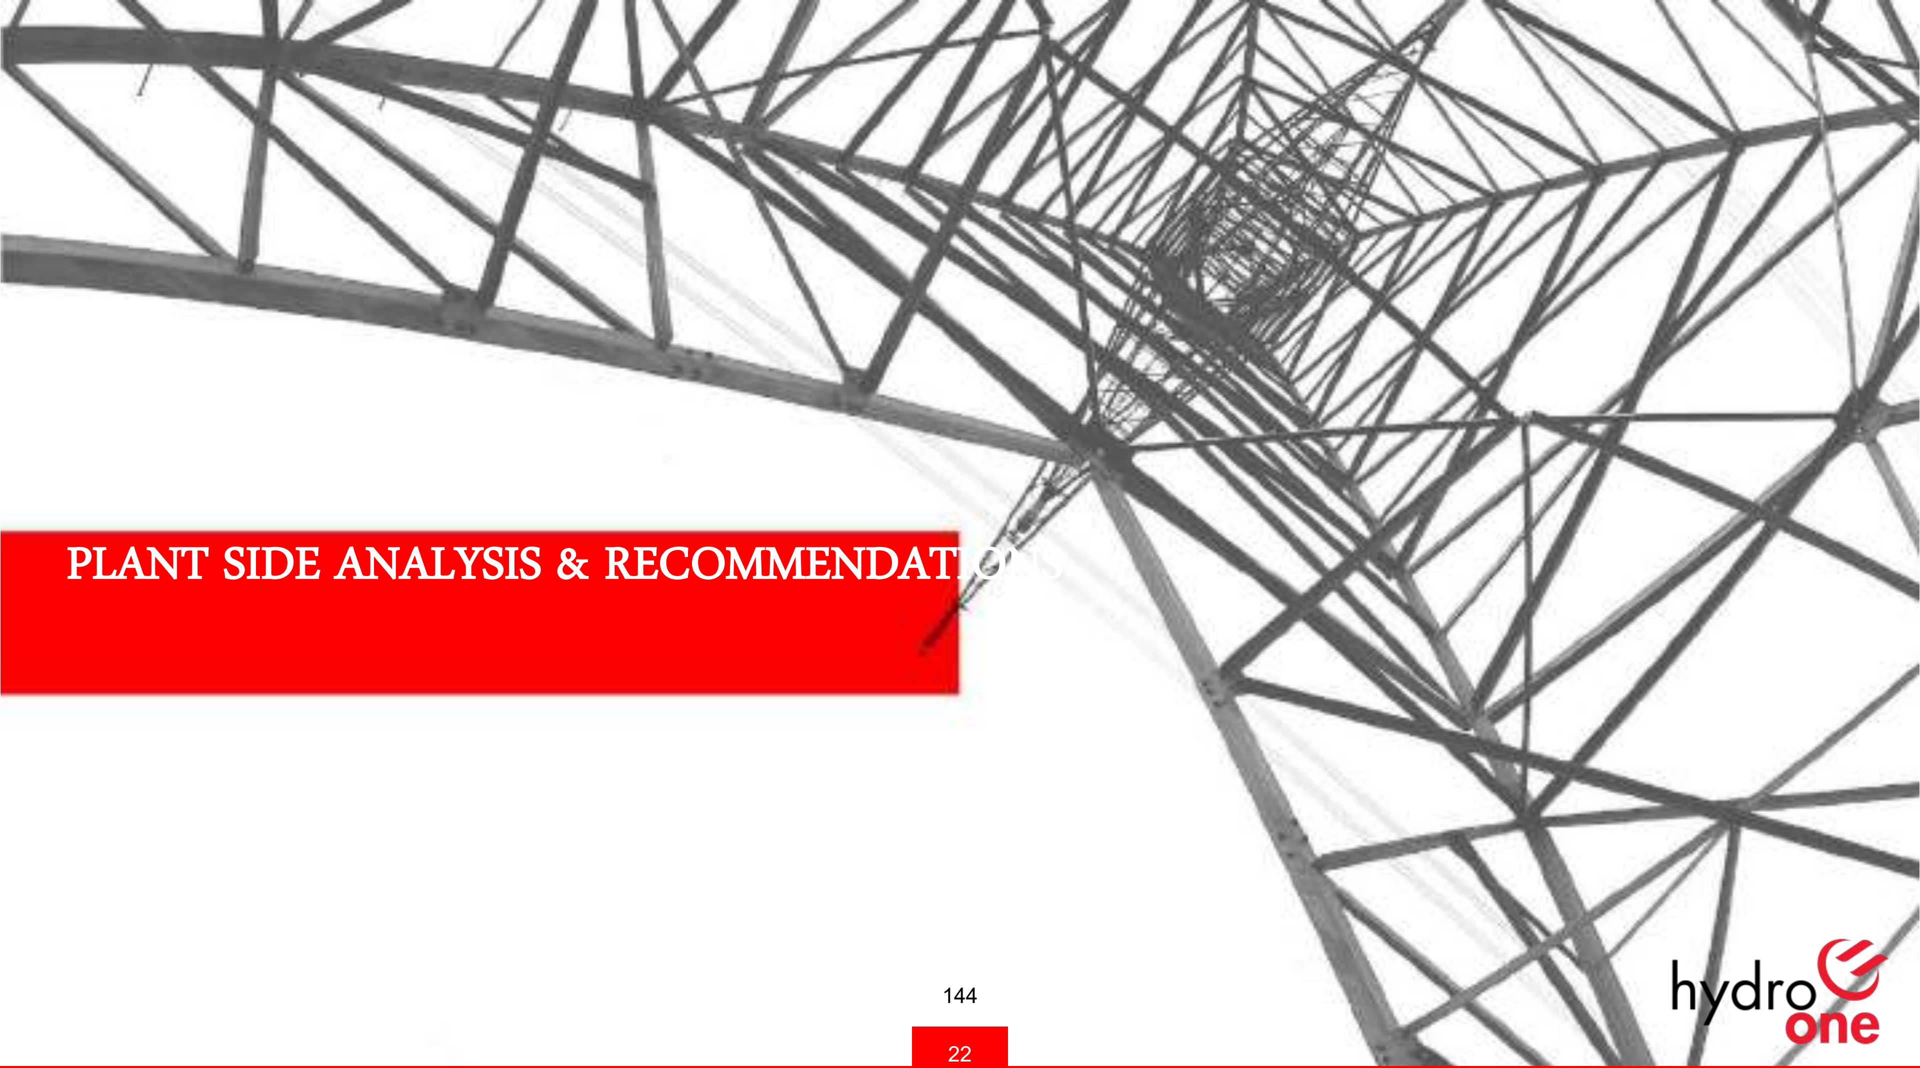
SARFI DATA

Import Name	(5/31/2015 - 12/8/2015)	
Event Count	12 total events	
Monitor Years	0.52 years	
Average Sag Magnitude (%)	82.30%	
Average Sag Duration (sec)	0.362s	
Median Sag Magnitude (%)	84.50%	
Median Sag Duration (sec)	0.125s	
	Normalized to 1 Year	Raw Count
SARFI 10	0.0	0
SARFI 50	0.0	0
SARFI 60	0.0	0
SARFI 70	1.9	1
SARFI 80	5.7	3
SARFI 90	22.9	12
SARFI SEMI F47	3.8	2
SARFI ITIC	5.7	3

- This dataset represents only 0.52 years of information
- Takeaways:
    - Data Set Incomplete
    - Average Sag Magnitude 82.3%
    - Average Sag Duration is 0.362 sec
    - Median Sag Magnitude is 84.5%
    - Median Duration is 0.125 sec



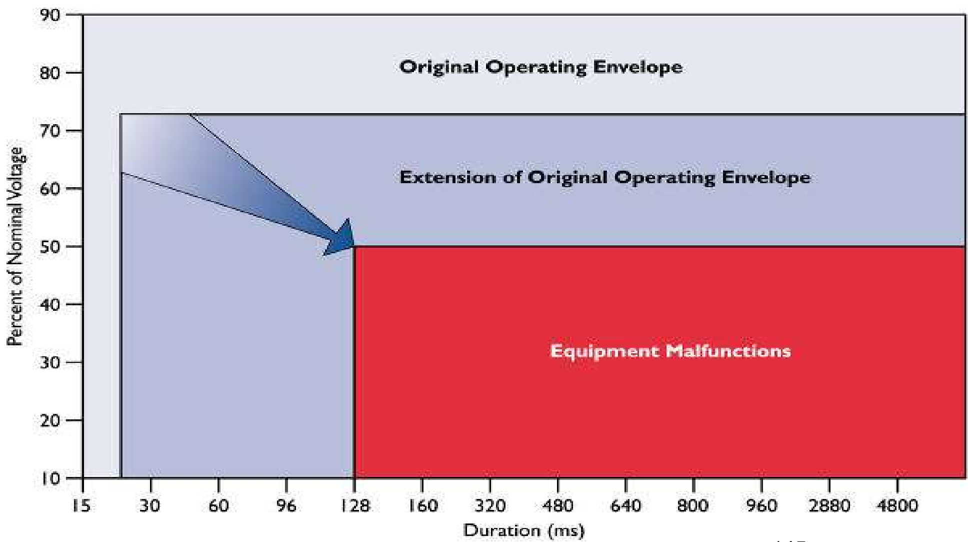
143



PLANT SIDE ANALYSIS & RECOMMENDATIONS

RESILIENCE – EXTEND THE OPERATING ENVELOPE

- “Extending the operating envelope” of equipment means that we have to reduce the area of equipment malfunctions by enabling the equipment to ride through deeper and longer voltage sags.



145

Table 10—Recommended test points for Type I and Type II voltage sags

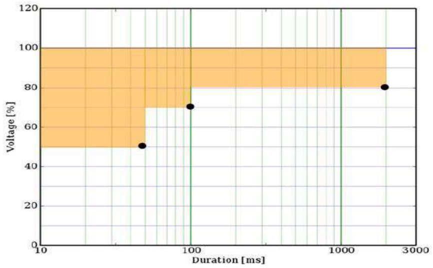

Figure 23—Recommended Type III test levels

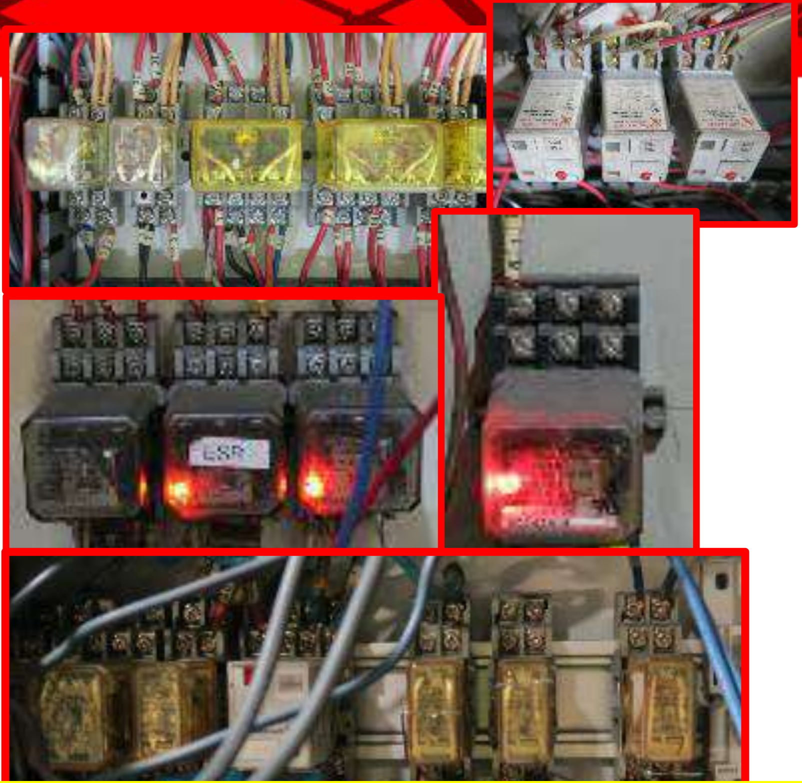
KEY FINDINGS FROM [CUSTOMER] ON-SITE AUDIT

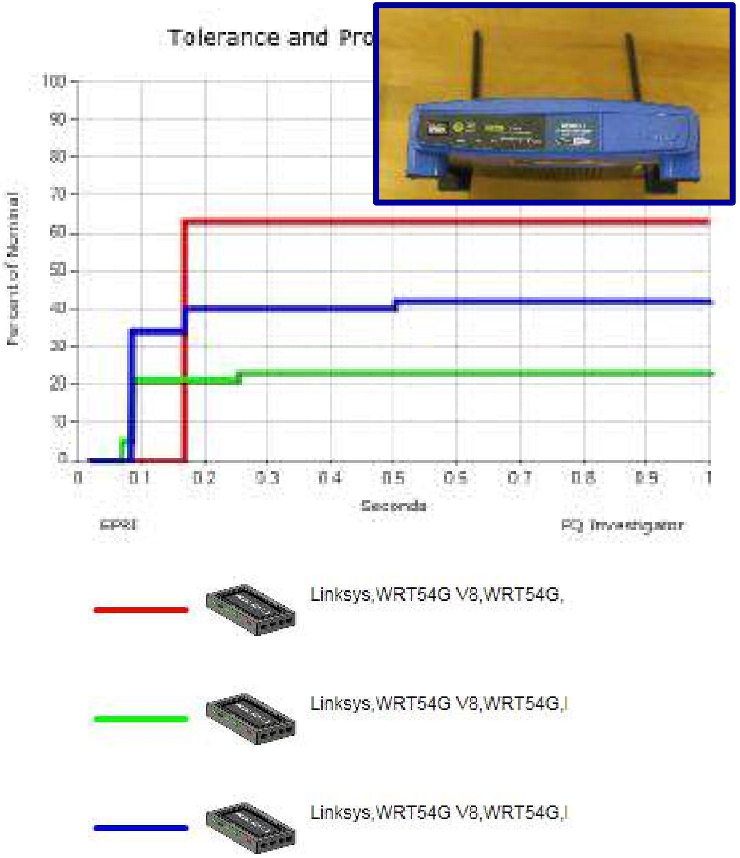
- Most of the process equipment was originally manufactured in the 1990's
  - Equipment has been moved to [customer] from different facilities around the world
  - Equipment has been upgraded on more than one occasion during its 20+ years of service
  - Equipment is largely dependent upon a coordinated drive system
  - The safety and run permissives of the controls were fed through the contacts of AC Ice Cube relays which are sensitive to voltage sags
  - The voltage sag ride through of these clear plastic relays is typically 1cycle 72%



Major Finding: Any voltage sag lower than 72% will cause the relay contacts to open and remove run permissive(s), enable signals, and potentially trigger a false Emergency Power Off (EPO).

KEY FINDINGS FROM ON-SITE AUDIT (CONT'D)

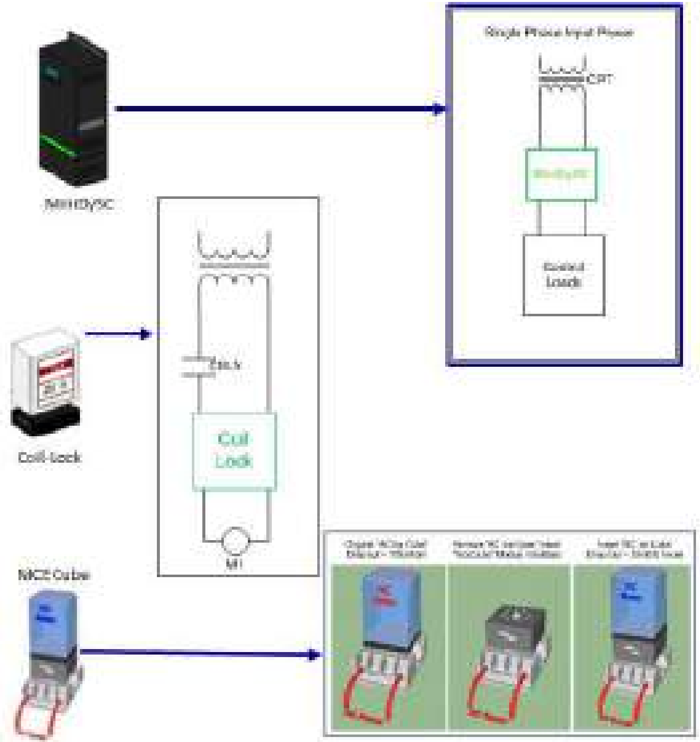
- The equipment has been upgraded on several occasions
- The newest ASDs in the facility communicate through local area network hubs LAN
- These hubs were powered through the service outlets in the cabinets
- May times these service outlets are not powered from the same source as the controls
- Some of these hubs are sourced through outlet style plug in power supplies
- EPRI tested a router using three different power supplies
    - The results were drastically different.
    - The power supply with the highest current rating actually produced the worst voltage sag ride through performance.



TYPES OF VOLTAGE SAG

PQ SOLUTIONS

- MiniDySC
  - Static Series Compensator with Capacitor Storage
  - Control Circuit Mitigation
  - 50ms of voltage interruption (more time at reduced load)
- 5 seconds of voltage sag protection to 50% nominal
  - Coil Lock
  - Relay Coil Solution
  - Size based upon coil resistance
  - 3 seconds of voltage sag protection to 25% nominal
- Nice Cube
  - 8 pin octal Ice Cube Relay Solution
  - Direct replacement for 120Vac and 24Vac octal relays
  - 3 seconds of voltage sag protection to 30% nominal



COMPARISON OF VOLTAGE SAG VS. INTERRUPTION SOLUTIONS

Voltage Sag Solutions

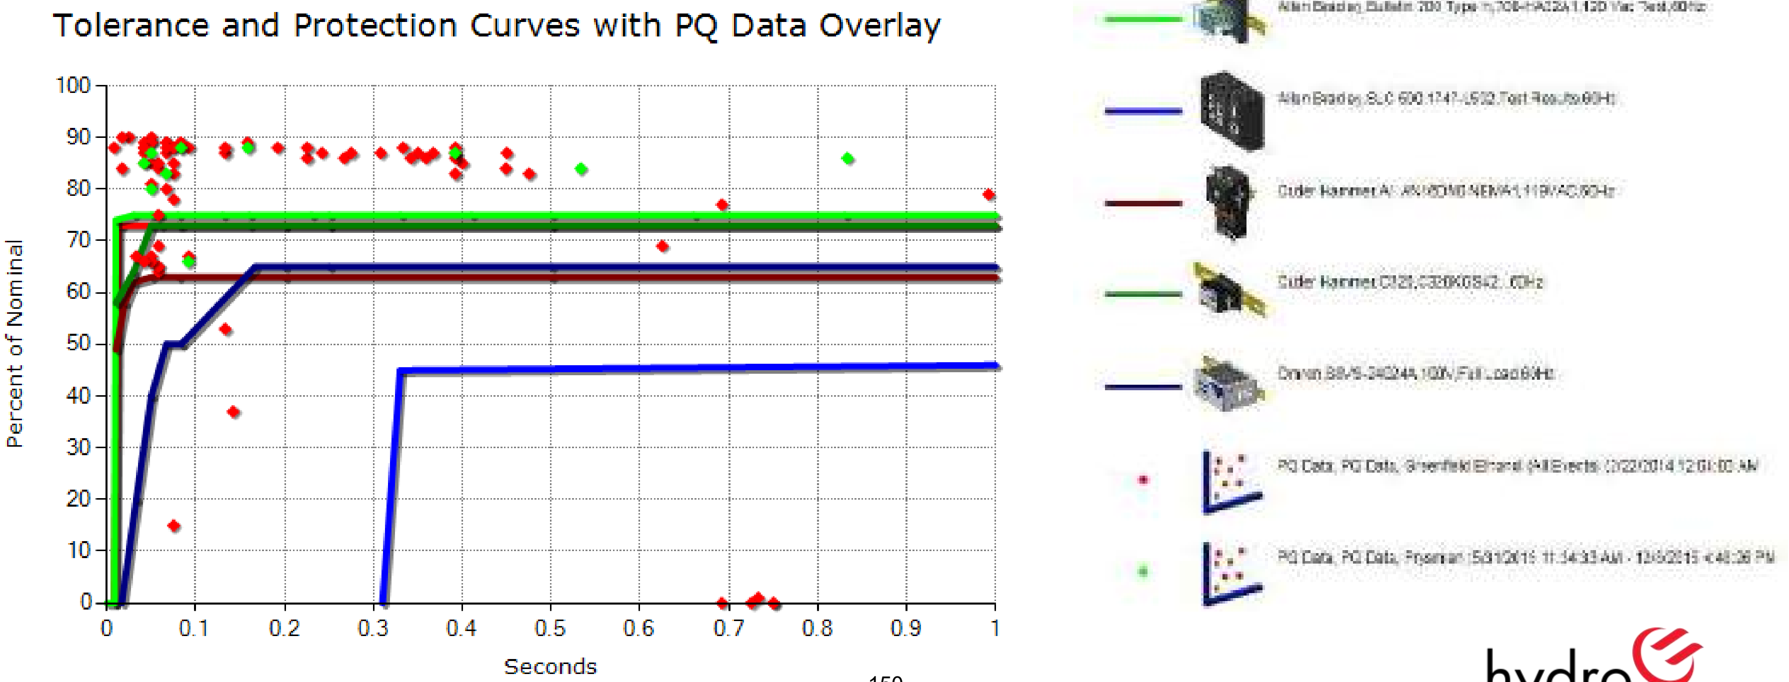
- Pros
  - Lower Cost
  - Less Maintenance
- Cons
  - Less ride through time
  - Protects for voltage sags only
  - Some solutions will protect for a couple cycles of voltage interruption

Interruption Solutions

- Pros
  - Longer ride through time
  - Protection to 0 volts
- Cons
  - Higher cost
  - Ultra Capacitor UPS requires fan maintenance

PQ DATA VS. EQUIPMENT SUSCEPTIBILITY

The majority of the control components that were observed during the audit are included in the graphic below

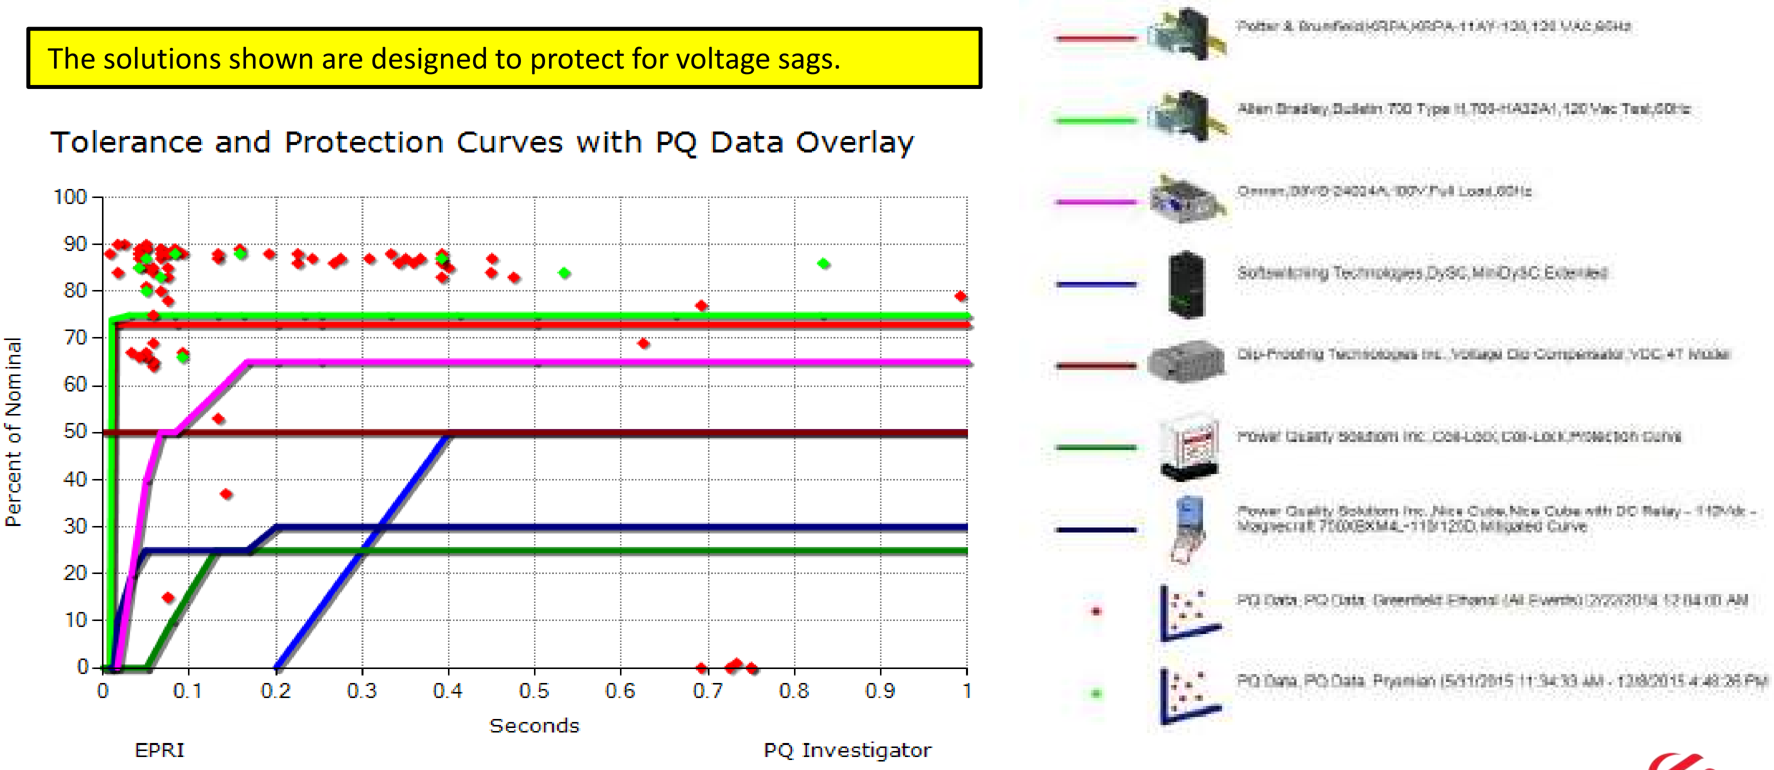


EPRI PQ Investigator

150

PQ DATA WITH EQUIPMENT SUSCEPTIBILITY AND MITIGATOR

The solutions shown are designed to protect for voltage sags.



151

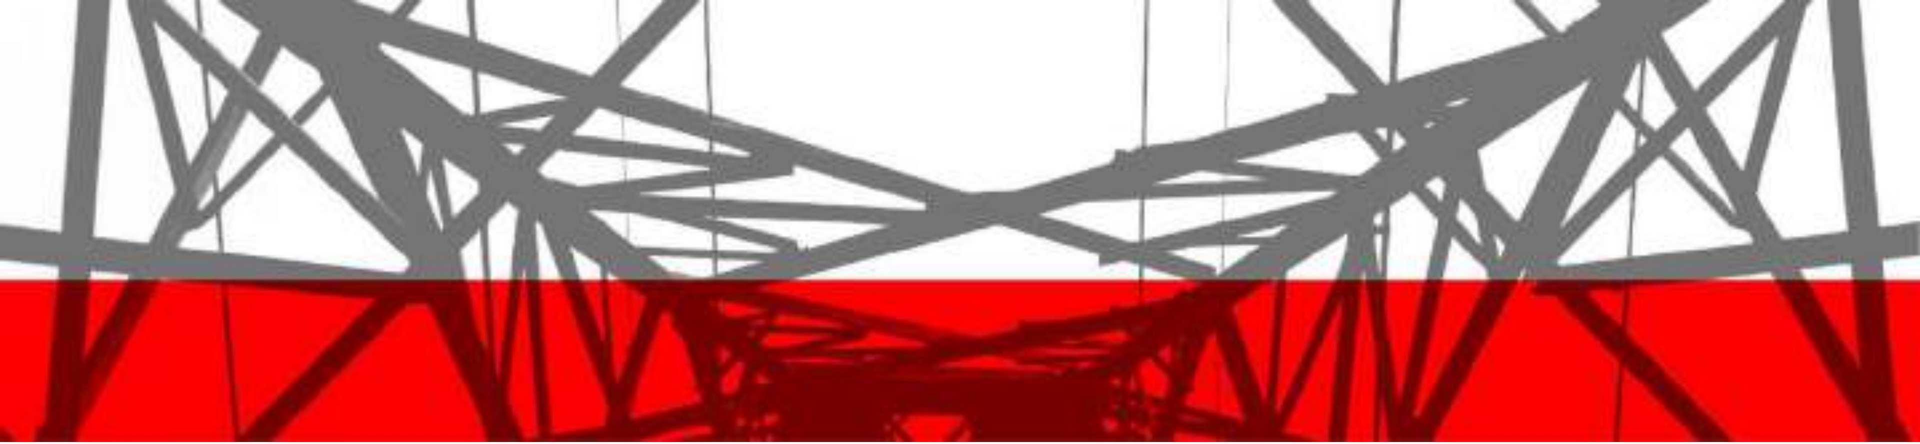
Productivity & Operational Efficiency

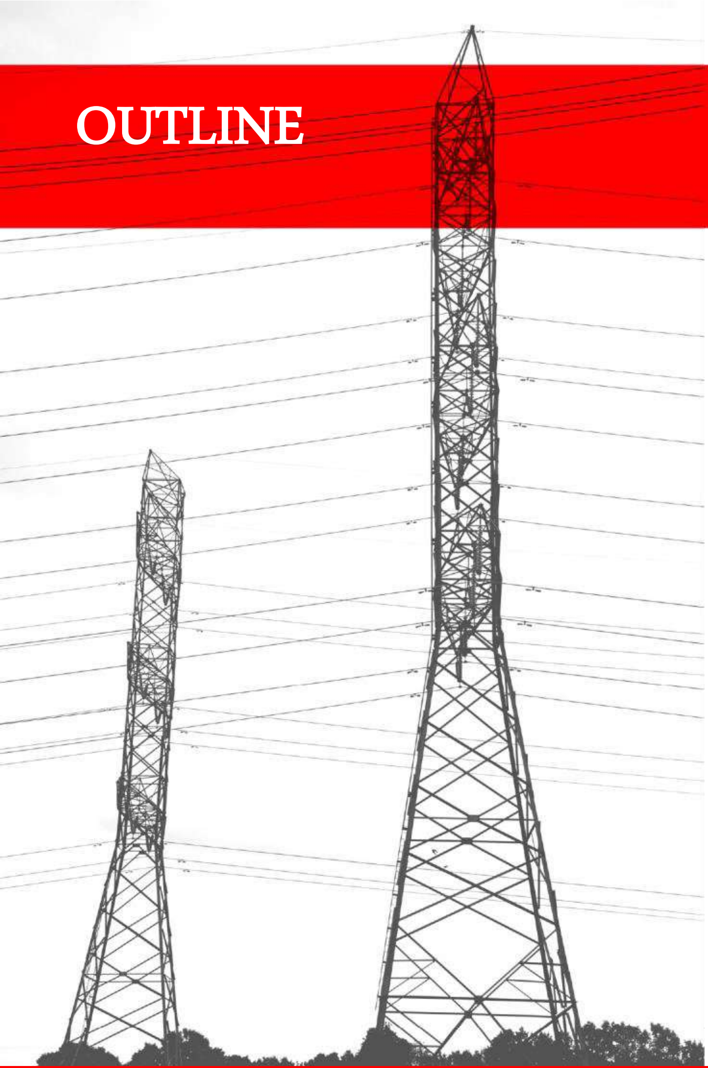


POWER QUALITY

Luis Marti

Director, Reliability Studies, Power Quality, RD&D

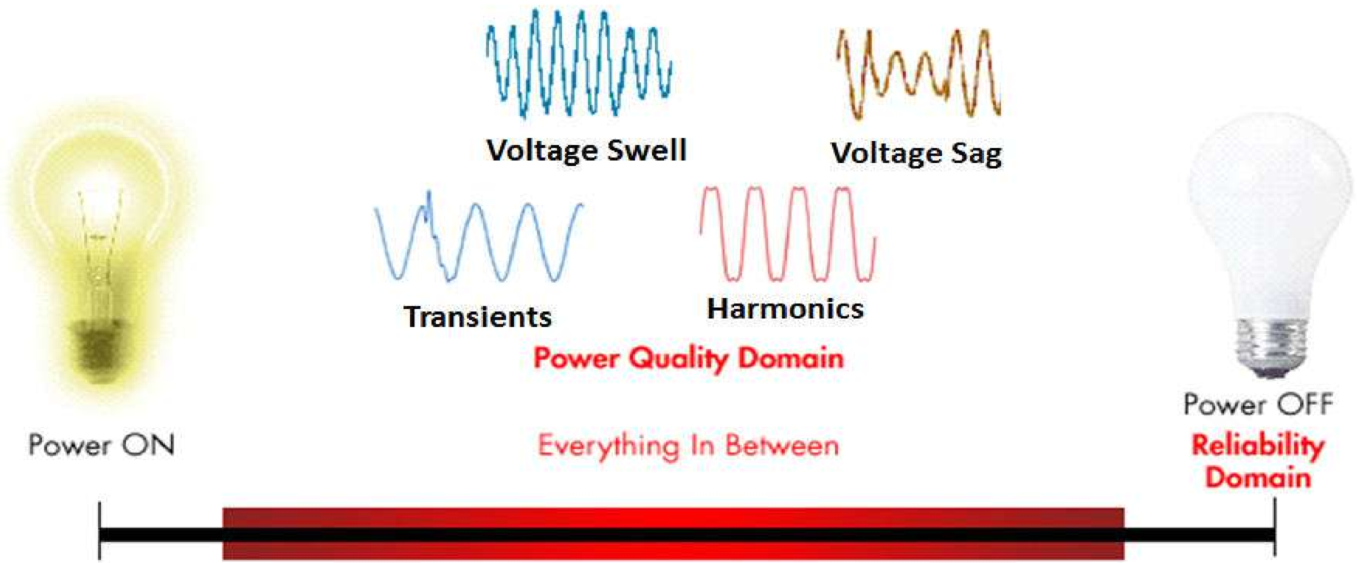
hydro one



OUTLINE

- Power Quality vs. Reliability
  - Resiliency vs. Delivery Point Interruptions
  - Types of Power Quality issues
  - Voltage Sag
- Initiatives
  - Revenue meter leverage
  - PQ audits

POWER QUALITY VS. RELIABILITY



Traditional Reliability Measures

- SAIDI (System Average Interruption Duration Index)
- SAIFI (System Average Interruption Frequency Index)

POWER QUALITY

- Power Quality (PQ) is a term used to describe harmonics, flicker, voltage imbalance, transients etc., excluding Delivery Point interruptions

- Formal PQ Definition: “Any problem that is manifested in voltage, current or frequency deviations [or tripping] that result in failure or misoperation of utility or end user equipment”

- PQ events can have high cost impact for industrial customers and generators depending on the individual plant and internal processes

- Within the Hydro One system, the most common PQ issues that affect generators and loads are:
    - Transient overvoltages caused by sub-transmission capacitor bank switching.

POWER QUALITY (CONT'D)

- Transient overvoltages caused by HV capacitor bank switching are not normally a problem because of the use of IPO (Independent Pole Operated) breakers to switch capacitors in and out of service

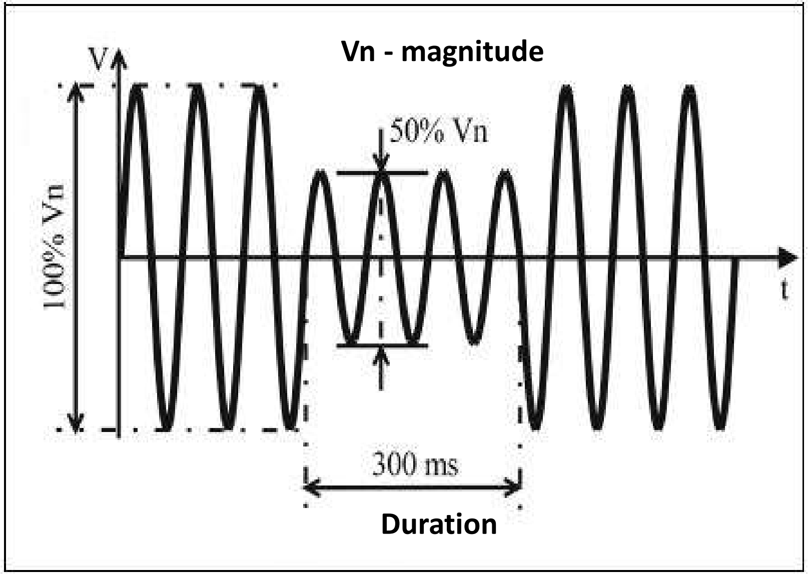
- For renewable generation Hydro One's concern is the potential for system resonance, especially as the network configuration changes over time
  - For DGs PQ monitors are installed routinely
  - Requirement for of monitors for Tx-connected renewable generation is now in place.

- Harmonics produced by inverter-based generation is usually within IEEE Std 519 limits

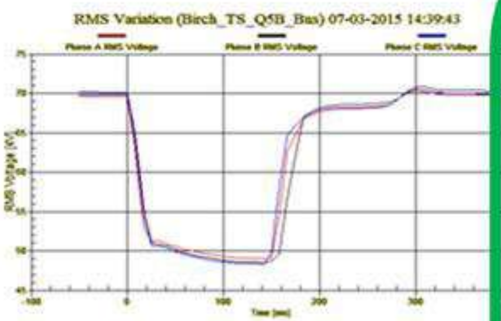
- High voltage harmonics may exist when system configuration with parallel resonance frequencies for the electrical network are close to those produced by inverter-based generation.
  - May cause excessive heating of power equipment such as transformers
  - May cause misoperation of WF and HON P&C.

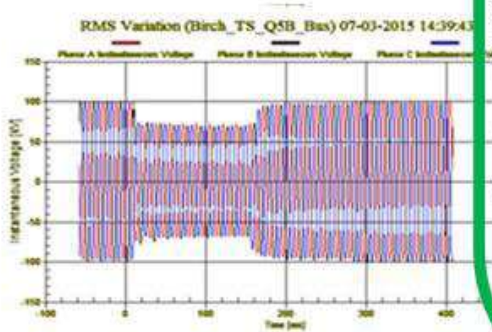
POWER QUALITY (CONT'D)

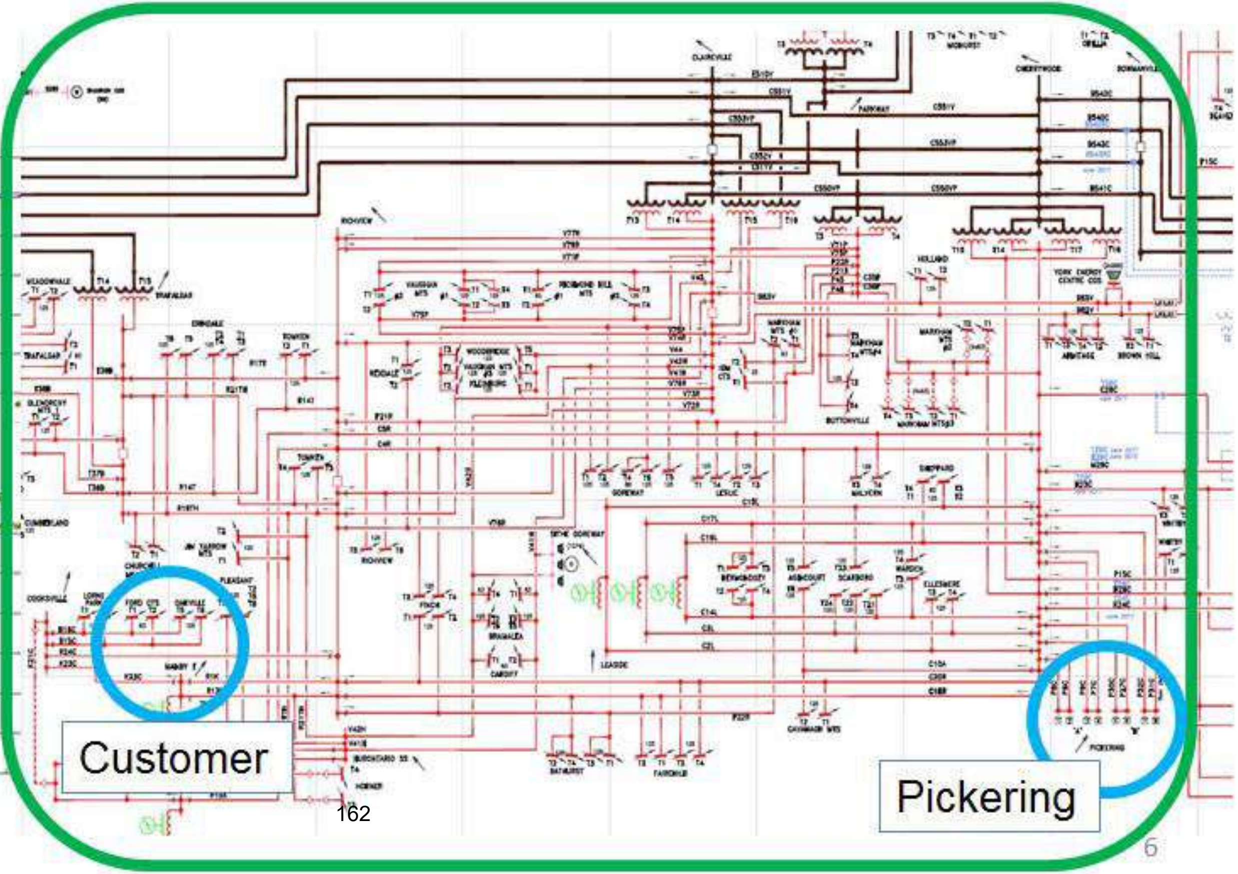
- Voltage sag is probably the most common power quality issue affecting Transmission and Distribution customers
- Momentary % drop in voltage magnitude due to a fault in the system
- System dependent: "zone of influence"
- If customer's equipment cannot "ride through" the momentary drop in the voltage, equipment would generally disconnect automatically
- Unlike delivery point interruptions (which are a measure of system reliability), the effects of voltage sag events are a combination of:
  - Severity of the sag
  - Duration of the sag
  - Resilience of the load



A FAULT WITHIN THE ZONE OF INFLUENCE CAN CAUSE A VOLTAGE SAG EVENT AT A CUSTOMER'S SITE







TYPICAL EVENTS CAPTURED

- It is intended for customers to specify equipment procurement with OEMs. It carefully avoids suggesting any type of required utility / customer interface compatibility or performance

- All references to voltage sag pertain to the load side

Table 10 —Recommended test points for Type I and Type II voltage sags

Minimum test point No.	Residual voltage in percent nominal	Duration in seconds	Duration at 50 Hz	Duration at 60 Hz
1	50%	0.2	10 cycles	12 cycles
2	70%	0.5	25 cycles	30 cycles
3	80%	2.0	100 cycles	120 cycles

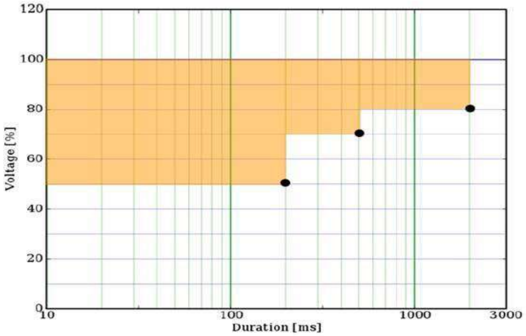

Figure 22 —Recommended Type I and Type II test levels

Table 11 —Recommended test points for Type III voltage sags

Minimum test point No.	Residual voltage in percent nominal	Duration in seconds	Duration at 50 Hz	Duration at 60 Hz
1	50%	0.05	2.5 cycles	3 cycles
2	70%	0.1	5 cycles	6 cycles
3	80%	2.0	100 cycles	120 cycles

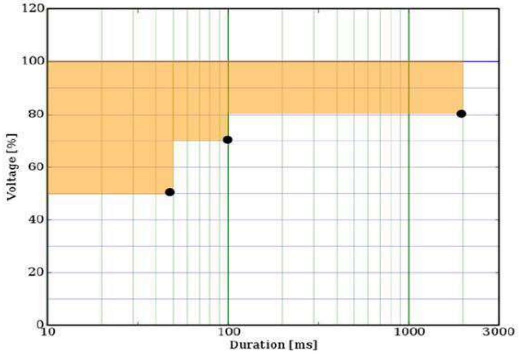

Figure 23 —Recommended Type III test levels

VOLTAGE SAG (CONT'D)

- There are no metrics for the frequency of sag events for a number of reasons:
  1. Sag events are logged in PQ meters but there is no way to know if the events are impactful to a customer
  2. Impact of a sag event depends on the load's ride-through capability. There are no North American standards that mandate a specific level of resiliency.
  3. Standard IEEE1668 is a good guidance reference point

- With station PQ meters, Hydro One has no direct visibility on whether a load is affected by voltage sag issues and relies on customer-provided information to assess whether ride-through was successful or not

PQ VS. DELIVERY POINT PERFORMANCE

- Hydro One's experience is consistent with the findings of EPRI's distributive power quality study (DPQ III): voltage sags are the most common power quality event

- DPQ III showed that a facility is 8 -20 times more likely to receive a voltage sag than an interruption

- The ratio of sags to interruptions found in the DPQ III study based on circuit type:
    - Transmission: 8 to 1 (> 100 kV)
    - Sub-Transmission: 20 to 1 (100 kV & > 34.5 kV)
    - Distribution: 15 to 1 (< 34.5 & > 1 kV)
    - Low Voltage: 8 to 1 (< 1 kV)

- Average distribution fed customer site is 15 times more likely to experience a voltage sag than an outage or momentary interruption

RESILIENCE – EXTENDING THE OPERATING ENVELOPE

"Extending the operating envelope" of equipment means reducing the area of equipment malfunctions by enabling the equipment to ride through deeper and longer voltage sags

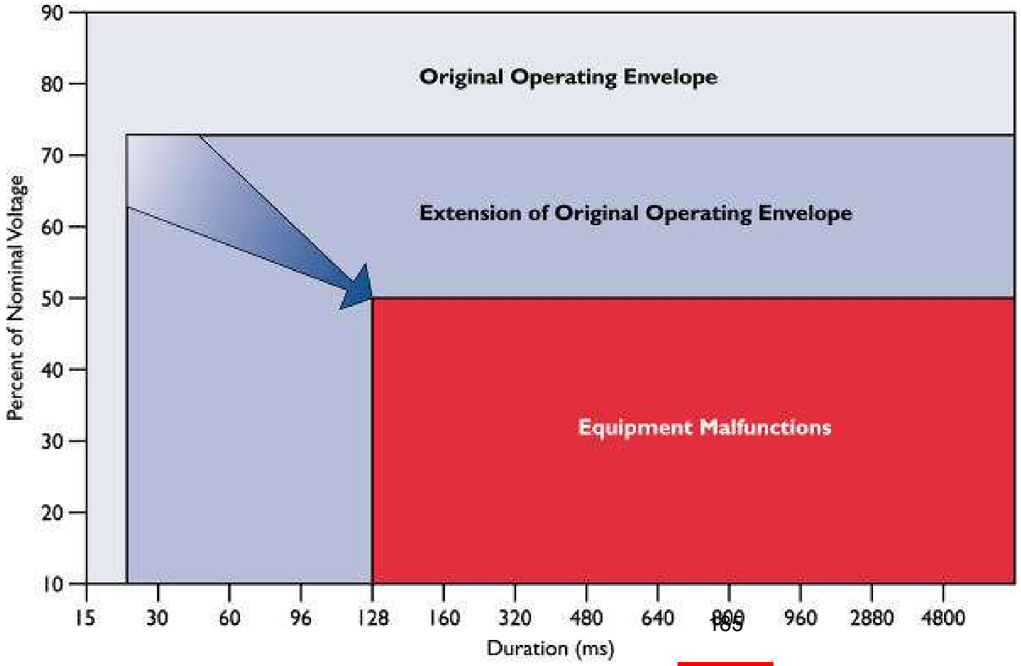

Table 10—Recommended test points for Type I and Type II voltage sags

Minimum test point No.	Residual voltage in percent nominal	Duration in seconds	Duration at 50 Hz	Duration at 60 Hz
1	50%	0.2	10 cycles	12 cycles
2	70%	0.5	25 cycles	30 cycles
3	80%	2.0	100 cycles	120 cycles

2	70%	0.1	5 cycles	6 cycles
3	80%	2.0	100 cycles	120 cycles

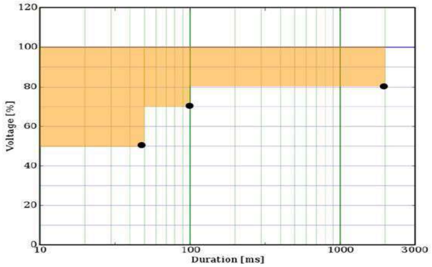

Figure 23—Recommended Type III test levels

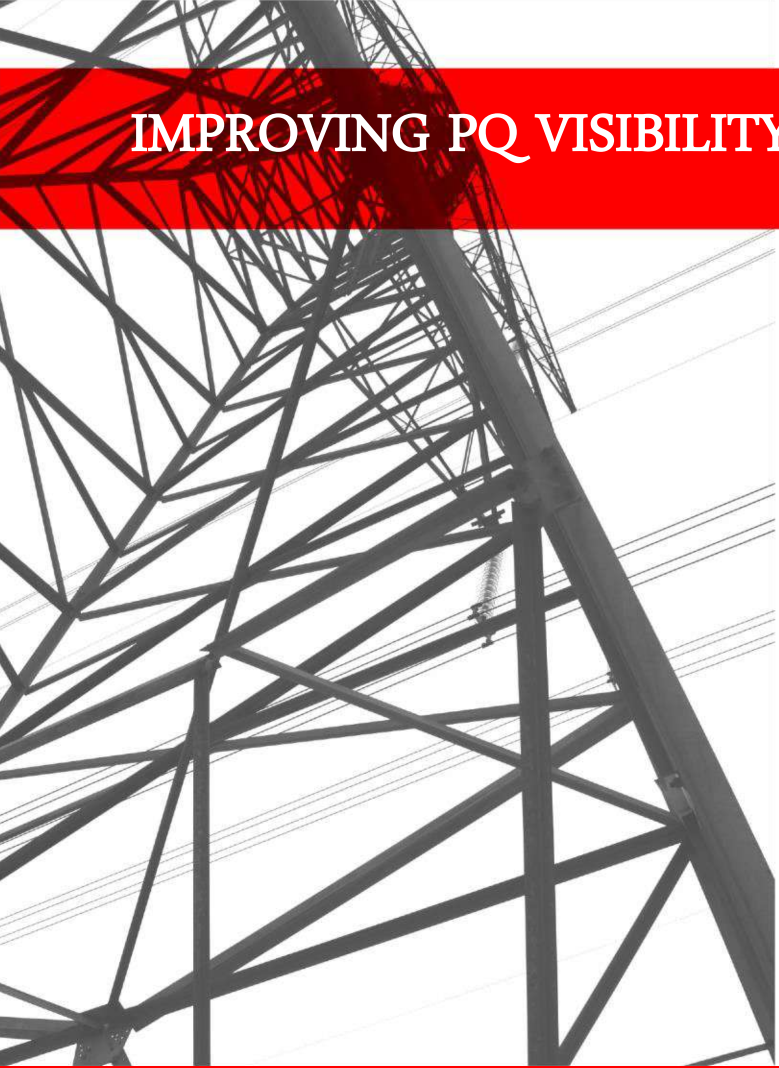
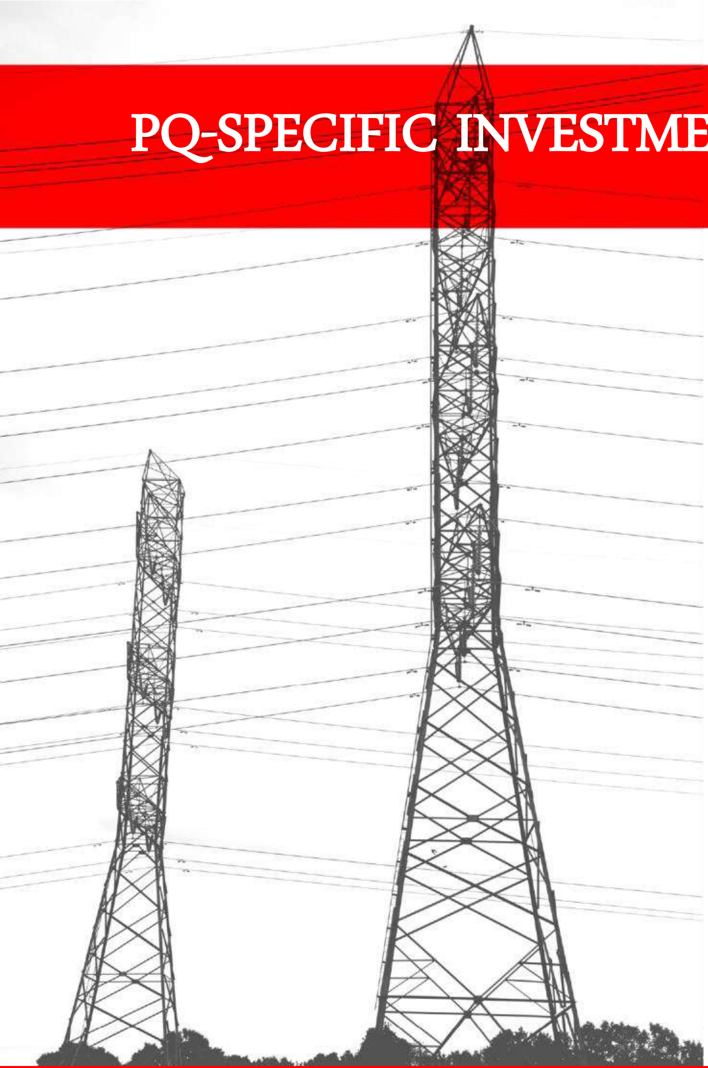
WHAT IS HYDRO ONE DOING ABOUT PQ?



IMPROVING PQ VISIBILITY

1. Increasing visibility of PQ measurements both in Tx and Dx
   - PQ meters installed to date = 345 Tx, 331 Dx (DG)
   - Average installed per year to Dx = 50 (DG)
   - Planned installations for Tx = 49 (by end of 2020)

2. Program to leverage/integrate Customer revenue meters into PQWeb
   (12 to date)



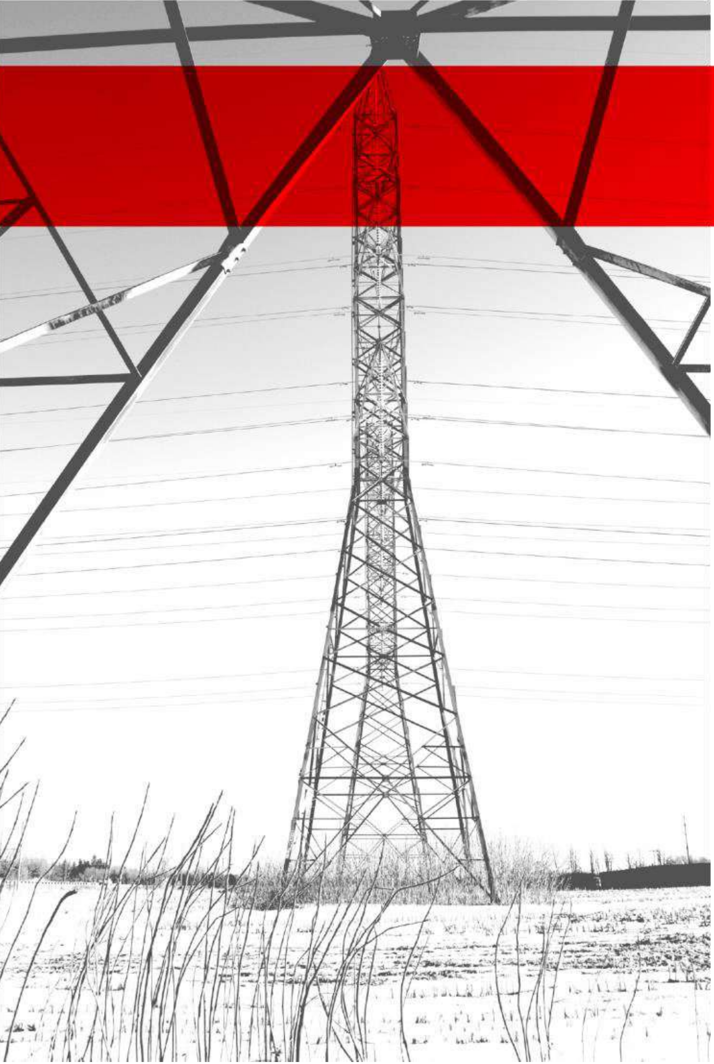
PQ-SPECIFIC INVESTMENTS

1. Dedicated PQ investment drivers

2. Investigate and invest in practical and financially prudent non-reactive measures that improve PQ

    - For example, a pilot to evaluate the performance of 72kV capacitor bank switchers with pre-insertion resistors to reduce switching transients

3. Support of 3rd party Power Quality Audits



WHAT DOES A PQ AUDIT LOOK LIKE?

1. Utility Side Analysis

2. Plant System Analysis and Recommendations

UTILITY-SIDE ANALYSIS:
SARFI DATA

$$SARFI_x = \frac{\sum N_i}{N_T}$$

- System Average RMS (Variation) Frequency Index
- Typically normalized to per site/per year data
- The index provides a count of all events with magnitudes and durations outside or below the index threshold
    - SARFI-70 provides a normalized count of all voltage sags with a retained voltage less than 70% of nominal (regardless of duration) in a time period.
    - SARFI-10 represents a normalized count of the number of interruptions experienced at the site.

Table 10—Recommended test points for Type I and Type II voltage sags

Minimum test point No.	Residual voltage in percent nominal	Duration in seconds	Duration at 50 Hz	Duration at 60 Hz
1	50%	0.2	10 cycles	12 cycles
2	70%	0.5	25 cycles	30 cycles

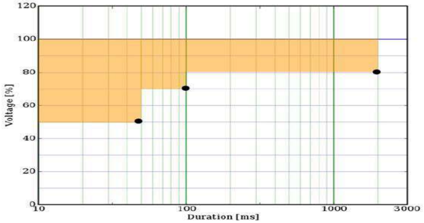

Figure 23—Recommended Type III test levels

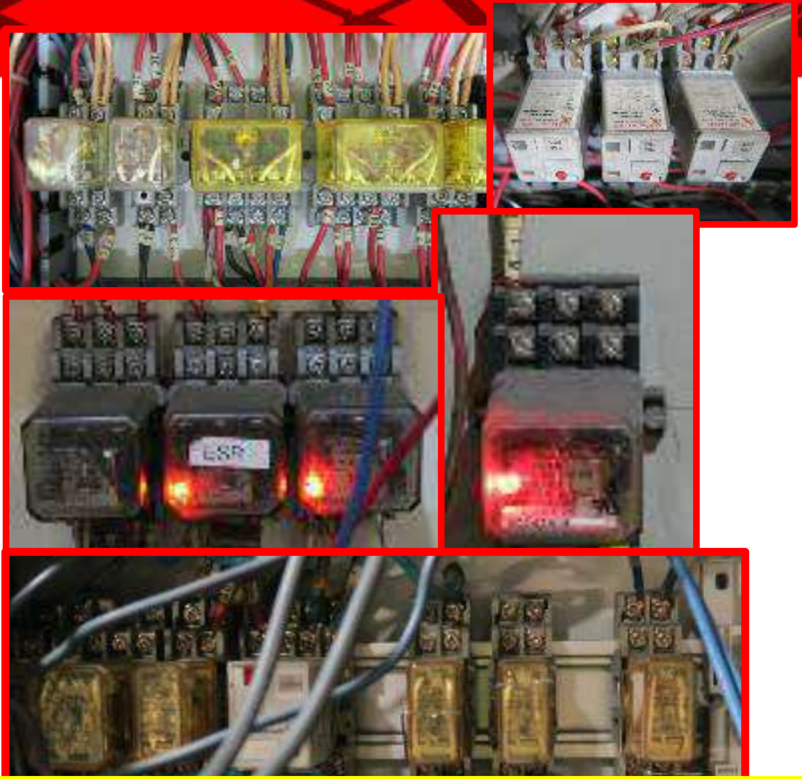
KEY FINDINGS FROM [CUSTOMER] ON-SITE AUDIT

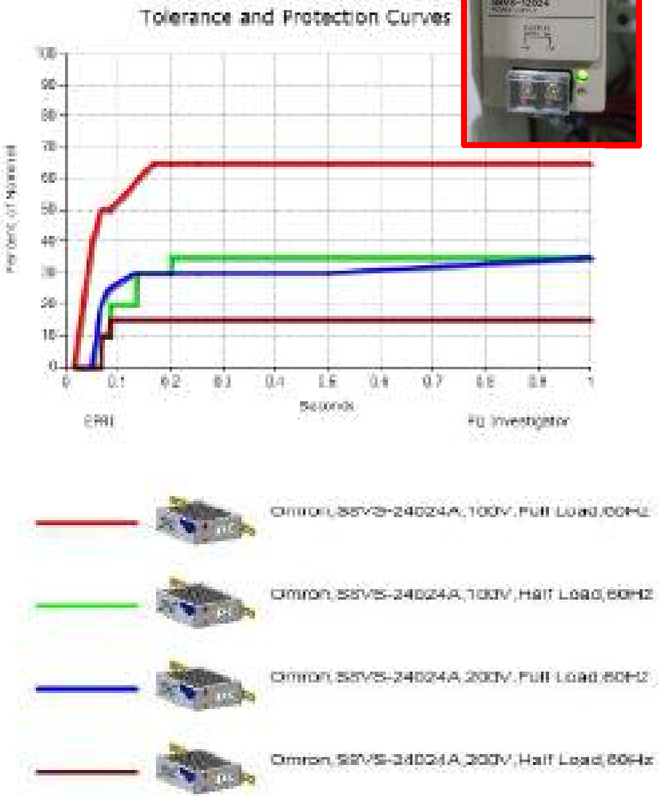
- Most of the process equipment was originally manufactured in the 1990's
  - Equipment has been moved to [customer] from different facilities around the world
  - Equipment has been upgraded on more than one occasion during its 20+ years of service
  - Equipment is largely dependent upon a coordinated drive system.
  - The safety and run permissives of the controls were fed through the contacts of AC Ice Cube relays which are sensitive to voltage sags.
  - The voltage sag ride through of these clear plastic relays is typically 1cycle 72%



Major Finding: Any voltage sag lower than 72% will cause the relay contacts to open and remove run permissive(s), enable signals, and potentially trigger a false Emergency Power Off (EPO).

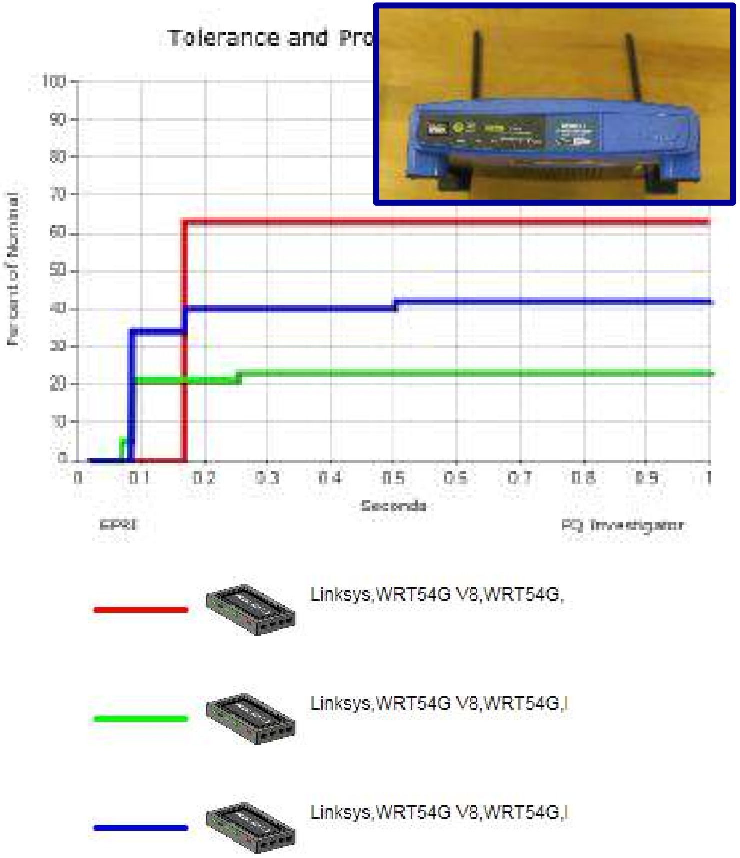
KEY FINDING FROM ON-SITE AUDIT (CONT'D)

- Omron S8VS Series DC Power Supply
  - The facility has chosen the Omron power supply for process control throughout the facility
  - EPRI has tested this power supply and found that the voltage sag ride through varies depending upon AC input voltage and the output DC loading
  - If this power supply is powered 100Vac and loaded 100% the voltage sag ride through is 3cycles 65%.
  - Power Supply Nominal Voltage was ~115Vac
  - If power supply is loaded 50% or below the ride through is reduced to 10 cycles 35% nominal
  - If power supply was powered 200Vac or greater the ride through may be better than 15%.
  - DC Load measurements were not taken therefore the ride through of this power supply was assumed at 100% load



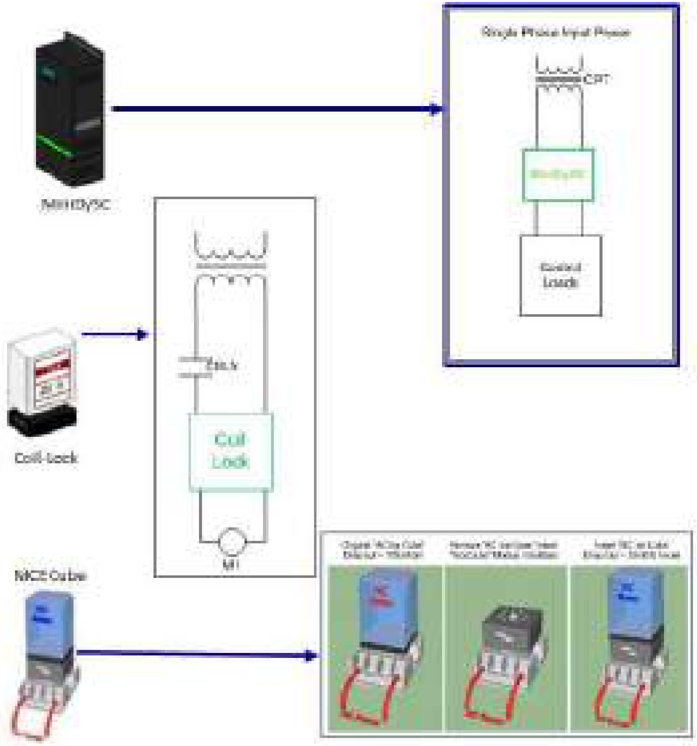
KEY FINDING FROM ON-SITE AUDIT (CONT'D)

- The equipment has been upgraded on several occasions
- The newest ASDs in the facility communicate through local area network hubs LAN
- These hubs were powered through the service outlets in the cabinets
- May times these service outlets are not powered from the same source as the controls
- Some of these hubs are sourced through outlet style plug in power supplies.
- EPRI tested a router using three different power supplies.
    - The results were drastically different.
    - The power supply with the highest current rating actually produced the worst voltage sag ride through performance.



TYPES OF VOLTAGE SAG
PQ SOLUTIONS

- MiniDySC
  - Static Series Compensator with Capacitor Storage
  - Control Circuit Mitigation
  - 50ms of voltage interruption (more time at reduced load)
- 5 seconds of voltage sag protection to 50% nominal
  - Coil Lock
  - Relay Coil Solution
  - Size based upon coil resistance
  - 3 seconds of voltage sag protection to 25% nominal
- Nice Cube
  - 8 pin octal Ice Cube Relay Solution
  - Direct replacement for 120Vac and 24Vac octal relays
  - 3 seconds of voltage sag protection to 30% nominal



COMPARISON OF VOLTAGE SAG VS. INTERRUPTION SOLUTIONS

Voltage Sag Solutions

- Pros
  - Lower Cost
  - Less Maintenance
- Cons
  - Less ride through time
  - Protects for voltage sags only
  - Some solutions will protect for a couple cycles of voltage interruption

Interruption Solutions

- Pros
  - Longer ride through time
  - Protection to 0 volts
- Cons
  - Higher cost
  - Ultra Capacitor UPS requires fan maintenance

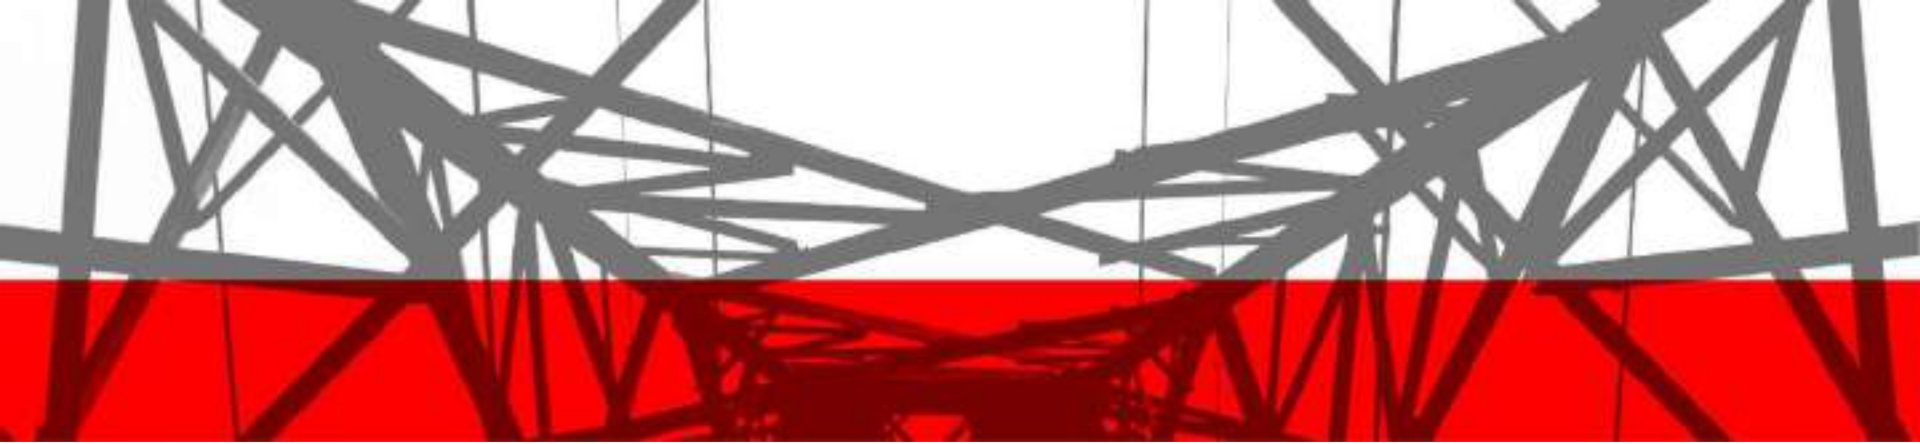
LARGE CUSTOMER CONFERENCE

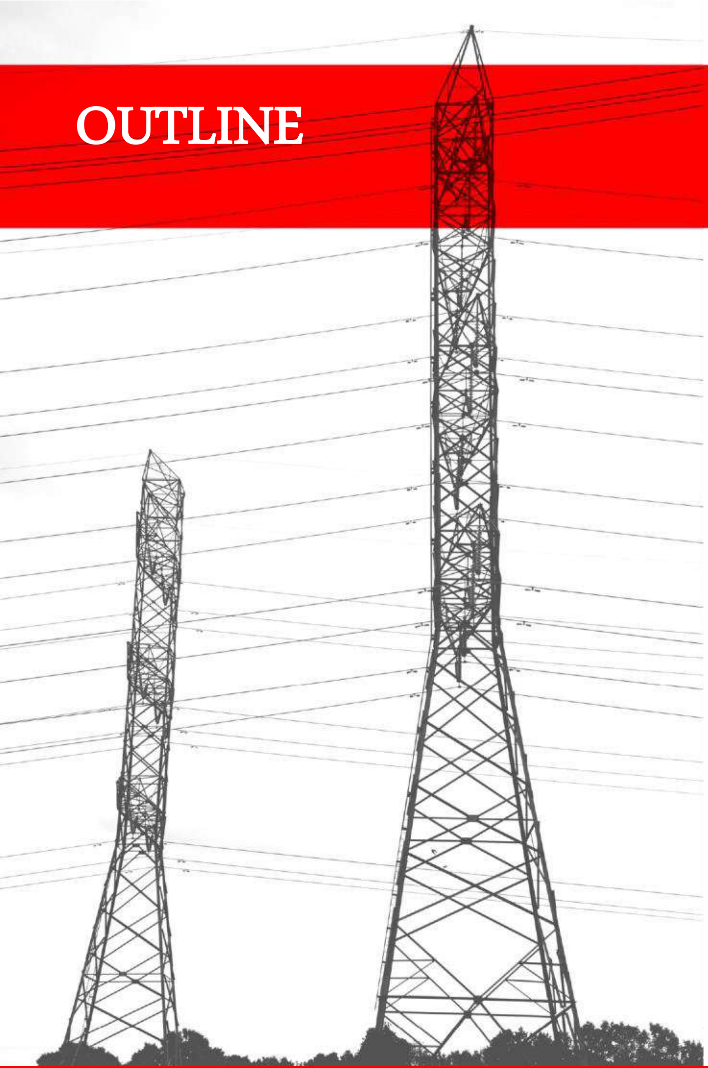
Productivity & Operational Efficiency



POWER QUALITY

Luis Marti

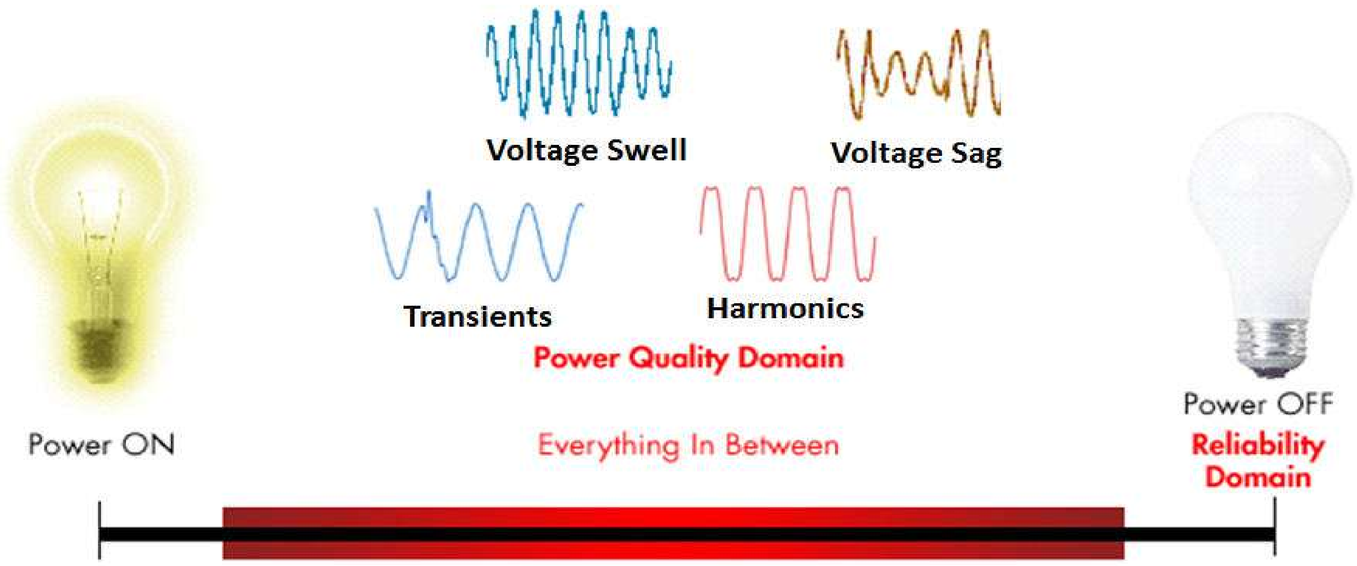
Director, Reliability Studies, Power Quality, RD&D



OUTLINE

- Power Quality vs. Reliability
  - Resiliency vs. Delivery Point Interruptions
  - Types of Power Quality issues
  - Voltage Sag
- Initiatives
  - Voltage sag reports
  - Revenue meter leverage
  - PQ audits

POWER QUALITY VS. RELIABILITY



Traditional Reliability Measures

- SAIDI (System Average Interruption Duration Index)
- SAIFI (System Average Interruption Frequency Index)

POWER QUALITY

- Power Quality (PQ) is a term used to describe harmonics, flicker, voltage imbalance, transients etc., excluding Delivery Point interruptions

- Formal PQ Definition: "Any problem that is manifested in voltage, current or frequency deviations [or tripping] that result in failure or misoperation of utility or end user equipment"

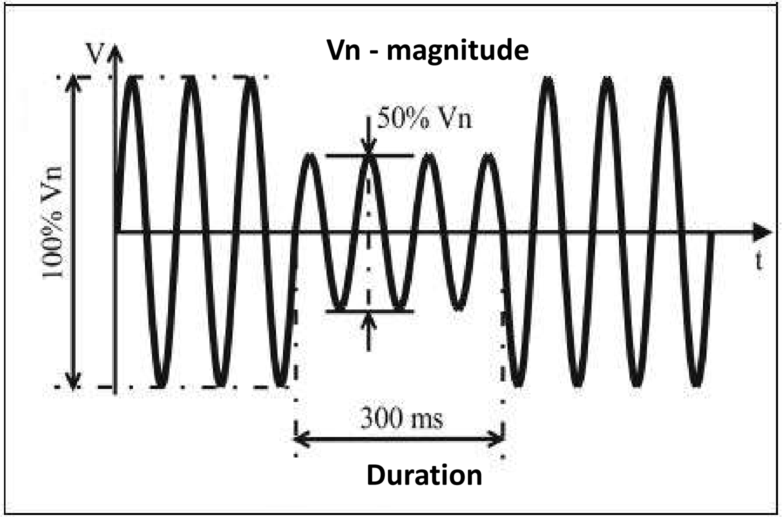
- PQ events can have high cost impact for industrial customers depending on the individual plant and internal processes

- Within the Hydro One system, the most common PQ issues that affect loads are:
  - Voltage sag events
  - Transient overvoltages caused by sub-transmission capacitor bank switching. Capacitor bank switching is not an issue in transmission – IPO breakers have been used since the 90s.

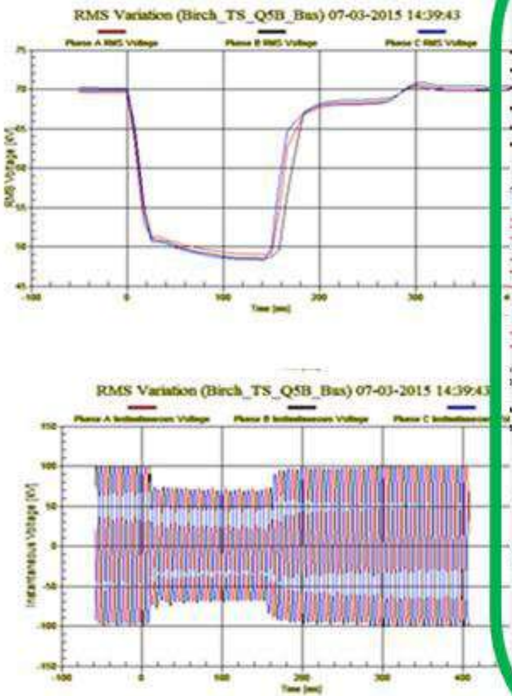
- To a lesser extent:
  - Flicker
  - Harmonics

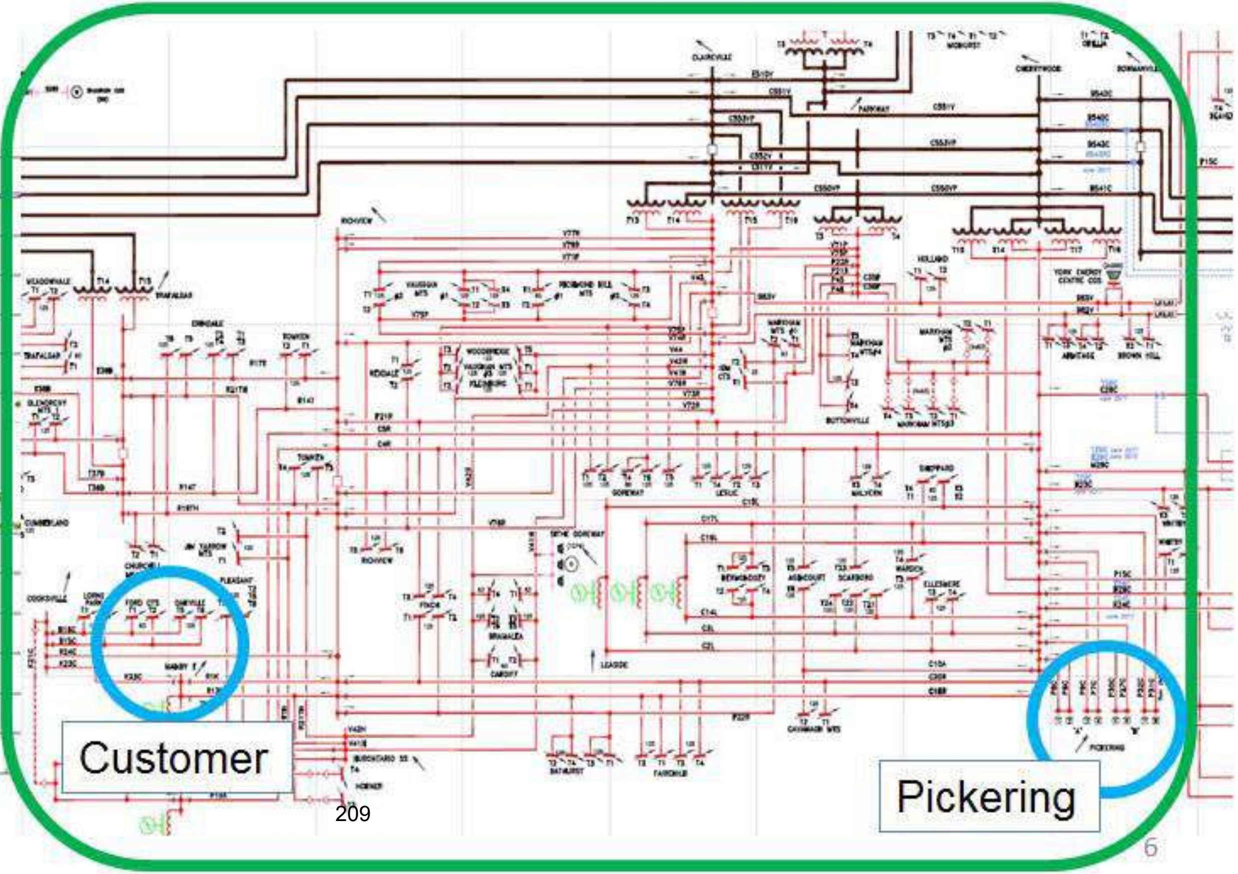
POWER QUALITY

- Momentary % drop in voltage magnitude due to a fault in the system
- System dependent :“zone of influence”
- If customer’s equipment cannot “ride through” the momentary drop in the voltage, equipment would generally disconnect automatically
- Unlike delivery point interruptions (which are a measure of system reliability), the effects of voltage sag events are a combination of:
  - Severity of the sag
  - Duration of the sag
  - Resilience of the load



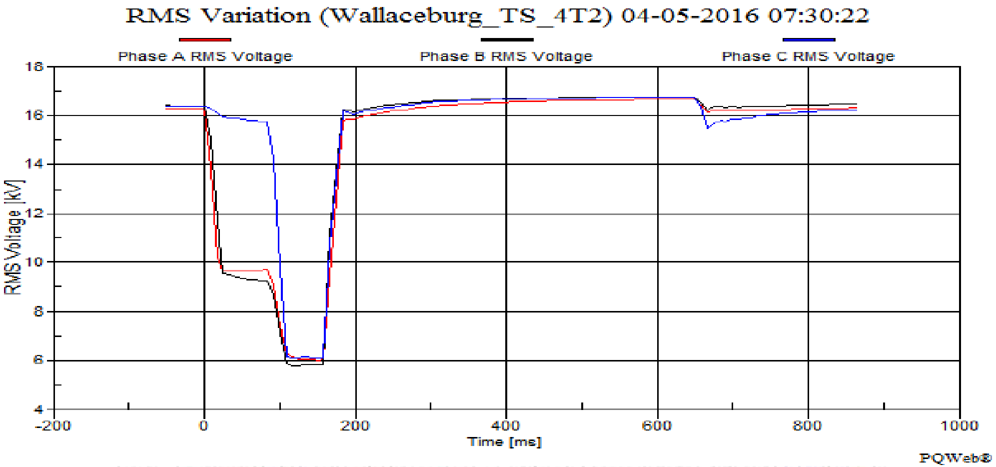
A FAULT WITHIN THE ZONE OF INFLUENCE CAN CAUSE A VOLTAGE SAG EVENT AT A CUSTOMER'S SITE

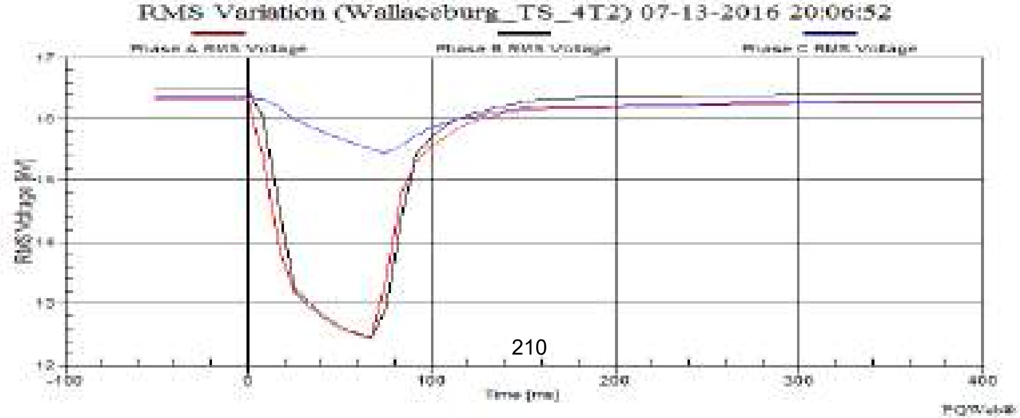




6

TYPICAL EVENTS CAPTURED





VOLTAGE SAG

- Standard IEEE1668 provides some guidance regarding load resilience in the form of recommended practices (not requirements / standards / compliance requirements)
- It is intended for customers to specify equipment procurement with OEMs. It carefully avoids suggesting any type of required utility / customer interface compatibility or performance
- All references to voltage sag pertain to the load side

Table 10—Recommended test points for Type I and Type II voltage sags

Minimum test point No.	Residual voltage in percent nominal	Duration in seconds	Duration at 50 Hz	Duration at 60 Hz

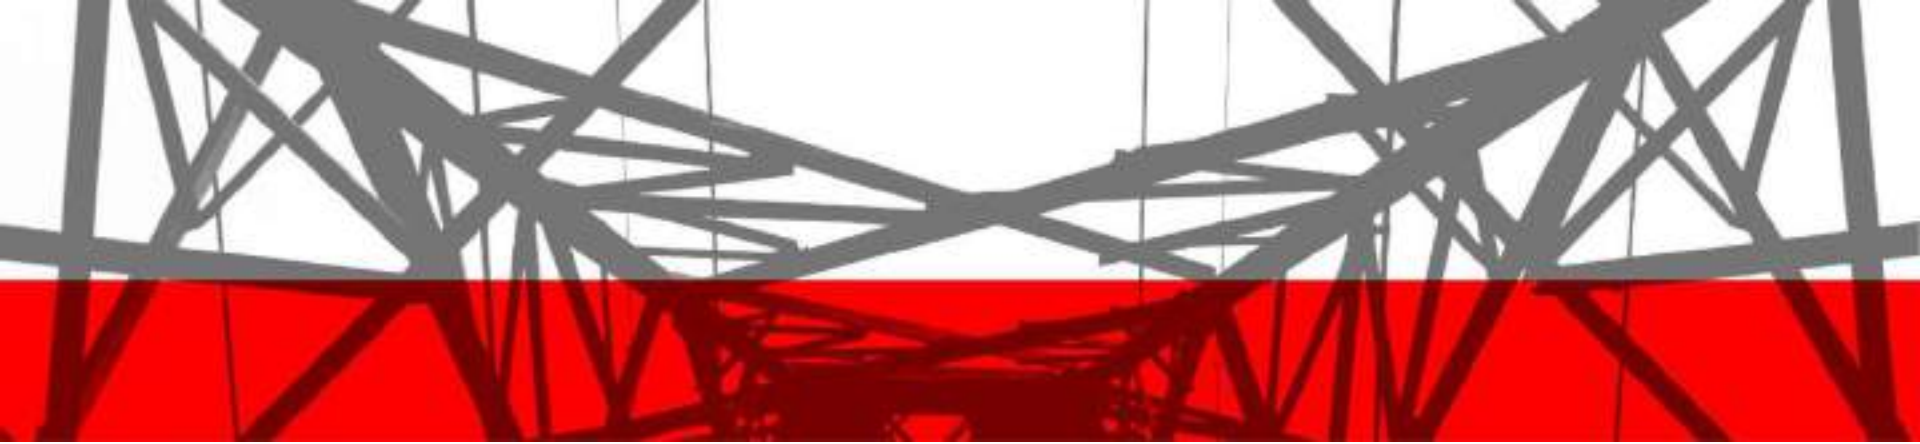
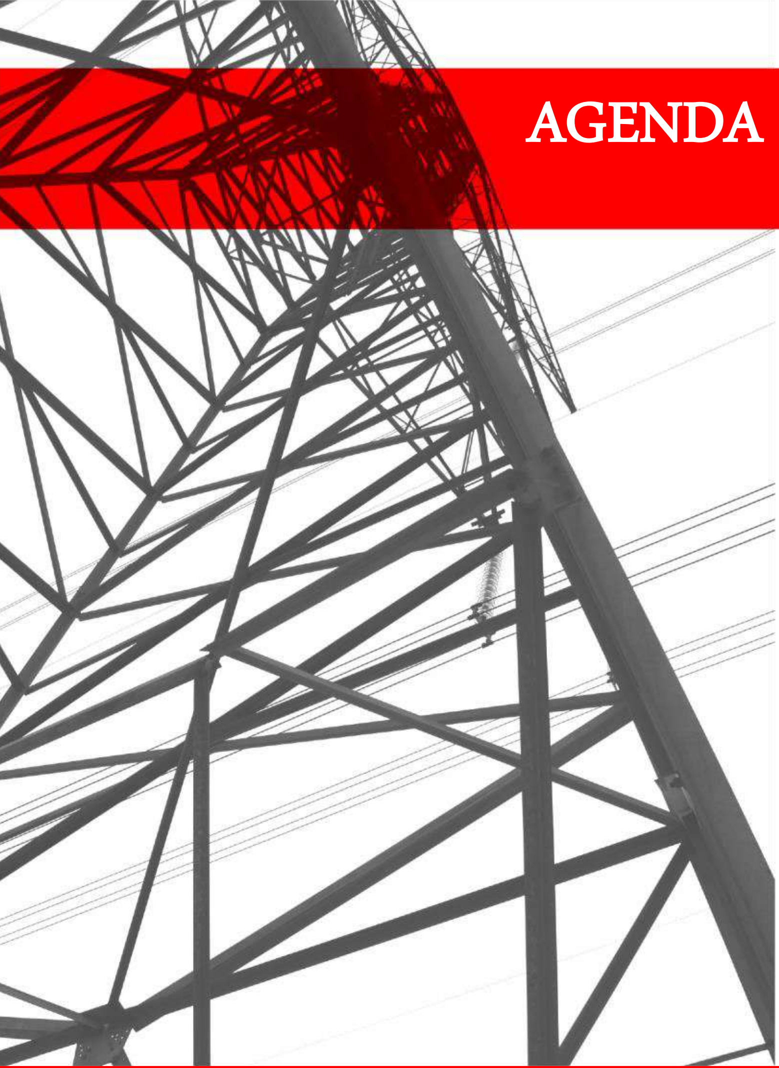
Productivity & Operational Efficiency



VOICE OF THE CUSTOMER

2016 Large Customer Conference



AGENDA

1. Purpose of today's session
2. Our commitment to large customers
3. What we've heard from you
4. What we've done to meet your needs
5. Now, it's your turn
6. It doesn't end today

VOICE OF THE CUSTOMER

Purpose of today's session

- Listen to your concerns and better understand your needs
- Identify any opportunities to add value to your business
- Capture your feedback and ensure follow-up by your Account Executive

VOICE OF THE CUSTOMER

Our commitment to large customers

- Large customers are a major driver of our success
- We are fully committed to continuous improvement

VOICE OF THE CUSTOMER

What we've heard from you last year

- Customer service, response timeliness and communications
- Rates and rate design
- Impacts of new/updated technology
- Power Quality and reliability

VOICE OF THE CUSTOMER

What we've done to meet your needs

- Drive process, reporting and communication improvements to identify and respond to your needs
    - Tx Customer Consultation sessions
    - Reliability Report and Customer Delivery Point Performance Standard

VOICE OF THE CUSTOMER

Now it's your turn

- Raise your hand so we can see you
- Please introduce yourself by stating your name and organization

VOICE OF THE CUSTOMER

It doesn't end today

- Your Account Executive, Executive Sponsor and/or other staff will follow-up with you directly

Thank You

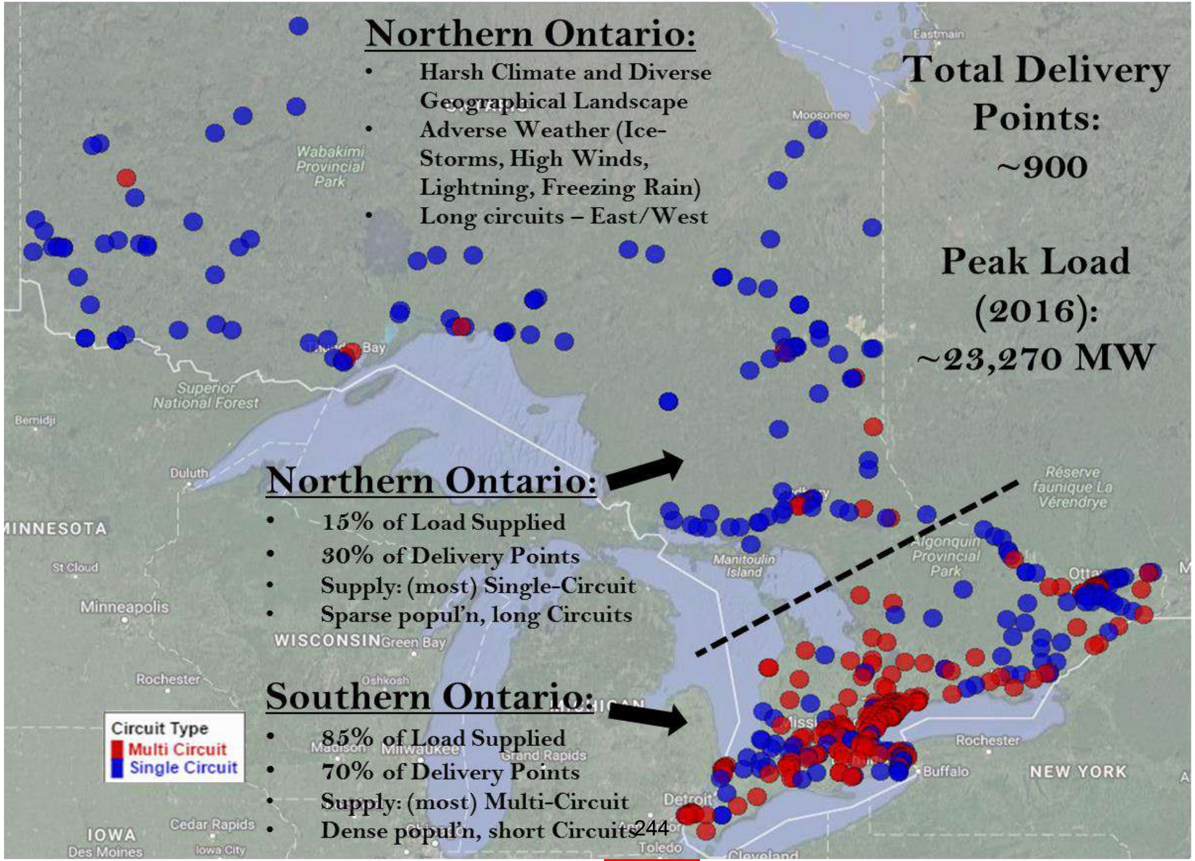
TRANSMISSION RELIABILITY (SAIDI/SAIFI)

Scott McLachlan

Director, Planning Optimization

Hydro One

ONTARIO LANDSCAPE: DELIVERY POINTS
MULTI-CIRCUIT VS SINGLE-CIRCUIT SUPPLIED



Northern Ontario:

- Harsh Climate and Diverse Geographical Landscape
- Adverse Weather (Ice-Storms, High Winds, Lightning, Freezing Rain)
- Long circuits – East/West

Total Delivery Points: ~900

Peak Load (2016): ~23,270 MW

Northern Ontario:

- 15% of Load Supplied
- 30% of Delivery Points
- Supply: (most) Single-Circuit
- Sparse popul'n, long Circuits

Southern Ontario:

- 85% of Load Supplied
- 70% of Delivery Points
- Supply: (most) Multi-Circuit
- Dense popul'n, short Circuits244

hydro one

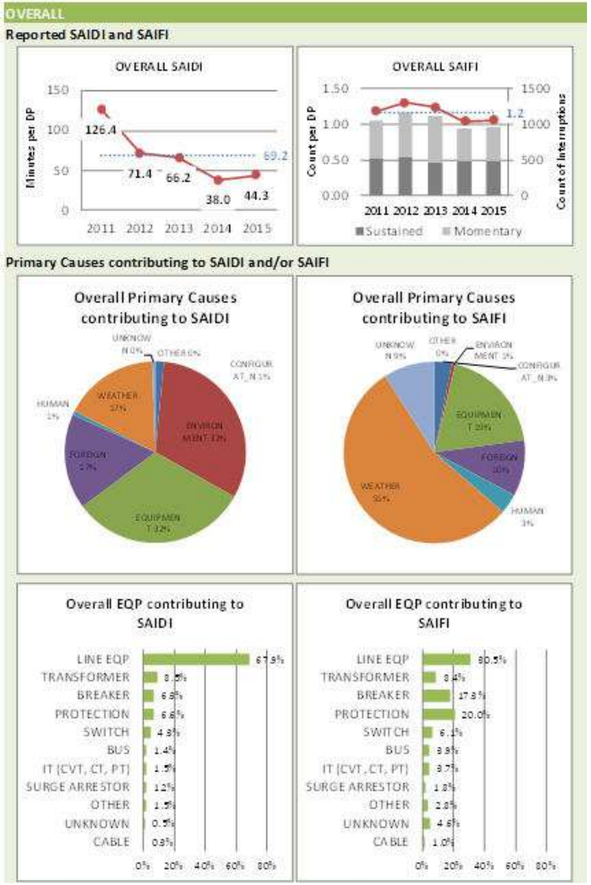
OVERALL TRANSMISSION PERFORMANCE

- **Lightning** is the major contributor to SAIFI (higher frequency, momentary events)
- **Equipment Failure** is the major contributor to SAIDI (low frequency, but longer duration)
- 1st Quartile (CEA benchmarked)
- SAIDI 5-Year Average: ~69.2 minutes
- SAIFI 5-Year Average: ~1.2 interruptions

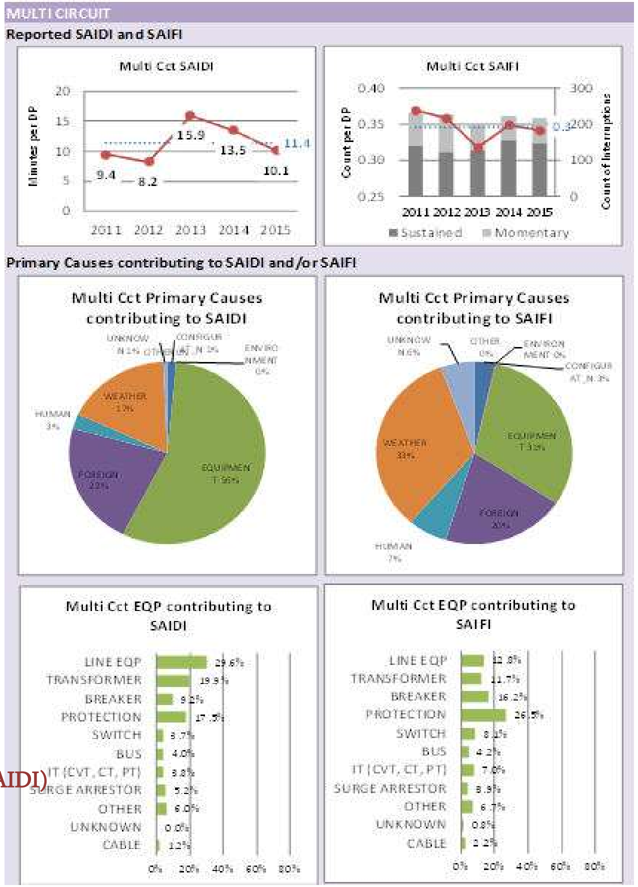


SAIDI/SAIFI → Primary Causes → Eqmt Class

PRIMARY Cause EQP Failure: 42% of total interrupted minutes (SAIDI)

MULTI-CIRCUIT SUB-SYSTEM

- 85 % of total supplied LOAD
- Higher Customer Density, (shorter lines in some cases)
- Contingent Supply (Two)
- Predominant in Southern Ontario and Urban areas
- 1st Quartile (CEA benchmarked)
- SAIDI 5-Year Average: ~11.4 minutes
- SAIFI 5-Year Average: ~0.3 interruptions

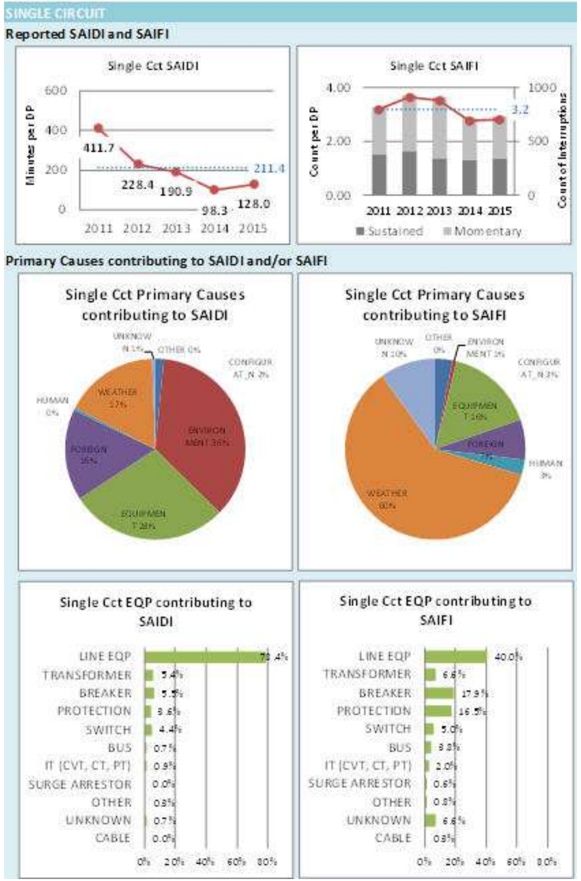


SAIDI/SAIFI → Primary Causes → Eqmt Class

PRIMARY Cause EQP Failure: 50% of total interrupted minutes (SAIDI)

SINGLE-CIRCUIT SUB-SYSTEM

- 15 % of total supplied Load
- Lower Customer Density
- **NO** Contingent Supply
- Predominant in Northern Ontario and Rural areas
- Susceptible to adverse weather
- Lightning contributes to higher frequency, momentary events
- Estimated 2nd Quartile (Not benchmarked)
- SAIDI 5-Year Average: ~211.4 minutes
- SAIFI 5-Year Average: ~3.2 interruptions



SAIDI/SAIFI → Primary Causes → Eqmt Class

PRIMARY Cause EQP Failure: 41% of total interrupted minutes (SAIDI)

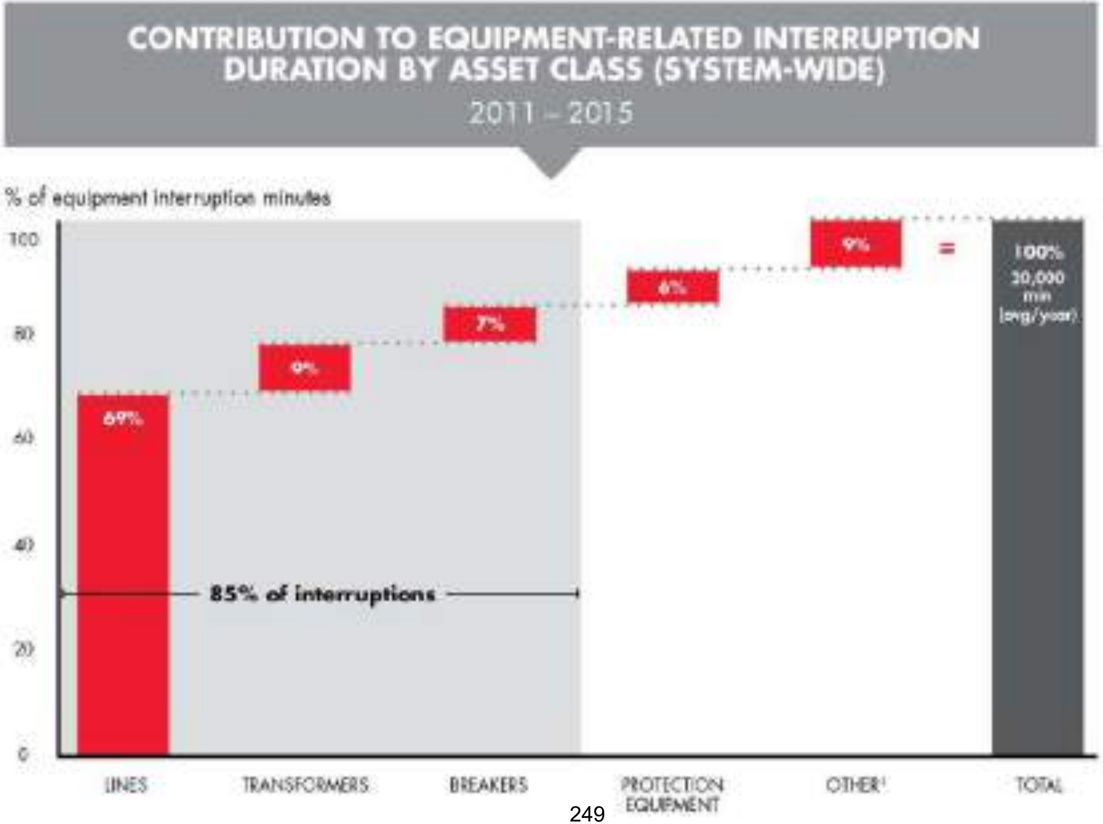
EQUIPMENT FAILURES

MAJOR TYPES CONTRIBUTING TO INTERRUPTION DURATION



TRANSMISSION CUSTOMER CONSULTATION FEEDBACK

Performance Comparison with other Customers Locally

Established 10 Local Reliability Areas:

South	Greater Toronto Area (GTA)
	Metro Toronto
	Hamilton Niagara
	East
	Central
	West
North	South West
	Sudbury-Algoma
	North East

Performance Comparison with Industry Peers

Established 3 Reliability Peer Groups:

- Direct Industrial
- Local Distribution Company (LDC)
- Hydro One Distribution

For Q2-2017, Hydro One has an initiative to launch a NEW web portal for our Customers showing insight into our Transmission Customer Reliability Metrics.

This web portal will allow Customers to:

- **View their Historical and Year to Date Performance for Duration and Frequency**
- **Have transparency into their Performance Reliability, revealing trends and/or isolated events**
- **Compare their performance with Peer Groups and Localized Area**

LOCAL RELIABILITY AREAS

10 Local Reliability Areas based on the 21 Regional Planning Zones were established:

- Northern Ontario (3)
- Southern Ontario (7)
- On average, ~60-100+ Delivery Points/Area

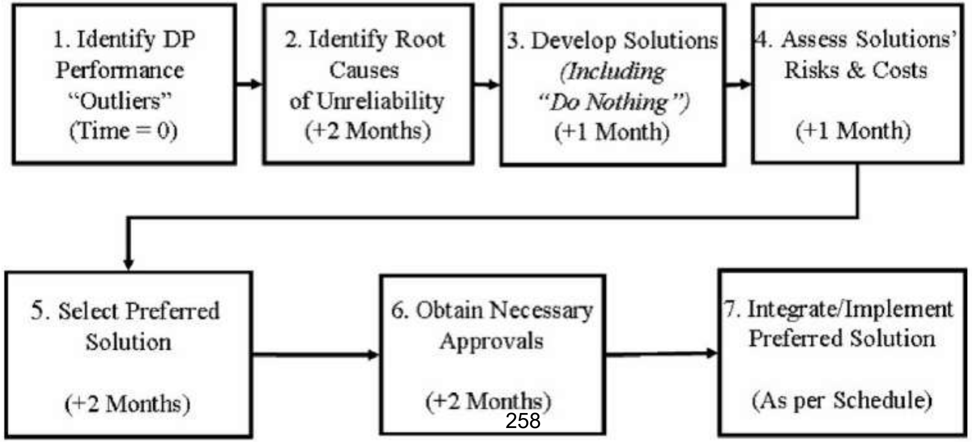
CUSTOMER DELIVERY POINT PERFORMANCE (CDPP) STANDARDS

- The Transmission System Code (TSC) requires transmitters to develop performance standards at the customer delivery point (DP) level

- The approved CDPP Standard consists of two components that:

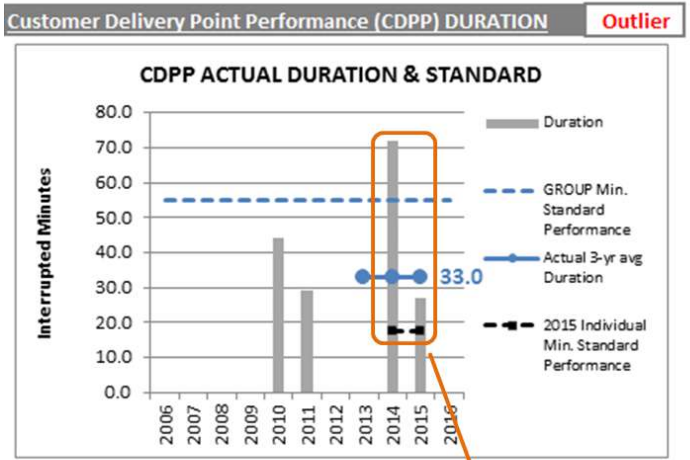
  1. Relate the reliability of supply to the size of load being served at the delivery point (Group Minimum Standard Performance) and
  2. Maintain a customer's individual historical delivery point performance (Individual Minimum Standard Performance)

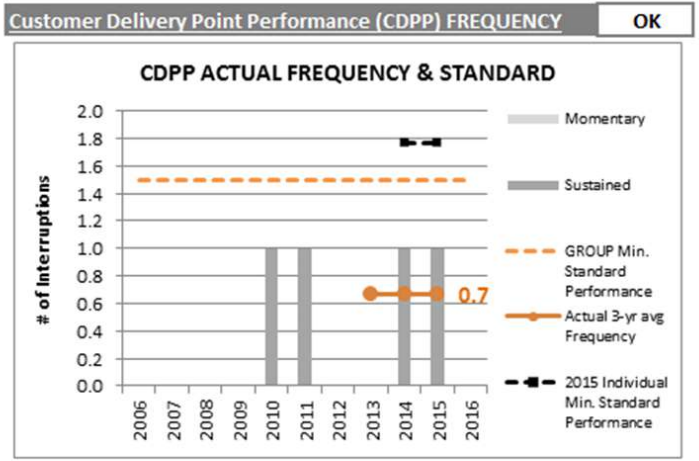


Reference: *EB-2005-0501, Exhibit A, Tab 15, Schedule 3*

CDPP – IDENTIFYING OUTLIERS

Triggers for each component are used to identify performance "outliers" to initiate technical and financial evaluations to determine the root cause of unreliability and remedial action required to improve reliability





This is a Delivery Point in the GTA.
This DP is an Individual DURATION Outlier because its' Performance has exceeded its' Minimum Standard Performance for 2 consecutive years (2014 & 2015) 259

CDPP – IDENTIFYING OUTLIERS

- When a Delivery Point is identified as an Outlier, it is considered a candidate for remedial action.
- In such cases, Hydro One will initiate technical and financial evaluations with affected customers to determine the root cause of the unreliability and any remedial action required to improve the reliability

The CDPP Outlier Appendix A based on the 2014 Outlier Status were issued to customers this year outlining their performance, detailed analysis and any remediation plans.

Appendix A:
Customer Delivery Point Performance (2014 Report) – DP Outlier

hydro one

Customer:

Station Name	Delivery Point Designation	LV Bus	Station Avg 3-Yr MW	Supply Circuit
St.Marys TS	NW9Y	Y	16.2	L7S

Performance Standards & Actual Results

Group Standard	Actual Performance (2012-2014 Average)	Minimum Standard Performance	Is this DP an Outlier for this Measure?
Frequency of Interruptions (outages/year)	3.67	3.50	Y
Duration of Interruptions (minutes/year)	34.33	140.00	N

Note: The Group performance standard is based on the 3 year average load being served at the DP

Individual Standard	Actual Performance		Minimum Standard Performance	Is this DP an Outlier for this Measure?
	2013	2014		
Frequency of Interruptions (outages/year)	1	6	19.06	N
Duration of Interruptions (minutes/year)	5	81	124.54	N

Note: The individual performance standard is based on the DP's historical performance. A DP is an outlier when the actual performance exceeds the individual minimumstandard of performance for two consecutive years.

Performance Analysis & Proposed Remediation Plans

Latest CDPP Report Analysis (2014 to 2012, Historic Results)	Post-CDPP Report Analysis (2015 to Mid-2016)
> Majority of Frequency resulted from momentary lightning events. This circuit is a long East-West circuit and is very susceptible to adverse weather historically and continuing. > These events increased 3-yr avg frequency to become a frequency group outlier, marginally. > Single equipment failure due to skywire in 2014 (65 min.) contributed to Duration.	2015: Equipment failure during adverse weather (~500 minutes) and a vehicle contact with structure (~1500 minutes) continue to deteriorate performance. Frequency improved substantially, returning to within historic levels. 2016: Only one interruption to date, minimal duration and weather cause.

Remediation Plans and/or Investments Proposed for this specific DP/Supply Circuit

> Performance indicates a natural return to within acceptable levels for frequency.
> Fault recorders have been acquired and installed to improve the ability to track location of faults. This data is being analyzed by Hydro One to assess possible location of circuit switchers.
> Line operating performance will be assessed through the Regional Planning process which will include circuits L7S, D10H and 61M18, additionally L7S is being assessed for lightnin [illegible] rmance.
> Some insulator and wood pole replacements are planned on [illegible] it in the 2017-2020 business plan
> Monitor performance in next CDPPS report

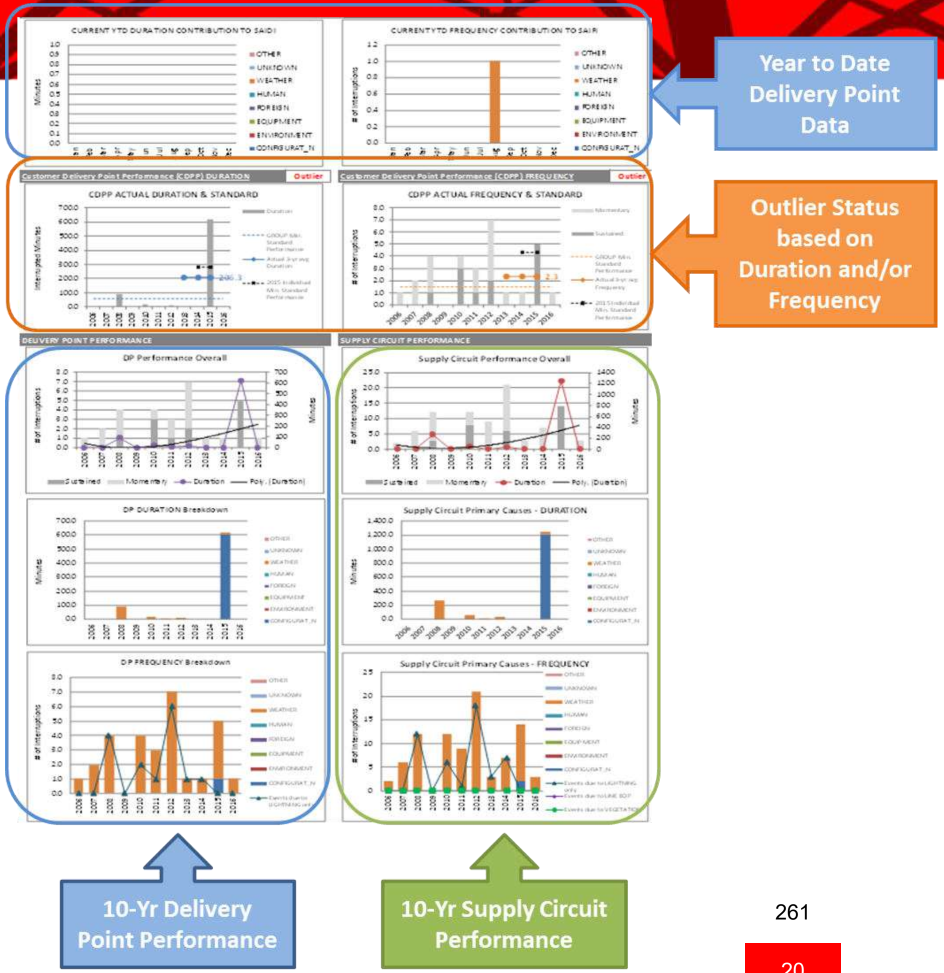
Delivery Point (DP) Data

DP Performance as per GROUP Standard

DP Performance as per INDIVIDUAL Standard

DP Performance Analysis

Remediation Plans and/or Investments Proposed



- A Delivery Point and Supply Circuit tool was developed to provide improved analysis, and transparency for both Hydro One and our Customers
- Our goal is to make this available to Customers via web portal log-in
- This tool will provide insight into the general health of the Delivery Point and Supply Circuit
- This report includes Monthly YTD data and 10-Year Performance History, revealing trends and/or isolated events contributing to performance

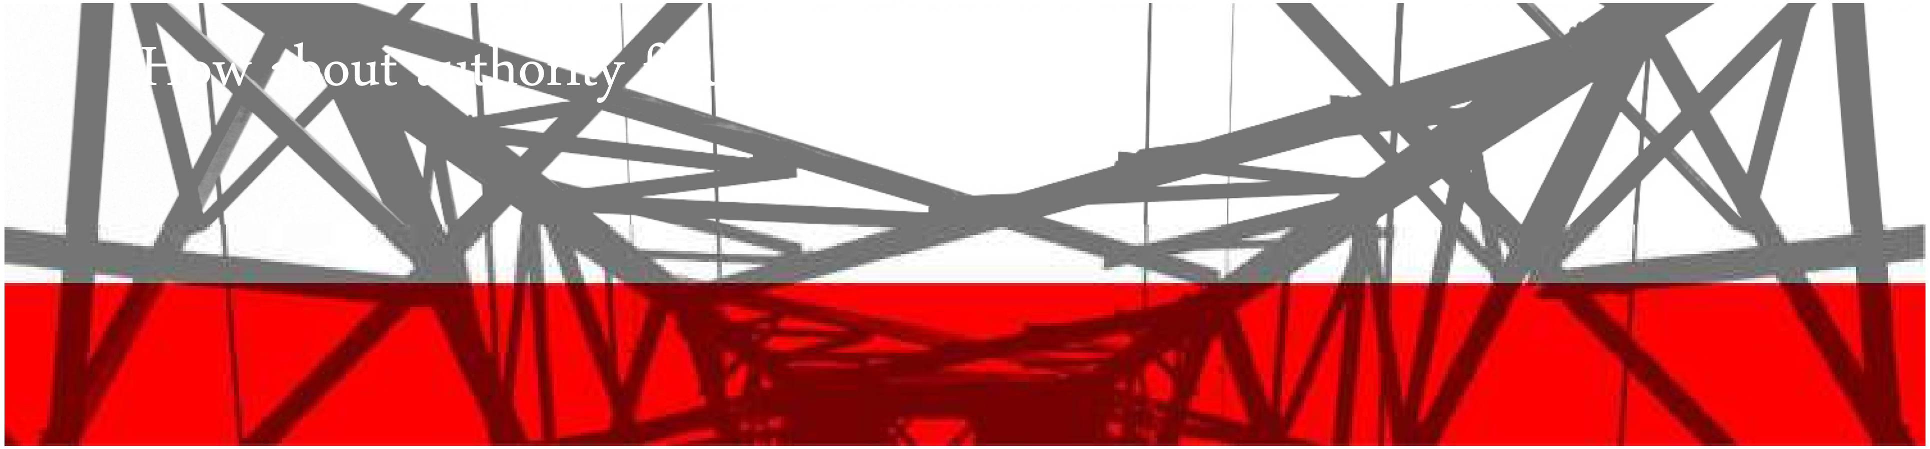
LARGE CUSTOMER CONFERENCE

Productivity & Operational Efficiency



CONNECTION & COST RECOVERY AGREEMENT (CCRA)

INITIAL ECONOMIC EVALUATIONS & TRUE UPS

Wade Frost MBA, CPA, CMA

Manager, Decision Support

Hydro One

CCRA OVERVIEW

- Goal is to hold the Tx rate pools harmless when new connections or customer specific upgrades are built
- OEB Transmission System Code (TSC) governs the entire process (section 6.5 and Appendix B)
- Further details in OEB approved Transmission Connection Procedures
- An economic evaluation determines whether a customer capital contribution is required

CCRA OVERVIEW (CONT'D)

- Evaluation of new or modified load connections impact on each rate pool
  - Each evaluation is considered separate from other rate pools (No cross subsidization)

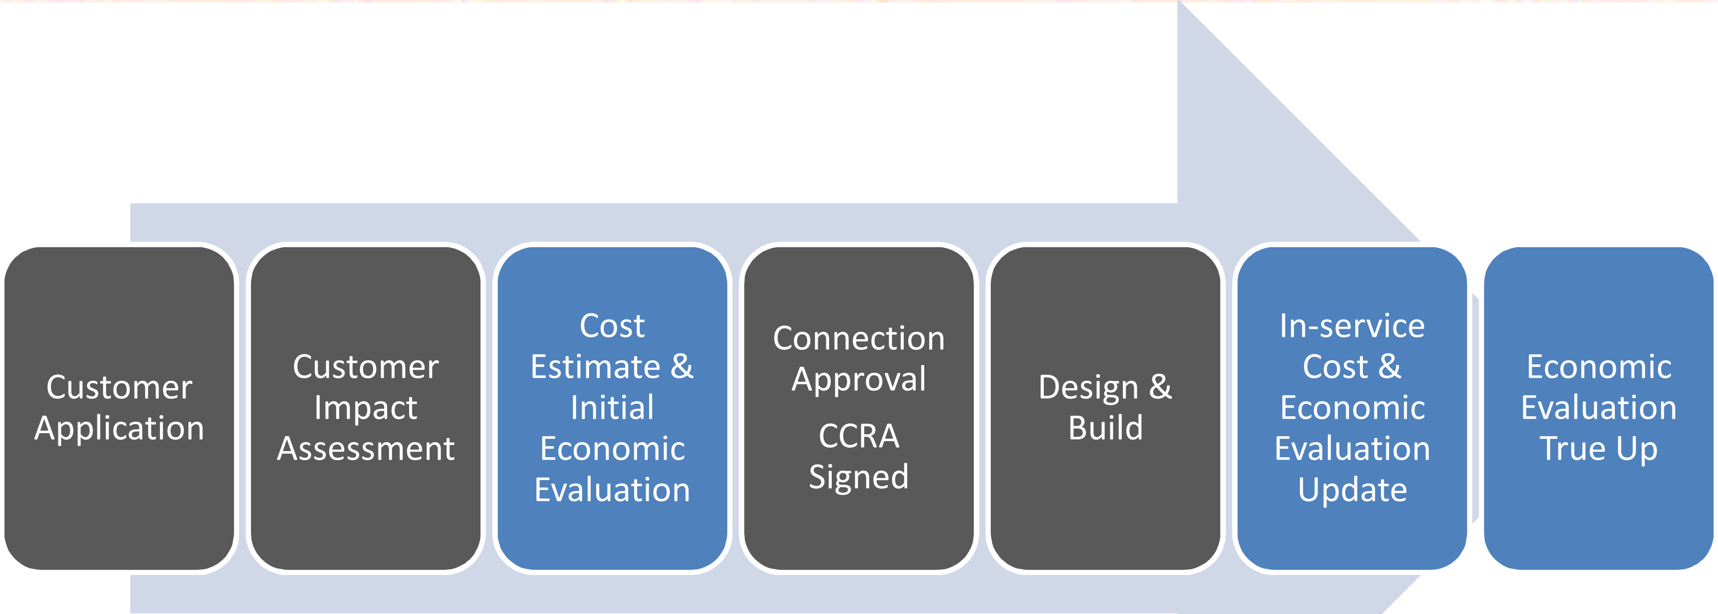
- Up to 25 year forecast of incremental load based on customer risk profile (as per TSC requirements)

- Primary forecast inputs
  - Up-front project costs
  - Incremental load
  - Ongoing operating expenditures

ECONOMIC EVALUATION (CONT'D)

- Economic evaluation based on a discounted cash flow (DCF) model
- A Net Present Value (NPV) result less than zero is considered to cause harm to the rate pool
- A negative impact on the rate pool triggers a capital contribution

PLACE IN CONNECTION PROCESS



- Customer Cost Recovery occurs at predetermined points in the Customer Connection Process

hydro one

Initial Economic Evaluation (IEE)

- Initial Economic Evaluation (IEE) prepared based on estimated connection costs and customer load forecast

- CCRA captures IEE results and establishes capital contribution progress payment schedule

- All inputs except actual construction cost and load frozen after IEE completed

hydro one

IEE RESULTS!

Discounted Cash Flow Summary

Economic Study Horizon - Years:		**25**
Discount Rate - %		**5.78%**
		$k
PV Incremental Revenue		29,181.2
PV OM&A Costs		(7,944.1)
PV Ontario Capital Tax and Municipal Tax		(843.0)
PV Income Taxes		(5,404.4)
PV CCA Tax Shield		2,306.8
PV Capital - Upfront	(15,000.0)	
Add: PV **Capital Contribution**	**0.0**	(15,000.0)
PV Capital - On-going		0.0
PV Proceeds on disposal of assets		0.0
PV Working Capital		1.2
PV Surplus / (Shortfall)		2,297.6
Profitability Index*		1.2

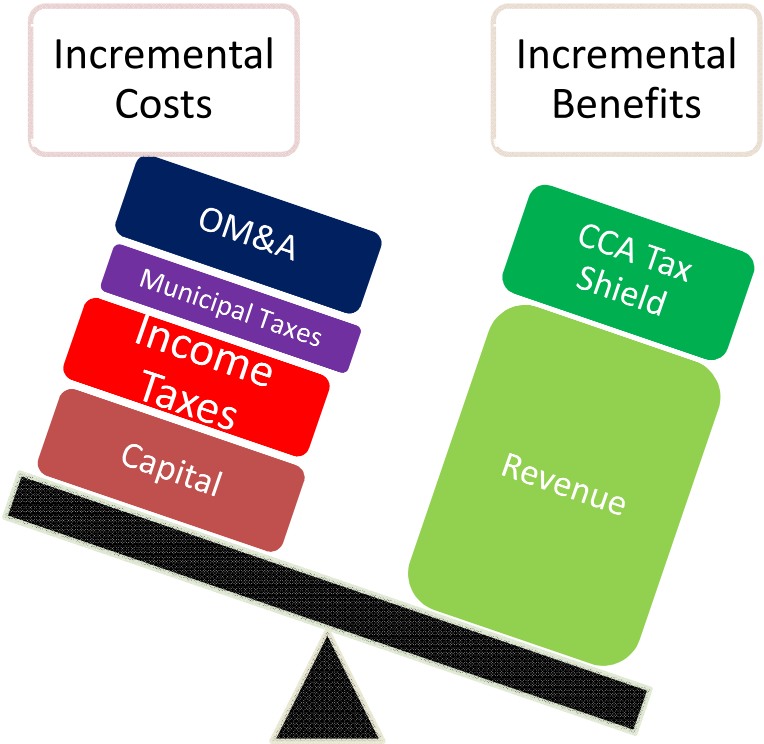
Notes:
*PV of total cash flow, excluding net capital expenditure & on-going capital & proceeds on disposal / PV of net capital expenditure & on-going capital & proceeds on disposal

All Revenue and Expenses are brought to Time = 0

Other Assumptions		**Notes:**
In-Service Date:	1-Jan-20	
Municipal Tax	0.42%	Transmission system average
Federal Income Tax	15.00%	Federal corporate income tax
Ontario Corporation Income Tax	11.50%	Provincial corporate income tax
Working cash net lag days	-1.04	As per Lead Lag study
CCA Rate for Class 47 Assets	8%	100% Class 47 assets

Calculation Time Stamp: 01-May-14, 4:12 PM

IEE RESULTS EXPLAINED



- NPV > or = 0 results in no capital contribution
- NPV < 0 requires capital contribution to have a zero NPV
- Ensures Ratepayer is not harmed
- Capital contributions lower Net Book Value of asset

CCRA CONTROL: LOAD TRUE UPS

- True Ups occur at preset periods after in-service, based on risk profile of customer
- Distribution customers are always considered “Low” Risk with 25 year economic evaluation period
- Low risk, true ups occur once project is in service and the 5, 10 and potentially 15 year mark as per 6.5.3c TSC
- Only load is trued up. Other inputs are held constant per TSC s6.5.4
- Additional capital contributions due as required while refunds for an over contribution are paid at final true up – both values are impacted by time-value-of-money

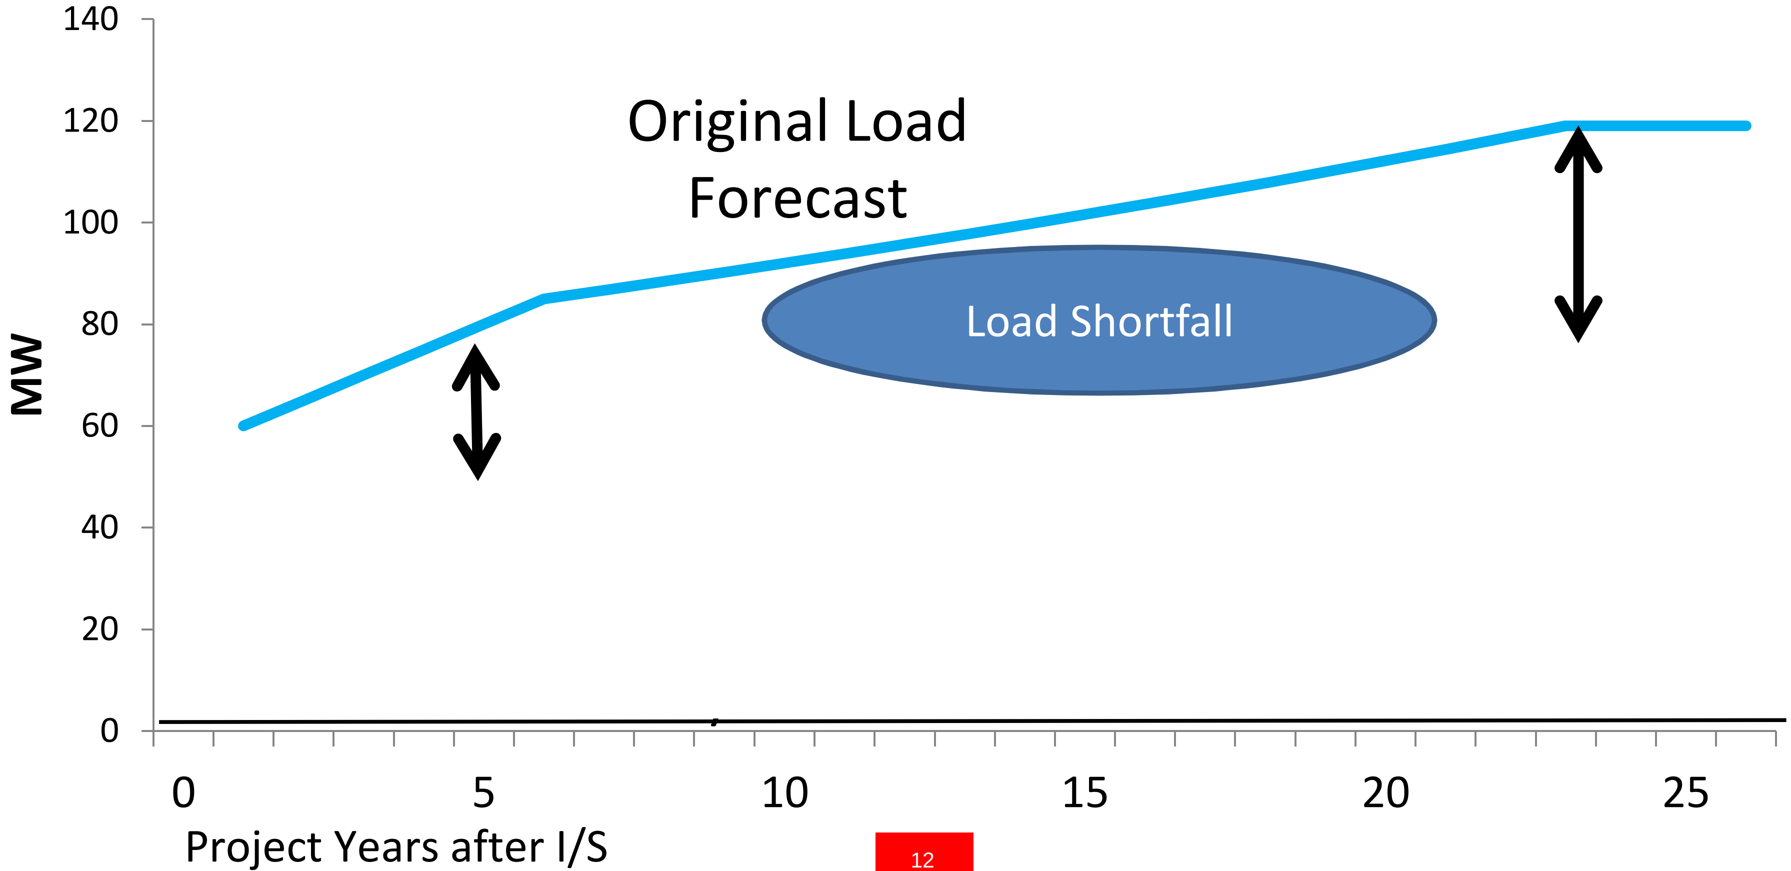
CDM/DISTRIBUTED GENERATION LOAD ADJUSTMENTS

- Per s6.5.8 and s6.5.10. of the TSC, the impact of incremental CDM and DGs may be added to the actual load. Hydro One performs the assessment; customer is not required to perform the calculation

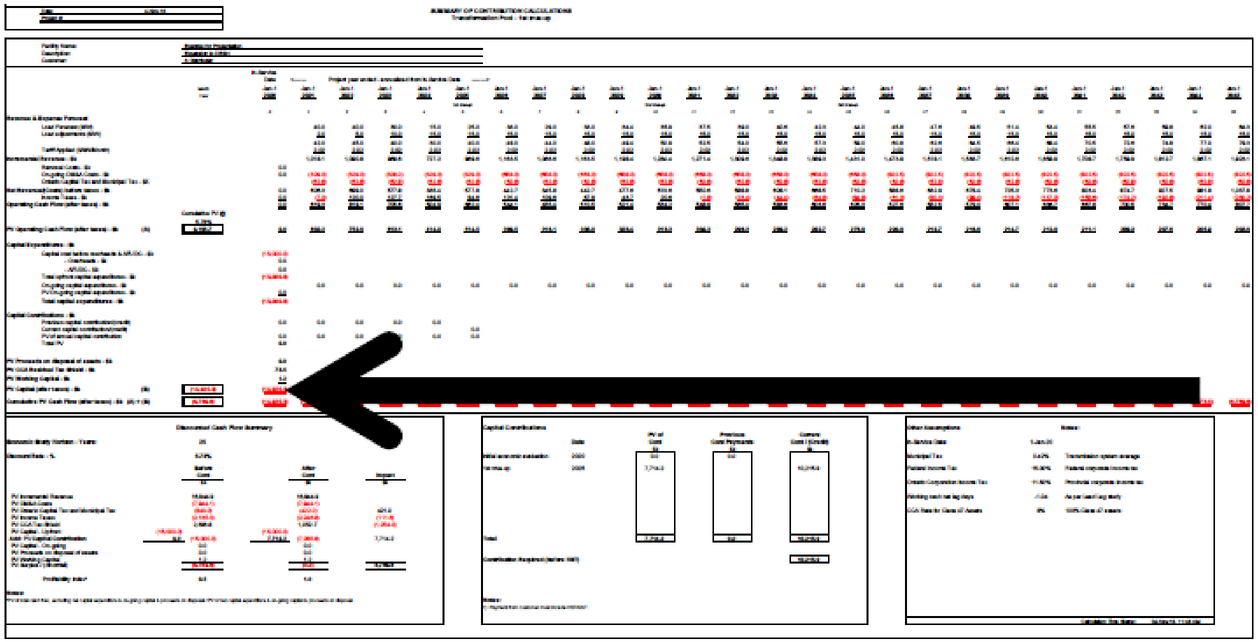
- Customer must provide evidence of CDM/DG impact
  - CDM/DG Load Adjustments resources located at: http://www.hydroone.com/IndustrialLDCs/ConnectionProcess/Pages/Getting-Started-2.aspx
  - Customer can choose to decline CDM credits

- Customer provides the impact of future CDM & DG in the updated load forecast

CCRA LOAD TRUE UPS



THE TRUE UP RESULT

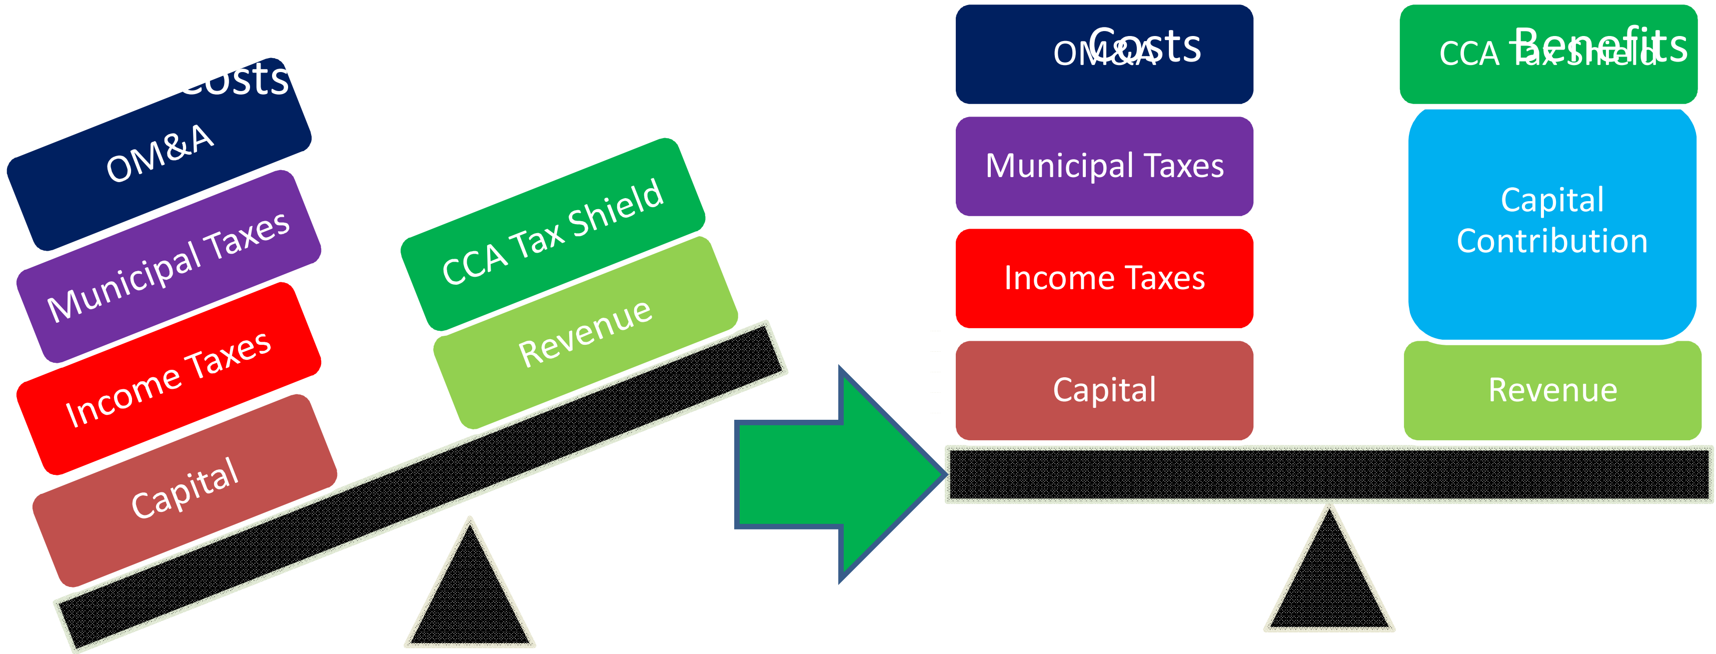


Rates & expenses are based on original inputs. The revised "forecast revenue" is adjusted solely on the changing load. Resulting capital contribution are brought to Time = 0

TRUE UP EXPLAINED

Incremental Costs now exceed benefits

Capital Contribution required to result in NPV = 0



Capital Contribution lowers the Net Book Value of Asset and Hydro One Transmission's Rate base

WHAT IS REQUIRED FROM THE CUSTOMER?

- Confirmation that original load forecast is still accurate or an updated load forecast
- Hydro One is obligated to review the forecast for "reasonableness"
- Customer must include their assumption of CDM/DG in their forecast.
- Supporting documentation for CDM/DG credits
  if required

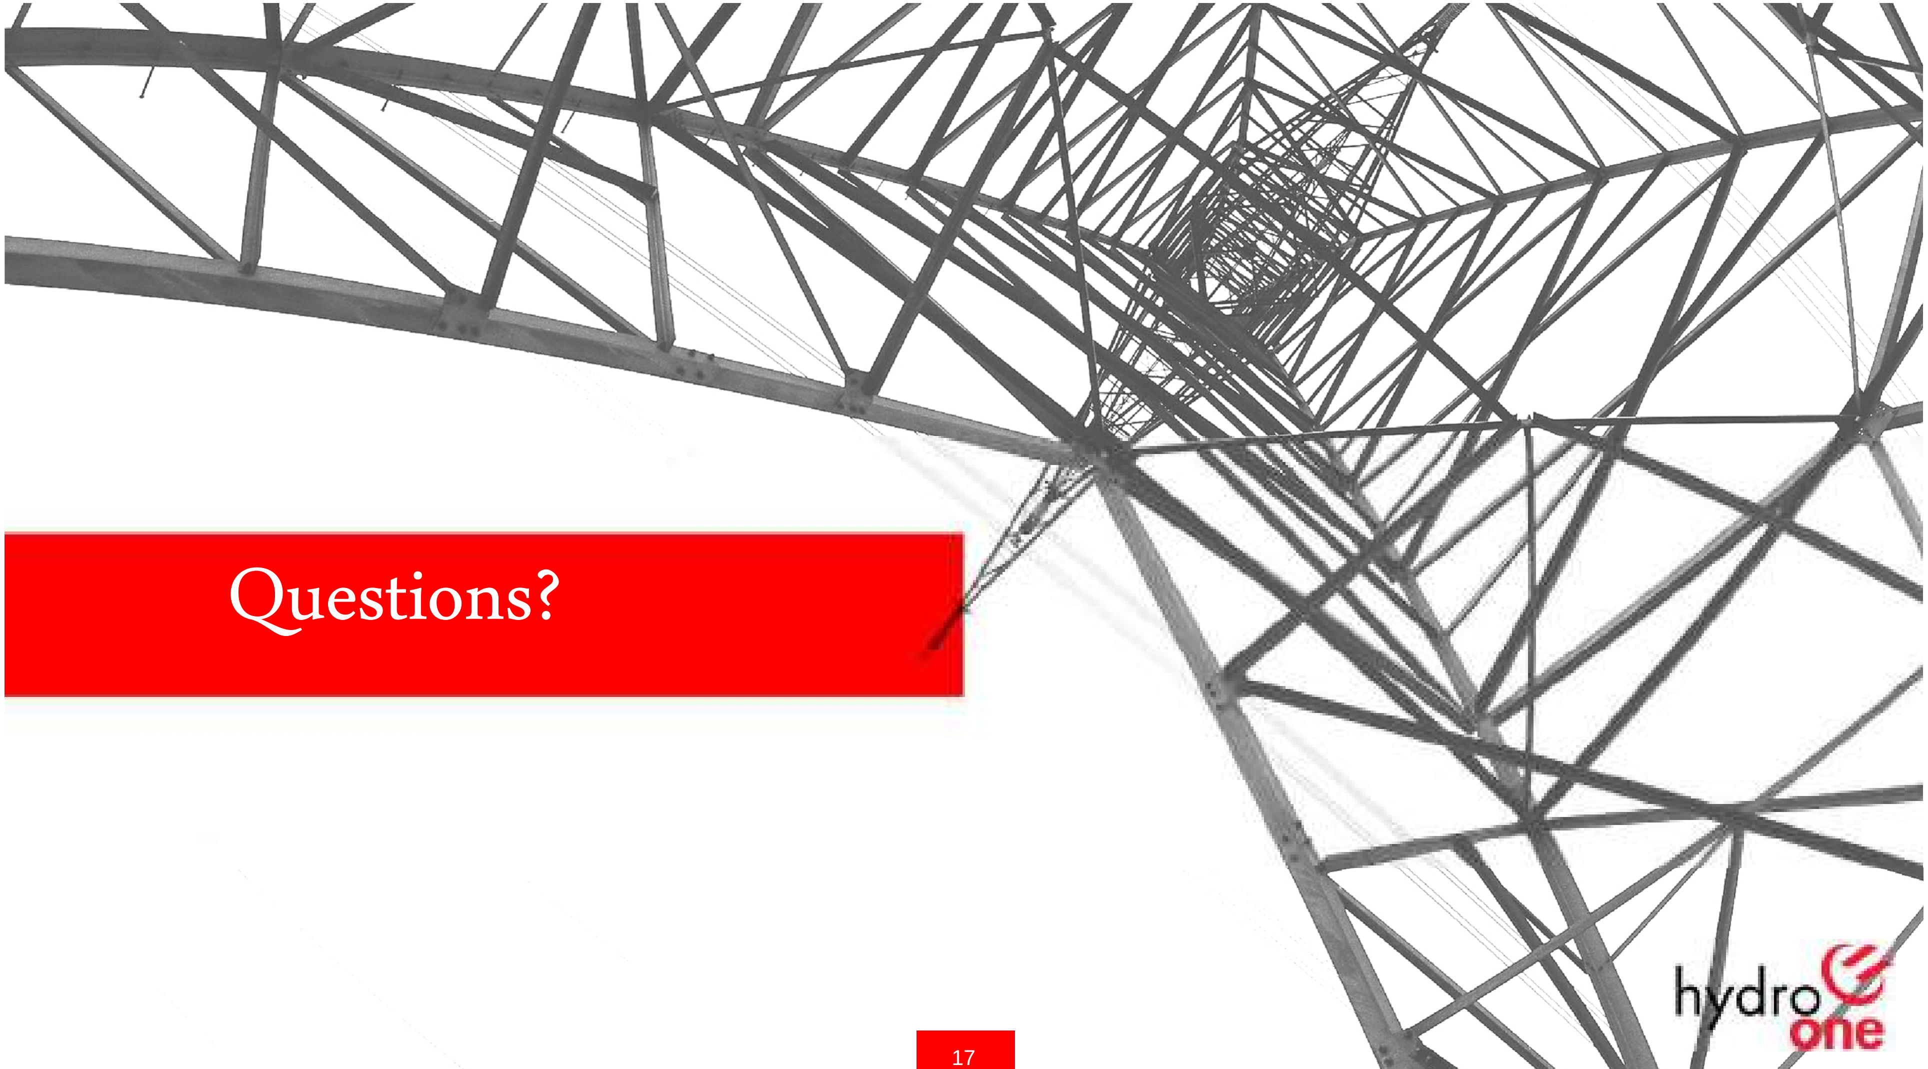
WHAT YOU SHOULD EXPECT FROM HYDRO ONE

- Calculate both the CDM credits and resulting True Up contribution or credit
  - Calculation usually takes 2 – 3 weeks dependent on extent of CDM once complete data set is received

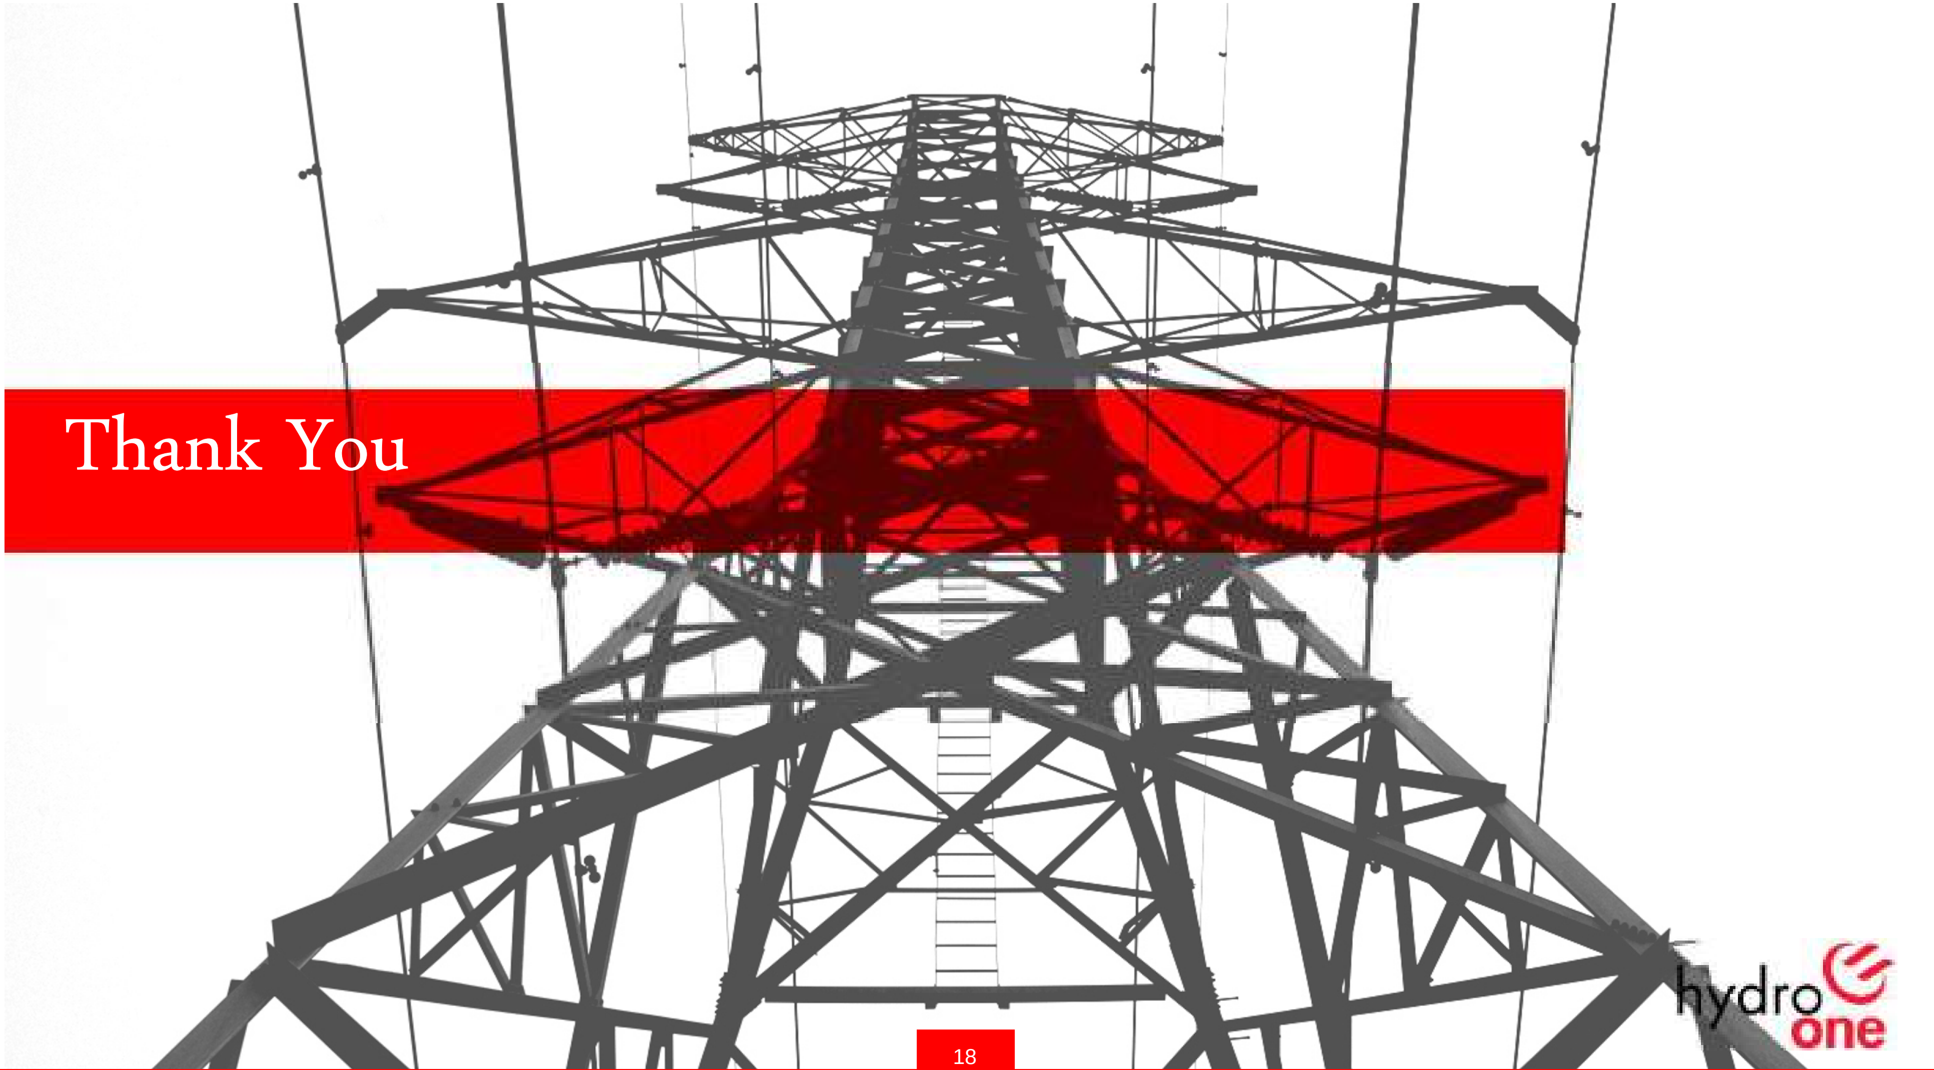
- Will provide CDM credit summary and unlocked copy true up calculations upon request

- Provide a detail explanation of calculation to customer staff and representative

- Will answer Interrogatories from Ontario Energy Board or Intervenors in relation to model design, inputs, and execution



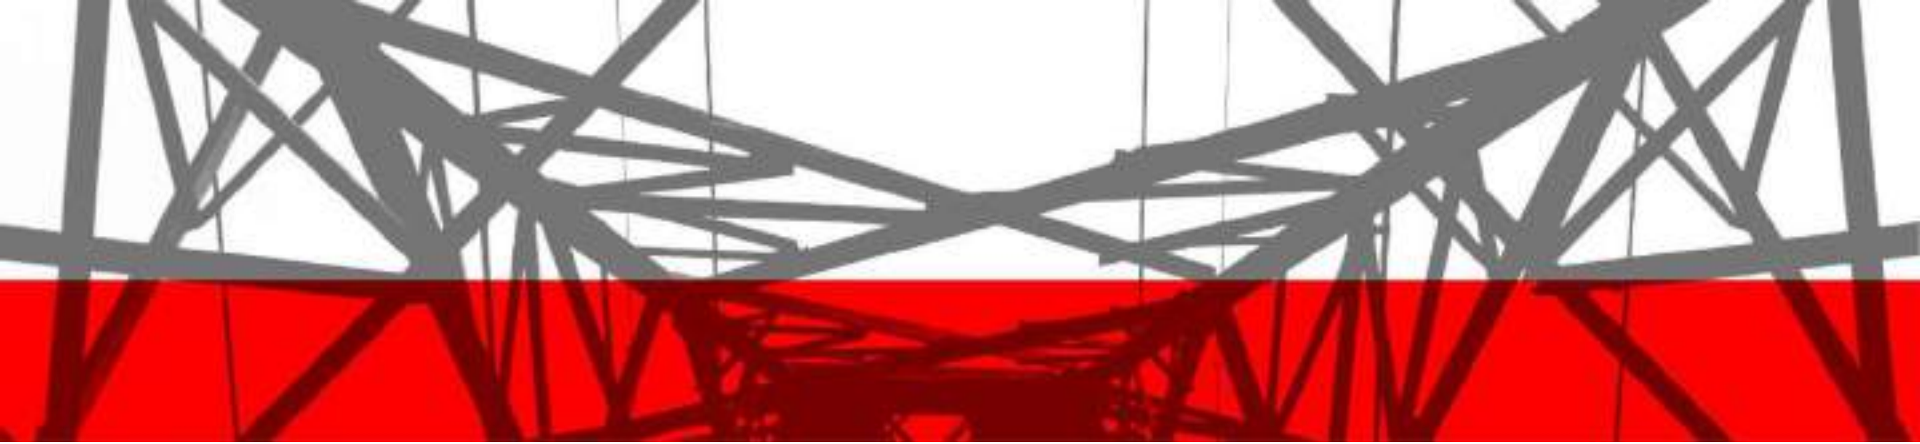
Questions?



Thank You

LARGE CUSTOMER CONFERENCE

Productivity & Operational Efficiency



BILLING & PAYMENT: LOAD DISPLACEMENT GENERATION, NET METERING AND ENERGY STORAGE

William Cheng

Manager, Transmission and Distribution Settlements

Hydro One

CUSTOMER INSTALLING A GENERATOR

- A Customer Impact Assessment (CIA) is needed for installing any load displacement or back-up generator >10 kW as per Hydro One's Conditions of Service

- A Distribution Connection Agreement (DCA) must be executed for connecting any >10 kW generator

RATIONALE FOR LOAD DISPLACEMENT GENERATOR

- A customer wants to reduce their electricity bill, in particular Global Adjustment
  - Class B customers want to reduce the total kWh based Global Adjustment charges
  - Class A customers want to avoid or reduce demand during the IESO system peaks to lower their Peak Demand Factor
- Customer could be incented by IESO to install generator under Conservation Demand Management
- Customer needs to self declare Debt Retirement payment to Ministry of Finance
  - Current forecasted Debt Retirement Charge expiry is March 31, 2018
- Load Displacement generation may impact Class A qualification
  - Please consult Meghan Atkinson (Meghan.Atkinson@HydroOne.com) for more information
- Depending on type and size of the generator, customer may or may not attract Gross Loading Billing

hydro one

POTENTIAL TRANSMISSION AND DISTRIBUTION CHARGES IMPLICATION FOR INSTALLING LOAD DISPLACEMENT GENERATOR

- Depending on the type and size per unit of the load displacement generator, it may trigger Gross Load Billing (GLB) of Transmission Line and Transformation Connection charges, but not Network charge

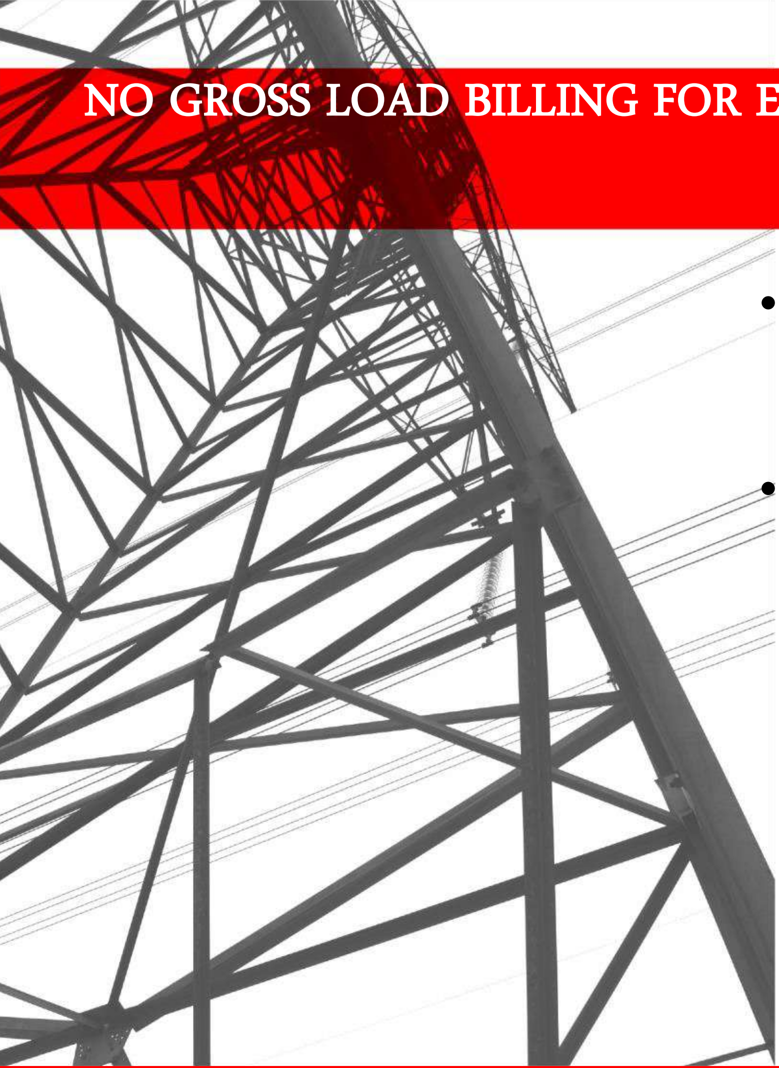
- Gross Load Billing applies to Distribution Common Sub-transmission Rate but not to the General Service Rates

- GLB thresholds: (1 MW for non-renewable and 2 MW for renewable) refer to unit capacity (in the case of solar, inverter capacity), not site capacity
    - Eg. A solar farm with 10 MW (20 x 0.5 MW inverter) capacity would not trigger GLB

- GLB also applies to the incremental capacity of a refurbished legacy generator
    - Eg. GLB applies to the 5 MW incremental capacity of a refurbished 7 MW Legacy generator with 2 MW old capacity

hydro one

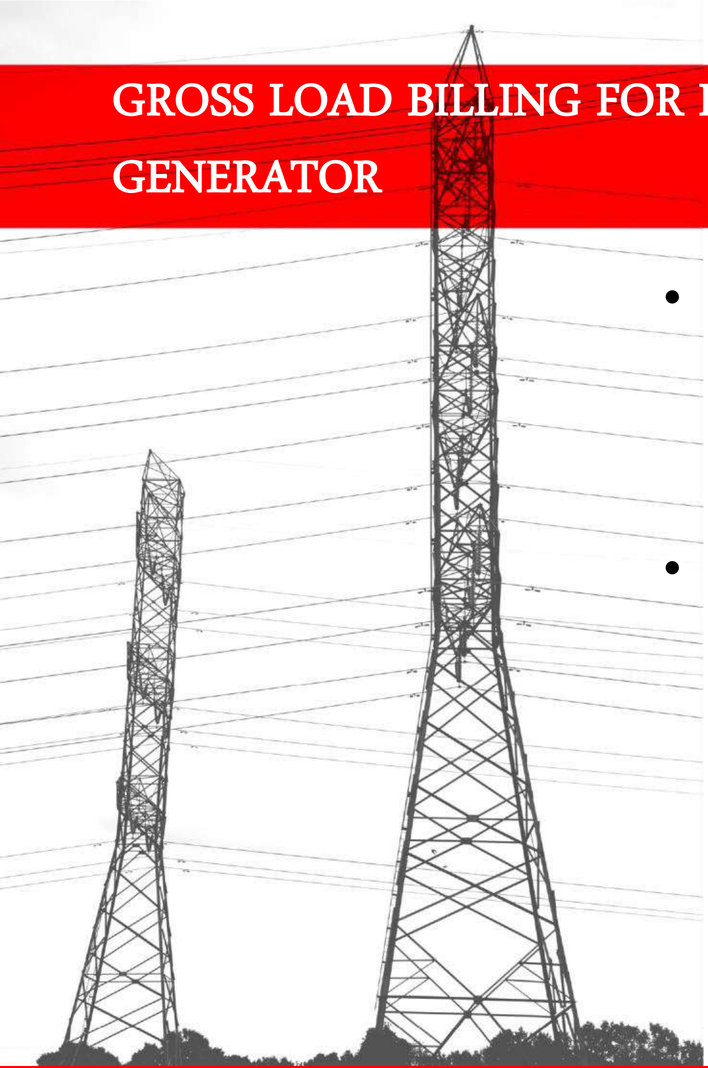
NO GROSS LOAD BILLING FOR EMERGENCY BACKUP GENERATOR



- GLB does not apply to an emergency back-up generators
  https://www.ontario.ca/laws/regulation/r07516

- “standby power source” means equipment that is intended to be used for the purpose of producing power to maintain operating conditions when the power produced by the normal sources of power is cut off or reduced

GROSS LOAD BILLING FOR ISLANDING OPERATION WITH LOAD DISPLACEMENT GENERATOR

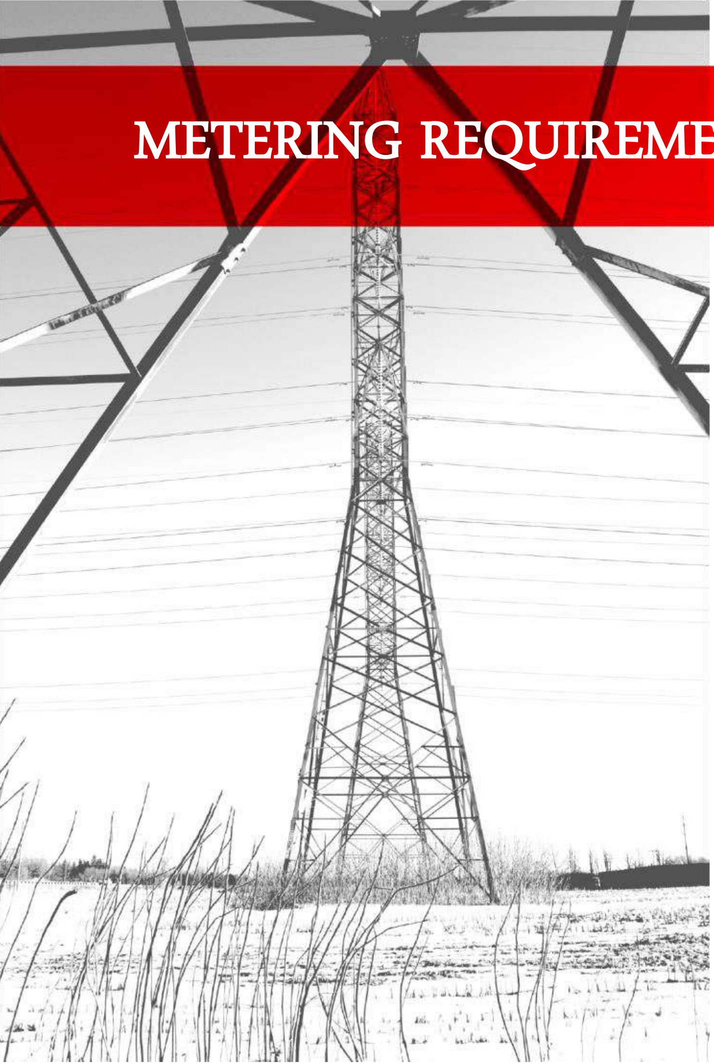


- A Customer with a load displacement generator operating off-grid is still subject to Gross Load Billing if they are connected to the grid for any back-up supply

- For complete off-grid operation, 365/7/24, Hydro One will not Gross Load Bill the customer but will remove all of the distribution assets from the connection and will not provide

  back-up support

METERING REQUIREMENTS



- A retail revenue meter is needed to measure the generator's output
- Hydro One needs access to the meter for on going Gross Load Billing for embedded LDCs
- Customer will need to install the meter for Debt Retirement Charge declaration to the Ministry of Finance

HYDRO ONE GLB BUSINESS PROCESS – CUSTOMER NOTIFICATION

- Hydro One Connection Impact Assessment (CIA) process now includes GLB assessment for any generators with a size of 1MW or more, to make customers aware of GLB eligibility and the settlement impacts

UPCOMING POTENTIAL CHANGES

- OEB is initiating a policy review to address the question of how a commercial and industrial customer should be billed when they have a Load Displacement Generator (LDG) behind the meter

- http://www.ontarioenergyboard.ca/oeb/_Documents/Documents/OEBltr_Gross_Load_Billing_Tx_20160329.pdf

NET METERING – EXISTING FRAMEWORK

- Our Net Metering program is available to any Hydro One customer who generates electricity primarily for their own use from a renewable energy source (wind, water, solar radiation or agricultural biomass) using equipment with a total nameplate rating of **500 kW or less**

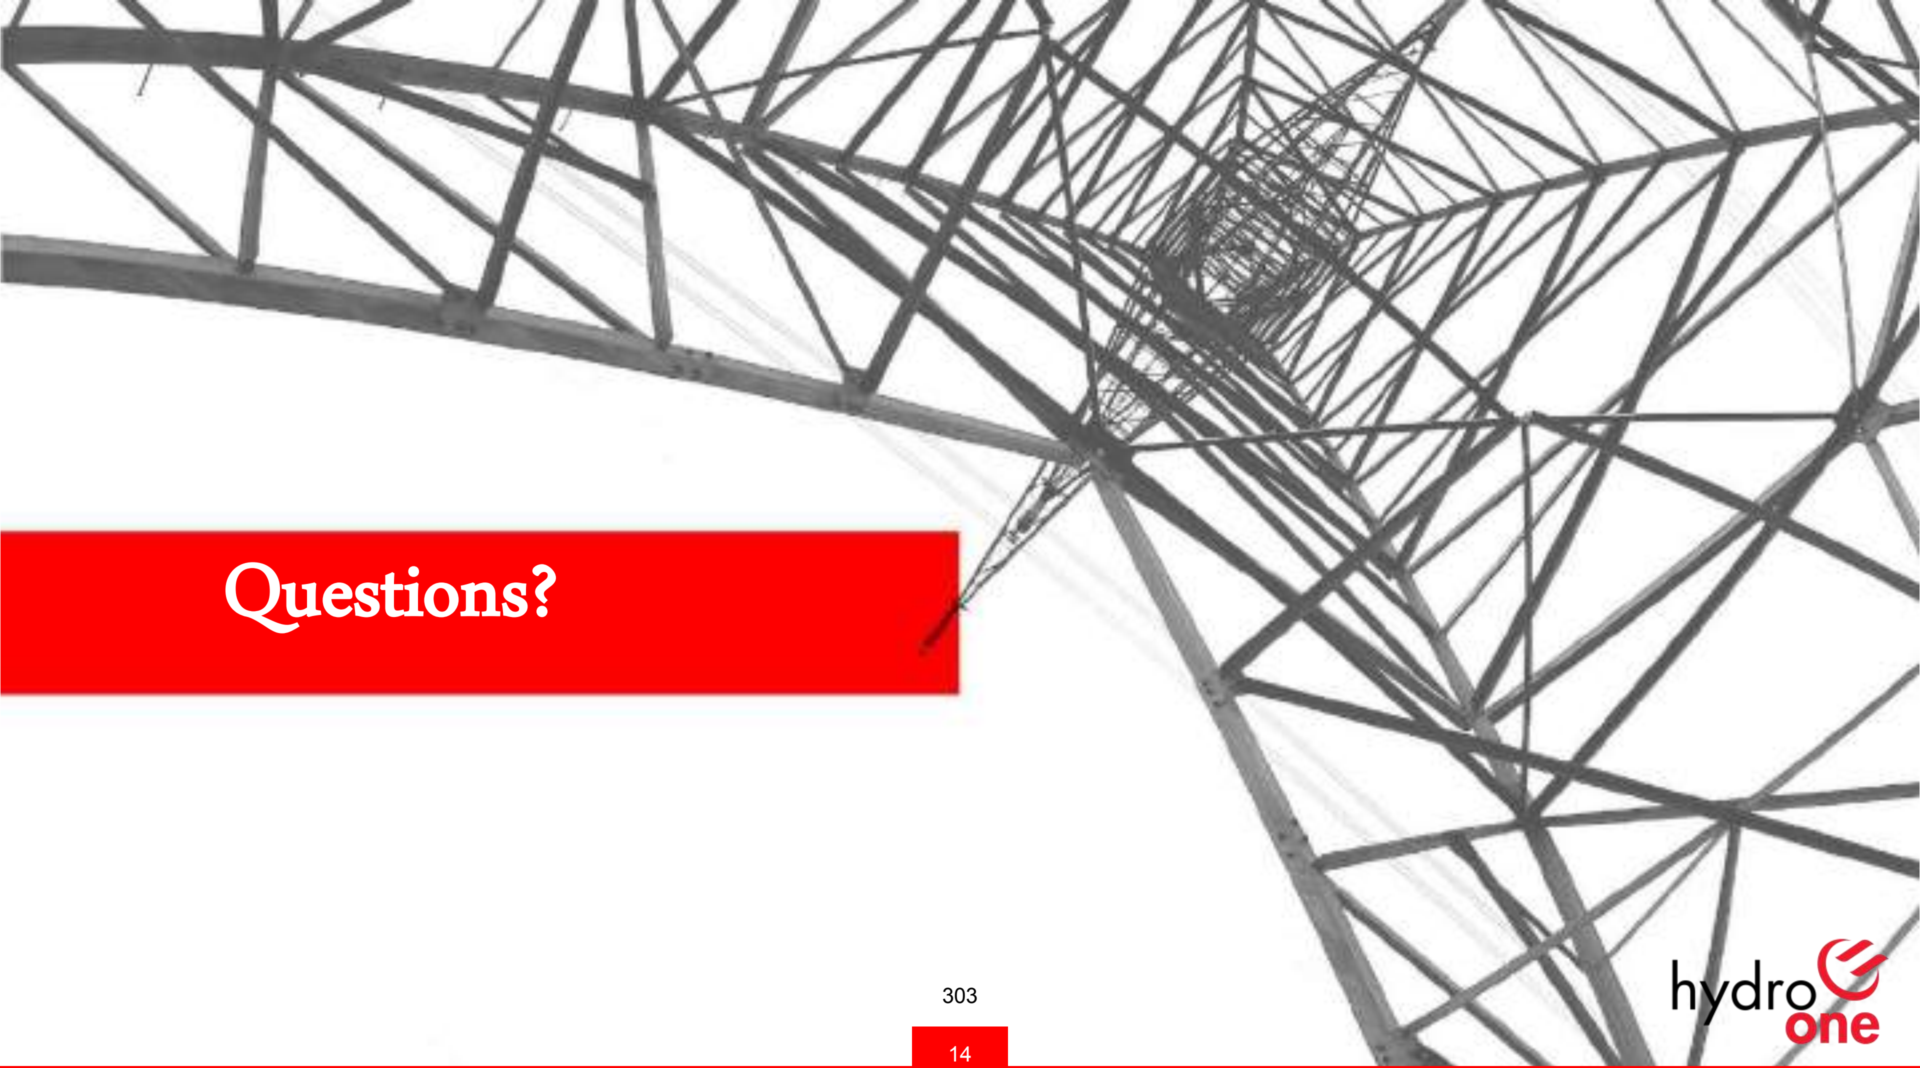
- Net metering allows you to send electricity generated from Renewable Energy Technologies (RETs) to Hydro One's distribution system for a credit towards your electricity costs
  - Excess generation credits can be carried forward for up to 11 months, including the 11th month, to offset future electricity costs

NET METERING – PROPOSED AMENDMENTS

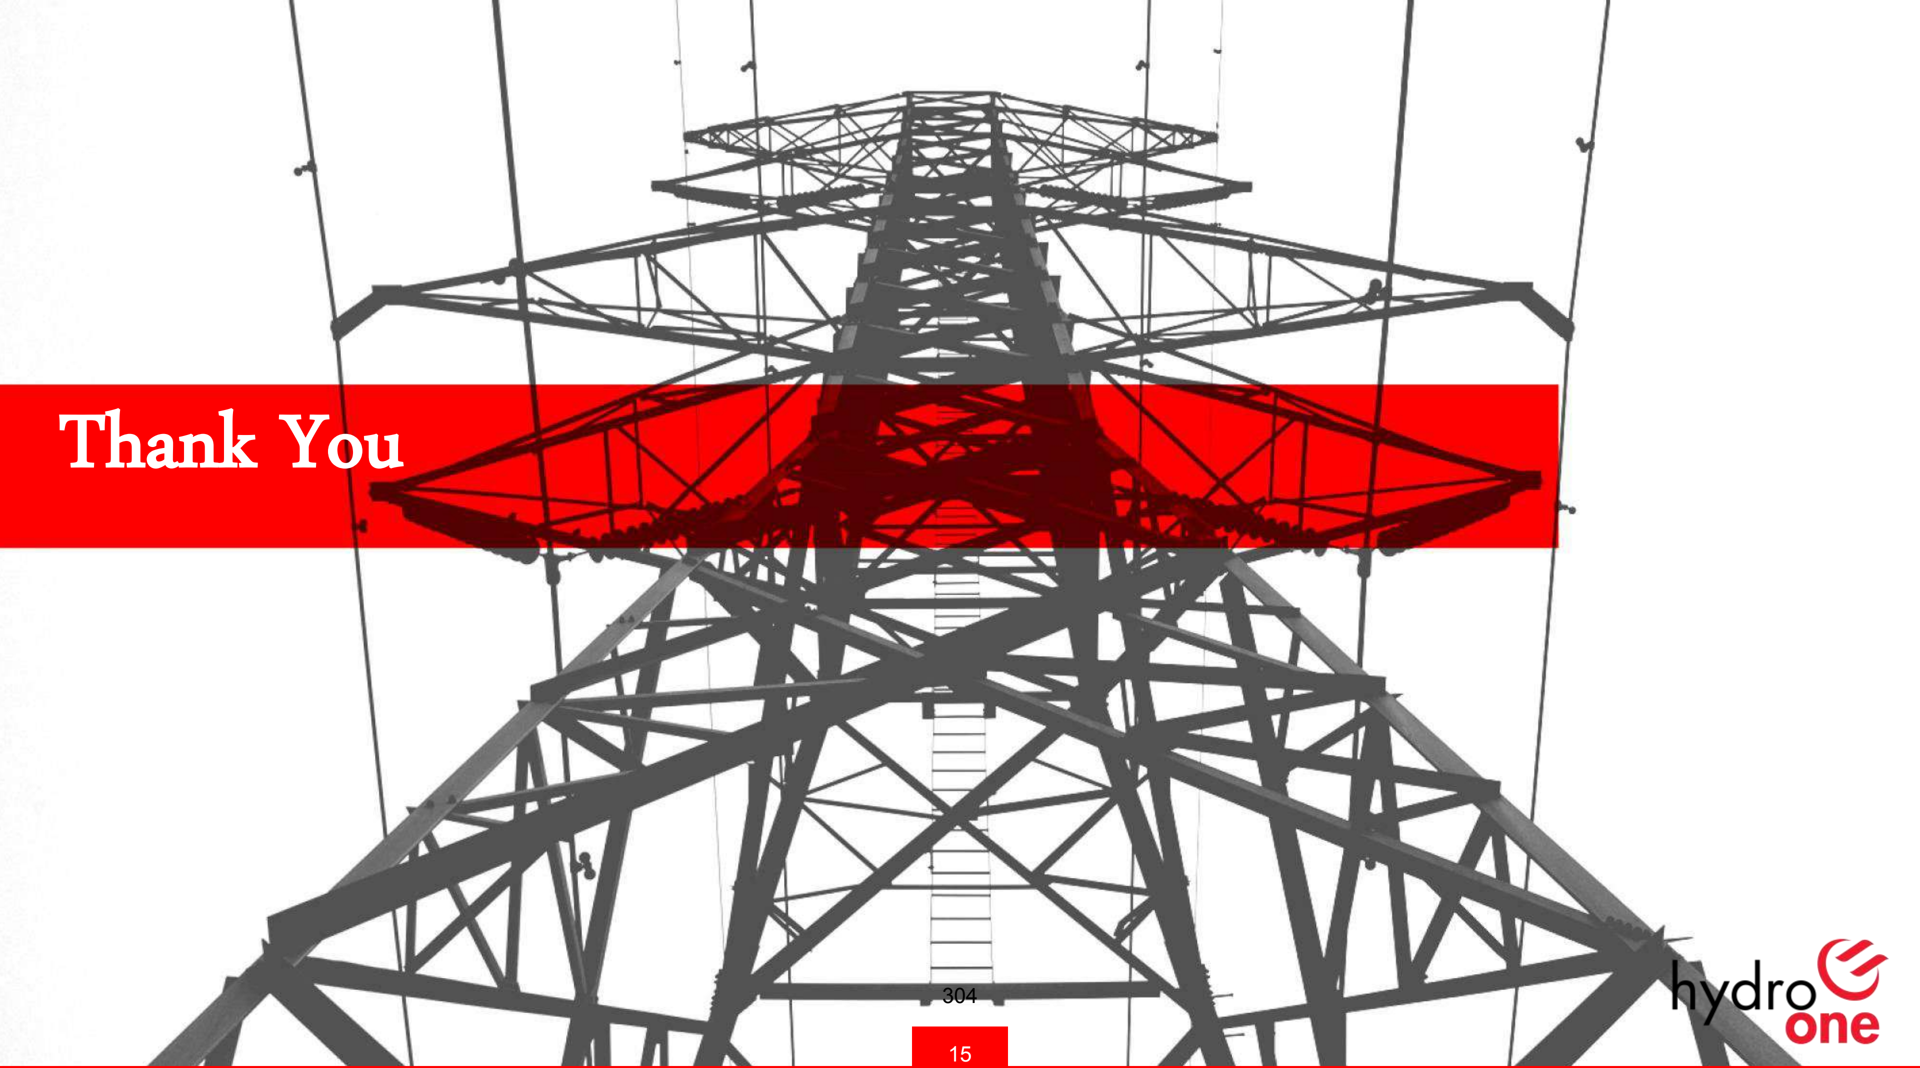
- Remove the capacity limit of 500 kW
- Extend credit carry forward period from 11 months to 12 months
- Virtual Net Metering – credits transfer within multiple accounts within the same LDC within the distance requirement
    - Proposed: 3km
- Pairing of renewable energy sources with energy storage which allows for flexible injection
- https://www.ebr.gov.on.ca/ERS-WEB-External/displaynoticecontent.do?noticeId=MTI5NTIx&statusId=MTk2Mjg5&language=en

ENERGY STORAGE

- Energy Storage License is required by OEB
- Proponent is subject to the same Hydro One connection process for a distribution generator
- Hydro One will settle Energy Storage as no contract generator:
  - Bill all charges (delivery, energy and global adjustments) for energy withdrawal from the grid
  - Pay spot prices when injecting power into the grid
- Industry estimates of 20% loss for kwh transaction – for every 100 kwh withdrawn, only 80 kwh injected
- Potential Cost Mitigation if energy storage is allowed as stand alone source for Net Metering – injection will receive both global adjustment and energy credit



Questions?



Thank You

Voice of the Customer – 2016 Large Customer Conference - Action Items

End-users:

- Service timeliness to resolve issues require faster response times and end-users would like to utilize LDC services to restore power faster. HONI engaged with the end user and addressed their concern to their satisfaction.
- End-users would like to resolves issues where their peaks are incorrectly applied to 'on peak instead of 'off peak' per actual usage
- When customers upgrade their facilities for DC Remote trip to a radio medium they requested that HONI help to resolve connection issues in a timely manner.

LDCs:

- Some LDCs requested that the investigation and results of U-Bolt failures be provided to them and to list any future action HONI may take to prevent single contingency events. HONI has complied with this request and further discussions with the concerned LDCs are ongoing. All the defective U-Bolts from the investigation back in 2016 were replaced.
- A few LDCs requested HONI to investigate if the customer # could be extracted at the Low Voltage Bus level. This was investigated and HONI cannot extract this at the Bus Level since the system is not capable. Additionally, other LDCs indicated that would not be willing to share their customer information.
- Some LDCs informed HONI that they are contacted by HONI's customers during power outages or trouble situations.

Generators:

- Outage communication and work bundling was a primary concern for all generators in attendance. The coordination of the data input on outage plans from all generators at the Transmission and Distribution level was reported as being fragmented. HONI's Transmission System Outage Group provides the opportunity for Transmission connected generators to participate. HONI is working on providing a similar forum in order to facilitate better notification of planned outage requirements to Distribution connected generators.

LDAs:

- No major issues were reported.

2016 LARGE CUSTOMER CONFERENCE

EVENT DEBRIEF

AT A GLANCE

Dates: Monday November 21 and Tuesday November 22, 2016
Times: Day 1 (Main Session): 7:00am-4:00pm, Dinner 5:00pm-9:00pm, Day 2 (Breakouts): 7:30am-5:00pm
Venue: Toronto Sheraton Airport Hotel & Conference Centre, 801 Dixie Rd, Mississauga, ON
Audience: Hydro One's Large Customers, including Local Distribution Companies (LDCs), Industrial and End Users, Transmission-connected Generators and Large Distribution Accounts (LDAs)
Format: Day1: All-in-one customer session, Day 2: Breakout sessions for each customer segment (4 different rooms)
Number of attendees: 131 customers across 97 different organizations
Hydro One Contact(s): Graham Henderson (graham.henderson@HydroOne.com), Victor Reynoso (victor.reynoso@HydroOne.com), Tony Yu (tony.yu@HydroOne.com)

Overview

The Large Customer Conference is Hydro One's annual premiere event for large customers. The conference is specifically targeted at the organization's different large customer sub segments – Local Distribution Companies, Industrial End Users, Transmission-connected Generators and Large Distribution Accounts.

This year's event featured a series of speakers and networking discussions that were centered around the themes of Productivity and Operational Efficiency, key elements of Hydro One's transformation into a leading global utility.

Day 1 consisted of key note addresses and presentations by various Hydro One and Independent Electricity System Operator (IESO) executives. Topics included: the Transmission Customer Engagement and Business Plan, Increasing Productivity at Hydro One, Security in the Power Industry and the Long Term Energy Plan (LTEP).

Day 2 included breakout streams specifically targeted at each Large Customer segment. Presentations were delivered by various Hydro One staff, as well as, other industry experts. Topics included: Power Quality, Transmission Reliability, LiDAR and new Hydro One technologies, Net Metering, CCRAs True-ups, the OGCC Control Room, Conservation and Demand Management, and others. Day 2 opened with Voice of the Customer sessions whereby customers openly discussed specific issues and concerns with Hydro One representatives. Those VoC sessions were formally documented and follow-up actions and resolutions will be coordinated by appropriate staff.

In total, 211 attendee's participated, including 131 customers from 97 organizations, and 80 Hydro One staff there to network, liaise and support customers in various capacities.

Overall, the 2016 Large Customer Conference was a huge success. Based on initial conference feedback, customers found the event valuable. There have also been valuable suggestions from attendees related to adding even more value for attendees, including topic, logistical and other suggestions. All feedback is being taken into serious consideration as planning for the 2017 conference has already begun.

Building Owners and Managers Association Toronto Interrogatory # 73

Issue:

Issue 2: Has Hydro One adequately responded to the customer concerns expressed in the Community Meetings held for this application?

Reference:

A-05-01 Page: 15 - detail of cost reduction

Interrogatory:

a) Percentage of telephone calls answered on time. Does Hydro One currently record and measure the purpose of each call, eg. bill, emergency, CDM request, etc.?

b) In what year of the five-year rate plan does Hydro One expect to reach its target of answering calls within thirty seconds, eighty percent of the time?

c) Does Hydro One forecast a reduction in call volumes, by what percentage, by what year, due to the investments and process changes, and digitalization measures it proposes to make?

d) What call centre cost reduction does it forecast in each year of the IRP, both capital and OM&A?

e) Are there any precedents to Hydro One proposed investments described at pp 15-16? Please discuss.

f) What increase in FCR has Hydro One targeted for each year in the plan in order to reach eighty-eight percent by 2022? What is the cost of the investment in customer tools and analytics? When will the High Usage Alerts feature be established and operating? How does it work?

g) Please provide a table for each of the custom performance indices showing HONI 2015 and 2016 performance industry average for 2016, and HONI's target for 2022 (or earlier, if applicable).

Response:

a) Yes, the volume of calls, and associated breakdown, are outlined in interrogatory response Exhibit I-2-Staff-001.

b) Hydro One expects to answer calls within 30 seconds, 80% of the time, in each year effective 2017 and beyond.

c) Hydro One forecasts call volumes two months in advance for the purposes of scheduling contact centre employees. There are a number of other factors that cause variations in call volumes year over year, including: policy changes, new initiatives, rate changes, and outages. As such, Hydro One does not forecast call volume percentage reductions associated with investments in future years.

d) The Customer Care OM&A exhibit (Exhibit C1, Tab 1, Schedule 5) assumes annual inflation which is offset by productivity improvements. There is no annual Capital program for the Contact Centre, however, there are a number of discreet initiatives that support Customer Service Operations overall, which are outlined in the Investment Summary Documents.

e) Hydro One's Distribution Rate Application includes several digital investments to address customer feedback. Additional information can be found in the Investment Summary Documents.

f) For Hydro One's First Call Resolution Targets, please refer to Exhibit I-18-SEC-029, Electricity Distributor Scorecard.

Refer to Hydro One's Investment Summary Documents GP-32 for additional information on the proposed investments and the associated costs.

High Usage Alerts, which launched December 2016, works by providing customers with a proactive alert if their bill is trending higher than a pre-determined threshold. This provides greater insight and visibility into the customer's electricity consumption and allows them to better proactively manage their electricity use.

g) Please refer to Exhibit I-18-SEC-029, Electricity Distributor Scorecard.

Consumers Council of Canada Interrogatory # 1

Issue:

Issue 2: Has Hydro One adequately responded to the customer concerns expressed in the Community Meetings held for this application?

Reference:

None

Interrogatory:

Please describe, in detail, how HON has responded to the customer concerns expressed at the 10 Community Meetings held regarding this Application.

Response:

Please see Exhibit I-2-VECC-1. Hydro One brought subject matter experts to each of the 10 Community Meetings, including customer service representatives. Hydro One representatives answered account related questions, specific concerns in the community, and/or rate application questions.

Energy Probe Research Foundation Interrogatory # 1

Issue:
Issue 2: Has Hydro One adequately responded to the customer concerns expressed in the Community Meetings held for this application?

Reference:
A-03-01 Page: 15

Interrogatory:
Preamble: Energy Probe is curious about the timing of Hydro One's three investment plans and the customer engagement activities. It appears that, even though customers repeatedly stressed that bill increases were their number on concern – more than improved reliability – the first plan recommended by the utility's asset managers called for a 7.1% rate increase in 2018 and 3.8% average annual rate increases over the term of the application.

a) Did Hydro One's asset managers make that request before the customer engagement surveys were completed? What were the time frames – i.e. when were the customer surveys completed versus the investment plans?

b) How does Hydro One distribute its customer engagement surveys and findings to its asset managers? Are all asset managers required to review the findings before making recommendations?

Response:
a) No. Please refer to Table 1 of Exhibit I-24-SEC-36 for a detailed timeline of customer engagement and investment plan timelines/milestones.

b) Hydro One shares its customer engagement surveys and findings with its management team in various lines of business that require the information. Investment administrators (asset managers) are required to consider the needs and preferences of customers and the asset and system needs of the distribution system in the development of candidate investments.

Ontario Sustainable Energy Association Interrogatory # 2

Issue:

Issue 2: Has Hydro One adequately responded to the customer concerns expressed in the Community Meetings held for this application?

Reference:

Hydro One Networks Inc. 2018 - 2022 Distribution Rate Application
Community Meeting Report 1. OEB File No. EB-2017-0049

Preamble: "The overall message heard from attendees at the meetings was that the cost of electricity was too high and therefore Hydro One's request for a rate increase should not be approved. There was some confusion about how the Hydro One rate application and the Fair Hydro Plan interacted.

1. The OEB should not approve this request by Hydro One to increase its rates. Reasons given included:
   - Hydro One should find efficiencies instead.
   - CEO and executive compensation should be reduced.
   - Replacement of assets should have already been paid for with revenues in the past (replacement reserve) and new funds are not necessary.
   - Hydro One has been wasting money in the past.
   - Rates in Ontario are the highest in the country creating hardships for customers and forcing business to close or relocate.
2. The salaries of Hydro One's CEO, executives and employees are too high. The CEOs of BC and Quebec Hydro make one tenth of the amount the Hydro One CEO makes. There are too many vice presidents at Hydro One and too many employees were on the "sunshine list" when Hydro One was a part of it.
3. Concerns over reliability and service capacity issues.
4. Disagreement with customer assignments to density based rate classes. Customers who were classified as medium density by Hydro One for years have been reassigned to a low-density classification with higher rates.
5. In a few communities (particularly Leamington and Napanee), MPPs and some consumers said there wasn't enough advance notice about the community meetings. Several attendees said they heard about the meeting from their conservative MPP.
6. Whether the OEB has ever refused a rate increase request and whether it is permitted to do so.

7. Concerns that the OEB does not care about the customer/consumer (OEB accountability).
8. An assertion that in the last Hydro One case, the OEB approved a higher increase than was requested."

Interrogatory:

a) While OSEA understands that Hydro One Distribution focuses on the bill impact of only distribution rates when presenting its plans to community groups, has Hydro One considered providing a better context for these impacts given the rest of the factors affecting electricity bills particularly given that its rural and northern customers are particularly hard hit with higher costs and less reliability then other distributions customers in the province?

b) Did Hydro One's presentation at the community meetings reinforce that the distribution charge does not vary by kWh consumption? If not, why?

Response:

a) Hydro One used a typical customer in its community meetings presentation to show the potential bill impacts of the distribution rate application. To provide better context for the bill impacts, the presenters were prepared to, and did, answer questions about the impacts on customers in different density classifications and who use more or less electricity than the typical customer profile. Customers' bills consists of various components and Hydro One spent some time explaining to attendees at the community meetings, the impact of the Fair Hydro Plan on the various bill components.

   Hydro One also provides bill impact and Fair Hydro Plan impacts on our website for different types of customers.

b) The distribution charge <u>does</u> vary by consumption for all rate classes. Residential customers are in the process of moving to a fully-fixed charge, as mandated by the Ontario Energy Board, but the majority of Hydro One's residential customers will not be at fully-fixed distribution charges until 2023. At some community meetings the fact that residential distribution charges are moving to fully-fixed charges did come up in questions from participants.

OEB Staff Interrogatory # 1

Issue:

Issue 2: Has Hydro One adequately responded to the customer concerns expressed in the Community Meetings held for this application?

Reference:

Executive Presentation Day Transcript Page: 38
At this page Mr. Pugliese indicates that,

> *"…one year after some of this work has started, is that the changes have resulted in a reduction of 100,000 calls related to billing and 73,000 fewer calls related to affordability, and we actually see that trend continuing to drop in terms of our responses back to the call centre."*

Interrogatory:

Please provide a table that shows the reductions in customer calls on a monthly basis broken down by category of calls.

Response:

The volumes of calls answered by an agent are as follows. Billing calls reduced by approximately 100,000 in 2017 and calls related to affordability / collections declined by approximately 73,000.

	Jan-17	Feb-17	Mar-17	Apr-17	May-17	Jun-17	Jul-17	Aug-17	Sep-17	Oct-17	Nov-17	Dec-17	Total

OEB Staff Interrogatory # 2

Issue:

Issue 2: Has Hydro One adequately responded to the customer concerns expressed in the Community Meetings held for this application?

Reference:

Executive Presentation Day Transcript, page 41
At this page Mr. Pugliese testifies,

> *"….we are the first utility to offer service guarantees. So, if we make a commitment to do a reconnect, to do a move in and move-out, if we fail to meet that within a set time frame, there is a service guarantee that we will give to the customer and a credit, and that is $75.*

Interrogatory:

a) Please provide a list of the services that Hydro One's "service guarantee" would cover.

b) Please describe in detail how this service guarantee would work for a typical customer.

c) Are there specific criteria the customer must meet to qualify for this service guarantee?

d) What is the total amount budgeted for 2018 for this service guarantee credit?

Response:

a) If Hydro One does any of the following, Hydro One will credit the affected customer's account $75:
   i. miss an appointment with a customer;
   ii. fail to connect the new service within five business days of all connection requirements being met; and
   iii. fail to return the customer's phone call within one business day

b) Hydro One's service guarantees are outlined below:

i. **Miss an Appointment with a Customer –** Hydro One may schedule an appointment for a member of the field staff to meet with the customer regarding planned work, or to determine the requirements for unplanned work or a new service connection. If Hydro One sets an appointment for a morning or afternoon visit and the appointment is missed, Hydro One will automatically credit the affected customer's account with $75. This service guarantee will not apply for design consultations which do not result in a connection and a customer account.

ii. **Fail to Connect the New Service within Five Business Days of All Connection Requirements Being Met –** If (a) all the connection requirements have been met and (b) Hydro One does not connect the power within five business days, Hydro One will automatically credit the affected customer's account with $75. This service guarantee will not apply if Hydro One and the customer have mutually agreed to connect at a date later than five business days or the service connection is >750V or for distributed generation.

iii. **Fail to Return the Customer's Phone Call Within One Business Day –** When a customer's phone call is escalated in the call centre, Hydro One may schedule a return phone call. If the return phone call is not made within one business day, Hydro One will automatically credit the customer's account with $75.

c) If Hydro One fails to meet any of these service guarantees, Hydro One will automatically credit the affected customer's account with $75. Additional information can be found on Hydro One's website, including exceptions and the conditions of service: https://www.hydroone.com/about/corporate-information/our-service-guarantees

d) Hydro One has budgeted $25,000 to fund service guarantees in 2018.

OEB Staff Interrogatory # 3

Issue:

Issue 2: Has Hydro One adequately responded to the customer concerns expressed in the Community Meetings held for this application?

Reference:

Executive Presentation Day Transcript, page 41

At this reference, Mr. Pugliese indicated that Hydro One had returned $12 million in security deposit value back to customers.

Section 2.4.9 of the Distribution System Code (DSC) sets out the circumstances under which a distributor may require a security deposit for different classes of customers.

Sections 2.4.22 – 2.4.25 set out the process for the review and adjustment or return of security deposits.

Interrogatory:

a) Please confirm that the security deposit amounts returned to customers were not held by Hydro One for periods longer than those set out in the DSC. If this cannot be confirmed, please provide an explanation.

b) Please confirm whether these security deposits were returned earlier than the time periods set out in the DSC. If so, please provide:

   i. Hydro One's time period for returning the deposit by customer class.
   ii. The reasons for returning these customer deposits and how Hydro One addressed the payment risk that a security deposit represents.

c) Has Hydro One made a permanent adjustment to its security deposit policy and defined its new criteria formally? If so, please provide the policy and outline how it is has changed.

Response:

a) Security deposits returned to customers were not held by Hydro One for periods longer than those set out in the Distribution System Code (DSC).

b)

i. Hydro One no longer requires security deposits from residential customers. With respect to General Service customers, security deposits are returned after one year if the customer is deemed to have a of "good payment history", as defined by the DSC.

ii. With respect to residential customers, the DSC currently requires utilities to apply a residential customer's security deposit to an overdue balance prior to the issuance of a disconnection notice. This requirement reduces the effectiveness of security deposits as a tool to mitigate bad debt for residential customers. Furthermore, operational costs associated with administering residential security deposits (i.e. calls, letters, escalations) were high. Hydro One will continue to work with customers in arrears to establish payment arrangements and ensure customers are aware of financial assistance programs. As such, Hydro One is not assuming greater payment risk with respect to accounts receivable.

With respect to General Service customers, Hydro One believes 12 months of payment history is a good indication of the customer's ability to pay. If a customer has 12 months of good payment history, any security deposit that has been collected will be returned to the customer. Hydro One will continue to request security deposits for new General Service customers or existing General Service customers who fall into arrears and no longer meet the good payment history criteria.

c) Hydro One has formally changed its policy to reflect the changes outlined above. The new security deposit policy is also outlined on Hydro One's website as of April 2017. Hydro One is currently in the process of updating its Conditions of Service, which will include the new changes to its security deposit policies.

OEB Staff Interrogatory # 4

Issue:

Issue 2: Has Hydro One adequately responded to the customer concerns expressed in the Community Meetings held for this application?

Reference:

Executive Presentation Day Transcript, page 42-43

At this reference, Mr. Pugliese indicated that Hydro One had changed its collections process from 4 stages to 8 stages. He also indicated that in 2014 accounts receivable were $194 million, which were reduced to $86 million in the most recent quarter of 2016.

Interrogatory:

a) Please provide an update to reflect the most recent quarterly amount.

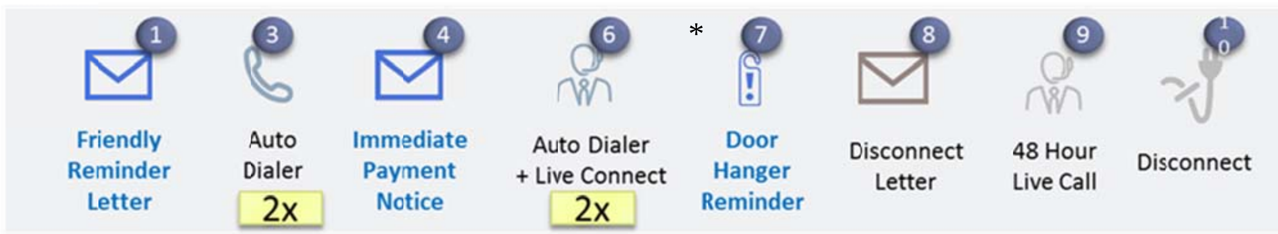
b) Please provide a more detailed account of how the collections process was changed, what the additional stages are and why this has resulted in lower levels of overdue accounts.

c) Please provide a more detailed accounting of the reduction in accounts receivable balances with a table which shows the trend of the reductions.

Response:

a) 2014 accounts receivable were $194 million, which were reduced to $86 million in the third quarter of 2017.

b) The Distribution System Code requires a utility to send a customer a disconnection notice and telephone call 48 hours prior to disconnection. Hydro One has found that more frequent contact with customers results in a reduction in overdue accounts receivable. Hydro One also reaches out to customers soon after they miss a payment, which provides customers more time to manage their arrears or arrange an affordable payment plan. Hydro One's residential collections process is outlined in the diagram below.



** Step 7 is completed in certain circumstances*

c) Hydro One's historical overdue accounts receivable is provided below.

	2014				2015				2016				2017		
	Q1	Q2	Q3	Q4	Q1	Q2	Q3	Q4	Q1	Q2	Q3	Q4	Q1	Q2	Q3
A/R ($M)	$158	$179	$194	$181	$194	$184	$158	$148	$152	$132	$114	$117	$116	$104	$86

OEB Staff Interrogatory # 5

Issue:

Issue 2: Has Hydro One adequately responded to the customer concerns expressed in the Community Meetings held for this application?

Reference:

Executive Presentation Day Transcript, page 43

At this reference, Mr. Pugliese indicated that Hydro One reconnected 400 dwellings that were inhabited of the 1,400 dwellings that had been disconnected. In addition, he testified that 60% of these dwellings are still connected today.

Interrogatory:

Please provide a more detailed account of how this process was conducted and the key aspects or learnings for Hydro One in conducting this exercise.

Response:

In December 2016, Hydro One introduced a Winter Relief program to assist some of its most vulnerable customers. The program identified all customers who had been disconnected for non-payment prior to the commencement of Hydro One's voluntary winter moratorium. Outreach was made to every customer through a number of channels, including mailed letters, outbound calls, and site visits to individual properties.

If Hydro One was able to contact a customer, their premise was reconnected immediately, free of charge, and Hydro One developed an achievable payment plan to get customers back on track. In addition, Hydro One enrolled customers into assistance programs, such as the Low-Income Energy Assistance Program, Ontario Electricity Support Program, and Home Assistance Program. The remaining premises that were not reconnected were deemed to be unoccupied based on Hydro One's site visit.

A few of Hydro One's key findings are detailed below.

1. Robust customer outreach through a variety of channels – Hydro One had difficulty contacting some customers. As a result, the team used a variety of communication channels to locate the customer, including field visits to the premise.

2. Electrical Safety Authority (ESA) Inspections – Some premises that were disconnected for a period of time required ESA inspection before Hydro One could reconnect. As such, the ESA inspections delayed the process, and in a number of instances, the ESA found a number of electrical issues that needed to be repaired prior to reconnection.

OEB Staff Interrogatory # 6

Issue:

Issue 2: Has Hydro One adequately responded to the customer concerns expressed in the Community Meetings held for this application?

Reference:

Executive Presentation Day Transcript, page 49

Interrogatory:

At this reference, Mr. Pugliese indicated that Hydro One will be introducing customer-selected due dates allowing the customer to select the due date by which it wants to pay the bill in the given month.

a) Please indicate whether this option will be available to all customer classes. If not, please identify the classes to which it will be made available and explain why it would not be universally available.

b) Would this require a major adjustment to Hydro One's billing system to meet the customer's request for a specific due date and to also meet the requirements of section 2.6 of the Distribution System Code – Bill Issuance and Payment.

c) Are there incremental OM&A costs involved in this change?

Response:

a) Customer-selected due dates will be available to all low volume customers (i.e. mass market customers) who are on time-of-use rates. The viability of this service is predicated on reliable smart meter connectivity and having daily access to meter-read data. As such, this service will not be available to customers that are covered by Hydro One's TOU exemption (EB-2012-0384).

b) The implementation of this service would not require a major modification to Hydro One's billing system. This service would be fully compliant with all existing regulations, including section 2.6 of the Distribution System Code, as customer billing frequency and timelines to pay would be maintained.

c) The initiative will not require any material incremental OM&A to support its implementation. Existing customer communication channels and tactics will be used to enhance customer awareness of this service.

OEB Staff Interrogatory # 7

Issue:

Issue 2: Has Hydro One adequately responded to the customer concerns expressed in the Community Meetings held for this application?

Reference:

Executive Presentation Day Transcript, page 49-50
Exhibit B/Part B/ISD GP-31 (Prepaid Meters)

Interrogatory:

At the Presentation Day, Mr. Pugliese indicated that Hydro One would never force the pre-paid meter option on any customer and that some customers have requested the pre-paid meter option and others have shown a preference for the load limiter option. At Exhibit B, Hydro One has indicated that it plans to commit $6.1 million in capital to a pre-paid meter project in 2022.

a) Please indicate the degree to which customers prefer the prepaid meter and load limiter options, and in particular:
    i. How many customers have requested prepaid meters? Were these requests unsolicited? What were the circumstances under which the requests were made?
    ii. How many customers have provided unsolicited requests to have a load limiters installed?
    iii. How many customers have provided unsolicited requests to keep a load limiter in lieu of complete reconnection?
    iv. What is Hydro One's current policy on the use of load limiters? Would this policy change under the proposed pre-paid meter program?

b) How will the planned prepaid meter program work in order to allow alternate arrangements to be made for payments (e.g. arrears management plans)?

c) Currently the LEAP program is designed to help pay arrears and maintain connection. It is generally accessed once the consumer receives a disconnection notice. If the consumer is on pre-paid meter service, how would the LEAP be used to provide credits to keep the electricity on?

d) Assuming that the meter would automatically disconnect when the credits run out, how would this be consistent with the disconnection requirements in the various codes and any legislative and/or regulatory restrictions on disconnections in the winter months?

e) How would this program work for special situations such as customers that have specific medical needs for electricity service?

f) What is the rationale for introducing the pre-paid meter program in 2022?

g) Section 53.16(1) of the Electricity Act in association with O. Reg. 525/06 states that when a distributor replaces an existing meter for residential or general service customers, the meter must meet the Functional Specification for Advanced Metering Infrastructure. Will these pre-paid meters meet the “functional specifications”? If not, how will Hydro One resolve this conflict?

h) Section 3.4 of the Standard Supply Service Code states that customers with eligible time-of-use meters must be charged using time-of-use pricing. Will these pre-paid meters be able to charge customers based on time-of-use pricing? If not, how will Hydro One resolve this conflict?

i) If pre-paid meters were to charge based on time-of-use, how would customers reasonably be able to calculate the amount of pre-paid credit required and/or available to cover a specific period given changes in pricing, use and timing?

j) Would pre-paid meters be able to shift between pre-paid mode and “regular” mode to ensure a consumer was not effectively disconnected during winter if unable to purchase new credits?

k) How would consumers “purchase” credits for pre-paid meters? If it is internet based, has Hydro One taken into consideration the complexities and service issues associated with internet access in remote communities? If consumers are able to purchase via credit card, has Hydro One taken into account the limitations on access to credit cards for lower income households?

l) How would fixed charges, such as the monthly delivery fee, be billed for pre-paid meter customers? If a pre-paid meter customer did not use any electricity in the month, would they still be charged a monthly delivery fee?

m) How would OESP and/or any other similar support programs be applied for customers with pre-paid meters?

n) Has Hydro One undertaken a risk-analysis to identify potential issues with pre-paid meters? If so, please provide details on what risks were identified and any action plans Hydro One has developed to mitigate these risks.

Response:

a)

i. Hydro One has received a few unsolicited requests from customers regarding how they can take advantage on the use of pre-paid meters. Data from other Ontario utilities and other jurisdictions indicates, including Woodstock, that when offered the choice of prepaid metering, uptake rates can be as high as 20%.

ii. Hydro One has received a few unsolicited requests from customers to have a load limiter installed.

iii. Hydro One has received a few unsolicited requests to keep load limiters installed in lieu of complete reconnection.

iv. Hydro One no longer installs load limiters as a collections measure. This policy will not change after the proposed pre-paid meter program is implemented.

b) Enrolment in prepaid meters is completely voluntary. In advance of the pre-paid meter deployment in 2022, Hydro One will ensure it is compliant with all regulations, legislations, and standards at that time, regardless of the type of meter at the premise. This includes:

- payment arrangement eligibility (as per OEB regulation)
- financial assistance programs (i.e. LEAP and OESP)
- provincial legislation (i.e. winter moratorium for residential customers)
- internal policies (i.e. Winter Relief)
- Electricity Act regulations
- Measurement Canada requirements
- Standard Supply Service Code (i.e. Time-of-Use pricing)
- Billing requirements (i.e. electricity, delivery, regulatory, taxes)

c) Refer to part b).

d) A disconnection would not automatically occur when a customer's credits run out. Hydro One will continue to follow existing processes with respect to multiple touch points prior to any disconnection.

e) In advance of the pre-paid meter deployment in 2022, Hydro One will create a vulnerability check as part of the eligibility assessment in order to determine if a pre-paid meter is in the best interest of the customer and their specific circumstances, after exploring other options.

f) Hydro One plans on introducing pre-paid metering in 2022 to ensure Hydro One has enough time to develop appropriate policies and procedures, complete field testing, and secure appropriate equipment and software.

g) Refer to part b).

h) Refer to part b).

i) Time-of-use customers with a pre-paid meter will continue to have access to tools that predict electricity usage and consumption patterns, including the time-of-use portal, high usage alerts, budget billing, and CDM.

j) Refer to part b).

k) Hydro One customers with pre-paid meters will have the same payment options available to them as non-pre-paid metered customers, including: bank, internet banking, telephone, credit card, etc.

l) Refer to part b).

m) Refer to part b).

n) In advance of the pre-paid meter deployment in 2022, Hydro One intends to complete a detailed risk assessment, including a review of all policies, soliciting customer input and feedback, and appropriately engaging with stakeholders.

OEB Staff Interrogatory # 8

Issue:

Issue 2: Has Hydro One adequately responded to the customer concerns expressed in the Community Meetings held for this application?

Reference:

Executive Presentation Day Transcript, page 44

Interrogatory:

At this reference, Mr. Pugliese indicated that Hydro One had just launched a new bill design. Please provide a copy of the new bill, description of the new bill presentation and outline the changes made and why those changes were made. Please also provide initial customer feedback, if available, on the new bill design.

Response:

A sample of the new bill is included on the last 2 pages of this response.

The new bill design is being implemented in response to customer feedback that the current bill is difficult to understand. Before the new bill design was launched, Hydro One's survey results indicated that approximately 40% of customers found the bill difficult to understand. The design of the new bill was grounded in customer behaviour research and underwent extensive customer testing with 4,800 of Ontario electricity bill payers, of which 3,130 were Hydro One customers

The key changes to the bill are detailed below.

- Prioritized key information deemed important by customers on the first page to improve ease of comprehension, specifically:
    - What do I owe?
    - How much did I use?
    - When is it due?
    - Who do I contact if I have a question?
    - Key information to be aware of.
- Tested multiple ways to improve customer comprehension of budget billing and instalment plans.
- Enhanced font size and key graphics to make it easier and quicker for customers to find information that they are looking for.

- Tested multiple ways to present the more detailed information on page two of the bill, including implementing a more intuitive time of use graphic and enhanced sequencing of related information in a format that made more sense from a customer comprehension perspective.
- Revised and simplified language to make information easier to read and understand for customers.
- Restructured the definitions for line items to make it easier for customers to relate to and understand where their dollars are being spent.
- Configured the bill layout in a modular format to improve speed to market for future changes.

Hydro One is rolling out the new bill design in a staged manner. It will take until mid-March 2018 to be fully deployed to all customers. As a result, formal customer satisfaction results are not available at this time. At this point, the introduction of the new design has not generated any adverse feedback.

Please see Exhibit I-2-Staff-9 for additional information on the bill redesign initiative.

Total amount you owe **$144.77**

Powering 32 NORTH STREET

Point of Delivery: 50150150 — Residential Medium Density

Electricity **$82.16**

This is the cost of generating the electricity you used this period. Usage is measured in kilowatt-hours (kWh) and depends on the wattage of devices you use and how long you use them. The Ontario Energy Board (OEB) sets the cost per kWh and the money collected goes directly to the electricity generators.

Delivery **$56.03**

This is the cost of ensuring you have reliable power when you need it. Hydro One collects this money to build, maintain, and operate the electricity infrastructure, which includes power lines, steel towers and wood poles covering 960,000 sq. km. A portion of this cost is fixed and a portion varies depending on the amount of electricity used.

Regulatory Charges **$4.45**

The Independent Electricity System Operator (IESO) uses this money to manage electricity supply and demand in the province, which is necessary to ensure that there is enough electricity to meet Ontario's needs at all times.

HST (12345-1234-RT1111) **$18.54**
8% Provincial Rebate .... **-$11.41**
Total of your electricity charges **$149.77**

Your Adjustments **-$5.00**

Hydro One - How the System Works

Hydro One's role is to make sure that Ontario's electricity can flow directly to you, our customers, through our system safely and reliably.

Energy Saving Tip

Phantom Power

Electronics use energy even when off. Plug them into power bars with timers or auto-shutoff to lower energy use.

OEB Staff Interrogatory # 9

Issue:

Issue 2: Has Hydro One adequately responded to the customer concerns expressed in the Community Meetings held for this application?

Reference:

Executive Presentation Day Transcript, page 18 and page 44
Exhibit C1/Tab 1/Schedule 5, pg 13, Table 11: Operational Effectiveness Outcomes

Interrogatory:

As noted above, Hydro One witnesses mention the bill redesign and its launch in late 2017. Table 11 indicates that the redesign "will make it easier for customers to understand their bill and increase their understanding of their electricity consumption."

a) The Hydro One witness mentioned that 40% of customers found that the current bill was confusing. What was the source of this statement?

b) Were there additional reasons for pursuing a bill redesign?

c) Please summarize the changes made to the bill design and why each specific change was made.

d) What was the cost of this bill redesign and are any of the costs of this project proposed to be recovered in 2018 rates?

e) What are the benefits expected from this bill redesign? Is customer satisfaction expected to improve? If so, by what amount? Are call volumes expected to be lower? Again by what amount? Would this lead to lower staffing and other costs and if so, to what extent?

f) Have bills also been redesigned for General Service and Large User customers? If so, what was the rational for this redesign and what are the benefits expected?

g) As Hydro One has shared this bill redesign with other distributors, what is the status of the bill redesign project in the distribution sector?

h) After the 2017 bill redesign completed in 2017, why is Hydro One planning another bill redesign for 2021/2022, as shown at ISD GP-29 (Customer Service Billing Investments)? What additional features are planned in the 2021/2022 redesign not already in 2017 redesign?

Response:

a) Hydro One conducts surveys on a regular basis across various customer segments to gain an understanding of the key drivers impacting customer satisfaction. All research is conducted by independent experts, thereby ensuring results are unbiased. The referenced statistic is based on results from the bi-annual Residential and Small Business survey.

b) Hydro One redesigned the bill in order to:
   - improve customer comprehension of information presented on the bill;
   - improve information retention by customers; and
   - replace vendor unsupported/antiquated bill print tools and applications.

c) Please refer to Exhibit I-2-Staff-8.

d) The cost of the Bill Redesign in 2017 was $9 million, broken down as follows: actual bill graphical design (1%); customer and behavioural science research (6%); replacement of out-dated bill print hardware and applications (26%); system design and testing (54%); and customer communication, migration and call centre staff training (13%). There will be no impact to 2018 rates as a result of this initiative.

e) Hydro One expects increased customer comprehension of their bill and electricity consumption, leading to improved customer satisfaction with service delivery. The redesigned bill will also encourage energy conservation by providing customers information on how they can manage their usage better to take advantage of off-peak rates. Furthermore, the new modular design will allow Hydro One to implement modifications faster to meet future regulatory and customer need driven changes.

   It is anticipated that with the new design, customers comprehension about their electricity consumption will increase, thereby reducing the number of calls to the contact centre. Since the new bill has not been fully rolled out yet, Hydro One is unable to quantify the potential reductions.

f) Bills for demand and interval billed customers and generator statements have not been redesigned as part of this initiative. However customer feedback has identified numerous needs for improvement, including items such as enhanced on-line access to statements such as more detailed supporting data and calculations and statements that are more flexible to better reflect the site specific supply and billing parameter configurations.

g) Hydro One has shared the customer insights and bill design with the Electricity Distributors Association, numerous local distribution companies, and the Ministry of Energy as part of their initiative on updating existing bill format regulations. The Ministry of Energy is contemplating a working group to update bill format regulations in an effort to improve bill comprehension and satisfaction. It is anticipated that Ministry efforts will result in the need for other local distribution companies to make updates to their bill designs.

h) The majority of the funding outlined in the Investment Summary Document GP-29 is required to reengineer processes and replace antiquated tools and applications that support non-energy billing, including: invoicing, collections, and customer service such as providing customers electronic bills and self-service options. The remaining funds are earmarked for the implementation a new bill design to meet the needs of commercial and industrial customers.

Vulnerable Energy Consumers Coalition Interrogatory # 1

Issue:

Issue 2: Has Hydro One adequately responded to the customer concerns expressed in the Community Meetings held for this application?

Reference:

None

Interrogatory:

a) Please provide a table showing a summary by topic of customer concerns provided to Hydro One related to this application.

b) Please show how/where in the evidence the concern expressed is addressed

Response:

a) The OEB issued a summary of the OEB's Community Meetings on September 7, 2017 (see pages 12-14). For convenience, the summary of the issues and comments related to Hydro One's Application are provided below.

Issues and Comments Directly Related to Hydro One's Application

1.	The OEB should not approve this request by Hydro One to increase its rates. Reasons given included: • Hydro One should find efficiencies instead. • CEO and executive compensation should be reduced. • Replacement of assets should have already been paid for with revenues in the past (replacement reserve) and new funds are not necessary. Hydro One has been wasting money in the past. Rates in Ontario are the highest in the country creating hardships for customers and forcing business to close or relocate.
2.	The salaries of Hydro One's CEO, executives and employees are too high. The CEOs of BC and Quebec Hydro make one tenth of the amount the Hydro One CEO makes. There are too many vice presidents at Hydro One and too many employees were on the "sunshine list" when Hydro One was a part of it.
3.	Concerns over reliability and service capacity issues.
4.	Disagreement with customer assignments to density based rate classes. Customers who were classified as medium density by Hydro One for years have been reassigned to a low density classification with higher rates.

5.	In a few communities (particularly Leamington and Napanee), MPPs and some consumers said there was not enough advance notice about the community meetings. Several attendees said they heard about the meeting from their conservative MPP.
6.	Whether the OEB has ever refused a rate increase request and whether it is permitted to do so.
7.	Concerns that the OEB does not care about the customer/consumer (OEB accountability).
8.	An assertion that in the last Hydro One case, the OEB approved a higher increase than was requested.

Issues Directly Related to Hydro One's Application Specific to Certain Communities

1.	Leamington - Concerns were raised that greenhouse agricultural producers were moving investment and jobs to jurisdictions in the United States (Ohio, Pennsylvania) due to high electricity rates.
2.	Rockland – Concerns were raised about the need for additional capacity in the area, so that businesses could expand.
3.	Bracebridge - Customers were concerned about reliability and many had already purchased a backup generator; due to the number, frequency and duration of outages.

b) The OEB Community Days were held after Hydro One's Application was filed on March 31, 2016. Hydro One responded to the concerns raised in its Executive Presentation on December 7, 2017 in this proceeding (see transcript).

Issue 3: Is the overall increase in the distribution revenue requirement from 2018 to 2022 reasonable?

Reference:

A-03-01-02 Consolidated Business Plan

Interrogatory:

Please provide a copy of the company's business plan referred to in the first paragraph that was submitted to the HONI Board last April. Does the Company have replacement for its CFO? Please provide a status report.

Response:

The evidence cited does not state that a business plan was submitted to the Board of Directors in April 2017, as no such plan was submitted.

Hydro One has selected a new CFO, Paul Dobson, whose appointment will be effective March 1, 2018. Mr. Dobson was most recently CFO for Direct Energy Ltd. (Direct Energy), Houston, Texas, where he was responsible for overall financial leadership of a $15 billion revenue business with three million customers in Canada and the U.S. Since 2003, Mr. Dobson has held leadership positions in finance, operations and customer service across the Centrica Group, the parent company of Direct Energy.

Building Owners and Managers Association Toronto Interrogatory # 37

Issue:

Issue 3: Is the overall increase in the distribution revenue requirement from 2018 to 2022 reasonable?

A-03-01-02 Page: 2

Interrogatory:

Please explain in detail what is meant by "responsible stewardship of its transmission system". What is the class you are seeking to be the best of, Canadian utilities, North American utilities, or other?

Response:

In this context, “responsible stewardship of its transmission system” refers to Hydro One managing and operating the transmission system safely, reliably and cost effectively for its customers. Hydro One’s vision is to be a Canadian-based, leading North American utility.

Building Owners and Managers Association Toronto Interrogatory # 39

Issue:

Issue 3: Is the overall increase in the distribution revenue requirement from 2018 to 2022 reasonable?

Issue 1: Has Hydro One responded appropriately to all relevant OEB directions from previous proceedings?

Issue 41: Has Hydro One demonstrated improvements in presenting its compensation costs and showing efficiency and value for dollar associated with its compensation costs (excluding executive compensation)?

Reference:

Hydro One Consolidated Business Plan, December 2, Page: 4

Interrogatory:

a) Is the $11 million included in the table, or is it additional to the costs, eg. 2018 $312 million in the table?

b) Is there a more detailed treatment of corporate common costs? See, in particular, last paragraph. Please provide a detailed breakdown of each of the lines in the table on p4, with particular attention to the larger items, such as Planning, Customer and Corporate Relations, Network Operating. Please provide the appropriate ratio for each of the lines, and the most recent B&V study. Please provide the cost of the custom service to the DSP.

c) Has the Internal Audit completed its review of same or all of the eight recommendations? Please file once this is completed.

d) Please update the table and chart to September 30, 2017.

Response:

a) Yes the $11 million is included in the table.

b) Please refer to Exhibit C1, Schedule 1, Tab 7 for more details on Common Corporate Functions and Services, Exhibit C1, Tab 1, Schedule 8 for Planning, Exhibit C1, Tab 1, Schedule 9 for Information Technology ("IT") and Exhibit C1, Tab 1, Schedule 4 for Operations OM&A.

c) Referring to the Hydro One Consolidated Plan on page 4 provided in Exhibit A-3-1-2, there are no recommendations identified for Audit to review.

d) It's noted that this interrogatory requests Q3 information, however Hydro One intends to update this interrogatory and others requesting 2017 actuals when the 2017 actuals are available and believes this will fulfill the intent of the interrogatory.

Issue:
Issue 3: Is the overall increase in the distribution revenue requirement from 2018 to 2022 reasonable?

Reference:
None

Interrogatory:
Please describe, in detail, the overall planning process that HON undertook in developing its rate plan and in putting together its Application. Please include a complete timeline. Please provide all budget directives and guidance provided to employees.

Response:
The business planning process at Hydro One typically starts in the spring each year. Hydro One's planning group prepares the investment plan as described in section 2.1 of the DSP (Exhibit B1, Tab 1, Schedule 1) and then the common corporate costs are compiled and layered onto the investment plan. The result is run through Hydro One's business plan models to determine revenue requirement and average rate increases, and the written business plan documents are prepared and reviewed for presentation to Hydro One's Executive Leadership Team followed by its Board of Directors. The Dx Business Plan forms the basis for this Application. Supporting evidence for the Application is prepared based on the approved business plan.

Please see Exhibit I-24-SEC-36 for a timeline for the process.

Please see Exhibit I-3-SEC-1 for budget guidance documents.

TORONTO ON M5W 3L3

123456123456000122185

What am I paying for?

Balance carried forward from previous statement		**$0.00**
Amount from your previous period	$60.71	
Amount we received on Dec 26/17	−$60.71	
Your electricity charges		**$122.18**
Total amount you owe		**$122.18**

If payment is not received by Jan 28, 2018, a late payment charge of 1.5% compounded monthly (19.56% per year) will be calculated from the statement date and applied to your account.

Powering 123 MAIN ST

Point of Delivery: 11111111 — **Residential - Medium Density**

Electricity $61.51

This is the cost of generating the electricity you used this period. Usage is measured in kilowatt-hours (kWh) and depends on the wattage of devices you use and how long you use them. The Ontario Energy Board (OEB) sets the cost per kWh and the **money collected goes directly to the electricity generators**.

Delivery $51.45

This is the cost of ensuring you have reliable power when you need it. **Hydro One collects this money** to build, maintain and operate the electricity infrastructure, which includes power lines, steel towers and wood poles covering 960,000 sq. km. A portion of this cost is fixed and a portion varies depending on the amount of electricity used.

Regulatory Charges $3.40

The Independent Electricity System Operator (IESO) uses this money to manage electricity supply and demand in the province, which is necessary to ensure that there is enough electricity to meet Ontario's needs at all times.

HST (87086-5821-RT0001) $15.13

8% Provincial Rebate .... −$9.31

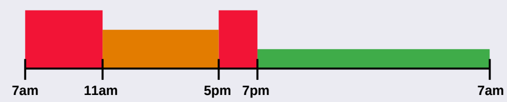
Total of your electricity charges **$122.18**

What is my Time-of-Use breakdown?

Dec 1/17 to Jan 4/18	Usage (kWh)	Rate (¢)	Amount
On-Peak	140.102	13.2	$18.49
Mid-Peak	112.2738	9.5	$10.67
Off-Peak	497.6243	6.5	$32.35

My current Time-of-Use schedule

Winter: Weekdays - Nov 1 to Apr 30

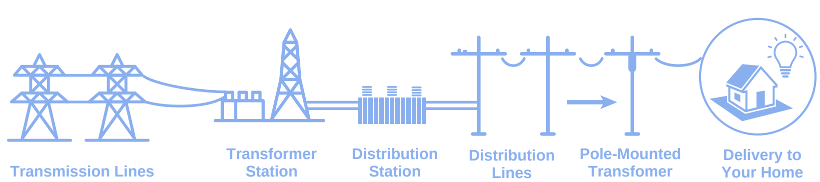


Weekends & holidays are always Off-Peak

Meter Number	Current Reading	Previous Reading	Difference	Usage in kWh
J1234567	Jan 4/18 12404.0568	Dec 1/17 11654.0568	750.0	(x1) = 750.0

Hydro One - How the System Works

Hydro One's role is to make sure that Ontario's electricity can flow directly to you, our customers, through our system safely and reliably.



Energy Saving Tip

Phantom Power

Electronics use energy even when off. Plug them into power bars with timers or auto-shutoff to lower energy use.

Consumers Council of Canada Interrogatory # 7

Issue:
Issue 3: Is the overall increase in the distribution revenue requirement from 2018 to 2022 reasonable?

Reference:
A-03-01-01

Interrogatory:
The 2017-2022 Business Plan is dated December 2, 2016. Please provide a timeline setting out the steps that led to this final Business Plan. How describe how HON operates in the context of two separate business plans given many of the resources are shared between Transmission and Distribution (e.g.; work force, Common Corporate Costs)?

Response:
Please refer to Exhibit I-24-SEC-36 for the timeline.

Hydro One prepares business plans for its transmission and distribution businesses simultaneously, focusing on their specific business requirements. As far as operating with shared resources, work is planned for each business to balance the workforce available with the planned work. Similarly, the groups that perform common corporate functions and services are staffed appropriately to balance their work requirements between the businesses.

Consumers Council of Canada Interrogatory # 8

Issue:

Issue 3: Is the overall increase in the distribution revenue requirement from 2018 to 2022 reasonable?

Reference:

A-03-02 Page 8 Table 3

Interrogatory:

Based on the proposed revenue requirement figures set out in Table 3 please confirm that HON is seeking to recover (on average) approximately an additional $52 million per year from its customers over the plan term relative to current rates. Please provide the total amount per year (increases relative to current rates) inclusive of the deferral and variance account amounts.

Response:

As outlined in the table below, Hydro One is seeking to recover (on average) an additional $50.7 million per year from its customers over the plan term relative to current rates inclusive of deferral and variance account amounts. Hydro One notes that the appropriate proposed revenue requirement figures for this calculation are provided in the application update filed in Exhibit Q, Tab 1, Schedule 1.

Year	Revenue Requirement (A) **	DVA Disposition (B) ***	Total (C = A+B)	Change in Total (C) Relative to Prior Year
2017	$ 1,467.58	$ 11.08	$ 1,478.66	-
2018	$ 1,517.11	$ 6.18	$ 1,523.29	$ 44.63
2019	$ 1,564.06	$ 6.18	$ 1,570.24	$ 46.95
2020	$ 1,610.67	$ 6.18	$ 1,616.85	$ 46.60
2021	$ 1,684.41	$ 6.18	$ 1,690.59	$ 73.75
2022	$ 1,725.87	$ 6.18	$ 1,732.05	$ 41.46
			Average Annual Change	$ 50.68

* All dollar figures are in millions.
** Revenue requirements reflect values in Exhibit Q, Tab 1, Schedule 1.
*** DVA refers to deferral and variance account balances for disposition.

Consumers Council of Canada Interrogatory # 9

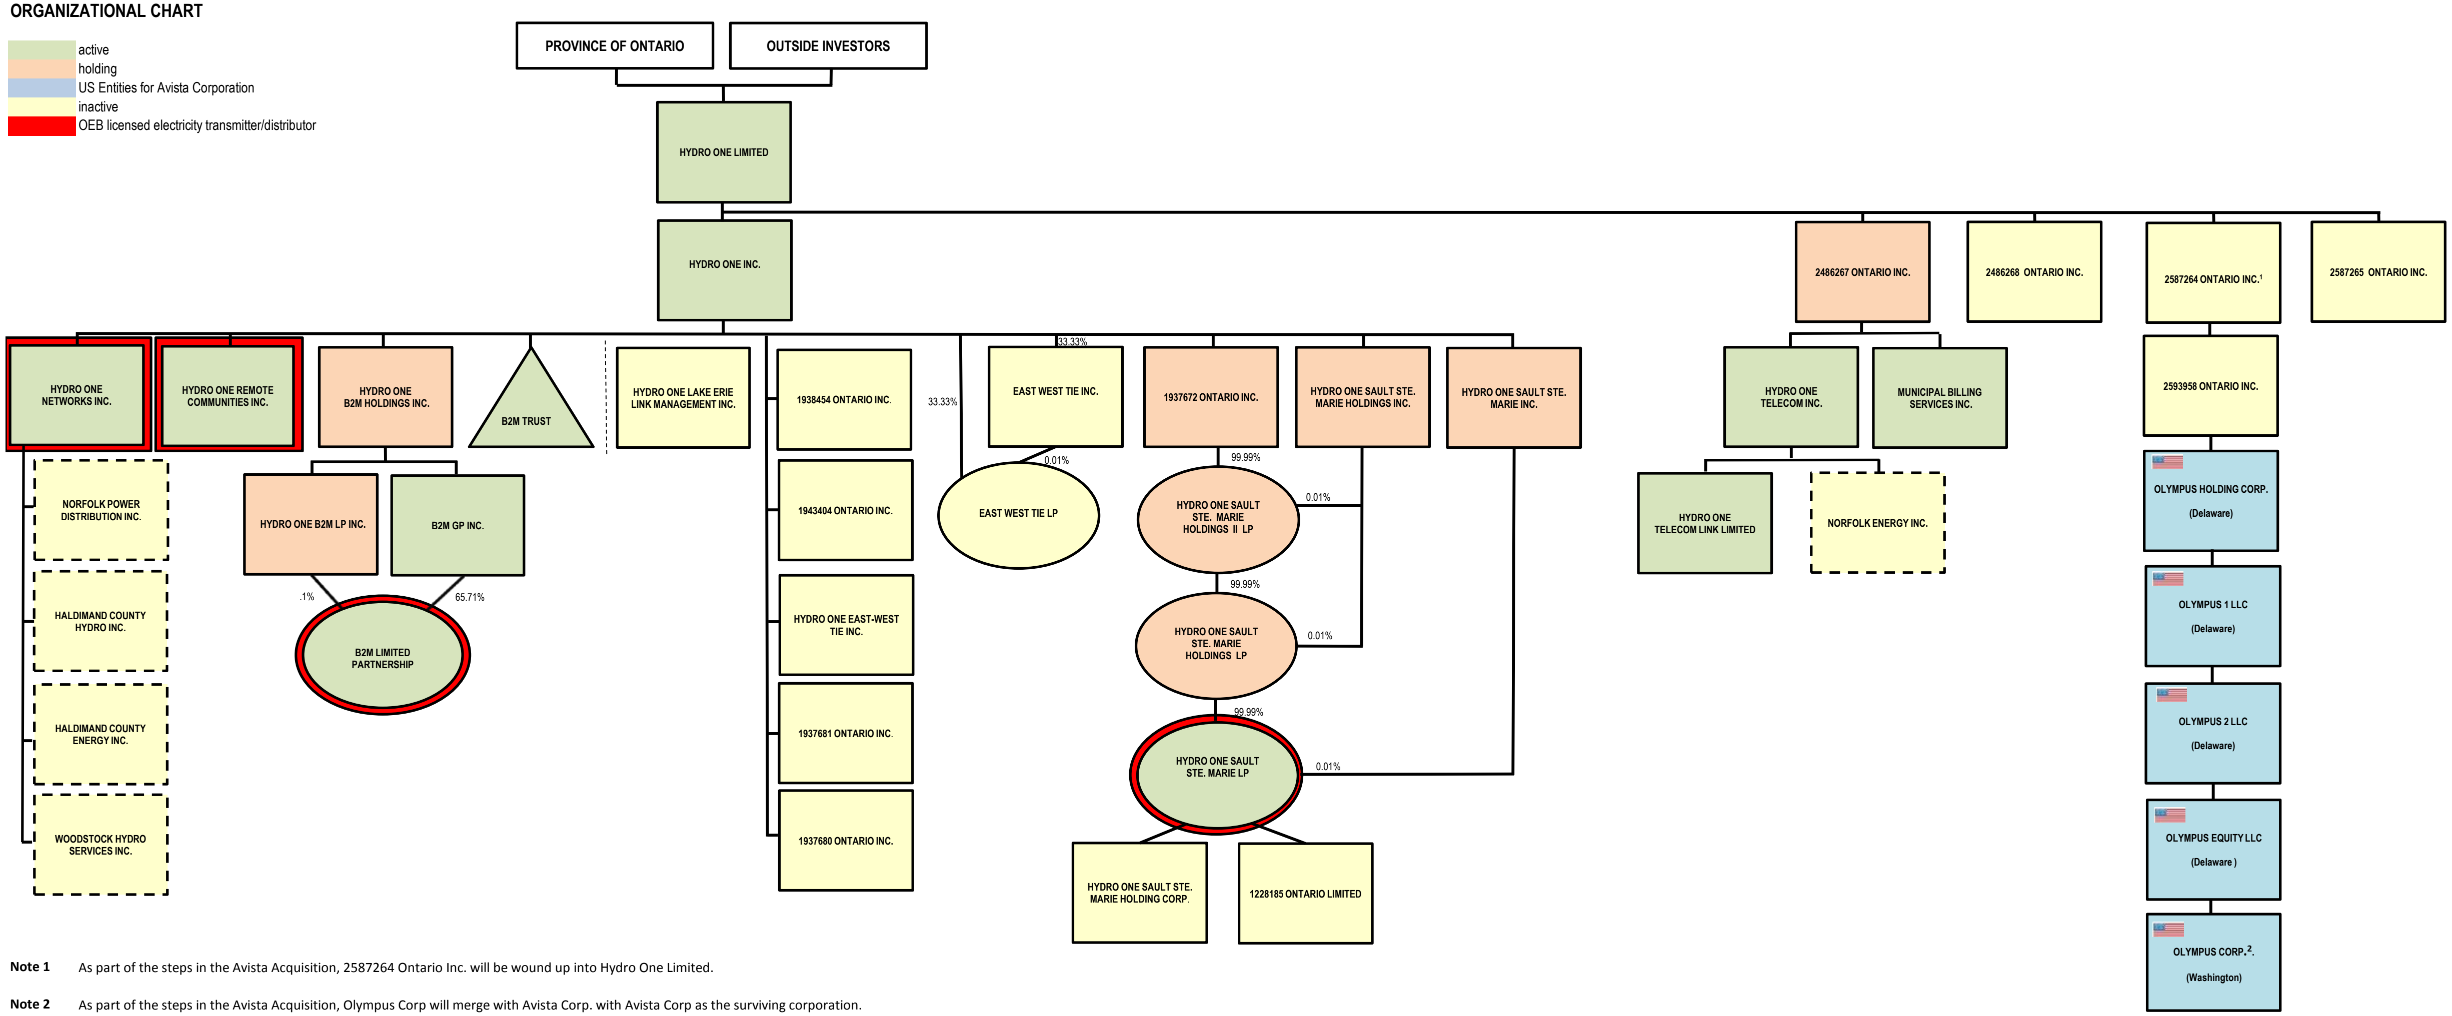
Interrogatory:

HON has provided a Corporate Organization Chart as it relates to HON Distribution. Please provide a complete corporate organization chart that includes all legal entities within HON Limited's organizational structure. In addition, please provide a complete organization chart for Hydro One Networks Inc. that includes both HON Transmission and Distribution (Please include employees down to the Director Level).

Response:

Please see Attachment 1 which reflects the corporate organizational structure. Please see Exhibit I-3-SEC-5 for the organizational chart for Hydro One Networks.

HYDRO ONE
ORGANIZATIONAL CHART



Note 1 As part of the steps in the Avista Acquisition, 2587264 Ontario Inc. will be wound up into Hydro One Limited.

Note 2 As part of the steps in the Avista Acquisition, Olympus Corp will merge with Avista Corp. with Avista Corp as the surviving corporation.

Canadian Manufacturers & Exporters Interrogatory # 42

Issue:

Issue 3: Is the overall increase in the distribution revenue requirement from 2018 to 2022 reasonable?

Reference:

C1-07-02-05 Updated
C1-07-02-06 Updated

Interrogatory:

A comparison of the number of eligible positions in 2016 (Attachment 6) and the forecast for 2018 through 2022 (Attachment 5) shows significant reductions for the Ontario Co-op Education Credit (358 to 247), the Ontario Apprenticeship Credit (394 to 346 in 2018 and to 268 in subsequent years) and the Federal Apprenticeship Tax Credit (245 to 169).

a) Please explain the significant reduction in the eligible positions for each of the above noted tax credits.

b) Please confirm that the wages & salaries included in OM&A costs for the 2018 through 2022 period reflect the reduction in eligible positions.

c) Please explain why the average annual Ontario Apprenticeship Credit per eligible position is about $3,000 per year when the credit is $5,000 per year.

Response:

a) The 2016 Ontario Co-op Education, Ontario Apprenticeship and the Federal Apprenticeship credits (the "Tax Credits") in Exhibit C1-7-2, Attachment 6 were estimates as the 2016 Hydro One Networks Inc. tax return was not filed at the time when the 2016 Tax Credits were compiled. These Tax Credits were subsequently trued up to actual amounts on the 2016 tax return as follows:

Summary of Tax Credits ($ Thousands)			
	2016 (1)	**2018 (2)**	**2019 (2)**
Ontario Coop Education Credit	$ 760	$ 740	$ 740
Eligible Positions	254	247	247
Ontario Apprenticeship Credit	$ 2,644	$ 1,430	$ 860
Eligible Positions	385	346	268
Federal Apprenticeship Credit	$ 323	$ 320	$ 320
Eligible Positions	171	169	169

(1) Per 2016 Hydro One Networks Inc. tax return
(2) Per Exhibit C1-07-02, Attachment 5

As illustrated above, the actual eligible positions for Ontario Co-op Education Credit and Federal Apprenticeship Credit in 2016 are consistent with those reported for the test years in Exhibit C1-07-02, Attachment 5.

The number of eligible positions for Ontario Apprenticeship Credit was decreased mainly due to an Ontario legislative change, which reduced the eligible period for Ontario Apprenticeship Credit by 12 months, from the first 48-month of the apprenticeship program to the first 36-month for apprenticeship programs commencing after April 23, 2015. As summarized below, the group of employees in 2016 that qualify for Ontario Apprenticeship Credit is larger than in future years such as 2019 onwards.

Summary of Ontario Apprenticeship Positions

Fiscal Years	Eligible Positions	Period	Approx. Yrs
~~2016~~	385	2013 to 2016	4 Years
2018	346	January 1, 2015 to April 23, 2015 2016 to 2018	< 4 years
2019 +	268	2017-2019	3 Years

b) As discussed in (a), eligible positions for the Ontario Co-op Education Credit and the Federal Apprenticeship Credit for the test years were consistent with the 2016 tax return. The number of eligible positions that qualified for the Ontario Apprenticeship Credit declined due to a change in the Ontario legislation and not the number of eligible apprentices employed by Hydro One.

c) The maximum annual Ontario Apprenticeship Credit is $5,000 per year. However, Hydro One estimated average annual Ontario Apprenticeship Credit to be $3,000 to reflect apprentices enrolled in an eligible program for part of the year.

Canadian Manufacturers & Exporters Interrogatory # 46

Issue:

Issue 3: Is the overall increase in the distribution revenue requirement from 2018 to 2022 reasonable?

Reference:

C1-07-01
EB-2016-0160 Decision and Order dated November 9, 2017

Interrogatory:

a) What is the impact on the 2018 distribution revenue requirement if Hydro One were to quantify and reflect the OEB findings in the November 9, 2017 EB-2016-0160 Decision and Order related to the regulatory income taxes recoverable from ratepayers.

Response:

In the November 9, 2017 EB-2016-0160 Decision and Order, OEB ordered Hydro One to give ratepayers an allocation of the future tax savings based on benefits follow costs "Actual FMV Sales and Payments" allocation factor that was established in the September 28, 2017 EB-2016-0160 Decision and Order ("September Decision"). As of January 1, 2018, 47.4% of the Province shares in Hydro One Limited ("HOL") were sold, and another 2.4% of the Province shares in HOL were sold to First Nations on January 4, 2018, for a total of 49.8% of HOL shares that were owned by new shareholders. Using the same methodology as illustrated in the September Decision, the benefits follow costs allocation ratio in favour of shareholders for Distribution is estimated to be 61.6% and is calculated as follows:

Actual FMV Sales and Payment Ratios - Distribution

	49.8% Shares Sold		
Actual Payment Proportions toward FMV bump			
- By new shareholders (47.4% + 2.4% First Nation)	49.8%	4,171.0	2,077
- Departure tax on remainder	50.2%	984.0	494
			2,571
		$2,571/$4,171 =	61.6%

Based on this updated ratio, the revised regulatory income taxes for 2018 would be reduced from $65.4 million as reported in Exhibit Q, Tab 1, Schedule 1 to $40.3 million.

This was noted in Procedural Order No. 2 of this proceeding which stated:

> “The OEB understands that Hydro One’s proposed treatment of tax savings resulting from the Government of Ontario’s decision to sell its ownership interest in Hydro One Limited by way of an IPO and subsequent sale of shares in this Distribution Rates Application is consistent with its proposed approach to those savings in the Transmission application. That is, Hydro One does not intend to apply any tax savings resulting from the IPO to reduce Hydro One’s distribution revenue requirement. As Hydro One notes “Neither the departure tax nor the change in tax regime will have any impact on ratepayers. For regulatory purposes, income tax expenses will continue to be calculated according to the method prescribed by the Board’s 2006 EDR Tax Model and 2006 EDR Handbook, Section 7.1 “OEB 2006 Regulatory Taxes Expense Methodology”[1]. The OEB does not intend to have that matter re-litigated in the current proceeding while the motion and appeal are pending. Accordingly, the OEB will not permit the Tax Savings Determination issue to be addressed in the distribution case, pending the outcomes of the Hydro One Motion and Appeal.” (Decision on Issues List, Interim Rates and Procedural Order No. 2, December 1, 2017, page 3-4)

Canadian Manufacturers & Exporters Interrogatory # 65

Issue:

Interrogatory:

a) Please update all of the tables in Schedule 1, along with the Revenue Requirement Workform, to reflect any changes made as a result of the responses to the interrogatory responses, and/or any updates or revisions made prior to the filing of the interrogatory responses.

Response:

a) Please refer to Exhibit I-33-Staff-179 for updated tables.

The Revenue Requirement Workform is filed as MS Excel I-03-CME-65-01.

Energy Probe Research Foundation Interrogatory # 2

Issue:

Issue 3: Is the overall increase in the distribution revenue requirement from 2018 to 2022 reasonable?

Reference:

E1-01-02 Page: 2 Table 1

Interrogatory:

Please explain the large variance in Regulated Revenues between 2016 Actual and 2016 Approved.

Response:

The large variance in the Regulated Revenues is due to the Decision and Order in EB-2015-0141 (Rogers Communication Partnership et al.). In late 2016, the OEB issued the decision which determined Hydro One's Joint Use telecom rate for calendar years 2015-2017. In this decision, the OEB approved a rate of $41.28 per attacher, per pole.

In late 2016, Hydro One back billed for the difference of the interim rate, and the approved rate for 2015 and 2016, which equated to $10.4M. The majority of the 2016 variance is due to the increase in Joint Use Revenues.

Witness: BOLDT John

Power Workers' Union Interrogatory # 1

Issue:

Issue 3: Is the overall increase in the distribution revenue requirement from 2018 to 2022 reasonable?

Issue 4: Are the rate and bill impacts in each customer class in each year in the 2018 to 2022 period reasonable?

Issue 5: Are Hydro One's proposed rate impact mitigation measures appropriate and do any of the proposed rate increases require rate smoothing or mitigation beyond what Hydro One has proposed?

Reference:

N/A

Interrogatory:

a) Which Hydro One rate classes benefit from bill protection pursuant to the terms of the Fair Hydro Plan (FHP)?

b) In 2016, how many customers were in each of these rate classes?

c) What percentage of Hydro One's total customers in 2016, do these customers represent?

d) In 2016, how much distribution revenue did Hydro One receive from these customers?

e) In 2016, what percentage of Hydro One's total distribution revenue was received from these customers?

Response:

a) Hydro One's R1 and R2 customers specifically benefit from the Distribution Rate Protection Program as set out in the Fair Hydro Plan.

   Hydro One notes that there are certain aspects of the Fair Hydro Plan that benefit customers of all distributors in Ontario, including: i) reduced Global Adjustment charges and the Ontario Rebate for Electricity Consumers ("OREC") credits for residential and low volume general service customers, ii) reduced regulatory charges (OESP charge eliminated, RRRP charge reduced) and iii) lower eligibility threshold for the Industrial Conservation Initiative ("ICI") program so more large general service customers can participate.

b) In 2016, there were 441,836 R1 customers and 328,766 R2 customers.

c) In 2016, in terms of number of customers, R1 represented 34% of total and R2 represented 26% of total. Former Norfolk, Haldimand and Woodstock customers were not included in this analysis as these customers had not been integrated into Hydro One's rate structure.

d) In 2016, Hydro One received $295.7 million and $476.2 million (including the RRRP credit) in base distribution revenue from R1 and R2 classes, respectively.

e) In 2016, in terms of base distribution revenue, R1 represented 22% of total and R2 represented 35% of total. Former Norfolk, Haldimand and Woodstock customers were not included in this analysis as these customers had not been integrated into Hydro One's rate structure.

Interrogatory:

Please provide a copy of all budget guidance documents that were issued regarding the 2018-2022 budgets that underlie the application.

Response:

Please see the attached budget guidance documents.

Attachment 1 – Common Corporate Costs Validation Kick-off 2017-2022 (June 15/16, 2016)
Attachment 2 – Regulatory Expectations for the Dx Filing (June 2, 2016)
Attachment 3 – Kick-off Investment Planning Process 2017-2022 (June 2, 2016)
Attachment 4 – Investment Planning Training 2017-2022 (Winter 2016)

Common Corporate Costs Validation Kick-off

2017 - 2022

June 15/16, 2016

Key Points of Discussion

- Key Points for Investment Plan Instructions
- Key Regulatory Points
- Common Corporate Costs Validation approach
- Schedule

Constraints are in place to guide Investment Plan Development

Constraints/Considerations	
Financial	Asset need, 4.2% rate base growth, productivity, and inflation
Regulatory	OM&A follow the OEB decision for 2017, and then for 2018-2022 assume IRM rate regime (inflation less productivity)
Forecast	Exception updates only
Schedule	Strict adherence to deadlines within IPP to meet established milestones
Common	Costs held in 2017 & 2018 due to Tx Rate Filing; approved changes must neutral or a “blue page update”
Resources	Work Program Levels must be achievable

Expectations: Regulatory

Hydro One's previous RRFE Distribution rate application not accepted by OEB in March 2015

At highest level, application not accepted due to insufficient alignment with RRFE

- However, 2015-2017 rates were accepted on a Cost of Service basis

Several specific reasons cited:

- Inconsistency with outcome-based regulation
- Lack of externally imposed incentives to inform productivity and efficiency gains
- Weak benchmarking evidence
- Limited prospects for continuous improvement
- Unclear demonstration of value to customers

In addition, OEB highlighted ten specific studies to complete and address in subsequent filing

- Largely focused on productivity and benchmarking

Key steps being taken to address areas of concern in upcoming Distribution application

Incorporate incentive rate structure to drive RRFE's desired performance outcomes

- Customer focus
- Operational effectiveness
- Public policy responsiveness
- Financial performance

Heavily leverage customer engagement findings to inform Distribution System Plan

- Customer need and preferences to drive investments

Reflect thorough internal and external benchmarking to support:

- Levels of planned spend
- Opportunities for improvement / efficiency

Include an Earnings Sharing Mechanism to align financial incentives with customers

Remove complexity wherever possible

Expectations: Regulatory

hydro one

5-year Distribution filing will fall under an incentive rate mechanism…

Three available incentive rate mechanisms:

- **Annual index -** rate increases limited to inflation less a productivity improvement factor
- **Price Cap –** similar to annual index, with tools for recovery of capital from unforeseen events
- **Custom –** applicant must define a custom formula to capture 5-year capital and OM&A needs

Selection of mechanism to be based on balancing flexibility (required to meet Hydro One's needs) with complexity (which drives regulatory risk)

Several features common to all 3 mechanisms:

- Comprehensive coverage (capital and OM&A)
- Productivity – capital and OM&A
- Sharing of benefits – earnings sharing mechanism
- Off-ramps for certain unforeseen events
- Variance and deferral accounts – including capital in-service variance account
- Performance reporting and monitoring

…necessitating an increased focus by Hydro One on three areas

1. **Living within our means – staying within capital envelope**
2. **Improving rigour in planning and execution – need to ensure we "get it right"**
3. **Becoming more efficient – driving and measuring productivity across lines of business**

Common Corporate Costs Validation

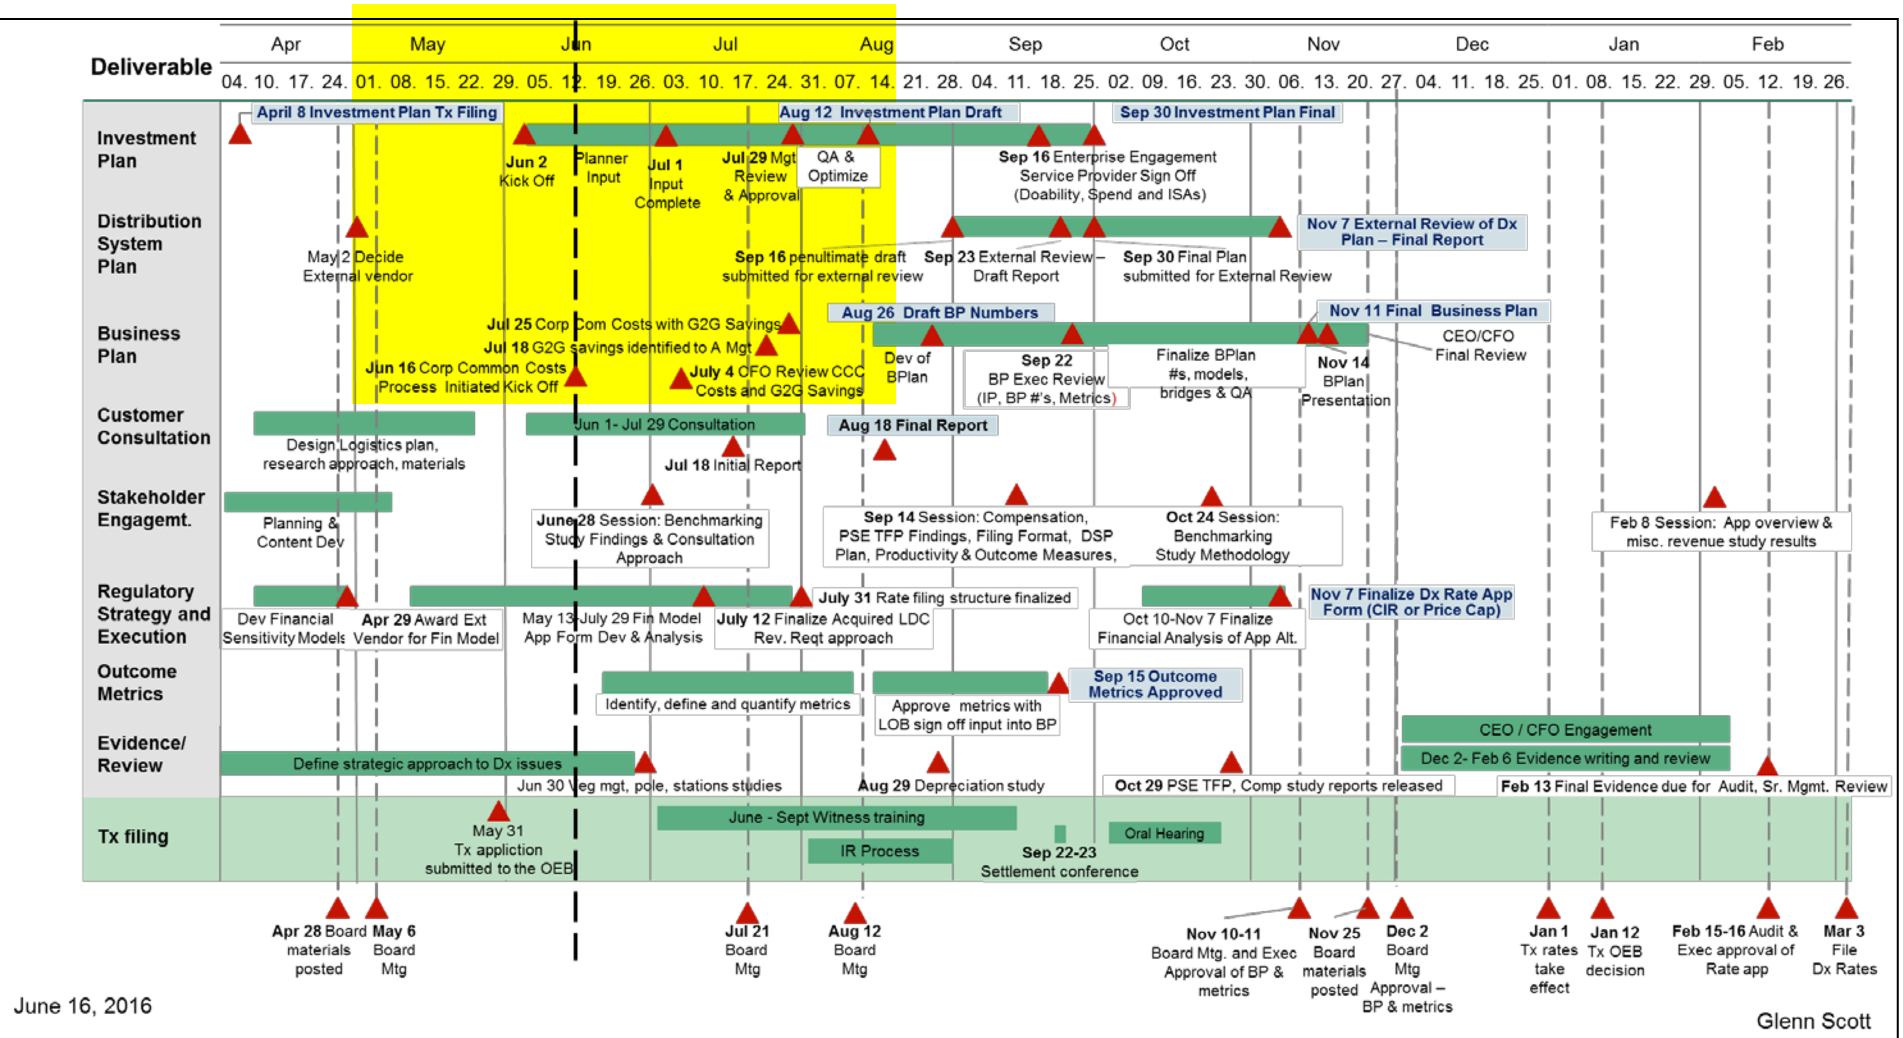
- Good to Great productivity opportunities identified in numerous groups
- Manifest in staffing reductions in some CCC groups
- Staff level baselined as of January 15, 2016.
- Reductions from there identified.

NOTE: Savings identified in 2016 are expected to carry forward year over year

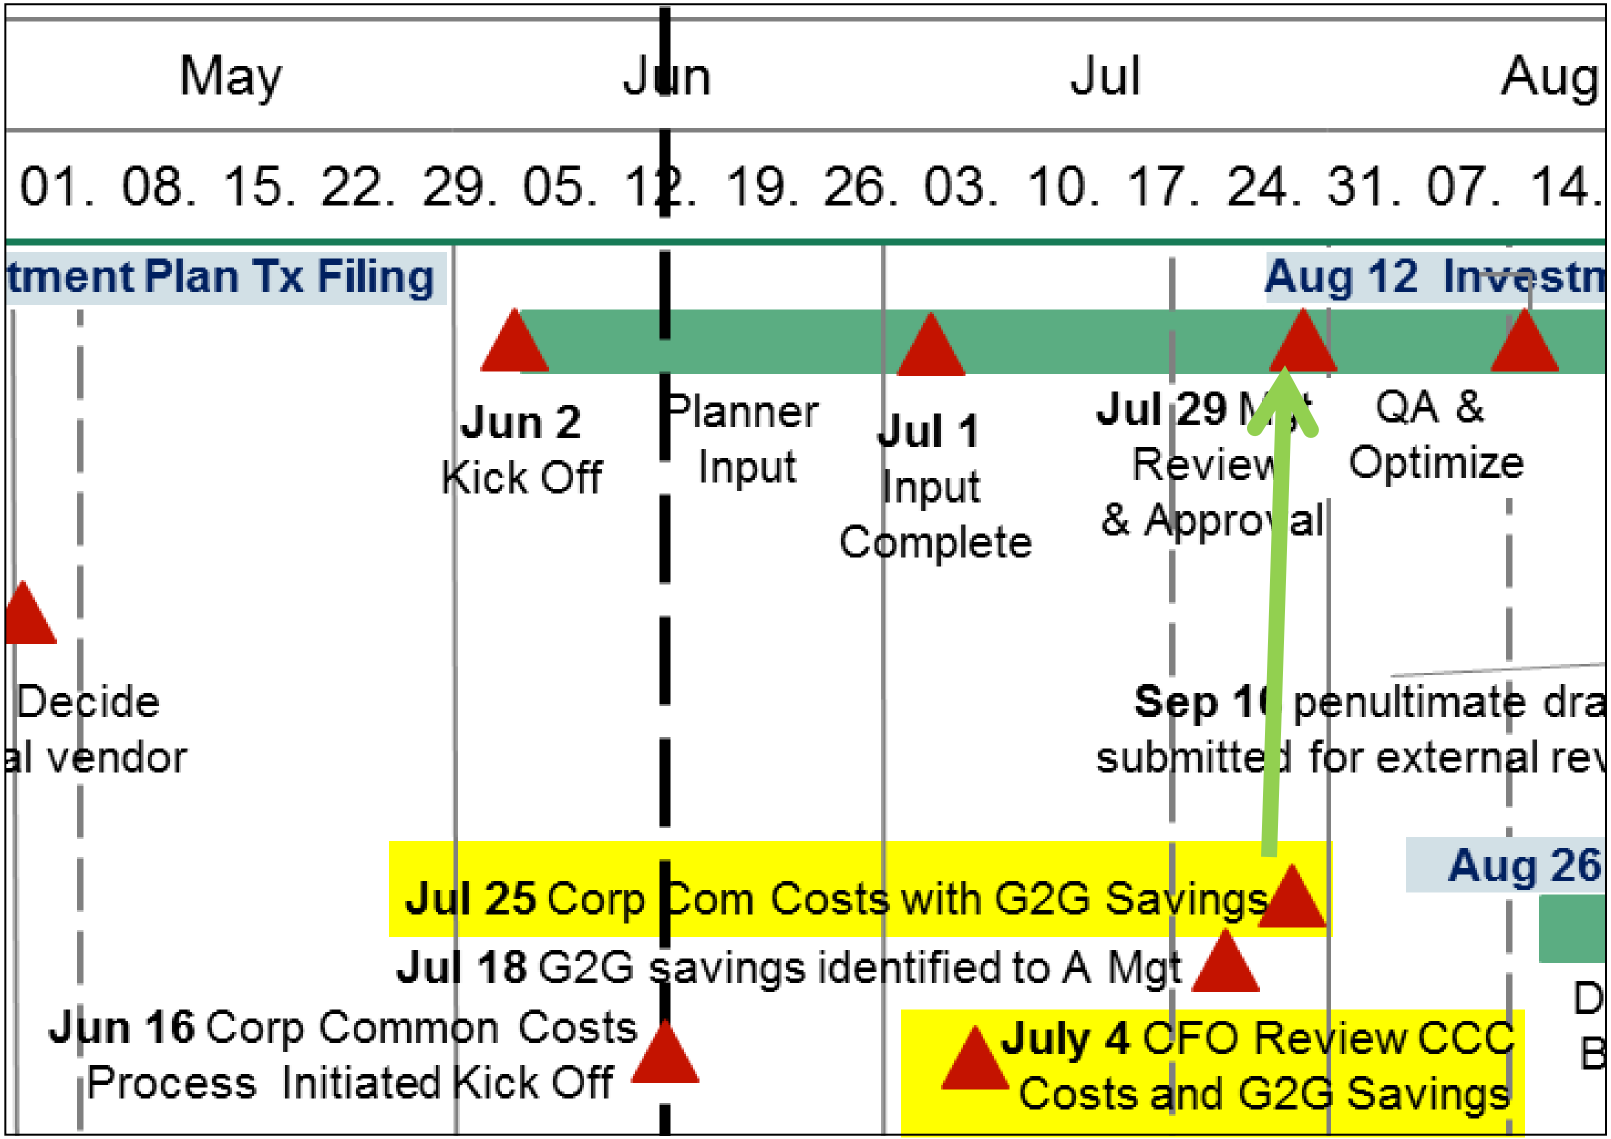
Common Corporate Costs Validation

- Information for you to review for your Cost Centers:
  - January 15, 2016 staff level
  - Agreed to BCG number
  - Current staff level
- Follow up next week with revised Green Sheets based on agreed to BCG numbers
  - Need to update non-labour costs based on new staff numbers

Timeline for activities leading up to Dx rate filing



Key Dates for Common Corporate Costs
July 4 and 25



Common Corporate Costs Validation

- Any increases offset by decrease elsewhere.
- Focus on BCG agreed to staff levels
- Revise non-Labour costs in Green Sheets

- July 4 CFO review (info to Scot by June 29 for Mike pre-read)
- July 25 Final numbers into AIP (info to Scot by July 20)

Regulatory Expectations for the Dx Filing
June 2, 2016

Expectations: Regulatory

Hydro One's previous RRFE Distribution rate application not accepted by OEB in March 2015

At highest level, application not accepted due to insufficient alignment with RRFE

- However, 2015-2017 rates were accepted on a Cost of Service basis

Several specific reasons cited:

- Inconsistency with outcome-based regulation
- Lack of externally imposed incentives to inform productivity and efficiency gains
- Weak benchmarking evidence
- Limited prospects for continuous improvement
- Unclear demonstration of value to customers

In addition, OEB highlighted ten specific studies to complete and address in subsequent filing

- Largely focused on productivity and benchmarking

Key steps being taken to address areas of concern in upcoming Distribution application

Incorporate incentive rate structure to drive RRFE's desired performance outcomes

- Customer focus
- Operational effectiveness
- Public policy responsiveness
- Financial performance

Heavily leverage customer engagement findings to inform Distribution System Plan

- Customer need and preferences to drive investments

Reflect thorough internal and external benchmarking to support:

- Levels of planned spend
- Opportunities for improvement / efficiency

Include an Earnings Sharing Mechanism to align financial incentives with customers

Remove complexity wherever possible

Expectations: Regulatory

5-year Distribution filing will fall under an incentive rate mechanism…

Three available incentive rate mechanisms:

- **Annual index -** rate increases limited to inflation less a productivity improvement factor
- **Price Cap –** similar to annual index, with tools for recovery of capital from unforeseen events
- **Custom –** applicant must define a custom formula to capture 5-year capital and OM&A needs

Selection of mechanism to be based on balancing flexibility (required to meet Hydro One's needs) with complexity (which drives regulatory risk)

Several features common to all 3 mechanisms:

- Comprehensive coverage (capital and OM&A)

- Performance reporting and monitoring

…necessitating an increased focus by Hydro One on three areas

1. **Living within our means – staying within capital envelope**
2. **Improving rigour in planning and execution – need to ensure we "get it right"**
3. **Becoming more efficient – driving and measuring productivity across lines of business**

Expectations: Regulatory

OEB's expectations regarding Hydro One's Distribution System Plan (DSP) are set out in the Board's Filing Requirements. Meeting these requirements is mandatory.

OEB's evaluation of the DSP is focused on outcomes and will consider the following:

- Responsiveness to customer needs and preferences;
- Value proposition for customers in terms of economic efficiency and cost-effectiveness;
- Integrated/regional planning/alternatives;
- Operational effectiveness – continuous improvements in productivity and cost performance while delivering explicitly stated system reliability and quality objectives;
- How the DSP has been integrated and rationalized to enable timely and appropriate expenditures in relation to government-mandated obligations; and
- Financial viability and operational effectiveness – sustainability of efficiencies in OM&A and capital (planning and execution).

DSP must also address OEB's comments in March 12, 2015 Decision relating to 2015 to 2017 distribution rates.

Regulatory Affairs will provide considerations relevant for the preparation and documentation of proposed distribution investments in a follow-on meeting.

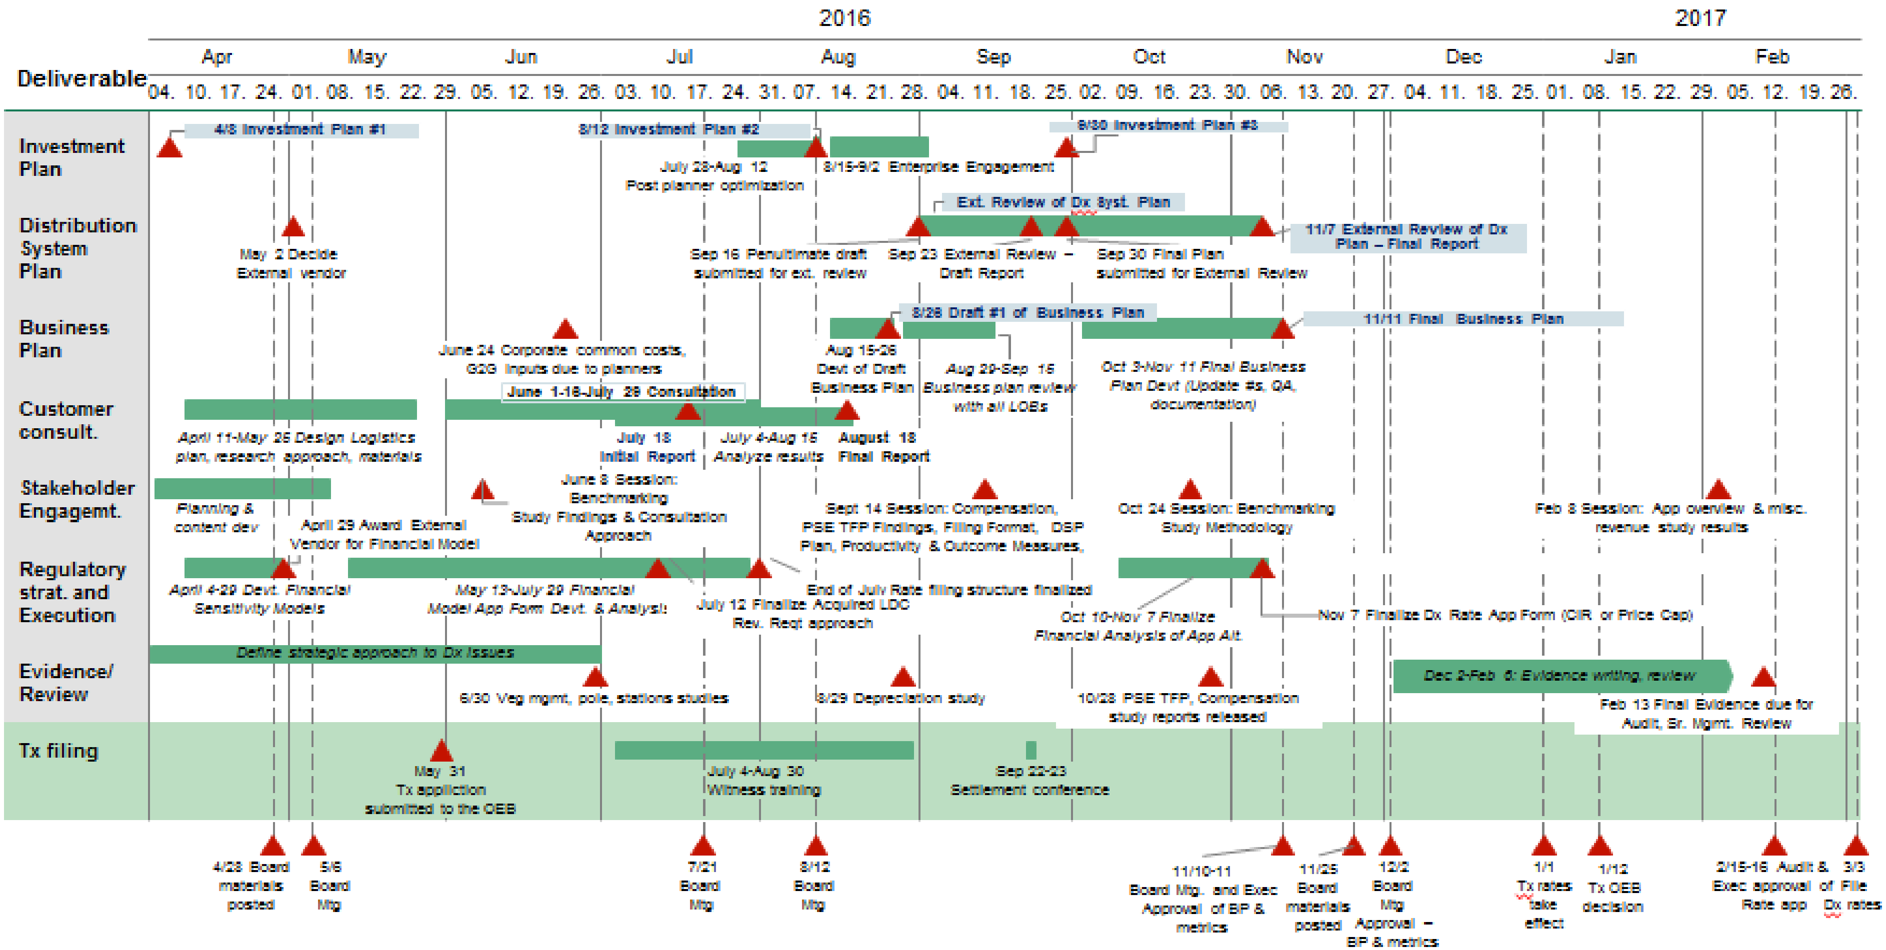
Expectations: Regulatory

Integrated Organizational Effort

Draft – for discussion purposes only

hydro one

Timeline for activities leading up to Dx rate filing



Summary of Key Expectations

- Where the regulatory environment is subject to uncertainty (eg cost responsibility and contribution level to SECTR/Leamington, or policy risk if non-recover of certain costs, consult with Reg Affairs and highlight the risk

Kick-off
Investment Planning Process

2017 - 2022

June 2, 2016

Key Points of Discussion

- Cycle is for Distribution Investments
  - Objectives
  - Constraints
- Creating an Optimized Plan
- Investment Plan Review
- Schedule

Prioritized IPP Pain Points to be Addressed this cycle:

Pain points prioritized by criticality and ease of addressing

1 Lack of clarity of financial boundary conditions

2 Spend categories not linked to outcome-driven objectives

3 Business values/weights do not reflect current corporate strategy

4 Planners/managers do not understand optimization process

5 Lack of feedback received on input to IPP process

6 Planner inputs are of inconsistent quality

7 Insufficient time for investment definitions + quality check

8 Inaccuracy / lack of cost-estimates for potent. investments

9 Risk evaluation process is not consistently applied

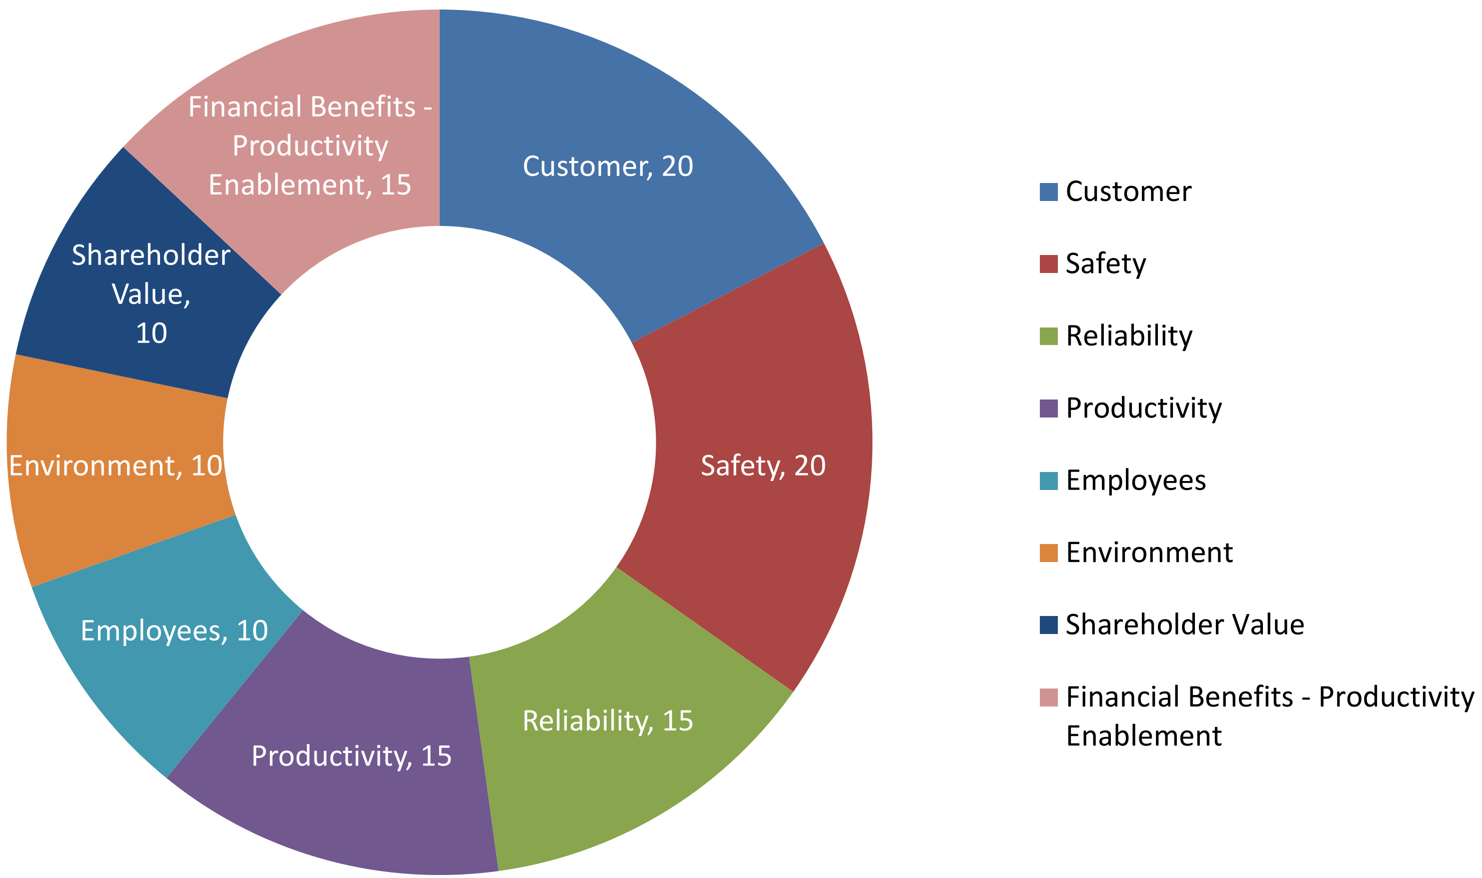
10 Invest. not tracked against expected perform. outcomes

"Quick wins" **Intermediate targets** **Long-term efforts**

Planning Cycle to establish an Optimized Plan for Dx Rate Filing

Objective
Finalize Dx CapEx & OMA Components of the 2017-2022 Investment Plan….
Validate & Document Investment Risk Assessment
Calibrate Risk Assessment across Business Units
Align Investment Strategy to Customer Consultations
Incorporate Feedback as a result of OEB Mandated 3rd Party Review
Develop efficiencies based on outcome of Productivity Studies
Ensure Alignment between Planning and Operations
To establish an Optimized Plan for Dx Rate Filing in Spring 2017

No Change to the Current Business Objectives and Weightings is Assumed



Note: individual weightings are determined through the allocation of 115 total value points

Constraints are in place to guide Investment Plan Development

Constraints/Considerations	
Financial	Asset need, 4.2% rate base growth, productivity, and inflation
Regulatory	OM&A follow the OEB decision for 2017, and then for 2018-2022 assume IRM rate regime (inflation less productivity)
Forecast	Exception updates only
Schedule	Strict adherence to deadlines within IPP to meet established milestones
Common	Costs held in 2017 & 2018 due to Tx Rate Filing; approved changes must neutral or a “blue page update”
Resources	Work Program Levels must be achievable

Investment Plan will be formed by multiple inputs and result in changes throughout the planning process

hydro one

Requirements	
Pricing	Agreement on costing between Planning & Operations; *Unit Prices will need to be updated with any G2G productivity savings.*
Investment Categorization	Identification of investments as Foundational vs Enhancement work; Reporting Framework for Rate Filing
Risk Calibration Session	Check that investment levels are appropriate and risk is consistently applied across all business units
Customer Consultation	Feedback to drive enhancement work; to be incorporated as information becomes available – during Manager/Director sign-off (late July).
3rd Party Review	Regulatory review of Dx Investment Plan to benchmark against other utilities
Productivity Studies	Outcome to be determined in summer with efficiencies to be included as deemed appropriate
Multi-Stage Review	Investments to undergo detailed review pre-optimization to eliminate tedious post-optimization changes; Post-optimization portfolio review to ensure cross-functional alignment

Investments segmented into foundational and enhancement categories with different purposes

	Investment category	Purpose
	Note: Will also consider applicability to Tx	
1 Foundational	a Asset renewal / maintenance b Customer connections c Safety, security, enviro (compliance) d Customer projects (ongoing) e Outage response f Facilities g Enterprise IT	**Maintain current reliability risk and system performance** • Continue to prioritize based on existing risk model / investment planning process
2 Enhancement	a Reliability enhancement b Grid mod (comms / automation) c Advanced analytics d Distributed Energy Resources enablement e Additional capacity / reserves f Grid hardening	**Enhance performance and deliver outcomes desired by customers**

Outcome	Metric
Improved reliability	$ / ACI
Reduced O&M	Annual savings / $ invested
Avoided CapEx	20-year NPV
Cust. energy efficiency / conservation	Load reduction / $ invested
New cust. products / services	Qualitative assessment

Customer input will help determine enhancement outcomes to prioritize in investment plan

1. Note: Foundational investments are those that are required for Hydro One to continue to deliver safe, reliable, and efficient service to all customers

Investment Plan will be formed by multiple inputs and result in changes throughout the planning process

Requirements	
Pricing	Agreement on costing between Planning & Operations; *Unit Prices will need to be updated with any G2G productivity savings.*
Investment Categorization	Identification of investments as Foundational vs Enhancement work; Reporting Framework for Rate Filing
Risk Calibration Session	**Check that investment levels are appropriate and risk is consistently applied across all business units**
Customer Consultation	Feedback to drive enhancement work; to be incorporated as information becomes available – during Manager/Director sign-off (late July).
3rd Party Review	Regulatory review of Dx Investment Plan to benchmark against other utilities
Productivity Studies	Outcome to be determined in summer with efficiencies to be included as deemed appropriate
Multi-Stage Review	Investments to undergo detailed review pre-optimization to eliminate tedious post-optimization changes; Post-optimization portfolio review to ensure cross-functional alignment

Risk mitigation is a **consistent standard** used to value investments, and is used to **facilitate trade-offs between investments**

Risk Assessment Process

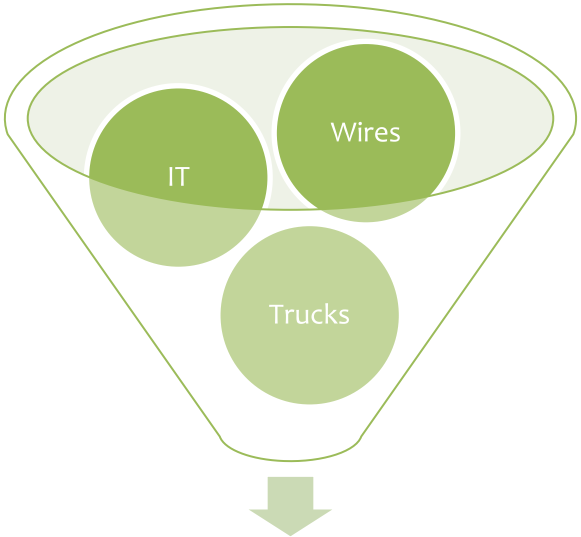
- For each identified investment need, risk is assessed against the potential impact on the Company's Business Values; investment alternatives are developed which may reduce the probability (risk abatement) and/or the consequence (risk mitigation) of the risk occurrence.
- **The risk assessment process allows investments to be compared** to one another on a value basis **across different portfolios**.

Investment Optimization Process

- The Investment Optimization process considers different investment increments/timing comprised of different risk management alternatives to facilitate tradeoffs between risk, cost and performance.
- The result is an investment plan that manages risk consistent with corporate direction and directs resources ($) to where they provide the maximum business value within the financial guidance provided.

Role of Calibration Session

- **If risk assessments are not properly calibrated** across business units, the optimized **investment portfolio may not** adequately **reflect the Company's priorities**
- The calibration sessions will focus on two dimensions:
  - Investment Flexibility
  - Risk Assessment Validation



Optimized Investment Plan

Why calibrate risk across LOBs?

Everyone **competes for funding** – if there is **too much "mandatory"**, **other work is reduced/deferred**

Observation:

- An increasing portion of the enterprise portfolio is being deemed "mandatory"

Workshop Purpose:

- To understand the level and composition of "mandatory" investments
- **Distinguish between investments that are beyond the control of the Company** *("mandatory")* **and those that are at the discretion of the Company** *("flexible").*

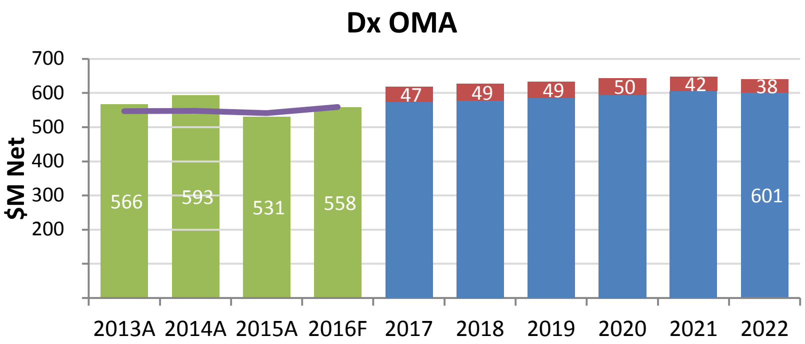
Implication:

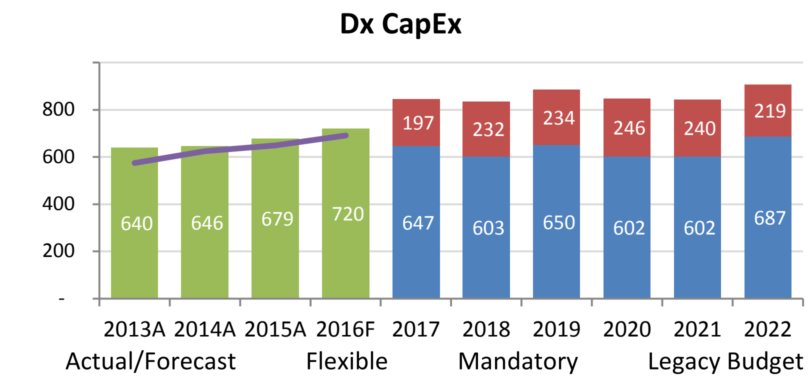
- You are all competing for limited resources
- **If too much** of the investment portfolio is deemed to be **"mandatory" there is limited ability to accommodate more discretionary work** *(i.e. select projects/incremental volumes get "squeezed out").*

Potential Outcomes:

- **Acceptance** of "mandatory" investments **or reclassification** of "mandatory" investments
- Separation of investment elements into base (mandatory) and enhancement (flexible)

Why discuss investment flexibility?





Mandatory investments include:

- Executing Projects
- Demand/Contract based programs
- Vulnerable(minimum) level of programs
- Single alternative programs
- Non-shift-able, unreleased projects

Data as of March 14th, 2016

Flexible investments include:

- Incremental Project/Program levels
- Shift-able, unreleased projects (shift-able by 1 year or more)

Everyone competes for funding – if risk assessments are not aligned, the investment plan may not reflect the Company's priorities

Observation:

- Risk assessments across LOBs may not be consistent

Workshop Purpose:

- To understand each LOB's approach to risk assessments
- **To normalize risk assessment outliers and improve consistency**

Implication:

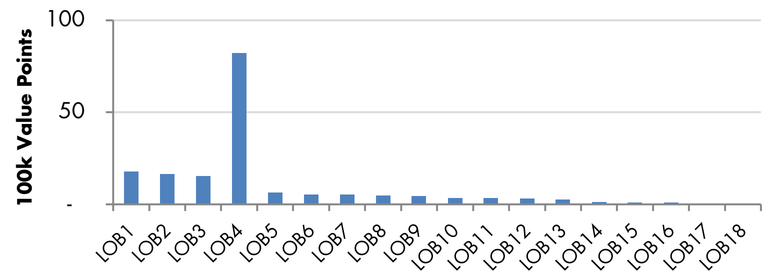
- You are all competing for limited resources
- The optimization process seeks to maximize value within the financial guidance identified
- **If an investment's risk mitigation** or productivity enhancement is **"overstated",** that investment may be selected in the optimization process, while **other worthwhile, higher operational risk investments** may be deferred *(assuming the mandatory level of investment does not exceed the financial guidance)*

Potential Outcomes:

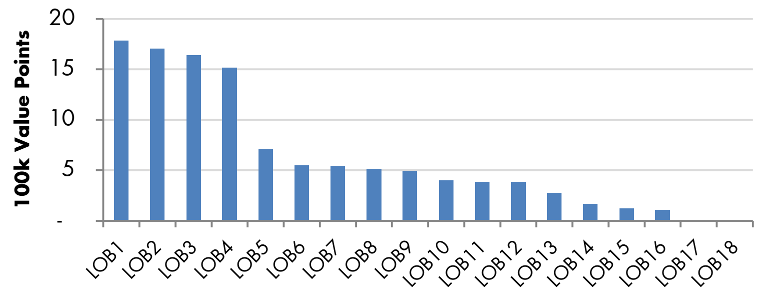
- **Acceptance or revisions** to risk assessment

Why validate investment risk assessments?

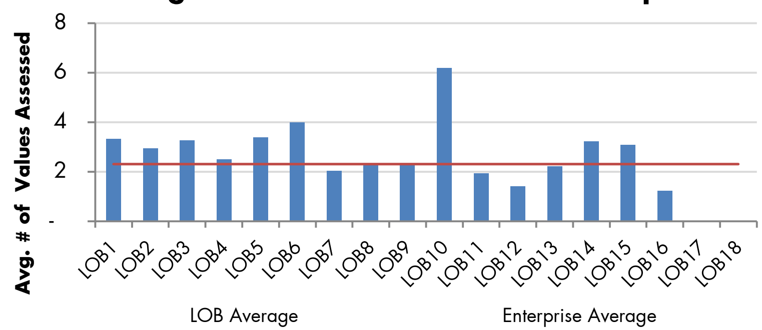
Average Value per Investment (All Business



Average Baseline Risk per Investment (All



Average # of Business Values Assessed per



Data as of March 14th, 2016

The Risk Calibration session will cover Investment Flexibility and Risk Analysis

Session	Key Questions to Consider/Address
Investment Flexibility	**Portfolio Questions:** • Is there variability in your investments? • How did you arrive at your mandatory/vulnerable/minimum funding level request? • What type of work is included in your mandatory bucket? • If the investment is mandatory, why now or at the time proposed? • Did you contemplate +/- 10% adjustments to your portfolio? • Did you consider a 1 or 2 year deferral? • Is the entire investment mandatory, or are there flexible/discretionary elements? • Is your mandatory level aligned with historic budgets or historic expenditures? **Select Investments:** • How did you determine your minimum funding level?
Risk Analysis	**Portfolio Questions:** • What are the largest risks facing your portfolio? • What would the impact of a +/-10% change to your investment portfolio be? • How did you determine the business values applicable to your portfolio and the level of risk mitigated? • Are you relatively aligned with other planning groups? **Select Investments:** • How did you assess the baseline and residual risk?

What will be covered?

6 week outlook includes investment development, customer consultations, risk calibration and management review

- **Risk calibration session is scheduled for July 12**
- A **standard template** will be developed and communicated to all participants; the expectation is that all materials will have a similar look/feel
- **Data will be pulled approximately 15 days before the calibration session** and sent to participants *(week of June 27)*:
  - Historic/forecast expenditures vs. current minimum/flexible investment outlook
  - Average risk/value assessment relative to other LOBs
  - Listing of significant investments to be covered as part of the workshop; significant investments may be identified based on:
    - » Risk/value score;
    - » Planned expenditures;
    - » Baseline risk assessment;
    - » Value per $; or
    - » Other considerations

What's next?

Investment Plan will be formed by multiple inputs and result in changes throughout the planning process

Requirements	
Pricing	Agreement on costing between Planning & Operations; *Unit Prices will need to be updated with any G2G productivity savings.*
Investment Categorization	Identification of investments as Foundational vs Enhancement work; Reporting Framework for Rate Filing
Risk Calibration Session	Check that investment levels are appropriate and risk is consistently applied across all business units
Customer Consultation	**Feedback to drive enhancement work; to be incorporated as information becomes available – during Manager/Director sign-off (late July).**
3rd Party Review	**Regulatory review of Dx Investment Plan to benchmark against other utilities**
Productivity Studies	**Outcome to be determined in summer with efficiencies to be included as deemed appropriate**
Multi-Stage Review	**Investments to undergo detailed review pre-optimization to eliminate tedious post-optimization changes; Post-optimization portfolio review to ensure cross-functional alignment**

Multi-stage review to minimize pre-optimization changes and ensure cross-functional alignment

	Investment Health Report	Manager's Checklist	AIP Workflow	Enterprise Engagement	Executive Review
	Manager/Director			Director	CEO/CFO
Objective	Report data quality issues Completion/ Approval targets to manage workload	Verification of key investment details	Official record of investment approval	Assess resource requirements to ensure work program, including planning timelines are achievable	Verify Investment Plan Alignment to Corporate Objectives
Reporting	Email Communication Based on Driver Owner	Manager via SharePoint Investment Planning Process Metrics	Manager/ Director in AIP Investment Planning Process Metrics	Meeting Minutes	Meeting Minutes
Outcome	Adherence to deadlines, improved data quality	Improved data quality	Record of Approval	Cross-functional alignment for an achievable plan	Internally approved plan

Dx Investment Plan Schedule

June 2	• Director Kickoff
June 6 - 30	• Planner Input
July 4 - 29	• Manager/Director Review • Risk Calibration Session – July 12
Aug 1 – 12	• QA & Optimization • **First Draft of Accomplishment File**
Aug 15 – Sept 16	• 3rd Party Review • Enterprise Engagement • iPAD Development
Sept 19 – 30	• Investment Plan Finalization • CEO/CFO Plan Review – Sept 26 • **Final Draft of Accomplishment File**

Customer Consultations

Productivity Studies

Prioritized IPP Pain Points to be Addressed this cycle:

hydro one

Pain points prioritized by criticality and ease of addressing

#	Pain point		Resolution
1	Lack of clarity of financial boundary conditions	✓	Multi business unit review
2	Spend categories not linked to outcome-driven objectives	✓	Investment Categorization
3	Business values/weights do not reflect current corp. strategy	✓	Maintain status quo
4	Planners/managers do not understand optimization process	✓	Management Training
5	Lack of feedback received on input to IPP process		TBD – Prior to Next Cycle
6	Planner inputs are of inconsistent quality	✓	Manager's Checklist
7	Insufficient time for investment definitions + quality check	✓	Manager's Checklist
8	Inaccuracy / lack of cost-estimates for potent. investments		TBD
9	Risk evaluation process is not consistently applied	✓	Risk Calibration Session
10	Invest. not tracked against expected perform. outcomes		TBD

"Quick wins" (1–4) Intermediate targets (5–7) Long-term efforts (8–10)

Regulatory Expectations

Karen Taylor

APPENDIX

Dx Investment Plan Schedule

hydro one

Date	Segment	Key Stakeholder(s)	Description
May 25 - 31	Director/Management Training	Investment Management, Planning	AIP Team to provide insight into AIP's optimization process and review requirements for the new Manager's Checklist
June 2	Investment Planning Kickoff	Planning, Operations, Finance, Regulatory & Investment Management	AIP Team to review schedule, requirements etc of the Dx Investment Planning Process with key stakeholders at Director/Management Level
June 6 – July 1	Planner Input	Planning (Operations)	AIP Tool Open to Planners with investments under Dx CapEx & Dx OMA only
July 4 – July 29	Management Review & Approval	Planning (Operations)	Management Review including Manager's Checklist with Final Investment Approval through AIP Workflow
July 12	Risk Calibration	Planning	AIP Team to facilitate Risk Calibration Session(s) to determine consistent risk approach across the all Planning organizations
Aug 1 –12	QA Optimization	Investment Management	AIP Team to run QA & optimization on Dx CapEx & Dx OMA only
August 12	**Hand-off for 3rd Party Review**	**Investment Management**	**Updated Accomplishment File due for 3rd Party Review**
Aug 15 – 26	3rd Party Review	Regulatory	Optimized Dx Work Program to undergo 3rd Party Review
Aug 15 - Sept 16	Enterprise Engagement	Planning, Operations, Finance, Regulatory & Investment Management	Planning and Operations to review Accomplishment File as a result of all changes identified, provide feedback with any remaining adjustments required, final Director Approval
Aug 15 – Sept 16	iPad Development	Planning	Planning to document investment strategy and outcome as a result of the Planning Process in their respective iPADs
Sept 19 - 30	Accomplishment File #3 Finalization	Planning & Investment Management	AIP Team to finalize updates prior to Business Planning Hand-off
Sept 26	CEO/CFO Investment Plan Review	Planning, Operations, Finance, Regulatory & Investment Management	Investment Plan Review Session for CEO/CFO Approval (previously IRRC)
Sept 30	**Business Planning Hand-off**	**Investment Management**	**Updated Accomplishment File due for Business Planning Board Prep**

Foundational Investment Categorization

Category	Description
Asset renewal / maintenance	Investments focused on minimizing life-cycle asset costs while maintaining an acceptable risk and continuously delivering reliable service
Customer connections (new customers)	Investments related to providing service to new customers, including construction, meter installations, and other required investments to address load growth
Safety, security and enviro (compliance)	Investments to ensure transmission and distribution facilities and operations are in compliance with environmental, safety, and other regulations
Customer projects (existing customers)	Investments related to customer-requested work from existing customers, including design and relocation of services
Outage response	Investments (primarily O&M) focused on responding to outages and restoring service
Facilities	Routine investments for building required facilities for customer and workforce needs
Enterprise IT	IT capital programs related to hardware replacement, secure access to information and technology and investments related to Hydro One's Enterprise Information Systems

Enhancement Investment Categorization

Category	Description
Reliability enhancement	Investments focused on providing improved reliability (e.g., reducing SAIFI / CAIDI) through addressing root causes of reliability issues or mitigating reliability impact from routine events
Grid modernization (comms / automation)	Investments to modernize the electrical grid to provide real-time visibility and control capabilities . May include smart meters, remote controllable devices. or enhanced communication capabilities.
Advanced analytics	Investments focused on databases, software, and analytics applications to collect and utilize operational data (e.g. meters, assets, customers)
DER enablement	Investments focused on enabling the integration of significant amounts of new distributed resources, such as rooftop PV
Additional capacity / reserves	Investments which improve system resiliency through increased circuit redundancy, additional load capacity, and storage capabilities
Grid hardening	Investments which increase the grid's ability to reliably operate during major events related to weather or other adverse conditions

Investment Planning Training 2017-2022

Winter 2016

Introduction

- Who's Who?
- Safety Moment
- Guest Address

Agenda

Course	Duration
Investment Planning Process	1 hour
Risk Assessment Methodology - Featuring Net Income & Revenue Requirement	1.5 Hours
AIP Tool Training	3 hours

Introduction to Hydro One's Investment Planning Process

Winter 2016

Agenda

- Overview
- Module 1: Business Planning vs Investment Planning
- Module 2: The World Affecting your Investment
- Module 3: Your Responsibility as an Investment Owner
- Module 4: How Investments are Selected
- Module 5: Investment Planning Approvals
- Module 6: Related Processes

Objectives

- Learn about the Investment Planning Process (IPP) and its interdependencies to the corporate Business Planning Process
- Understand the context within which the Investment Plan is being developed and the process goals/metrics
- Recognize the steps in the high-level IPP
- Be able to identify focus areas and expectations of the IPP, including productivity and related metrics
- Understand the relationship between investment planning and parallel processes such as work release, budgeting, resource planning, etc.
- Understand the basics of the optimization process

Module 1

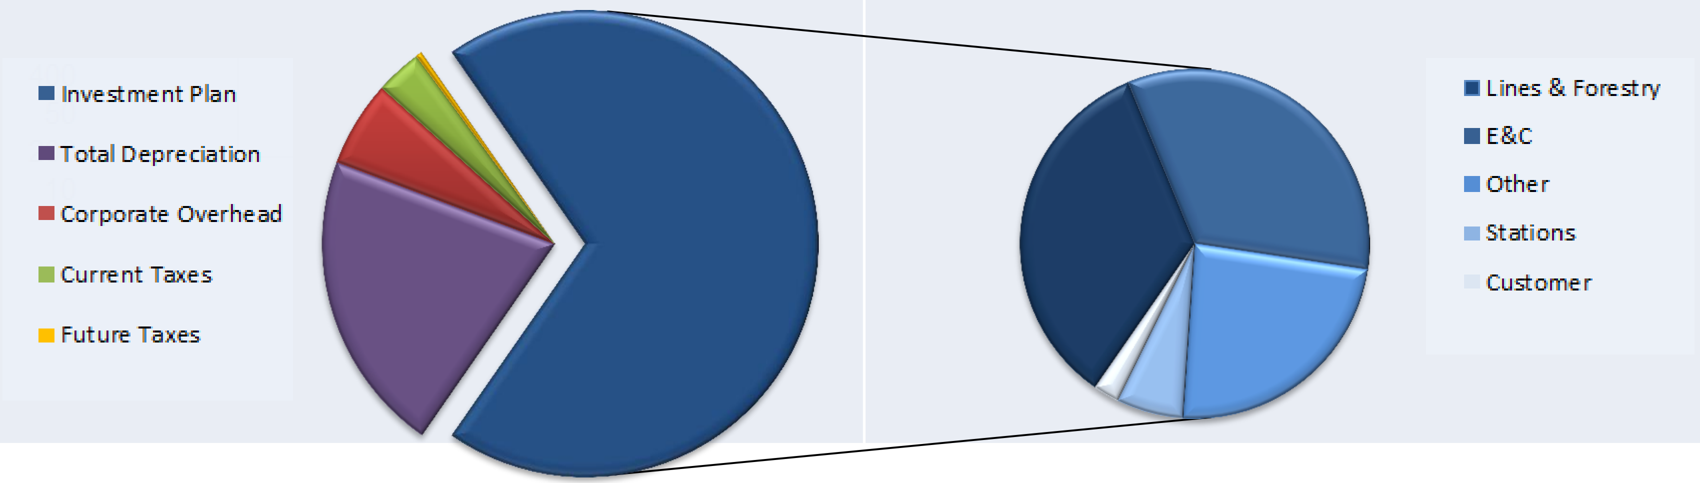
BUSINESS PLAN VS. INVESTMENT PLAN

Business Plan vs Investment Plan

Corporate Business Plan	Investment Plan
Overall 5 year Financial Outlook for *Hydro One Limited.* that spans: • Subsidiaries (Networks, Remotes, Telecom, Acquisitions) • Investments • Staffing & Overheads • Revenue Forecasts • Other (Tax, Depreciation, Working Capital, etc.)	**The *Hydro One Networks* investments planned for the selected time period (all the work that we do):** • Sustainment • Development • Operations • Customer • Other **The Plan Considers:** • Asset Needs (Short-term and Long-Term Risks) • Corporate Objectives • Financial, Regulatory, and Resource Constraints

$3.6B CapEx and OM&A

$2.5B CapEx and OM&A



Your Role in the Investment Planning Process

Module 2

THE WORLD AFFECTING YOUR INVESTMENT

2016-2020 Investment Plan Update

- 2016 was approved by the Board for budgetary purposes on January 14th
- 2016-2018 to be submitted to the Board in early May for approval prior to Tx Rate Filing at the end of the month

Parameters | Investment Input | Investment Review | Optimization | Enterprise Engagement | Approval

Lessons Learned

- Dedicated Quality Assurance period to resolve issues/discrepancies
- Enhance Coordination/Collaboration between planning groups
- Remodel Training Material and Tool Packages
- Consistent Risk Approach
- Direction regarding concept and effects of Investment Shifting and Alternative Levels
- Lessons Learned Report

Corporate Strategy: Becoming Canada's Leading Utility

	Uniting Behind the Goal 2014	Enabling our People 2015-16	Unlocking Performance 2017-18
Safety	Creating an injury free workplace and maintaining public safety		World Class safety performance
Customer	Satisfying our customers		Satisfying experience & trusted partner
People	Championing people and culture		High performance culture
Business Excellence	Reliable, affordable Tx & Dx systems Improve productivity and cost effectiveness Increasing value for our shareholder		Reliable Power Cost Effective Pride in Shareholder Value Creation

Strategic Plan 2014-2019

Corporate Scorecard 2014-2019

Canada's Leading Utility

Our Employees, Customers, and the people of Ontario

BELIEVE

We are a company of great people providing

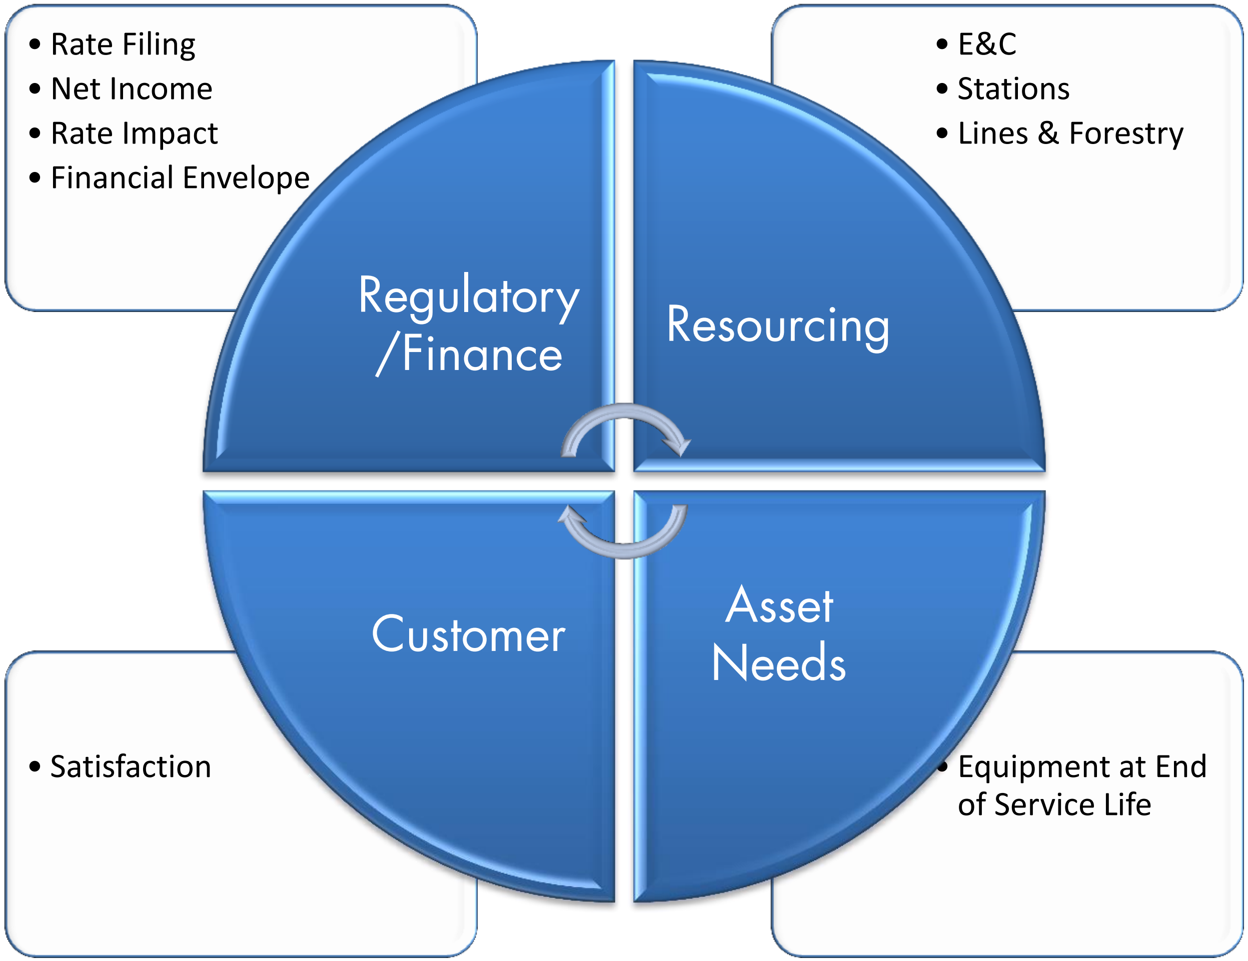
safe, reliable, excellent and affordable service

Parameters → Investment Input → Investment Review → Optimization → Enterprise Engagement → Approval

Hydro One's Business Values

Parameters | Investment Input | Investment Review | Optimization | Enterprise Engagement | Approval

Constraints



Financial Framework

Financial Envelope

Asset Need	Inflation	Productivity	Rate Base Growth 4.2%

Investment Plan Guided by Financial Envelope of Previous Plan

Regulatory Framework

- Plans should be consistent with approved rate decisions/applications in-flight
- Transmission
  - Consistent with 2016-2020 Plan and align to rate filing for years 2017-2018
- Distribution
  - To follow OEB Decision for 2017 and assume IRM rate regime (inflation less productivity) for 2018-2022

Parameters | Investment Input | Investment Review | Optimization | Enterprise Engagement | Approval

Benchmarking

- OEB has mandated productivity studies for both Transmission and Distribution
- Outcome from results of the Studies to be expected in the summer
  - May cause potential changes to the plan between internal approval and Board Approval submission

Touch point

- Name 3 Key Business Values for Hydro One

- What expected decisions may result in a change to the Investment Plan?

Module 3

YOUR RESPONSIBILITY AS INVESTMENT OWNER

Role of Investment Owner

Determine Investment Need

Evaluation and Quantification of Options

Risk Analysis

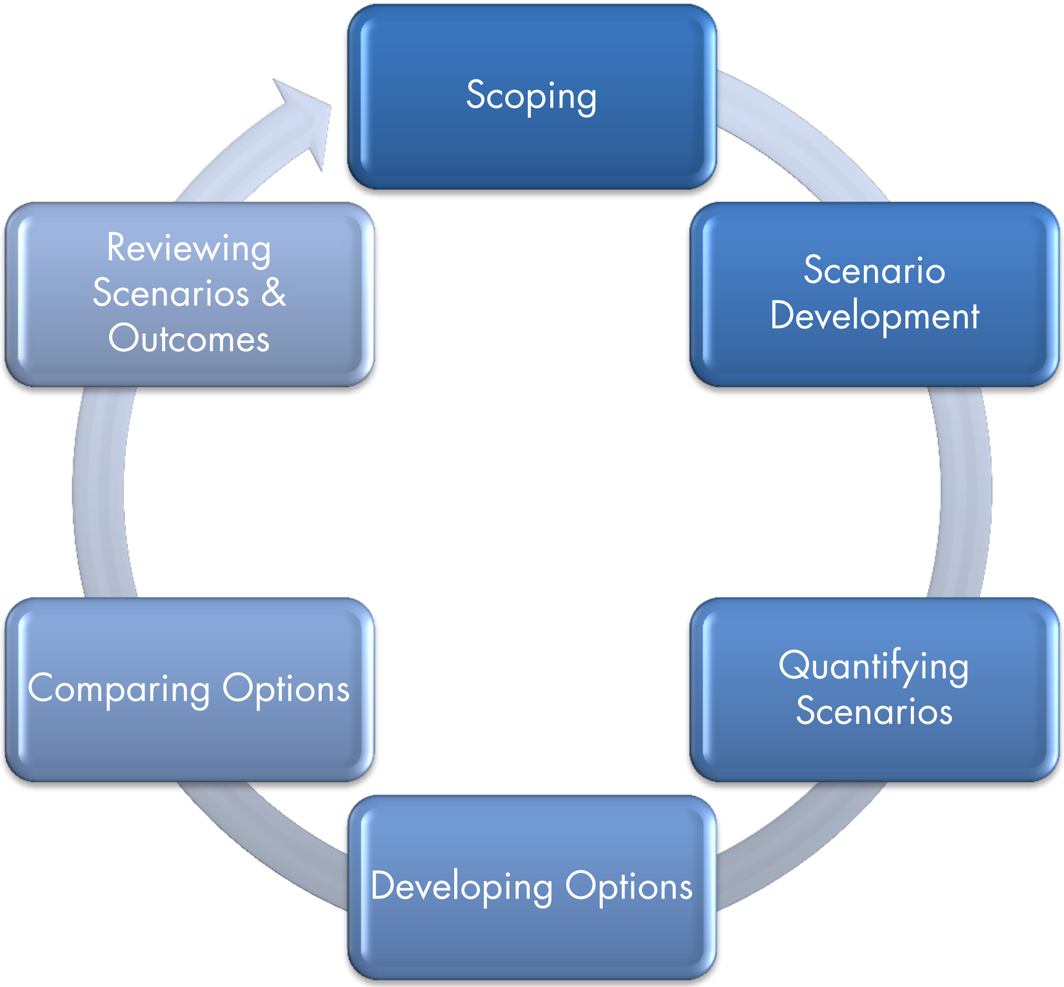
Alignment to Investment Expectations

Workflow Submission

Investment Strategy

- Audit Approach to Investment Planning
- All investments must be justified through data analysis with supporting documentation
- Focus on Productivity with emphasis on unit accomplishments

Investment Assessment Process



Program

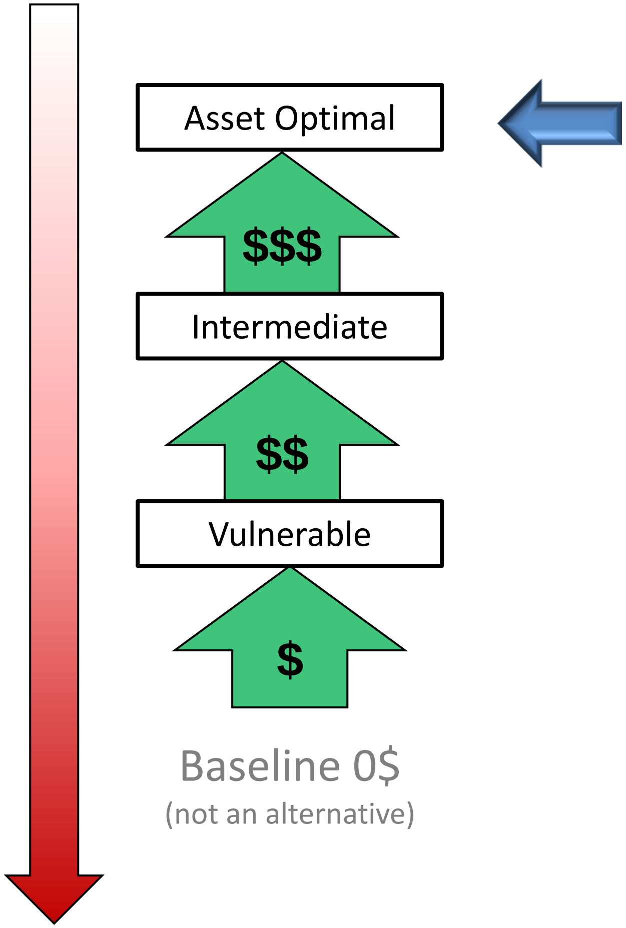
Definition **(as per SP1078)**

The total of all transactions relating to a specific body of work where the type of work **recurs year over year**. The extent of the work executed in any particular year, may change from year to year depending on its ranking in the prioritized programs and the overall availability of funds. Alternative approaches do not exist to achieve the objective.

NOTE:

In-Service Additions calculated on a ***ratio*** basis

Program Alternatives



Recommended or Proposed Alternative should align to your Investment Strategy based on your analysis and in turn align with the Corporate Strategy

Every Alternative is a valid option for consideration

Note: Demand Programs will only have one alternative

Project

Definition (as per SP1078)

The total of all transactions relating to a specific body of work that is a **one-time event** that occurs during a specific time period. This period may cover more than one fiscal year. **Alternative** approaches can be taken to achieve the objective and there is a greater level of risk.

NOTE:

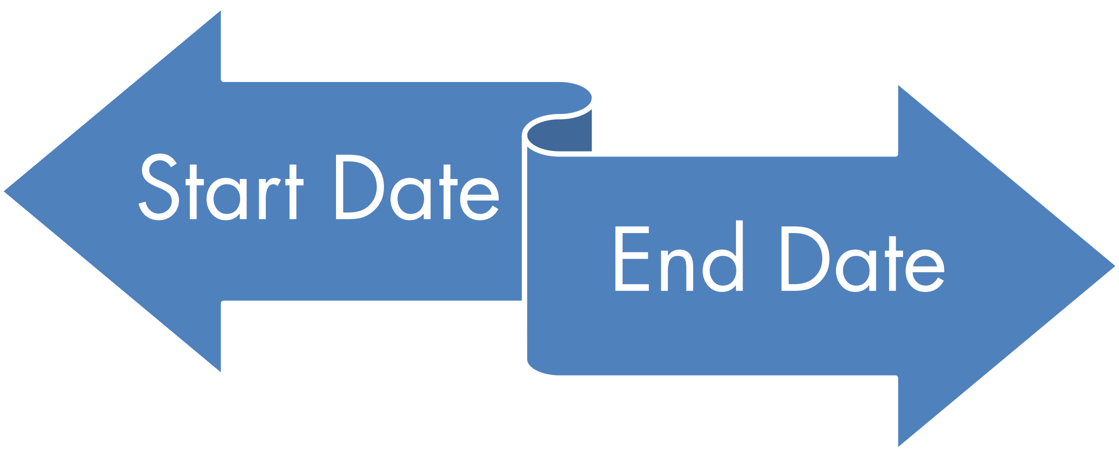
In-Service Additions determined by ***In-Service Date of total Net Costs***

All Integrated Investments are now **PROJECTS**

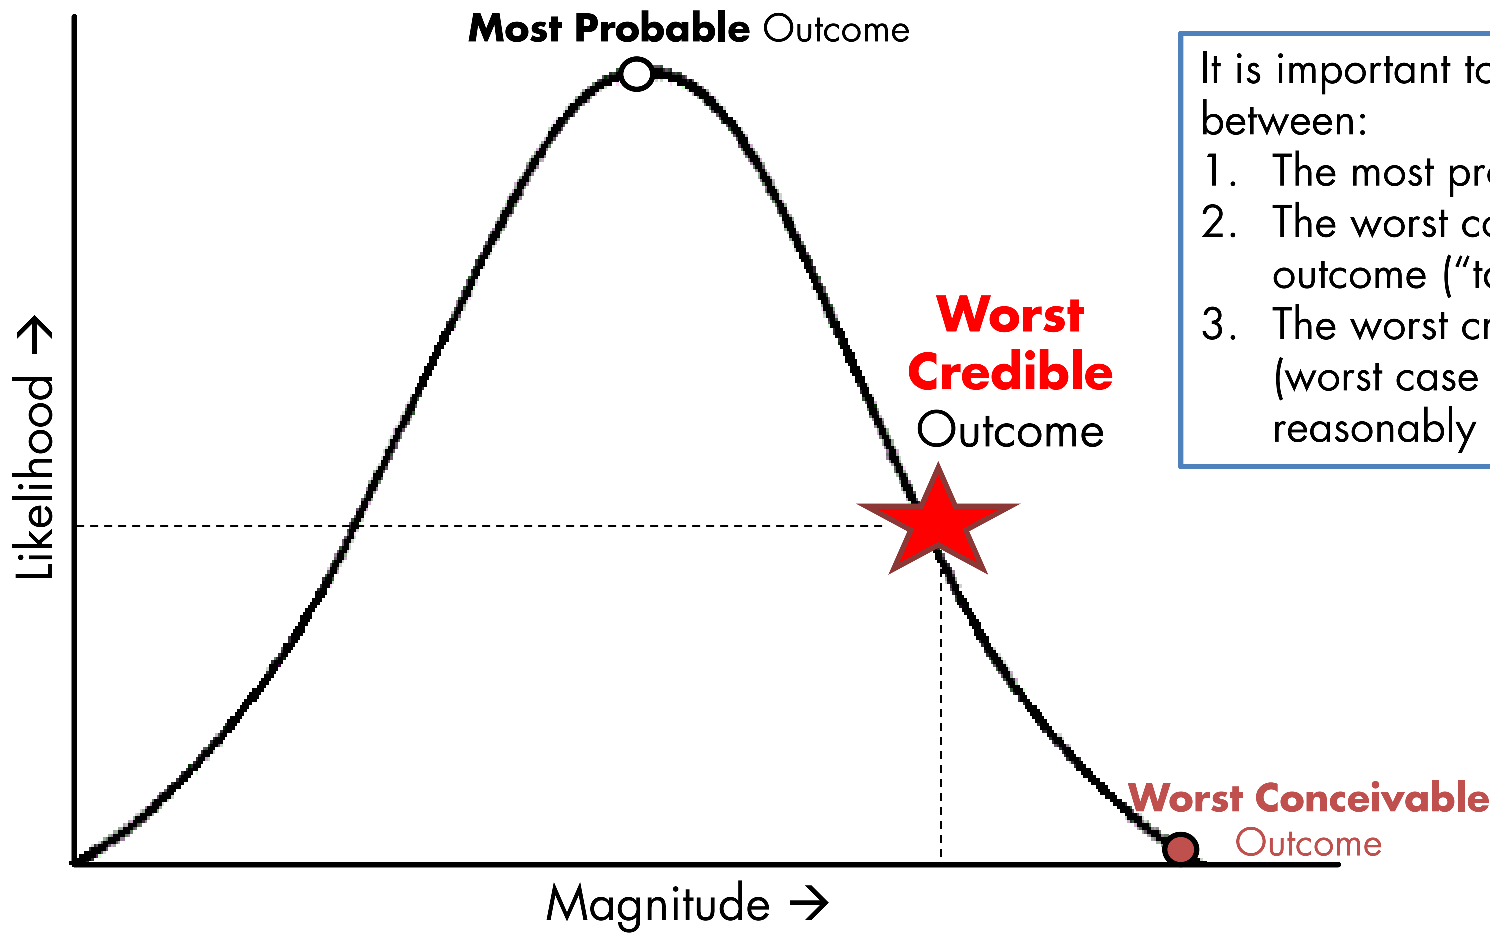
Updates to **Released Projects** are based on Multi-year Forecast from Service Provider and therefore are not the responsibility of the Investment Planner

Project Alternatives

- Project Alternatives are determined by the ability to **Shift** an investment
- Criteria based on the Earliest Start Date and the Latest Start Date
- Multiple Alternatives may be provided where appropriate
- Allows a level of confidence for those investments containing:
  - Signed Customer Agreement
  - Currently in the estimating process
  - Long-lead material



Hypothetical Risk Distribution Curve



It is important to differentiate between:

1. The most probable outcome
2. The worst conceivable outcome ("tail risk")
3. The worst credible case (worst case that may reasonably occur)

Parameters | Investment Input | Investment Review | Optimization | Enterprise Engagement | Approval

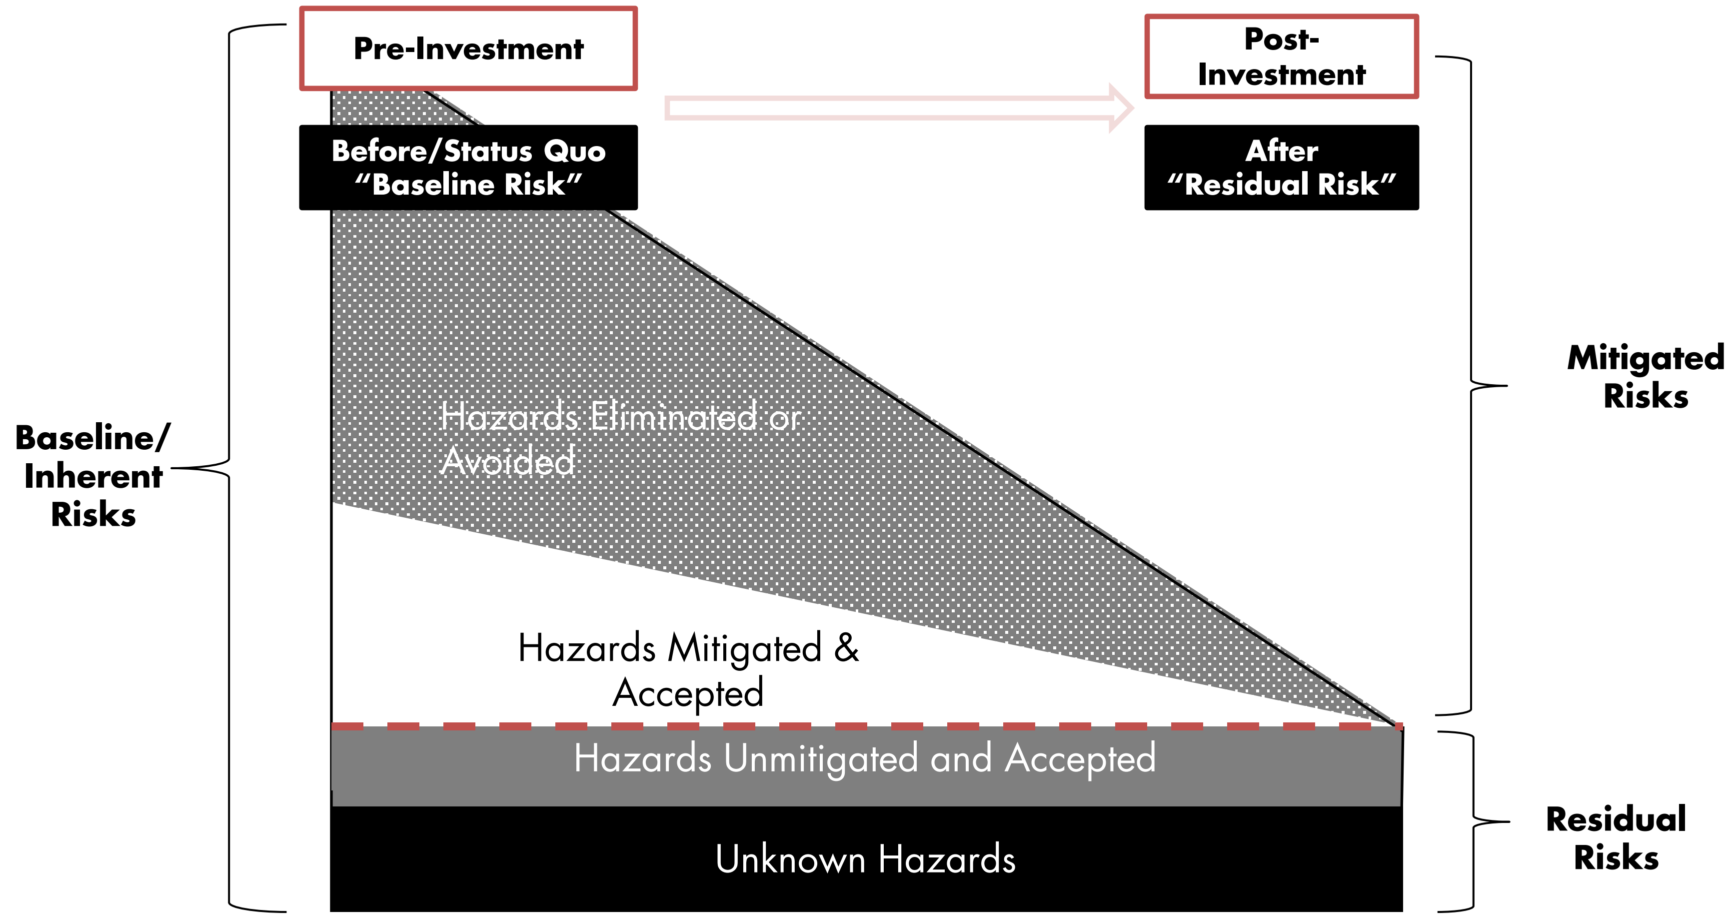
Investment Planning Risks Assessments

Hazards/Threats
- Fire
- Explosion
- Severe Weather
- Hazardous materials spill or release
- Mechanical breakdown
- Equipment condition
- Cyber Attack
- Physical Attack
- Theft and vandalism
- Obsolescence
- Inefficient processes
- Non Compliance

Assets at Risk
- People
- Power system facilities
- Customer Relationship
- Systems/Equipment
- Information Technology
- Operational performance
- Business Operations
- Financial profile
- Regulatory and legal obligations
- Environment
- Company Reputation

Consequences
- Workforce/Public Injuries
- Performance and reliability
- Erosion of customer goodwill
- Environmental release/contamination
- Financial loss
- Loss of Shareholder confidence
- Regulatory credibility
- Regulatory compliance
- Fines, penalties and sanctions

Risk Informed Investment Decisions



Parameters | Investment Input | Investment Review | Optimization | Enterprise Engagement | Approval

Expectations & Metrics

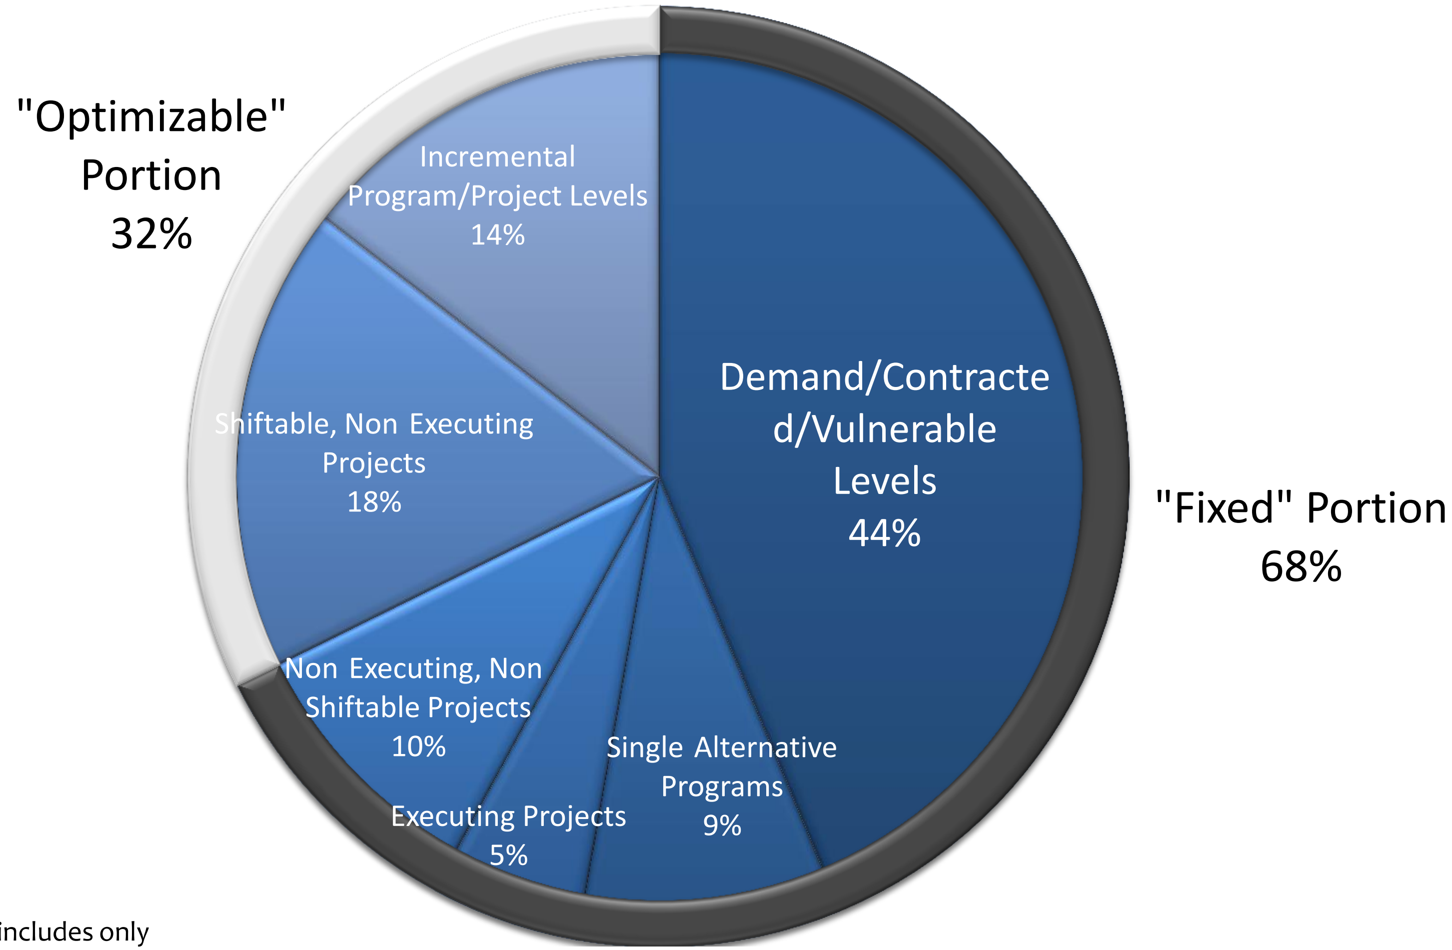
- Key Performance Indicators (KPIs) will be implemented to measure the end-to-end Investment Planning Process

- Including overall metrics such as:
  - Plan contributes to acceptable rate increase
  - Balanced plan developed & aligned to corporate guidance
  - Increase the "optimizable" portion in the plan

Note: ⍓ indicates metric

Investment Plan Optimization

5-Year Net Total (2016-2020)



As of May 14, 2015; includes only selectable alternatives

Investment Input Expectations

Category	Components	Metric
Supporting Documentation	Asset Analytics	⍓
	Investment Development & Justification	⍓
	Scope	⍓
	Financial & Asset evaluations	⍓
	Risk/Value Assessment	⍓
	Potential Need Notifications	⍓
Ability to Optimize	Shifting of Non-Executing Projects	⍓
	Viable Alternatives for Non-Demand/Non-Contract Programs	⍓
	No Near-Term Placeholders	⍓
Planning Timelines	Logical and aligned to Estimating guidelines	⍓
	No Year End In-Service Dates (ISD)	
Enterprise Engagement	Discussion of Key Investment Details such as:	
	• All cost assumptions are to be agreed by Work Program Management	⍓
	• UPC	⍓
	• Sourcing Model	
	• Planning Timelines	

Tx Investments with Dx Contributions

- Both ARs to have same Service Provider

- Funding Party (Dx) has a Gross Plan equal to the receiving party's (Tx) Capital Contribution from Dx
  - Note: Tx may have capital contributions in addition to Dx

- The timing of the matching Dx Gross $ and Tx Cap Contribution must be equal on an annual basis and offset one another

Investment Input Quality & Analysis

- IM Team to complete Pre & Post Investment Submission Review with feedback provided on data quality and completeness
- Reviewer Feedback will be provided to the investment owner via a meaningful Manager Check-list
  - Checklist will serve as a basis for many KPIs
- Essential for Investment Quality, as minimal changes will be allowed post-optimization

Metric

Parameters | Investment Input | Investment Review | Optimization | Enterprise Engagement | Approval

Investment Approval Workflow

Investment Owner (IO)		e.g. Don Mastrangelo
Interim Reviewer #1	Optional	Ken McNeil
Driver Owner (Manager/ Director)	Mandatory	Bruno Jesus
Interim Reviewer #2	>$15M/10M Optional	
Portfolio Owner (Director)	>$15M/10M Mandatory	CK Ng

- All Investments must be approved through Workflow and status will be tracked and reported

Metric

Investment Approval Submission

- Investment Planning Approval Documents (iPADs) are to be submitted post Workflow Approval for each Driver
- Asset Portfolio Documents (APDs) are to be submitted for asset types where appropriate
- Developed by the Director and based on investment owners proposed scenario for investments contained in associated Driver
- Used during IRRC Planning Review to provide insight into Strategies and Risk associated with Investments within the Plan

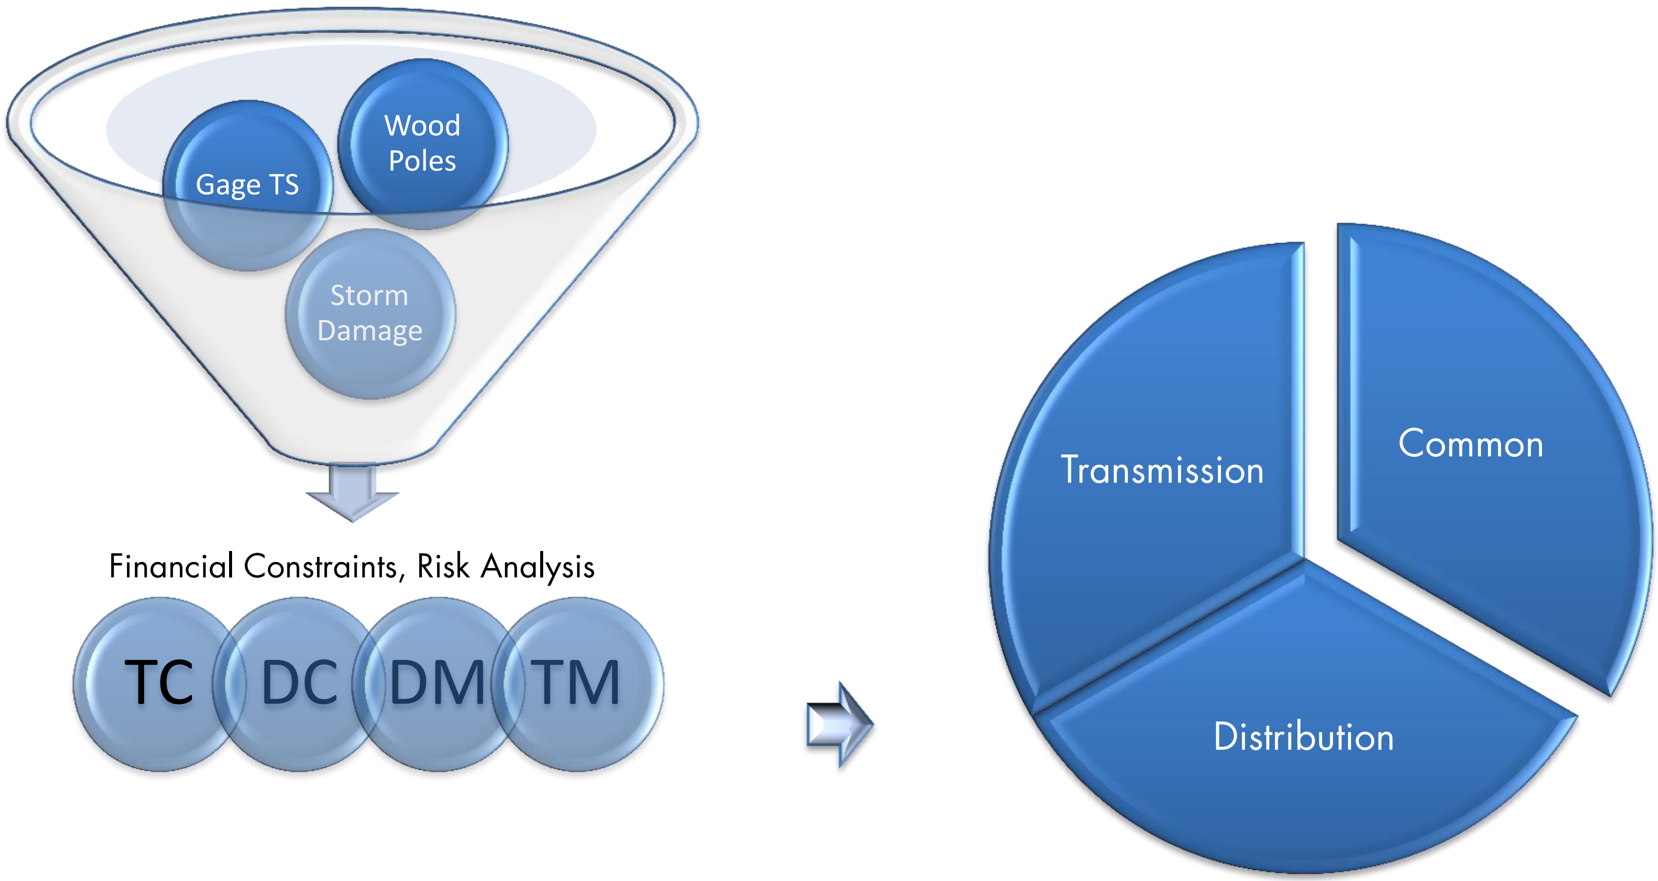
Touch Point

- What are the key responsibilities of an Investment Owner?
- Name three expectations for an investment that will be tracked as a metric

Module 4

HOW INVESTMENTS ARE SELECTED

Optimization



Best Selection and timing of investments

Optimization Analysis

- Various scenarios are run by the IM Team to understand the data and achieve an optimal plan

- Risk Calibration sessions will be completed pre-optimization

Enterprise Engagement

Enterprise Engagement Expectations

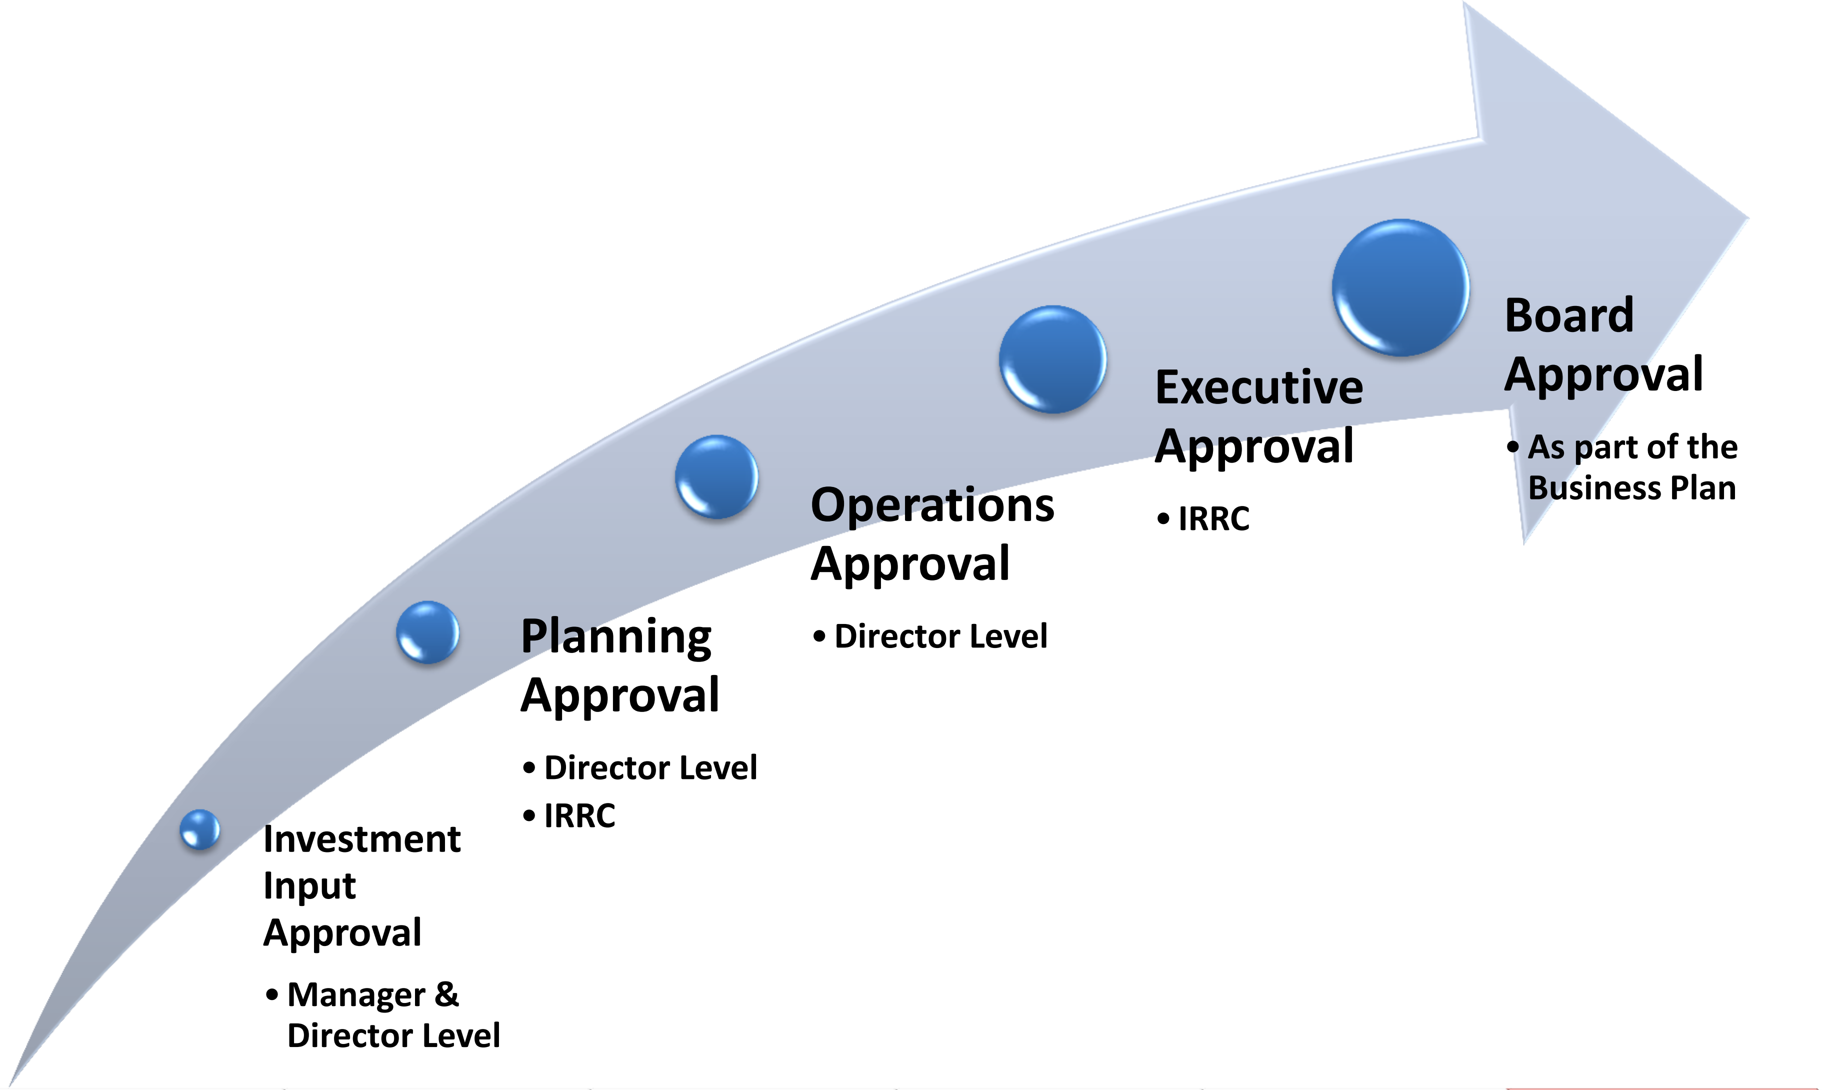
Expectation	Metric
Unit Prices from Operations are available to Planners and have been agreed to by both parties	☒
Operations (thru Finance) will provide a multi-year forecast of released projects Monthly	
Collaborative Effort between Planning and Operations for Funding Redirection	
Collaborative process to ensure investments have accurate costs and realistic timelines considering resource constraints	
All LOBs will participate in the finalization of the Investment Plan	☒

☒ Metric

Module 5

INVESTMENT PLANNING APPROVALS

Investment Plan Approval Stages



Parameters > Investment Input > Investment Review > Optimization > Enterprise Engagement > Approval

Module 6

Questions??

School Energy Coalition Interrogatory # 2

Issue:

Issue 3: Is the overall increase in the distribution revenue requirement from 2018 to 2022 reasonable?

Reference:

None

Interrogatory:

Please provide a copy of Hydro One's 2015-2017 corporate scorecards.

Response:

Please see attached team scorecards for the period 2015-2016. For the 2017 scorecard, please see Attachment 4 to Exhibit C1, Tab 2, Schedule 1.

APPENDIX

HYDRO ONE INC.

Recommended 2015/2019 Corporate Scorecard[1,2,3]

Strategic Objective	Performance Measure	2014 Target	2014 Actual	Targets 2015	Targets 2019
Injury Free Workplace	Total Recordable Rate (OHSA Recordable) # Recordable per 200,000 hours worked	1.9	1.8	1.7	0.9
Satisfying our Customers	**Customer Satisfaction – Transmission[4] (% satisfied)**	**n/a**	**76**	**78**	**90**
	Customer Satisfaction – Distribution[4] (% satisfied)	**n/a**	**84**	**86**	**90**
	Connection of New Services (% completed in ≤ 5 days)	90	97	95	95
	Billing Success (NEW) (%)	**n/a**	**97**	**99**	**n/a**
	First Call Resolution (NEW) (%)	**n/a**	**81**	**83**	**87**
Continuous Improvement & Cost Effectiveness in the Building and Maintaining of Reliable Distribution and Transmission Systems	Transmission Unit Costs (OM&A/Gross Fixed Assets)[5] %	2.9	2.7	2.8	2.5
	Distribution Unit Costs (OM&A/Gross Fixed Assets)[5] %	5.7	6.1	5.4	4.7
	Duration (SAIDI) – Transmission (minutes per delivery point)	8.9	11.8	10.0	8.8
	Duration (SAIDI) – Distribution (hours per customer)	6.7	7.4	7.1	6.9
Maintaining a Commercial Culture that Increases Shareholder Value	Net Income After Tax ($M)[5]	668	747	750	941
	In-Service Capital – Transmission (% of Plan)[5]	85	99	95	100
	In-Service Capital – Distribution (% of Plan)[5]	87	97	95	100

1 New measures are in bold.

2 2015 targets are based on historical data, benchmarking (where available) and approved Business Plans. Targets reflect the Company's strategic objectives and consideration of the audited 2014 year-end results for review and approval by the accountable Executive and Hydro One Committees and Board.

3 Safety, including major safety events, will be an important consideration of the Board in determining the level of short term incentive pool.

4 The Customer satisfaction measures have moved away from measuring top-line customer satisfaction and instead shifted to measuring satisfaction with relevant business processes and transactional customer experience. The Distribution Customer Satisfaction measure also includes an additional transactional survey called "My Account".

5 The targets do not reflect the impact of the Distribution Rate decision. Targets will be updated once the 2015 Business Plan and Gross Fixed Assets numbers are released.

Executive Summary

2016 Team Scorecard					
	Weight	Threshold	Target	Maximum	Description
Net Income	**50%**	582.2	685.0	736.0	$M
Customer Sat.	**20%**	74%	75%	80%	% Customer Satisfaction
Work Program	**20%**	97%	101%	106%	% Work Program Complete
Safety*	**10%**	1.7	1.6	1.5	Recordable Rate per 200,000 Hrs.
** If the company has a fatality, the attained Safety measure will be reduced by 50% based on the findings of the System Investigation*					

The 2016 Team Scorecard is developed to provide feedback that helps ensure the Company remains on track to achieving its Strategic Objectives.

The Team Scorecard is made up of four weighted measures (with a minimum of 10% given to any one measure) with the majority weighting on the financial measure.

The 2016 Team Scorecard is a key input into 2016 Management Compensation, specifically the Short Term Incentive Plan (STIP) Fund, as it relates to overall corporate performance in 2016.

Each Scorecard measure includes performance expectations expressed as Threshold/Target/Maximum to provide clear expectations at the Company level that can be translated into personal expectations for achievement.

Team Performance, expressed by the Team Scorecard, plays an increasingly larger role in Management Compensation based on level.

Bank	Team Weighting	Individual Weighting
Sr. Exec. (1-2)	80%	20%
Exec. (3-4)	80%	20%
Director (5)	70%	30%
Mgmt./Prof. (6-7)	70%	30%
Support (8-10)	50%	50%

The combination of these four performance measures are expected to drive the following behaviours:

1. A focus on finding ways to maximize net earnings without compromising work program delivery.
2. Focusing the organization on achieving activities that are meaningful and impactful to customers, in addition to continuing the focus on ensuring positive transactional outcomes.
3. Making it clear to the organization that an appropriate balance between satisfying all stakeholders, including ratepayers, shareholders and customers is the path to maximizing value.
4. Reinforcing the continuing importance of safety to the organization.
   NOTE: This metric has a modifier attached to it, which will require that, in the case of a fatal incident, the overall safety measure will be reduced by 50%. This appropriately demonstrates a fatality on our watch is unacceptable and must be heavily weighted.

School Energy Coalition Interrogatory # 3

Issue:

Issue 3: Is the overall increase in the distribution revenue requirement from 2018 to 2022 reasonable?

Reference:

None

Interrogatory:

Please provide a copy of all benchmarking analysis, reports, opinions and/or assessments, undertaken by Hydro One or for Hydro One since 2014, regarding any aspect that directly or indirectly relates to its distribution business that is not already included in this application.

Response:

Hydro One has provided two studies as attachments to this response.

Attachment 2	CEA – 2016 Electric Power System Reliability Assessment

Hydro One
PWU Benchmarking

Willis Towers Watson

Segmented Workforce Philosophy

Comparator Group Approach and Criteria

Hydro One's comparator groups have been differentiated to reflect the segmented labour markets for talent, i.e., Operations and Core Services roles, and will be applied consistently for the following employee groups to ensure a consistent end-to-end approach for understanding market position holistically:

- Executives
- Management Group
- PWU represented roles
- Society represented roles *(benchmarking has yet to commence)*

	Segment Definition	Comparator Group Selection Criteria
Operations	▪ Requires specific education, skills and knowledge in a professional area, directly related to concepts and methods associated with the transmission, distribution and regulation of power. Examples include: Operations, Engineering, Skilled Trades, Maintenance	▪ *Predominant focus on industry/nature of work*: reflects organizations where comparable specialized skill sets reside ▪ **Industry:** Utility ▪ **Geography:** Canada, with <30% Alberta representation ▪ **Size**: Revenue size > $500M ▪ **Ownership:** Balance of public and private-sector ownership models
Core Services	▪ Roles requiring education, skills and knowledge not specific to the transmission, distribution and regulation of power. Examples of such functions include Finance, Human Resources and Information Technology	▪ *Predominant focus on range of Ontario talent sources*: incorporates a variety of organizations based on labour market – assumes an Ontario labour market and recognizes the importance of Hydro One as an Ontario employer ▪ **Industry:** General Industry *(excluding subsidiary Retail and Consumer Products)* ▪ **Geography:** Ontario-based employers ▪ **Size**: Private sector: >$500M, Public sector: >$100M & Subsidiaries: >$1B ▪ **Ownership:** All structures

A detailed company listing of both peer groups are noted in Appendix I

Background and Context

Willis Towers Watson was engaged by Hydro One to benchmark its represented roles. This preliminary report provides competitive market data for Hydro One's PWU represented roles

Current Workforce Population Composition*

Hydro One Employee Group	Employee Distribution		Total 2016 Payroll Costs (in Millions)
	# of Employees	% of Total	
Management and Non-Represented Employees	762	7.4%	$105.6
Represented Employees (including Casual and Hiring Hall)	**9,569**	**92.6%**	**$806.6**
Total	10,331	100%	$912.2

PWU population accounts for approximately **80%** of the represented population. Society represents approximately **20%**

The represented population accounts for over **90%** of total Hydro One employees, accounting for **88%** of total 2016 payroll.

*Source: Hydro One 2016 Actual Payroll Summary
Society roles to be benchmarked at a later date

Background and Context

Willis Towers Watson benchmarked over 90% of Hydro One's PWU represented workforce in this review

Hydro One PWU workforce summary

PWU Segment	N count	% of PWU Incumbents benchmarked
Core Services	533	13%
Operations	3711	87%

Over **90%** of all PWU represented staff are in jobs included in the benchmarking analysis *(4244 of 4671)*

The prevalence of represented roles matched to Willis Towers Watson's compensation surveys varies significantly across the segmented peer groups

Peer Group Summary Statistics

Hydro One Peer Group	Prevalence of Annual Incentive Plan (AIP)*	% of unionized roles in the survey
Core Services	60%	9%
Operations	80%	56%

Broad-based AIP's are common among western-based utility comparators as a means to remain competitive with the oil & gas sector

Salary surveys are typically used as a means to review the competitiveness of an organization's non-represented workforce. A higher proportion of unionized roles are prevalent in the operations peer group (a reflection of the nature of work)

* Represents the percentage of peer companies offering a broad-based AIP *(levels below Management & Professional roles)*

Hydro One Salary Schedules

- PWU compensation is administered across a wide range of salary schedules that create internal equivalencies between jobs that are typically differentiated in the market place. Market benchmarking results provide some indication as to the differences

- At a high level, a summary of the typical titles and types of roles by schedule and by segment are summarized below:

PWU Schedule	Typical Titles by PWU Schedule
	Operations & Core Services
Schedule 20	Clerical/Technical/Technologist
Schedule 21	Helicopter Positions
Schedule 25	Trades
Schedule 26	Working Supervisors
Schedule 27	Motive Power Trades
Schedule 28	Regional Maintainers
Schedule 30	Controller/Dispatcher
Schedule 32	Trades - Services
Schedule 50	Certified Trades (other than civil trades)
Schedule 86/87	University/College Students

Benchmarking Methodology

- PWU job steps within each schedule have been matched to a comparable job within Willis Towers Watson's Compensation Database, based on segmented peer groups outlined on Page 2
- For the purposes of this internal exercise, an additional comparator group is used for the Core Service segment which reflects the utility and energy sector companies used to assess operations jobs. This peer group is not aligned with the segmented compensation philosophy, nor does it reflect direct competitors for talent in Ontario for these roles. This perspective is provided as an additional data point, as it reflects a highly unionized sample
- The following pages outline market comparison as follows:
  - **Operations Segment** – aligned to the agreed operations peer group
  - **Core Services (Primary Comparison)** – aligned to the agreed core services peer group
  - **Core Services (Secondary Comparison)** – reflecting core services roles (i.e., clerical positions), assessed against companies in the Operations peer group
- All market data is presented on a base salary and total target cash compensation basis as follows:

Compensation Element	Hydro One	Market
Base salary	Actual base salary	Actual base salary
Total Target Cash Compensation	Actual base salary + actual share grant plan award *(target 2.7% of salary)*	Actual base salary + target incentive plan awards

Executive Summary

- Market Compensation benchmark results have been provided on a segmented basis for the benchmarked PWU roles, covering 90% of the PWU represented workforce

Competitive Analysis

- On an overall basis, Hydro One's target total cash is, on average positioned at market (within +/- 10%) of its 50th percentile target market reference

Hydro One Segment	% +/- Target Market Positioning		Employee Distribution
	Base Salary	Target Total Cash (TTC)	
Operations	-4%	-8%	87%
Core Services	63%	64%	13%
Overall	**9%**	**7%**	**100%**

Note: Overall market positioning represents an incumbent weighted average spanning both employee segments

Over **90%** of all PWU represented staff are included in the benchmarking analysis *(4244 of 4671 incumbents)*

Compensation Element	Hydro One	Market Data
Base salary	Actual base salary	Actual base salary
Total Target Cash Compensation	Actual base salary + actual share grant plan award *(target 2.7% of salary)*	Actual base salary + target incentive plan awards
Market data were sourced from Willis Towers Watson's 2017 General Industry and 2017 Energy Services, Middle Management, Professional and Support (MMPS) database		

Competitive Positioning

Detailed Summary by Schedule

PWU Schedule	Average Competitive Positioning vs. Market Median						Employee % Distribution	
	Operations & Core Services		Operations		Core Services (Primary)			
	Base Salary	Target Total Cash (TTC)	Base Salary	Target Total Cash (TTC)	Base Salary	Target Total Cash (TTC)	Operations	Core Services
Schedule 20	26%	25%	6%	5%	78%	77%	18%	8%
Schedule 21	-	-	-	-	-	-	0%	0%
Schedule 25	7%	-18%	7%	-18%	-	-	2%	0%
Schedule 26	-11%	-18%	-11%	-18%	-	-	4%	0%
Schedule 27	-15%	-14%	-15%	-14%	-	-	2%	0%
Schedule 28	-12%	-14%	-12%	-14%	-	-	36%	0%
Schedule 30	-	-	-	-	-	-	3%	0%
Schedule 32	43%	47%	-	-	43%	47%	0%	2%
Schedule 50	-2%	-5%	-11%	-16%	45%	46%	22%	3%
Schedule 86	-	-	-	-	-	-	0%	0%
Schedule 87	-	-	-	-	-	-	0%	0%
Overall	9%	7%	-4%	-8%	63%	64%	87%	13%

INTRODUCTION

This report presents the results of the fifty-fourth consecutive survey of the performance of the Distribution Systems in electrical utilities. The report, prepared by the Canadian Electricity Association (CEA), presents a statistical summary of the Distribution Systems Performance for the year 2016 and compares it to 2015, as well as to the 2012-2016 five-year average.

The report presents some industry standard metrics for the Electricity Distribution including:

- System Average Interruption Frequency Index (SAIFI)
- System Average Interruption Duration Index (SAIDI)
- Customer Average Interruption Duration Index (CAIDI)
- Index of Reliability (IOR)
- Customer Interruptions per Kilometre (CIKM)
- Customer Hours per Kilometre (CHIKM)

By using the above metrics in combination with the cause of an electricity interruption, utility companies can

- set targets for improvement
- develop programs in support of their improvement targets
- make design/build decisions that try to mitigate interruption causes

Major Event Days (MEDs) are included in all statistics within this report. Major Event Days -- also referred to as Most Prominent Events -- events that exceed reasonable design and or operational limits of the electric power system.

National significant events (or catastrophic events) are a subset of MEDs. These are generally events that are larger than most MEDs, are outside the control of the utility, and have an impact on the national composite statistics. These are evaluated on a case-by-case basis by the Service Continuity Committee.

Members of the Service Continuity Committee and participants in the Service Continuity program follow a systematic procedure for collecting and analyzing data with regard to the Distribution System Performance according to definitions set by the Committee. This procedure follows the guidelines set out by CEA's Electric Power System Reliability Assessment program (EPSRA) which governs system continuity statistics for the entire electricity system. This includes the statistics captured in this report for the Distribution system and also statistics captured in the Bulk Electric System (BES) for service interruptions within the Transmission system. The EPSRA program is governed by the Consultative Committee on Outage Statistics (CCOS). The CCOS Committee was chaired until early 2010 by Dr. Roy Billinton of the University of Saskatchewan, a world renowned expert in the field of Electricity Equipment and Systems Reliability. The mission and vision of the Service Continuity Committee is below:

Mission:
Provide a mechanism to collect, analyze and report system distribution outage data, processes and functions in order to encourage members to gain and share insights and benefits through a community of practice.

Vision:
To be recognized as a trusted forum in distribution reliability practices through shared experiences and data analysis.

Objectives:

- Act as governing body that will oversee changes and enhancements of the database application and the data itself, while ensuring a high level of data quality/integrity.
- Act as distribution experts under the auspices of the CEA Analytics department and collaborate with the other Consultative Committee on Outage Statistics (CCOS) committees to share and present an overall view of Canadian electricity reliability.
- Actively perform/seek new research/analysis that will provide insight into enhancing distribution reliability.

- Add value to SCC members by providing a confidential forum for distribution system personnel to identify, develop and monitor the relevancy of distribution performance reliability measures, through shared practices, lessons learned and data analysis.
- Facilitate development of inter-utility networking for distribution system reliability.
- Maintain, update and provide guidance on common definitions and terms used in service continuity performance measurements, consistent with Canadian and International utility practices.
- Coordinate research efforts with other CEA groups as required.
- Be recognized nationally and internationally as a credible and trusted source for reliability information.

The membership of SCC includes one member of each of the participating CEA Corporate member utilities. It is chaired by Riaz Shaikh of PowerStream. The Vice-Chair is Betsy Matamoros of Fortis BC.

ACKNOWLEDGEMENT

We wish to thank the utilities that have contributed data for this report. They are:

Executive Summary

Service Continuity Committee (SCC) 2016 System Performance Report

Overview

	2011	2012	2013	2014	2015	2016
SAIFI	2.63	2.54	2.72	2.39	2.32	3.1
SAIFI (Significant Eventss Removed)	2.53	2.48	2.45	2.33	2.21	2.78
SAIDI	6.16	4.66	9.49	6.38	5.08	5.66
SAIDI (Significant Eventss Removed)	5.12	4.43	5.94	5.06	3.88	4.39

Highlights (all events):

- Tree Contacts contributed to 2 hours of the 5.66 SAIDI hours, they remain the largest contributor to SAIDI, the number of tree contacts has increased from 14% (2015) to 16% (2016) of interruptions or almost 10,000 interruptions, and 9,000,000 customer hours.
- Equipment Failure contributed to 0.85 hours of the 5.66 SAIDI hours, the 2nd largest contributor to SAIDI. Even though the SAIDI value was flat the number of interruptions due to equipment failures decreased slightly to 18.5% from 20% in 2015.
- The third largest contributor to SAIDI was Loss of Supply, contributing 0.57 hrs. This was a slight increase in interruptions from 2.6% to 2.9% (2016), however was a large increase in customer hours by almost 600,000 hours.

All Recorded Interruptions Summary				
Interruptions	Customer Interruptions	Customer Hours of Interruptions	SAIFI	SAIDI
292,906	44,929,125	82,127,861	3.10	5.66

Significant Events (SE) are those major events that the committee has deemed completely outside the control of the utility, and significantly impact the Canadian Index.				
Interruptions	Customer Interruptions	Customer Hours of Interruption	Contribution to Composite SAIFI	Contribution to Composite SAIDI
11,367	4,558,770	18,270,708	0.32	1.27

- Events classified as Significant Events, included two separate ice-storms, a lightning storm and the Fort McMurray fires. They represent 22% of the total hours of outages from 2016.

1.0 DEFINITIONS

1.0 DEFINITIONS

1.1 DEFINITION OF TERMS

DISTRIBUTION SYSTEM

A Distribution System is that portion of an electric power system which links the Bulk Electricity System (BES) or sources with the customer's facilities.

Subtransmission lines, distribution substations, primary feeders, distribution transformers, secondaries and customers' services all form different parts of what can generally be called Distribution Systems. The Delivery Point (DP) is the delineation point between the BES and the Distribution System. It is the low voltage busbar of the step down transformer station, whereby the transformer busbar is considered part of the BES System. At the transformer station the voltage is stepped down from a transmission voltage, which may cover a range of 60-750kV to a distribution voltage of under 60kV.

Where the reporting company does not own the equipment up to the Delivery Point as defined above, the delineation point shall be at the point of ownership.

CUSTOMERS

The average number of customers served in the region during the reporting period. This means the number of customer services fed at secondary, primary and subtransmission voltages. A customer is defined as a metered service. Municipal utilities buying power from Provincial utilities should not be reported as customers by the Provincial utility.

INTERRUPTION

An *interruption* is the loss of service to one or more customers and is the result of one or more component outages. A *momentary interruption* is defined as an interruption with a duration of less than one (1) minute. These are interruptions generally restored by automatic reclosure facilities, which are of a very short duration (on the order of a few seconds).

INTERRUPTION-DURATION

This is the period from the initiation of an interruption to a customer until service has been restored to that customer.

INTERRUPTION START TIME

An interruption is deemed to have occurred when the utility supplying power is made aware that a customer is without power. This is either the time the customer calls in or the time remote monitoring devices indicate a power interruption. It may be for either a full or part power interruption.

INTERRUPTION END TIME

An interruption is deemed to have ended when the utility supplying power is made aware that a customer's power has been restored. This is either the time the restoring crew reports the restoration is complete or the time remote monitoring devices indicate a power has been restored.

CUSTOMER-HOURS OF INTERRUPTION

This is the product of the customer services interrupted by the period of interruption.

CUSTOMER-INTERRUPTIONS

This is the sum of products of the customer services interrupted by the number of interruptions that affect those customer services.

SYSTEM AVERAGE INTERRUPTION FREQUENCY INDEX (SAIFI)

This index is defined as the average number of interruptions per customer served per year.

$$\textbf{SAIFI} = \frac{\text{Total Customer-Interruptions}}{\text{Total Customers Served}}$$

SYSTEM AVERAGE INTERRUPTION FREQUENCY INDEX (MOMENTARY) SAIFI (MI)

This index is defined as the average number of interruptions per customer served per year for momentary interruptions (interruptions of a duration less than 1 minute).

$$\textbf{SAIFI (MI)} = \frac{\text{Total Momentary Customer-Interruptions}}{\text{Total Customers Served}}$$

(in area where momentary interruptions are monitored)

SYSTEM AVERAGE INTERRUPTION DURATION INDEX (SAIDI)

This index is defined as the system average interruption duration for customers served per year.

$$\textbf{SAIDI} = \frac{\text{Total Customer-Hours of Interruptions}}{\text{Total Customers Served}}$$

CUSTOMER AVERAGE INTERRUPTION DURATION INDEX (CAIDI)

This index is defined as the customer average interruption duration for customers interrupted during a year.

$$\textbf{CAIDI} = \frac{\text{Total Customer-Hours of Interruptions}}{\text{Total Customer Interruptions}}$$

CUSTOMER INTERRUPTIONS PER KM

$$\textbf{Customer Interruptions per KM} = \frac{\text{Customer Interruptions}}{\text{Circuit Km}}$$

CUSTOMER HOURS PER KM

$$\textbf{Customer Hours per KM} = \frac{\text{Customer Hours}}{\text{Circuit Km}}$$

INDEX OF RELIABILITY

The per unit of annual customer-hours that service is available.

$$\textbf{Index of Reliability} = \frac{\text{8,760 hours/year - SAIDI}}{\text{8,760 hours/year}}$$

1.2 CLASSIFICATION OF INTERRUPTIONS BY CAUSE

A customer interruption has been defined in terms of primary cause of the interruption. These causes have been assigned the following codes:

0 - ***Unknown/Other***

Customer interruptions with no apparent cause or reason which could have contributed to the outage.

1 - ***Scheduled Outage***

Customer interruptions due to the disconnection at a selected time for the purpose of construction or preventive maintenance.

2 - ***Loss of Supply***

Customer interruptions due to problems in the bulk electricity supply system such as underfrequency load shedding, transmission system transients, or system frequency excursions. During a rotating load shedding cycle, the duration is the total outage time until normal operating conditions resume, while the number of customers affected is the average number of customers interrupted per rotating cycle.

3 - ***Tree Contacts***

Customer interruptions caused by faults due to trees or tree limbs contacting energized circuits.

4 - ***Lightning***

Customer interruptions due to lightning striking the Distribution System, resulting in an insulation breakdown and/or flashovers.

5 - ***Equipment Failure***

Customer interruptions resulting from equipment failures due to deterioration from age, incorrect maintenance, or imminent failures detected by maintenance.

6 - ***Adverse Weather***

Customer interruptions resulting from rain, ice storms, snow, winds, extreme ambient temperatures, freezing fog, or frost and other extreme conditions.

7 - ***Adverse Environment***

Customer interruptions due to equipment being subjected to abnormal environment such as salt spray, industrial contamination, humidity, corrosion, vibration, fire or flooding.

8 - ***Human Element***

Customer interruptions due to the interface of the utility staff with the system such as incorrect records, incorrect use of equipment, incorrect construction or installation, incorrect protection settings, switching errors, commissioning errors, deliberate damage, or sabotage.

9 - ***Foreign Interference***

Customer interruptions beyond the control of the utility such as birds, animals, vehicles, dig-ins, vandalism, sabotage and foreign objects.

2.0 PERFORMANCE OF UTILITIES

2.0 PERFORMANCE OF UTILITIES

2.1 COMPARISON OF 2016 CANADIAN SYSTEM INDICES TO 2015

SAIFI	The average number of interruptions per customer per year was 3.10, which represents an increase of 33.4% over the 2015 figure of 2.32.
SAIDI	The system average interruption duration for customers served was 5.66 hours per year, which represents an increase of 11.5% over the 2015 figure of 5.08 hours.
CAIDI	The average customer interruption duration per interruption was 1.83 hours, which represents a decrease of 16.4% over the 2015 figure of 2.19 hours.
Index of Reliability	or the per unit annual customer hours that service is available was 0.999354, as compared to 0.999420 in 2015.
CHIKM	The average customer hour interruptions per KM was 100.50, which represents an increase of 12.7% over the 2015 figure of 89.14.
CIKM	The average customer interruptions per KM was 54.98, which represents an increase of 34.9% over the 2015 figure of 40.75.

2.2 COMPARISON OF 2016 INTERNATIONAL SYSTEM INDICES TO 2015

SAIFI	The average number of interruptions per customer per year was 8.22, which represents an increase of 36.54% over the 2015 value of 6.02.
SAIDI	The system average of interruption duration for customers served was 15.28 hours per year, which represents an increase of 91.48% over the 2015 value of 7.98.
CAIDI	The average customer interruption duration per interruption was 1.86 which represents an increase of 40.91% over the 2015 value of 1.32.
Index of Reliability	The Index of Reliability was 0.998256, as compared to 0.999090 in 2015.
CHIKM	The average customer hour interruptions per KM was 423.5, which represents an increase of 39.87% over the 2015 value of 302.79.
CIKM	The average customer interruptions per KM was 227.70, which represents a decrease of 0.47% over the 2015 value of 228.78.

2.3 General Statistics Summary:

Canadian Utilities:

	2016	2015
Total Customers:	14,509,663	14,329,556
Total Distribution System Peak (KW):	77,578,797	89,056,407
Average Distribution System Peak (KW):	1,891,1657	2,283,498
Total Area Served (SQ.KM):	5,863,913	5,863,146
Total Distribution Circuit (KM) Overhead:	668,582	667,728
Total Distribution Circuit (KM) Underground:	148,579	149,025
Total Distribution Circuit (KM) Both:	817,161	816,753

International Utilities:

	2016	2015
Total Customers:	276,529	361,737
Total Distribution System Peak (KW):	278,510	2,097,169
Average Distribution System Peak (KW):	564.2	349,528
Total Area Served (SQ.KM):	2,821	3,771
Total Distribution Circuit (KM) Overhead:	9127	4,721
Total Distribution Circuit (KM) Underground:	858	4,806
Total Distribution Circuit (KM) Both:	9985	9,527

Combined:

	2016	2015
Total Customers:	14,786,192	14,691,293
Total Distribution System Peak (KW):	77,854,332	91,153,576
Average Distribution System Peak (KW):	1,692,550	2,025,635
Total Area Served (SQ.KM):	5,866,734	5,866,917
Total Distribution Circuit (KM) Overhead:	677,709	672,449
Total Distribution Circuit (KM) Underground:	6,544,443	153,831
Total Distribution Circuit (KM) Both:	827,146	826,280

The annual variations in the service indices for Canadian data for the period 2011 to 2016 are shown below in Graph 2.1.

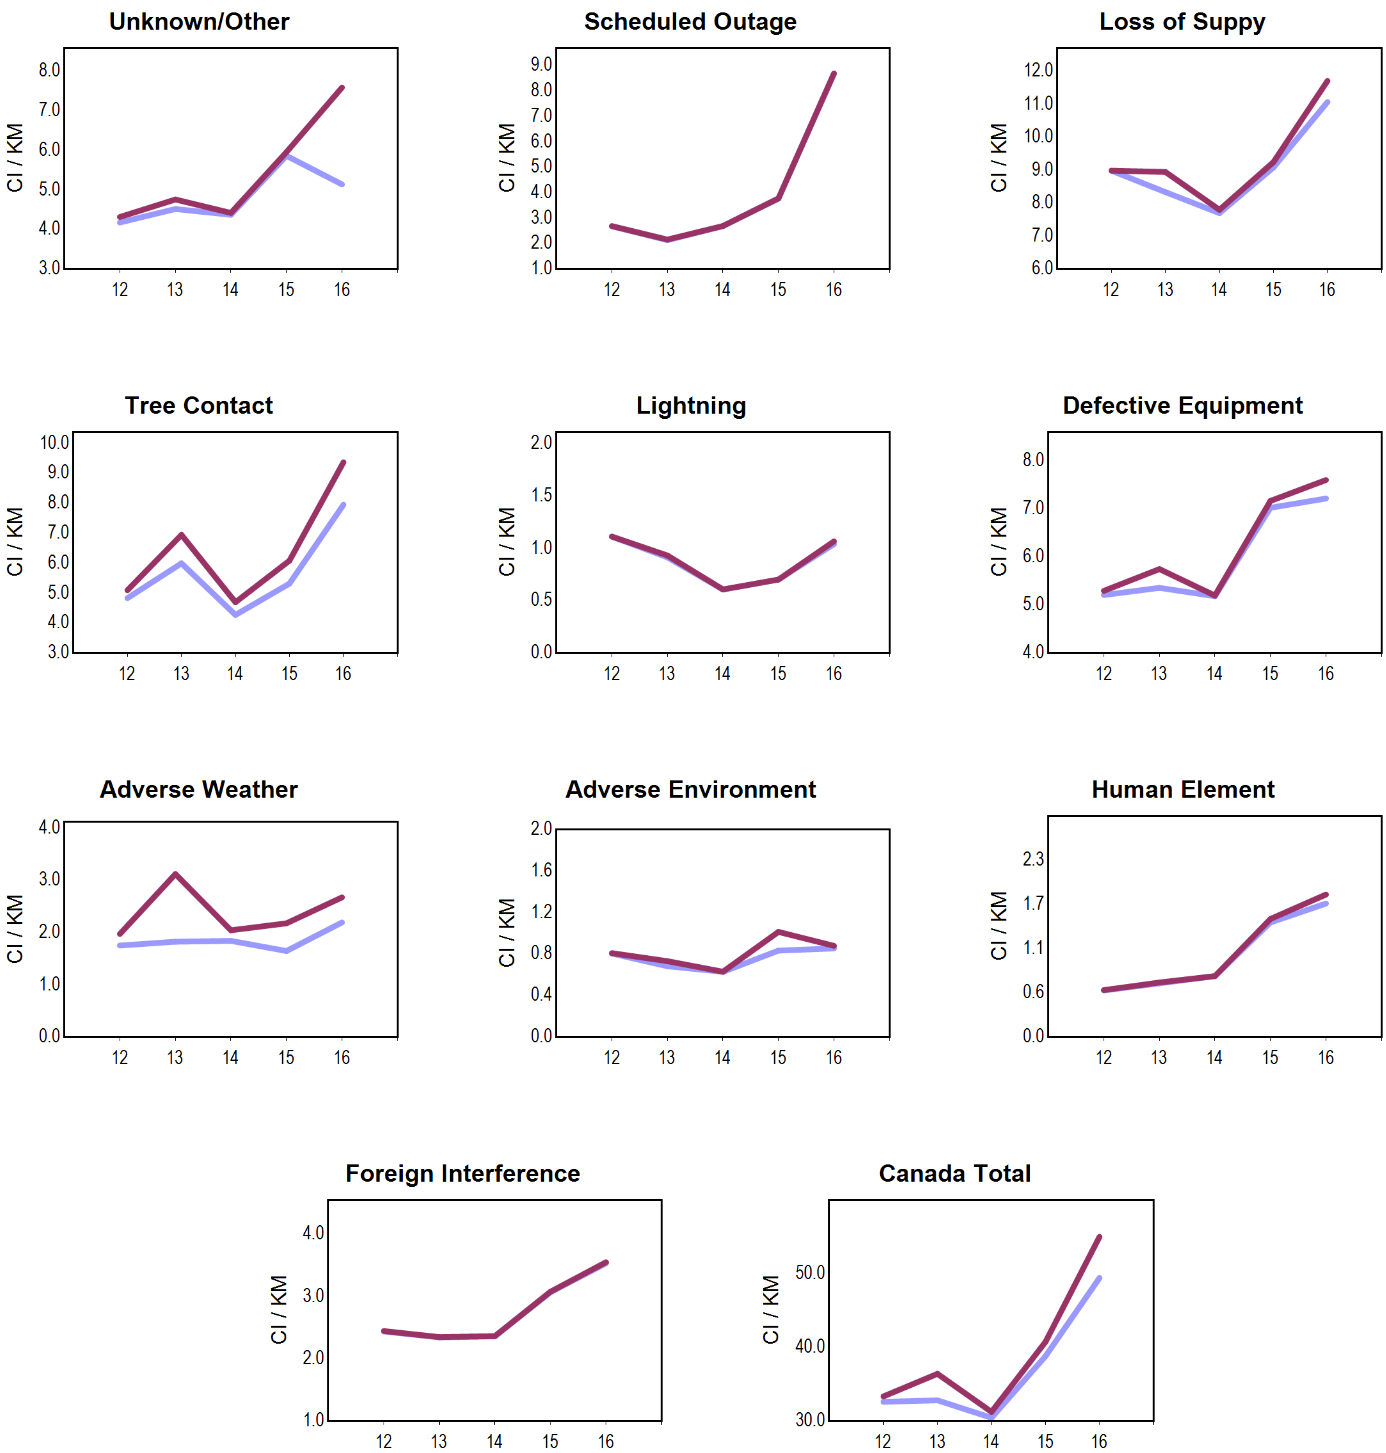
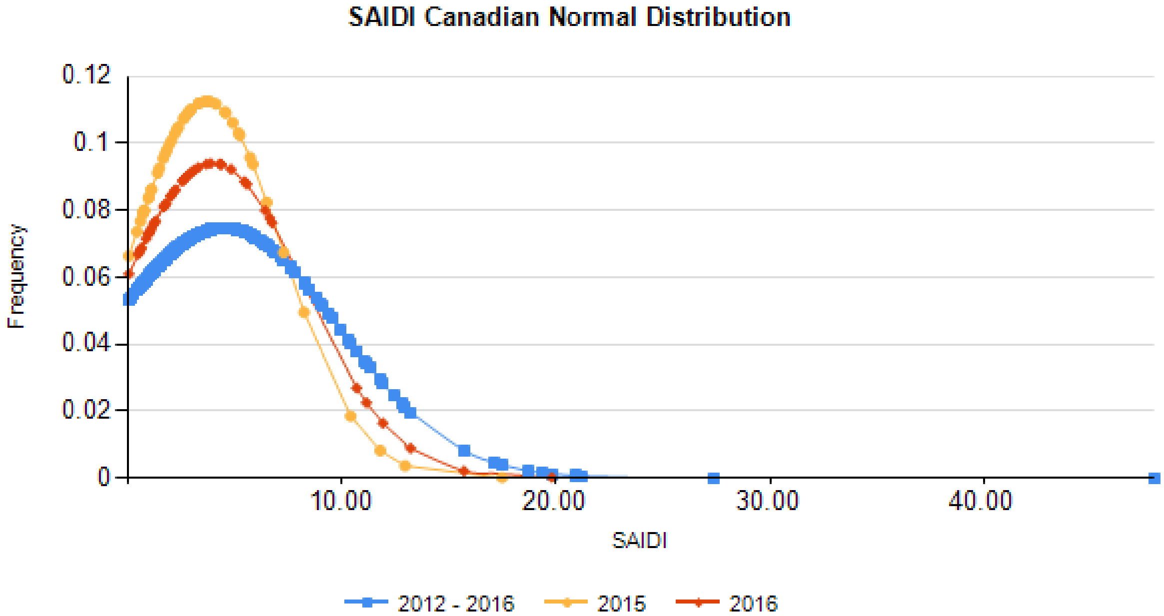
Graph 2-6 Contribution to CHIKM by Cause for 2012-2016 Canadian Data



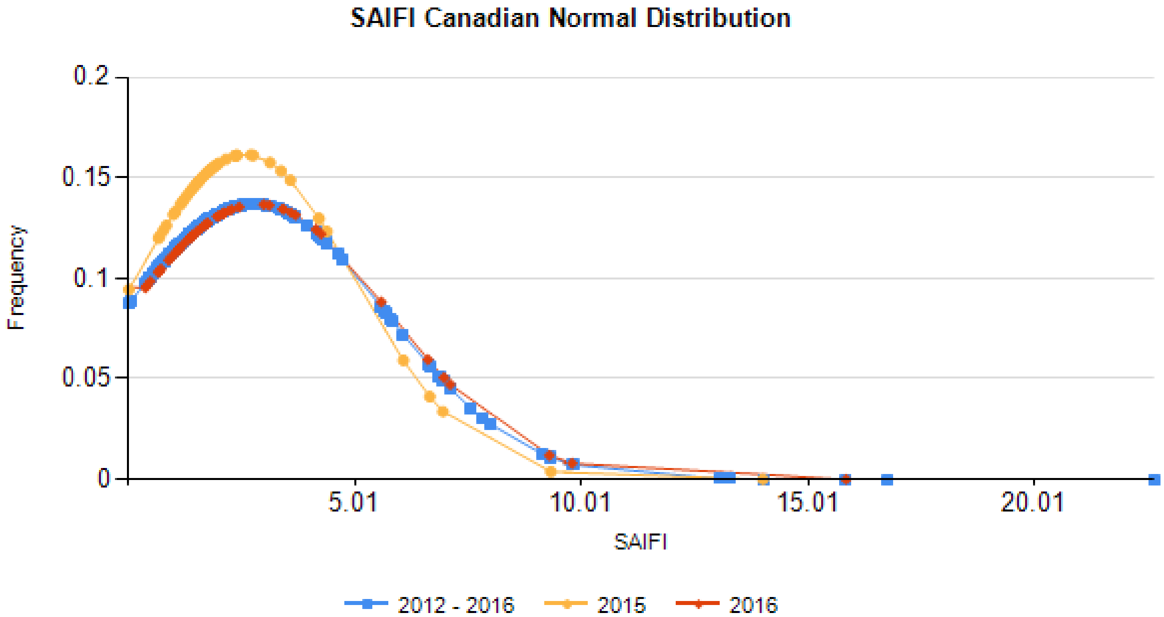
Note: denotes the exclusion of Significant Event data.

Graph 2-7 Contribution to CIKM by Cause for 2012-2016 Canadian Data



2016 SAIDI normal distribution confidence level: 95% 3.95 +/- 1.03

2016 SAIDI Standard Error 0.57



2016 SAIFI normal distribution confidence level: 95% 2.86 +/- 0.71

2016 SAIFI Standard Error 0.41

3.0 TABULATION AND ANALYSIS OF SERVICE INTERRUPTION DATA

TABLE 3-1

SUMMARY OF INTERRUPTION DATA

(Including Derivation of Index of Reliability)

FOR YEARS 2011 - 2016

THE "INDEX OF RELIABILITY" IS A MEASURE OF SERVICE RELIABILITY.
IT EQUALS THE PER UNIT ANNUAL CUSTOMER-HOURS THAT SERVICE IS AVAILABLE.

CANADIAN UTILITIES IN 2016

YEAR	NUMBER OF CUSTOMERS SERVED	NUMBER OF INTERRUPTIONS	TOTAL CUSTOMER INTERRUPTIONS	(A) TOTAL INTERRUPTED CUST. HOURS	(B) TOTAL AVAILABLE CUST. HOURS	(C) INDEX OF RELIABILITY
2011	13,166,791	247,330	34,640,048	81,099,286	115,341,089,160	0.999297

4.0 SUMMARY

4.0 SUMMARY

- For the 2016 reporting year, based on data for 14.5 million customers in Canada and 0.3 million international customers, the system indices are the following:

Canadian		*Excluding SE**	*International*		*Excluding SE**
SAIFI	3.10	2.77	SAIFI	8.22	7.79
SAIDI	5.66	4.28	SAIDI	15.28	8.98
CAIDI	1.83	1.54	CAIDI	1.86	1.15
IOR	0.999354	0.999511	IOR	0.998256	0.998975
CHIKM	100.50	76.01	CHIKM	423.05	248.52
CIKM	54.98	49.26	CIKM	227.70	215.76

**SE - Significant Events*

Canadian Statistics

- The number of customers as compared to last year has remained relatively stable with a slight increase of 1.3%.
- Compared to the previous year, the total interrupted customer-hours increased by 11.4 %. (Derived from Table 3-1).
- The number of interruptions increased by 13.3 %. (Table 3-1).
- The total customer interruptions increased by 26.0 %. (Table 3-1).
- The customer average interruption duration index or the average restoration time for affected customers was 1.83 hours, compared to 2.19 hours for 2015. (Table 3-2).

- The five major causes of service interruption of utilities are: (Derived from table 3-2)

Canadian:

- Scheduled Outage 22.35%
- Defective Equipment 18.47%
- Tree Contacts 16.0%
- Unknown/Other 13.1%
- Foreign Interference 12.86%

International:

- Scheduled Outage 21.9%
- Defective Equipment 21.25%
- Loss of Supply 17.12%
- Unknown/Other 13.69%
- Foreign Interference 6.95%

Section 4.1 Major Event and Significant Event Summary

For the year 2016, Canadian Utilities identified Major Event Days.

All Recorded Major Events

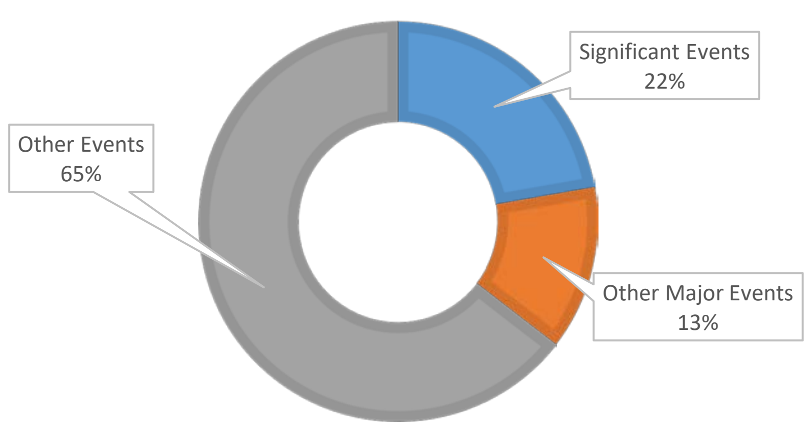
Year	Interruptions	Customer Interruptions	Customer Hours of Interruptions	Contribution to Composite SAIFI	Contribution to Composite SAIDI
2016	20,674	6,545,906	29,138,473	0.45	2.02
2015	13,059	3,737,677	26,234,850	0.26	1.83

Significant Events were determined from the recorded major event days. In 2016, those events are the following:

Significant Event Statistics

Event	Interruptions	Customer Interruptions	Customer Hours of Interruption	Contribution to Composite SAIFI	Contribution to Composite SAIDI
Ontario Ice Storm	3,148	598,963	5,724,264	0.04	0.40
Multi-Province Ice Storm	4,216	1,976,383	5,528,213	0.14	0.38
Quebec Lightning Storm	3,134	1,947,923	3,941,115	0.13	0.27
Fort McMurray Fires	869	35,501	3,077,116	0.00	0.21

CUSTOMER HOURS OF INTERRUPTION BREAKDOWN



Section 4.2 International Major Event and Significant Event Summary

For the year 2016, International Utilities identified Major Event Days.

All Recorded Major Events					
Year	Interruptions	Customer Interruptions	Customer Hours of Interruptions	Contribution to Composite SAIFI	Contribution to Composite SAIDI
2016	48	318,301	1,786,808	1.15	6.46

Significant Events were determined from the recorded major event days. In 2016, those events are the following:

Significant Event Statistics					
Event	Interruptions	Customer Interruptions	Customer Hours of Interruption	Contribution to Composite SAIFI	Contribution to Composite SAIDI
Hurricane Matthew	29	119,410	1,743,006	0.43	6.3

TABLE 7-1 (REGION 2)
SUMMARY OF INTERRUPTION DATA
(Including Derivation of Index of Reliability)
FOR YEARS 2011 - 2016

THE "INDEX OF RELIABILITY" IS A MEASURE OF SERVICE RELIABILITY.
IT EQUALS THE PER UNIT ANNUAL CUSTOMER-HOURS THAT SERVICE IS AVAILABLE.

CANADIAN UTILITIES IN 2016

YEAR	NUMBER OF CUSTOMERS SERVED	NUMBER OF INTERRUPTIONS	TOTAL CUSTOMER INTERRUPTIONS	(A) TOTAL INTERRUPTED CUST. HOURS	(B) TOTAL AVAILABLE CUST. HOURS	(C) INDEX OF RELIABILITY
2011	10,326,243	236,958	30,682,291	77,424,503	90,457,888,680	0.999144

Submission to the Board of Directors

Date: October 11, 2016

Re: Application for Distribution Rates 2018 to 2022

On March 3, 2017, Hydro One Networks Distribution ("HONI Dx") plans to file an application with the Ontario Energy Board ("OEB"), seeking the OEB's approval of a Custom Incentive Rate-setting Mechanism to establish rates for 2018 to 2022. The purpose of this Board meeting is to:

- Facilitate a discussion and obtain feedback from the Board relating to the preliminary Dx rate profile to be reflected in the planned application;
- Explain the rationale for the targeted March 3, 2017 filing date for the 2018 to 2022 Dx Rates Application; and
- Describe the form of the planned application.

We look forward discussing this submission with you at the board meeting on October 11th. In the interim, please feel free to forward any questions to myself or Michael Vels.

Yours sincerely,

Oded Hubert
Vice President - Regulatory Affairs

Hydro One Limited / Hydro One Inc.
Submission to the Board of Directors

Date: October 11, 2016

Re: Application for Distribution Rates 2018 to 2022

A. For Discussion - Preliminary Dx Rate Profile 2018 to 2022

Hydro One's management is seeking feedback from the Board on the rates profile that has emerged from the planning process for the 2018 to 2022 period.

The 2018 to 2022 application for Dx rates is expected to reflect the following key financial and rates metrics.

Table 1. Dx 2018 to 2022 Rates Profile ($M except where otherwise noted)

Date: September 28th, 2016	Distribution (Plan A - Recommended)					
	2017	2018	2019	2020	2021	2022
Capital Expenditures	660	805	850	787	792	898
In-service Additions	696	800	847	858	783	870
	OEB					
Rate Base	**7,190**	**7,741**	**8,207**	**8,683**	**9,290**	**9,709**
OM&A	593	587	596	605	614	623
Depreciation	390	421	439	453	479	499
Return on Debt	196	196	208	220	236	246
Return on Equity	252	272	288	305	326	341
Income Tax	49	60	62	62	70	75
Revenue Requirement	1,480	1,535	1,592	1,644	1,724	1,783
Acquired LDCs OM&A Adder	-	-	-	-	9	10
Rate Riders	11	26	26	26	26	26
Other revenue impacts	(52)	(42)	(42)	(41)	(42)	(42)
Rates Revenue Requirement	**1,440**	**1,520**	**1,577**	**1,629**	**1,719**	**1,778**
Rate Increase Required, excl Load		**5.6%**	**3.7%**	**3.3%**	**5.5%**	**3.4%**
Estimated Load Impact (Preliminary (August Load Forecast)		1.7%	-0.2%	-0.7%	-2.5%	-0.6%
Rate Increase Required		**7.3%**	**3.5%**	**2.6%**	**3.0%**	**2.8%**
Estimated Total Bill Impact (R1 customer - 30%)		**2.2%**	**1.1%**	**0.8%**	**0.9%**	**0.9%**

Assumptions:
Distribution 2017 rate base and revenue requirement per OEB approval
Forecasted ROE Rate of 8.77% used for Dx 2018-2022
Rate Base for acquired LDCs incorporated in 2021

The point at which Hydro One believes its corporate goals and customer interests are aligned or balanced, and appropriately reflected by the percentage increase in annual customer rates, is a matter of corporate strategy and informed judgment. The metrics set out above reflect the following factors that were considered to affect a balancing or alignment of competing interests, being low customer rates, appropriate system investments and Hydro One's business objectives.

Table 2. Dx Business Objectives

Business Objective	Description
Customer	• Improve customer satisfaction. • Engage consistently and proactively with customers. • Ensure investment plan reflects customer needs and preferred outcomes.
Safety	• Drive towards an injury free work place.
Employee	• Achieve and maintain employee engagement.
Reliability	• Maintain or improve level of distribution system reliability relative to distribution peers.
Environment	• Sustainably manage the company's environmental footprint.
Cost Control	• Actively control and lower costs through OM&A and capital efficiencies.
Public Policy Responsiveness	• Ensure compliance with all codes, standards and regulations.
Shareholder Value	• Achieve the ROE allowed by the OEB.

In making this assessment, Management considered a number of factors. These factors are set out below and include:

1. Output from a customer engagement process;
2. Analysis of two alternative investment planning scenarios ("Plan A - Recommended" and "Plan B – Not Recommended");
3. Attribution of the distribution rate profiles in each investment planning scenario;
4. Hydro One Limited consolidated financial outlook; and
5. Prior regulatory determinations of the Ontario Energy Board.

1. **Output from a customer engagement process:** HONI Dx engaged Ipsos to assist with the design and execution of a comprehensive customer engagement process. The purpose of the engagement process was to secure the input/feedback necessary to prepare an investment plan and rate application that considers Hydro One's customers' needs and preferences. The customer engagement process produced the following key findings that are more supportive of a lower rather than higher investment plan:

– **Keeping costs as low as possible is customers' top priority**. This preference is influenced by a desire to see Hydro One demonstrate greater fiscal management and operational efficiency before considering rate increases. Many customers believe that total electricity costs are approaching unaffordable levels.

– **Maintaining reliable electricity service is consistently a second priority to cost**. Power quality events and unplanned momentary power interruptions of less than one minute, rather than sustained interruptions of one minute or more, is the primary concern of commercial and industrial customers. Some large customers have capacity challenges and want more access to power in order to grow their enterprises. Customer service improvements are not something for which customers are willing to pay higher rates.

– **Large customers are more concerned with the reliability of service** they currently receive than residential and small business customers. However, although this group of customers is more inclined to value better reliability, they are not willing to entertain the corresponding rate impact. (Note: this is a significant difference between the feedback received from Transmission customers where generally, reliability and reliability risk was a higher priority than cost control).

– **All large customer segments prioritize the renewal program that focuses on replacing equipment that affects reliability** ahead of other options for improving reliability. Other options include: tree-trimming, using technology to reduce the chances of losing power, strengthening the grid to better withstand severe weather, better detection of outages and/or remotely responding to outages.

– **Willingness to accept a rate increase to maintain and improve service level is limited**. The majority of residential and small business customers are unwilling to accept higher rate impacts for better reliability; large customers generally accept that investments are needed; however they expect HONI Dx to exhaust all operational efficiencies before raising rates. At present, there is limited acceptance of any of the illustrative rate impact scenarios, even to maintain the current levels of reliability and service.

Management is aware of and has carefully considered the consequences of pursing an investment plan that is largely inconsistent with the outcome of the customer engagement process. It is important to note that for the 2018 rebasing year, approximately 50% or 3.5% of the rate increase in both investment planning scenarios is not within the company's control as it is driven by load changes or settlement of existing regulatory accounts. In addition, the average differential rate impact for the remaining four years of the rate-setting term is about 0.5% and 0.2% expressed on a total bill basis.

2. Analysis of two investment planning scenarios:

Two investment planning scenarios have been considered after the completion of the customer engagement process: Plan A - Recommended and Plan B – Not Recommended.

Plan A – Recommended: this investment plan reflects a portfolio of appropriately paced investments that achieve an optimal balance between cost effectiveness, responsiveness to certain identified customer needs and preferences, asset requirements and business objectives. In this plan, Hydro One is proactively investing in system renewal to address the reliability and power quality concerns of its customers. It increases the number of:

- Pole replacements, distribution station refurbishments, and submersible cable replacements to address the poor results of condition assessments; and
- Mobile unit substations to reduce customer interruptions due to planned maintenance and refurbishment activity.

The plan also includes investments that are designed to improve customer satisfaction, and enable productivity and efficiency improvements to lower OM&A costs.

Plan B – Not Recommended: this investment plan reflects a portfolio of capital investment that ensures compliance with applicable codes/regulations/laws and addresses certain reliability and customer needs; however it presents limited opportunities for productivity and reliability improvements. Investment in renewal capital is less than that in Plan A – Recommended, with the result that there is incremental risk of customer interruptions and a higher number of costly unplanned replacements. In addition, this investment plan puts at risk the company's ability to implement various enabling IT enhancements that are designed to result in productivity savings or improved customer satisfaction. Productivity savings are reflected in this investment plan; however the risk that these savings are not achieved is higher than in Plan A – Recommended.

The annual capital expenditures associated with each plan are set out graphically in Figures 1 and 2. The single largest investment in each of the two plans is the Integrated System Operating Centre which has a total cost of $130M. The cost of the facility is allocated 50/50 between Transmission and Distribution, with the Transmission portion of the Centre included in the current Tx rate application that is presently before the OEB.

Hydro One is planning to proceed on the basis that Plan A – Recommended will be included in its Dx application for rates.

Figure 1. Plan A - Recommended

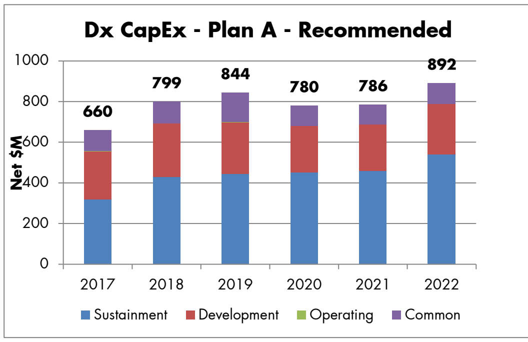

Figure 2. Plan B – Not Recommended

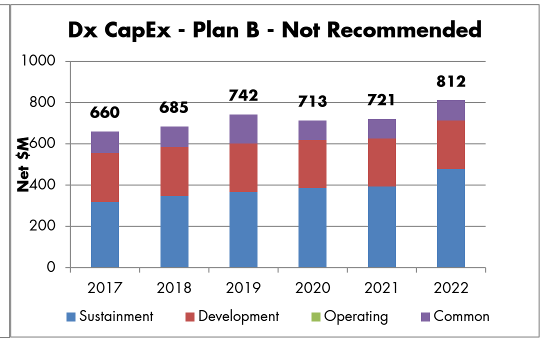


The average annual difference in investment between the two plans is $85 million. The rate impact of each investment plan is set out in Table 3. The principal drivers of Dx rates over the investment term are more fully analyzed in Table 6.

Table 3. Rate Impact – Plan A - Recommended and Plan B – Not Recommended

Plan A - Recommended	**2018**	**2019**	**2020**	**2021**	**2022**	**Average**
Rate Increase Required	7.3%	3.5%	2.6%	3.0%	2.8%	3.9%
Estimated Total Bill Impact (R1 customer – 30%)	2.2%	1.1%	0.8%	0.9%	0.9%	1.2%
Plan B – Not Recommended						
Rate Increase Required	6.2%	3.2%	2.5%	0.8%	2.6%	3.4%
Estimated Total Bill Impact (R1 customer – 30%)	1.9%	1.0%	0.7%	0.8%	0.8%	1.0%

As set out in Section C of this document, the OEB has implemented a Renewed Regulatory Framework for Electricity Distributors ("RRFE") for rate-setting purposes. Pursuant to the RRFE, the OEB requires that distributors substantiate applied-for capital budgets in terms of the performance outcomes of the RRFE: (i) customer focus; (ii) operational effectiveness; (iii) public policy responsiveness; and (iv) financial performance The RRFE Outcomes associated with Plan A – Recommended are set out in Table 4.

Table 4. RRFE Outcomes – Plan A - Recommended

RRFE Outcome	**Description**
Customer	• Investments are paced to avoid potential catch-up in future investment periods. • Identified needs and preferences of industrial customers for reliability and power quality improvements are addressed. Investments are made on a case-by-case basis using individual feeder performance metrics, rather than system-wide SAIDI/SAIFI performance statistics. • Worst performing feeder program for outlier management to be implemented on mass market customer feeders. • IT system investments promote the customer experience and achieve operational efficiencies. Initiatives include: web redesign and investments to improve customer bill comprehension and to improve visibility of customer energy usage, thus enhancing customers' ability to conserve based on visible

	consumption patterns. • Investments to improve customer services to put the "Customer First" will result in improved customer satisfaction and improved reliability and efficiencies in the call center. Overall the plan forecasts to improve the Customer Satisfaction survey result by approximately 13%. • Targeted reduction in manual meter reads of approximately 43,000 per year over the plan, enabling more timely and accurate Time-Of-Use bills. • eBilling is forecast to increase by approximately 15% over the term of the investment plan, resulting in significant savings in postage costs.
Operational Effectiveness: Productivity	• Productivity enabling investments will allow Hydro One to mitigate OM&A cost increases that would otherwise been included in the plan. • Investments in Customer Service, Work Management, Finance, Human Resource, Supply Chain systems enable higher work productivity and therefore lower the unit costs of these operations. Investment in plant maintenance, planning and scheduling will improve overall infrastructure reliability, reducing the number and duration of outages. • Standardization of work management for Provincial Lines, Stations and Forestry will be developed using SAP's mobile capabilities, with a commitment to achieve a minimum 5 percent productivity gain and annual savings of $12M. • Investments in Smart Meter Infrastructure enables remote disconnect/reconnect capabilities, with estimated savings of $3M per year. The remote disconnect/reconnect meters will deliver an additional $1M of annual OM&A savings over the planning period for Vacant Premise orders. • Vegetation Management programs have targeted SAIFI (interruption frequency) improvements primarily due to lower expected numbers of tree contacts, with investment focused on critical cycle clearing. • Fleet Services has struck an optimal balance between capital and maintenance expenditures. Each further reduction of $1M in capital will correspondingly increase OM&A by $60K and incur 205 hours of fleet downtime.
Operational Effectiveness: Safety	• Reduces the public safety risk of 'shock in water' incidents by replacing submarine cables with shoreline exposure over a 10 year period. Approximately 220 cables per year, representing 2% of the total fleet, are targeted for replacement.
Operational Effectiveness: Reliability	• System Average Interruption Frequency Index (SAIFI) and Customer Average Interruption Duration Index (CAIDI) are forecast to improve by approximately 2% to 3% versus current levels of 3 outages per customer and 2.5 hours per event over the term of the investment plan. • Distribution system modernization will support the above improvements to reliability. • Trouble Calls and Storm Damage are budgeted at the four-year historical average to ensure sufficient funding for anticipated outages and power

	interruptions. • Adequate pacing of replacement levels of wood poles; about 83,000 poles representing 5%of the total fleet are currently in a deteriorated condition and must be replaced in a paced manner in order to manage renewal volumes. At the end of the investment term, the backlog of poles requiring replacement will be reduced slightly, thus achieving the proper pace of replacements to avoid future step changes in work volumes. Network Operating Division maintains its control room, system and tools to achieve an availability standard of 99.97%, ensuring reliability and availability. • Fleet vehicle levels are maintained to manage potential delays in the response time to unplanned incidents, such as trouble calls and storms, mitigating the negative impact on SAIDI. • Distribution station failures are reduced by setting station refurbishments at the level required to maintain system reliability at the current level, while addressing load requirements and aging asset demographics. Line Components that require replacement based on condition assessments will be remedied on a planned rather than unplanned basis. This will reduce costs and improve reliability.
Public Policy Responsiveness	• Distribution Modernization supports the Green Energy Act and Conservation First framework by enabling the connection of renewable resources, improving operational flexibility and promoting conservation. • Deliver timely and accurate bills to meet/exceed customer and regulatory expectations, reducing the number of estimated bills. • Lower unit costs by reducing manual meter reads.
Public Policy Responsiveness: Environment	• The Polychlorinated Biphenyl (PCB) Replacement strategy enables compliance with federally mandated environmental requirements to eliminate all contaminated units by 2025.
Financial Performance	• Productivity initiatives and strategies have been identified to drive sustainable and continuous improvements in cost performance and will be implemented over the investment term. Three work streams have been targeted: OM&A, Procurement, and Operations and Maintenance. Value realization for several key initiatives is dependent upon targeted investments in Information Technology (IT) and realization of Procurement savings.

Some of the key risks (by RRFE principle) involved with reducing funding to the level in "Plan B – Not Recommended" are set out in Table 5.

Table 5. RRFE Outcome Risks Associated with Plan B – Not Recommended

RRFE Outcome	Description
Customer	• Asset replacements would fall behind targeted levels, increasing the likelihood of unplanned equipment outages that cause customer interruptions, higher replacement costs than a planned replacement and a

	future "step change" in asset renewal volumes. • Network Operating portfolio reduces funding for investment in Outage Response Management System (ORMS) enhancements, which may delay customer restoration improvement initiatives.
Operational Effectiveness: Productivity	• Realization of savings projections and unit cost reductions are at risk due to reduced funding levels for IT improvements. • Lower expenditures in Fleet services will result in reduction of heavy equipment replacements of up to 13 units per year which will increase the risk of downtime hours; that will cause delays in work programs, impacting costs and performance. • Facilities would not be able to support the work program effectively (e.g., not investing in fleet garages will lower utilization rates) and constrain productivity achievements.
Public Policy Responsiveness: Environment	• Reduction in 2017 for PCB Transformer replacements requires a future program increase to meet the 2025 target of elimination of PCBs, with an increased risk of potential oil leaks. • Decreased work equipment replacements will reduce the equipment efficiency and limit reductions in Hydro One's carbon footprint.

3. **Attribution of distribution rate profiles in each scenario – 2018 rate increase relatively insensitive to investment scenario:** as set out in Table 6 below, the size of the rate increase in 2018 to 2022 in each scenario is largely attributable to Hydro One's capital investment program. Notably, approximately half of the 2018 rate increase is attributable to the true-up of the load forecast, differences from the prior year in amounts refunded to customers through rate riders, and changes in external revenues. This means that under both investment plan scenarios, there will be a minimum rate increase for 2018 of about 3.5% that is not within the control of HONI Dx.

   It is also important to note that significant productivity savings are reflected in the OM&A of both scenarios in the 2018 re-basing year, offsetting the upward pressure from inflation, regulatory costs, and planned, contracted labour-cost escalations. These cost and productivity initiatives reflect lower pension costs, process improvements associated with IT investments, and other organization-wide initiatives.

Table 6. Attribution of Distribution Rate Profile

Rate Increase Components Plan A - Recommended	2018	2019	2020	2021	2022	Average
Not in Hydro One's Control						
Estimated Load	1.7%	-0.2%	-0.7%	-2.5%	-0.6%	-0.5%
Rate Riders	1.1%	0.0%	0.0%	0.0%	0.0%	0.2%
External Revenues - Other	0.7%	0.0%	0.0%	0.0%	0.0%	0.1%
	3.5%	-0.2%	-0.7%	-2.5%	-0.6%	-0.1%
Within Hydro One's Control						
OM&A	-0.4%	0.6%	0.6%	1.1%	0.5%	0.5%
Rate Base & Depreciation	3.5%	3.0%	2.7%	3.9%	2.6%	3.1%
Income Taxes	0.8%	0.1%	0.0%	0.5%	0.3%	0.3%
	3.8%	3.7%	3.3%	5.5%	3.4%	4.0%
Total Rate Increase	7.3%	3.5%	2.6%	3.0%	2.8%	3.9%

Rate Increase Components Plan B - Not Recommended	2018	2019	2020	2021	2022	Average
Not in Hydro One's Control						
Estimated Load	1.7%	-0.2%	-0.7%	-2.5%	-0.6%	-0.5%
Rate Riders	1.1%	0.0%	0.0%	0.0%	0.0%	0.2%
External Revenues - Other	0.7%	0.0%	0.0%	0.0%	0.0%	0.1%
	3.5%	-0.2%	-0.7%	-2.5%	-0.6%	-0.1%
Within Hydro One's Control						
OM&A	0.0%	0.6%	0.6%	1.2%	0.6%	0.6%
Rate Base & Depreciation	2.1%	2.6%	2.5%	3.5%	2.4%	2.6%
Income Taxes	0.7%	0.2%	0.1%	0.4%	0.3%	0.3%
	2.8%	3.4%	3.2%	5.1%	3.2%	3.5%
Total Rate Increase	6.2%	3.2%	2.5%	2.6%	2.6%	3.4%

4. **Hydro One Limited consolidated financial outlook:** as set out in Table 7 below, Hydro One Limited's financial outlook does not materially change between investment scenarios. Earnings per share and dividend metrics over the 2018 to 2022 rate period are not sufficiently differentiated to favour one investment plan over the other. The CAGR of EPS over the 5-year rate setting period for both scenarios is consistent with the 4 to 6% range targeted by most comparable publicly traded utilities and the expected dividend and dividend payout ratios are nearly identical. Debt levels would continue to be in the targeted range under both investment plans.

Table 7. Hydro One Limited Consolidated Financial Outlook

Metric (2017 to 2022)	Plan A - Recommended	Plan B – Not Recommended
CAGR Net Income	6.5%	6.1%
CAGR Earnings per Share	6.5%	6.0%
CAGR Dividends Per Share	5.0%	5.0%
Average Dividend Pay Out	69%	69%
Average Debt to Rate Base	64%	63%

5. **Regulatory determinations:** Management was informed by the rates approvals associated with the Custom IR filings by other utilities, including Toronto Hydro Electric System Limited and PowerStream Inc., and 4th Generation (or Price Cap IR) applications by other utilities, such as Milton Hydro Distribution Inc. These decisions have been used to:

- Identify the decision framework that the OEB will use to assess whether the form and incentives embedded in Dx's planned application for 2018 to 2022 rates are consistent with the RRFE;

- Provide guidance with respect to the overall preliminary Dx rate profile for 2018 to 2022; and
- Provide guidance with respect to evidentiary requirements to support the applied-for investment plan; specifically productivity, outcomes and key performance metrics.

For example, based on the Reasons for Decision relating to the Milton Hydro Distribution[1] application, it is evident that the OEB is increasingly likely to use benchmarking and other reference tools to determine the appropriateness of the applied-for increase in distribution rates, including the change in rates between the bridge (2017) and rebasing year (2018).

These metrics include:

- use of an econometric model to externally and internally benchmark utility productivity on a historical basis;
- use of the same model to predict forecast costs over a single period, being the rebasing year; and
- use of other comparables, as set out in Table 8 below. The OEB is likely to use these metrics to aid in its determination of whether the revenue requirements and the associated applied-for capital expenditure budgets are reasonable.

Table 8. HONI Dx Scenario Metrics versus Inflation and Load

Plan A - Recommended	
CAGR Revenue Requirement 2017 to 2022	4.3%
Percentage Change in Revenue Requirement 2022 versus 2017	23.5%
CAGR Rate Base 2017 to 2022	6.2%
Percentage Change in Revenue Requirement 2022 versus 2017	35.0%
Plan B - Not Recommended	
CAGR Revenue Requirement 2017 to 2022	3.9%
Percentage Change in Revenue Requirement 2022 versus 2017	21.0%
CAGR Rate Base 2017 to 2022	5.3%
Percentage Change in Revenue Requirement 2022 versus 2017	29.4%
Inflation	
Annual Inflation Assumption	1.50%
Percentage Change in Inflation	7.7%
Load	
CAGR Load	-0.5%
Percentage change in Load	-2.3%

The principal reason that Hydro One's Revenue Requirement is increasing at a higher rate than inflation is due to the need to invest in assets that are increasingly deteriorated and at the end of life, requiring investment in excess of annual depreciation.

[1] Milton Hydro Distribution Inc. Decision and Order. Ontario Energy Board EB-2015-0089. July 28, 2016.

B. March 3, 2017 Target Filing Date

The targeted filing date of the application is March 3, 2017. The decision to file the application on this date reflects the following considerations:

- The OEB normally requires seven to nine months to consider a typical cost of service application; however 10 to 12 months is more of the norm in relation to the time required to hear and consider an application for Custom Incentive Rates, due to the additional complexity that accompanies this type of application.

  As described in the next section, HONI Dx intends to file an application for Custom Incentive Rates effective January 1, 2018, and it is expected that the rate-setting structure will have a number of custom features, including a custom capital factor and an additional mechanism associated with the previous acquisition of Norfolk Power Inc., Haldimand County Utilities Inc., and Woodstock Hydro Services Inc. Given these custom elements, it may take in excess of 12 months for the OEB to fully litigate HONI Dx's application for Custom Incentive Rates.

- HONI Tx is expected to file a multi-year application for incentive rates beginning January1, 2019 in the first quarter of 2018. Asset planning and customer engagement processes, benchmarking and productivity studies, and other associated regulatory studies and processes will need to be initiated in early 2017, if a regulatory application is to be filed and considered by the OEB, such that approved rates are in place and effective January 1, 2019. A delay in the preparation and subsequent filing of the 2018 to 2022 Application for Custom Incentive Rates will have the effect of "crowding out" the Tx application process.

C. Form of the Planned Application for 2018 to 2022 Distribution Rates

In Ontario, the OEB is required by its governing statute, the *Ontario Energy Board Act, 1998* (the OEB Act), to give rate-regulated utilities the opportunity to recover their reasonably incurred costs of providing utility service. The OEB Act gives the regulator wide latitude in the tools that is uses to fulfil this requirement, allowing it to use "any method or device" to set utility rates. In the case of Ontario-based electricity distribution utilities, the OEB adopted an incentive mechanism for rate-setting purposes in 2000 (1st Generation IR).

Incentive Regulation

An incentive rate or "IR" regime is one in which "market-like incentives are created for the utility to operate in an efficient and effective manner for the customers' benefit, reducing the need for continuous and detailed regulatory scrutiny of utility operations"[2]. A well designed IR

[2] Discussion Paper on Rate Regulation in Ontario. Pacific Economics Group, LLC, ICF Consulting; and Exel Energy Group. September 2004. Page. 17.

approach seeks to achieve both productive and allocative efficiency. Productive efficiency is achieved by weakening the link between utility costs and approved rates, expressed on a unit basis. Allocative efficiency is achieved by the use of metrics to ensure that the services provided and outcomes achieved by the utility are valued by customers and demonstrate "value for money"; that is, services are provided by the utility for which the customer is willing to pay.

The OEB has continued to evolve its approach to incentive regulation – on October 18, 2012, the OEB released its *Report of the Board - Renewed Regulatory Framework for Electricity Distributors: A Performance-Based Approach* (RRFE).

Renewed Regulatory Framework for Electricity Distributors

The OEB's RRFE intends to provide alignment between a sustainable, financially viable electricity sector with customers' expectations for reliable service at a reasonable price. The OEB believes that emphasizing results, as opposed to activities, will result in better responsiveness to customer preferences, enhance distributor productivity, and promote innovation.

The RRFE is focused on driving four performance outcomes:

1. Customer Focus: services are provided in a manner that responds to identified customer preferences;
2. Operational Effectiveness: continuous improvement in productivity and cost performance is achieved. Utilities deliver on system reliability and quality objectives;
3. Public Policy Responsiveness: utilities deliver on obligations mandated by government; and
4. Financial Performance: financial viability is maintained and savings from operational effectiveness are sustainable.

The RRFE performance outcomes are to be achieved by three regulatory approaches:

1. Three incentive-based rate-setting options designed to incent continuous productivity improvement: (i) Annual Incentive Rate-setting Index – for distributors with limited incremental capital requirements; (ii) 4th Generation or Price Cap IR – suitable for most distributors; and (iii) Custom Incentive Rate-setting – suitable for distributors with large or highly variable capital requirements – HONI Dx will be selecting option (iii);
2. Five-year, consolidated asset plans to support rate applications; and
3. Performance measurement.

Previous HONI Dx Custom IR Decision

The planned HONI Dx application targeted for March 3, 2017 will be the second Custom Incentive Rate-setting application filed by HONI Dx with the OEB. The first application, filed on December 19, 2013 sought an OEB approval for distribution rates for a five year period, commencing January 1, 2015. Although HONI Dx applied for rates under the OEB's Custom IR framework, the application was characterized by HONI Dx as a "Custom Cost of Service", and as such the OEB determined that it "does not consider Hydro One's application to be sufficiently aligned with the objectives of the RRFE policy"[3]. As a result, the OEB approved rates for the period 2015 to 2017 on a cost of service basis.

In addition, the OEB made the following determinations[4]:

- The company's approach lacks the RRFE features designed to achieve a central policy objective of measuring performance and providing incentives for continuous improvement:

  - Inconsistency with outcome-based regulation as it relates to decoupling rates from costs and the use of external benchmarks of cost, output and service quality to reveal superior performance and encourage best practice;
  - Lack of externally imposed incentives to inform productivity and efficiency gains;
  - Weak benchmarking evidence to demonstrate year-over-year trended performance or performance versus that of other comparable utilities;
  - Limited prospects for continuous improvement; and
  - Absence of outcome measures that confirm or demonstrate value to customers.

- It is clear that thedistribution system is in need of investment and changes to system performance may not be immediately visible. However, in absence of an outcome measures to demonstrate performance improvement value to customers, another way to demonstrate value for customers is to bring forward unit cost metrics to demonstrate cost performance improvements.

The OEB expects HONI Dx's application for 2018 to 2022 rates to be fully compliant with the RRFE. The rate-setting approach to be reflected in the application is set out in Table 9.

Table 9. Key Features of the HONI Dx Rate-setting Approach

Feature	Description
Type of Rate-Setting Approach	Custom IR
Term	5 years: January 1, 2018 to December 31, 2022. Term is consistent with OEB RRFE requirement that the minimum term of a Custom IR be 5 years. 2018 – Rebasing or cost of service year 2019 to 2022 – Incentive rate years (IR years)* *2021 Rates to include acquired utilities

[3] EB-2013-0416 Decision Hydro One Networks Inc. Ontario Energy Board. March 12, 2015. Page 8.
[4] Ibid. Pages 9, 12-20.

Revenue Cap	The Revenue Cap is determined as: (1) the revenue requirement determined for the rebasing year (2018), adjusted by the Annual Adjustment Mechanism in each of the four successive incentive rate years, plus (2) the revenue requirement calculated by the Capital Factor.
Annual Adjustment Mechanism (1 + Inflation Factor – Industry Total Factor Productivity - Stretch Factor)	To be calculated in a manner consistent with the OEB approach in 4th Generation IR. The Annual Adjustment Mechanism is equal to: (i) **Inflation Factor** – based on 2-factor input price index (IPI) methodology that reflects Ontario's electricity industry (70% of annual % change in GDP-IPI and 30% of annual % change in Average Weekly Earnings); (ii) **Productivity Factor** – Ontario electricity industry Total Factor Productivity (TFP) which is currently set at 0%; and (iii) **Stretch Factor** (SF) – as determined by the OEB based on the OEB's Total Cost Benchmarking model. HONI Dx Distribution's current Stretch Factor is 0.6%. The Inflation and Stretch Factors will be updated annually, consistent with current OEB practice in 4th Generation IR. The Productivity Factor (TFP) will remain fixed over the Custom IR term. The Stretch Factor is updated annually by the OEB. Should HONI Dx's efficiency, as determined through the OEB's comparative cost analysis, improve during the term of the Custom IR, the Stretch Factor would decline. This means that HONI Dx's revenue will increase about 1.5% each year, assuming current inflation rates. Any ability for the company to limit the rate of cost increases to less than this amount will result in over-earning of its deemed ROE.
Treatment of Capital – Capital Factor	Costs associated with HONI Dx's capital program that are not recovered in base IR rates will be recovered through a Capital Factor. Costs to be recovered in the Capital Factor include incremental depreciation, cost of debt, cost of equity, and taxes. These are the specific costs that are related to capital. The factors relevant to the calculation of the Capital Factor are: mid-year rate base and assets placed in-service.
Deferral and Variance Accounts	HONI Dx's existing variance accounts, and associated rate riders, will continue in the normal course.

	New variance accounts that are likely to be required include: • Capital In-Service Variance Account; and • Earnings Sharing Mechanism (see below). Consideration is currently being given to a variance account for the costs associated with externally driven capital investment that is not anticipated in the Distribution System Plan.
Load Forecast	HONI Dx will estimate load for each year of the Custom IR term and file it in the application. It is intended that the OEB approve the load forecast for each of the 5-years and that the annual process to adjust IR rates will reflect the change in load for that year. Billing determinants (number of customers, kWh Consumption or kW Peak Load) would be updated annually to reflect the approved load forecast for each year. Consideration is currently being given to the potential use of mechanisms to reduce the risk related to the 5 year forecast. For example, HONI Dx could apply to update the load and customer forecast at the end of 2020, for rates in 2021 and 2022.
Earnings Sharing Mechanism (ESM)	An ESM is not a required feature of a Custom IR. However, Management believes that we will likely implement an ESM. HONI Dx is currently contemplating a sharing mechanism pursuant to which any earnings that exceed the regulatory ROE reflected in Custom IR rates by more than a pre-established threshold in any year of the Custom IR term would be shared 50/50 with customers.
Cost of Capital Parameters	Cost of equity and debt will be updated in 2018 (the rebasing year). However cost of capital parameters are not automatically subject to annual adjustment as part of a Custom IR application. HONI Dx will likely decide to apply to update the parameters on an annual basis, which will be done as part of the annual rate order process in the Incentive Rate years 2019 to 2022.
Capital In-Service Variance Account (CISVA)	HONI Dx does not currently have a CISVA, however it is expected that this account will be included, as it represents good practice, aligns the interests of the utility and customers by creating an incentive for the utility to only put in service the amount of capital that is reflected in the rates, and is consistent with HONI Tx. The features of a CISVA currently being considered include:

	i. Purpose to track the impact on revenue requirement of any in-service additions versus OEB-approved amount for each year of the Custom IR term; ii. The revenue requirement associated with any under spending, will be disposed of on a cumulative basis at the end of the five-year term of the Custom IR Plan in 2023; iii. Revenue requirement associated with variances in in-service additions resulting from verifiable productivity gains will be excluded from the calculation; and iv. Account will be asymmetrical, meaning that should the in-service additions in any year exceed the OEB-approved amount for that period, no entry is made in the variance account and no amount is recoverable from ratepayers.
Treatment of Unforeseen Events (Z-Factor Claims)	Consistent with the OEB's RRFE, existing OEB policies in relation to unforeseen events will apply. HONI Dx has the ability to include in an application a request to recover costs associated with unforeseen events that are outside the control of a distributor's ability to manage. The cost must be material (in-excess of $2 million) and its causation clear. The materiality thresholds must be met on an individual event basis in order for the distributor to apply for recovery of the relevant costs.
Off-Ramps	A regulatory review may be triggered if a distributor's earnings are outside of a dead band of +/- 300 basis points from the OEB-approved return on equity.

Table 10 highlights the key regulatory policy issues associated with the planned 2018 to 2022 Custom IR application for Dx rates.

Table 10. Regulatory Policy Issues

Regulatory Policy Issue	Description
Status of Tx Application – Implication for Dx Application for 2018 to 2022 Rates	There is some risk that the OEB may not issue a Decision and Order on HONI Tx's application for 2017 and 2018 rates prior to the finalization of the structure and content of the HONI Dx application for 2018 to 2022 rates. There are a significant number of regulatory policy issues that are common to both applications. The issuance of a Tx Decision by the OEB that is inconsistent with the filing position on shared regulatory policy issues may cause the HONI Dx application for rates to be delayed.
Compensation	Consistent with the filing position for the Application for 2017 and 2018 Transmission Rates, LTIP, STIP, stock-based compensation costs and costs related to the Employee Share Ownership Plan should be recoverable in rates and are a component of normal total compensation. Four compensation

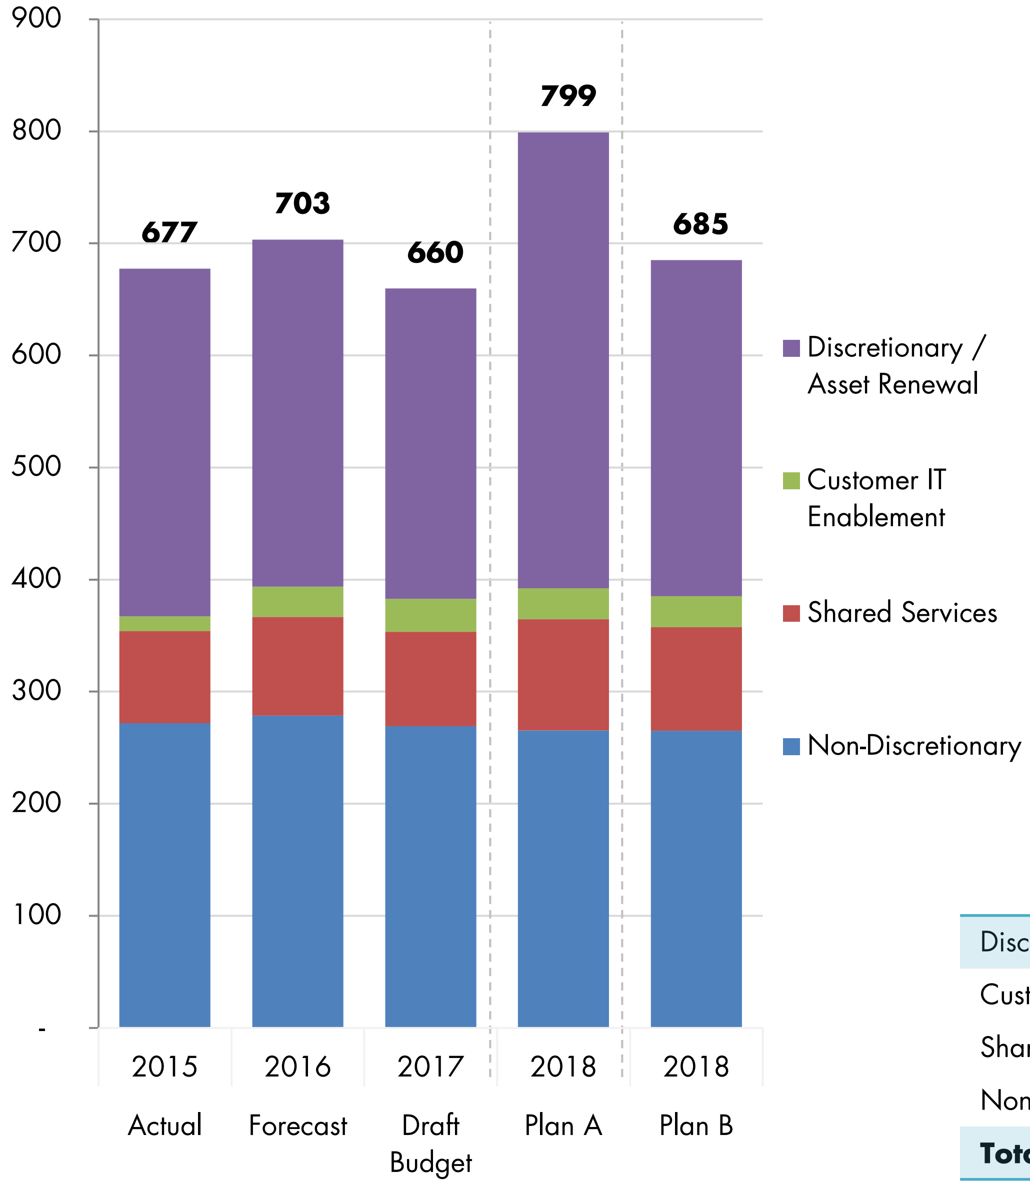
	issues will likely be tested during the proceeding: (i) size of total compensation "envelope"; (ii) composition of compensation costs; (iii) executive compensation; and (iv) whether Hydro One's OEB-approved Regulatory Cost Allocation remains appropriate.
Taxation Rates and Deferred Tax Asset	The application will reflect a combined Federal and Provincial income tax rate of 26.5% for ratemaking purposes. Consistent with the filing position for the Transmission Application for Rates, based on regulatory principles ("stand-alone" and "benefits follow costs") and guidance from previous OEB determinations, the shareholder should own the benefit associated with the deferred tax asset that arose from the IPO of the company.
Response to OEB-Mandated Studies	The OEB Ordered the completion of the following reports in order to inform it's assessment of HONI Dx's efficiency and productivity, and to assist with its assessment of whether applied-for costs are reasonable: • Total Factor Productivity (TFP) Study; • Total Compensation Study; • Vegetation Management Program and Trend Analysis; • Third-party Review of Dx's Distribution System Plan; • Pole Replacement Program; • Distribution Station Refurbishment Program; • Miscellaneous Service Charges; • Depreciation Study; and • Capital In-Service Additions. The implications and consequences of these reports will be fully reflected in HONI Dx' capital and operating plans. Strategies and actions to address identified areas will be comprehensively set out in the application and the pre-filed evidence.
Cost Efficiencies, Productivity and Performance Management	KPI's, performance metrics and outcome measurement contained in and resulting from the foregoing OEB-Mandated Studies are expected to be integrated into the company's performance measurement approach. As stated by the OEB in its July 28, 2016 Decision and Order for EB-2015-0089, utilities that objectively demonstrate measurable and sustainable continuous improvements in each of the RRFE categories can expect to have their test period revenue requirement requests approved without material disallowances. Measurement tools include: (i) productivity indicators: input/output metrics; (ii) KPIs: track how well you are doing versus what you said you would do; and (iii) Outcome measures: creating value for money or results that are valued by Customers.
Total Cost Benchmarking – Pacific	As set out by the OEB in the recent PowerStream Decision and Order, "the OEB has previously determined that both external benchmarking and

Economic Group (PEG) Model	internal benchmarking that tracks year-over-year productivity improvements are key in providing the confidence for long-term rate setting under the principles of the RRFE"[5]. The OEB has used an econometric model to externally and internally benchmark utility productivity on a historical basis. It is this model that benchmarks HONI Dx's annual cost performance, places the company in the 4th quartile, and results in the assignment of the 0.6% Productivity Stretch Factor. This model reflects the "average" Ontario utility and does not reflect HONI Dx's particular circumstances. The OEB has signalled its intention to use this model to predict forecast costs. New OEB filing requirements contemplate that HONI Dx will be required to run and file the output of this model, as it relates to the prediction of future costs, with the OEB at some point during the process to litigate the Custom IR application. HONI Dx will be required to provide evidence to support the difference or "gap" between econometrically predicted and applied-for costs, notably in the 2018 rebasing year. Although the OEB has also stated in a number of previous decisions "that it will use benchmarking as a tool to inform its decisions, but will not use it as a method by which to determine rates"[6], it appears that the weight the OEB places on the approach to establish the reasonableness of costs may be increasing.
Comprehensive Customer Engagement	HONI Dx has undertaken a comprehensive Customer Engagement process, consistent with the RRFE and the OEB's Filing Requirements for Electricity Distribution Rate Applications. At issue will be: (i) whether the Customer Engagement process meets the OEB's Filing Requirements; (ii) whether it was designed to identify customer needs and preferences; (iii) whether customer needs and preferences were identified; (iv) how identified needs and preferences informed the investment and operating plans set out in the pre-filed evidence; and (v) whether HONI Dx has adequately responded to the feedback from customers in a manner that produces tangible and measurable outcomes that are valued by customers.
Integration of Acquired Utilities	As described previously, the Integration of the Acquired Utilities will require that the rate base and OM&A costs of each utility be closed to HONI Dx's rate base and OM&A in 2021. The integration also requires new rate classes for residential and commercial customers. In addition, the OEB has mandated the following requirements in the Decisions and Orders in which it approved each of the MAADs applications relating to the Acquired Utilities.

[5] Ontario Energy Board. Decision and Order – PowerStream Inc. EB-2015-0003. August 4, 2016. Page 9.
[6] Ontario Energy Board. Decision and Order – Toronto Hydro Electric System Limited. EB-2014-0116. Page 19

	These requirements must be appropriately addressed in the Custom IR application.
Working Capital Allowance	The application will include a proposal for working capital as determined by a lead-lag study to be conducted by Navigant. The lead-lag study conducted for HONI Dx's current rates established a working capital requirement of approximately $250 million or 7.4% of total OM&A and Cost of Power amounts. Working capital is included in the calculation of mid-year rate base. A similar working capital requirement is anticipated for this application.

Investment Plan Scenario Comparison



Variance

- Plan B represents a 26% reduction of Discretionary / Asset Renewal Investment from Plan A levels (2018).

Discretionary / Asset Renewal

- Pacing of Asset Replacement/Refurbishment (Poles, Stations, Conductors)
- Technology Enhancements

Customer IT Enablement

- Billing and call centre enhancements
- Customer portal redesign

Shared Services

- Facilities sustainment
- Fleet and work equipment
- Technology infrastructure refresh

Non-Discretionary

- Third Party Relocations
- Storm Damage Response
- Customer Connections (Load / Generation)
- Metering
- Operating infrastructure

	Draft 2017	Plan A 2018	Plan B 2018
Discretionary / Asset Renewal	277	407	300

Hydro One Limited/ Hydro One Inc.
Submission to the Board of Directors

Date: November 11, 2016

Re: Application for Distribution Rates 2018 to 2022

Attached for information is a summary of progress to date of the Distribution Investment Plan for the five year Distribution rate filing that is expected to be filed on March 3rd, 2017. The information is provided for feedback and input.

Significant inclusions/changes since the last Board meeting include:

1. A potential path to accomplish a 2018 rate increase of 5.4% (average of 3.4% over 5 years).
2. Detailed analysis of the effects of various options on customer bills and reliability.
3. Data on asset replacement rates and impacts on asset condition.
4. Analysis of productivity initiatives and outcomes on capital and OM&A
5. Summaries of customer feedback and the impact of such feedback on the plan.
6. Some history of OEB decisions to provide context on OEB expectations for this filing.

For the last several months, our teams have worked diligently to analyse trade-offs between customer and reliability impacts and customer bill impacts. In working to the optimum outcomes, we have considered overall reductions in the capital program, short-term capital reductions and more aggressive and targeted cost reduction to further reduce the overall bill impact arising from OM&A and corporate costs. Our focus was to find ways to reduce the average bill impact over the five year period, but also reduce the first year (2018) bill impact that already has non-actionable rate increases of 5.1% included. Our latest iteration has succeeded in adding only 0.3% in rate increases to the minimum bill impact in 2018.

The analyses provided are for feedback only. Management is not making a recommendation at this time. We will incorporate your feedback into the further analysis that we continue to perform, and expect to provide a final recommendation that will be included in a detailed business plan for Board approval at the December 2016 meeting.

We have attempted to keep the analysis as clear as possible, while providing relevant data.The subject is complex, and I would be pleased to discuss or answer questions of clarification before the meeting.

Yours sincerely,

Michael Vels
Chief Financial Officer

Date: November 11, 2016

Re: Application for Distribution Rates 2018 to 2022

A. CONTEXT AND BACKGROUND

Hydro One Distribution is in the process of preparing its rate filing for the five years beginning 2018. The process to finalise a major rate application is long, complex and iterative. The process is led by the Investment Management team, and involves accumulating and assessing a significant amount of information that supports decisions related to a system comprising $7.2 billion of assets (distribution rate base), over 1.3 million residential customers, a network of unique commercial and industrial customers and many competing priorities and needs. The process must incorporate direction, filters and adjustments at many points in the process.

The final recommendation must balance three competing, but equally important, factors. These are (i) the needs and preferences of our customers; (ii) the condition and reliability of the distribution system; and (iii) the effect on customer rates. None of these factors can trump the others, but a high quality application will evidence that management followed a sound process and used its best judgement to arrive at an optimum solution. The Ontario Energy Board (OEB) is acutely interested in how utility companies arrive at their conclusions.

For this application, we are very aware that customers are experiencing increasing and, in many cases, unmanageable electricity bills. These increases have been driven by many factors, including investments by generators, the need to invest in the deteriorated wires infrastructure and material changes in generation mix, from lower-cost coal to a higher reliance on cleaner and more efficient natural gas, nuclear and renewable generation. In addition, conservation and demand management initiatives have increased costs, on a per kWh basis, as predominantly fixed system investment is recovered over lower total Ontario demand.

Hydro One's approach has been shaped by: (i) a thorough investigation of opportunities to reduce our own costs and increase efficiencies before asking customers to pay more; (ii) direction of investment to support specific customer feedback on needs and preferences; and (iii) reducing or deferring investment levels to where increases in reliability risk can reasonably be justified by lower rates.

We have also taken into account previous direction by the OEB that acknowledged that our system is in need of additional investment, that planned reductions in reliability are not acceptable, and that investment in the system is desirable and required. We expect that there will be areas in our upcoming rate application where we will transparently outline that we have consciously reduced investments. For example, we may choose to reduce investments in 2018 to reduce rates in a year where customers may be experiencing bill impacts of up to 7.2% (total bill) due to continued increases in the price of electricity, but these decisions may have a negative effect on reliability risk and system condition.

We are very concerned about the effect of electricity costs on our most vulnerable customers. In some cases, bills for a low-density customer, even after the upcoming provincial rebates and existing support programs, can represent up to 18% of household net income. Studies presented to the OEB in the past have drawn the affordability line at 4-6% of household net income. Hydro One has about 71,000 customers that exceed the Statistics Canada Low-Income Cut-offs, with 3,500 of those experiencing electricity costs greater than 10% of net income. Our customer service and collections staff manages these customer impacts with as much empathy as possible and ensuring that these customers are fully availing themselves of existing support programs. Hydro One is also participating in OEB initiatives and studies, such as the First Nations rate recommendations, and directing community specific outreach to ensure that we are sharing and communicating available support programs and ways to reduce consumption with these customers.

As a rate regulated entity, we are not permitted to unilaterally resolve the rate design or social policy issues ourselves, and our focus on cost reduction, while helpful, is a small component of the total bill. Our primary focus is to help our customers deal with these impacts by using the resources at our disposal.

Finally, we have made decisions on information technology investments that will improve the customer experience. These decisions have had the effect of increasing the overall capital expenditures. Some of these investments are directed at cost efficiencies – for example moves to e-billing – but also include initiatives that will make it easier for customers to understand and manage their electricity consumption. We believe these initiatives are critical for a company that will clearly and visibly put the interests of its customers first.

B. PROCESS TO DATE

Starting early this year, and informed by work we completed on efficiency studies and business objectives, as described below, the Investment Management team finalised an asset investment plan that was focused on maintaining or improving reliability for customers, and was responsive to specific feedback received from our wide variety of customers. It includes significant efficiency improvements and focuses on reducing backlog of deteriorated assets over the five-year period. This plan resulted in a 7.1% Hydro One rate increase in 2018 (average of 3.8% over the five years), and forecasted improvement of approximately 6% in SAIDI and 4% in SAIFI related to our most significant areas of reliability risk over the five-year period. This "Plan A" was supported by detailed analysis and the outcomes following significant iteration and assessment of investment candidates and asset sustainment plans, and in many areas, a reduction of submitted candidate investments.

Investment Management, as part of their process, also requires Asset Owners to put forward, at a detailed level, lower levels of investment than the optimal recommendation which are considered when adjusting the plans to affect rate impacts and outcomes. Based on these detailed inputs and feedback and discussion with executive management, a further alternative investment "Plan B" was produced that reduces the rate impact in 2018 by 1%, to 6.2% (average of 3.5% over the five years), and also delivers a reliability improvement (approximately 3% SAIDI, 2% SAIFI), albeit not as much as Plan A.

These alternatives were further discussed with the Executive Leadership Team and, subsequently, the Board of Directors. These discussions generated exploration of further options to mitigate rate effects and, in particular, options to reduce the effect on customer rates in 2018 while maintaining responsible system investments and acceptable reliability and other outcomes.

Investment Management has further refined their work, and have outlined further options for consideration. Firstly, they assessed what would be required to achieve the lowest 2018 rate increase without material disruption to our operations. This is presented as the "Plan C" scenario, a top down assessment of alternatives, and is not fleshed out the same amount of detail as the Plan A and B scenarios. Our conclusion is that this option as a whole is not viable due to the material system and reliability impacts - degradation of approximately 2% in both SAIDI and SAIFI - that would result from such a reduced level of sustainment capital investment and reductions in work programs and the associated increased backlog of assets in poor condition. However, a subset of options were also considered and are included in a scenario labelled here as "Plan B Modified." These options reduce the immediate impact on rates in 2018, to 5.4%. These options are indented to hold reliability risk constant, but may be justified by the positive effect on rates.

In the remainder of this note, we have outlined elements of the process followed and some more detail to illustrate the outcomes of each option. We are presenting these analyses for input and feedback, and will be finalising and presenting our recommendations for the Distribution rate filing in December, when we request approval of the Company's business plan. This business plan will then form the basis for the rate filing and related evidence, to be filed on March 3rd, 2017.

C. INVESTMENT PLANNING PROCESS

Hydro One's investment planning process is based on ISO 55000 principles, which are best practices for holistic Asset Management. The process takes identified asset needs, converts them into candidate investments, and then optimizes them based on their contribution to business objectives to yield an investment plan.

Business Objectives	Description
Customer 20 pts	• Improve customer satisfaction. • Engage with customer consistently and proactively.
Safety 20 pts	• Drive towards an injury-free work place. • Eliminate public safety incidents
Employee 10 pts	• Achieve and maintain employee engagement.
Reliability 15 pts	• Maintain current level of distribution system reliability relative to distribution peers.
Environment 10 pts	• Sustainably manage our environmental footprint.
Productivity 15 pts	• Actively control and lower costs through OM&A and capital efficiencies.
Shareholder Value 10 pts	• Ensure compliance with all codes, standards and regulations. • Achieve the ROE allowed by the OEB.

Initial guidance, in addition to these business objective weighting factors, was provided to planners in February 2016 to build their plans with the following considerations:

- Asset condition assessments
- OM&A limited to inflation, less a productivity factor as defined by the OEB (total increase no more than 1.5%). Very recently, in October, the OEB reduced the inflation factor by 20bps, which means we will need to update final work plans to reflect no more than a 1.3% revenue growth over the base year
- Rate base/asset growth originally limited to 4.2%, as in the previous business plan.
- 2017 spending/plans consistent with prior OEB decisions
- Cumulative In Service capital for 2016/17 consistent with OEB-approved levels
- Significant emphasis on how planned investments provide value to customers, reflect continuous improvement and improve reliability; and
- Plans must consider and incorporate the findings of the customer consultation process and productivity studies as information becomes available

Asset Owners design their investments to achieve the aforementioned objectives. The result is known in our internal process as "asset optimal level." As noted above, lower levels of investment are also requested – a.k.a. "Vulnerable." The lower level is described as a level that meets minimum compliance and health and safety requirements and is only tolerable for brief periods. At the lower level, asset failure is a distinct possibility.

After completion of manager review, the Investment Management team begins the optimisation process. This is when the rate impact of the plan is first determined. It is at this time that Hydro One introduces a financial constraint to adjust investment levels to align with acceptable customer rate impacts. Investments are eliminated based on weighted optimisation values, which, in our process, weight customer impact and worker and public safety as the highest values. Reliability and Productivity are the second highest values. These top four values comprise 60% of the total weighting. This year, greater emphasis was placed on customer-centric outcomes, including customer experience enhancements and productivity enablement for rate mitigation.

D. RATE APPLICATION FRAMEWORK

Under the current OEB framework for distributors, base distribution rate components, such as OM&A and depreciation, are set on a "cost of service" basis for a rebasing year (2018). This generates a revenue requirement for 2018. This base year revenue is then indexed by a (price or revenue cap) formula, comprised of an inflation adjustment (1.9%), less a productivity stretch (0.6%) factor for a total of 1.3%, and escalated annually from 2019 to 2022. The OEB inflation factor is updated and applies annually. Because 2018 costs form the base for the next four years of revenue, these costs are closely scrutinised. Any variances over this period, negative or positive, are to the utility's account.

The revenues calculated above recover approved costs and a steady state level of capital expenditures only. In addition capital program costs that are not recovered in base rates will be recovered through a custom Capital Factor that drives changes in rates in each year of the rate period, based on the quantum and timing of the capital program. Rate increases each year are highly responsive to the timing of capital placed in service. The revenue requirement generated by this capital factor is added to the revenue requirement outlined in the prior paragraph, for a total customer rate impact.

Past OEB filings: In 2012 (for 2013-2014), Hydro One sought OEB approval for substantial increases over historically approved levels for select investment areas, including wood poles and distribution stations, to address quality of service issues. Hydro One argued that without incremental investment, system reliability would be impacted as Hydro One would be unable to replace or refurbish assets prior to breakdown. Further, Hydro One argued that deferring planned replacement and refurbishment presents incremental system costs, as planned activities are less costly than simply replacing or refurbishing assets when they break.

In 2014, relative to other distributors in Ontario, Hydro One's average duration of outages (SAIDI) and average frequency of outages (SAIFI) for its distribution system were ranked worst and second-worst respectively among the 72 LDCs assessed, according to OEB scorecard data. The proportion of outages attributed to equipment failures has risen steadily. In response, Hydro One has placed an increased emphasis on renewal capital investments over the past several years. However despite increased investment, Hydro One's distribution system reliability did not improve from 2010 to 2014; the total number of power outages on Hydro One's distribution system increased by 11% over the period, with the most significant increase attributed to equipment failures.

In March 2015, Hydro One received OEB approval for a three year (2015-2017) custom cost of service application which included increased sustainment capital investment. Areas of focus included:

- stations component replacement and refurbishment to address station transformers and other components either approaching or beyond their expected service life;
- replacement of wood poles and line components that are either approaching or beyond expected service life; and
- replacement of a subset of wood poles showing signs of premature decay.

In its last distribution filing, Hydro One noted that that it would not be cost effective to improve its reliability ratings compared to other utilities and its customers would not want to pay the cost associated with the improvements. In its decision, the OEB stated it *"considers Hydro One's stance on its performance to be misplaced. Rather than argue that it would be too expensive to move up the ladder in comparison to those that are in the first, second and third quartile, Hydro One should be finding cost effective ways to improve its performance and provide evidence intended to convince the OEB that it has identified more appropriate benchmarks to which it can and will compare itself for continuous improvement tracking purposes."*

The Board goes on to opine regarding the ability to immediately impact system reliability, *"As previously noted, it is clear that the distribution system is in need of investment, and changes to system performance may not be immediately visible. Rather, system performance may erode without the investment."*

We will need to ensure that we have taken these directions by the OEB into account, or be very clear why we may have diverged from the direction in certain areas. We have concluded that a plan that further increases reliability risk is inappropriate and unlikely to be accepted by the OEB. We are also undertaking benchmarking studies to allow improved comparisons and thoroughly investigated options for productivity and efficiency improvements.

E. DESCRIPTION OF OPTIONS AND SCENARIOS

As discussed in this document, 5.1% of the 2018 rate increase is due to factors that cannot be impacted by Hydro One, and this is a "floor" on our ability to impact 2018 customer rates. This "floor" varies slightly across scenarios due to tax impacts.

Following further discussion related to customer rate impacts, Investment Management was directed to prepare a scenario that would limit 2018 customer rates and average rates for the five year period as much as possible while acknowledging various operational constraints. This was labelled as "Plan

C." Considering the unacceptable negative reliability and customer satisfaction outcomes over five years arising from Plan C, we then considered a range of more targeted options that trade off reliability impacts and impacts on rates. This is identified in this document as "Plan B Modified". Each scenario provides alternate outcomes and trade-offs between customer cost and preferences, company performance, and system risk over the 2018 to 2022 period, all of which the Executive Leadership Team will be considering as they arrive at a final recommendation. Bill impact amounts shown below are Distribution only (excludes Transmission) and have not been calculated as yet for Plan B – Modified.

Figure: 2018 Rate Impacts

	Plan A	Plan B	Plan B-Modified	Plan C
Average Annual Rate Increase (vs. 2017)	**3.7%**	**3.5%**	**3.4%**	**2.8%**
2022 – R1 Customer - Hydro One Rate (Dx) Impact (vs. 2017)	**$3.91**	**$3.42**	**TBD**	**$2.76**

As noted above, common to all three plans is a "fixed" rate increase for 2018 based on activities between 2014 and 2016 that cannot be practically influenced. After adding non-discretionary asset spend and taxation, the minimum rate increase for 2018 is approximately 5.1%, varying slightly between each scenario. These variances, and the effect on each plan, are further summarized in the waterfall charts below for Plan A and a modified Plan B, and can be explained as follows:

- *Load Impact*: As part of the design of the regulatory framework, a load forecast must be provided and the base year trued up for variances that, until then will have been borne by the utility (1.7%).
- *Regulatory deferral accounts* that have not been reflected in rates must be trued up according to OEB direction (1.0%).
- *Legacy Rate Base*: Hydro One has approximately $105M of additional work completed in 2015 above the prior revenue allowance that must be recovered in rates, referred to above as legacy rate base (0.5%).
- *Non-discretionary capital spending* that impacts the 2108 rate base include mandatory investments to connect load and generation customers, responding to storm damage and trouble calls, maintaining and enhancing the meter network, and sustaining operating infrastructure (0.5%).

As a result, in the 2018 rebasing year, between capital factors and OM&A, Hydro has approximately 2.4% of rate impact that can be adjusted to affect lower rates for customers. In all circumstances, Hydro One has built a plan where OM&A levels positively impacts rates by at least 0.4%, i.e., the contribution of productivity has reduced rates in excess of inflation, including productivity and cost reductions of approximately 2%.

Figure: 2018 Rate Impact of Plan A

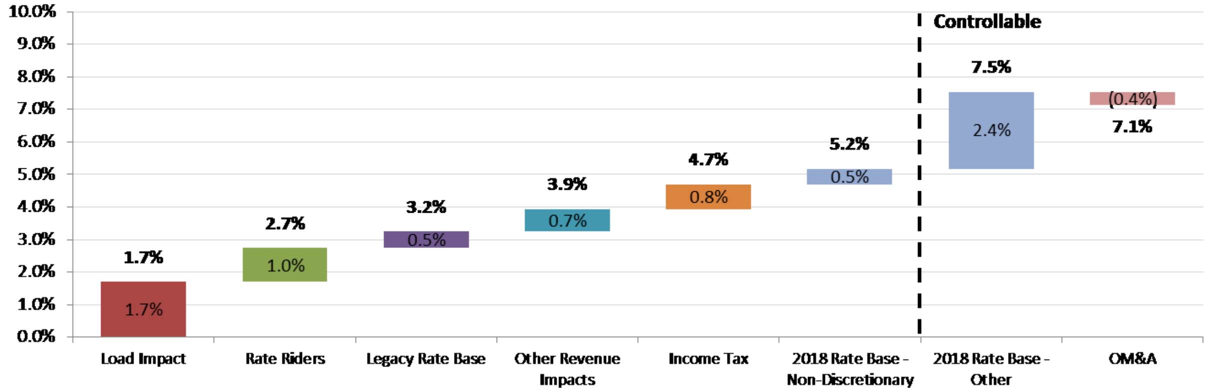

Figure: 2018 Rate Impact of Plan B - Modified

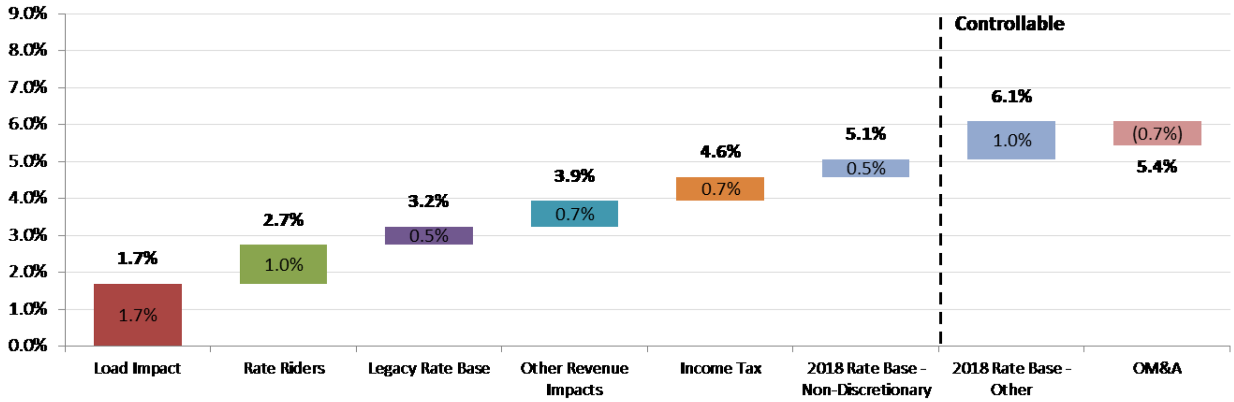
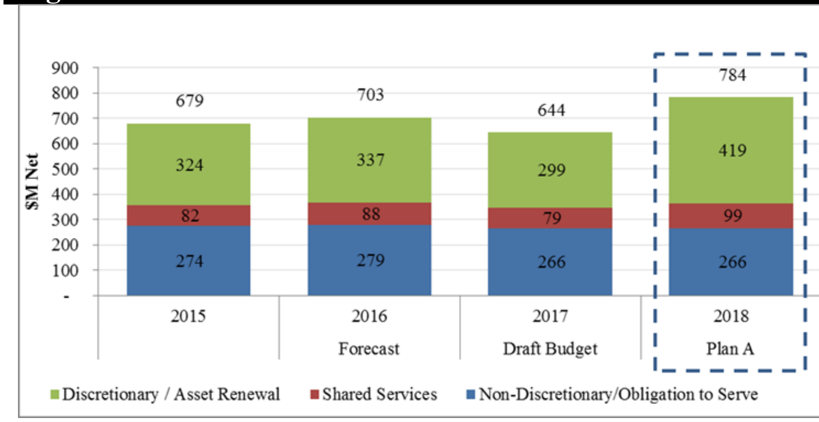


Summarised below is the capital profile of the primary scenarios and their outcomes. Capital categories include:

- Non-Discretionary: as defined above; not optional and cannot be eliminated or deferred.
- Shared Services: investments to sustain common support infrastructure.
- Discretionary/Asset Renewal: investments to enhance technology platforms and the pacing of asset replacements/refurbishments, including poles and stations.

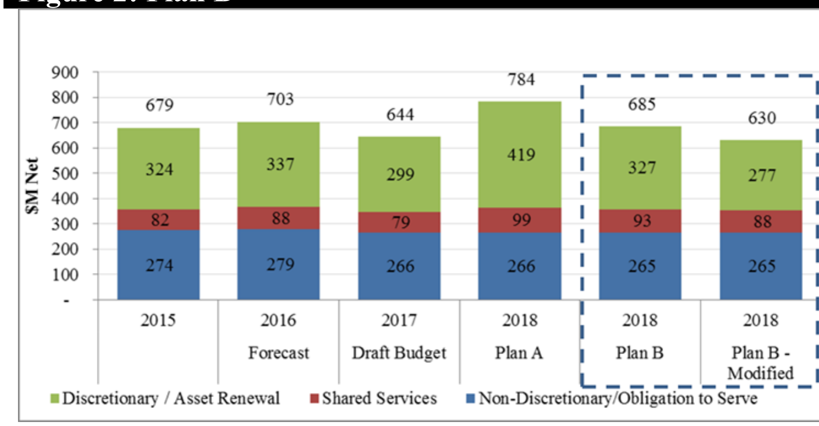
Figure 1: Plan A



Average annual spend (2019-2022): $798M

- Designed to meet business objectives
- Customer Service IT investments implemented
- 2018 Rate Increase **7.1%**
- Avg. annual rate increase **3.8%**
- Reliability: SAIDI improves by ~6%, SAIFI by 4%, by 2022*

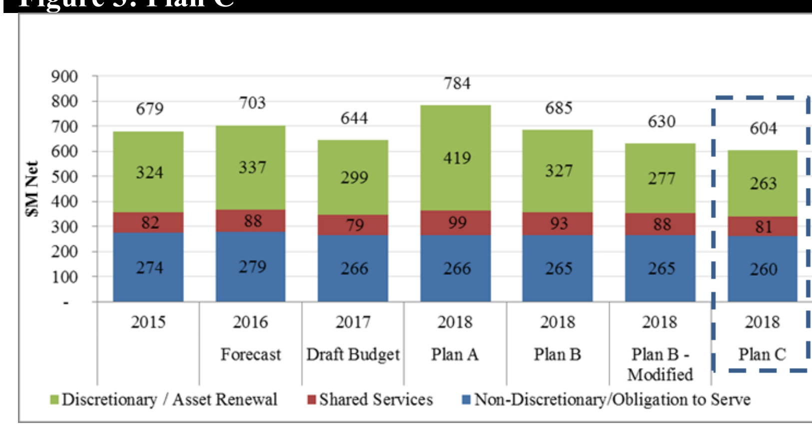
Figure 2: Plan B



Average annual spend (2019-2022): $798M $747M

- Business objectives largely achievable, but effect on reliability and related customer impacts may partly impair some objectives
- 2018 rate increase **6.2%**
- Avg. annual rate increase **3.5%**
- Lower reliability than Plan A
- Reliability: SAIDI improves by ~3%, SAIFI by 2%, by 2022*

Figure 3: Plan C



Average annual spend (2019-2022): $798M $747M $642M

- High risk of missing business objectives due to a large increase in reliability risk
- 2018 rate increase **5.1%**
- Avg. annual rate increase **2.9%**
- Reliability: SAIDI & SAIFI degrades ~2% by 2022*
- Decreased value for money as unplanned corrective work increases

* Reliability impacts modelled using relative investment impacts for vegetation management, pole replacement and distribution stations

F. KEY INVESTMENT IMPACTS

The customer engagement process, produced the following key findings that are more supportive of a lower rather than higher investment plan:

- *Keeping costs as low as possible is customers' top priority*. This preference is influenced by a desire to see HONI Dx demonstrate greater fiscal management and operational efficiency before considering rate increases. Many customers believe that total electricity costs are approaching being unaffordable.

- *Maintaining reliable electricity service is consistently second priority to cost*. Power quality events and unplanned momentary power interruptions of less than one minute, rather than sustained interruptions of one minute or more, is the primary concern. Some customers have capacity challenges and want more access to power in order to grow their enterprises. Customer service improvements are not something for which customers are willing to pay higher rates.

- *Large customers are more concerned with the reliability of service* they currently receive than residential and small business customers. However, although this group of customers is more inclined to value better reliability, they are not willing to entertain the corresponding rate impact.

- *All large customer segments prioritize the renewal program that focuses on replacing equipment that affects reliability* ahead of other options for improving reliability. Other options include: tree-trimming, using technology to reduce the chances of losing power, strengthening the grid to better withstand severe weather, better detection of outages and/or remotely responding to outages.

- *Willingness to accept a rate increase to maintain and improve service level is limited*. The majority of residential and small business customers are unwilling to accept higher rate impacts for better reliability; large customers generally accept that investments are needed; however they expect HONI Dx to exhaust all operational efficiencies before raising rates. At present, there is limited acceptance of any of the illustrative rate impact scenarios, even to maintain the current levels of reliability and service.

It is worth noting that when Residential & Small Business customers were informed that to maintain reliability and customer service, a typical customer's monthly bill would need to increase by about 1% ($2.00), about half of Residential and Seasonal customers were willing to accept it.

Customer feedback was incorporated into the planning process through the development of a number of key initiatives, including:

- A *restructured vegetation management plan* that will provide best in class vegetation management to circuits that distribute large volumes of power to support regional industries, large distribution customers and large quantities of Hydro One's residential customer base. A strategic maintenance program will provide a targeted, risk-based vegetation management treatment to circuits of lower criticality. This is expected to result in improved reliability without an increase in program spending.

- *Improvements to address industrial customer power quality* and reliability outliers.

- A *worst performing distribution line modernization initiative* which will deploy enhanced communication and automation capability to select distribution lines to improve reliability by reducing outage duration.

Hydro One is sensitive to the impact that its plans have on customer rates; in developing potential investment plans, Hydro One sought to strike a balance between three sometimes opposing factors: (i) the needs and preferences of its customers; (ii) the condition and reliability of the electrical system; and (iii) the effect on customer rates.

Reliability impacts and differences in capital spending for all scenarios were modelled using the effect of relative investment impacts for (i) vegetation management; (ii) pole replacement; and (iii) distribution stations. Although reliability can be affected by other factors, these three areas contribute the lion's share of reliability impacts and investment, and represent the most significant drivers of both customer rates and reliability. Understanding the impacts of each option on these key areas is important to understanding the relative trade-offs that must be made to affect rate impacts.

Following is a graphical analysis of the primary sources and impact of reliability on the Distribution system:

NB: SAIDI (duration) and SAIFI (frequency) impacts are calculated on a high level estimate basis, using simplified assumptions and are approximate.

Table: SAIDI Projection

Avg. 2013-15 SAIDI*:	**7.3 hours**	Average Number of Hours that a Customer is Interrupted				
	Assumptions			**Forecasted Impact[1]**		
	Failure Rate/Impact	**Contribution to SAIDI**	**SAIDI Contribution** (based on 2013-15)	**Plan A**	**Plan B**	**Plan C**
Poles	• 345 outages/year • 180 customers/outage • 10 hours/outage	3%	0.2	20%	15%	(15)%
Stations	• 16 failures (outages) /year • 1200 customers/outage • 24 hours/outage	4%	0.2	14%	5%	(4)%
Other Line Components	• 2070 outages/year • 180 customers/outage • 4 hours/outage	23%	1.5	10%	0%	(10)%
Vegetation	• 15,530 outages/year	27%	1.8	8%	8%	4%

Vegetation management levels have not been materially adjusted in scenarios considered, except for minor changes in Plan C and no changes were made in all scenarios to investments in high priority rights of way. We consider vegetation management spending to be at appropriate levels and the strategy for 2016 onwards has been to maintain consistent spending and to drive tactical plans designed to over-achieve on units via productivity and take a more analytic approach to location of work in order to leverage reliability impacts. Reducing vegetation spend will result in deterioration in cycle that cannot be sustained, and it has a significant effect on reliability improvements.

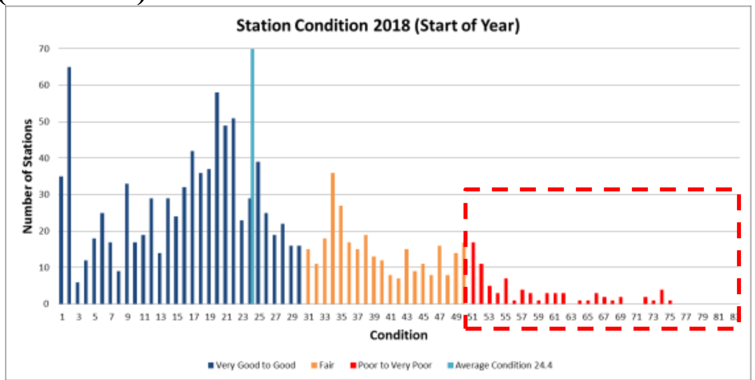
We currently maintain 112,000 km rights of way that generate approximately 15,530 outages per annum due to tree contact. These outages contribute 27% to SAIDI and 16% to SAIFI. All scenarios include consistent spending on high priority rights of way, with targets to eliminate the backlog of off-cycle rights of way by 2022 (9% decrease of SAIDI, 9% of SAIFI).

For Plans A and B, medium or low-priority rights of way maintenance is reduced by 1,000 km/yr, increasing backlog by 8-10%, increasing both SAIDI and SAIFI by 1%, but significantly offset by the 9% improvements in high priority rights of way. Plan C would take another 1,000km/yr out of the plan, increasing outages by 2% and reducing reliability by 5%.

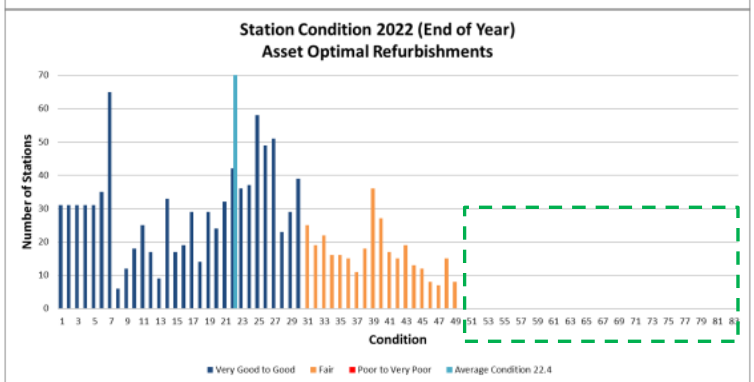
Distribution Stations: The leading contributor to outage frequency and second leading contributor to outage duration is defective equipment, which can be directly influenced by proactive asset replacements. The figures below show the projected impact of alternate replacement rates and the resulting "stations in poor condition surplus/deficit" at the end of the planning period. From Plans A through Plan C, the "backlog" of assets requiring replacement are identified through the growing red sections to the right of the individual graphs under the various plans/scenarios. Based on this, we can, and have, modelled the effects on reliability noted above.

Stations (Condition)

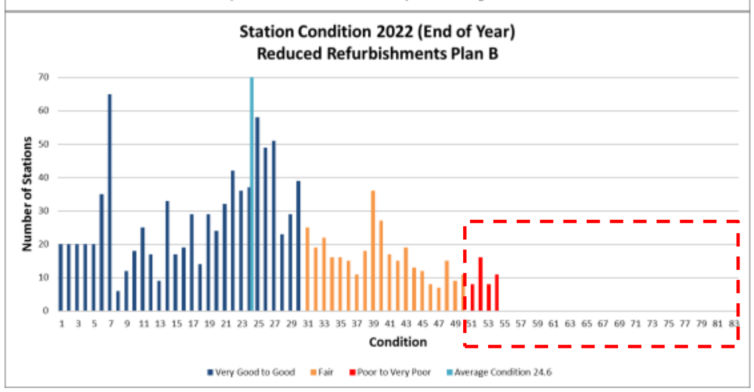
Current State



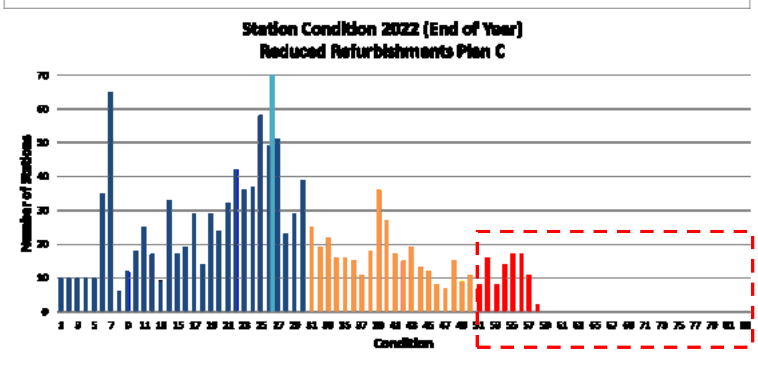
Plan A



Plan B



Plan C



We operate 1,005 stations, of which 70 are in poor condition. Currently, an average of 16 stations per year require an outage (23% of those in poor condition). A station outage, on average, affects 1,200 customers for 24 hours and contributes 4% to SAIDI and 3% to SAIFI. Because of the distributed nature of these stations, a failure has consequent impacts, for example failures often require redirecting a mobile station from a planned replacement underway and increasing our cost.

Also, a station failure will affect an entire community that has major impacts if they occur in cold conditions in Northern Ontario.

- Plan A: Replaces all stations deemed to be in poor condition (70) by the end of the horizon (2022). SAIDI and SAIFI improvement of ~14%.
- Plan B: Reduces the number of stations in poor condition to ~40 by the end of the horizon. SAIDI and SAIFI improvement of ~5%.
- Plan C: Increases the number of stations in poor condition to 90 by the end of the horizon. SAIDI and SAIFI degrade of ~4%.

Wood Poles: We manage a population of 1.6 million poles, of which 103,000 are in poor condition and need to be addressed. Failures average 345 outages annually, impacting an average of 185 customers for 10 hours, and contributes 3% to SAIDI and 2% to SAFI. In addition, as pole failures generally occur in the public domain (i.e. not in a Hydro One enclosed area), they also represent a public health and safety risk.

- Plan A: Reduces the number of poles in poor condition to 80,000 by the end of the planning horizon (2022). Reduces forced outages by ~20% or down to ~275 instances per year. Both SAIDI and SAIFI impacts from wood poles improve by 20%.
- Plan B: Reduces the number of poles in poor condition to 84,000 by the end of the horizon. Reduces forced outages by ~15% or down to ~290 instance per year, improving reliability impacts from wood poles by 15%.
- Plan C: Poles in poor condition will increase to 114,000 at the end of the horizon. Increases forced outages by 15% or up to ~395 instances per year, decreasing reliability due to wood poles by 15%.

G. OTHER ALTERNATIVES FOR RATE MITIGATION

Taking each of the above factors into account, and the outcomes of each plan in its entirety, there are some other options that can modify each of the plans as discussed below, and which have positive rate impacts but can only be withstood for limited durations (1 year) on the system. Of the options outlined below, we have included the first two measures in the "Plan B modified" scenario. The remainder were considered impractical to implement.

Potential Measure	**Potential 2018 Relief**	**Feasibility / Impacts**
Reduce 2018 Capital by up to $55 million	0.8% compared to Plan B	• Capital spending for 2018 reduced by $55 million, and then ramped back up to Plan B levels for the remaining 4 years • An assessment of in-service additions is underway to determine if there is any further ability to mitigate the 2018 rate increase. • The reduction of $55 million is subject to change, and we may be able to defer some of the spending or in service into 2019, increasing 2019 rates, but with a positive effect on 2018. To be finalized by December. • Can be accomplished without undue cost/unit impacts within the expected labour availability mix

		• Reduces IT spending by $5 million; to avoid reductions in customer investments, this must be sourced from cancellation of lower value projects or improved capital productivity • The wood pole program would be reduced by $25M or 3,100 poles in 2018. • Stations would be reduced by $4M (2 stations). • Component and Reinforcement activities would be reduced by $15M. Hydro One would have to carefully manage feeders with Large Customers to deliver the requested level of reliability communicated through the customer consultation feedback. • Facilities and Vehicle investments would be reduced by $6M combined.
OM&A - Corporate Common	0.25% compared to Plan B	• Reduce Corporate Common/Overhead budgets by executing on lower impact cost reductions and shared services efficiencies ($15million) • OM&A impact on distribution rates likely to be only 25% of total impact as a result of common cost allocation model - $3.5M impact • Represents an aggressive reduction to sustainable run rate levels of corporate common costs
Rate Smoothing	1-3%	• Places upwards pressure on future year rate increases. • Previous rate smoothing measures have been opposed by intervenors and not supported by the OEB, on the basis of intergenerational inequity, adds interest and carrying costs, masks the actual increase in any one year, and limited evidence that customers want to pay additional costs to achieve rate smoothing.
Reduce 2018 OM&A by upwards of $30M	Up to 2%	• Reduce total 2018 OM&A to 2015 levels (work program). • Total OM&A reduction over the planning period: $132M (2018-22), which would materially impact work programs and related reliability impacts. Not considered practical to achieve; our focus has been on efficiency, not reductions in work in order to achieve reliability improvements at the lowest cost possible.

H. **PRODUCTIVITY AND COST REDUCTION**

Guided by the new Executive Leadership Team, following work completed earlier this year, and building on existing initiatives, we have included efficiencies into work program costs. These are specific, material, and reflect our customers' reasonable desire to know that we have found all possible efficiencies before increasing their rates. Forecasted efficiencies were added to the plans <u>after</u> the optimisation process to ensure that those savings materialize and are not absorbed into additional units of work. Savings are realized in both the capital and OM&A work programs as follows:

$M	2018	2019	2020	2021	2022
Capital	**24.5**	**25.8**	**29.8**	**30.9**	**31.5**
OM&A	**32.1**	**37.3**	**38.8**	**40.3**	**43.1**
Total	**56.7**	**63.1**	**68.6**	**71.2**	**74.5**

The productivity and cost reductions totals shown above equate to an approximate 2% impact on Hydro One Distribution rates.

Significant productivity initiatives included in work programs include:

- *Move to Mobile($10M Capital, $3M OM&A):* To increase field workforce efficiencies through the utilization of new mobile application technology to manage inventory, document & field work order management and enable onsite decision making
- *Vegetation Management($10M OM&A):* To incorporate savings from various initiatives (e.g., use of hiring hall workers to complete low-skilled brush control activities)
- *Cable Locates ($8M OM&A):* Outsourcing extension
- *Procurement* To achieve cost reduction by bundling multiple contracts with a single supplier and negotiating volume discounts across multiple categories and contracts; maximize competitive pressure through multiple feedback rounds; installation of catalogue buying via new SAP tools and enforcement of compliance with procurement contracts
- *Standardization of Spend and Specifications:* To enable direct, like-for-like comparisons across bidders, reducing procurement costs and inventory requirements

Certain productivity initiatives are in process or have yielded savings and are included in OM&A efficiencies:

- *3rd Party Contractor Rate Reduction:* Rate reduced by 20-30% effective 2017
- *Backup and Storage Optimisation:* Reduce SAP storage costs by 75% without a material change in risk profile; Hydro One's monthly storage requirement decreased by 50%
- *Infrastructure and Database Decommissioning:* Decommissioned 138 serves and 38 databases that had very little or no utilization and reduced monthly server and database fees; plans for additional decommissioning in 2017

I. CUSTOMER BILL IMPACTS

The effects of investment plans on customer bills are very different depending on the class of customer. We have considered both the effect that our rate changes will have, and the estimated effect that other contributors to the bill may have based on recent industry activity and rate filings in process. This is the effect on the total bill, which for our R1 customers, could be as much as 6-7% on average over the five year term. In Plan B. our share of that increase, for distribution, is approximately $2.23 per month, or 1.2% over the 5-year period. The difference between Plan A and Plan C, for distribution, would be approximately $0.60 per month. Further details regarding the total bill impact, including Transmission, is reflected in the appendices.

Table: Plan B Customer Bill Impacts

Plan B	2017E	2018E	2019E	2020E	2021E	2022E	Avg
R1 Customer - 750 kWh							
Forecasted Total Bill ($)	**$165.11**	**$176.47**	**$187.07**	**$198.42**	**$210.15**	**$222.89**	**$199.00**

J. FINANCIAL OUTCOMES

The financial forecasts related to the recommended investment plan will be presented to the Board in December. We have assessed the financial result of each of the scenarios, for earnings and cash flow impacts and balance sheet strength and flexibility. Financial viability and the effect of investment planning on shareholder outcomes must be considered in the process. Our conclusion is that the financial outcomes of all scenarios are not sufficiently different to weigh heavily in arriving at the optimum investment plan. For example, Earnings per Share between Plan A and Plan C vary by about 2%, and Debt to Rate Base is in a narrow band of 63-64% for all three scenarios. FFO/Debt improves for Plan A, due to lower capital expenditures, but is within "A" debt rating margins for all scenarios.

Capital expenditures over the five year period differ between scenario A and C by approximately $800 million. Although a significant amount in total, it is still a relatively small proportion of the total rate base and debt outstanding, and therefore has a relatively immaterial impact on the earnings and cash flow outcomes for shareholders.

We have therefore concluded that shareholders would be relatively indifferent between all scenarios currently being considered by management.

K. EARNINGS SHARING MECHANISM

The table below illustrates how an earning sharing mechanism would work with a 100 basis point threshold. To illustrate potential returns to customers, the table assumes certain levels of "overearnings" in each year, that are above the estimated "Plan A" ROE.

As outlined, in 2019 approximately $30 million in additional net income is the point at which the ESM begins to return monies to customers. This level of incremental net income, considering potential weather and cost savings impacts, is not out of the question, and as such we consider the current construct we are considering of a 50/50 sharing of savings over 100bps in excess of ROE to be reasonable.

We have considered whether it makes sense to increase the extent of the earnings sharing, and have concluded that there is limited benefit. First, the current structure, including the 100 bps threshold, is familiar to and has been previously accepted by the OEB. Secondly, the OEB generally views ESM to be a mechanism that, consistent with the RRFE framework, aligns the interests of customers with those of the utility. It is important to understand that any amounts to be shared with customers pursuant to the ESM will only reduce future rates beginning in 2023, in the next rate setting period. However, the OEB is unlikely to view a more "generous" ESM to be an appropriate offset to unfavourable rate increases. Instead, Hydro One remains focused on productivity and cost efficiencies to help keep rates down.

Management is still considering available options for including an ESM in the Distribution application next year.

Draft Earnings Sharing Calculation
Hydro One Networks Inc - Distribution

	2018	2019	2020	2021	2022	
Deemed Approval from OEB

SUMMARY OF EXPENDITURES & IMPACTS

For information, following is a summary of top line outcomes related to the three principal scenarios outlined in this memorandum. To reduce complexity, we have not included the Plan B – Modified scenario.

In conclusion, we believe that we have a path to achieving an optimal plan that will balance the expressed needs and preferences of our customers, system reliability and customer rate impacts. We should also be able to minimise the effect of our plan on the 2018 rates, and still maintain either consistent or slightly improved reliability. We look forward to discussing our final plan with the Board of Directors in December.

Plan A	2017	2018	2019	2020	2021	2022	Avg
Capex ($M Net)	$ 644	$ 784	$ 819	$ 750	$ 760	$ 864	$ 770

Glossary

Vegetation Management  *Wallace Tap	Hydro one has an active demand vegetation management program that addresses emergent and urgent safety/reliability risks identified by our customers and through internal asset inspections. Hydro One performs tree clearing and brushing on its 112,000 km of distribution rights of way. As per the last OEB rate filing, all M-Class feeders need to be cleared every 8 years, 94% of our Transmission feeders (M-Class) are less than 8 years since the last vegetation management treatment. From 2013-2015 tree contacts accounted for 16% of the System Average Interruption Frequency Index and 27% of the System Average Interruption Duration Index.
Wood Pole Replacement 	The main purpose of the pole replacement program is to prevent failures from happening. Pole failures can lead to long power interruptions for our customers and can cause a potential public safety hazard. Hydro One owns 1.6 Million distribution poles, and there are an additional 350,000 poles supported by our joint use partner owned poles. These poles support approximately 120,000 km of distribution lines and equipment. The current average age of a pole is 39 years old on the Hydro One network.
Distribution Station Refurbishment  *Cobden DS	Hydro One has 1005 Distribution Stations. Distribution Stations are comprised of transformers, breakers, structures, reclosers, switches, fuses, fences, grounding, yards and access roads. When multiple assets at a DS are in need of replacement they are bundled into station refurbishment projects. In 2015, 28 distribution station refurbishments were completed and started to include elements of grid modernization.

Hydro One Limited/ Hydro One Inc.
Submission to the Board of Directors

Date: November 11, 2016

Re: Financial Forecasts

Hydro One has prepared a number of different alternatives relative to its Distribution rate filing. The final financial forecasts related to the investment plan will be presented to the Board in December. As information, attached are analyses that supported the conclusion that financial outcomes are not sufficiently material to weigh heavily in selecting the investment plan for the Company. For example, Earnings per Share between Plan A and Plan C vary by about 2%, and Debt to Rate Base is in a narrow band of 63-64% for all three scenarios.

Capital expenditures in absolute terms differ significantly between scenarios, with a difference in the five year period between scenario A and C of approximately $800 million. Although a significant amount, it is a relatively small proportion of the total rate base and total debt outstanding, and therefore has a relatively immaterial impact on the outcome.

We have therefore concluded that shareholders would be relatively indifferent between all scenarios currently being considered by management.

Earnings per share	$ 1.20	$ 1.29	$ 1.36	$ 1.43	$ 1.51	
ROE, Before "equity bump"	9.8%	10.3%	10.5%	10.6%	10.8%	
Funds from Operations	$ 1,648	$ 1,763	$ 1,819	$ 1,908	$ 1,995	
FFO / Debt	13.3%	13.6%	13.4%	13.3%	13.1%	
Capital Expenditures	$ 1,656	$ 1,865	$ 1,904	$ 2,099	$ 2,183	
In-service Additions	$ 1,891	$ 1,697	$ 1,988	$ 1,850	$ 2,318	
Rate Base	$19,720	$20,744	$21,761	$22,828	$24,020	4.0%
Total Debt to Rate Base	62.6%	62.5%	62.6%	63.0%	63.2%	
Distribution Tariff rate increase	5.0%	2.9%	1.9%	2.2%	2.3%	
Distribution Bill Impact (R1 customer)	1.7%	1.0%	0.7%	0.8%	0.8%	

EARNINGS SHARING MECHANISM – Illustrative Example

The table below illustrates how an earning sharing mechanism would work with a 100 basis point threshold. To illustrate potential returns to customers, the table assumes certain levels of "overearnings" in each year, that are above the estimated "Plan A" ROE.

As outlined, in 2019 approximately $33 million in additional net income is the point at which the ESM begins to return monies to customers. This level of incremental net income, considering potential weather and cost savings impacts, is not out of the question, and as such we consider the current construct we are considering of a 50/50 sharing of savings over 100bps in excess of ROE to be reasonable.

We have considered whether it makes sense to increase the extent of the earnings sharing, and have concluded that there is limited benefit. First, the current structure, including the 100 bps threshold, is familiar to and has been previously accepted by the OEB. Second, the OEB generally views ESM to be a mechanism that, consistent with the RRFE framework, aligns the interests of customers with those of the utility. It is important to understand that amounts to be shared with customers pursuant to the ESM will reduce future rates beginning in 2023. However, the OEB is unlikely to view a more "generous" ESM to be an appropriate offset to unfavourable rate increases. Instead, Hydro One remains focused on productivity and cost efficiencies to help keep rates down.

Management is still considering available options for including an ESM in the Distribution application next year.

Draft Earnings Sharing Calculation
Hydro One Networks Inc - Distribution

	2018	2019	2020	2021	2022	
Deemed Approval from OEB						
Estimated Distribution Rate Base	$ 7,741	$ 8,207	$ 8,683	$ 9,290	$ 9,709	
Deemed Equity (%)	40%	40%	40%	40%	40%	
Deemed Equity ($)	$ 3,097	$ 3,283	$ 3,473	$ 3,716	$ 3,883	A
Allowed return on equity (%)	8.77%	8.77%	8.77%	8.77%	8.77%	B
Allowed return on equity ($)	$ 272	$ 288	$ 305	$ 326	$ 341	C = A x B
Earnings Sharing Analysis						
Revenues						
Filed OM&A in revenue requirement	$ 587	$ 596	$ 605	$ 614	$ 623	D
Costs						
Forecast OM&A in costs	$ 587	$ 587	$ 587	$ 587	$ 587	E
Additional Savings		$ (30)	$ (33)	$ (36)	$ (40)	F
Earnings before tax	$ -	$ 39	$ 51	$ 63	$ 76	G = D - E - F
Earnings after tax	$ -	$ 32	$ 41	$ 52	$ 62	H
Forecasted return on equity ($)	$ 272	$ 320	$ 346	$ 377	$ 403	I = C + H
Forecasted return on equity (%)	8.77%	9.74%	9.96%	10.16%	10.37%	J = I / A
Allowed return on equity (%)	8.77%	8.77%	8.77%	8.77%	8.77%	B
Change from Allowed ROE	**0.00%**	**0.97%**	**1.19%**	**1.39%**	**1.60%**	K = J - B
Earnings Sharing Threshold	1.00%	1.00%	1.00%	1.00%	1.00%	L
Earnings in excess of threshold (%)	0.00%	0.00%	0.19%	0.39%	0.60%	M = L - K

Refund to rate payers in 2023 ($)	**$ -**	**$ -**	**$ 3**	**$ 7**	**$ 12**	

Hydro One Limited/ Hydro One Inc.

Submission to the Board of Directors

Date: February 10, 2017

Re: Distribution Filing

On March 31, 2017, Hydro One Networks Distribution plans to file an application with the Ontario Energy Board ("OEB") seeking the OEB's approval of a Custom Incentive Rate regime for 2018 to 2022 Distribution Rates. The attached submission, for information, sets out the form of the Distribution application, and outlines its key components.

As context, we are aware that the planned Application will be filed when there are a number of discussions occurring at a policy level between the Government of Ontario and members of the Ontario electricity industry. These discussions relate to the potential mitigation of customer bills. This discussion is far reaching, and includes reducing the amount of the Global Adjustment that is recovered in the electricity commodity prices administered by the Ontario Energy Board, and also discussions relating to delivery rates.

Hydro One does not expect these discussions to have a material effect on the derivation of Hydro One Distribution's revenue requirement and the proposed Custom Incentive Rate regime is designed to flexibly accommodate potential changes to cost allocation and rate design that would drive delivery rate mitigation for certain rate classes.

The customer rate impacts presented in this submission and prior Board submissions represent the continuation of the status quo. Should delivery rate and commodity price relief be implemented by the Government, estimated rate impacts emanating from the planned Application would likely increase, both as a percentage change in delivery rate and on a total bill basis. There would also be public notice by the OEB of our request for rate increases at the same time that the Province is announcing price decreases, which we may need to address in media communications.

Yours sincerely,

Michael H. Vels
Chief Financial Officer

Vice President-Regulatory Affairs

Hydro One Limited / Hydro One Inc.
Submission to the Board of Directors

Date: February 10, 2017

Re: Distribution Filing

This memorandum outlines the form and key components of the Company's upcoming Distribution rate application. The application is consistent with the business plan that was approved by the Board in December 2016, except as otherwise noted.

A. Form of Application – Custom Incentive Rate-Setting Mechanism

In Ontario, the OEB is required by its governing statute to give rate-regulated utilities the opportunity to recover their reasonably incurred costs of providing utility service. The OEB Act gives the regulator wide latitude in the tools that it uses to fulfill this requirement, allowing it to use "any method or device" to set utility rates.

The OEB's *Renewed Regulatory Framework for Electricity Distributors: A Performance-Based Approach* (RRFE) was issued in October 2012 and provides three rate-setting options pursuant to which a distributor may apply for rates:

- 4th Generation Incentive Rate-Setting (also referred to as Price Cap IR);
- Custom Incentive Rate-Setting (Custom IR); and
- Annual Incentive Rate-Setting Index (Annual IR Index).

In October 2016, the OEB completed its review of the RRFE and released its *Handbook for Utility Rate Applications* ("Handbook"). In the Handbook, the OEB outlines the key principles and expectations that it will apply when reviewing applications for rates and also indicates that the rate-setting policy would be applied to all rate-regulated utilities going forward, not only electricity distributors. In addition, the OEB determined that going forward the policy would be referred to as the Renewed Regulatory Framework (RRF).

Hydro One Distribution previously applied for distribution rates using a Custom Incentive Rate-Setting approach and filed a "custom cost of service" application with the OEB for electricity distribution rates and other charges for five years effective 2015 to 2019. In its decision, the OEB found that the rate-setting approach set out in the application did not meet the intent of the RRF. The OEB approved distribution rates for the 2015 to 2017 period, inclusively.

The OEB expects that Hydro One Distribution's application for 2018 to 2022 rates will fully comply with the RRF. Regulatory Affairs analysed the Price Cap IR and Index IR, as described, to determine whether these available rate-setting options could be used for the purpose of the 2018 to 2022 Distribution application. We concluded that these two rate-setting approaches would not result in sufficient rates revenue to address the expected growth in Hydro One Distribution's costs over the rate-setting period, largely arising from the need for significant investments in power system infrastructure.

Renewed Regulatory Framework

The OEB's RRF intends to provide alignment between a sustainable, financially viable electricity sector with customers' expectations for reliable service at a reasonable price. The OEB believes that emphasizing outcomes, as opposed to activities, will result in better responsiveness to customer preferences, enhance distributor productivity, and promote innovation.

The RRF is focused on driving four performance outcomes:

1. Customer Focus: services are provided in a manner that responds to identified customer preferences;
2. Operational Effectiveness: continuous improvement in productivity and cost performance is achieved. Utilities deliver on system reliability and quality objectives;
3. Public Policy Responsiveness: Utilities deliver on obligations mandated by government; and
4. Financial Performance: Financial viability is maintained and savings from operational effectiveness are sustainable.

The RRF performance outcomes are to be achieved by three regulatory approaches:

- Three incentive-based rate setting options, as noted above, designed to incent continuous productivity improvement;
- Five-year asset plans to support all rate applications; and
- Performance measurement.

The Handbook stipulates that a comprehensive rate application has three main components:

- **Business Plan** – including the overall strategy for the regulated business, utility goals, how the goals relate to what is sought in the application and the plan to meet them. The business plan should be supported by system plans, capital and operating plans, benchmarking, external reviews and customer engagement activities;

- **Historical and Forecast Information** – historical information (2013 to 2016, inclusively for capital and 2014 to 2016, inclusively for OM&A), a bridge-year (forecast 2017), and information relating to the five prospective test years (2018 to 2022 for capital and 2018 only for OM&A), the purpose of which is to demonstrate the continuity of the utility over time and allow a thorough review of proposed rates; and

- **Rate Models** – as crafted by the OEB for use as one of the tools to enhance the efficiency, consistency and accuracy of the review process.

Hydro One Distribution's primary challenge in this application is to establish that the proposed 2018 to 2022 distribution rates profile:

- Appropriately balances or aligns three competing but equally important factors: (i) customer needs and preferences; (ii) responsible stewardship of the company's distribution system; and (iii) customer rates;

- Reflects objectively demonstrated, measurable and sustainable continuous improvements; and

- Reflects costs that result in outcomes that customers value.

B. 2018 to 2022 Custom Incentive Rate-Setting (Custom IR): Key Elements

Hydro One Distribution intends to file a 5-year Custom Incentive Rate-Setting application that features the following key "custom" features:

- A rebasing of rates in 2018;
- Annual adjustments for inflation and productivity in 2019 through 2022;
- Integration, for rate setting purposes, of Norfolk, Haldimand and Woodstock, (the "Acquired Utilities") in 2021, along with the introduction of new rate classes;
- Midterm adjustments of the ROE and Load Forecast in 2021, coincident with the integration of the Acquired Utilities; and
- A capital factor to allow for the added revenue requirement required to recover rate base growth over the rate-setting period.

<u>Financial Metrics - Hydro One Distribution Application</u>

Hydro One Distribution's application will reflect the Distribution Investment Plan for the five year period 2018 to 2022 as described the Distribution Business Plan 2017 to 2022 that was approved by the Board on December 2, 2016. The financial metrics set out below are different from the approved Business Plan only as they relate to the treatment of the Acquired Utilities, which does not impact estimated increases in rates or estimated total bill impacts.

Table 1. Financial Metrics 2018 to 2022 Hydro One Distribution Application

Distribution Revenue Requirement	2017	2018	2019	2020	2021	2022
	OEB Approved					
Capital Expenditures	$ 661	$ 634	$ 757	$ 719	$ 741	$ 827
In-Service Additions	$ 696	$ 641	$ 776	$ 768	$ 734	$ 815
Rate Base	**$ 7,190**	**$ 7,672**	**$ 8,049**	**$ 8,477**	**$ 9,035**	**$ 9,435**
OM&A	$ 593	$ 592	$ 600	$ 607	$ 626	$ 634
Depreciation	$ 390	$ 394	$ 414	$ 429	$ 448	$ 465
Return on Debt	$ 183	$ 191	$ 200	$ 211	$ 225	$ 235
Return on Equity	$ 253	$ 269	$ 283	$ 298	$ 317	$ 331
Income Tax	$ 49	$ 58	$ 61	$ 63	$ 69	$ 70
Revenue Requirement	**$ 1,468**	**$ 1,505**	**$ 1,558**	**$ 1,607**	**$ 1,685**	**$ 1,735**
Rate Riders	$ 11	$ 23	$ 23	$ 23	$ 23	$ 23
Other revenue impacts	$ (53)	$ (49)	$ (49)	$ (49)	$ (50)	$ (50)
Rates Revenue Requirement	**$ 1,426**	**$ 1,479**	**$ 1,532**	**$ 1,581**	**$ 1,658**	**$ 1,707**
Rate Increase Required, excluding Load		**3.7%**	**3.6%**	**3.2%**	**4.9%**	**3.0%**
Estimated Load Impact		2.0%	-0.2%	-0.7%	-2.5%	-0.6%
Rate Increase Required		**5.7%**	**3.4%**	**2.5%**	**2.4%**	**2.4%**
Estimated Total Bill Impact (R1 customer - 30%)		**1.7%**	**1.0%**	**0.7%**	**0.7%**	**0.7%**

The drivers of the proposed distribution rate increases over the 2018 to 2022 period are set out in Table 2. The average rate increase over the 5-year period is 3.3%. As discussed in November 2016, approximately 5.1% or 90% of the rate increase in 2018 is attributable to factors that cannot be controlled at this time by Hydro One. Proposed increases in rates in 2019 through 2022 are driven by planned capital additions in each year, consistent with the Distribution Business Plan approved by the Board in December 2016.

Table 2. Drivers of Proposed Distribution Rates Increases 2018 to 2022

Distribution Rate Drivers	**2018**	**2019**	**2020**	**2021**	**2022**
OM&A	-0.1%	0.5%	0.5%	1.2%	0.5%
Rate Base & Depreciation	2.0%	2.9%	2.6%	3.3%	2.5%
Income Taxes	0.7%	0.2%	0.1%	0.4%	0.1%
Rate Riders	0.8%	0.0%	0.0%	0.0%	0.0%
Estimated Load Impact	2.0%	-0.2%	-0.7%	-2.5%	-0.6%
External Revenues - Other	0.3%	0.0%	0.0%	-0.1%	0.0%
Total	5.7%	3.4%	2.5%	2.4%	2.4%

The estimated total bill impacts noted above do not yet reflect the final 2018 to 2022 load forecast, which will be reflected in the actual pre-filed evidence. In addition, there are several updates that must be made that may have further, unavoidable implications for the bill impacts. The update of this evidence, currently planned for early June 2017 includes:

- Integration of actual 2016 year-end financial data, including deferral and variance account balances that inform the calculation of Rate Riders; and
- Receipt of a new actuarial valuation report, that could reduce the total cash pension cost by approximately $25 million to $85 million from $110 million currently (Hydro One Distribution and Transmission).

<u>Key Messages and Themes</u>

The planned application for distribution rates is consistent with the corporate vision, values and strategy for the regulated business set out in Hydro One's Distribution Business Plan; it illustrates how the company's business objectives and values align with the OEB's RRF, and also associates business objectives with the choices inherent in the Distribution System Plan.

In particular, the application includes the following key messages:

- Hydro One's new commercial orientation means that the company is customer focused, drives company-wide efficiency and productivity, and demonstrates corporate accountability for performance outcomes;

- Hydro One's executive leadership and Board of Directors are committed to building a strong performance management culture and the ability to measure and track performance is essential to this vision;

- Hydro One's vision, strategy and values inform everything the company does, as it works to align three competing but equally important factors: customer needs and preferences, responsible stewardship of its distribution system, and customer rates;

- The approach has been shaped by: (i) the company's commitment to reduce costs and increase productivity and efficiency before asking customers to pay more; (ii) directing investment to address specific identified customer needs and preferences; (iii) reducing or deferring investment levels to where any tradeoff with respect to reliability can reasonably be justified by lower rates; and (iv) the evaluation of the resulting rates profile for the 2018 to 2022 period in the context of customer feedback from Hydro One Distribution's 2016 customer engagement process and the backdrop of increasing electricity prices; and

- Previous direction by the OEB that the company's distribution system is in need of additional investment and the company should be finding cost effective ways to improve its reliability performance.

Custom IR Design Features

Custom IR Design Feature	Description
Revenue Cap versus Price Cap	**Revenue Cap** – form of incentive regulation in which utility ***revenue*** for the test year t+1 is equal to the revenue in year t inflated by an Annual Adjustment Mechanism, comprised of inflation and productivity factors. For example and as set out in Appendix A, 2019 revenue requirement is equal to the revenue requirement in 2018 inflated by the Annual Adjustment Mechanism. **Price Cap** – form of incentive regulation in which utility ***rates*** for the test year t+1 are equal to utility rates in year t inflated by an Annual Adjustment Mechanism. The recommended Custom IR approach is a Revenue Cap. This approach: (i) is more consistent with Hydro One's business planning process and the Total Custom Incentive Revenue for Rates can be easily reconciled to the Rates Revenue Requirement estimated for the test period by Business Planning; (ii) gives the company the needed flexibility to introduce a new rate class in 2021 to fully integrate the acquired LDCs in a manner consistent with prior determinations of the OEB; (iii) permits the continued transition to fully-fixed rates for residential customers and flexibility for any future OEB decisions regarding rate design changes for small business customers; (iv) provides adequate flexibility to reset customer rates should the OEB proceed with the elimination of the Seasonal Rate Class over the 2018 to 2022 Custom IR term; (v) provides adequate flexibility regarding the OEB's rate design initiative for Electricity Commercial and Industrial Customers; (vi) allows the company to update its billing determinants to reflect estimated changes in the load forecast over the IR term; and (vii) more easily accommodates the planned Capital Factor. 2018 rates revenue requirement (i.e., for the first year of the five-year term) is determined using a Cost of Service Approach, consistent with the OEB's RRF.
Annual Adjustment	The recommended Annual Adjustment Mechanism is consistent with

Mechanism (1+Inflation Factor-TFP-SF)	the OEB's RRF policy direction for Custom IR. Specifically, the RRF provides that the allowed rate of change in the rates/revenue over the term of the Custom IR will be determined on a case by case basis, informed by empirical evidence that includes: (i) distributor's forecasts (revenues and costs, including inflation and productivity); (ii) the OEB's inflation and industry productivity analyses; and (iii) benchmarking to assess the reasonableness of distributor forecasts. The RRF policy also stipulates that expected inflation and productivity gains will be built into the rate adjustment over the term of the Custom IR. The recommended Custom IR rate-setting approach is consistent with these expectations. Hydro One Distribution has obtained its own third-party expert estimation of industry Total Factor Productivity and has also retained a third-party expert to estimate, using an econometric benchmarking approach, a Hydro One Distribution-specific Productivity Stretch Factor, consistent with the OEB's requirements as set out in the Handbook. As a result of this analysis, Hydro One Distribution will seek approval to use the OEB's Inflation Factor, Industry Total Factor Productivity of 0%, and a utility-specific Productivity Stretch Factor of 0.6%. The OEB's Inflation Factor is determined annually by the OEB and is 1.9% for 2017. The Inflation Factor would be adjusted in each of 2019 to 2022. Industry Total Factor Productivity and the utility-specific Productivity Stretch Factor would not be subject to annual adjustment. In other words, rates are increased for inflation, increased/decreased for industry-wide productivity, and reduced further by a utility-specific productivity factor that depends on the relative cost performance of the utility versus all distributors in Ontario. Since 2013, the productivity factor used by the OEB for the industry has been set at 0%, as industry productivity has been negative, meaning that the industry is getting less efficient. Rate increases would therefore be greater than inflation. Hydro One Distribution's productivity stretch factor reflects the company's cost performance in relation to the industry, and currently indicates the necessity for a 0.6% factor; a built-in expectation that cost improvement of at least

	0.6% per year is required.
Capital Factor	The Custom Capital Factor creates revenue neutrality with Hydro One Distribution's Business Planning rates revenue requirement in each of 2018 to 2022, excluding the effect of the Productivity Stretch Factor. Specifically, it is designed to provide for the additional revenue requirement that results from: (i) the level of capital investment, ins-service additions, and rate base growth required by Hydro One Distribution and (ii) the added rate base associated with the Acquired Utilities for rate-setting purposes. This approach, excluding the integration of rate base associated with the Acquired Utilities, was previously tested and accepted by the OEB in the recent Toronto Hydro decision.
OM&A Associated with Acquired Utilities	The proposed Custom IR rate-setting approach contemplates that the residual/incremental operating costs of the three Acquired Utilities be added to the revenue requirement in 2021. If this did not occur, Hydro One would lose the revenue related to these LDC's as their deferral periods end, but would still be incurring the OM&A related to supporting these businesses.
Cost of Capital	Hydro One Distribution's application contemplates that the cost of equity and cost of debt are updated for the 2018 cost of service or rebasing year. Hydro One will also apply to update the cost of capital in 2021, as a mid-term adjustment. While this feature may be viewed as being inconsistent with the OEB's direction in the Handbook, the adjustment is consistent with: (i) proposal to integrate the Acquired Utilities in 2021; (ii) introduction of new customer rate classes; and (iii) proposal to refresh the Load Forecast for 2021 and 2022.
Earnings Sharing Mechanism (ESM)	An ESM is not a required feature of a Custom IR. However, in order to address the OEB's expectations that the structure of the Custom IR contain features that align the interests of customers with those of the utility and provide a degree of protection to customers, Hydro One Distribution intends to include an ESM in the application. Hydro One Distribution will share with customers 50% of any earnings that exceed the regulatory ROE reflected in Custom IR by more than 100 basis points in any year of the Custom IR term. The customer share of

	the earnings will be adjusted for any tax impacts and will be credited to a new deferral account for clearance at the time of Hydro One Distribution's next rebasing, presently assumed to be in 2023.
Capital In-Service Variance Account (CISVA)	A CISVA is a mechanism to track the difference between the revenue requirement associated with the actual in-service capital additions during a rate year and the revenue requirement associated with the OEB-approved in-service capital additions for that year. If in-service additions in a year are less than the OEB-approved level, the balance of the account would be negative and refunded to customers in a future rate-setting period. If actual in-service capital additions are equal or greater than the OEB-approved level in the year, no entry would be recorded in the account Hydro One Distribution does not currently have a CISVA. However, it is a standard feature in most Custom IRs approved by the OEB, and is familiar to the OEB and intervenors from Hydro One's Transmission applications. Hydro One Distribution intends to include a proposed CISVA in the pre-filed evidence that has the following key features: (i) Purpose is to track the impact on revenue requirement of any in-service additions that are lower than 98% of the OEB-approved amount for each year of the Custom IR term; (ii) For cumulative in-service additions that are 98% of the OEB-approved level or less, the associated revenue requirement impact will be computed and tracked on an annual basis; (iii) At the end of the five-year term of the Custom IR Plan in 2023, the sum of the variances in each year will be disposed of for the benefit of customers; (iv) Revenue requirement associated with variances in in-service additions resulting from verifiable productivity gains will be excluded from the calculation; and (v) Account will be asymmetrical, meaning that should the cumulative in-service additions in any year of the Custom IR term exceed 98% of the cumulative OEB-approved amount for that period, no entry is made in the variance account and no amount is recoverable from ratepayers. Should in-service additions, on a cumulative basis over the term of the

	Custom IR, exceed the cumulative OEB-approved in-service additions for the same period, the OEB will consider whether it is appropriate to recover this difference in rates at the time of the next rebasing, currently anticipated to be 2023. This is consistent with current OEB practice.
Treatment of Unforeseen Events (Z-Factor Claims)	Hydro One Distribution will continue to have access to this existing OEB mechanism that allows distributors to apply to the OEB to recover costs associated with unforeseen events that are outside the control of a distributor's ability to manage. The cost must be material (in excess of $1 million), its causation clear, and the amount must have been prudently incurred. The materiality thresholds must be met on an individual event basis in order for the distributor to apply for recovery of the relevant costs. The use of a Z-Factor Claim is subject to a number of specific Filing Guidelines. For example, storm costs that are in excess of $1 million are not eligible for Z-Factor treatment if the storm related costs reflected in rates have not been fully incurred for that year.
Off-Ramps	A regulatory review may be triggered if Hydro One Distribution's earnings are outside of a dead band of +/- 300 basis points from the OEB-approved return on equity. No specific provision for this is needed in the Application.
Customer Classes	Hydro One Distribution is proposing to maintain the following existing customer classes until 2021: • **Residential:** High Density (UR), Medium Density (R1), Low Density (R2) and Seasonal; • **General Service:** Energy Billed (<50kW), Demand Billed (≥50 kW), Urban High Density, and Non-urban Density; • **Sub-Transmission:** connected at >13.8 kV, supply own transformation, >500 kW, and includes all embedded distributors; and • **Other:** Street and Sentinel Lighting, Unmetered Scattered Load, and Distributed Generation. Hydro One Distribution also intends to seek OEB approval for new

	residential and general service rate classes, effective January 1, 2021, consistent with the OEB's MAADs Decisions[1], to integrate the Acquired Utilities. Other rate classes that exist in the acquired utilities (such as Streetlight, Sentinel Light, Unmetered Scattered Load and Large Users) would be moved to existing Hydro One Distribution rate classes. These new rate classes would be approved by the OEB for use commencing January 1, 2021. It is not expected that, at the time of the Application, the OEB would have decided on the elimination of the Seasonal Rate Class or on Commercial & Industrial rate design. As such, the proposed filing will assume the 'status quo' for these customers.
Cost Allocation and Rate Design	Changes to Hydro One Distribution's cost allocation (e.g., due to possible elimination of the seasonal rate class and incorporating the new acquired rate classes), as well as changes to rate design previously approved by the OEB (e.g., transition to fully-fixed rates for residential customers) will continue during the Custom IR term. Cost allocation relates to the process of apportioning the OEB-approved revenue requirement amongst Hydro One Distribution's rate classes on the basis of cost causality. Rate Design refers to how utility rates are charged to each customer class and are a function of: (i) identified charge determinants that include the number of customers in each class, kWh consumption, or kW peak load; and (ii) whether rates will be assessed as a fixed monthly charge ($/customer) or on a volumetric basis ($/kWh or $/kW). The OEB does not consider material changes to Cost Allocation and Rate Design in the context for an application for distribution rates, due to the industry-wide policy implications associated with proposed changes. Initiatives relating to the Elimination of the Seasonal Rate

Ontario Energy Board. Decision and Order - Haldimand County Hydro Inc. EB-2014-0244. March 12, 2015.
Ontario Energy Board. Decision and Order – Woodstock Hydro Services Inc. EB-2014-0213. September 11, 2015.

	Class (EB-2013-0416/EB-2016-0315), Residential Rate Design/Decoupling (EB-2007-0031, EB-2010-0060 and EB-2012-0410), and Rate Design for Distribution Commercial and Industrial Customers (EB-2015-0043) have all been or in the process of being addressed in separate OEB-sponsored policy processes.
Deferral and Variance Accounts	Deferral and variance account balances as of the end of 2016 will be cleared in this Application. Over the Custom IR period, deferral and variance account balances will continue to be used and balances cleared in a manner consistent with OEB policies. These balances are set out in Table 1 in the "Rate Riders" line item. Estimated costs of $23 million are forecast to be recovered from customers in 2018.

Regulatory Policy Issues

Regulatory Policy Issue	Description
Status of Transmission Application – Implication for Distribution Application for 2018 to 2022 Rates	The OEB is not expected to issue its Decision and Order relating to Hydro One Transmission's application for 2017 and 2018 rates (EB-2016-0160) prior to the planned March 31, 2017 filing date of the Distribution Application. There are a significant number of common regulatory policy issues. The issuance of a Decision and Order by the OEB that is inconsistent with the filing position on shared regulatory policy issues may cause the consideration of the Distribution application to take longer, require additional updates to pre-filed evidence, or result in additional interrogatories and undertakings arising from the technical conference and oral hearing.
Comprehensive Customer Engagement	Hydro One Distribution has undertaken a comprehensive Customer Engagement process, consistent with the RRF and the OEB's Filing Requirements for Electricity Distribution Rate Applications. At issue will be: (i) whether the Customer Engagement process meets the OEB's Filing Requirements; (ii) whether it was designed to identify customer needs and preferences; (iii) whether customer needs and preferences were identified; (iv) how identified needs and preferences informed the investment and operating plans set out in the pre-filed evidence; and (v) whether Hydro One Distribution has adequately responded to the feedback from customers in a manner that produces

	tangible and measurable outcomes that are valued by customers. We believe that the Application will satisfy all of these requirements.
Other Stakeholdering and Engagement /Discussions	In its 2015 Decision, the OEB provided some generally positive feedback to Hydro One on its stakeholdering efforts. The application will include documentation of the various stakeholder engagements that Hydro One held with intervenors on the subjects of the various productivity and benchmarking studies, the customer engagement and the proposed revenue requirement and form of the Application. Also included will be a report on the First Nations and Metis engagements that will have been held in advance of the filing.
First Nations and Métis Engagement	On February 9 and 10, 2017, Hydro One is hosting Hydro One First Nations Engagement sessions to build on its relationships with First Nations communities and Chiefs. The planned Hydro One Distribution Application will be discussed at these sessions. First Nations customers were engaged as part of the above noted comprehensive Customer Engagement Process, however it was determined that additional, direct dialogue with community Chiefs relating to the Application would be beneficial. In addition, through the use of a moderator and note taker, Hydro One will be gathering information relating to First Nations' thoughts and goals, consistent with the Company's desire to build a new vision for our collective futures. A similar session is planned for Hydro One's Métis customers on February 22. During these sessions, should First Nations and/or Métis leaders express a desire to obtain additional information or education about the planned Distribution Application, Hydro One will make the appropriate arrangements to ensure that these needs are met.
Compensation	Consistent with the filing position for the Application for 2017 and 2018 Transmission Rates, LTIP, STIP, stock-based compensation costs and costs related to the Employee Share Ownership Plan should be recoverable in rates and are a component of normal total compensation. Four compensation issues will likely be tested during the proceeding: (i) size of total compensation "envelope"; (ii) composition of compensation costs; (iii) executive compensation; and (iv) whether Hydro One's OEB-approved Cost Allocation remains

	appropriate. Hydro One's Distribution Application will be supported by a compensation benchmarking study.
Regulatory Treatment of Pension and OPEB Costs	The OEB is presently holding a consultative initiative to develop standard principles to guide the OEB's review of pension and OPEB costs for the future, to establish specific information requirements for applications, and to consider appropriate regulatory mechanisms for cost recovery which could be applied consistently across the gas and electricity sectors for rate-regulated entities. The Custom IR application will reflect Hydro One Distribution's current, OEB-approved regulatory treatment of pension and OPEB costs – cash and accrual, respectively. It is not clear whether regulatory policies relating to the cost recovery of pension or OPEB costs will change, what that change would be, or when that change would be effective. Regulatory tools to protect Hydro One Distribution from the adverse financial effect of a potential change in cost recovery of OPEB Costs will be considered, once the consequences of any change to policy are quantified. Hydro One Distribution plans to request the OEB's approval to transition to an updated regulatory approach, if any such change occurs, at the time of Hydro One Distribution's next rebasing in 2023.
Taxation Rates and Deferred Tax Asset	The application will reflect a combined Federal and Provincial income tax rate of 26.5% for ratemaking purposes. Consistent with the filing position for the Transmission Application for Rates, based on regulatory principles ("stand-alone" and "benefits follow costs") and guidance from previous OEB determinations, the shareholder alone should own the benefit associated with the deferred tax asset.
Response to OEB-Mandated Studies	The OEB Ordered the completion of the following reports in order to inform its assessment of Hydro One Distribution's efficiency and productivity, and to assist with its assessment of whether applied-for costs are reasonable, in the context of the company's next application for rates: • Total Factor Productivity (TFP) Study (see below); • Total Compensation Study (as noted above);

	• Vegetation Management Program and Trend Analysis; • Third-party Review of the Distribution System Plan; • Pole Replacement Program; • Distribution Station Refurbishment Program; • Miscellaneous Service Charges; • Depreciation Study; and • In-Service Capital Additions Variance Analysis. The implications and consequences of these reports will be reflected in Hydro One Distribution's capital and operating plans. Strategies and actions to address identified areas will need to be comprehensively set out in the application and the pre-filed evidence.
Cost Efficiencies, Productivity and Performance Management	KPIs, performance metrics and outcome measurement contained in and resulting from the foregoing OEB-Mandated Studies are expected to be integrated into the company's performance measurement approach. In its Decision relating to Hydro One Distribution's application for 2015 to 2019 Distribution rates, the OEB also created an expectation that Hydro One Distribution would improve its performance and outcome measurement, demonstrate the financial and unit cost benefit arising from productivity and other continuous improvement initiatives, and demonstrate that the company provides value for customers. As stated by the OEB in its July 28, 2016 Decision and Order for EB-2015-0089 for Milton Hydro Distribution Inc., utilities that objectively demonstrate measurable and sustainable continuous improvements can expect to have their test period revenue requirement requests approved without material disallowances. Measurement tools include: (i) productivity indicators: input/output metrics; (ii) KPIs: track how well the utility is achieving its stated plans and accomplishments; and (iii) Outcome measures: creating value for money or results that are valued by Customers
Total Cost Benchmarking – Pacific Economic Group (PEG) Model	As set out by the OEB in the recent PowerStream Decision and Order, "the OEB has previously determined that both external benchmarking and internal benchmarking that tracks year-over-year productivity improvements are key in providing the confidence for long-term rate

	setting under the principles of the RRFE"[2]. The OEB has used an econometric model to externally and internally benchmark utility productivity on a historical basis. It is this model that benchmarks Hydro One Distribution's annual cost performance, places the company in the 4th quartile, and results in the assignment of a 0.6% Productivity Stretch Factor. This model reflects the "average" Ontario utility and does not reflect Hydro One Distribution's particular circumstances. The OEB has signalled its intention to use this model to predict forecast costs. New OEB filing requirements contemplate that Hydro One Distribution will be required to run and file the output of this model, as it relates to the prediction of future 2018 costs, with the OEB. Hydro One currently intends to run this model and file the results with the OEB as part of a "Blue Page" update to the application once 2016 audited year-end financial metrics are available. Hydro One expects this update to be filed in late-May or early-June 2017. Hydro One Distribution will be required to provide evidence to support the difference or "gap" between econometrically predicted and applied-for costs, notably in the 2018 rebasing year and must be able to demonstrate that it will be able to "live within its means" over the remainder of the 2019 to 2022 term. Although the OEB has also stated in a number of previous decisions "that it will use benchmarking as a tool to inform its decisions, but will not use it as a method by which to determine rates"[3], it appears that the weight the OEB places on the approach to establish the reasonableness of costs may be increasing. Hydro One Distribution is presently ranked by the OEB in the fourth quartile versus its peer group and the recommended 0.6% Productivity Stretch Factor is consistent with that established for other fourth quartile performers.
Lost Revenue	As a result of updated OEB policies and guidelines, there is a high

[2] Ontario Energy Board. Decision and Order – PowerStream Inc. EB-2015-0003. August 4, 2016. Page 9.
[3] Ontario Energy Board. Decision and Order – Toronto Hydro Electric System Limited. EB-2014-0116. Page 19

Adjustment Mechanism Deferral and Variance Accounts - LRAMVA	probability that Hydro One Distribution will be expected to track the variance between the OEB-approved Conservation Demand Management ("CDM") adjustment to its load forecasts and the actual (verified) CDM results in a variance account called the LRAM Variance Account (LRAMVA), consistent with the OEB's Filing Requirements for Electricity Distribution Rate Applications. Hydro One Distribution does not currently have an LRAMVA account. Should this account be required, Hydro One Distribution would apply to dispose of any balance in this account at the time of its next rebasing, which is presently assumed to be 2023.
Working Capital Allowance	The application will include a proposal for working capital as determined by a lead-lag study to be conducted by Navigant, a third party expert, which is now complete. The lead-lag study conducted for Hydro One Distribution's established a working capital requirement of approximately $321 million or 7.7% of total OM&A and Cost of Power amounts for 2018. Working capital is included in the calculation of mid-year rate base.

Appendix A highlights the operation of the proposed Custom IR rate-setting methodology graphically, consistent with the briefing documents previously provided to the Board, but updated for actual numbers.

Submission to the Board of Directors

Date: November 10, 2017

Re: Changes to Forestry Plan - Optimal Cycle Protocol (OCP)

Hydro One has developed a new vegetation management strategy and program called the Optimal Cycle Protocol. This new strategy and program will reduce safety risks, improve reliability, reduce the total program costs, and increase customer satisfaction. The attached Briefing Note and presentation are to update the Board on the transition to the new strategy and program.

Yours sincerely,

Greg Kiraly
Chief Operating Officer

Brad Bowness
VP, Distribution

VP, Planning

BriefingNote

hydro one

Date: November 10, 2017

Presented by: Brad Bowness

Overview:

Hydro One is implementing a new vegetation management strategy called the Optimal Cycle Protocol which will transition the company to an industry leading three year cycle. By 2021, the Optimal Cycle Protocol will improve vegetation management outcomes by: reducing safety risks, improving reliability, improving unit cost, and increasing customer satisfaction.

Investment Details:

Hydro One's distribution vegetation management program has been a key focus of the Ontario Energy Board (OEB), the Auditor General of Ontario and Hydro One's internal audit department, all of which suggested improvements in program planning and execution were required. Industry peer benchmarking has also positioned Hydro One unfavourably on unit costs, reliability and maintenance cycle length.

Hydro One distribution manages about 104,000 right-of-way kilometers to reduce the likelihood of a vegetation outage and to mitigate public safety risk. Vegetation related outages account for about 30% of System Average Interruption Duration Index (SAIDI) based on the three year average and projected to be over 40% by year-end 2017. Hydro One's performance is 4th quartile relative to industry peers. Deferred spending has resulted in maintenance cycles of approximately ten years, which is much longer than industry average, and has been identified as the largest contributor to poor reliability performance.

Working with Clear Path Utility Solutions LLC over the last six months, Hydro One developed a new program called the Optimal Cycle Protocol. This new program will patrol Hydro One's rights-of-ways on a three year cycle, generate defect-based work prescriptions, and correct through trimming and/or removing, trees that can grow into our distribution lines, along with dead, dying, or diseased trees that can fall into our lines. The Optimal Cycle Protocol will help Hydro One gain valuable system information, improve right-of-way asset condition and provide the opportunity to optimize the maintenance approach for each feeder to improve public safety, reduce risk of wildfire and improve system reliability within the current approved budget. This new program allows Hydro One to manage more kilometers of right-of-way with the same budget.

The transition to the Optimal Cycle Protocol started in September 2017 where the program strategy was rolled out to the field and employees were trained on the new work standards. The work from September 2017 to December 2017 is being closely monitored to ensure that the new program approach is achieving the desired objectives. By mid-November100% of the forestry technicians will be trained on the Optimal Cycle protocol and by year end about 2,380 km of tree trimming and removal will be completed according to the new standard. It is expected that by January 1st 2018, a stable and sustainable Optimal Cycle Protocol will be implemented across the Province.

Brad Bowness /November 2, 2017 10:30pm

Table 1. Financial Metrics 2018 to 2022 Hydro One Distribution Application

Distribution Revenue Requirement	2017	2018	2019	2020	2021	2022
	OEB Approved					
Capital Expenditures	$ 661	$ 634	$ 757	$ 719	$ 741	$ 827
In-Service Additions	$ 696	$ 641	$ 776	$ 768	$ 734	$ 815
Rate Base	**$ 7,190**	**$ 7,672**	**$ 8,049**	**$ 8,477**	**$ 9,035**	**$ 9,435**
OM&A	$ 593	$ 592	$ 600	$ 607	$ 626	$ 634
Depreciation	$ 390	$ 394	$ 414	$ 429	$ 448	$ 465
Return on Debt	$ 183	$ 191	$ 200	$ 211	$ 225	$ 235
Return on Equity	$ 253	$ 269	$ 283	$ 298	$ 317	$ 331
Income Tax	$ 49	$ 58	$ 61	$ 63	$ 69	$ 70
Revenue Requirement	**$ 1,468**	**$ 1,505**	**$ 1,558**	**$ 1,607**	**$ 1,685**	**$ 1,735**
Rate Riders	$ 11	$ 23	$ 23	$ 23	$ 23	$ 23
Other revenue impacts	$ (53)	$ (49)	$ (49)	$ (49)	$ (50)	$ (50)
Rates Revenue Requirement	**$ 1,426**	**$ 1,479**	**$ 1,532**	**$ 1,581**	**$ 1,658**	**$ 1,707**
Rate Increase Required, excluding Load		**3.7%**	**3.6%**	**3.2%**	**4.9%**	**3.0%**
Estimated Load Impact		2.0%	-0.2%	-0.7%	-2.5%	-0.6%
Rate Increase Required		**5.7%**	**3.4%**	**2.5%**	**2.4%**	**2.4%**
Estimated Total Bill Impact (R1 customer - 30%)		**1.7%**	**1.0%**	**0.7%**	**0.7%**	**0.7%**

The drivers of the proposed distribution rate increases over the 2018 to 2022 period are set out in Table 2. The average rate increase over the 5-year period is 3.3%. As discussed in November 2016, approximately 5.1% or 90% of the rate increase in 2018 is attributable to factors that cannot be controlled at this time by Hydro One. Proposed increases in rates in 2019 through 2022 are driven by planned capital additions in each year, consistent with the Distribution Business Plan approved by the Board in December 2016.

Table 2. Drivers of Proposed Distribution Rates Increases 2018 to 2022

Distribution Rate Drivers	2018	2019	2020	2021	2022
OM&A	-0.1%	0.5%	0.5%	1.2%	0.5%
Rate Base & Depreciation	2.0%	2.9%	2.6%	3.3%	2.5%
Income Taxes	0.7%	0.2%	0.1%	0.4%	0.1%
Rate Riders	0.8%	0.0%	0.0%	0.0%	0.0%
Estimated Load Impact	2.0%	-0.2%	-0.7%	-2.5%	-0.6%
External Revenues - Other	0.3%	0.0%	0.0%	-0.1%	0.0%
Total	5.7%	3.4%	2.5%	2.4%	2.4%

Estimated Costs:

The Optimal Cycle Protocol will be executed within the proposed five year budget 2018 – 2022 (Table 1). In addition, there is a separate project (currently estimated at $5M capital investment) to deliver a supporting IT tool to manage work more efficiently.

Table 1 - Vegetation Management Budgets

	2015	2016	2017	2018	2019	2020
OEB Approved	$129.0M	$164.6M	$167.3M	N/A	N/A	N/A
OEB Units (as filed)	10,200 km	14,250 km	14,250 km	21,250 km	-	-
HONI Approved Budget	$129.4M	$145.7M*	$138.5M*	-	-	-
HONI Proposed Budget	-	-	-	$149.6M	$150.0M	$152.4M
YE Actual	$118.0M	$142.9M	$129.3M**	N/A	N/A	N/A
Actual Units and Forecast	10,366 km	11,753 km	20,500 km	34,333 km	34,333 km	34,333 km

NOTE: The table above reflects three different strategic approaches with different scopes hence like for like comparison for units may not be applicable.

* Discrepancy between OEB approved and HONI approved is due to redirection to Customer Care and Trouble Calls.

** 2017 Forecast – September

Other Alternatives Considered:

Status Quo or Do nothing Alternative

The do nothing alterative was considered and rejected because continuing with the current vegetation management programs would not yield the desired safety, condition, reliability and cost outcomes within the Business Plan timeframe. Table 2, in the appendix below outlines some of the key differences between the Optimal Cycle Protocol and the current vegetation management strategy.

Regulatory Considerations:

The Optimal Cycle Protocol Project strategy was developed after the current distribution rate filing was submitted. Therefore, the concept of moving to a three year cycle and changing the work specifications is not currently described in the evidence.

There are two main regulatory considerations pertaining to the rate filing:

1. Explaining how this transition may affect the future of the vegetation management programs and how that affects the rate filing evidence, most importantly, the program budgets requested.
   - Hydro One has committed to operating within the approved vegetation management budget that will be outlined in the Ontario Energy Board's decision on the current rate application. It is expected that under the Optimal Cycle Protocol, investment outcomes will be noticeably improved prior to the next rate application.
2. Justifying a vegetation management strategy that improves reliability given the results of the rate filing customer consultation.
   - The primary driver of this strategy change is to manage affordability for our customers. With a significant reduction in cycle length there will be a cascading improvement to reliability that will provide our customers further value from the vegetation management programs ultimately reducing forestry costs and trouble call expenses.

Risks and Mitigation:

Resourcing – The Optimal Cycle Protocol requires a different labour mix than the traditional approach to vegetation management and will require increased administrative oversight and support.

Change Management – The Optimal Cycle Protocol requires a significant change to work specifications, resource requirements and generates new work in the form of project management and quality assessment that currently isn't in place within the existing Forestry Programs. Furthermore, the success of the Optimal Cycle Protocol hinges on quality data collection and strict adherence to the scope of work, which has been a challenge in the past. Change management activities are currently ongoing and the early stages of implementation are seeing a high degree of acceptance.

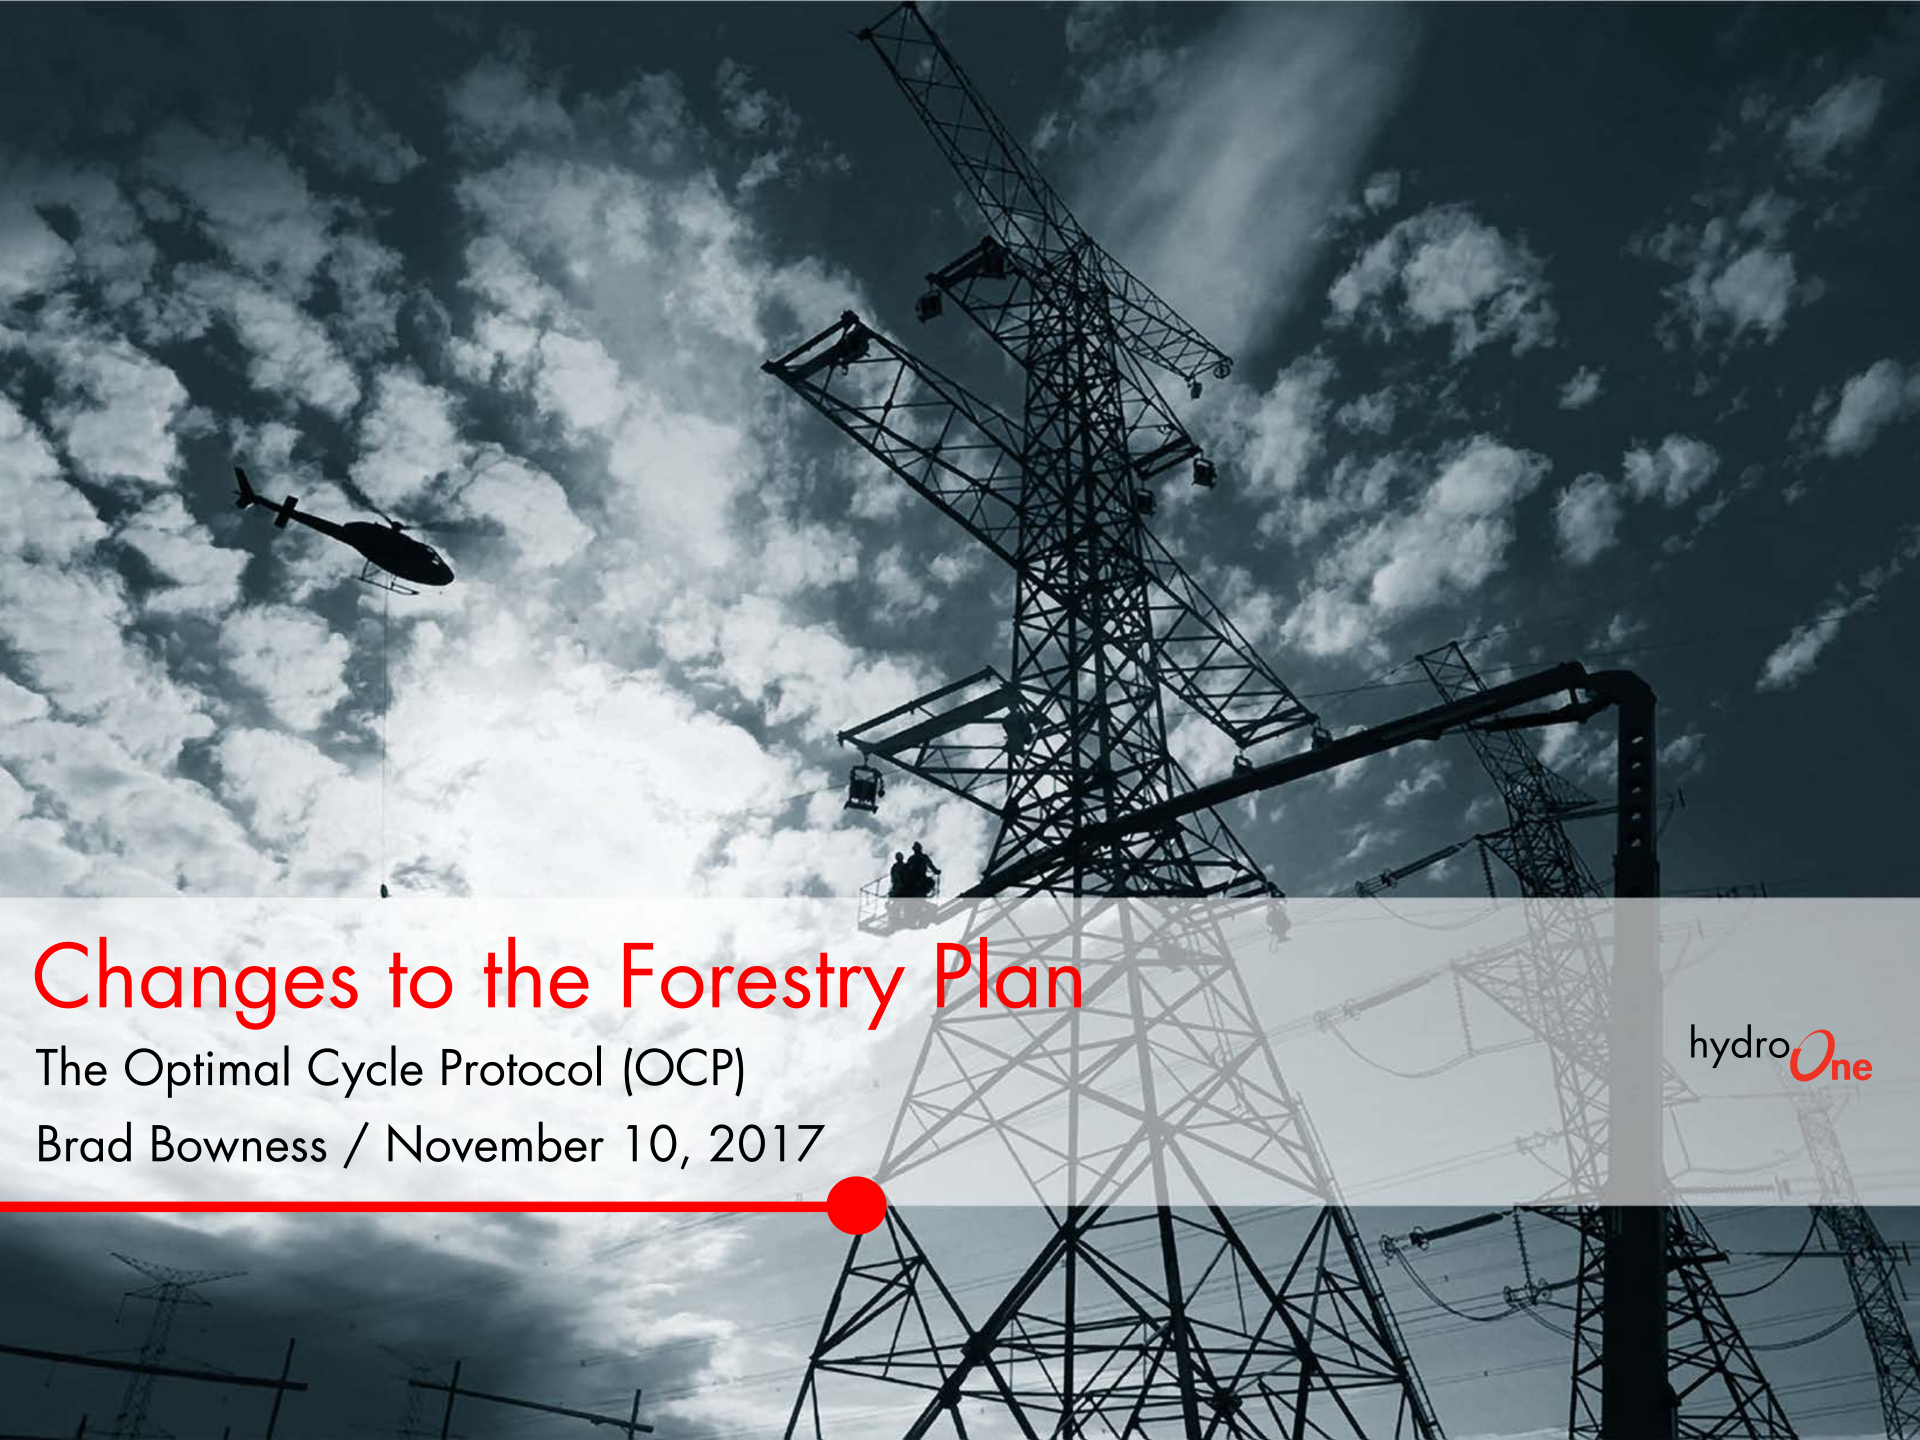
Information Technology – Forestry Services' is currently replacing their work management system as the existing Forestry Management System is at end of life. The Optimal Cycle Protocol requires enhanced data collection and detailed project management, both of which are not supported by the current forestry management system. As an interim solution, the Forestry Management System will continue to be used along with a supplementary data collection process that will require close monitoring to ensure data accuracy.

Long-Term Asset Condition and Future Maintenance Costs – The Optimal Cycle Protocol reduces the brush control being completed on the right of way floor. Some brush control will be completed to maintain access. Forest edge encroachment could increase population of trees capable of striking the power line over time and to mitigate this risk, adequate funding in the public safety and reliability program will be required.

Appendix

Table 2 - Comparison between the current vegetation strategy and the Optimal Cycle Protocol

	Historic Approach	**Optimal Cycle Protocol**
Scope/Approach	Full ROW clearing	Defect focused
Cycle/Frequency	10 years	3 years
Cost per unit	$12,000 / km	$3,600 / km
Units per year	10,500 km	34,666 km
Costs per year	$150M	$150M
Defects treated per year	800,000	700,000 to 800,000
Cost per defect	$120	$160
Impact to Reliability	Maintain current reliability	By 2022, we can expect a 40% improvement based on a 10 year average and a 58% improvement based on a 2017 year-end projection.
Cost Savings	N/A	$6M to $12M annual saving by 2023 due to reduced trouble calls and about $20M starting in 2023 due to on-cycle efficiencies
Environmental Consideration	Infrequent maintenance allowing for incompatible vegetation to establish requiring high intensity clearing	Frequent maintenance allow for a better managed utility forest
Customer Consideration	Infrequent, heavy vegetation management treatment with high aesthetic impact	Frequent, light touch vegetation management treatments with improved aesthetics and customer relations
Safety Consideration	6.5% of the tree utility forest has vegetation grow-in contacts	Less than 1% vegetation grow-in contacts after the 1st cycle. Reduced risk of public electrical contact and wildfire.



Changes to the Forestry Plan

The Optimal Cycle Protocol (OCP)

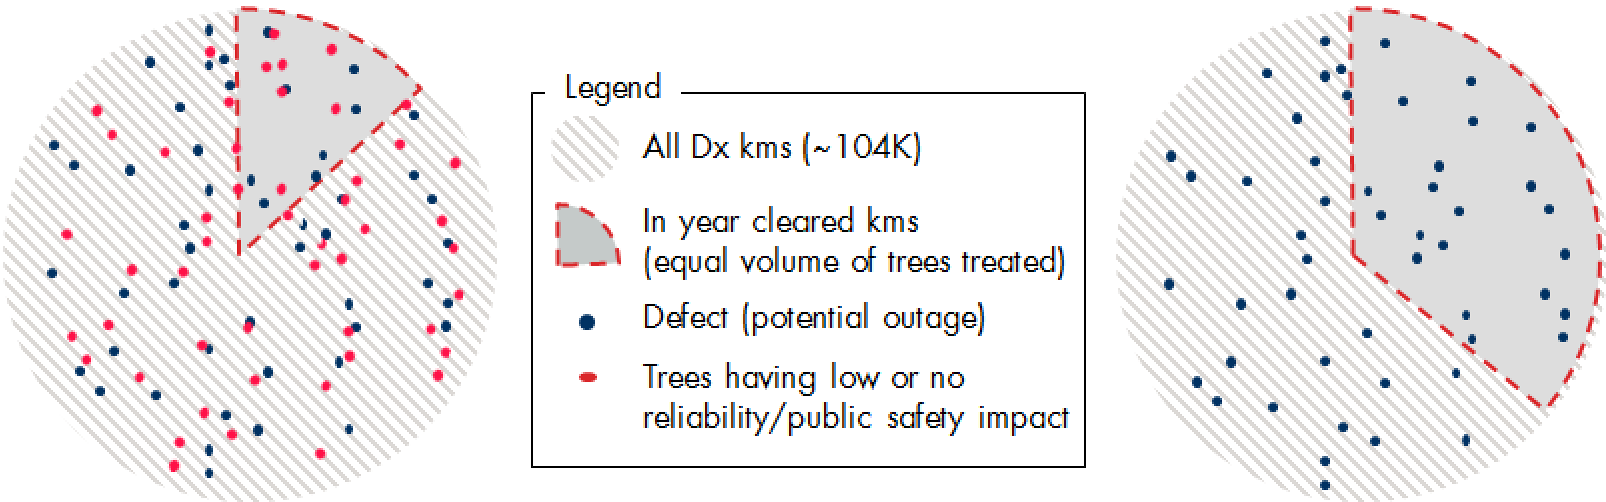
Brad Bowness / November 10, 2017

hydro One

The new strategy would cover the entire province in 3 years and increase the rate of critical defect removal

PREVIOUS STRATEGY FOCUSES ON CLEARING ~1/10TH OF LINE KMS

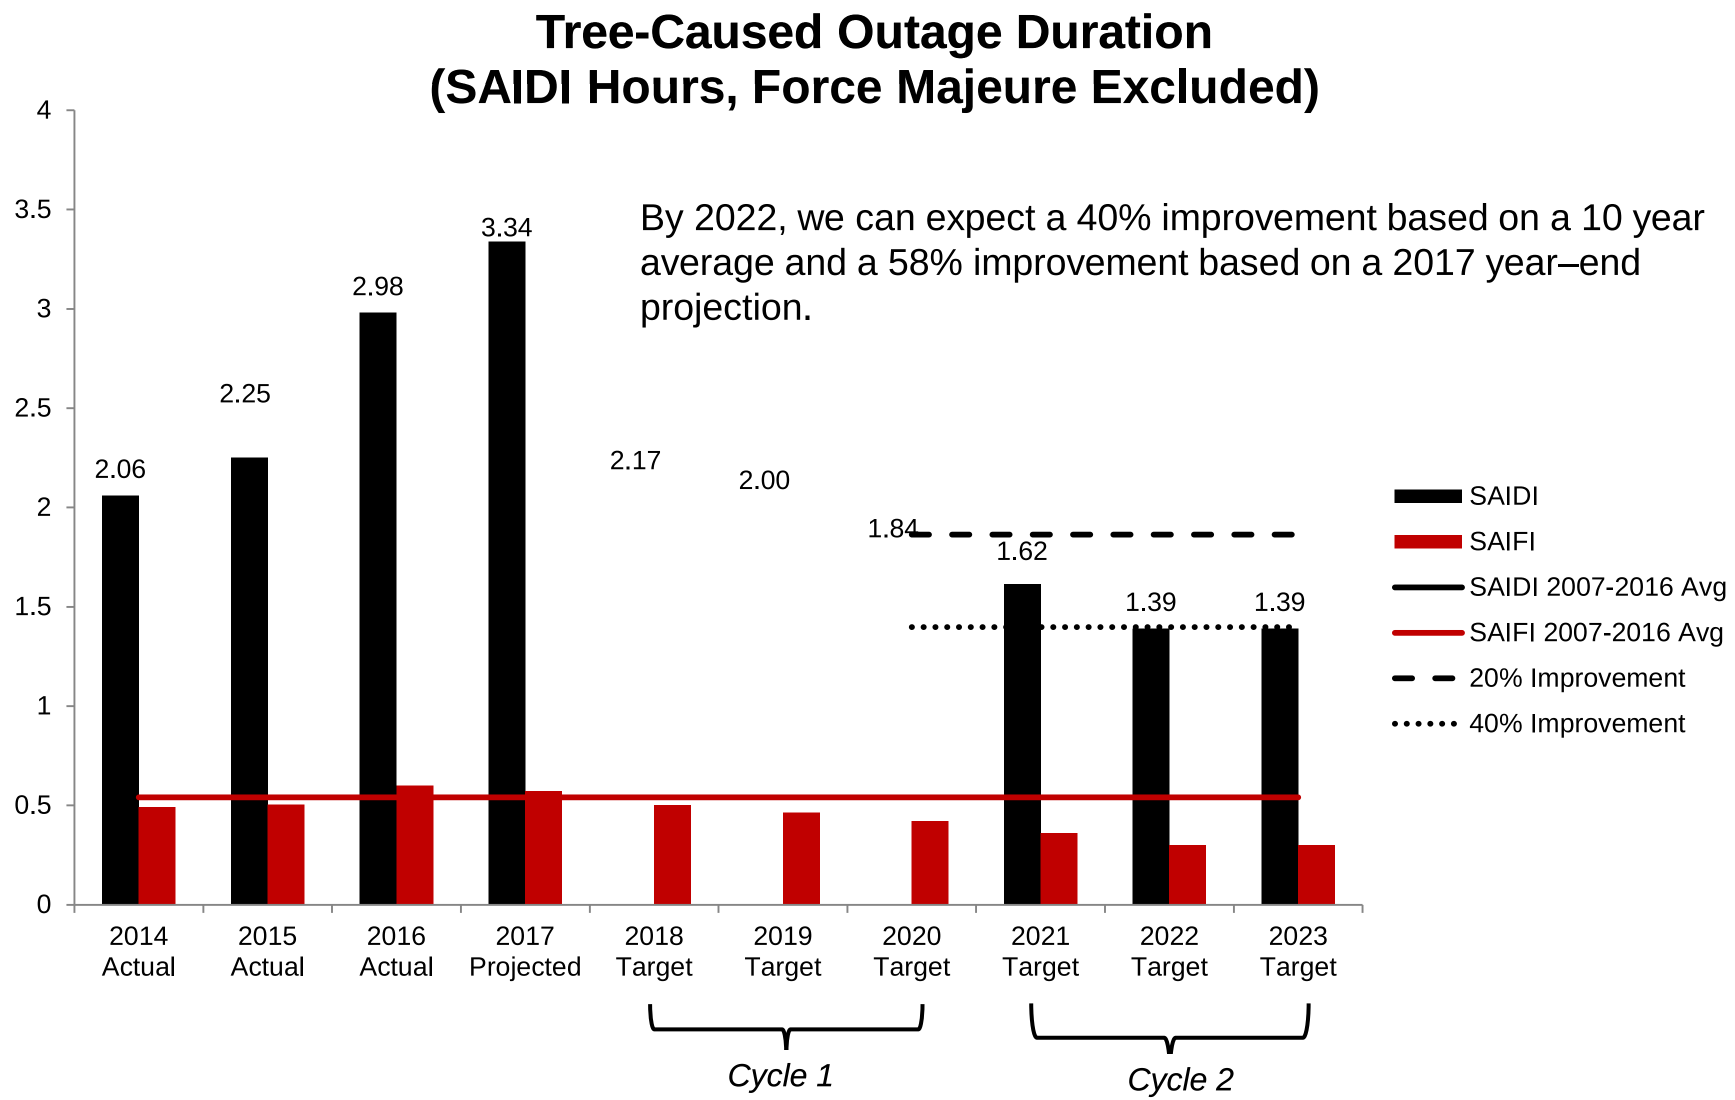
NEW STRATEGY TREATS MORE CRITICAL DEFECTS PER YEAR



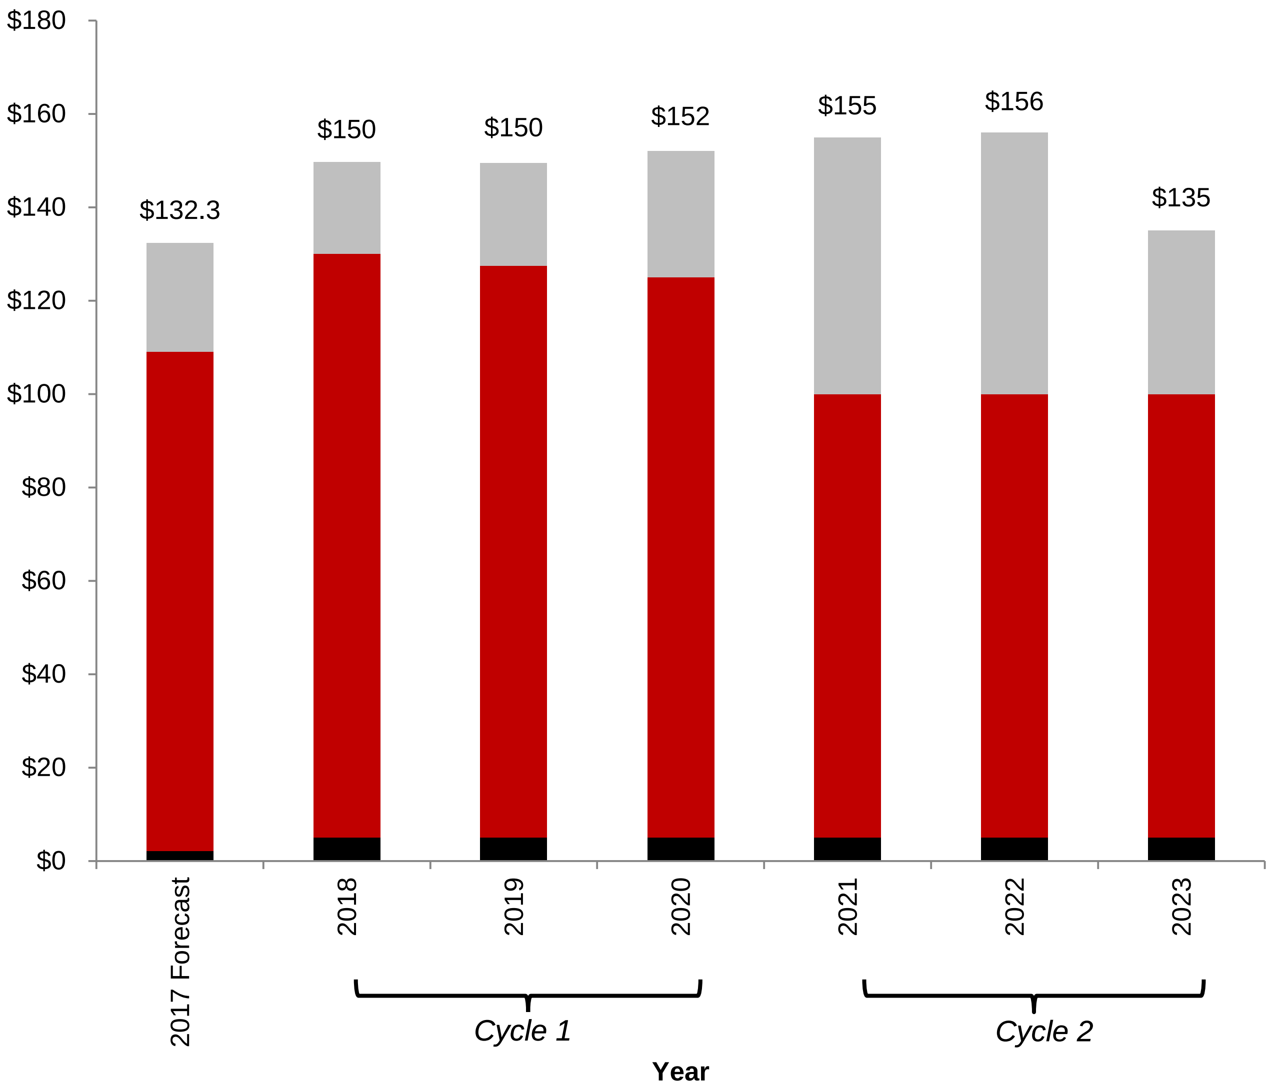
Scope Change Overview

	CURRENT STRATEGY FOCUSES ON CLEARING ~1/10TH OF LINE KMS	NEW STRATEGY TREATS MORE CRITICAL DEFECTS PER YEAR
Scope/Approach	Full Right-of-Way clearing	Defect focused
Cycle/Frequency	10 years	3 years
Cost per unit	$12,000	$3,600
Units per year	10,500 km	34,333 km
Costs per year	$150M	$150M
Defects treated per year	800,000	700,000 to 800,000
Cost per defect	$120	$160
Impact to Reliability	Maintain current reliability	By 2022, we can expect about 40% improvement based on a 10 year average and 58% improvement based on a 2017 year-end projection.
Cost Savings	N/A	$6M to $12M annual saving by 2023 due to reduced trouble calls About $20M reduction starting in 2023 due to on-cycle efficiencies
Environmental Consideration	Infrequent maintenance allowing for incompatible vegetation to establish requiring high intensity clearing	Frequent maintenance allow for a better managed utility forest
Customer Consideration	Infrequent, heavy vegetation management treatment with high aesthetic impact	Frequent, light touch vegetation management treatments with improved aesthetics and customer relations
Safety Consideration	6.5% of the tree utility forest has vegetation grow-in contacts	Less than 1% vegetation grow-in contacts by end of first cycle. Reduced risk of public electrical contact and wildfire

3.5 Million Hour Reduction in Tree-Caused Outage Duration in 2 Cycles



Expected Budget Allocations for First 7 Years of Implementation



WORK PROGRAM WILL REFLECT A NEW ALLOCATION

- Public Safety & reliability Right-of-way work deferred to mid - second cycle
- Cycle Clearing Costs reduced after 1st cycle due to fewer defects
- $5M yearly Optimal Cycle Protocol for sustainment costs and improved analytics
  - Post event analysis, QA/QC, and ongoing maintenance of feeder condition data

Consolidated Business Plan 2018-2023

Board of Directors | December 8, 2017

hydro One

Key Outcomes in this 6 Year Plan include…

Improved Customer Satisfaction	▪ Customer initiatives to improve satisfaction and increase efficiency including:
	  ▪ eBilling will increase customer participation from 8% to 40% by 2022
	  ▪ Web and Bill redesign will increase self-serve transaction from 90,000 to 500,000 by 2019
	▪ Indigenous Relations Initiatives include a new service model for First Nations focused on in-community, face-to-face interactions and enhanced engagement regarding our Distribution and Transmission applications
	▪ Customer bill impacts have been minimized
	[redacted]
	  ▪ Distribution - average of **1.3%** per year or an average of $1.81 per monthly bill

Regulatory Responsiveness	▪ This plan addresses concerns raised by the OEB:
	  ▪ Earlier and more comprehensive customer engagement
	  ▪ Improved investment planning process
	  ▪ Improved work program execution performance

Enhanced Operational Effectiveness	▪ Operations initiatives and outcomes that improve safety, customer satisfaction, reliability and cost:
	  ▪ Replacement of assets and deployment of new technologies reduces the likelihood of failures and associated health, safety and environmental risks
	[redacted]
	  ▪ Reduces Distribution outage duration (SAIDI) by 28% compared to 2017 year end forecast
	  ▪ Using technology to improve operational efficiency and reduce costs
	[redacted]

Financial Performance	[redacted]

[1] See table on Slide 5 for calculation and Risks and Opportunities on Slide 8.

Key Assumptions Underlying the Business Plan

OEB Rate Filings	▪ Distribution 2018-2022 - approved as filed, subject to updates in this plan [redacted] [redacted]
Allowed Return on Equity	▪ Increased from 8.78% in prior plan to 9.00% for 2018-2023
Deferred Tax Asset	[redacted]
Conservation & Demand Management (CDM)	[redacted]
Collective Bargaining	▪ Power Workers Union: 1% existing contract yearly escalation. Agreement expires March 31 2018, Plan escalates by inflation thereafter ▪ Society of Energy Professionals: 0.5% existing contract yearly escalation. Agreement expires March 31 2019, Plan escalates by inflation thereafter
Avista Corporation	[redacted]
Dividend Policy	▪ Plan targets dividend payout in middle of 70%-80% target range
Specifically Excluded from Budget	▪ Future acquisitions ▪ New innovation businesses such as distributed generation ▪ Significant development projects are not included in the plan such as East-West tie and Northwest bulk transmission

[redacted]

[redacted]

[redacted]

[redacted]

Business Plan Opportunities & Risks (Ontario)

	Opportunity/Risk Identification	[1]Net Income Impact (C$ millions) 2018 Budget	[1]Net Income Impact (C$ millions) 2018-23 Annual Impact
Return on Equity	[redacted] Dx: ROE locked at 9.00% until 2021 *100 bps change*	No Impact. ROE set in Business Plan at OEB approved level.	[redacted] Dx : 2021-23 ▪ +/- \$36 – \$39 million annually
Interest Rates	Cost of debt included in revenue requirement, but subject to risk once the revenue envelope is approved *100 bps change*	+/- \$23 million	+/- \$23 – \$40 million annually
Load Forecast	Revenue based on actual demand and consumption may differ from the October 2017 Load Forecast *1 standard deviation*	[redacted] Dx: +/- \$11 million	[redacted] Dx: 2018-23 ▪ +/- \$11 million – \$33 million
Deferred Tax Asset[2]	Risk of losing full shareholder benefit	One-time impairment: [redacted] ▪ Dx: ~(\$370) million	No annual income impact Annual FFO impact: (\$50)–(\$60) million
OEB – Capital	[redacted] 10% of Dx Capital (2018) = \$65M	[redacted]	[redacted]

[1] *1 cent on EPS ~ \$6 million net income*
[2] *Motion to Review & Vary Tx Decision filed in October 2017 seeking full allocation of DTA to shareholder. If unsuccessful, will appeal to higher court with lower probability of success.*

[redacted]

[redacted]

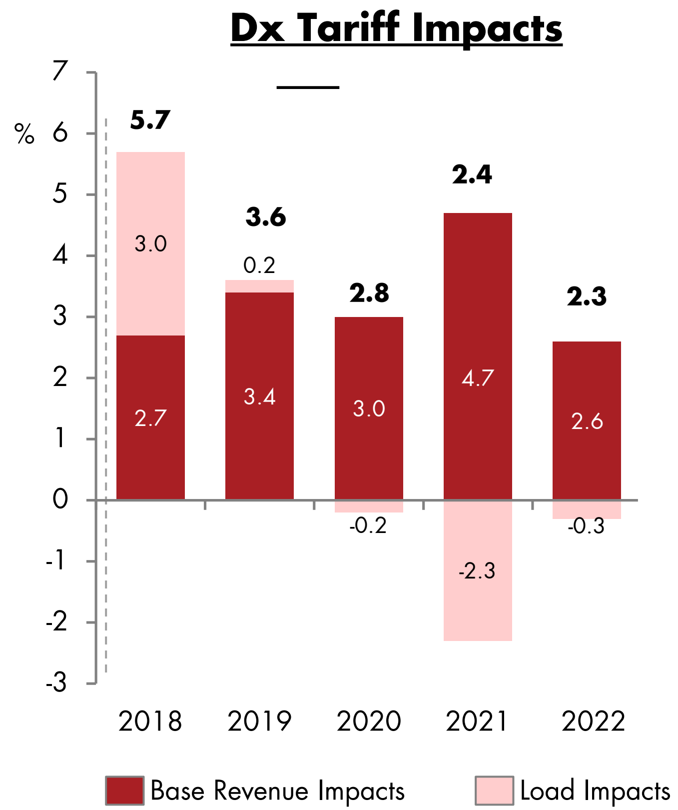
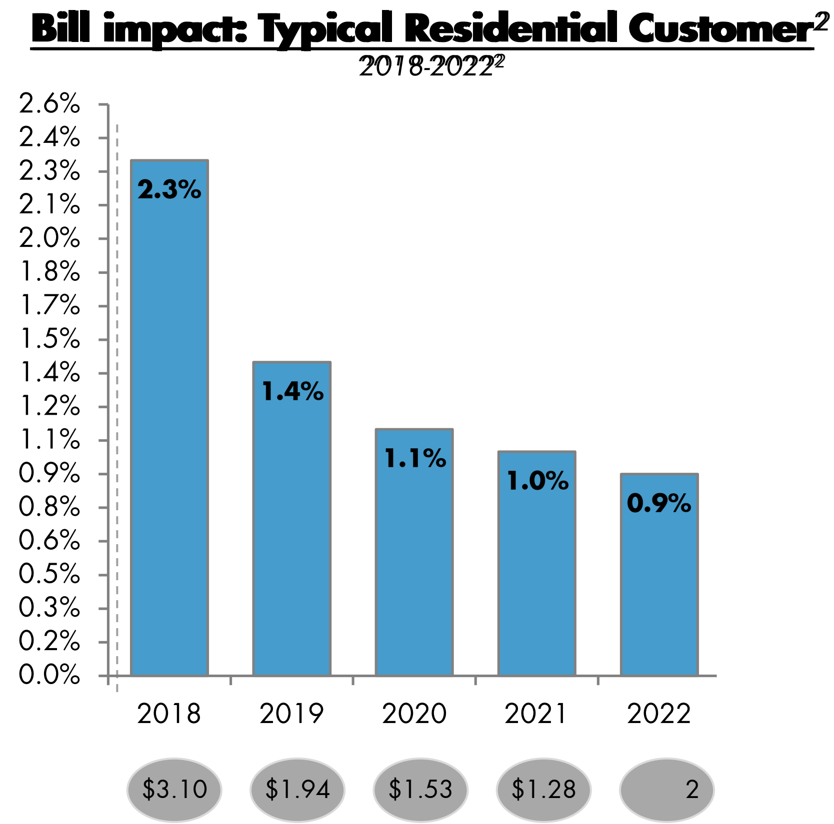
Distribution Tariff and Total Bill Impacts





- **Key Comments:**
  - 2018 Tariff increase largely a result of higher Cost of Capital updates including ROE *[9.00% from 8.78%*]
  - Rate Base Growth throughout the planning period
  - 2021 acquired LDCs incorporated

[1] *Distribution rates only filed with OEB until 2022.*
[2] *An estimated total bill amount before taxes for a typical R1 customer is approximately $135. Fair Hydro Plan impact considered for commodity portion of bill only.*

hydroOne

Strategy

- **Hydro One is transforming to achieve its vision of becoming a best-in-class, customer-centric commercial entity, with a culture of continuous improvement and excellence in execution.**
- **Hydro One's commercial orientation means that the company will:**
  - be focused on customers,
  - demonstrate corporate accountability for performance outcomes,
  - and drive company-wide efficiency and productivity.
- **Hydro One's vision and strategy reflect values that are integral to the well-being of communities:**
  - Safety comes first;
  - Stand for people;
  - Empowered to act;
  - Optimism charges us; and
  - Win as one.
- **The key outcomes that the Company expects from its strategy are as follows:**
  - Improved levels of customer satisfaction;
  - Minimizing the long-term cost of maintaining the reliability of the Transmission and Distribution systems;
  - Maintain top quartile reliability in the Transmission system and continually improve reliability in the Distribution system by mitigating risk arising from asset deterioration;
  - Achieve an injury free workplace and a safe environment for the public;
  - Compliance with all regulatory and reliability standards; and,
  - Responsible environmental stewardship.

Customer Relations

- **Hydro One is a customer centric commercial entity that provides service to its customers that meets their needs and preferences while ensuring that the system continues to deliver safe, reliable energy.**

- **Customer from Tx and Dx were segmented and engaged using a variety of consultation methods**

[redacted]

- **Distribution customers' key preferences**
  - Customers consistently prioritized low rates as the top priority and wanted Hydro One to do its best to limit increases.
  - Reliability was the second most important factor – very low willingness to accept rate increases to attain better reliability.
  - Power quality was a significant factor for large customers.

- **These preferences have guided the development of the investment plan**
- **In-Sourcing of Customer Contact Centre**

Indigenous Relations

- **Hydro One's Indigenous Relations Strategy is to ensure the Company remains committed to developing and maintaining relationships with Indigenous communities that demonstrate mutual respect.**

- **The key goal for Hydro One is to become the primary business partner to Indigenous communities by 2021. The key objectives to meet that goal are:**
  - Become Top of Class: Fully integrate Indigenous relations into each line of business;
  - Become Primary Utility Partner: Create business, technical, knowledge and advocacy partnerships; and,
  - Support Indigenous Leaders: Work with communities by supporting future leaders.

- **Hydro One is actively pursuing a number of initiatives that fit well with the framework:**
  - Successfully offered a new service model to several Ontario First Nation communities that focuses on in-community, face-to-face interactions, to ensure that customers understand and have access to all available programs; and,
  - Implementing the First Nations Conservation Program for communities that have not benefited from the IESO's Aboriginal Conservation Program;
  - Implementing the Affordability Fund to help First Nation customers make their home more energy efficient provided they cannot afford to make energy efficiency improvements, and do not qualify for the Save on Energy Home Assistance Program; and,
  - Development of training for the Executive Leadership on Indigenous Relations.

Regulatory

- **Risks related to obtaining rate orders or other regulatory approvals**
  - Uncertainty regarding, or delays in receiving, approval of major application revenue requirements or capital plans, by the OEB.
  - Risks around regulatory approvals by the OEB for leave to construct applications, applications for mergers or acquisitions and environment approvals

- **Deferred Taxes**
  - As part of the IPO, Hydro One incurred a departure tax of $2.6 billion due to the transition to the Federal taxing authority.
  - Company recorded a deferred tax recovery, representing the fair market value "bump" of its assets, $2.3 billion related to Networks.
  - OEB decision ruled against excluding the tax recovery and 38% is to be shared with Ratepayers – Hydro One is appealing.

- **Integration of Acquired Local Distribution Companies and New Rate Classes**
  - Integration of acquired LDCs to be complete in 2021

- **Rate Setting Approach and Business Implications**
  - Dx rates for 2018 will be set using a rebasing approach and rates for 2019 to 2022 will be set on a formulaic basis. Proposing a similar application for Transmission.
  - Risks on OM&A borne by the shareholder and the company loses the ability to adjust for load and ROE over the period.
  - Have proposed updating load forecast and ROE in 2021 to coincide with the integration of Acquired Utilities.
  - This adds risk and opportunity for the Company and must be carefully managed.

- **Capital In-Service Variance Account**
  - Dx application proposed a CISVA; [redacted]. The features of a CISVA include:
    - Tracks variances between in-service additions and amount included in OEB approved rates in each individual year;
    - Revenue requirement associated with any under spending to be accumulated and returned to customers at end of the five-year term; and,
    - Account will be asymmetrical; over spending of these amounts is not recoverable.

Productivity

- **Quantifiable and sustainable improvements embedded in the work program and or cost centers:**
  - More effective procurement programs, including investments in new processes and tools;
  - Reductions in administrative expenditures through improved processes, tools and optimization of internal staff skills;
  - Rationalization of Fleet size, cost and related spending;
  - Rationalization of IT spending;
  - Improved field efficiency through improved work planning and analytics; and,
  - Development of analytical measures to enable tracking of outcomes and better leveraging of existing spend.
- **Robust governance structure ensures productivity savings reported accurately**

[redacted]

Investment Plan – Total OM&A

[redacted]

[redacted]

Highlights

- **The plan addresses condition assessments, preventative and corrective maintenance, including increasing environmental and regulatory compliance requirements.**
- Dx OM&A plan is $2.8 billion over five years
- [redacted]
- Vegetation Management and Planned Outage Reductions account for 80% of the overall distribution SAIDI reductions

The plan incorporates OEB and Customer Feedback:

- Reflects customer priorities for cost, safety and reliability
- Continues to optimize the life of the existing assets by balancing operational risk, cost and value delivered to customers

Forecasted costs for the core Dx Investment Plan are consistent with the figures filed with the OEB

- Incorporates the new vegetation management program (Optimal Cycle Protocol) that is expected to result in improved unit costs and long-term efficiency as well as improved reliability and customer satisfaction

[redacted]

Common Corporate Costs

- **Majority of costs allocated to Transmission and Distribution (89%).**
- **A significant portion of these costs get capitalized (49%).**
- **The remaining 11% of costs get allocated to Telecom, Remotes, Other Subs and Shareholder.**

Corporate Common Cost $M	2017F	2018	2019	2020	2021	2022	2023	CAGR
Corporate Management	$ 12	$ 14	$ 14	$ 14	$ 15	$ 15	$ 15	3.9%
General Counsel & Regulatory Affairs	$ 35	$ 41	$ 39	$ 38	$ 38	$ 40	$ 41	2.6%
Operations	$ 113	$ 108	$ 108	$ 106	$ 107	$ 108	$ 108	-0.8%
Customer and Corporate Relations	$ 40	$ 43	$ 44	$ 45	$ 47	$ 47	$ 47	3.1%
Human Resources	$ 18	$ 22	$ 21	$ 21	$ 22	$ 22	$ 22	3.7%
Strategy	$ 13	$ 10	$ 10	$ 10	$ 11	$ 11	$ 11	-3.3%
Finance	$ 43	$ 48	$ 48	$ 49	$ 50	$ 50	$ 51	2.8%
Information Solutions Division	$ 21	$ 19	$ 19	$ 17	$ 18	$ 18	$ 18	-2.7%
Bad Debt	$ 18	$ 19	$ 19	$ 18	$ 18	$ 18	$ 18	-0.3%
Total	**$ 313**	**$ 323**	**$ 321**	**$ 320**	**$ 325**	**$ 329**	**$ 331**	**0.9%**

	OM&A	Capital
Transmission Portion	16.4%	30.3%
Distribution Portion	23.9%	18.8%
Other Allocated	10.7%	

Appendix

Business Plan Diagram

- **Consolidated Business Plan** – fundamental document outlining the company's plans for the 2018-2023 period.
- **Budget** – this document, which integrates closely with the Consolidated Business Plan, lays out the specifics of expenditures for the 2018 calendar year.
- **Transmission Business Plan** – Plan for the 2018-2023 period that focuses on the Transmission side of the business. It is fully expected that this will be filed with the OEB as part of our April 2018 Tx rate filing.
- **Distribution Business Plan** – Plan for the 2018-2023 period that focuses on the Distribution side of the business. Either by interrogatory or by motion, it is fully expected that this could be called into evidence as part of our previous March 2017 Dx rate filing with the OEB.
- **Transmission System Plan** – TSP to be filed as part of the April 2018 Tx filing. This is a document explaining the many factors, processes and outcomes that comprise our investment plan.
- **Distribution System Plan** – the DSP was filed as part of our Dx application in March 2017. This has not been altered.

Investment Plan – Dx OM&A

Dx OM&A is $2.8 Billion over five years, representing an annual 1.3% Growth Rate

Work Program OM&A Trajectory 2018-2022

$ Millions (Does not include corporate common costs)

	Total OM&A $ M, 2018-22	OM&A Growth %, 2018-22	OM&A Growth %, 2019-22
Original Target	$2,885	1.1%	1.3%
Draft Plan	$2,823	1.3%	1.2%
Change	($17)	0.2%	(0.1%)

Highlights

Dx OM&A Plan is $2.8 Billion over five years

Forecasted costs for the core Dx Investment Plan are consistent with the figures filed with the OEB

- Redirection opportunities have been identified, but not embedded in the plan, to introduce a shortened and targeted vegetation management program that is expected to result in long-term productivity savings as well as improved reliability and community relations.

Common corporate investments have been updated consistent with the Tx Investment Plan.

We minimized the customer rate impact of the plan through productivity commitments

- Includes $142 Million of embedded productivity savings related to the core Dx business, identified in the previous plan
- Includes $61 Million of common IT savings

1. Original target based on previous investment plan filed as part of the 2018-22 Dx Rate Application
2. Figures exclude Acquired LDCs

School Energy Coalition Interrogatory # 5

Issue:

Issue 3: Is the overall increase in the distribution revenue requirement from 2018 to 2022 reasonable?

Reference:

None

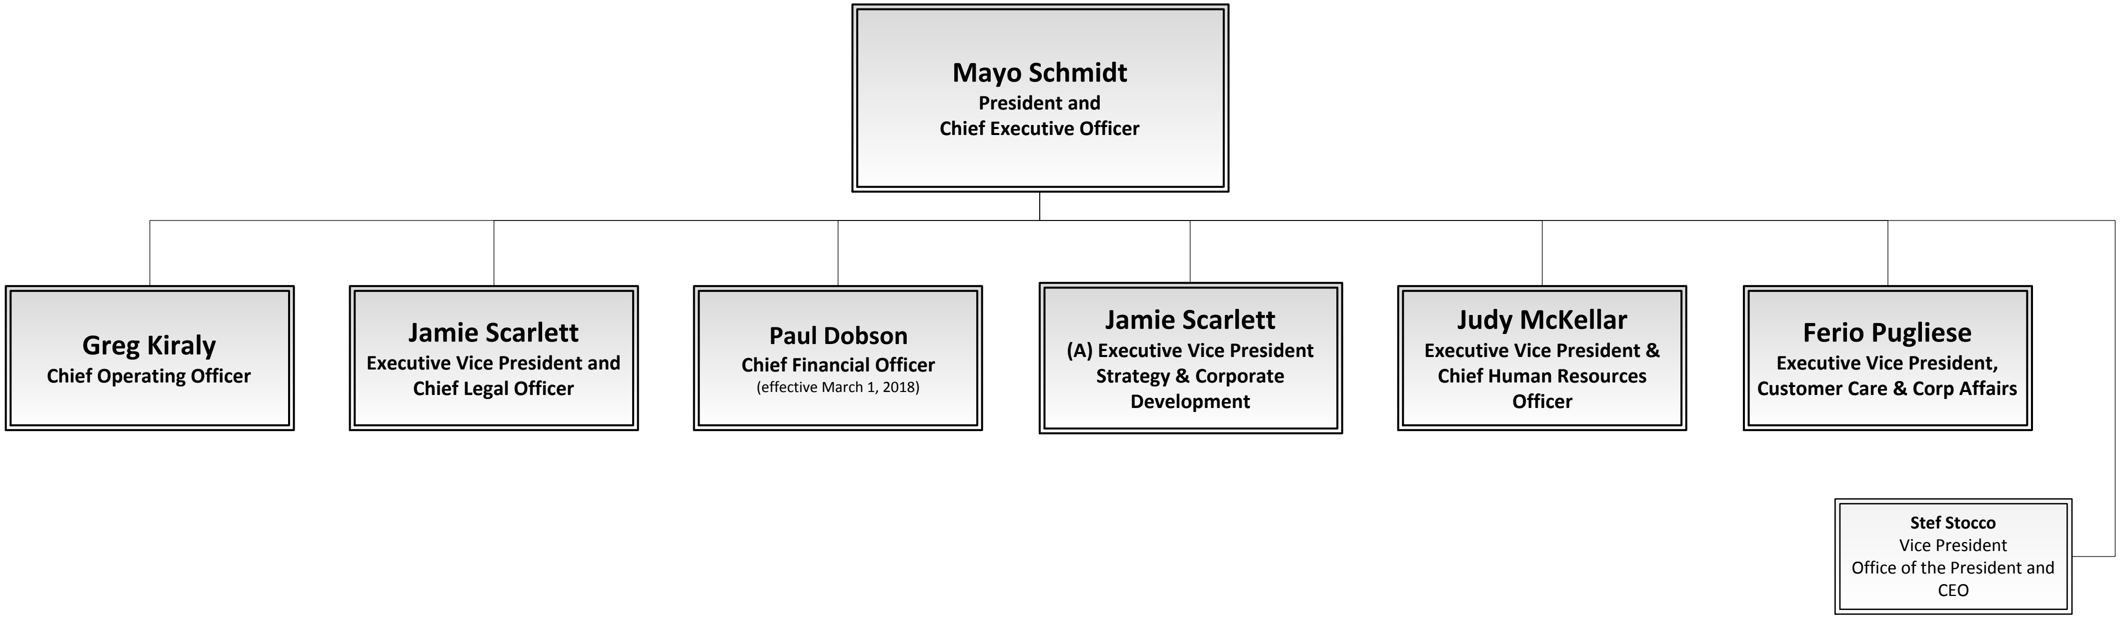
Interrogatory:

Please provide a full Hydro One Networks Inc. organizational chart.

Response:

Please see attached organizational charts for direct reports to the President and CEO to the Director level.

President and Chief Executive Officer



Operations

- **Greg Kiraly**
  Chief Operating Officer
  - **Paul Madore**
    Pres. & CEO, Hydro One Telecom
  - **Bing Young**
    Vice President
    Engineering
  - **Andrew Spencer**
    Vice President
    Transmission & Stations
  - **Brad Bowness**
    Vice President
    Distribution
  - **Darlene Bradley**
    Vice Presidet
    Planning
  - **Robe Berardi**
    VP
    Shared Services
  - **Martin Huang**
    VP
    System Operations
  - **Kraemer Coulter**
    Managing Director
    Remote Communities

Distribution

- **Brad Bowness**
  Vice President
  Distribution
  - **Alex Turpin**
    Director
    Distribution Lines
  - **Tom Jackson**
    Director
    Forestry
  - **David Price**
    Superintendent
    Forestry Work
    Management
  - **Scott Vicary**

School Energy Coalition Interrogatory # 6

Issue:
Issue 3: Is the overall increase in the distribution revenue requirement from 2018 to 2022 reasonable?

Reference:
None

Interrogatory:
Please provide summaries of all internal audit reports conducted since 2014, related to any aspect that directly or indirectly relates to Hydro One's distribution business, their findings, recommendations, and the status of any actions that are to be taken.

Response:
Please see filed MS Excel I-03-SEC-006.

School Energy Coalition Interrogatory # 7

Issue:

Issue 3: Is the overall increase in the distribution revenue requirement from 2018 to 2022 reasonable?

Reference:

A-03-01-03, Attachment A-B

Interrogatory:

With respect to Hydro One's Internal Audit Report, *Auditor General Report 2016 Follow-up*:

a) The report states that management commits to Task 49 (p.9) which is an independent third-party review of its DSP (p.12). Is the AESI review located at Exhibit B1-2-1, the third-party review referenced in Task 49? If not, please provide a copy of the independent third-party review of Hydro One's DSP.
b) Please provide a similar table to Appendix B showing all tasks that had been completed before September 30, 2016 (i.e. all Tasks that came out of the response to the Auditor General's Report and are not listed in Appendix B).
c) Please provide an updated status on all outstanding Tasks required to be completed listed in Appendix B, and the date they were completed.
d) If Tasks 46 and 48 are now complete, please provide results of the reviews/analysis.
e) [A-3-1, Attachment 4, p. 10] Hydro One says "Internal Audit validated 39 activities as completed in Sept 2016. As a follow-up, at the end of March 2017, a request was made to Internal Audit to validate evidence on the remaining items completed over the timeframe of Oct 2016 to March 2017. This will take place before the end of 2017." If Hydro One's Internal Audit has completed this work to date, please provide a copy. If not, please undertake to provide a copy when the information becomes available.

Response:

a) Yes, the AESI review is the third party review referenced in Task 49.

b) Please see Table 1 in Appendix A for all tasks completed by September 30, 2016.

c) Please see Attachment 6 to Exhibit I-3-SEC-8 (Internal Audit Report: Auditor General Follow-up 2017) for an updated status on tasks listed in Appendix B.

Witness: KIRALY Gregory

d) Task 46 and 48 are complete.

Task 46: As noted in Attachment 1, the results of the assessment of past maintenance expenditures and activities, with a focus on critical factors and contributors to the distribution reliability measures have been incorporated into the development of the DSP and specific investment justifications.

Task 48: The identified benchmarking studies have been included in the DSP.

- Distribution Unit Cost Benchmarking Study: Pole Replacement and Substation Refurbishment included in DSP – Ex B1-1-1, Section 1.6, Attachment 1 (page 2000 of 2930)
- Hydro One Vegetation Management Study 2016 included in DSP – Ex B1-1-1, Section 1.6, Attachment 2 (page 2035 of 2930)

e) Please see Attachment 6 to Exhibit I-3-SEC-8.

Appendix A

Table 1: AG Recommendation Task Numbers – Tasks completed as of September 30, 2016

AG Recommendation	Task #	Management Commitments
1	1	Conduct assessments on poor performing single circuit transmission lines consistent with the Customer Delivery Point Performance Standard.
	2	Continue to analyze outage data to identify reliability issues and identify investments to improve customer reliability in accordance with the OEB’s Customer Delivery Point Performance Standard (CDPPS).
	5	Implement Planning-Stage work-bundling strategy to combine planned maintenance to reduce planned outages, reducing the risk of delivery point interruptions.
	7	Continue to report on System Reliability through the CEA
2	8	Identify Preventive Maintenance backlog
	9	Perform analysis to confirm "completed" orders are appropriately documented
	10	Document existing Preventive Maintenance strategy and process.
3	12	Provide clear explanation regarding our transformers and breakers replacement strategy, selection process and execution methodology as part of the 2017/18 Tx Rate Application.
	13	Provide information specific to key assets replaced in 2015, 2016 or planned to be replaced, and reasons for deferrals.
	14	Provide information specific to key assets planned to be replaced in 2017 and 2018 with justifications and possible deferrals as part of the 2017/18 Tx Rate Application.
4	15	Engage a third party expert to review the transformer fleet health assessment.
5	16	Re-evaluate the augmentation of the AA tool to include the additional risk factors (i.e. Environmental/H&S, Obsolescence)
	19	Define accountabilities for change control for all asset classes.
	20	Identify all Tx data included in Asset Analytics and implement project to populate these elements
	21	Implement strategy to populate absent legacy asset data
	22	Replace Asset Analytics Google earth view to provide a more accurate view of the Tx system
	23	Address backlog of Transmission Lines GIS updates.
6	25	Re-prioritize resources to address actions deferred from previous internal audits through a data remediation project

AG Recommendation	Task #	Management Commitments
7	28	Continue Planning-stage work bundling to allow integrated outage scheduling and integrated work execution and minimize outages.
	29	Conduct benchmarking and best practice studies with other North American transmitters for reliability and cost improvements, consistent with OEB direction
8	31	Develop and implement a new comprehensive security program which will apply to all electronic devices, including the hardening of deployed devices.
9	33	Establish an Investment Plan for the 2017-2022 period which identifies projects to improve reliability.
	34	Monitor project completions as part of monthly reporting process and incorporate remote monitoring and control into investment scopes.
	35	Update asset portfolio documents for vegetation management to include reliability management of Large Distribution Account customer feeders.
	36	Establish Vegetation Management prioritization matrix to increased emphasis on reliability to provide execution teams more direction. Introduce more granular work accomplishment reporting as part of monthly reporting cycle.
	37	Develop strategies for cost-effective investments to improve reliability, including increased line and distribution station renewal; relocating assets to road allowances to improve access and facilitate fault-finding; enable control room visibility and controllability of devices, and prioritizing vegetation management programs to focus on reliability to large commercial/industrial customers.
10	38	Introduce an eight-year vegetation management cycle over the longer term.
	40	Prioritize vegetation management on feeders with more frequent tree-related outages.
	41	Conduct annual vegetation management program review to identify issues and action plans for improvement.
11	43	Enable the interface between the Distribution GIS system and Asset Analytics to make recent design changes visible.
12	44	Continue to maximize asset life expectancy and optimize work efficiency for pole assets based on operations, maintenance and conditions under which the asset is used.
	45	Continue to base asset replacement decisions based on condition, not age.
13	47	Participate in benchmarking studies, as directed by OEB, to support its approaches to investment, maintenance and sustainment activities to be included in the next distribution rate application.
15	51	Review Forecasting Model for predicting Transformer failures

Witness: KIRALY Gregory

AG Recommendation	Task #	Management Commitments
	53	Develop a plan to standardize Distribution Transformers and implement a rationalization strategy to reduce the number of types of transformers
	54	Review plans for further rationalize the number of types of Transmission transformers
	55	Conduct detailed review of Tx Spares models & compliment needs
	59	Quantify Savings from moving from (current) 14 Standards to fewer Standards
	60	Develop a strategy to reduce number of Tx spare transformers in inventory from 44 to 28 over next 10 years
	61	Develop a Strategy and Process to determine DS Spare Transformer scrapping and purchase requirements
16	65	Provide PQ information to Tx-connected customers, including estimates of frequency and duration of potentially disruptive voltage sag events tailored to the customer's specific connection point.
	66	Perform detailed analysis of PQ data to improve estimation of the frequency, duration and magnitude of potential events that could have an adverse effect on its equipment and processes.
	67	Provide PQ reports to identified customers
17	69	Review contingency and escalation allowances used in Capital project estimates and establish an internal guideline in line with industry benchmarks
	70	Implement a project closure process for larger projects to ensure work is completed as planned, project estimates are compared against actuals, all variances are explained and learnings are incorporated into future projects; Include originally approved budget and in-service dates
	71	Implement a process to provide a yearly summary of completed projects to compare project estimates to final project costs and determine "success rate" over the next 10 years

School Energy Coalition Interrogatory # 8

Issue:

Issue 3: Is the overall increase in the distribution revenue requirement from 2018 to 2022 reasonable?

Auditor General of Ontario 2017 Annual Report, Vol 2, Chapter 1, Section 1.06, http://www.auditor.on.ca/en/content/annualreports/arreports/en17/v2_106en17.pdf

Interrogatory:

With respect to the Auditor General of Ontario's Follow-Up Report to its 2015 Annual Report on Hydro One:

a) Please provide copies of all correspondence and information exchanged between the Auditor General and Hydro One regarding the 2015 Annual Report follow up.

b) The Auditor General of Ontario notes with respect to Recommendations 11, 12, 13, 14, 15, 16, 17 and 18, Hydro One did not provide requested information, details, and/or supporting documents. For each recommendation, please provide the information, details and/or supporting documents requested by the Auditor General of Ontario.

Response:

a) Please see Attachments 1-5 for letters Hydro One exchanged with the Auditor General of Ontario.

b) For clarity, there are 17 recommendations from the Auditor General, not 18. Please see Attachment 6 for the Internal Audit – Auditor General Report Follow-up 2017, which has been redacted for items specific to Hydro One's transmission business.

April 26, 2017

Bonnie Lysyk
Auditor General of Ontario
Box 105, 15th Floor
20 Dundas Street West
Toronto, ON
M5G 2C2

Dear Ms Lysyk,

On behalf of Hydro One, I wish to thank you for the opportunity to follow up on your *2015 Annual Report,* and the related section 3.6 – *Hydro One: Management of Electricity Transmission and Distribution Assets.* As you may know, since becoming a private company in 2015, it has been a priority of Hydro One's executive leadership team to change the way Hydro One does business. We are transforming Hydro One into an industry leading customer-centric organization; advocating for our customers and communities; and have applied great rigor to ensure that at every level, we are driving productivity and operational efficiency throughout the Company.

While we are no longer bound by many of the rules governing a Crown Corporation, it is our pleasure to provide you with an update to our March 23rd, 2016 appearance before yourself and the Standing Committee on Public Accounts.

The *2015 Annual Report* highlighted 17 recommendation areas. Hydro One has committed to completing 71 remedial activities, of which:

- A total of 66 are now completed,
- Two (2) activities will be completed by May 2017, and
- The remaining 3 items will be completed by the end of 2017.

These recommendations have been grouped into 12 functional areas, with the appropriate recommendations noted in the subject headers along with a high-level brief on the activities completed and status below.

1. Transmission & Distribution Systems Reliability Performance [Rec: 1, 9] (Complete ✓)

Recommendations included setting multi-year targets and timetables for reducing the frequency and duration of power outages and establishing cost-effective action plans and strategies to improve reliability performance. Also, to more thoroughly analyze outage data on both our transmission single and multi-circuit systems.

Activities Completed:

- To improve our ability to more accurately measure the effect of system investment on transmission reliability, Hydro One has supplemented its existing analysis with an additional model to quantify reliability risk which provides a directional indication of the effect of system investment on future transmission system reliability. This was introduced in the latest transmission rate filing application.

- Organizational changes were implemented in 2016 to establish a Planning Analytics team that works closely with the asset planners. This has enabled better performance analysis and integration into the Investment Planning process.

- Multi-year transmission and distribution reliability targets are in development and will be set by the end of April 2017.

- Transmission Strategies have been implemented to combine planned maintenance activities into a single work-stream to enable the reduction of planned outages, creating outage and work bundling opportunities in the execution phase, hence reducing the risk of customer delivery point interruptions.

- Annual iterative processes are now in place to conduct detailed analyses on transmission customer delivery point performance and determine investment options for outliers. This enables integration into future business plans through an annual review of the interruption data to identify the main issues that are negatively impacting the system's reliability.

- Annually, a comprehensive analysis of the 5- and 10-year historic transmission reliability performance is executed. Within this process, opportunities identified within Hydro One's control are the primary focus; these are further investigated for remediation investment options in accordance with the Customer Delivery Point Performance Standard (CDPPS). Communication to affected customers on plans for outlier improvement activities occurred for the first time in 2016 and is now an annual iteration.

- A high-level analysis of the 5-year historic transmission reliability performance vs maintenance program spend was completed, identifying opportunities for shifting of program funds to asset classes which contribute significant duration minutes to overall reliability performance.

- A comprehensive review of the outstanding deficiency reports (i.e. Defect Notifications, DRs) across all the asset hierarchies: T&D Stations & Lines (and Forestry program) has been completed, ensuring that no open DRs of a critical rating are unaddressed. This action ensures that no know deficiencies are overlooked and mitigates the impact equipment failures can have on planned outages.

- The Distribution System Plan (DSP) for the 2017-2022 timeframe has been developed and included in the recent rate filing submission. Strategic updates based on customer consultation feedback were incorporated in late 2016 along with adjusted investments in programs to improve reliability on specific under-performing assets.

- Distribution Strategies implemented include: Increasing Programs for line renewal and distribution station renewal; moving the location of rebuilt lines from off-road line sections to road allowances to improve access and facilitate fault-finding; enabling control room visibility and controllability of many devices, and prioritizing vegetation management programs to focus on reliability to large commercial/industrial customers.

- Distribution investment prioritization matrix has been updated to include greater weighting on reliability and more priority categories to give field crews more direction for work throughout and better visibility to important feeders. This includes off ramps in the program (forestry) to cut lower priority work if funding constraints are encountered.

- Monitoring of distribution work accomplishments on a more granular level (including project completions) are in place and reported monthly. Station refurbishments include monitoring and control in the scope of work and Line switch remote controllability is monitored annually to demonstrate number of controllable points.

2. Transmission and Distribution Systems Spend Related to Reliability [Rec 7, 13] (Complete ✓)

Recommendations included conducting an assessment of past maintenance expenditures and activities to determine what changes and improvements can be made to more effectively focus efforts on the critical factors that improve system reliability and to conduct benchmarking cost assessments related to reliability.

Activities Completed:

- Transmission: Several activities were completed in the areas of reviewing of maintenance expenditures, reliability performance, enabling work bundling opportunities and deficiency reports. All of these activities are listed above under item 1.

- Transmission: Cost and reliability performance benchmarking was completed by Navigant and submitted as part of the 2017-2018 rate filing application.

- Distribution: An assessment of past maintenance expenditures and activities was completed, with a focus on critical factors and contributors to the distribution reliability measure. Strategic updates to distribution programs and projects, based on customer consultation feedback, were undertaken in Q3 2016, are supported by standardized Investment Summary Documents (ISDs) which are included in the Distribution System Plan.

- Distribution: Hydro One participated in benchmarking studies, to support its approaches to the investment, maintenance and sustainment activities included in the recently filed distribution rate application. Studies included vegetation management, pole replacement program, and station refurbishment program.

- Distribution: In 2016 Hydro One undertook an independent third-party review of the Distribution System Plan, providing unit cost validation for forestry, pole replacement and station refurbishment programs.

3. Transmission and Distribution Assets in Service Beyond Their Expected Life [Rec 3, 4, 12] (Complete ✓)

Recommendations included ensuring that its applications for rate increases to the Ontario Energy Board provide accurate information on its asset replacement activities, including whether it actually replaced assets in poor condition that were cited in previous applications and whether the same assets are being resubmitted. In addition, the findings have recommended targeting assets that have exceeded their planned useful service life and have the highest risk of failure and to re-assess its practice of replacing assets that are rated as being in good condition.

Activities Completed:

Context Clarification: As defined in our latest rate filing evidence, the expected service life is the average time in years that an asset can be expected to operate under normal system conditions. It does not imply the asset will need immediate replacement beyond this period of time. Hydro One operates a fleet of assets that are beyond expected service life. However, Hydro One's asset management objective is to maintain asset performance while minimizing full life cycle costs. This is accomplished through proper maintenance and timely replacement which are detailed in our application. This approach benefits ratepayers by minimizing rate increases.

- The Auditor General made a recommendation that Hydro One should be replacing assets based on their age rather than their condition. Hydro One employs investment planning processes, systems and trained planning Engineers to make prudent renewal plans based on multiple risk factors. The Company's experience is that our expected service life for various assets is appropriate given the operations, maintenance and conditions under which they are used. Hydro One does not replace assets that, while old, are in good working condition. The aim is to maximize the life expectancy of an asset and optimize work efficiency in order to derive the most value from our investments.

- The expected service life values for key asset classes was reviewed, found to be valid and in line with other utilities. Replacement rates and pacing of investments are reflected in both the transmission and distribution rate applications and aligned with the customer consultation needs and preferences.

- Transformers and breakers replacement strategies, selection process and execution methodology are clearly outlined in our rate filing evidence, providing the rationale behind each replacement.

- Transmission: A third party industrial expert, Electric Power Research Institute (EPRI), reviewed our transformer fleet health (condition) assessment. This supports our fleet health assessment methodology to verify that rate increases accurately reflect asset replacement activities.

Context Clarification: The Auditor General made conclusions regarding the deferral or delay in replacing transmission transformers. This conclusion was solely based on asset condition information but without the benefit of the full information that Hydro One uses in determining asset replacement. Asset Condition is not the sole consideration in determining the need to replace an asset. These replacement decisions take into account many factors; conversely, assets in good condition may need replacement based on other factors such as environmental, health and safety, inadequate capacity and customer needs and preferences, while assets that are deteriorated may be deprioritized due to their having a less material impact on the system.

- Transmission: All transformers selected for replacement in 2017-2018 are supported by detailed assessments and engineering reports. Replacement is anchored by an overarching strategy document. Individual transformer replacement decisions are based on Asset Risk Assessment process as outlined in rate filing evidence.

4. Information Provided to OEB in Rate Applications [Rec 6] (Complete ✓)

Recommendations included ensuring that Hydro One's applications to the Ontario Energy Board for rate increases include accurate assessments of the condition of its assets.

Activities Completed:

Context Clarification: Hydro One endeavors to ensure all data submitted to the OEB for rate setting purposes accurately reflects its forward test year plans. In making this statement, the Auditor General appeared to have focused on investments that appeared in successive applications. In practice, investments are sometimes delayed due to work execution delays or other factors including changes in priority due to changing circumstances since the last rate application.

- To address this concern Hydro One has provided evidence supporting the 2017-2018 capital spending plans. These plans are based on the best information available at the time of filing the application. Hydro One is also prepared to explain variations from its previous plans and/or OEB approved spending amounts, compared to actual work completed. In addition, data quality improvement activities explained under item 5 below.

5. Asset Analytics System – Data Remediation [Rec 5, 11] (Mostly Complete ☑)

Recommendations included enhancing the Asset Analytics system to include information on all key factors that affect asset investment decisions; review and adjust current weighting assigned to risk factors to more accurately reflect their impact of asset condition and risk of failure; and make changes to procedures so that updates to Hydro One's data are complete, timely, reliable and accurate to ensure the information can support our asset replacement decision making process.

Activities Completed:

Context Clarification: The purpose of Asset Analytics is to provide asset planners with convenient access to asset data and assess emerging risk factors in an efficient manner. Decisions to replace assets are made by the asset planners in part based on Asset Analytics output and also based on many factors fully described in our rate filing evidence. Asset Analytics is one tool to aid in decision making, but it is not the only factor considered.

A data remediation project was established in 2015 to address the data quality, population levels, processes and functionality issues related to the Asset Analytics tool. The focus was on data used in the AA algorithms.

Significant data and functionality improvements for Asset Analytics were completed over 2015-2016, with key activities as follows:

- Metrics: Dashboards for population levels, missing data reports and effectiveness of new assets completeness have been established for all of the Transmission and Distribution asset hierarchies.
- Data: Transmission Stations data has been increased from 35% to 85%, Transmission Lines from 50% to 70%, with new assets consistently close to 100% population.
- Data: Distribution Stations data has been increased from 35% to 60%, Distribution Lines data is a current focus, starting at 69%, with a plan to get to 85% by year end. This work is in progress.
- GIS: A backlog of more than two years of TLGIS updates has been completed; and the distribution MADX translator has been fixed. With these fixes in place, transmission and distribution Planners can now see updates using the AA tool to view an accurate transmission and distribution network configuration in a GIS environment.
- Characteristics: ~30-40% of asset characteristics were discarded through workshops conducted to confirm "needs" tied to business needs. This eliminates many data fields that were being collected but not required. All characteristic data has been assigned a priority rating, high priority data population is showing great improvement.
- Data Templates: More than 250 data templates were revised, for the first time since "go-live" in 2008, enabling better data quality entry and providing clear direction to staff in LOB population roles.
- Legacy population strategies were employed; utilizing default values, data audits/comparisons to other systems, matching of records on key attributes, and some manual entry. All of these contributed to improving the quality and population level of the transmission hierarchies.
- In progress: Distribution data remediation continues, focusing on key activities such as asset counts across multiple systems (i.e. poles, pole-top transformers in GIS, SAP differ at present), development of Lines metrics dashboard and process fixes, targeted completion for main activities is by the end of 2017.

6. **Prioritization of the Distribution System Vegetation Management Program [Rec 10] (Complete ✓)**

Recommendations included shortening the vegetation management cycle to be more cost-effective and in line with other similar local distribution companies and to change the way we prioritize lines that need clearing.

Activities Completed:

- A comprehensive review of the vegetation management program was undertaken and the prioritization model was improved to better support decision-making through the increase in reliability weighting on the risk matrix so that it becomes a major driver of prioritization. The program is reviewed annually.

- The vegetation management program has been adjusted to get feeders to an eight-year cycle over the longer term and in 2016, a new On-Cycle Maintenance Program was introduced. It is not economically feasible to get to a shorter (4-year) cycle as the Auditor General has recommended. Re-focusing work crew deployment and flexible locational work is also being implemented to enable improvement in unreliable areas.

7. **Preventive Maintenance Orders Backlog on Transmission Equipment [Rec 2] (Complete ✓)**

Recommendations included establishing a timetable that eliminates a growing preventive maintenance backlog and improved oversight of preventive maintenance programs to ensure it is completed as required and on time.

Activities Completed:

- Backlog: The identified backlog was partially due to a one-time generation of 2,440 PCB oil sampling orders (consisting of 12,500 equipment) to facilitate execution efficiency. These orders are not expected to be completed until 2021. These oil sample testing orders are to ascertain PCB level in oil filled equipment older than 1985. The result of these testing will determine if the PCB level is >50 ppm, which will help Hydro One determining whether a retro-filling or replacement is needed to comply with federal regulation to phase out PCB by 2025.

- Oversight: There are clearly outline accountabilities, authorities and processes around preventive maintenance orders generation, prioritization, redirection, scheduling, cancellation and deferral. This includes an over-release strategy (8% buffer above and beyond available resources) for maintenance orders to minimize outages. No critical preventive maintenance orders can be deferred without approval from Asset Management.

-

8. Use of Smart Meters Capabilities to Improve Response to Power Outages [Rec 14] (Mostly Complete ☑)

Recommendations included improving customer service and lowering repair costs relating to power outages through more accurate and timely dispatches of its repair crews and to develop a plan and timetable for using our existing smart meter capability to pinpoint the location of customers with power outages.

Activities Completed:

- The Advanced Metering Infrastructure for Operations and the Advanced Metering Infrastructure for Analytics project charters have been reviewed and approved for implementation. This will allow for integration of the smart meter outage data to the outage management system, enable monitoring of asset loading information based on the network topology and proactively allow monitoring of our assets to avoid premature and possibly unplanned asset failures due to overloaded equipment.

- Our pilot technology has continued to deliver value. As a result, in addition to being able to ping meters to determine whether customers have power at their premises and avoid re-dispatching crews for further repair work, it will deliver further value by consolidating multiple meters without power and showing the scope of a power outage to the control room operators.

- *In progress*. Requirements and scope have been solidified and vendors chosen to do the work. Estimated completion and implementation is the end of 2017.

9. Electronic Devices Security Framework [Rec 8] (Complete ✓)

Recommendations included developing a comprehensive security framework to cover all electronic devices ensuring a robust and high level of security for the transmission system to mitigate the risk of service disruptions due to sabotage, vandalism, software viruses, or unauthorized changes to device software or controls.

Activities Completed:

- Hydro One has completed the development of a comprehensive security framework. This framework is called the Hydro One Security Code of Practice which includes the Security Policy and Security Operating Standards for the organization. The Code of Practice was completed and implemented as part of the NERC CIP v5 Standards.

10. **Transmission and Distribution Spare Transformers Fleet [Rec 15] (Complete ✓)**

Recommendations included improving the spares forecasting model; review and adjust spares inventory levels; develop plans to standardize in-service transformers and set targets and timelines for achieving savings.

Activities Completed:

Note: All activities are applicable to both the Transmission and Distribution power transformer spares.

- The Markov Model used to predict spare requirements have been updated; this model utilizes industry proven strategic spares risk analysis methodology to determine the appropriate quantity of operating spares.

- Spares Strategies. Transmission and Distribution Spares strategies have been approved. The strategies address key issues such as (i) reducing existing inventory, (ii) reinforcing first-in-first-out policy, and (iii) establish spare transformers shelf life to trigger mandatory deployment.

- Standardization. Transmission power transformer fleet was reviewed for further standards incorporation and determined that the existing 14 procurement standards are sufficient, limited value in adopting additional standards. Distribution power transformer fleet was reviewed and a refined set of procurement standards was established, reducing from 60 standards down to 45. Quantification of savings and timelines for achieving same has been established and documented.

- A comprehensive review and documentation of power transformer inventory at the Central Maintenance Shop (CMS) was completed and plans are in place to ensure required compliment totals are accurate and maintained. Asset data (including Level 1, 2, 3 spares information) has been updated in the system of record (i.e. SAP) to enable better tracking of available spares and their deployment status. Reviews will be completed annually.

hydro one

11. Power Quality (PQ) Meters Data Use, Helping Customers Avoid Disruptions [Rec 16] (Complete ✓)

Recommendations included minimizing the number and impact of power quality events for its large customers through proactively using the data collected by its power meters to help assess the frequency and location of power quality events on its transmission and distribution systems, thereby improving the reliability.

Activities Completed:

- Hydro One has completed system studies to estimate the magnitude, frequency and duration of power quality voltage sag events. The results of these system studies provide an indication of the number, severity and duration of voltage sag events that a customer may experience and should be able to withstand. These studies are used by Hydro One to identify and undertake initiatives to minimize power quality impacts to customers and customers will be able to use these studies to inform their decisions regarding investments to improve their resilience.

- Hydro One is working with our customers to enable their revenue meters to also serve as PQ meters. This will allow for more effective assessment of PQ events and customer impact. We have also offered the services of 3rd party experts to assess customers' facilities and recommend measures to increase their resilience to minor to moderate PQ events.

12. Management Oversight Processes over Capital Project Costs [Rec 17] (Mostly Complete ☑)

Recommendations included conducting benchmarking to assess capital construction project costs; adherence to industry-normal contingency and escalation allowances; to improve management reporting and oversight of project costs showing actual project costs and completion dates compared to estimates.

Activities Completed:

- A Total Cost Benchmarking study (Navigant) was completed noting a number of benchmarks for project management performance. The internal work breakdown structure has been refined to enable a more efficient, consistent and accurate cost collection process for capturing project actual costs and comparisons.

- Contingency and escalation allowances have been reviewed and redefined. Escalation rates are now in line and consistent with our corporate business plan and we have implemented a quantitative project risk management methodology. In addition, a formalized project closure report process (including all project stakeholders) has been implemented to analyze the project plan and the effectiveness of its execution.

- >*In progress*. Hydro One is currently working to develop relationships with peer Canadian utilities to develop a consistent approach to benchmarking capital project work with an early focus on transmission lines projects and with a subsequent focus to be on substation projects.

I trust that you will find this information helpful as you draft the follow-up reports volume of the 2017 Annual Report. The response to your report is representative of a herculean effort within Hydro One as a part of our transformation from Crown Corporation to a world-class electricity services organization.

Thank you again for allowing us the opportunity to follow up on your 2015 report and for taking the time to review our progress in the intervening years.

Regards,

Daniel Levitan

Hello Gigi,

Thank you again for providing us with an opportunity to review elements pertaining to Hydro One in the Auditor General's upcoming Annual Report. We have reviewed the two sections and have determined that we have no further commentary to provide at this time.

Enclosed you will find the five hard copies that you had provided to us. As per instructions, no copies were made.

Of course, please feel free to call me should you wish to discuss further.

Regards,

Daniel Levitan
Director, Government Relations and Public Affairs

Hello Gigi,

Our detailed letter to the Office of the Auditor General, as with our letter to the Committee on Public Accounts on the same topic was a good faith effort to inform the two entities of the activities raised in the Auditor General's 2015 Annual Report and in Hydro One's subsequent appearance before the Committee.

While we understand your office's intent to further inform the upcoming report, we need to be clear that our letter response was provided as a courtesy and that Hydro One will not be providing any further detail on the matter. Following the passage of Bill 91, *An Act to implement Budget measures and to enact and amend various Acts*, 2015, Hydro One is no longer an agency of the Crown and must act accordingly. Save for providing information for the assembly of consolidated financial statements, Hydro One is no longer subject to inquiries by the Auditor General (Schedule 3, Auditor General Act).

Of course, please feel free to call me should you wish to discuss further.

Regards,

Daniel Levitan
Director, Government Relations and Public Affairs

Dear Ms Lysyk,

Thank you again for allowing us advanced review of our section in your upcoming Annual Report. As we have discussed with your office, while we appreciate the opportunity, we have no comments to provide on the findings contained in the Report.

Regarding your request for a letter of representation, I note that, as Hydro One is no longer participating in the audit process, nor is it currently being audited, it is not appropriate for management of Hydro One to sign an audit representation letter. Accordingly, we respectfully decline the request to sign the letter you had sent over, or any similar document.

Regards,

James Scarlett

M5G 2P5

Dear Mr. Levitan:

Enclosed are two copies of the preliminary draft report of our follow-up on the 2015 audit of *Hydro One: Management of Electricity Transmission and Distribution Assets* as well as two copies of the preliminary draft report of our follow-up on the December 2016 Standing Committee on Public Accounts report on *Hydro One: Management of Electricity Transmission and Distribution Assets*. These follow-up reports are based primarily on the information provided to us by you and your staff this year, and supplemental information provided by your staff in response to our questions and review.

Copies of the draft reports are part of our working papers and must therefore be kept strictly confidential and are not to be copied. Please keep track to whom copies are provided and return them to us after the reports have been finalized. As well, please provide us with an email indicating who has received a copy of the draft follow-up report as soon as possible.

In order to adhere to our Follow-up Report preparation and publishing schedule, I would appreciate it if you could please provide me with any comments on the contents of the draft reports by August 9, 2017. If you would like to discuss the content of the reports or have any questions, please contact me at 416-212-7094.

To meet new Canadian auditing standards, we are requesting deputy ministers and assistant deputy ministers, as well as organization CEOs and vice presidents or equivalents, to sign a management representation letter. I have enclosed a representation letter dated August 16, 2017 to you. Upon finalization of these follow-up reports, I will request that the signed letter be provided to me.

Sincerely,

Gigi

Gigi Yip

Final Report Issued: November 28, 2017
Draft Report Issued: October 17, 2017
Report Number: 2017-19

Lead Auditor: William Chan
Audit Manager: Jeff Schaller

EXECUTIVE SUMMARY

Background:

In November 2016, Internal Audit completed a follow-up audit[1] of the control environment to address the recommendations made in the 2015 Auditor General's Report. Based on Internal Audit's 2016 follow-up audit, 31 committed management actions remained outstanding. There were 8 management actions that had target completion dates beyond September 30, 2016 that were not formally assessed as part of the 2016 follow-up and were identified in that report as "work in progress". These actions, along with the 23 committed management action items found to be partially or substantially complete in the 2016 follow-up, were assessed as part of a follow-up we recently performed. The management and resolution of the action items outlined in this report is important to the company as it can have a significant impact on corporate reputation, as well as the overall efficiency of work performed to maintain our assets in ensuring a safe, reliable, and cost effective electricity supply for our customers.

Objective and Scope:

The objective of this audit was to perform a follow-up review of the outstanding committed management actions associated with the follow-up audit report completed in 2016, and to provide the status of Hydro One's actions to address the recommendations outlined in the 2015 Auditor General's Report. Our work involved a review of the status of these actions and the degree to which they address the issues (design effectiveness).

Our work included:

- A review of the available evidence supporting the status of the 31 committed management actions (that were not previously verified as complete) in Hydro One's response to the 2015 Auditor General's Report, to provide assurance that a process is in place to address all of the recommendations. As agreed with management, the evidence provided by a cutoff date of August 31, 2017 formed the basis of this assessment.[2]
- Updating our understanding of the key controls that provide assurance relative to the audit objective.
- Interviewing and discussion with accountable management, staff and stakeholders regarding completeness of committed actions.
- Briefing management on any gaps throughout the review.
- Recommending improvements, where appropriate.

The scope of our work did *not* include an assessment of the management commitments assessed as complete in the 2016 follow-up review, or the propriety of the Auditor General's recommendations.

Success Factors:

We noted that the following success factors were in place:

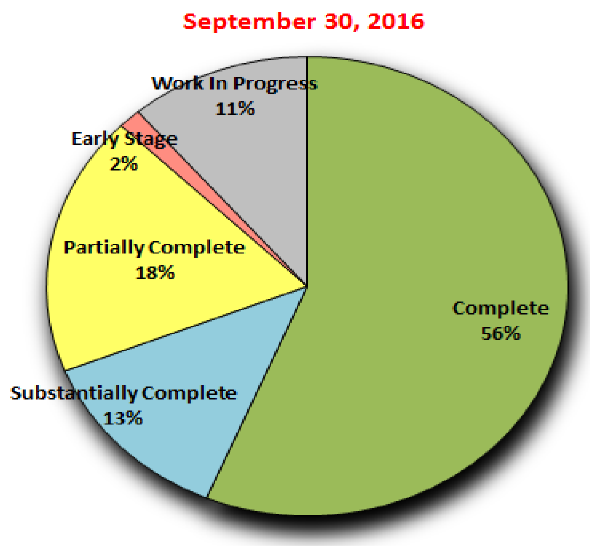
- A single accountable Director was assigned to coordinate with the lines of business to establish, assign, prioritize, and schedule the required actionable tasks.
- A mechanism to track and report on all completed and outstanding actions was established.

[1] Auditor General Report Follow-up 2016 Report Number: 2016-18
[2] Additional evidence was taken into account during the preliminary observations meeting on October 18, 2017.

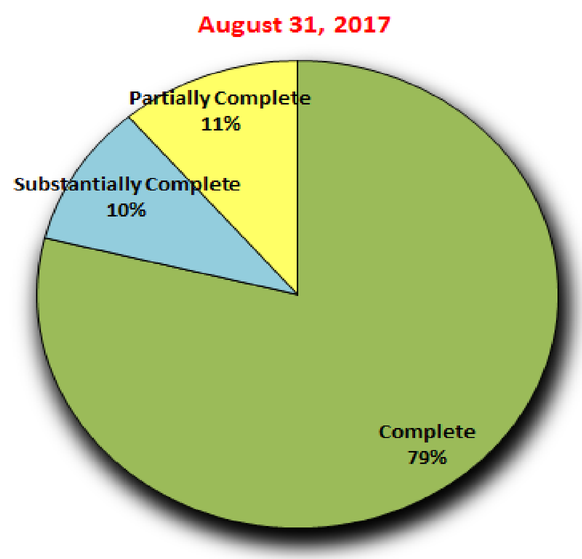
- All actions were assigned a target completion date by the respective line of business Directors with management status update comments provided at milestone points of March 31, 2017 and June 15, 2017 for most of the actions.
- There were 2 actions that had target completion dates beyond August 31, 2017. We reviewed evidence provided by management and have observed that progress is being made on these actions.

Summary of Observations:

The charts shown below provide an illustrative comparison of the summary status of Hydro One's committed actions as determined during the 2016 and 2017 follow-up audits.



Management Committed Actions	Actions Complete	Substantially Complete	Partially Complete	Early Stage	Work In Progress
71	40	9	13	1	8



Management Committed Actions	Actions Complete	Substantially Complete	Partially Complete	Early Stage	Work In Progress
71	56	7	8	0	0

The following table shows the status of the 31 actions which we assessed as at the conclusion of this review, with further details outlined in Appendix A, along with definitions of the assessment levels.

Auditor General Recommendations	Outstanding Management Committed Actions	Actions Complete	Substantially Complete	Partially Complete	Early Stage	Work In Progress
17	**31**	**16**	**7**	**8**	**0**	**0**

* Definitions of the degree of completeness can be found in the table at the end of this Executive Summary.

On June 15, 2017, management reset the target completion dates for all outstanding actions. Of the 31 actions due on or before August 31st, 2017, management reported 19 actions as complete.

The key observations we made are intended to facilitate the completion of the remaining management actions as originally committed in response to the Auditor General's Report recommendations:

- An initiative is presently in place to establish data governance and guidelines to improve data quality within the organization; however the evidence continues to show a lack of focus on distribution asset data quality.
- In some cases, management has been considering changes to the previously committed management actions (due to evolving business needs/directions). Currently there is no formal process and approval mechanism to manage the revision of the original management commitments.

We have shared our observations with management. The objective of those meetings was not to elicit any management actions; rather to communicate the outcome of our review. Management demonstrated that it is committed to continue its efforts to complete all of the actions in support of Hydro One's commitments included in the 2015 Auditor General's report.

We would like to thank the management and staff in Strategy and Integrated Planning, Transmission Asset Management, Distribution Asset Management, and Project Management for their assistance during this review.

Assessment of Action Item Status and Control Design Effectiveness by Internal Audit		
Assessment Type	**Assessment Level**	**Description**
Action Item Status	**Complete**	All actions fully address Hydro One's response in the Auditor General's Report.
	Substantially Complete	Action lacking full completion i.e., implementation plan, rollout, approvals or communication.
	Partially Complete	Some actions have been taken, however insufficient completeness for Internal Audit to assess control design effectiveness.
	Early Stage	Little or no action taken. Insufficient completeness for Internal Audit to assess control design effectiveness.
	Work In Progress	Tasks that were planned for completion past the audit timeframe for the 2016 review - i.e. later than September 30, 2016. The design effectiveness on the management action was not assessed as part of the follow-up audit.

Control Design Effectiveness	**Effective**	The actions or controls designed, fully address Hydro One's commitments in the Auditor General's Report.
	Substantially Effective	The actions or controls designed mostly (but do not fully) address the Hydro One's commitments in the Auditor General's Report.
	Partially Effective	The review of control designs indicate that only some risks are mitigated.
	Ineffective	The control design is ineffective. Control improvements needed to address the commitments

Management Response:

Bruno Jesus, Director, Strategy and Integrated Planning

Management agrees with Internal Audit's assessment of our actions to address the recommendations in the 2015 Auditor General's report and we continue to track the status of the remaining actions to their completion.

[redacted]

[3] The assessment criteria on the completion and control design effectiveness of the action items are included in Appendix C.
[4] Transmission Reliability Metric: Transmission System Average Interruption Duration Index.(TxSAIDI)
[5] Insufficient completeness for Internal Audit to assess control design effectiveness.

AG Recommendation 5: Information Systems on Asset Condition incl. Asset Analytics

- Enhance its Asset Analytics system to include information on all key factors that affect asset investment decisions, including those related to technological/manufacturer obsolescence, known defects, environmental impact and health and safety.
- Review and adjust current weighting assigned to risk factors in Asset Analytics to more accurately reflect their impact of asset condition and risk of failure.
- Make changes to its Asset Analytics system and procedures so that updates to its data are complete, timely and accurate.
- Conduct a comprehensive review of the data quality in Asset Analytics to update any incomplete or erroneous information on its assets and to ensure the information can support its asset replacement decision making process.
- Investigate why known deficiencies in the reliability of the Asset Analytics system, such as those found two years earlier by internal audits, have not been corrected by management in a timely manner.

Task #	Task Description (Original Management Commitments)	Assessment of Completion	Assessment of Control Design Effectiveness
16	Re-visit and evaluate the augmentation of the Asset Analytics tool to include the additional risk factors (i.e. Environmental/Health & Safety, Obsolescence)	Partially Complete	N/A
17	Risk Algorithms Review: Conduct a review of the risk factors algorithms and adjust current weightings as necessary to better support the asset replacement decision-making process.	Complete	Effective
18	Improve the data collection, population and monitoring process for SAP data utilized in the Asset Analytics tool.	Partially Complete	N/A
21	Implementation of strategies for the population of absent legacy data (~1 million data fields will be addressed through default populations, derivation, validation, etc.).	Partially Complete	N/A
24	Development of data quality assessments and data audits for all Transmission asset classes.	Partially Complete	N/A

Observations:

- Management has a plan in place to address additional risk factors requirements for Asset Analytics over a 3 year period between 2018-2020. (Task 16)
- Risk factors algorithms have been reviewed and adjusted to better support the decision-making process. (Task 17)
- The data remediation effort has not adequately addressed distribution data completeness. (Task 18, 21)
- There is a lack of sustainable approach over the long term to manage data completeness and data quality. (Task 21)
- The implementation timelines, project scope, recommended targets on data quality and timeliness, roles, and accountabilities have not been adequately stakeholdered during the time of the audit (early September 2017) in order for us to evaluate the effectiveness of the control design. (Tasks 21, 24)

[redacted]

[redacted]

AG Recommendation 9: Distribution System Reliability

- Establish more ambitious performance goals, targets and benchmarks for system performance.
- Develop short- and long-term strategies for new and enhanced activities and cost-effective investments that will improve its overall reliability record.

Task #	Task Description (Original Management Commitments)	Assessment of Completion	Assessment of Control Design Effectiveness
32	Based on the approved funding in the investment plan, DxAM needs to establish multi-year reliability targets and implement the new initiatives (programs) to specifically target improving distribution reliability performance.	Complete	Effective
33, 35, 37	***Requirement to Complete as stated in the 2016 Auditor General follow-up audit:*** *Establish the appropriate funding level with senior management and the Board prior to 2017 Distribution Rate Filing.*	Complete	Effective

Observations:

- Management has established year over year targets 2018-2023 for Distribution SAIDI. Management's commitment was not prescriptive as to which reliability metric(s) would be involved. Ideally, management would establish year over year targets for all metrics that it submits to the OEB, we find that management has met this committed action for Distribution. (Tasks 33,35,37)
- Since Hydro One is committed to reporting SAIDI and SAIFI to the OEB (according to Electricity Reporting & Record Keeping Requirements, May 2016), we suggest that management also establish multi-year targets for SAIFI. (Tasks 33,35,37)
- The Hydro One Business Plan was approved by the Board on December 2, 2016. The Business Plan is the basis for the 2018-2022 Distribution Rate Application, EB-2017-0049 which included new strategies to the vegetation management program, lines sustainment initiatives program, and the worse performing feeders program to drive improvements on overall distribution reliability. (Task 32)

AG Recommendation 10: Prioritization of Vegetation Management Work on the Distribution System

- Shorten its current 9.5-year vegetation-management cycle to a more cost-effective cycle of less than four years, in line with other similar local distribution companies.
- Change the way it prioritizes lines that need clearing so that lines with more frequent tree-related outages are given higher priority and work crews are dispatched sooner.

Task #	Task Description (Original Management Commitments)	Assessment of Completion	Assessment of Control Design Effectiveness
39	Review vegetation-management program and improve prioritization model to support decision-making. Quarterly review of progress in 2016; Annual review in Q3/4 2016.	Complete	Effective

Observations:

- Evidence was provided on the stakeholdering of the vegetation-management program and improvements on the prioritization model. A program accomplishment review was conducted in January 2017.

AG Recommendation 11: Quality of Data for Distribution Assets

- Ensure that management decisions on replacing distribution system assets are made using reliable and complete information, Hydro One should take the actions needed to ensure its Asset Analytics system provides timely, reliable, accurate and complete information on the condition of assets.

Task #	Task Description (Original Management Commitments)	Assessment of Completion	Assessment of Control Design Effectiveness
42	Following the remediation of the Transmission data, Planning will enable a project to focus on the Distribution data. However, due to resource constraints, both of these initiatives are not able to be implemented simultaneously within the business.	Partially Complete	N/A

Observations:

- Based on the evidence gathered on the distribution data (DS, DL) remediation efforts, this project is currently running on an ad-hoc basis with a lack of an implementation schedule nor the establishment of the data completeness and accuracy targets.

AG Recommendation 13: Spending to Maintain Distribution System Reliability

- Conduct an assessment of its past maintenance expenditures and activities to determine how to focus efforts on more critical factors that affect the system.
- Benchmark cost assessments with other similar local distribution companies (LDCs) in Ontario and Canada, and consider implementing the best practices of the leading cost-effective LDCs.

Task #	Task Description (Original Management Commitments)	Assessment of Completion	Assessment of Control Design Effectiveness
46	Assessment of past maintenance expenditures and activities, with a focus on critical factors and contributors to the distribution reliability measure.	Complete	Effective
48	Undertake a third-party review of its distribution system plan that will provide unit cost validation for forestry, pole replacement and station refurbishment.	Complete	Effective
49	Hydro One's Distribution System Plan is under development and we will be having an independent third party review of such in 2016.	Complete	Effective

Observations:

- The asset planning documents for vegetation management, distribution station refurbishment, and pole replacement were completed with the submission of the Distribution System Plan as part of the Distribution Rate Filing.
- Evidence was provided to address the third party review of the Distribution System Plan for the Distribution Rate Filing.

AG Recommendation 14: Smart Meter Capabilities to Improve Response to Power Outages

- Lower its repair costs and improve customer service relating to power outages through more accurate and timely dispatches of its repair crews, Hydro One should develop a plan and timetable for using its existing smart meter capability to pinpoint the location of customers with power outages.

Task #	Task Description (Original Management Commitments)	Assessment of Completion	Assessment of Control Design Effectiveness
50	The Advanced Metering Infrastructure for Operations and the Advanced Metering Infrastructure for Analytics project charters under the larger ADS project have been reviewed and approved for implementation. This will allow for integration of the smart meter outage data to the outage management system.	Substantially Complete	Substantially Effective

Observations:

- The first phase of the Advanced Metering Infrastructure for Operations project has been completed. This established real-time situational awareness outages based on signals received from customer smart meters. It provides an alarm screen showing second by second meter outages and restoration along with a geographic view.
- Operational decisions are made based on the number of outage incidents that were screened that had successful meter pings from the new smart metering tool. A mechanism has been developed to track and monitor the amount of savings from crew dispatch to investigate these incidents.
- As stipulated in the original Advanced Metering Infrastructure for Operations project charter, the full value of this work will be realized through both consistent and systematic use of the meter interrogation capability to analyze power and equipment outage scenarios, and the integration with ORMS, as presently planned for future implementation.
- The integration (Phase 2) of smart meter capabilities with ORMS[6] is still work in progress. To this end, we've reviewed evidence to show that the scope is currently being defined along with the development of an implementation plan.

[6] ORMS: Outage Response Management System.

AG Recommendation 15: Operating Spares Management of Transmission and Distribution Transformers

- Improve the forecasting model it uses for predicting transformer failures.
- Maintain its inventory levels of spare transformers in accordance with the forecasts.
- Develop a plan to standardize in-service transformers as much as possible.
- Set targets and timelines for achieving savings from better managing both spare and in-service transformers.

Task #	Task Description (Original Management Commitments)	Assessment of Completion	Assessment of Control Design Effectiveness
52, 53, 56, 57, 60, 61, 64	***Requirement to Complete as stated in the 2016 Auditor General follow-up audit:*** *Complete management's commitment to review the existing draft strategies and policies on operating spares, make appropriate updates, stakeholder them and formally issue them for use.*	Complete	Effective

Observations:

- Evidence shows that Asset Management has reviewed, stakeholdered, and approved the existing draft strategies and policies (for transmission and distribution operating spare transformer requirement and management) formally issue them for use.

AG Recommendation 17: Oversight on Capital Project Costs

- Use industry benchmarks to assess the reasonableness of capital construction project costs, and whether using internal services and work crews is more economical that contracting out capital projects.
- Use and adhere to contingency and escalation allowances that are more in line with industry norms for capital construction projects.
- Improve its management reporting and oversight of project costs by regularly producing reports that show actual project costs and actual completion dates compared to original project cost estimates, cost allowances used, original approved costs, subsequent approvals for cost increases, and planned completion dates.
- Regularly analyze its success in preparing project estimates by comparing them with final project costs.

Task #	Task Description (Original Management Commitments)	Assessment of Completion	Assessment of Control Design Effectiveness
68	As part of project closure process, compare our internal construction project costs to industry benchmarks of contracting out similar capital work.	Partially Complete	N/A

Observations:

- The benchmarking process was documented in an email response to a request from Internal Audit during the time of the 2017 AG follow-up audit. Management states that there is a general understanding of this benchmarking process among staff, however no evidence was provided to show this process is repeatable and has been stakeholdered with staff involved in the process.
- Evidence shows a comparison was done between "historical actual costs" vs "external estimates". The comparison should also include external actual costs since the final contracted price may vary, especially if it is not a fixed price contract or if there are substantial scope changes involved.
- At the time of the follow-up audit, 2 committed sub-action items remain incomplete.

Establish benchmarking process to compare Internal vs. External costs based on recent Canadian study. Begin with Lines project types.	Oct 2017	On Track
Compare AR 22869 - Q11S/Q12S Actuals vs. costs from historical H1 line projects	*Oct 2017	On Track

- Management is committed to meeting the target completion date of December 31, 2017 on this action item.

Appendix B

Assessment of Action Item Status and Control Design Effectiveness by Internal Audit		
Assessment Type	**Assessment Level**	**Description**
Action Item Status	**Complete**	Evidence exists to demonstrate that the committed actions are complete. All actions fully address Hydro One's response in the Auditor General's Report.
	Substantially Complete	Most actions and control designs are complete, however they are lacking any of the following elements: implementation plan, rollout, approvals, communication, awareness to stakeholders.
	Partially Complete	Actions have been taken on some tasks, however the controls still require further design, stakeholdering, and implementation. Insufficient completeness for Internal Audit to assess control design effectiveness.
	Early Stage	Little to no progress has been made in actions and control designs. Insufficient completeness for Internal Audit to assess control design effectiveness.
	Work In Progress	Tasks that were planned for completion past the audit timeframe for the 2016 review - i.e. later than September 30, 2016. The design effectiveness on the management action was not assessed as part of the follow-up audit.
Control Design Effectiveness	**Effective**	The actions or controls designed fully address the commitments within Hydro One's response in the Auditor General's Report.
	Substantially Effective	The actions or controls designed mostly address the commitments within Hydro One's response in the Auditor General's Report.
	Partially Effective	The review of control designs indicate that only some risks are mitigated.
	Ineffective	The control design is ineffective. Better controls are available to address the commitments within Hydro One's response in the Auditor General's Report.

School Energy Coalition Interrogatory # 9

Issue:

Issue 3: Is the overall increase in the distribution revenue requirement from 2018 to 2022 reasonable?

Daniel Levitan
Director, External Relations

April 26, 2017

Katch Koch
Clerk of the Committee
Standing Committee on Public Accounts
99 Wellesley Street West
Toronto, ON
M7A 1A2

Dear Mr Koch,

On behalf of Hydro One, I wish to thank you for the opportunity to follow up on your December 2016 Report *Hydro One – Management of Electricity Transmission and Distribution Assets.* As you may know, since becoming a private company in 2015, it has been a priority of Hydro One's executive leadership team to change the way Hydro One does business. We are transforming Hydro One into an industry leading customer-centric organization; advocating for our customers and communities; and have applied great rigor to ensure that at every level, we are driving productivity and operational efficiency throughout the Company.

While we are no longer bound by many of the rules governing a Crown Corporation, it is our pleasure to provide you with an update to our March 23rd, 2016 appearance before the Standing Committee on Public Accounts.

The *2015 Auditor General's Annual Report* highlighted 17 recommendation areas. Hydro One has committed to completing 71 remedial activities, of which:

- A total of 66 are now completed,
- Two (2) activities will be completed by May 2017, and
- The remaining 3 items will be completed by the end of 2017.

These recommendations have been grouped into 12 functional areas, with the appropriate recommendations noted in the subject headers along with a high-level brief on the activities completed and status below.

hydro one

1. Transmission & Distribution Systems Reliability Performance [Rec: 1, 9] (Complete ✓)

Recommendations included setting multi-year targets and timetables for reducing the frequency and duration of power outages and establishing cost-effective action plans and strategies to improve reliability performance. Also, to more thoroughly analyze outage data on both our transmission single and multi-circuit systems.

Activities Completed:

- To improve our ability to more accurately measure the effect of system investment on transmission reliability, Hydro One has supplemented its existing analysis with an additional model to quantify reliability risk which provides a directional indication of the effect of system investment on future transmission system reliability. This was introduced in the latest transmission rate filing application.

- Organizational changes were implemented in 2016 to establish a Planning Analytics team that works closely with the asset planners. This has enabled better performance analysis and integration into the Investment Planning process.

- Multi-year transmission and distribution reliability targets are in development and will be set by the end of April 2017.

- [redacted]

- [redacted]

- [redacted]

- [redacted]

- A comprehensive review of the outstanding deficiency reports (i.e. Defect Notifications, DRs) across all the asset hierarchies: T&D Stations & Lines (and Forestry program) has been completed, ensuring that no open DRs of a critical rating are unaddressed. This action ensures that no know deficiencies are overlooked and mitigates the impact equipment failures can have on planned outages.

- The Distribution System Plan (DSP) for the 2017-2022 timeframe has been developed and included in the recent rate filing submission. Strategic updates based on customer consultation feedback were incorporated in late 2016 along with adjusted investments in programs to improve reliability on specific under-performing assets.

- Distribution Strategies implemented include: Increasing Programs for line renewal and distribution station renewal; moving the location of rebuilt lines from off-road line sections to road allowances to improve access and facilitate fault-finding; enabling control room visibility and controllability of many devices, and prioritizing vegetation management programs to focus on reliability to large commercial/industrial customers.

- Distribution investment prioritization matrix has been updated to include greater weighting on reliability and more priority categories to give field crews more direction for work throughout and better visibility to important feeders. This includes off ramps in the program (forestry) to cut lower priority work if funding constraints are encountered.

- Monitoring of distribution work accomplishments on a more granular level (including project completions) are in place and reported monthly. Station refurbishments include monitoring and control in the scope of work and Line switch remote controllability is monitored annually to demonstrate number of controllable points.

2. Transmission and Distribution Systems Spend Related to Reliability [Rec 7, 13] (Complete ✓)

Recommendations included conducting an assessment of past maintenance expenditures and activities to determine what changes and improvements can be made to more effectively focus efforts on the critical factors that improve system reliability and to conduct benchmarking cost assessments related to reliability.

hydro one

Activities Completed:

- [redacted]
- [redacted]
- Distribution: An assessment of past maintenance expenditures and activities was completed, with a focus on critical factors and contributors to the distribution reliability measure. Strategic updates to distribution programs and projects, based on customer consultation feedback, were undertaken in Q3 2016, are supported by standardized Investment Summary Documents (ISDs) which are included in the Distribution System Plan.

- Distribution: Hydro One participated in benchmarking studies, to support its approaches to the investment, maintenance and sustainment activities included in the recently filed distribution rate application. Studies included vegetation management, pole replacement program, and station refurbishment program.

- Distribution: In 2016 Hydro One undertook an independent third-party review of the Distribution System Plan, providing unit cost validation for forestry, pole replacement and station refurbishment programs.

3. Transmission and Distribution Assets in Service Beyond Their Expected Life [Rec 3, 4, 12] (Complete ✓)

Recommendations included ensuring that its applications for rate increases to the Ontario Energy Board provide accurate information on its asset replacement activities, including whether it actually replaced assets in poor condition that were cited in previous applications and whether the same assets are being resubmitted. In addition, the findings have recommended targeting assets that have exceeded their planned useful service life and have the highest risk of failure and to re-assess its practice of replacing assets that are rated as being in good condition.

Activities Completed:

Context Clarification: As defined in our latest rate filing evidence, the expected service life is the average time in years that an asset can be expected to operate under normal system conditions. It does not imply the asset will need immediate replacement beyond this period of time. Hydro One operates a fleet of assets that are beyond expected service life. However, Hydro One's asset management objective is to maintain asset performance while minimizing full life cycle costs. This is accomplished through proper maintenance and timely replacement which are detailed in our application. This approach benefits ratepayers by minimizing rate increases.

- The Auditor General made a recommendation that Hydro One should be replacing assets based on their age rather than their condition. Hydro One employs investment planning processes, systems and trained planning Engineers to make prudent renewal plans based on multiple risk factors. The Company's experience is that our expected service life for various assets is appropriate given the operations, maintenance and conditions under which they are used. Hydro One does not replace assets that, while old, are in good working condition. The aim is to maximize the life expectancy of an asset and optimize work efficiency in order to derive the most value from our investments.

- The expected service life values for key asset classes was reviewed, found to be valid and in line with other utilities. Replacement rates and pacing of investments are reflected in both the transmission and distribution rate applications and aligned with the customer consultation needs and preferences.

- Transformers and breakers replacement strategies, selection process and execution methodology are clearly outlined in our rate filing evidence, providing the rationale behind each replacement.

- [redacted]

Context Clarification: The Auditor General made conclusions regarding the deferral or delay in replacing transmission transformers. This conclusion was solely based on asset condition information but without the benefit of the full information that Hydro One uses in determining asset replacement. Asset Condition is not the sole consideration in determining the need to replace an asset. These replacement decisions take into account many factors; conversely, assets in good condition may need replacement based on other factors such as environmental, health and safety, inadequate capacity and customer needs and preferences, while assets that are deteriorated may be deprioritized due to their having a less material impact on the system.

- [redacted]

4. Information Provided to OEB in Rate Applications [Rec 6] (Complete ✓)

Recommendations included ensuring that Hydro One's applications to the Ontario Energy Board for rate increases include accurate assessments of the condition of its assets.

Activities Completed:

Context Clarification: Hydro One endeavors to ensure all data submitted to the OEB for rate setting purposes accurately reflects its forward test year plans. In making this statement, the Auditor General appeared to have focused on investments that appeared in successive applications. In practice, investments are sometimes delayed due to work execution delays or other factors including changes in priority due to changing circumstances since the last rate application.

- To address this concern Hydro One has provided evidence supporting the 2017-2018 capital spending plans. These plans are based on the best information available at the time of filing the application. Hydro One is also prepared to explain variations from its previous plans and/or OEB approved spending amounts, compared to actual work completed. In addition, data quality improvement activities explained under item 5 below.

5. Asset Analytics System – Data Remediation [Rec 5, 11] (Mostly Complete ☑)

Recommendations included enhancing the Asset Analytics system to include information on all key factors that affect asset investment decisions; review and adjust current weighting assigned to risk factors to more accurately reflect their impact of asset condition and risk of failure; and make changes to procedures so that updates to Hydro One's data are complete, timely, reliable and accurate to ensure the information can support our asset replacement decision making process.

Activities Completed:

Context Clarification: The purpose of Asset Analytics is to provide asset planners with convenient access to asset data and assess emerging risk factors in an efficient manner. Decisions to replace assets are made by the asset planners in part based on Asset Analytics output and also based on many factors fully described in our rate filing evidence. Asset Analytics is one tool to aid in decision making, but it is not the only factor considered.

hydro one

A data remediation project was established in 2015 to address the data quality, population levels, processes and functionality issues related to the Asset Analytics tool. The focus was on data used in the AA algorithms.

Significant data and functionality improvements for Asset Analytics were completed over 2015-2016, with key activities as follows:

- Metrics: Dashboards for population levels, missing data reports and effectiveness of new assets completeness have been established for all of the Transmission and Distribution asset hierarchies.
- [redacted]
- Data: Distribution Stations data has been increased from 35% to 60%, Distribution Lines data is a current focus, starting at 69%, with a plan to get to 85% by year end. This work is in progress.
- GIS: A backlog of more than two years of TLGIS updates has been completed; and the distribution MADX translator has been fixed. With these fixes in place, transmission and distribution Planners can now see updates using the AA tool to view an accurate transmission and distribution network configuration in a GIS environment.
- Characteristics: ~30-40% of asset characteristics were discarded through workshops conducted to confirm "needs" tied to business needs. This eliminates many data fields that were being collected but not required. All characteristic data has been assigned a priority rating, high priority data population is showing great improvement.
- Data Templates: More than 250 data templates were revised, for the first time since "go-live" in 2008, enabling better data quality entry and providing clear direction to staff in LOB population roles.
- Legacy population strategies were employed; utilizing default values, data audits/comparisons to other systems, matching of records on key attributes, and some manual entry. All of these contributed to improving the quality and population level of the transmission hierarchies.
- In progress: Distribution data remediation continues, focusing on key activities such as asset counts across multiple systems (i.e. poles, pole-top transformers in GIS, SAP differ at present), development of Lines metrics dashboard and process fixes, targeted completion for main activities is by the end of 2017.

6. **Prioritization of the Distribution System Vegetation Management Program [Rec 10] (Complete ✓)**

   Recommendations included shortening the vegetation management cycle to be more cost-effective and in line with other similar local distribution companies and to change the way we prioritize lines that need clearing.

Activities Completed:

- A comprehensive review of the vegetation management program was undertaken and the prioritization model was improved to better support decision-making through the increase in reliability weighting on the risk matrix so that it becomes a major driver of prioritization. The program is reviewed annually.

- The vegetation management program has been adjusted to get feeders to an eight-year cycle over the longer term and in 2016, a new On-Cycle Maintenance Program was introduced. It is not economically feasible to get to a shorter (4-year) cycle as the Auditor General has recommended. Re-focusing work crew deployment and flexible locational work is also being implemented to enable improvement in unreliable areas.

7. **Preventive Maintenance Orders Backlog on Transmission Equipment [Rec 2] (Complete ✓)**

Recommendations included establishing a timetable that eliminates a growing preventive maintenance backlog and improved oversight of preventive maintenance programs to ensure it is completed as required and on time.

Activities Completed:

- Backlog: The identified backlog was partially due to a one-time generation of 2,440 PCB oil sampling orders (consisting of 12,500 equipment) to facilitate execution efficiency. These orders are not expected to be completed until 2021. These oil sample testing orders are to ascertain PCB level in oil filled equipment older than 1985. The result of these testing will determine if the PCB level is >50 ppm, which will help Hydro One determining whether a retro-filling or replacement is needed to comply with federal regulation to phase out PCB by 2025.

- Oversight: There are clearly outline accountabilities, authorities and processes around preventive maintenance orders generation, prioritization, redirection, scheduling, cancellation and deferral. This includes an over-release strategy (8% buffer above and beyond available resources) for maintenance orders to minimize outages. No critical preventive maintenance orders can be deferred without approval from Asset Management.

•

8. Use of Smart Meters Capabilities to Improve Response to Power Outages [Rec 14] (Mostly Complete ☑)

Recommendations included improving customer service and lowering repair costs relating to power outages through more accurate and timely dispatches of its repair crews and to develop a plan and timetable for using our existing smart meter capability to pinpoint the location of customers with power outages.

Activities Completed:

- The Advanced Metering Infrastructure for Operations and the Advanced Metering Infrastructure for Analytics project charters have been reviewed and approved for implementation. This will allow for integration of the smart meter outage data to the outage management system, enable monitoring of asset loading information based on the network topology and proactively allow monitoring of our assets to avoid premature and possibly unplanned asset failures due to overloaded equipment.

- Our pilot technology has continued to deliver value. As a result, in addition to being able to ping meters to determine whether customers have power at their premises and avoid re-dispatching crews for further repair work, it will deliver further value by consolidating multiple meters without power and showing the scope of a power outage to the control room operators.

- *In progress*. Requirements and scope have been solidified and vendors chosen to do the work. Estimated completion and implementation is the end of 2017.

9. Electronic Devices Security Framework [Rec 8] (Complete ✓)

Recommendations included developing a comprehensive security framework to cover all electronic devices ensuring a robust and high level of security for the transmission system to mitigate the risk of service disruptions due to sabotage, vandalism, software viruses, or unauthorized changes to device software or controls.

Activities Completed:

- Hydro One has completed the development of a comprehensive security framework. This framework is called the Hydro One Security Code of Practice which includes the Security Policy and Security Operating Standards for the organization. The Code of Practice was completed and implemented as part of the NERC CIP v5 Standards.

10. **Transmission and Distribution Spare Transformers Fleet [Rec 15] (Complete ✓)**

Recommendations included improving the spares forecasting model; review and adjust spares inventory levels; develop plans to standardize in-service transformers and set targets and timelines for achieving savings.

Activities Completed:

Note: All activities are applicable to both the Transmission and Distribution power transformer spares.

- The Markov Model used to predict spare requirements have been updated; this model utilizes industry proven strategic spares risk analysis methodology to determine the appropriate quantity of operating spares.

- Spares Strategies. Transmission and Distribution Spares strategies have been approved. The strategies address key issues such as (i) reducing existing inventory, (ii) reinforcing first-in-first-out policy, and (iii) establish spare transformers shelf life to trigger mandatory deployment.

- Standardization. [redacted] Distribution power transformer fleet was reviewed and a refined set of procurement standards was established, reducing from 60 standards down to 45. Quantification of savings and timelines for achieving same has been established and documented.

- A comprehensive review and documentation of power transformer inventory at the Central Maintenance Shop (CMS) was completed and plans are in place to ensure required compliment totals are accurate and maintained. Asset data (including Level 1, 2, 3 spares information) has been updated in the system of record (i.e. SAP) to enable better tracking of available spares and their deployment status. Reviews will be completed annually.

11. Power Quality (PQ) Meters Data Use, Helping Customers Avoid Disruptions [Rec 16] (Complete ✓)

Recommendations included minimizing the number and impact of power quality events for its large customers through proactively using the data collected by its power meters to help assess the frequency and location of power quality events on its transmission and distribution systems, thereby improving the reliability.

Activities Completed:

- Hydro One has completed system studies to estimate the magnitude, frequency and duration of power quality voltage sag events. The results of these system studies provide an indication of the number, severity and duration of voltage sag events that a customer may experience and should be able to withstand. These studies are used by Hydro One to identify and undertake initiatives to minimize power quality impacts to customers and customers will be able to use these studies to inform their decisions regarding investments to improve their resilience.

- Hydro One is working with our customers to enable their revenue meters to also serve as PQ meters. This will allow for more effective assessment of PQ events and customer impact. We have also offered the services of 3rd party experts to assess customers' facilities and recommend measures to increase their resilience to minor to moderate PQ events.

12. Management Oversight Processes over Capital Project Costs [Rec 17] (Mostly Complete ☑)

Recommendations included conducting benchmarking to assess capital construction project costs; adherence to industry-normal contingency and escalation allowances; to improve management reporting and oversight of project costs showing actual project costs and completion dates compared to estimates.

Activities Completed:

- A Total Cost Benchmarking study (Navigant) was completed noting a number of benchmarks for project management performance. The internal work breakdown structure has been refined to enable a more efficient, consistent and accurate cost collection process for capturing project actual costs and comparisons.

- Contingency and escalation allowances have been reviewed and redefined. Escalation rates are now in line and consistent with our corporate business plan and we have implemented a quantitative project risk management methodology. In addition, a formalized project closure report process (including all project stakeholders) has been implemented to analyze the project plan and the effectiveness of its execution.

- >*__In progress__*. Hydro One is currently working to develop relationships with peer Canadian utilities to develop a consistent approach to benchmarking capital project work with an early focus on transmission lines projects and with a subsequent focus to be on substation projects.

I trust that you will find this information helpful. The response to your report is representative of a herculean effort within Hydro One as a part of our transformation from Crown Corporation to a world-class electricity services organization.

Thank you again for allowing us the opportunity to follow up on our 2015 appearance and for taking the time to review our progress in the intervening years.

Regards,

Daniel Levitan
Director, External Relations

OEB Staff Interrogatory # 10

Issue:

Issue 3: Is the overall increase in the distribution revenue requirement from 2018 to 2022 reasonable?

Reference:

C1-07-02-01

At the above reference, Hydro One calculates the test period regulatory taxes sought for recovery in rates. On December 21, 2017, Hydro One filed Exhibit Q which provided updates to various areas of the previously filed evidence for this proceeding. As part of this update, Hydro One indicated a change to the regulatory tax balance being sought for recovery, however did not provide an updated detailed tax calculation in support of the revised amounts.

Interrogatory:

Please provide an updated regulatory tax calculation for the test period similar to the one provided in Exhibit C1/Tab7/Schedule 2, Attachment 1. Also please update other regulatory tax supporting documents as needed as a result of changes noted in Exhibit Q (i.e. CCA)

Response:

Please see below the updated Calculation of Utility Income Taxes and Calculation of Capital Cost Allowance (CCA).

HYDRO ONE NETWORKS INC.
DISTRIBUTION
Calculation of Utility Income Taxes

OEB Staff Interrogatory # 11

Issue:

Issue 3: Is the overall increase in the distribution revenue requirement from 2018 to 2022 reasonable?

Reference:

C1-07-03

At the above reference, Hydro One indicated that its 2016 Income Tax Return will be submitted as an update to the application once complete, however to date it has not been submitted.

Interrogatory:

Please provide the final (filed) Income Tax Return for 2016.

Response:

Please see attached the final Tax Return for 2016.

Canada Revenue Agency / Agence du revenu du Canada

Code 1501

Scientific Research and Experimental Development (SR&ED) Expenditures Claim

Use this form:
- to provide technical information on your SR&ED projects;
- to calculate your SR&ED expenditures; and
- to calculate your qualified SR&ED expenditures for investment tax credits (ITC).

To claim an ITC, use either:
- Schedule T2SCH31, *Investment Tax Credit – Corporations*, or
- Form T2038(IND), *Investment Tax Credit (Individuals)*.

The information requested in this form and documents supporting your expenditures and project information (Part 2) are prescribed information.

Your SR&ED claim must be filed within 12 months of the filing due date of your income tax return.

To help you fill out this form, use the T4088, *Guide to Form T661*, which is available on our Web site: **www.cra.gc.ca/sred**.

Part 1 – General information

010 Name of claimant: HYDRO ONE NETWORKS INC.	Enter one of the following:
Tax year From: 2016-01-01 (Year Month Day) To: 2016-12-31 (Year Month Day)	Business number (BN): 87086 5821 RC0001
050 Total number of projects you are claiming this tax year: 6	Social insurance number (SIN):

100 Contact person for the financial information	**105** Telephone number/extension	**110** Fax number
Glendy Cheung	(416) 345-6812	
115 Contact person for the technical information	**120** Telephone number/extension	**125** Fax number
Glendy Cheung	(416) 345-6812	(416) 345-6978

151 If this claim is filed for a partnership, was Form T5013 filed? . . . . 1 ☐ Yes 2 ☐ No

If you answered **no** to line 151, complete lines 153, 156 and 157.

153 Names of the partners	**156** %	**157** BN or SIN
1		
2		
3		
4		
5		

Part 2 - Project information

CRA internal form identifier 060
Code 1501

Complete a separate Part 2 for each project claimed this year.

Section A - Project identification

200 Project title (and identification code if applicable)

See schedule

Part 3 – Calculation of SR&ED expenditures

What did you spend on your SR&ED projects?

Section A – Select the method to calculate the SR&ED expenditures

I elect (choose) to use the following method to calculate my SR&ED expenditures and related investment tax credits (ITC) for this tax year.
I understand that my election is irrevocable (cannot be changed) for this tax year.

160 1 ☐ I elect to use the proxy method (Enter "0" on line 360 and complete Part 5.)

162 1 ☒ I choose to use the traditional method (Enter "0" on lines 355 and 502. Complete line 360.)

Section B – Calculation of allowable SR&ED expenditures (to the nearest dollar)

	Line		Amount
SR&ED portion of salary or wages of employees directly engaged in the SR&ED:			
a) Employees other than specified employees for work performed in Canada	300	+	1,595,483
b) Specified employees for work performed in Canada	305	+	
Subtotal (add lines 300 and 305)	306	=	1,595,483
c) Employees other than specified employees for work performed outside Canada (subject to limitations – see guide)	307	+	
d) Specified employees for work performed outside Canada (subject to limitations – see guide)	309	+	
Salary or wages identified on line 315 in prior years that were paid in this tax year	310	+	
Salary or wages incurred in the year but not paid within 180 days of the tax year end	315		
Cost of materials consumed in performing SR&ED	320	+	
Cost of materials transformed in performing SR&ED	325	+	
Contract expenditures for SR&ED performed on your behalf:			
a) Arm's length contracts (see note 1)	340	+	4,275,930
b) Non-arm's length contracts (see note 1)	345	+	
Lease costs of equipment used **before 2014**:			
a) All or substantially all (90% of the time or more) for SR&ED	350	+	
b) Primarily (more than 50% of the time but less than 90%) for SR&ED. (Enter 50% of lease costs if you use the proxy method or enter "0" if you use the traditional method)	355	+	
Overhead and other expenditures (enter "0" if you use the proxy method)	360	+	1,462,594
Third-party payments (see note 2) (complete Form T1263*)	370	+	1,089,769
Total current SR&ED expenditures (add lines 306 to 370; do not add line 315) (Corporations may need to adjust line 118 of schedule T2SCH1)	380	=	8,423,776
Capital expenditures for depreciable property available for use **before 2014** (Do not include these capital expenditures on schedule T2SCH8)	390	+	
Total allowable SR&ED expenditures (add lines 380 and 390)	400	=	8,423,776

Section C – Calculation of pool of deductible SR&ED expenditures (to the nearest dollar)

	Line		Amount
Amount from line 400	420		8,423,776
Deduct			
provincial government assistance for expenditures included on line 400	429	–	393,493
other government assistance for expenditures included on line 400	431	–	
non-government assistance for expenditures included on line 400	432	–	
SR&ED ITCs applied and/or refunded in the prior year (see guide)	435	–	
sale of SR&ED capital assets and other deductions	440	–	
Subtotal (line 420 minus lines 429 to 440)	442	=	8,030,283
Add			
repayments of government and non-government assistance that previously reduced the SR&ED expenditure pool	445	+	
prior year's pool balance of deductible SR&ED expenditures (from line 470 of prior year T661)	450	+	1,491,890
SR&ED expenditure pool transfer from amalgamation or wind-up	452	+	
amount of SR&ED ITC recaptured in the prior year	453	+	
Amount available for deduction (add lines 442 to 453) (enter positive amount only, include negative amount in income)	455	=	9,522,173
Deduction claimed in the year (Corporations should enter this amount on line 411 of schedule T2SCH1)	460	–	
Pool balance of deductible SR&ED expenditures to be carried forward to future years (line 455 minus 460)	470	=	9,522,173

* Form T1263, *Third-Party Payments for Scientific Research and Experimental Development (SR&ED)*

Note 1 – For contract expenditures made after 2013, no amounts for purchasing or leasing capital property can be included.

Note 2 – For third-party payments made after 2013, no amounts for purchasing or leasing capital property can be included.

Part 4 – Calculation of qualified SR&ED expenditures for investment tax credit (ITC) purposes

The resulting amount is used to calculate your refundable and/or non refundable ITC.

Enter the breakdown between current and capital expenditures (to the nearest dollar)

	Line	Current Expenditures	Line	Capital Expenditures
Total expenditures for SR&ED (from lines 380 and 390)	492	8,423,776	496	
Add				
payment of prior years' unpaid amounts (other than salary or wages) (see note 5)	500 +			
prescribed proxy amount (complete Part 5) (Enter "0" if you use the traditional method)	502 +			
expenditures on shared-use equipment for property acquired **before 2014**			504 +	
qualified expenditures transferred to you (see note 3) (complete Form T1146**)	508 +		510 +	
Subtotal (add lines 492 to 508, and add lines 496 to 510)	511 =	8,423,776	512 =	
Deduct (see note 4)				
provincial government assistance	513 –	393,493	514 –	
other government assistance	515 –		516 –	
non-government assistance and contract payments	517 –		518 –	
current expenditures (other than salary or wages) not paid within 180 days of the tax year end (see note 5)	520 –			
amounts paid in respect of an SR&ED contract to a person or partnership that is not a taxable supplier	528 –			
20% of expenditures included on lines 340 and 370	529 –	1,073,140		
prescribed expenditures not allowed by regulations (see guide)	530 –		532 –	
other deductions (see guide)	533 –		535 –	
non-arm's length transactions				
– assistance allocated to you (complete Form T1145*)	538 –		540 –	
– expenditures for non-arm's length SR&ED contracts (from line 345)	541 –			
– adjustments to purchases (limited to costs) of goods and services from non-arm's length suppliers (see guide)	542 –		543 –	
– qualified expenditures you transferred (complete Form T1146**)	544 –		546 –	
Subtotal (line 511 minus lines 513 to 544 and line 512 minus lines 514 to 546)	557 =	6,957,143	558 =	
Qualified SR&ED expenditures (add lines 557 and 558)			559 =	6,957,143
Add				
repayments of assistance and contract payments made in the year			560 +	
Total qualified SR&ED expenditures for ITC purposes (add lines 559 and 560)			570 =	6,957,143

* Form T1145, *Agreement to Allocate Assistance for SR&ED Between Persons Not Dealing at Arm's Length*

** Form T1146, *Agreement to Transfer Qualified Expenditures Incurred in Respect of SR&ED Contracts Between Persons Not Dealing at Arm's Length*

Note 3 – On line 510 (capital) – Only include expenditures made before 2014 by the transferor (performer). Complete the latest version of Form T1146.

Note 4 – On lines 514, 516, 518, 532, 535, 540, 543 and 546 – Only include amounts related to expenditures of a capital nature made before 2014.

Note 5 – For arm's length contracts, only include 80% of the contract amount.

Part 5 – Calculation of prescribed proxy amount (PPA)

A notional amount representing your overhead and other expenditures.

This part calculates the PPA to enter on line 502 in Part 4. Do not complete this part if you have chosen to use the traditional method in Part 3 (line 162).
You can only claim a PPA if you elected to use the proxy method for the year in Part 3 (line 160).

Special rules apply for specified employees. Calculate your salary base in Section A and the PPA in Section B.

Section A – Salary base

Salary or wages of employees other than specified employees (from lines 300 and 307) . . . . 810 +

Deduct

Bonuses, remuneration based on profits, and taxable benefits that were included on line 810 . . . . 812 –

Subtotal (line 810 minus 812) . . . . 814 =

Salary or wages of specified employees

850	852	854	856	858	860
Column 1	**Column 2**	**Column 3**	**Column 4**	**Column 5**	**Column 6**
Name of specified employee	Total salary or wages for the year (SR&ED and non-SR&ED) excluding bonuses, remuneration based on profits, and taxable benefits (to the nearest dollar)	% of time spent on SR&ED (maximum 75%)	Amount in column 2 multiplied by percentage in column 3	2,5 x A x B/365 A = Year's maximum pensionable earnings B = Number of days employed in tax year	Amount in column 4 or 5, whichever amount is less

(Enter total of column 6 on line 816) 816 +

Salary base (total of lines 814 and 816) . . . . 818 =

Section B – Prescribed proxy amount (PPA)

Enter 65% of the salary base (line 818) less 5% of the salary base for the number of 2013 calendar days in the tax year, and less 10% of the salary base for number of days after 2013 in the tax year (use the formula in the guide-line 820) . . . . 820 =

Enter the amount from line 820 on line 502 in Part 4 unless the overall cap on PPA applies to you. . . . .

(See the guide for explanation and example of the overall cap on PPA)

Part 6 – Project costs

Information requested in this part must be provided for **all** SR&ED projects claimed in the year.
Expenditures should be recorded and allocated on a project basis.

	750	752	754	756
	Project title or identification code	Salary or wages in the tax year (Total of lines 306 to 309)	Cost of materials in the tax year (Total of lines 320 and 325)	Contract expenditures for SR&ED performed on your behalf in the tax year (Total of lines 340 and 345)
1.	11-03 Extreme Space Weather Preparedness	40,311		
2.	15-03 Mission Critical Protection Scheme Upgrade Methods	553,077		
3.	16-01 Voltage Stabilization of Distributed Generation	239,513		
4.	16-02 Direct SCADA Architecture	14,027		
5.	16-03 Fibre-based Protection Control and Telecommunicatio	748,555		1,090,747
6.	16-04 Big Data Analytics for Advanced Distribution Solutions			3,185,183
	Total	1,595,483		4,275,930

Part 7 – Additional information

Expenditures for SR&ED performed by you in Canada (line 400 minus lines 307, 309, 340, 345, and 370) **605** 3,058,077

From the total you entered on line 605, estimate the percentage of distribution of the sources of funds for SR&ED performed within your organization.

		Canadian (%)		Foreign (%)
Internal	600	100.000		
Parent companies, subsidiaries, and affiliated companies	602		604	
Federal grants (do not include funds or tax credits from SR&ED tax incentives)	606			
Federal contracts	608			
Provincial funding	610			
SR&ED contract work performed for other companies on their behalf	612		614	
Other funding (e.g., universities, foreign governments)	616		618	

For statistical purposes indicate whether the work you performed falls within the realm of Basic or Applied research (to advance scientific knowledge) or Experimental development (to achieve a technological advancement):

620 1 [X] Basic or Applied research **622** 1 [X] Experimental development

Enter the number of SR&ED personnel in full-time equivalents (FTE):

Scientists and engineers	632	9
Technologists and technicians	634	5
Managers and administrators	636	
Other technical supporting staff	638	

Part 8 – Claim checklist

To ensure your claim is complete, make sure you have:

1. used the current version of this form . . . [X]
2. entered the method you have chosen for reporting your SR&ED expenditures in Section A of Part 3 . . . [X]
3. completed Part 2 for each project . . . [X]
4. filed a completed Schedule T2SCH31 or Form T2038(IND) to claim ITCs on your qualified SR&ED expenditures . . . [X]
5. filed a completed Form T1145*, T1146**, T1174*** and/or T1263**** including any required attachments, if applicable . . . [X]

To expedite the processing of your claim, make sure you have:

1. completed Form T2, *Corporation Income Tax Return* or Form T1, *Income Tax and Benefit Return* . . . [X]
2. filed the appropriate provincial and/or territorial tax credit forms, if applicable . . . [X]
3. retained documents to support the SR&ED work performed and SR&ED expenditures you claimed . . . [X]
4. checked boxes 231 and 232 on page 2 of your T2 return to indicate attachment of Form T661 and Schedule T2SCH31 . . . [X]

* Form T1145, *Agreement to Allocate Assistance for SR&ED Between Persons Not Dealing at Arm's Length*

** Form T1146, *Agreement to Transfer Qualified Expenditures Incurred in Respect of SR&ED Contracts Between Persons Not Dealing at Arm's Length*

*** Form T1174, *Agreement Between Associated Corporations to Allocate Salary or Wages of Specified Employees for Scientific Research and Experimental Development (SR&ED)*

**** Form T1263, *Third-Party Payments for Scientific Research and Experimental Development (SR&ED)*

Part 9 – Claim preparer information

Information requested in this part must be provided for each claim preparer that has accepted consideration to prepare or assist in the preparation of this SR&ED claim. Certification is required on lines 935, 970, and 975.

A $1000 penalty may be assessed if the information requested below about the claim preparer(s) and billing arrangement(s), is missing, incomplete, or inaccurate. Where a claim preparer has prepared or assisted in the preparation of this SR&ED form, the claimant and the claim preparer will be jointly and severally, or solidarily, liable for the penalty.

935 Was a claim preparer engaged in any aspect of the preparation of this SR&ED claim?

1 [X] Yes (complete the claim preparer information table and lines 970 and 975 below)

2 [ ] No (complete lines 970 and 975)

Claim preparer information table

940	945	950	955	960	965
Name of claim preparer (company or individual)	Business number	Billing arrangement code (see codes*)	Billing rate (percentage, hourly/daily rate or flat fee)	Other billing arrangement(s) (Maximum 10 words)	Total fee paid, payable, or expected to pay
1. KPMG LLP	12236 3153 RT0001				
				Total	

*** Billing arrangement codes**

Code	Type of billing arrangement
1	Contingency fee arrangement – where the fee is based on a percentage of the investment tax credit earned
2	Hourly rate
3	Daily rate
4	Flat fee arrangement (lump sum)
5	Other arrangements – describe the arrangement in box 960 in 10 words or less

970 I, CHRIS LOPEZ, certify that the information provided in this part is complete
Name of authorized signing officer of the corporation, or individual (print)
and accurate.

THIRD-PARTY PAYMENTS FOR SCIENTIFIC RESEARCH AND EXPERIMENTAL DEVELOPMENT (SR&ED)

Complete this form for each third-party payment and attach it to Form T661.

For more information on third-party payments:

- See line 370 of Guide to Form T661, *Scientific Research and Experimental Development (SR&ED) Expenditures Claim*;
- Third-Party Payments Policy;
- Consult our Web site: **www.cra.gc.ca/sred**.

Required Information

1. Identification

701 Name of the third party

[redacted]

702 Address (Street number and name)

[redacted]

City	Province / Territory	Postal Code
[redacted]	[redacted]	[redacted]

Total amount paid in the year

$ [redacted]

Identify the research project(s) performed by the third-party entity for the payment

706 Project title (and identification code if applicable)

1 [redacted]

Check the appropriate box to indicate the type of entity:

711	Approved association	1 Yes [ ]	
712	Non-profit SR&ED corporation resident in Canada	1 Yes [ ]	
714	An approved university, college, research institute, or other similar institution	1 Yes [ ]	
716	Granting council	1 Yes [ ]	
718	Other corporation resident in Canada	1 Yes [X]	
721	Are you dealing at arm's length with the recipient?	1 Yes [X]	2 No [ ]

2. Nature of payment

Check the appropriate box to indicate the type of entity:

The payment is for:

731	Experimental development	1 Yes [ ]
732	Applied research	1 Yes [X]
734	Basic research	1 Yes [ ]

736 Briefly explain what the payment is for:

Research and Testing on the impact of humidity on protection
and control equipment

738 Briefly explain how the SR&ED is related to a business that you carry on:

Electricity distribution requires knowledge of the
impact of humidity on equipment logivity and functionality

740 Briefly explain how you are entitled to exploit the results of the SR&ED:

Gain the knowledge and understanding to apply to existing
control and protection equipmment replacement timelines and
life-span assessment

Personal information is collected pursuant to subsections 37(1), 37(11), and 162(5.1) of the *Income Tax Act* (the Act) and is used for verification of compliance, administration and enforcement of the Scientific Research and Experimental Development (SR&ED) program requirements.

Information may also be used for the administration and enforcement of other provisions of the Act, including audit, enforcement action, collections, and appeals, and may be disclosed under information-sharing agreements in accordance with the Act. Incomplete or inaccurate information may result in assessment of monetary penalties and/or delays in processing SR&ED claims.

The social insurance number is collected pursuant to section 237 of the Act and is used for identification purposes.

736 Briefly explain what the payment is for:

The payment is for the development of a cloud-based electricity distribution management system.

738 Briefly explain how the SR&ED is related to a business that you carry on:

A cloud-based electricity management system will allow Hydro
One to offer “Software-as-a-service” to the other power
utilities for managing their DMS in the cloud

740 Briefly explain how you are entitled to exploit the results of the SR&ED:

If the technological limitations were able to remove, Hydro One have the
contractual rights to leverage the results of the SR&ED to license the soluti
ons to other PUCs

Personal information is collected pursuant to subsections 37(1), 37(11), and 162(5.1) of the *Income Tax Act* (the Act) and is used for verification of compliance, administration and enforcement of the Scientific Research and Experimental Development (SR&ED) program requirements.

Information may also be used for the administration and enforcement of other provisions of the Act, including audit, enforcement action, collections, and appeals, and may be disclosed under information-sharing agreements in accordance with the Act. Incomplete or inaccurate information may result in assessment of monetary penalties and/or delays in processing SR&ED claims.

The social insurance number is collected pursuant to section 237 of the Act and is used for identification purposes.

Information is described in personal information bank CRA PPU 441 “Scientific Research and Experimental Development”, in the Canada Revenue Agency (CRA) chapter of *Info Source*. Personal information is protected under the *Privacy Act* and individuals have a right of access to, correction, and protection of their personal information. Further details regarding requests for personal information at the CRA and our Info Source chapter can be found at **http://www.cra.gc.ca/atip/**.

T1263 E (15)

Part 2 – Project information (continued)

Project number **1**

CRA internal form identifier 060
Code 1501

Complete a separate Part 2 for each project claimed this year.

Section A – Project identification

200 Project title (and identification code if applicable)

11-03 Extreme Space Weather Preparedness

202 Project start date	**204** Completion or expected completion date	**206** Field of science or technology code (See guide for list of codes)
2011-04 (Year Month)	2016-06 (Year Month)	2.02.01 Electrical and electronic engineering

Project claim history

208 1 [X] Continuation of a previously claimed project **210** 1 [ ] First claim for the project

218 Was any of the work done jointly or in collaboration with other businesses? . . . . . 1 [ ] Yes 2 [X] No

If you answered **yes** to line 218, complete lines 220 and 221.

220 Names of the businesses	**221** BN
1	
2	
3	

Section B – Project descriptions – You have chosen not to print the description of the project (lines 242, 244 and 246).

Section C – Additional project information

Who prepared the responses for Section B?

253 1 [ ] Employee directly involved in the project	**254** Name	
255 1 [ ] Other employee of the company	**256** Name	
257 1 [X] External consultant	**258** Name KPMG LLP	**259** Firm KPMG LLP

List the key individuals directly involved in the project and indicate their qualifications/experience.

260 Names	**261** Qualifications/experience and position title
1 [redacted]	[redacted]
2 [redacted]	[redacted]
3 [redacted]	[redacted]

265 Are you claiming any salary or wages for SR&ED performed outside Canada? . . . . . 1 [ ] Yes 2 [X] No
266 Are you claiming expenditures for SR&ED carried out on behalf of another party? . . . . . 1 [ ] Yes 2 [X] No
267 Are you claiming expenditures for SR&ED performed by people other than your employees? . . . . . 1 [ ] Yes 2 [X] No

If you answered **yes** to line 267, complete lines 268 and 269.

268 Names of individuals or companies	**269** BN
1	

What evidence do you have to support your claim? (Check any that apply)
You do not need to submit these items with the claim. However, you are required to retain them in the event of a review.

270	1	X	Project planning documents	276	1		Progress reports, minutes of project meetings
271	1	X	Records of resources allocated to the project, time sheets	277	1	X	Test protocols, test data, analysis of test results, conclusions
272	1		Design of experiments	278	1		Photographs and videos
273	1		Project records, laboratory notebooks	279	1		Samples, prototypes, scrap or other artefacts
274	1	X	Design, system architecture and source code	280	1	X	Contracts
275	1		Records of trial runs	281	1		Others, specify 282

Part 2 – Project information (continued)

Project number **2**

CRA internal form identifier 060
Code 1501

Complete a separate Part 2 for each project claimed this year.

Section A – Project identification

200 Project title (and identification code if applicable)

15-03 Mission Critical Protection Scheme Upgrade Methods

202 Project start date	**204** Completion or expected completion date	**206** Field of science or technology code (See guide for list of codes)
2014-11 (Year Month)	2018-12 (Year Month)	2.02.01 Electrical and electronic engineering

Project claim history

208 1 [X] Continuation of a previously claimed project **210** 1 [ ] First claim for the project

218 Was any of the work done jointly or in collaboration with other businesses? . . . . . 1 [ ] Yes 2 [X] No

If you answered **yes** to line 218, complete lines 220 and 221.

Federal Tax Instalments

Federal tax instalments

For the taxation year ended 2017-12-31

Business number 87086 5821 RC0001

The following is a list of federal instalments payable for the current taxation year. The last column indicates the instalments payable to Canada Revenue Agency. The instalments are due no later than on the dates indicated, otherwise non-deductible interest will be charged. Payment may be made by cheque or money order payable to the Receiver General either at an authorized financial institution or filed with **the appropriate remittance voucher at the following address**:

Canada Revenue Agency
875 Heron Road
Ottawa ON K1A 1B1

Note that you may also be able to pay by telephone or Internet banking. For more information, consult the *Corporation Instalment Guide*.

Monthly instalment workchart

Date	Monthly tax instalments	Refund transferred to instalments	Instalments paid	Cumulative difference	Instalments payable
2017-01-31	1,425,729	732,568			693,161
2017-02-28	1,425,729				1,425,729

Totals	17,108,740	732,568			16,376,172

Quarterly instalment workchart

Date	Quarterly tax instalments	Refund transferred to instalments	Instalments paid	Cumulative difference	Instalments payable
2017-03-31					
2017-06-30					
2017-09-30					
2017-12-31					
Totals					

Instalment method

Indicate instalment method chosen [1-3] 1

1st Instalment base method

If payment of instalments other than quarterly instalments is delayed, indicate the MONTH in which you want them to begin (1=January, 2=February, etc.). 1

Select this box if you want the instalments to be calculated without taking the applicable threshold into account ☐

Quarterly instalments calculation

The corporation must meet requirements 1 to 5 to be eligible for quarterly instalments for a tax year.

		Yes	No
1 –	Is the corporation a Canadian-controlled private corporation (CCPC)?		X
2 –	Did the corporation claim any deduction under the section 125, during either the current or previous year?		X
3 –	Is the corporation's, or any of its associated corporations', taxable income for the current or previous year less than or equal to $500,000?		
4 –	Is the corporation and any associated corporations' taxable capital employed in Canada for the current or previous year less than or equal to $10,000,000?		
5 –	Does the corporation have a perfect compliance history in the last 12 months?		

If you do not want to use the quarterly instalments option, select this box to go back to monthly instalments. ☐

1 – 1st Instalment base method

1st Instalment base amount (amount N below)	17,108,740	÷	12	=	1,425,729
	Monthly instalments required				1,425,729
Quarterly tax instalments required	17,108,740	÷	4	=	

2 – Combined 1st and 2nd instalment base method

Select this box if you want the first 2 payments* to be calculated without taking the applicable threshold into account? ☐

2nd Monthly instalment base amount

Indicate: Part I tax							
Part VI, VI.1 and XIII.1 tax	+						
Federal adjustment for amalgamation, winding up or transfer	+						
Provincial tax, other than Alberta, Québec and Ontario	+						
Ontario tax	+	15,130,883					
Provincial adjustment for amalgamation, winding up or transfer	+						
Total	=	15,130,883	÷	12	=	1,260,907	**A**
1/12 of estimated current year credits (M below /12)					–	518,300	
Each of the first two instalment payments					=	742,607	**B**
Total tax from N below		17,108,740					
Amount B above x 2	–	1,485,214					
	=	15,623,526	÷	10	=	1,562,353	
Each of the remaining ten instalment payments					=	1,562,353	

2nd Quarterly instalment base amount

Indicate: Part I tax							
Part VI, VI.1 and XIII.1 tax	+						
Federal adjustment for amalgamation, winding up or transfer	+						
Provincial tax, other than Alberta, Québec and Ontario	+						
Ontario tax	+	15,130,883					
Provincial adjustment for amalgamation, winding up or transfer	+						
Total	=	15,130,883	÷	4	=	3,782,721	**A**
1/4 of estimated current year credits (M below /4)					–	1,554,900	
The first instalment payment					=		**B**
Total tax from N below		17,108,740					
Amount B above	–						
	=	17,108,740	÷	3	=	5,702,914	
Each of the remaining three instalment payments					=		

* It is the first payment if the quarterly instalments are applicable.

3 – Estimated tax method

Instalment base amount (amount N below)		÷	12	=	
	Monthly instalments required				
Quarterly tax instalments required		÷	4	=

T2 Corporation Income Tax Return

200

055 Do not use this area

This form serves as a federal, provincial, and territorial corporation income tax return, unless the corporation is located in Quebec or Alberta. If the corporation is located in one of these provinces, you have to file a separate provincial corporation return.

All legislative references on this return are to the federal *Income Tax Act* and *Income Tax Regulations*. This return may contain changes that had not yet become law at the time of publication.

Send one completed copy of this return, including schedules and the *General Index of Financial Information* (GIFI), to your tax centre or tax services office. You have to file the return within six months after the end of the corporation's tax year.

For more information see cra.gc.ca or Guide T4012, *T2 Corporation - Income Tax Guide*.

Identification

Business number (BN) 001 87086 5821 RC0001

Corporation's name
002 HYDRO ONE NETWORKS INC.

Address of head office

Taxable income for a corporation with exempt income under paragraph 149(1)(t) (line 360 **minus** line 370)				Z
Taxable income for the year from a personal services business**				Z.1

* This amount is equal to 3.5 times the Part VI.1 tax payable at line 724 on page 9.

** For a taxation year that ends after 2015.

Small business deduction

Canadian-controlled private corporations (CCPCs) throughout the tax year

Income from active business carried on in Canada from Schedule 7 . . . . 400 ______ A

Taxable income from line 360 on page 3, **minus** 100/28 3.57143 of the amount on line 632* on page 8, **minus** 4 times the amount on line 636** on page 8, and **minus** any amount that, because of federal law, is exempt from Part I tax . . . . 405 ______ B

Business limit (see notes 1 and 2 below) . . . . 410 ______ C

Notes:

1. For CCPCs that are not associated, enter $ 500,000 on line 410. However, if the corporation's tax year is less than 51 weeks, prorate this amount by the number of days in the tax year **divided** by 365, and enter the result on line 410.
2. For associated CCPCs, use Schedule 23 to calculate the amount to be entered on line 410.

Business limit reduction:

Amount C ______ x 415 *** ______ D / 11,250 = ... ______ E

Reduced business limit (amount C **minus** amount E) (if negative, enter "0") . . . . 425 ______ F

Business limit the CCPC assigns under subsection 125(3.2) (from line 515 below) . . . . ______ G

Amount F **minus** amount G . . . . 427 ______ H

Small business deduction

Amount A, B, C, or H, whichever is the least ______ x (Number of days in the tax year before January 1, 2016 ______ / Number of days in the tax year 366) x 17 % = ______ 1

Amount A, B, C, or H, whichever is the least ______ x (Number of days in the tax year after December 31, 2015 366 / Number of days in the tax year 366) x 17.5 % = ______ 2

Total of amounts 1 and 2 (enter amount I on line J on page 8) 430 ______ I

* Calculate the amount of foreign non-business income tax credit deductible on line 632 without reference to the refundable tax on the CCPC's investment income (line 604) and without reference to the corporate tax reductions under section 123.4.

** Calculate the amount of foreign business income tax credit deductible on line 636 without reference to the corporation tax reductions under section 123.4.

*** **Large corporations**

- If the corporation is not associated with any corporations in both the current and previous tax years, the amount to be entered on line 415 is: (total taxable capital employed in Canada for the **prior** year **minus** $10,000,000) x 0.225%.
- If the corporation is not associated with any corporations in the current tax year, but was associated in the previous tax year, the amount to be entered on line 415 is: (total taxable capital employed in Canada for the **current** year **minus** $10,000,000) x 0.225%.
- For corporations associated in the current tax year, see Schedule 23 for the special rules that apply.

Specified corporate income and assignment under subsection 125(3.2)

Applicable to tax years that begin after March 21, 2016

Except that, if the tax year of your corporation started before **and** ends on or after March 22, 2016 and in the tax year of a CCPC, you can make an assignment of business limit to that other CCPC if its tax year started after March 21, 2016.

	J1 Name of corporation receiving the income and assigned amount	J Business number of the corporation receiving the assigned amount 490	K Income paid under clause 125(1)(a)(i)(B) to the corporation identified in column J [3] 500	L Business limit assigned to corporation identified in column J [4] 505
1.				
			Total 510 ______	Total 515 ______

Notes:

3. This amount is [as defined in subsection 125(7) **specified corporate income** (a)(i)] the total of all amounts each of which is income from an active business of the corporation for the year from the provision of services or property to a private corporation (directly or indirectly, in any manner whatever) if
(A) at any time in the year, the corporation (or one of its shareholders) or a person who does not deal at arm's length with the corporation (or one of its shareholders) holds a direct or indirect interest in the private corporation, and
(B) it is not the case that all or substantially all of the corporation's income for the year from an active business is from the provision of services or property to
(I) persons (other than the private corporation) with which the corporation deals at arm's length, or
(II) partnerships with which the corporation deals at arm's length, other than a partnership in which a person that does not deal at arm's length with the corporation holds a direct or indirect interest.
4. The amount of the business limit you assign to a CCPC cannot be greater than the amount determined by the formula A – B, where A is the amount of income referred to in column K in respect of that CCPC and B is the portion of the amount described in A that is deductible by you in respect of the amount of income referred to in clauses 125(1)(a)(i)(A) or (B) for the year. The amount on line 515 cannot be greater than the amount on line 425.

Schedule 141

Notes Checklist

Corporation's name	Business number	Tax year-end Year Month Day
HYDRO ONE NETWORKS INC.	87086 5821 RC0001	2016-12-31

- Parts 1, 2, and 3 of this schedule must be completed from the perspective of the person (referred to in these parts as the **accountant**) who prepared or reported on the financial statements. If the person preparing the tax return is not the accountant referred to above, they must still complete Parts 1, 2, 3, and 4, as applicable.
- For more information, see Guide RC4088, *General Index of Financial Information (GIFI)* and T4012, *T2 Corporation – Income Tax Guide.*
- Complete this schedule and include it with your T2 return along with the other GIFI schedules.

Part 1 – Information on the accountant who prepared or reported on the financial statements

Does the accountant have a professional designation? . . . **095** 1 Yes [X] 2 No [ ]

Is the accountant connected* with the corporation? . . . **097** 1 Yes [X] 2 No [ ]

Note
If the accountant does not have a professional designation **or** is connected to the corporation, you do not have to complete Parts 2 and 3 of this schedule. However, you **do have** to complete Part 4, as applicable.

* A person connected with a corporation can be: (i) a shareholder of the corporation who owns more than 10% of the common shares; (ii) a director, an officer, or an employee of the corporation; or (iii) a person not dealing at arm's length with the corporation.

Part 2 – Type of involvement with the financial statements

Choose the option that represents the highest level of involvement of the accountant: **198**

Completed an auditor's report . . . 1 [ ]
Completed a review engagement report . . . 2 [ ]
Conducted a compilation engagement . . . 3 [ ]

Part 3 – Reservations

If you selected option 1 or 2 under **Type of involvement with the financial statements** above, answer the following question:

Has the accountant expressed a reservation? . . . **099** 1 Yes [ ] 2 No [ ]

Part 4 – Other information

If you have a professional designation and are not the accountant associated with the financial statements in Part 1 above, choose one of the following options: . . . **110**

Prepared the tax return (financial statements prepared by client) . . . 1 [ ]
Prepared the tax return and the financial information contained therein (financial statements have not been prepared) . . . 2 [ ]

Were notes to the financial statements prepared? . . . **101** 1 Yes [X] 2 No [ ]

If **yes**, complete lines 104 to 107 below:

Are subsequent events mentioned in the notes? . . . **104** 1 Yes [X] 2 No [ ]
Is re-evaluation of asset information mentioned in the notes? . . . **105** 1 Yes [X] 2 No [ ]
Is contingent liability information mentioned in the notes? . . . **106** 1 Yes [X] 2 No [ ]
Is information regarding commitments mentioned in the notes? . . . **107** 1 Yes [X] 2 No [ ]

Does the corporation have investments in joint venture(s) or partnership(s)? . . . **108** 1 Yes [ ] 2 No [X]

Part 4 – Other information (continued)

Impairment and fair value changes

In any of the following assets, was an amount recognized in net income or other comprehensive income (OCI) as a result of an impairment loss in the tax year, a reversal of an impairment loss recognized in a previous tax year, or a change in fair value during the tax year? . . . . . 200 1 Yes [X] 2 No [ ]

If **yes**, enter the amount recognized:

		In net income Increase (decrease)		In OCI Increase (decrease)
Property, plant, and equipment	210		211	
Intangible assets	215		216	
Investment property	220			
Biological assets	225			
Financial instruments	230		231	309,758
Other	235		236	

Financial instruments

Did the corporation derecognize any financial instrument(s) during the tax year (other than trade receivables)? . . . . . 250 1 Yes [ ] 2 No [X]

Did the corporation apply hedge accounting during the tax year? . . . . . 255 1 Yes [X] 2 No [ ]

Did the corporation discontinue hedge accounting during the tax year? . . . . . 260 1 Yes [ ] 2 No [X]

Adjustments to opening equity

Was an amount included in the opening balance of retained earnings or equity, in order to correct an error, to recognize a change in accounting policy, or to adopt a new accounting standard in the current tax year? . . . . . 265 1 Yes [X] 2 No [ ]

If **yes**, you have to maintain a separate reconciliation.

Canada Revenue Agency / Agence du revenu du Canada

Net Income (Loss) for Income Tax Purposes

Schedule 1

Corporation's name	Business number	Tax year-end Year Month Day
HYDRO ONE NETWORKS INC.	87086 5821 RC0001	2016-12-31

- The purpose of this schedule is to provide a reconciliation between the corporation's net income (loss) as reported on the financial statements and its net income (loss) for tax purposes. For more information, see the T2 *Corporation Income Tax Guide*.
- All legislative references are to the *Income Tax Act*.

		Totals	29,595,509	11,098,498	5,932,055	12,564,956

Deduction as per paragraph 20(1)(e) of the ITA

This workchart allows you to determine the tax deduction as per paragraph 20(1)(e) of the Income Tax Act (ITA). It relates to the expenses of issuing or selling shares, units or interests and expenses of borrowing money.

Ensure that any of these expenses deducted in the financial statements have been added back on line 216, "Financing fees deducted in books," and/or on line 235, "Share issue expense" to Schedule 1, if applicable.

* If the check box was selected, the annual deduction will be equal to the amount in column C.

1 Description: 2012 Underwriting Fees

Subparagraph 20(1)(e)(v) is applicable in the taxation year*	Date of expense	A Expense amount	B Amounts deductible in the preceding taxation years	C Balance before the annual expense (column A minus column B)	D 20 % of amount A x number of days in the taxation year 366 / **365**	E Annual deduction (C or D, whichever is less)*	F Balance at the end of the year (column C minus column E)
☐	2012-01-01	4,645,000	3,716,000	929,000	931,545	929,000

Schedule 2

Charitable Donations and Gifts

Corporation's name	Business number	Tax year-end Year Month Day
HYDRO ONE NETWORKS INC.	87086 5821 RC0001	2016-12-31

- For use by corporations to claim any of the following:
  - the eligible amount of charitable donations to qualified donees;
  - the Ontario, Nova Scotia, and British Columbia food donation tax credits for farmers;
  - the eligible amount of gifts of certified cultural property;
  - the eligible amount of gifts of certified ecologically sensitive land; or
  - the additional deduction for gifts of medicine.
- All legislative references are to the federal *Income Tax Act*, unless otherwise specified.
- The eligible amount of a gift is the amount by which the fair market value of the gifted property exceeds the amount of an advantage, if any, for the gift.
- The donations and gifts are eligible for a 5-year carryforward except for gifts of certified ecologically sensitive land made after February 10, 2014, which are eligible for a 10-year carryforward. Please note that the provincial food donation tax credits must be applied in the current tax year.
- Use this schedule to show a transfer of unused amounts from previous years following an amalgamation or the wind-up of a subsidiary as described under subsections 87(1) and 88(1).
- Subsection 110.1(1.2) provides as follows:
  - Where a particular corporation has undergone an acquisition of control, for tax years that end on or after the acquisition of control, no corporation can claim a deduction for a gift made by the particular corporation to a qualified donee before the acquisition of control.
  - If a particular corporation makes a gift to a qualified donee pursuant to an arrangement under which both the gift and the acquisition of control is expected, no corporation can claim a deduction for the gift unless the person acquiring control of the particular corporation is the qualified donee.
- An eligible medical gift to a qualifying organization for activities outside of Canada may be eligible for an additional deduction. Calculate the additional deduction in Part 5.
- File one completed copy of this schedule with your *T2 Corporation Income Tax Return*.
- For more information, see the *T2 Corporation - Income Tax Guide*.

Dividends Received, Taxable Dividends Paid, and Part IV Tax Calculations

Schedule 3

Corporation's name	Business number	Tax year-end Year Month Day
HYDRO ONE NETWORKS INC.	87086 5821 RC0001	2016-12-31

- Corporations must use this schedule to report:
  - non-taxable dividends under section 83;
  - deductible dividends under subsection 138(6);
  - taxable dividends deductible from income under section 112, subsection 113(2) and paragraphs 113(1)(a),(a.1), (b) or (d); or
  - taxable dividends paid in the tax year that qualify for a dividend refund.
- All legislative references are to the federal *Income Tax Act*.
- The calculations in this schedule apply only to private or subject corporations.
- A recipient corporation is **connected** with a payer corporation at any time in a tax year, if at that time the recipient corporation:
  - controls the payer corporation, other than because of a right referred to in paragraph 251(5)(b); or
  - owns more than 10% of the issued share capital (with full voting rights), and shares that have a fair market value of more than 10% of the fair market value of all shares of the payer corporation.
- If you need more space, continue on a separate schedule.
- File one completed copy of this schedule with your *T2 Corporation Income Tax Return*.
- Column A1 – Enter "X" if dividends received from a foreign source.
- Column F1 – Enter the amount of dividends received reported in column 240 that are eligible.
- Column F2 – Enter the code that applies to the deductible taxable dividend.

Part 1 – Dividends received in the tax year

Do **not** include dividends received from foreign non-affiliates.

Complete columns B, C, D, H and I **only if** the payer corporation is **connected.**

Important instructions to follow if the payer corporation is connected

If your corporation's tax year-end is different than that of the **connected** payer corporation, dividends could have been received from more than one tax year of the payer corporation. If so, **use a separate line** to provide the information according to each tax year of the payer corporation.

When completing column J and K use the **special calculations provided in the notes**.

A Name of payer corporation (from which the corporation received the dividend) 200	A1	B Enter 1 if payer corporation is **connected** 205	C Business Number of **connected** corporation 210	D Tax year-end of the payer corporation in which the sections 112/113 and subsection 138(6) dividends in column F were paid YYYY/MM/DD 220	E Non-taxable dividends under section 83 230

Total of column E (enter amount on line 402 of Schedule 1)

F Taxable dividends deductible from taxable income under section 112, subsections 113(2) and 138(6), and paragraphs 113(1)(a), (a.1),(b), or (d)[note 1] 240	F1 Eligible dividends (included in column F)	F2	G Dividends included in column F that was received **before** 2016 241	H Total taxable dividends paid by **connected** payer corporation (for tax year in column D) 250	I Dividend refund of the **connected** payer corporation (for tax year in column D)[note 2] 260	J Part IV tax before deductions. Dividends (from column G) received **before** 2016 **multiplied** by 33 1/3%[note 3] 270	K Part IV tax before deductions. Dividends received **after** 2015 (column F **minus** column G) **multiplied** by 38 1/3%[note 4] 275
Total of column F (include this amount on line 320 of the T2 Return)						**Total of column J** (enter amount on line a in Part 2)	**Total of column K** (enter amount on line b in Part 2)

1 If taxable dividends are received, enter the amount in column 240, but if the corporation is not subject to Part IV tax (such as a public corporation other than a subject corporation as defined in subsection 186(3)), enter "0" in column 270 or column 275 as applicable according to the date received. Life insurers are not subject to Part IV tax on subsection 138(6) dividends.

2 If the connected payer corporation's tax year ends after the corporation's balance-due day for the tax year (two or three months, as applicable), you have to estimate the payer's dividend refund when you calculate the corporation's Part IV tax payable.

3 For dividends received **before** 2016 from **connected** corporations, Part IV tax on dividends is equal to: column G **multiplied** by column I **divided** by column H.

4 For dividends received **after** 2015 from **connected** corporations, Part IV tax on dividends is equal to: column I **divided** by column H **multiplied** by the result of column F **minus** column G.

Part 2 – Calculation of Part IV tax payable

Part IV tax on dividends received **before** 2016, before deductions (total of column J in part 1) . . . . . . ______ a

Part IV tax on dividends received **after** 2015, before deductions (total of column K in part 1) . . . . ______ b

Part IV tax before deductions (amount a **plus** amount b) . . . . ______ ______ L

Deduct:

Part IV.I tax payable on dividends subject to Part IV tax (from line 360 of Schedule 43) . . . . **320** ______

Subtotal (amount L **minus** line 320) ______ M

Deduct:

Current-year non-capital loss claimed to reduce Part IV tax . . . . **330** ______ c

Non-capital losses from previous years claimed to reduce Part IV tax . . . . **335** ______ d

Current-year farm loss claimed to reduce Part IV tax . . . . **340** ______ e

Farm losses from previous years claimed to reduce Part IV tax . . . . **345** ______ f

Total losses applied against Part IV tax (total of amounts c to f) ______ g

If your tax year begins after December 31, 2015:

Amount g **multiplied** by 38 1 / 3 % . . . . ______ h

If your tax year begins before January 1, 2016:

Amount b or M whichever is less

______ ÷ 38 1 / 3 % . . . = ______ 1

Amount 1 or g, whichever is less . . . . ______ 2

Amount g **minus** amount 2 . . . . ______ 3

Amount 2 ______ x 38 1 / 3 % = ______ i

Amount 3 ______ x 33 1 / 3 % = ______ j

Subtotal (amount i **plus** amount j) ______ k

Amount h or amount k, whichever applies depending on your tax year start date . . . . ______ N

Part IV tax payable (amount M **minus** amount N, if negative enter "0") . . . . **360** ______
(enter amount on line 712 of the T2 return)

Part 3 – Taxable dividends paid in the tax year that qualify for a dividend refund

If your corporation's tax year-end is different than that of the connected recipient corporation, your corporation could have paid dividends in more than one tax year of the recipient corporation. If so, use a separate line to provide the information according to each tax year of the recipient corporation.

	O Name of connected recipient corporation 400	P Business Number 410	Q Tax year-end of connected recipient corporation in which the dividends in column R were received YYYY/MM/DD 420	R Taxable dividends paid to connected corporations 430	R1 Eligible dividends (included in column R)
1	Hydro One Inc.	86999 4731 RC0001	2016-12-31	26,500,564	1,500,000
			Total of column R	26,500,564	

Total taxable dividends paid in the tax year to other than connected corporations . . . . 450 ______

Eligible dividends (included in line 450) . . . . 450a ______

Total taxable dividends paid in the tax year that qualify for a dividend refund (total of column R **plus** line 450) 460 26,500,564

Part 4 – Total dividends paid in the tax year

Complete this part if the total taxable dividends paid in the tax year that qualify for a dividend refund (line 460) is different from the total dividends paid in the tax year.

Total taxable dividends paid in the tax year for the purposes of a dividend refund (from above) 26,500,564

Other dividends paid in the tax year (total of 510 to 540) . . . . ______

Total dividends paid in the tax year 500 26,500,564

Deduct:

Dividends paid out of capital dividend account . . . . 510 ______

Capital gains dividends . . . . 520 ______

Dividends paid on shares described in subsection 129(1.2) . . . . 530 ______

Taxable dividends paid to a controlling corporation that was bankrupt at any time in the year . . . . 540 ______

Subtotal (total of lines 510 to 540) ______ ______ S

Total taxable dividends paid in the tax year that qualify for a dividend refund (Line 500 **minus** amount S) 26,500,564 T

Corporation's name	Business number	Tax year-end Year Month Day
HYDRO ONE NETWORKS INC.	87086 5821 RC0001	2016-12-31

- Use this form to determine the continuity and use of available losses; to determine a current-year non-capital loss, farm loss, restricted farm loss, or limited partnership loss; to determine the amount of restricted farm loss and limited partnership loss that can be applied in a year; and to ask for a loss carryback to previous years.
- A corporation can choose whether or not to deduct an available loss from income in a tax year. The corporation can deduct losses in any order. However, for each type of loss, deduct the oldest loss first.
- According to subsection 111(4) of the *Income Tax Act*, when control has been acquired, no amount of capital loss incurred for a tax year ending before that time is deductible in computing taxable income in a tax year ending after that time. Also, no amount of capital loss incurred in a tax year ending after that time is deductible in computing taxable income of a tax year ending before that time.
- When control has been acquired, subsection 111(5) provides for similar treatment of non-capital and farm losses, except as listed in paragraphs 111(5)(a) and (b).
- For information on these losses, see the *T2 Corporation – Income Tax Guide.*
- File one completed copy of this schedule with the T2 return, or send the schedule by itself to the tax centre where the return is filed.
- All legislative references are to the *Income Tax Act*.

Part 1 – Non-capital losses

Determination of current-year non-capital loss

Net income (loss) for income tax purposes			-549,209,136	A
Deduct: (increase a loss)				
Net capital losses deducted in the year (enter as a positive amount)		a		
Taxable dividends deductible under section 112 or subsections 113(1) or 138(6)		b		
Amount of Part VI.1 tax deductible under paragraph 110(1)(k)		c		
Amount deductible as prospector's and grubstaker's shares – Paragraph 110(1)(d.2)		d		
Subtotal (total of amounts a to d)		▶		B
Subtotal (amount A **minus** amount B; if positive, enter "0")			-549,209,136	C
Deduct: (increase a loss)				
Section 110.5 or subparagraph 115(1)(a)(vii) – Addition for foreign tax deductions				D
Subtotal (amount C **minus** amount D)			-549,209,136	E
Add: (decrease a loss)				
Current-year farm loss (the lesser of: the net loss from farming or fishing included in income and the non-capital loss before deducting the farm loss)				F
Current-year non-capital loss (amount E **plus** amount F; if positive, enter "0")			-549,209,136	G

If amount G is negative, enter it on line 110 as a positive.

Continuity of non-capital losses and request for a carryback

Non-capital loss at the end of the previous tax year		221,857,191	e		
Deduct: Non-capital loss expired (note 1)	100		f		
Non-capital losses at the beginning of the tax year (amount e **minus** amount f)	102	221,857,191		221,857,191	H
Add:					
Non-capital losses transferred on an amalgamation or on the wind-up of a subsidiary (note 2) corporation	105		g		
Current-year non-capital loss (from amount G)	110	549,209,136	h		
Subtotal (amount g **plus** amount h)		549,209,136		549,209,136	I
Subtotal (amount H **plus** amount I)				771,066,327	J

Note 1: A non-capital loss expires as follows:

- after **10** tax years if it arose in a tax year ending after March 22, 2004, and before 2006; and
- after **20** tax years if it arose in a tax year ending after 2005.

An allowable business investment loss becomes a net capital loss after **10** tax years if it arose in a tax year ending after March 22, 2004.

Note 2: Subsidiary is defined in subsection 88(1) as a taxable Canadian corporation of which 90% or more of each class of issued shares are owned by its parent corporation and the remaining shares are owned by persons that deal at arm's length with the parent corporation.

Part 1 – Non-capital losses (continued)

Deduct:

Other adjustments (includes adjustments for an acquisition of control)	**150**		i	
Section 80 – Adjustments for forgiven amounts	**140**		j	
Subsection 111(10) – Adjustments for fuel tax rebate			j.1	
Non-capital losses of previous tax years applied in the current tax year Enter amount k on line 331 of the T2 Return.	**130**		k	
Current and previous year non-capital losses applied against current-year taxable dividends subject to Part IV tax (note 3)	**135**		l	
Subtotal (total of amounts i to l)				K
Non-capital losses before any request for a carryback (amount J **minus** amount K)			771,066,327	L

Deduct – Request to carry back non-capital loss to:

First previous tax year to reduce taxable income	**901**		m	
Second previous tax year to reduce taxable income	**902**		n	
Third previous tax year to reduce taxable income	**903**		o	
First previous tax year to reduce taxable dividends subject to Part IV tax	**911**		p	
Second previous tax year to reduce taxable dividends subject to Part IV tax	**912**		q	
Third previous tax year to reduce taxable dividends subject to Part IV tax	**913**		r	
Total of requests to carry back non-capital losses to previous tax years (total of amounts m to r)				M
Closing balance of non-capital losses to be carried forward to future tax years (amount L **minus** amount M)	**180**		771,066,327	N

Note 3: Amount l is the total of lines 330 and 335 from Schedule 3, *Dividends Received, Taxable Dividends Paid, and Part IV Tax Calculation*.

Part 2 – Capital losses

Continuity of capital losses and request for a carryback

Capital losses at the end of the previous tax year	**200**		a	
Capital losses transferred on an amalgamation or on the wind-up of a subsidiary corporation	**205**		b	
Subtotal (amount a **plus** amount b)				A

Deduct:

Other adjustments (includes adjustments for an acquisition of control)	**250**		c	
Section 80 – Adjustments for forgiven amounts	**240**		d	
Subtotal (amount c **plus** amount d)				B
Subtotal (amount A **minus** amount B)				C
Add: Current-year capital loss (from the calculation on Schedule 6, *Summary of Dispositions of Capital Property*)	**210**			D
Unused non-capital losses that expired in the tax year (note 4)			e	
Allowable business investment losses (ABILs) that expired as non-capital losses at the end of the previous tax year (note 5)			f	
Enter amount e or f, whichever is less	**215**		g	
ABILs expired as non-capital losses: line 215 **multiplied** by 2.000000	**220**			E
Subtotal (total of amounts C to E)				F

Note

If there has been an amalgamation or a wind–up of a subsidiary, do a separate calculation of the ABIL expired as non-capital loss for each predecessor or subsidiary corporation. Add all these amounts and enter the total on line 220 above.

Note 4: If the loss was incurred in a tax year ending after March 22, 2004, determine the amount of the loss from the 11th previous tax year and enter the part of that loss that was not used in previous years and the current year on line e.

Note 5: If the ABILs were incurred in a tax year ending after March 22, 2004, enter the amount of the ABILs from the 11th previous tax year. Enter the full amount on line f.

Part 2 – Capital losses (continued)

Deduct: Capital losses from previous tax years applied against the current-year net capital gain (note 6)			**225**		G
Capital losses before any request for a carryback (amount F **minus** amount G)					H

Deduct – **Request to carry back capital loss to** (note 7):

	Capital gain (100%)		Amount carried back (100%)			
First previous tax year		**951**		h		
Second previous tax year		**952**		i		
Third previous tax year		**953**		j		
Subtotal (total of amounts h to j)						I
Closing balance of capital losses to be carried forward to future tax years (amount H **minus** amount I)					**280**	J

Note 6: To get the net capital losses required to reduce the taxable capital gain included in the net income (loss) for the current-year tax, enter the amount from line 225 **divided** by 2 at line 332 of the T2 return.

Note 7: On line 225, 951, 952, or 953, whichever applies, enter the actual amount of the loss. When the loss is applied, divide this amount by 2. The result represents the 50% inclusion rate.

Part 3 – Farm losses

Continuity of farm losses and request for a carryback

Farm losses at the end of the previous tax year			a		
Deduct: Farm loss expired (note 8)	**300**		b		
Farm losses at the beginning of the tax year (amount a **minus** amount b)	**302**				A
Add:					
Farm losses transferred on an amalgamation or on the wind–up of a subsidiary corporation	**305**		c		
Current-year farm loss (amount F in Part 1)	**310**		d		
Subtotal (amount c **plus** amount d)					B
Subtotal (amount A **plus** amount B)					C
Deduct:					
Other adjustments (includes adjustments for an acquisition of control)	**350**		e		
Section 80 – Adjustments for forgiven amounts	**340**		f		
Farm losses of previous tax years applied in the current tax year Enter amount g on line 334 of the T2 Return.	**330**		g		
Current and previous year farm losses applied against current-year taxable dividends subject to Part IV tax (note 9)	**335**		h		
Subtotal (total of amounts e to h)					D
Farm losses before any request for a carryback (amount C **minus** amount D)					E
Deduct – **Request to carry back farm loss to:**					
First previous tax year to reduce taxable income	**921**		i		
Second previous tax year to reduce taxable income	**922**		j		
Third previous tax year to reduce taxable income	**923**		k		
First previous tax year to reduce taxable dividends subject to Part IV tax	**931**		l		
Second previous tax year to reduce taxable dividends subject to Part IV tax	**932**		m		
Third previous tax year to reduce taxable dividends subject to Part IV tax	**933**		n		
Subtotal (total of amounts i to n)					F
Closing balance of farm losses to be carried forward to future tax years (amount E **minus** amount F)				**380**	G

Note 8: A farm loss expires as follows:
after **10** tax years if it arose in a tax year ending before 2006; and
after **20** tax years if it arose in a tax year ending after 2005.

Note 9: Amount h is the total of lines 340 and 345 from Schedule 3.

Part 4 – Restricted farm losses

Current-year restricted farm loss

Total losses for the year from farming business			485		A
Minus the deductible farm loss:					
(amount A above ______ – $2,500) **divided** by 2 =		a			
Amount a or $ 15,000 (note 10), whichever is less				b	
	2,500	c			
Subtotal (amount b **plus** amount c)	2,500			2,500	B
Current-year restricted farm loss (amount A **minus** amount B)					C

Continuity of restricted farm losses and request for a carryback

Restricted farm losses at the end of the previous tax year			d		
Deduct: Restricted farm loss expired (note 11)	400		e		
Restricted farm losses at the beginning of the tax year (amount d **minus** amount e)	402				D
Add:					
Restricted farm losses transferred on an amalgamation or on the wind-up of a subsidiary corporation	405		f		
Current-year restricted farm loss (from amount C) Enter amount g on line 233 of Schedule 1, *Net Income (Loss) for Income Tax Purposes*.	410		g		
Subtotal (amount f **plus** amount g)					E
Subtotal (amount D **plus** amount E)					F
Deduct:					
Restricted farm losses from previous tax years applied against current farming income Enter amount h on line 333 of the T2 return.	430		h		
Section 80 – Adjustments for forgiven amounts	440		i		
Other adjustments	450		j		
Subtotal (total of amounts h to j)					G
Restricted farm losses before any request for a carryback (amount F **minus** amount G)					H

Deduct – Request to carry back restricted farm loss to:

First previous tax year to reduce farming income	941		k		
Second previous tax year to reduce farming income	942		l		
Third previous tax year to reduce farming income	943		m		
Subtotal (total of amounts k to m)					I
Closing balance of restricted farm losses to be carried forward to future tax years (amount H **minus** amount I)	480				J

Note

The total losses for the year from all farming businesses are calculated without including scientific research expenses.

Note 10: For tax years that end before March 21, 2013, use $6,250 instead of $15,000.

Note 11: A restricted farm loss expires as follows:
after **10** tax years if it arose in a tax year ending before 2006; and
after **20** tax years if it arose in a tax year ending after 2005.

Part 5 – Listed personal property losses

Continuity of listed personal property loss and request for a carryback

Listed personal property losses at the end of the previous tax year			a		
Deduct: Listed personal property loss expired after 7 tax years	500		b		
Listed personal property losses at the beginning of the tax year (amount a **minus** amount b)	502				A
Add: Current-year listed personal property loss (from Schedule 6)				510	B
Subtotal (amount A **plus** amount B)					C
Deduct:					
Listed personal property losses from previous tax years applied against listed personal property gains	530		c		
Enter amount c on line 655 of Schedule 6.					
Other adjustments	550		d		
Subtotal (amount c **plus** amount d)					D
Listed personal property losses remaining before any request for a carryback (amount C **minus** amount D)					E
Deduct – Request to carry back listed personal property loss to:					
First previous tax year to reduce listed personal property gains	961		e		
Second previous tax year to reduce listed personal property gains	962		f		
Third previous tax year to reduce listed personal property gains	963		g		
Subtotal (total of amounts e to g)					F
Closing balance of listed personal property losses to be carried forward to future tax years (amount E **minus** amount F)				580	G

Part 7 – Limited partnership losses

Current-year limited partnership losses

	1	2	3	4	5	6	7
	Partnership account number	Tax year ending yyyy/mm/dd	Corporation's share of limited partnership loss	Corporation's at-risk amount	Total of corporation's share of partnership investment tax credit, farming losses, and resource expenses	Column 4 **minus** column 5 (if negative, enter "0")	Current-year limited partnership losses (column 3 **minus** column 6)
	600	602	604	606	608		620
1.							

Total (enter this amount on line 222 of Schedule 1)

Limited partnership losses from previous tax years that may be applied in the current year

	1	2	3	4	5	6	7
	Partnership account number	Tax year ending yyyy/mm/dd	Limited partnership losses at the end of the previous tax year and amounts transferred on an amalgamation or on the wind-up of a subsidiary	Corporation's at-risk amount	Total of corporation's share of partnership investment tax credit, business or property losses, and resource expenses	Column 4 **minus** column 5 (if negative, enter "0")	Limited partnership losses that may be applied in the year (the lesser of columns 3 and 6)
	630	632	634	636	638		650
1.							

Continuity of limited partnership losses that can be carried forward to future tax years

	1	2	3	4	5	6
	Partnership account number	Limited partnership losses at the end of the previous tax year	Limited partnership losses transferred in the year on an amalgamation or on the wind-up of a subsidiary	Current-year limited partnership losses (from line 620)	Limited partnership losses applied in the current year (must be equal to or less than line 650)	Current year limited partnership losses closing balance to be carried forward to future years (column 2 **plus** column 3 **plus** column 4 **minus** column 5)
	660	662	664	670	675	680
1.						

Total (enter this amount on line 335 of the T2 return)

Note

If you need more space, you can attach more schedules.

Part 8 – Election under paragraph 88(1.1)(f)

If you are making an election under paragraph 88(1.1)(f), check the box . . . . **190** Yes

In the case of the wind-up of a subsidiary, if the election is made, the non-capital loss, restricted farm loss, farm loss, or limited partnership loss of the subsidiary—that otherwise would become the loss of the parent corporation for a particular tax year starting after the wind–up began—will be considered as the loss of the parent corporation for its immediately preceding tax year and not for the particular year.

Note

This election is only applicable for wind-ups under subsection 88(1) that are reported on Schedule 24, *First-Time Filer after Incorporation, Amalgamation, or Winding-up of a Subsidiary into a Parent*.

Non-Capital Loss Continuity Workchart

Part 6 – Analysis of balance of losses by year of origin

Non-capital losses – losses that can be carried forward over 20 years

Year of origin	Balance at beginning of year	Loss incurred in current year	Adjustments and transfers	Loss carried back Parts I & IV	Applied to reduce Taxable income	Applied to reduce Part IV tax	Balance at end of year
Current	N/A	549,209,136			N/A		549,209,136
1st preceding taxation year 2015-12-31	219,765,360	N/A		N/A			219,765,360
2nd preceding taxation year 2015-11-04	2,091,831	N/A		N/A			2,091,831

Schedule 5

Tax Calculation Supplementary – Corporations

Corporation's name	Business Number	Tax year-end Year Month Day
HYDRO ONE NETWORKS INC.	87086 5821 RC0001	2016-12-31

- Use this schedule if, during the tax year, the corporation:
  - had a permanent establishment in more than one jurisdiction (corporations that have no taxable income should only complete columns A, B and D in Part 1);
  - is claiming provincial or territorial tax credits or rebates (see Part 2); or
  - has to pay taxes, other than income tax, for Newfoundland and Labrador, or Ontario (see Part 2).
- All legislative references mentioned in this schedule are from the *Income Tax Regulations*.
- For more information, see the *T2 Corporation – Income Tax Guide.*
- Enter the regulation number in field 100 of Part 1.

Part 1 – Allocation of taxable income

100 ____________ Enter the Regulation that applies (402 to 413).

A Jurisdiction Tick yes if the corporation had a permanent establishment in the jurisdiction during the tax year.*		B Total salaries and wages paid in jurisdiction	C (B x taxable income) / G	D Gross revenue	E (D x taxable income) / H	F Allocation of taxable income (C + E) x 1/2** (where either G or H is nil, do not multiply by 1/2)
Newfoundland and Labrador	003 1 Yes	103		143		
Newfoundland and Labrador Offshore	004 1 Yes	104		144		
Prince Edward Island	005 1 Yes	105		145		
Nova Scotia	007 1 Yes	107		147		
Nova Scotia Offshore	008 1 Yes	108		148		
New Brunswick	009 1 Yes	109		149		
Quebec	011 1 Yes	111		151		
Ontario	013 1 Yes	113		153		
Manitoba	015 1 Yes	115		155		
Saskatchewan	017 1 Yes	117		157		
Alberta	019 1 Yes	119		159		
British Columbia	021 1 Yes	121		161		
Yukon	023 1 Yes	123		163		
Northwest Territories	025 1 Yes	125		165		
Nunavut	026 1 Yes	126		166		
Outside Canada	1 Yes			167		
Total		129 G		H		

* "Permanent establishment" is defined in subsection 400(2).
** For corporations other than those described under section 402, use the appropriate calculation described in the Regulations to allocate taxable income.

Notes:
1. After determining the allocation of taxable income, you have to calculate the corporation's provincial or territorial tax payable. For more information on how to calculate the tax for each province or territory, see the instructions for Schedule 5 in the *T2 Corporation – Income Tax Guide*.
2. If the corporation has provincial or territorial tax payable, complete Part 2.
3. If the corporation is a member of a partnership and the partnership had a permanent establishment in a jurisdiction, select the jurisdiction in Column A and include your proportionate share of the partnership's salaries and wages and gross revenue in columns B and D, respectively.

Part 2 – Ontario tax payable, tax credits, and rebates

Total taxable income	Income eligible for small business deduction	Provincial or territorial allocation of taxable income	Provincial or territorial tax payable before credits

	Line	Amount	Total	
Ontario basic income tax (from Schedule 500)	270			
Deduct: Ontario small business deduction (from Schedule 500)	402			
Subtotal				A6
Add:				
Ontario additional tax re Crown royalties (from Schedule 504)	274			
Ontario transitional tax debits (from Schedule 506)	276			
Recapture of Ontario research and development tax credit (from Schedule 508)	277			
Subtotal				B6
Subtotal (amount A6 **plus** amount B6)				C6
Deduct:				
Ontario resource tax credit (from Schedule 504)	404			
Ontario tax credit for manufacturing and processing (from Schedule 502)	406			
Ontario foreign tax credit (from Schedule 21)	408			
Ontario credit union tax reduction (from Schedule 500)	410			
Ontario political contributions tax credit (from Schedule 525)	415			
Subtotal				D6
Subtotal (amount C6 **minus** amount D6) (if negative, enter "0")				E6
Deduct: Ontario research and development tax credit (from Schedule 508)	416			
Ontario corporate income tax payable before Ontario corporate minimum tax credit and Ontario community food program donation tax credit for farmers (amount E6 **minus** amount on line 416) (if negative, enter "0")				F6
Deduct:				
Ontario corporate minimum tax credit (from Schedule 510)	418			
Ontario community food program donation tax credit for farmers (from Schedule 2)	420			
Ontario corporate income tax payable (amount F6 **minus** amounts on line 418 and line 420) (if negative, enter "0")				G6
Add:				
Ontario corporate minimum tax (from Schedule 510)	278	23,328,339		
Ontario special additional tax on life insurance corporations (from Schedule 512)	280			
Subtotal		23,328,339	23,328,339	H6
Total Ontario tax payable before refundable credits (amount G6 **plus** amount H6)			23,328,339	I6
Deduct:				
Ontario qualifying environmental trust tax credit	450			
Ontario co-operative education tax credit (from Schedule 550)	452	1,364,783		
Ontario apprenticeship training tax credit (from Schedule 552)	454	4,744,816		
Ontario computer animation and special effects tax credit (from Schedule 554)	456			
Ontario film and television tax credit (from Schedule 556)	458			
Ontario production services tax credit (from Schedule 558)	460			
Ontario interactive digital media tax credit (from Schedule 560)	462			
Ontario sound recording tax credit (from Schedule 562)	464			
Ontario book publishing tax credit (from Schedule 564)	466			
Ontario innovation tax credit (from Schedule 566)	468			
Ontario business-research institute tax credit (from Schedule 568)	470	110,000		
Subtotal		6,219,599	6,219,599	J6
Net Ontario tax payable or refundable credit (amount I6 **minus** amount J6) (if a credit, enter a negative amount) Include this amount on line 255.	290		17,108,740	K6

Summary

Enter the total net tax payable or refundable credits for all provinces and territories on line 255.

Net provincial and territorial tax payable or refundable credits	**255**	17,108,740

If the amount on line 255 is positive, enter the net provincial and territorial tax payable on line 760 of the T2 return.
If the amount on line 255 is negative, enter the net provincial and territorial refundable tax credits on line 812 of the T2 return.

Canada Revenue Agency / Agence du revenu du Canada

Schedule 6

Summary of Dispositions of Capital Property

Corporation's name	Business number	Tax year-end Year Month Day
HYDRO ONE NETWORKS INC.	87086 5821 RC0001	2016-12-31

- Use this schedule if your corporation disposed of (actual or deemed) capital property or claimed an allowable business investment loss (ABIL), or both, in the tax year.
- Also use this schedule to make a designation under paragraph 111(4)(e) of the *Income Tax Act* if control of the corporation has been acquired by a person or a group of persons.
- For more information, see the section called "Schedule 6, Summary of Dispositions of Capital Property" in Guide T4012, *T2 Corporation – Income Tax Guide*.

Designation under paragraph 111(4)(e) of the Income Tax Act

Are any dispositions shown on this schedule related to deemed dispositions designated under paragraph 111(4)(e)? . . . . . . 050 1 Yes [ ] 2 No [X]

If **yes**, attach a statement specifying which properties such a designation applies to.

Part 1 – Shares

	1 Number of shares 100	2 Name of corporation in which the shares are held 105	3 Class of shares 106	4 Date of Acquisition YYYY/MM/DD 110	5 Proceeds of disposition 120	6 Adjusted cost base 130	7 Outlays and expenses from disposition 140	8 Gain (or loss) (column 5 **minus** columns 6 and 7) 150	Foreign source
1	361	Woodstock Hydro Servic	Common	2016-08-31	32,055,289	32,055,289			
2	1,002	Haldimand County Hydro	Common	2016-08-31	72,265,957	72,265,957			
3	1,002	Haldimand County Energ	Common	2016-08-31	1,000,000	1,000,000			
				Totals	105,321,246	105,321,246			

Total adjustment under subsection 112(3) of the Act to all losses identified in Part 1 . . . . 160 ______

Actual gain or loss from the disposition of shares (total of column 8 **plus** line 160) . . . . ______ A

Part 2 – Real estate (Do not include losses on depreciable property)

1 Municipal address of real estate 1 = Address 1 2 = Address 2 3 = City 4 = Province, Country, Postal Code and Zip Code or Foreign Postal Code 200	2 Date of Acquisition YYYY/MM/DD 210	3 Proceeds of disposition 220	4 Adjusted cost base 230	5 Outlays and expenses from disposition 240	6 Gain (or loss) (column 3 **minus** columns 4 and 5) 250	Foreign source
	Totals					B

Part 3 – Bonds

1 Face value of bonds 300	2 Maturity date YYYY/MM/DD 305	3 Name of bond issuer 307	4 Date of Acquisition YYYY/MM/DD 310	5 Proceeds of disposition 320	6 Adjusted cost base	7 Outlays and expenses from disposition 340	8 Gain (or loss) (column 5 **minus** columns 6 and 7) 350	Foreign source
			Totals					C

Part 4 – Other properties (Do not include losses on depreciable property)

1 Description of other property 400	2 Date of Acquisition YYYY/MM/DD 410	3 Proceeds of disposition 420	4 Adjusted cost base 430	5 Outlays and expenses from disposition 440	6 Gain (or loss) (column 3 **minus** columns 4 and 5) 450	Foreign source
Totals						D

Note
Other property includes capital debts established as bad debts, as well as amounts that arise from foreign currency transactions.

Part 5 – Personal-use property (Do not include listed personal property)

1 Description of personal-use property 500	2 Date of Acquisition YYYY/MM/DD 510	3 Proceeds of disposition 520	4 Adjusted cost base 530	5 Outlays and expenses from disposition 540	6 Gain only (column 3 **minus** columns 4 and 5; if negative, enter "0") 550	Foreign source
Totals						E

Note
You cannot deduct losses on dispositions of personal-use property (other than listed personal property) from your income.

Part 6 – Listed personal property

1 Description of listed personal property 600	2 Date of Acquisition YYYY/MM/DD 610	3 Proceeds of disposition 620	4 Adjusted cost base 630	5 Outlays and expenses from disposition 640	6 Gain (or loss) (column 3 **minus** columns 4 and 5) 650	Foreign source
Totals						

Deduct: Unapplied listed personal property losses from other years (amount from line 530 of Schedule 4, *Corporation Loss Continuity and Application*) . . . . 655 ______

Net gains (or losses) from the disposition of listed personal property (total of column 6 **minus** line 655) . . . . ______ F

Note
Net listed personal property losses can only be applied against listed personal property gains.

Part 7 – Property qualifying for and resulting in an allowable business investment loss

1 Name of small business corporation 900	2 Shares, enter 1; debt, enter 2 905	3 Date of Acquisition YYYY/MM/DD 910	4 Proceeds of disposition 920	5 Adjusted cost base 930	6 Outlays and expenses from disposition 940	7 Loss only (column 4 **minus** columns 5 and 6) 950	Foreign source
Totals							

Allowable business investment losses (ABILs) . . . . Total of Column 7 ______ x 50.0000 % = ______ G

Enter amount G on line 406 of Schedule 1, *Net Income (Loss) for Income Tax Purposes*.

Note
Properties listed in Part 7 should not be included in any other parts of this schedule.

Part 8 – Capital gains or losses

Total of amounts A to F (do not include amount F if it is a loss) . . . . H

Add: Foreign source

Capital gains dividend received in the year . . . . **875** I

Capital gains reserve opening balance (from Part 1 of Schedule 13, *Continuity of Reserves,* enter the amount from line 8, *Balance at the beginning of the year* **plus** the amount from line 9, *Transfer on an amalgamation or the wind–up of a subsidiary*) . . . . **880** J

Subtotal (total of amounts H to J) K

Deduct: Capital gains reserve closing balance (from Schedule 13) . . . . **885** L

Capital gains or losses, excluding ABILs (amount K **minus** amount L) . . . . **890** M

Part 9 – Taxable capital gains and total capital losses

Capital gains or losses, excluding ABILs (amount from line 890 in Part 8) . . . . N

Deduct the following amounts included in amount N, that are subject to the zero inclusion rate:

Note
When a taxpayer is entitled to an advantage in respect of a donation, the zero inclusion rate is restricted to only part of the taxpayer's capital gain on disposition of the property. See section 38.2 of the Act for more information.

Gain on the donation to a qualified donee of a share, debt obligation, or right listed on a designated stock exchange and other securities under subparagraphs 38(a.1)(i) and (iii) of the Act . . . . **895** a Foreign source

Gain on the donation to a qualified donee of ecologically sensitive land under paragraph 38(a.2) of the Act* . . . . **896** b Foreign source

Exempt portion of the gain on the donation of securities arising from the exchange of a partnership interest under paragraph 38(*a.3*) . . . . b-2 Foreign source

Subtotal (amount a **plus** amount b **plus** b-2) ▶ O

Subtotal (amount N **minus** amount O) P

Add:

Deemed capital gain from the donation of property included in a flow-through share class of property to a qualified donee under subsection 40(12) of the Act:

Exemption threshold at time of disposition . . . . **897** c

The total of all capital gains from the disposition of the actual property . . . . **898** d

Foreign source

Amount c or amount d, whichever is less Q

Taxable capital gains under section 34.2 of the Act (line 275 of Schedule 73, *Income Inclusion Summary for Corporations that are Members of Partnerships*) . . . . x 2 = **899** R

Subtotal (total of amounts P to R) S

Deduct:

Allowable capital losses under section 34.2 of the Act (line 285 of Schedule 73, *Income Inclusion Summary for Corporations that are Members of Partnerships*) . . . . x 2 = **901** T

Total capital gains or losses (amount S **minus** amount T) U

Taxable capital gains or total capital losses

Total capital losses (amount U, if amount U is negative; if amount U is positive, enter "0") V
Enter amount V on line 210 of Schedule 4.

Taxable capital gains (if amount U is positive, enter amount U multiplied by 50.0000 %;
if amount U is negative, enter "0") . . . . W
Enter amount W on line 113 of Schedule 1.

* Do not include gains on donations of ecologically sensitive land to a private foundation.

35.	94	CIP	1,166,518,343		-1,166,518,343	0			0	0	0		
		Totals	19,896,004,985	1,380,858,351	-2,552,487,160	2,403,419	688,758,939	18,033,213,818				1,734,270,073	16,987,702,684

Note: Class numbers followed by a letter indicate the basic rate of the class taking into account the additional deduction allowed.
Class 1a: 4% + 6% = 10% (class 1 to 10%), class 1b: 4% + 2% = 6% (class 1 to 6%).

* Include any property acquired in previous years that has now become available for use. This property would have been previously excluded from column 3. List separately any acquisitions that are not subject to the 50% rule, see *Regulation* 1100(2) and (2.2).

** Enter in column 4, "Adjustments and transfers", amounts that increase or reduce the undepreciated capital cost.
Items that **increase** the undepreciated capital cost include amounts transferred under section 85, or transferred on amalgamation or winding-up of a subsidiary. Items that **reduce** the undepreciated capital cost include government assistance received or entitled to be received in the year, or a reduction of capital cost after the application of section 80. See the *T2 Corporation Income Tax Guide* for other examples of adjustments and transfers to include in column 4.

*** The net cost of acquisitions is the cost of acquisitions (column 3) **plus** or **minus** certain adjustments and transfers from column 4. For information on the exceptions to the 50% rule, as well as how to calculate the amounts to enter in column 6 in those cases, see Interpretation Bulletin IT-285, *Capital Cost Allowance - General Comments*.

**** Enter a rate only if you are using the declining balance method. For any other method (for example the straight-line method, where calculations are always based on the cost of acquisitions), enter N/A. Then enter the amount you are claiming in column 11.

***** For every entry in column 9, the "Recapture of capital cost allowance" there must be a corresponding entry in column 5, "Proceeds of dispositions during the year". The recapture and terminal loss rules do not apply to passenger vehicles in Class 10.1.

****** If the tax year is shorter than 365 days, prorate the CCA claim. Some classes of property do not have to be prorated. See the *T2 Corporation Income Tax Guide* for more information.

SCHEDULE 10

CUMULATIVE ELIGIBLE CAPITAL DEDUCTION

Name of corporation	Business Number	Tax year-end Year Month Day
HYDRO ONE NETWORKS INC.	87086 5821 RC0001	2016-12-31

- For use by a corporation that has eligible capital property. For more information, see the *T2 Corporation Income Tax Guide*.
- A separate cumulative eligible capital account must be kept for each business.

Part 1 – Calculation of current year deduction and carry-forward

Cumulative eligible capital - Balance at the end of the preceding taxation year (if negative, enter "0")					200	3,832,387,613	A
Add: Cost of eligible capital property acquired during the taxation year	222	2,506,433					
Other adjustments	226						
Subtotal (line 222 plus line 226)		2,506,433	x 3 / 4 =	1,879,825			B
Non-taxable portion of a non-arm's length transferor's gain realized on the transfer of an eligible capital property to the corporation after December 20, 2002	228		x 1 / 2 =				C
amount B minus amount C (if negative, enter "0")				1,879,825		1,879,825	D
Amount transferred on amalgamation or wind-up of subsidiary					224	27,967,016	E
Subtotal (add amounts A, D, and E)					230	3,862,234,454	F
Deduct: Proceeds of sale (less outlays and expenses not otherwise deductible) from the disposition of all eligible capital property during the taxation year	242		G				
The gross amount of a reduction in respect of a forgiven debt obligation as provided for in subsection 80(7)	244		H				
Other adjustments	246		I				
(add amounts G,H, and I)			x 3 / 4 =		248		J
Cumulative eligible capital balance (amount F minus amount J)						3,862,234,454	K
(if amount K is negative, enter "0" at line M and proceed to Part 2)							
Cumulative eligible capital for a property no longer owned after ceasing to carry on that business			249				
amount K		3,862,234,454					
less amount from line 249							
Current year deduction		3,862,234,454	x 7.00 % = 250	270,356,412 *			
(line 249 plus line 250) (enter this amount at line 405 of Schedule 1)				270,356,412		270,356,412	L
Cumulative eligible capital – Closing balance (amount K minus amount L) (if negative, enter "0")					300	3,591,878,042	M

* You can claim any amount up to the maximum deduction of 7%. The deduction may not exceed the maximum amount prorated by the number of days in the taxation year divided by 365.

Part 2 – Amount to be included in income arising from disposition

(complete this part only if the amount at line K is negative)

Amount from line K (show as positive amount)							N
Total of cumulative eligible capital (CEC) deductions from income for taxation years beginning after June 30, 1988			400		1		
Total of all amounts which reduced CEC in the current or prior years under subsection 80(7)			401		2		
Total of CEC deductions claimed for taxation years beginning before July 1, 1988	402		3				
Negative balances in the CEC account that were included in income for taxation years beginning before July 1, 1988	408		4				
Line 3 minus line 4 (if negative, enter "0")					5		
Total of lines 1, 2 and 5					6		
Amounts included in income under paragraph 14(1)(b), as that paragraph applied to taxation years ending after June 30, 1988 and before February 28, 2000, to the extent that it is for an amount described at line 400			7				
Amounts at line T from Schedule 10 of previous taxation years ending after February 27, 2000			8				
Subtotal (line 7 plus line 8)	409				9		
Line 6 minus line 9 (if negative, enter "0")							O
Line N minus line O (if negative, enter "0")							P
Line 5				x 1 / 2 =			Q
Line P minus line Q (if negative, enter "0")							R
Amount R				x 2 / 3 =			S
Amount N or amount O, whichever is less							T
Amount to be included in income (amount S plus amount T) (enter this amount on line 108 of Schedule 1)						410

SCHEDULE 11

TRANSACTIONS WITH SHAREHOLDERS, OFFICERS, OR EMPLOYEES

Corporation's name	Business Number	Tax year end Year Month Day
HYDRO ONE NETWORKS INC.	87086 5821 RC0001	2016-12-31

Provide the details of any transactions with shareholders, officers or employees that involve:

– payments the corporation made or amounts credited to the account of shareholders, officers, or employees, which were not part of their remuneration or reimbursement of expenses;

– assets the corporation sold to or purchased from shareholders, officers, or employees, including those for which an election was made under section 85; or

– loans or indebtedness to shareholders, officers, or employees, or persons connected with a shareholder, which were not repaid by the end of the taxation year.

	Relationship code (see note) 100	Payments $ 200	Reimbursement (Other than reimbursement of expenses) $ 300	Loans receivable from, or debts owing to $ 400	Assets sold or purchased $ 500	Does section 85 apply to assets sold or purchased? 550
1	1				105,321,246	Yes X No

Note: Enter the code number of the relationship that applies: (if more than one relationship exists, enter the lowest applicable number)
1 - Shareholder
2 - Officer
3 - Employee

SCHEDULE 13

CONTINUITY OF RESERVES

Name of corporation	Business number	Tax year end Year Month Day
HYDRO ONE NETWORKS INC.	87086 5821 RC0001	2016-12-31

- For use by corporations to provide a continuity of all reserves claimed which are allowed for tax purposes.
- File one completed copy of this schedule with the corporation's *T2 Corporation Income Tax Return*.
- For more information, see the *T2 Corporation Income Tax Guide*.

Part 1 – Capital gains reserves

	Description of property 001	Balance at the beginning of the year $ 002	Transfer on an amalgamation or the wind-up of a subsidiary $ 003	Add $	Deduct $	Balance at the end of the year $ 004
1						
	Totals	008	009			010

The amount from line 008 **plus** the amount from line 009 should be entered on line 880 of Schedule 6, *Summary of Dispositions of Capital Property*. The amount from line 010 should be entered on line 885 of Schedule 6.

Part 2 – Other reserves

Description		Balance at the beginning of the year $	Transfer on an amalgamation or the wind-up of a subsidiary $	Add $	Deduct $	Balance at the end of the year $
Reserve for doubtful debts	☐	110	115			120
Reserve for undelivered goods and services not rendered	X	130	135	46,625,639		140 46,625,639
Reserve for prepaid rent	☐	150	155			160
Reserve for refundable containers . .	☐	190	195			200
Reserve for unpaid amounts	☐	210	215			220
Other tax reserves	☐	230	235			240
Totals			275	46,625,639		280 46,625,639

Enter "X" in the column above if the tax reserve has also been reported on the corporation's financial statements. This allows offsetting entries on Schedule 1, resulting in a zero effect on net income for tax purposes.

The amount from line 270 **plus** the amount from line 275 should be entered on line 125 of Schedule 1, *Net Income (Loss) for Income Tax Purposes*, as an addition. The amount from line 280 should be entered on line 413 of Schedule 1 as a deduction.

SCHEDULE 14

MISCELLANEOUS PAYMENTS TO RESIDENTS

Name of corporation	Business Number	Tax year end Year Month Day
HYDRO ONE NETWORKS INC.	87086 5821 RC0001	2016-12-31

- This schedule must be completed by all corporations who made the following payments to residents of Canada: royalties for which the corporation has not filed a T5 slip; research and development fees; management fees; technical assistance fees; and similar payments.
- Please enter the name and address of the recipient and the amount of the payment in the applicable column. If several payments of the same type (i.e., management fees) were made to the same person, enter the total amount paid. If similar types of payments have been made, but do not fit into any of the categories, enter these amounts in the column entitled "Similar payments".

Schedule 15

Deferred Income Plans

Corporation's name	Business number	Tax year end Year Month Day
HYDRO ONE NETWORKS INC.	87086 5821 RC0001	2016-12-31

- Complete the information below if the corporation deducted payments from its income made to a registered pension plan (RPP), a registered supplementary unemployment benefit plan (RSUBP), a deferred profit sharing plan (DPSP), a pooled registered pension plan (PRPP), or an employee profit sharing plan (EPSP).
- If the trust that governs an employee profit sharing plan is **not resident** in Canada, please indicate if the T4PS, *Statement of Employees Profit Sharing Plan Allocations and Payments*, Supplementary slip(s) were filed for the last calendar year, and whether they were filed by the trustee or the employer.

	Type of plan (see note 1) 100	Amount of contribution $ (see note 2) 200	Registration number (RPP, RSUBP, PRPP, and DPSP only) 300	Name of EPSP trust 400	Address of EPSP trust 500	T4PS slip(s) (see note 3) 600
1	1	103,608,124	1059104			

Note 1

Enter the applicable code number:

1 – RPP
2 – RSUBP
3 – DPSP
4 – EPSP
5 – PRPP

Note 2

You do not need to add to Schedule 1 any payments you made to deferred income plans.
To reconcile such payments, calculate the following amount:

Total of all amounts indicated in column 200 of this schedule	103,608,124	A
Less:		
Total of all amounts for deferred income plans deducted in your financial statements	44,240,669	B
Deductible amount for contributions to deferred income plans (amount A **minus** amount B) (if negative, enter "0")	59,367,455	C

Enter amount C on line 417 of Schedule 1

Note 3

T4PS slip(s) filed by: 1 – Trustee
2 – Employer (EPSP only)

FIRST-TIME FILER AFTER INCORPORATION, AMALGAMATION, OR WINDING-UP OF A SUBSIDIARY INTO A PARENT

Name of corporation	Business Number	Tax year end Year Month Day
HYDRO ONE NETWORKS INC.	87086 5821 RC0001	2016-12-31

This schedule must be filed by corporations for the first year of filing after incorporation, amalgamation, or by parent corporations filing for the first time after winding-up a subsidiary corporation(s) under section 88 of the *Income Tax Act* during the current taxation year.

Part 1 – Type of operation

100 For those corporations filing for the first time after incorporation or amalgamation, please identify the type of operation that applies to your corporation:

Part 2 – First year of filing after amalgamation

For the first year of filing after an amalgamation, please provide the following information:

Name of predecessor corporation(s) 200	Business Number (If a corporation is not registered, enter "NR") 300

Part 3 – First year of filing after wind-up of subsidiary corporation(s)

For the parent corporation filing for the first time after winding-up a subsidiary corporation(s) under section 88 of the *Income Tax Act*, please provide the following information:

	Name of subsidiary corporation(s) 400	Business Number (If a corporation is not registered, enter "NR") 500	Commencement date of wind-up (YYYY/MM/DD) 600	Date of wind-up (YYYY/MM/DD) 700

Schedule 31

Investment Tax Credit – Corporations

General information

- Use this schedule:
  - to calculate an investment tax credit (ITC) earned during the tax year;
  - to claim a deduction against Part I tax payable;
  - to claim a refund of credit earned during the current tax year;
  - to claim a carryforward of credit from previous tax years;
  - to transfer a credit following an amalgamation or wind-up of a subsidiary, as described under subsections 87(1) and 88(1);
  - to request a credit carryback to one or more previous years; or
  - if you are subject to a recapture of ITC.
- Unless otherwise noted, all legislative references are to the *Income Tax Act* and the *Income Tax Regulations*.
- The ITC is eligible for a three-year carryback (if not deductible in the year earned). It is also eligible for a twenty-year carryforward.
- Investments or expenditures, described in subsection 127(9) and Regulation Part XLVI, that earn an ITC are:
  - qualified property and qualified resource property (Parts 4 to 7 of this schedule);
  - expenditures that are part of the scientific research and experimental development (SR&ED) qualified expenditure pool (Parts 8 to 17). File Form T661, *Scientific Research and Experimental Development (SR&ED) Expenditures Claim*;
  - pre-production mining expenditures (Parts 18 to 20);
  - apprenticeship job creation expenditures (Parts 21 to 23); and
  - child care spaces expenditures (Parts 24 to 28).
- Include a completed copy of this schedule with the *T2 Corporation Income Tax Return*. If you need more space, attach additional schedules.
- For more information on ITCs, see "Investment Tax Credit" in Guide T4012, *T2 Corporation – Income Tax Guide*, Information Circular IC78-4, *Investment Tax Credit Rates*, and its related Special Release.
- For more information on SR&ED, see T4088, *Guide to Form T661 – Scientific Research and Experimental Development (SR&ED) Expenditures Claim*. Also see the *Eligibility of Work for SR&ED Investment Tax Credits Policy* at **cra.gc.ca/txcrdt/sred-rsde/clmng/lgbltywrkfrsrdnvstmnttxcrdts-eng.html**.

Detailed information

- For the purpose of this schedule, **investment** means the capital cost of the property (excluding amounts added by an election under section 21), determined without reference to subsections 13(7.1) and 13(7.4), minus the amount of any government or non-government assistance that the corporation has received, is entitled to receive, or can reasonably be expected to receive for that property when it files the income tax return for the year in which the property was acquired.
- An ITC deducted or refunded in a tax year for a depreciable property, other than a depreciable property deductible under paragraph 37(1)(b), reduces both the capital cost of that property and the undepreciated capital cost of that class in the next tax year. An ITC for SR&ED deducted or refunded in a tax year will reduce the balance in the pool of deductible SR&ED expenditures and the adjusted cost base (ACB) of an interest in a partnership in the next tax year. An ITC from pre-production mining expenditures deducted in a tax year reduces the balance in the pool of deductible cumulative Canadian exploration expenses in the next tax year.
- Property acquired has to be **available for use** before a claim for an ITC can be made. See subsections 127(11.2) and 248(19) for more information.
- Expenditures for SR&ED and capital costs for a property qualifying for an ITC must be identified by the claimant on Form T661 and Schedule 31 no later than 12 months after the claimant's income tax return is due for the tax year in which it incurred the expenditures or capital costs.
- Expenditures for pre-production mining, apprenticeship, or child care space for an ITC must be identified by the claimant on Schedule 31 no later than 12 months after the claimant's income tax return is due for the tax year in which it incurred the expenditures or capital costs.
- Partnership allocations – Subsection 127(8) provides for the allocation of the amount that may reasonably be considered to be a partner's share of the ITCs of the partnership at the end of the fiscal period of the partnership. An allocation of ITCs is generally considered to be the partner's reasonable share of the ITCs if it is made in the same proportion in which the partners have agreed to share any income or loss and if section 103 is not applicable for the agreement to share any income or loss. Special rules apply to specified and limited partners. For more information, see Guide T4068, *Guide for the Partnership Information Return*.
- For SR&ED expenditures, the expression **in Canada** includes the "exclusive economic zone" (as defined in the *Oceans Act* to generally consist of an area that is within 200 nautical miles from the Canadian coastline), including the airspace, seabed and subsoil for that zone.
- For the purpose of this schedule, the expression **Atlantic Canada** includes the Gaspé Peninsula and the provinces of Newfoundland and Labrador, Prince Edward Island, Nova Scotia, and New Brunswick, as well as their respective offshore regions (prescribed in Regulation 4609).
- For the purpose of this schedule, **qualified property** means property in Atlantic Canada that is used primarily for manufacturing and processing, farming or fishing, logging, storing grain, or harvesting peat. Property in Atlantic Canada that is used primarily for oil and gas, and mining activities is considered qualified property only if acquired by the taxpayer **before** March 29, 2012. Qualified property includes new buildings and new machinery and equipment (prescribed in Regulation 4600), and if acquired by the taxpayer **after** March 28, 2012, new energy generation and conservation property (prescribed in Regulation 4600). Qualified property can also be used primarily to produce or process electrical energy or steam in a prescribed area (as described in Regulation 4610). See the definition of **qualified property** in subsection 127(9) for more information.

Detailed information (continued)

- For the purpose of this schedule, **qualified resource property** means property in Atlantic Canada that is used primarily for oil and gas, and mining activities, if acquired by the taxpayer **after** March 28, 2012, and **before** January 1, 2016. Qualified resource property includes new buildings and new machinery and equipment (prescribed in Regulation 4600). See the definition of **qualified resource property** in subsection 127(9) for more information.
- For the purpose of this schedule, **pre-production mining exploration expenditures** are pre-production mining expenditures incurred **after** March 28, 2012, by the taxpayer to determine the existence, location, extent, or quality of certain mineral resources in Canada, excluding expenses incurred in the exploration of an oil or gas well. See subparagraph (a)(i) of the definition of **pre-production mining expenditure** in subsection 127(9) for more information.
- For the purpose of this schedule, **pre-production mining development expenditures** are pre-production mining expenditures incurred **after** March 28, 2012, by the taxpayer to bring a new mineral resource mine in Canada into production, excluding expenses in the development of a bituminous sands deposit or an oil shale deposit. See subparagraph (a)(ii) of the definition of **pre-production mining expenditure** in subsection 127(9) for more information.

Part 1 – Investments, expenditures, and percentages

Investments	**Specified percentage**
Qualified property acquired primarily for use in Atlantic Canada	10 %
Qualified resource property acquired primarily for use in Atlantic Canada and acquired:	
– after March 28, 2012, and before 2014	10 %
– after 2013 and before 2016	5 %
– after 2015*	0 %
Expenditures	
If you are a Canadian-controlled private corporation (CCPC), this percentage may apply to the portion that you claim of the SR&ED qualified expenditure pool that does not exceed your expenditure limit (see Part 10)	35 %
Note: If your current year's qualified expenditures are more than your expenditure limit (see Part 10), the excess is eligible for an ITC calculated at the 20 % rate**.	
If you are a corporation that is not a CCPC and have incurred qualified expenditures for SR&ED in any area in Canada:	
– before 2014**	20 %
– after 2013**	15 %
If you are a taxable Canadian corporation that incurred pre-production mining expenditures before March 29, 2012	10 %
If you are a taxable Canadian corporation that incurred pre-production mining exploration expenditures:	
– after March 28, 2012, and before 2013	10 %
– in 2013	5 %
– after 2013	0 %
If you are a taxable Canadian corporation that incurred pre-production mining development expenditures***:	
– after March 28, 2012, and before 2014	10 %
– in 2014	7 %
– in 2015	4 %
– after 2015	0 %
If you paid salary and wages to apprentices in the first 24 months of their apprenticeship contract for employment	10 %
If you incurred eligible expenditures after March 18, 2007, for the creation of licensed child care spaces for the children of your employees and, potentially, for other children	25 %

* A transitional relief rate of 10% may apply to property acquired after 2013 and before 2017, if the property is acquired under a written agreement entered into before March 29, 2012, or the property is acquired as part of a **phase** of a project where the construction or the engineering and design work for the construction started before March 29, 2012. See paragraph (a.1) of the definition of **specified percentage** in subsection 127(9) for more information.

** The reduction of the rate from 20% to 15% applies to 2014 and later tax years, except that, for 2014 tax years that start before 2014, the reduction is pro-rated based on the number of days in the tax year that are after 2013.

*** A transitional relief rate may apply to expenditures incurred after 2013 and before 2016, if the expenditure is incurred under a written agreement entered into before March 29, 2012, or the expenditure is incurred as part of the development of a new mine where the construction or the engineering and design work for the construction of the new mine started before March 29, 2012. See subparagraphs (k)(ii) and (iii) of the definition of **specified percentage** in subsection 127(9) for more information.

Corporation's name	Business number	Tax year-end Year Month Day
HYDRO ONE NETWORKS INC.	87086 5821 RC0001	2016-12-31

Part 2 – Determination of a qualifying corporation

Is the corporation a qualifying corporation? . . . . **101** 1 Yes [ ] 2 No [X]

For the purpose of a refundable ITC, a **qualifying corporation** is defined under subsection 127.1(2). The corporation has to be a CCPC and its taxable income (before any loss carrybacks) for its previous tax year cannot be more than its **qualifying income limit** for the particular tax year. If the corporation is associated with any other corporations during the tax year, the total of the taxable incomes of the corporation and the associated corporations (before any loss carrybacks), for their last tax year ending in the previous calendar year, cannot be more than their qualifying income limit for the particular tax year.

Note: A CCPC considered associated with another corporation under subsection 256(1) will be considered **not** associated for the calculation of a refundable ITC if:

- one corporation is associated with another corporation solely because one or more persons own shares of the capital stock of both corporations; and
- one of the corporations has at least one shareholder who is not common to both corporations.

If you are a **qualifying** corporation, you will earn a **100%** refund on your share of any ITCs earned at the 35% rate on qualified **current** expenditures for SR&ED, up to the allocated expenditure limit. The 100% refund does not apply to qualified **capital** expenditures eligible for the 35% credit rate. They are only eligible for the **40%** refund*.

Some CCPCs that are **not qualifying** corporations may also earn a **100%** refund on their share of any ITCs earned at the 35% rate on qualified **current** expenditures for SR&ED, up to the allocated expenditure limit. The expenditure limit can be determined in Part 10. The 100% refund does not apply to qualified **capital** expenditures eligible for the 35% credit rate. They are only eligible for the **40%** refund*.

The 100% refund will not be available to a corporation that is an **excluded corporation** as defined under subsection 127.1(2). A corporation is an excluded corporation if, at any time during the year, it is a corporation that is either controlled by (directly or indirectly, in any manner whatever) or is related to:

a) one or more persons exempt from Part I tax under section 149;

b) Her Majesty in right of a province, a Canadian municipality, or any other public authority; or

c) any combination of persons referred to in a) or b) above.

* Capital expenditures incurred after December 31, 2013, including lease payments for property that would have been a capital expenditure if purchased directly, are **not** qualified SR&ED expenditures and are **not** eligible for an ITC on SR&ED expenditures.

Part 3 – Corporations in the farming industry

Complete this area if the corporation is making SR&ED contributions.

Is the corporation claiming a contribution in the current year to an agricultural organization whose goal is to finance SR&ED work (for example, check-off dues)? . . . . **102** 1 Yes [ ] 2 No [X]

If **yes**, complete Schedule 125, *Income Statement Information*, to identify the type of farming industry the corporation is involved in.

Contributions to agricultural organizations for SR&ED* . . . . **103** ______
(Enter this amount on line 350 of Part 8)

* Enter only contributions not already included on Form T661.
Include 80% of the contributions made **after** 2012. For contributions made **before** 2013, include all of the contributions.

Qualified Property and Qualified Resource Property

Part 4 – Eligible investments for qualified property and qualified resource property from the current tax year

Capital cost allowance class number **105**	Description of investment **110**	Date available for use **115**	Location used in Atlantic Canada (province) **120**	Amount of investment **125**

Total of investments for qualified property and qualified resource property ______ A1

Part 5 – Current-year credit and account balances – ITC from investments in qualified property and qualified resource property

ITC at the end of the previous tax year				B1
Deduct:				
Credit deemed as a remittance of co-op corporations	210			
Credit expired	215			
Subtotal (line 210 **plus** line 215)				C1
ITC at the beginning of the tax year (amount B1 **minus** amount C1)			220	
Add:				
Credit transferred on amalgamation or wind-up of subsidiary	230			
ITC from repayment of assistance	235			
Qualified property; and qualified resource property acquired after March 28, 2012, and before January 1, 2014* (applicable part from amount A1 in Part 4) ______ x 10 % =	240			
Qualified resource property acquired after December 31, 2013, and before January 1, 2016 (applicable part from amount A1 in Part 4) ______ x 5 % =	242			
Credit allocated from a partnership	250			
Subtotal (total of lines 230 to 250)				D1
Total credit available (line 220 **plus** amount D1)				E1
Deduct:				
Credit deducted from Part I tax (enter this amount at line D8 in Part 30)	260			
Credit carried back to the previous year(s) (from amount H1 in Part 6)		a		
Credit transferred to offset Part VII tax liability	280			
Subtotal (total of line 260, amount a, and line 280)				F1
Credit balance before refund (amount E1 **minus** amount F1)				G1
Deduct:				
Refund of credit claimed on investments from qualified property and qualified resource property (from Part 7)			310	
ITC closing balance of investments from qualified property and qualified resource property (amount G1 **minus** line 310)			320	

* Include investments acquired after 2013 and before 2017 that are eligible for transitional relief.

Part 6 – Request for carryback of credit from investments in qualified property and qualified resource property

	Year	Month	Day			
1st previous tax year				Credit to be applied	901	
2nd previous tax year				Credit to be applied	902	
3rd previous tax year				Credit to be applied	903	

Total of lines 901 to 903 (enter amount H1 on line a in Part 5) ______ H1

Part 7 – Refund of ITC for qualifying corporations on investments from qualified property and qualified resource property

Current-year ITCs (total of lines 240, 242, and 250 in Part 5)		I1
Credit balance before refund (from amount G1 in Part 5)		J1
Refund (40 % of amount I1 or J1, whichever is less)		K1

Enter amount K1 or a lesser amount on line 310 in Part 5 (also enter it on line 780 of the T2 return if you don't claim an SR&ED ITC refund).

SR&ED

Part 8 – Qualified SR&ED expenditures

Current expenditures (from line 557 on Form T661)		6,957,143		
Contributions to agricultural organizations for SR&ED				
Deduct: Government assistance, non-government assistance, or contract payment				
Contributions to agricultural organizations for SR&ED for the federal ITC (this amount is updated to line 103 of Part 3. For more details, consult the Help.)*		+		
Current expenditures (line 557 on Form T661 **plus** line 103 in Part 3)*		6,957,143	350	6,957,143
Capital expenditures incurred **before** 2014 (from line 558 on Form T661)**			360	
Repayments made in the year (from line 560 on Form T661)			370	
Qualified SR&ED expenditures (total of lines 350 to 370)			380	6,957,143

* If you are claiming only contributions made to agricultural organizations for SR&ED, line 350 should equal line 103 in Part 3. Do not file Form T661.

** Capital expenditures incurred after December 31, 2013, are not qualified SR&ED expenditures. Capital cost allowance can be claimed for depreciable property acquired for use in SR&ED after 2013.

Part 9 – Components of the SR&ED expenditure limit calculation

Part 9 only applies if you are a CCPC.

Note: A CCPC considered associated with another corporation under subsection 256(1) will be considered not associated for the calculation of an SR&ED expenditure limit if:

one corporation is associated with another corporation solely because one or more persons own shares of the capital stock of the corporation; and

one of the corporations has at least one shareholder who is not common to both corporations.

Is the corporation associated with another CCPC for the purpose of calculating the SR&ED expenditure limit? .... **385** 1 Yes ☐ 2 No ☐

If you answered **no** to the question on line 385 above or if you are not associated with any other corporations, complete lines 390 and 398.
If you answered **yes**, the amounts for associated corporations will be determined on Schedule 49.

Enter your taxable income for the previous tax year* (prior to any loss carrybacks applied) .... **390** ____

Enter your taxable capital employed in Canada for the previous tax year minus $10 million. If this amount is nil or negative, enter "0". If this amount is over $40 million, enter $40 million .... **398** ____

* If the tax year referred to on line 390 is less than 51 weeks, **multiply** the taxable income by the following result: 365 **divided** by the number of days in that tax year.

Part 10 – SR&ED expenditure limit for a CCPC

For a stand-alone (not associated) corporation: $ 8,000,000

Deduct:

Taxable income for the previous tax year (from line 390 in Part 9) or $500,000, whichever is more	x 10 =		A2
Excess ($8,000,000 **minus** amount A2; if negative, enter "0")			B2
$ 40,000,000 **minus** line 398 in Part 9	a		
Amount a **divided** by $ 40,000,000			C2
Expenditure limit for the stand-alone corporation (amount B2 **multiplied** by amount C2)*			D2

For an associated corporation:

If associated, the allocation of the SR&ED expenditure limit, as provided on Schedule 49* .... **400** ____ E2

If your tax year is less than 51 weeks, calculate the amount of the expenditure limit as follows:

Amount D2 or E2 ____ x Number of days in the tax year 366 / 365 = ... ____ F2

Your SR&ED expenditure limit for the year (enter the amount from amount D2, E2, or F2, whichever applies) .... **410** ____

* Amount D2 or E2 cannot be more than $3,000,000.

Part 11 – Investment tax credits on SR&ED expenditures

Current expenditures (from line 350 in Part 8) or the expenditure limit (from line 410 in Part 10), whichever is less*	420		x	35 %	=		G2
Line 350 **minus** line 410 (if negative, enter "0")	30	6,957,143					

Amount from line 430 ______ x (Number of days in the tax year before 2014 ______ / Number of days in the tax year) x 20% = ______ b

Amount from line 430** 6,957,143 x (Number of days in the tax year after 2013 366 / Number of days in the tax year 366) x 15 % = 1,043,571 c

Subtotal (amount b **plus** amount c) . . . 1,043,571 — 1,043,571 H2

Line 410 **minus** line 350 (if negative, enter "0") . . . ______ d

Capital expenditures (from line 360 in Part 8) or amount d above, whichever is less* . . . **440** ______ x 35 % = ______ I2

Line 360 **minus** amount d above (if negative, enter "0") . . . **450** ______

Amount from line 450 ______ x (Number of days in the tax year before 2014 ______ / Number of days in the tax year) x 20% = ______ e

Amount from line 450** ______ x (Number of days in the tax year after 2013 366 / Number of days in the tax year 366) x 15 % = ______ f

Subtotal (amount e **plus** amount f) . . . ______ — ______ J2

If a corporation makes a repayment of any government or non-government assistance, or contract payments that reduced the amount of qualified expenditures for ITC purposes, the amount of the repayment is eligible for a credit.

Repayments (amount from line 370 in Part 8) . . . . . ______

The ITC on the repayment (the credit) is calculated using the ITC rate that you used to determine your ITC when your qualified expenditures for ITC purposes were reduced because of the government or non-government assistance, or contract payments. Enter the amount of the repayment on the line that corresponds to the appropriate rate. ***

460		x	35 %	=	g
480		x	20 %	=	h
490		x	15 %	=	i

Subtotal (**add** amounts g to i) ______ — ______ K2

Current-year SR&ED ITC (total of amounts G2 to K2; enter on line 540 in Part 12) . . . 1,043,571 L2

* For corporations that are not CCPCs, enter "0" for amounts G2 and I2.

** For tax years that end after 2013, the general SR&ED ITC rate is reduced from 20% to 15%, except that, for 2014 tax years that start before 2014, the reduction is pro-rated based on the number of days in the tax year that are after 2013. For tax years that have a start date **after** 2013, multiply the amount by 15%.

*** If you are reporting a repayment for a tax year which included two calendar years with different rates (such as a 2014 tax year that started in 2013), the amount of repayment is allocated between the two ITC rates as follows:
- For the first part of the tax year, enter on the line next to the applicable ITC rate, the result of the following calculation: The full repayment amount **multiplied** by the number of days in the tax year which were in the first calendar year, **divided** by the total number of days in the tax year.
- For the last part of the tax year which is in the second calendar year, enter on the line next to the applicable ITC rate, the difference between the first part calculated above and the full repayment amount.

Part 12 – Current-year credit and account balances – ITC from SR&ED expenditures

ITC at the end of the previous tax year			213,699	M2
Deduct:				
Credit deemed as a remittance of co-op corporations	510			
Credit expired	515			
Subtotal (line 510 **plus** line 515)				N2
ITC at the beginning of the tax year (amount M2 **minus** amount N2)	520		213,699	
Add:				
Credit transferred on amalgamation or wind-up of subsidiary	530			
Total current-year credit (from amount L2 in Part 11)	540	1,043,571		
Credit allocated from a partnership	550			
Subtotal (total of lines 530 to 550)		1,043,571	1,043,571	O2
Total credit available (line 520 **plus** amount O2)			1,257,270	P2
Deduct:				
Credit deducted from Part I tax (enter this amount at line E8 in Part 30)	560			
Credit carried back to the previous year(s) (from amount S2 in Part 13)		j		
Credit transferred to offset Part VII tax liability	580			
Subtotal (total of line 560, amount j, and line 580)				Q2
Credit balance before refund (amount P2 **minus** amount Q2)			1,257,270	R2
Deduct:				
Refund of credit claimed on SR&ED expenditures (from Part 14 or 15, whichever applies)	610			
ITC closing balance on SR&ED (amount R2 **minus** line 610)	620		1,257,270	

Part 13 – Request for carryback of credit from SR&ED expenditures

	Year	Month	Day			
1st previous tax year				Credit to be applied	911	
2nd previous tax year				Credit to be applied	912	
3rd previous tax year				Credit to be applied	913	
				Total of lines 911 to 913 (enter amount S2 at line j in Part 12)		S2

Part 14 – Refund of ITC for qualifying corporations – SR&ED

Complete this part only if you are a qualifying corporation as determined on line 101 in Part 2.

Is the corporation an excluded corporation as defined under subsection 127.1(2)? . . . . . **650** 1 Yes [ ] 2 No [X]

Current-year ITC (lines 540 **plus** 550 in Part 12 **minus** amount K2 in Part 11)		k
Refundable credits (amount k or amount R2 in Part 12, whichever is less)*		T2
Deduct:		
Amount T2 or amount G2 in Part 11, whichever is less		U2
Net amount (amount T2 **minus** amount U2; if negative, enter "0")		V2
Amount V2 **multiplied** by 40 %		W2
Add:		
Amount U2		X2
Refund of ITC (amount W2 **plus** amount X2 – enter this, or a lesser amount, on line 610 in Part 12)		Y2

Enter the total of line 310 in Part 5 and line 610 in Part 12 on line 780 of the T2 return.

* If you are also an excluded corporation, as defined in subsection 127.1(2), this amount must be multiplied by 40%. Claim this, or a lesser amount, as your refund of ITC for amount Y2.

Part 15 – Refund of ITC for CCPCs that are not qualifying or excluded corporations – SR&ED

Complete this box only if you are a CCPC that is not a qualifying or excluded corporation as determined on line 101 in Part 2.

Credit balance before refund (from amount R2 in Part 12)	1,257,270	Z2
Deduct:		
Amount Z2 or amount G2 in Part 11, whichever is less		AA2
Net amount (amount Z2 **minus** amount AA2; if negative, enter "0")	1,257,270	BB2
Amount BB2 or amount I2 in Part 11, whichever is less		CC2
Amount CC2 **multiplied** by 40 %		DD2
Add:		
Amount AA2		EE2
Refund of ITC (amount DD2 **plus** amount EE2)		FF2

Enter FF2, or a lesser amount, on line 610 in Part 12 and also on line 780 of the T2 return.

Recapture – SR&ED

Part 16 – Recapture of ITC for corporations and partnerships – SR&ED

You will have a recapture of ITC in a year when **all** of the following conditions are met:

- you acquired a particular property in the current year or in any of the 20 previous tax years, and the credit was earned in a tax year ending after 1997 and did not expire before 2008;
- you claimed the cost of the property as a qualified expenditure for SR&ED on Form T661;
- the cost of the property was included in calculating your ITC or was the subject of an agreement made under subsection 127(13) to transfer qualified expenditures; and
- you disposed of the property or converted it to commercial use after February 23, 1998. This condition is also met if you disposed of or converted to commercial use a property that incorporates the particular property previously referred to.

Note:

The recapture **does not apply** if you disposed of the property to a non-arm's-length purchaser who intended to use it all or substantially all for SR&ED. When the non-arm's-length purchaser later sells or converts the property to commercial use, the recapture rules will apply to the purchaser based on the historical ITC rate of the original user.

You will report a recapture on the T2 return for the year in which you disposed of the property or converted it to commercial use. In the following tax year, add the amount of the ITC recapture to the SR&ED expenditure pool.

If you have more than one disposition for calculations 1 and 2, complete the columns for each disposition for which a recapture applies, using the calculation formats below.

Calculation 1 – If you meet all of the above conditions

Amount of ITC you originally calculated for the property you acquired, or the original user's ITC where you acquired the property from a non-arm's length party, as described in the **note** above 700	Amount calculated using ITC rate at the date of acquisition (or the original user's date of acquisition) on either the proceeds of disposition (if sold in an arm's length transaction) or the fair market value of the property (in any other case) 710	Amount from column 700 or 710, whichever is less

Subtotal (enter amount A3 on line C3 in Part 17) A3

Calculation 2 – Only if you transferred all or a part of the qualified expenditure to another person under an agreement described in subsection 127(13); otherwise, enter nil on line B3.

A Rate that the transferee used in determining its ITC for qualified expenditures under a subsection 127(13) agreement 720	B Proceeds of disposition of the property if you dispose of it to an arm's length person; or, in any other case, enter the fair market value of the property at conversion or disposition 730	C Amount, if any, already provided for in Calculation 1 (This allows for the situation where only part of the cost of a property is transferred under a subsection 127(13) agreement.) 740	D Amount determined by the formula (A x B) – C	E ITC earned by the transferee for the qualified expenditures that were transferred 750	F Amount from column D or E, whichever is less

Subtotal (total of column F) (enter amount B3 on line D3 in Part 17) B3

Part 16 – Recapture of ITC for corporations and partnerships – SR&ED (continued)

Calculation 3

As a member of the partnership, you will report your share of the SR&ED ITC of the partnership after the SR&ED ITC has been reduced by the amount of the recapture. If this amount is a positive amount, you will report it on line 550 in Part 12. However, if the partnership does not have enough ITC otherwise available to offset the recapture, then the amount by which reductions to ITC exceed additions (the excess) will be determined and reported on line 760.

Corporate partner's share of the excess of SR&ED ITC (amount to be reported on line E3 in Part 17) **760** ______

Part 17 – Total recapture of SR&ED investment tax credit

Recaptured ITC from calculation 1, amount A3 in Part 16		C3
Recaptured ITC from calculation 2, amount B3 in Part 16		D3
Recaptured ITC from calculation 3, line 760 in Part 16		E3
Total recapture of SR&ED investment tax credit (total of amounts C3 to E3)		F3

Enter amount F3 on line A8 in Part 29.

Pre-Production Mining

Part 18 – Pre-production mining expenditures

Exploration information

A mineral resource that qualifies for the credit means a mineral deposit from which the principal mineral to be extracted is diamond, a base or precious metal deposit, or a mineral deposit from which the principal mineral to be extracted is an industrial mineral that, when refined, results in a base or precious metal.

In column 800, list all minerals for which pre-production mining expenditures have taken place in the tax year.

For each of the minerals reported in column 800, identify each project (in column 805), mineral title (in column 806), and mining division (in column 807) where title is registered. If there is no mineral title, identify only the project and mining division.

List of minerals 800	Project name 805

Mineral title 806	Mining division 807

Pre-production mining expenditures*

Exploration:

Pre-production mining expenditures that you incurred in the tax year (**before** January 1, 2014) for the purpose of determining the existence, location, extent, or quality of a mineral resource in Canada:

Prospecting	810	
Geological, geophysical, or geochemical surveys	811	
Drilling by rotary, diamond, percussion, or other methods	812	
Trenching, digging test pits, and preliminary sampling	813	

Development:

Pre-production mining expenditures incurred in the tax year for bringing a new mine in a mineral resource in Canada into production in reasonable commercial quantities and incurred before the new mine comes into production in such quantities:

Clearing, removing overburden, and stripping	820	
Sinking a mine shaft, constructing an adit, or other underground entry	821	

Other pre-production mining expenditures incurred in the tax year:

Description 825	Amount 826
Total of column 826	

			A4
Total pre-production mining expenditures (total of lines 810 to 821 and amount A4)	830		
Deduct:			
Total of all assistance (grants, subsidies, rebates, and forgivable loans) or reimbursements that the corporation has received or is entitled to receive in respect of the amounts referred to on line 830 above	832		
Excess (line 830 **minus** line 832) (if negative, enter "0")			B4
Add:			
Repayments of government and non-government assistance	835		
Pre-production mining expenditures (amount B4 **plus** line 835)			C4

* A pre-production mining expenditure is defined under subsection 127(9).

Part 19 – Current-year credit and account balances – ITC from pre-production mining expenditures

ITC at the end of the previous tax year					D4
Deduct:					
Credit deemed as a remittance of co-op corporations	841				
Credit expired	845				
Subtotal (line 841 **plus** line 845)					E4
ITC at the beginning of the tax year (amount D4 **minus** amount E4)			850		
Add:					
Credit transferred on amalgamation or wind-up of subsidiary			860		
Pre-production mining expenditures* incurred before January 1, 2013 (applicable part from amount C4 in Part 18)	870	x 10 % =		a	
Pre-production mining exploration expenditures** incurred in 2013 (applicable part from amount C4 in Part 18)	872	x 5 % =		b	
Pre-production mining development expenditures incurred in 2014 (applicable part from amount C4 in Part 18)	874	x 7 % =		c	
Pre-production mining development expenditures incurred in 2015 (applicable part from amount C4 in Part 18)	876	x 4 % =		d	
Current year credit (total of amounts a to d)	880				F4
Total credit available (total of lines 850, 860, and amount F4)					G4
Deduct:					
Credit deducted from Part I tax (enter this amount at line F8 in Part 30)	885				
Credit carried back to the previous year(s) (from amount I4 in Part 20)				e	
Subtotal (line 885 **plus** amount e)					H4
ITC closing balance from pre-production mining expenditures (amount G4 **minus** amount H4)			890		

* Also include pre-production mining development expenditures incurred before 2014 and pre-production mining development expenditures incurred after 2013 and before 2016 that are eligible for transitional relief.

** Also include pre-production mining development expenditures incurred in 2015 if the expense is described in subparagraph (a)(ii) of the definition **pre-production mining expenditure** in subsection 127(9) of the Act because of paragraph (g.4) of the definition **Canadian exploration expense** in subsection 66.1(6) of the Act.

Part 20 – Request for carryback of credit from pre-production mining expenditures

	Year	Month	Day			
1st previous tax year				Credit to be applied	921	
2nd previous tax year				Credit to be applied	922	
3rd previous tax year				Credit to be applied	923	
				Total of lines 921 to 923 (enter amount I4 on line e in Part 19)		I4

Apprenticeship Job Creation

Part 21 – Total current-year credit – ITC from apprenticeship job creation expenditures

If you are a related person as defined under subsection 251(2), has it been agreed in writing that you are the only employer who will be claiming the apprenticeship job creation tax credit for this tax year for each apprentice whose contract number (or social insurance number (SIN) or name) appears below? (If not, you cannot claim the tax credit.) . . . . 611 1 Yes ☐ 2 No ☐

For each apprentice in their first 24 months of the apprenticeship, enter the apprenticeship contract number registered with Canada, or a province or territory, under an apprenticeship program designed to certify or license individuals in the trade. For the province, the trade must be a Red Seal trade. If there is no contract number, enter the SIN or the name of the eligible apprentice.

	A Contract number (SIN or name of apprentice) 601	B Name of eligible trade 602	C Eligible salary and wages* 603	D Column C x 10 % 604	E Lesser of column D or $ 2,000 605
1.	Apprentice 1	403A	67,787	6,779	2,000
2.	Apprentice 2	309A	43,419	4,342	2,000

Child Care Spaces

Part 24 – Eligible child care spaces expenditures

Enter the eligible expenditures that you incurred to create licensed child care spaces for the children of the employees and, potentially, for other children. You cannot be carrying on a child care services business. The eligible expenditures include:

- the cost of depreciable property (other than specified property); and
- the specified child care start-up expenditures.

Properties should be acquired and expenditures should be incurred only to create new child care spaces at a licensed child care facility.

Cost of depreciable property from the current tax year

	Capital cost allowance class number 665	Description of investment 675	Date available for use 685	Amount of investment 695
1.				

Total cost of depreciable property from the current tax year (total of column 695) **715** ______

Add:

Specified child care start-up expenditures from the current tax year . . . . **705** ______

Total gross eligible expenditures for child care spaces (line 715 **plus** line 705) . . . . ______ A6

Deduct:

Total of all assistance (including grants, subsidies, rebates, and forgivable loans) or reimbursements that the corporation has received or is entitled to receive in respect of the amounts referred to in amount A6 . . . . **725** ______

Excess (amount A6 **minus** line 725) (if negative, enter "0") . . . . ______ B6

Add:

Repayments by the corporation of government and non-government assistance . . . . **735** ______

Total eligible expenditures for child care spaces (amount B6 **plus** line 735) . . . . **745** ______

Part 25 – Current-year credit – ITC from child care spaces expenditures

The credit is equal to 25% of eligible child care spaces expenditures incurred to a maximum of $10,000 per child care space created in a licensed child care facility.

Eligible expenditures (from line 745 in Part 24) . . . . ______ x 25 % = ______ C6

Number of child care spaces . . . . **755** ______ x $ 10,000 = ______ D6

ITC from child care spaces expenditures (amount C6 or D6, whichever is less) . . . . ______ E6

Part 26 – Current-year credit and account balances – ITC from child care spaces expenditures

ITC at the end of the previous tax year F6

Total of lines 941 to 943
(enter amount K6 on line a in Part 26) K6

Recapture – Child Care Spaces

Part 28 – Recapture of ITC for corporations and partnerships – Child care spaces

The ITC will be recovered against the taxpayer's tax otherwise payable under Part I of the Act if, at any time within 60 months of the day on which the taxpayer acquired the property:

the new child care space is no longer available; or

property that was an eligible expenditure for the child care space is:

- disposed of or leased to a lessee; or
- converted to another use.

If the property disposed of is a child care space, the amount that can reasonably be considered to have been included in the original ITC (paragraph 127(27.12)(a)) **792**

In the case of eligible expenditures (paragraph 127(27.12)(b)), the lesser of:

The amount that can reasonably be considered to have been included in the original ITC **795**

25% of either the proceeds of disposition (if sold in an arm's length transaction) or the fair market value (in any other case) of the property **797**

Amount from line 795 or line 797, whichever is less A7

Partnerships

As a member of the partnership, you will report your share of the child care spaces ITC of the partnership after the child care spaces ITC has been reduced by the amount of the recapture. If this amount is a positive amount, you will report it on line 782 in Part 26. However, if the partnership does not have enough ITC otherwise available to offset the recapture, then the amount by which reductions to ITC exceed additions (the excess) will be determined and reported on line 799 below.

Corporate partner's share of the excess of ITC **799**

Total recapture of child care spaces investment tax credit (total of line 792, amount A7, and line 799) B7

Enter amount B7 on line B8 in Part 29.

Summary of Investment Tax Credits

Part 29 – Total recapture of investment tax credit

Recaptured SR&ED ITC (from amount F3 in Part 17) A8

Recaptured child care spaces ITC (from amount B7 in Part 28) B8

Total recapture of investment tax credit (amount A8 **plus** amount B8) C8

Enter amount C8 on line 602 of the T2 return.

Part 30 – Total ITC deducted from Part I tax

ITC from investments in qualified property deducted from Part I tax (from line 260 in Part 5) D8

ITC from SR&ED expenditures deducted from Part I tax (from line 560 in Part 12) E8

ITC from pre-production mining expenditures deducted from Part I tax (from line 885 in Part 19) F8

ITC from apprenticeship job creation expenditures deducted from Part I tax (from line 660 in Part 22) G8

ITC from child care space expenditures deducted from Part I tax (from line 785 in Part 26) H8

Total ITC deducted from Part I tax (total of amounts D8 to H8) I8

Enter amount I8 on line 652 of the T2 return.

Canada Revenue Agency / Agence du revenu du Canada

Schedule 33

Taxable Capital Employed in Canada – Large Corporations

Corporation's name	Business number	Tax year-end Year Month Day
HYDRO ONE NETWORKS INC.	87086 5821 RC0001	2016-12-31

- Use this schedule in determining if the total taxable capital employed in Canada of the corporation (other than a financial institution or an insurance corporation) and its related corporations is greater than $10,000,000.
- If the total taxable capital employed in Canada of the corporation and its related corporations is greater than $10,000,000, file a completed Schedule 33 with your T2 *Corporation Income Tax Return* no later than six months from the end of the tax year.
- Unless otherwise noted, all legislative references are to the *Income Tax Act* and the *Income Tax Regulations*.
- Subsection 181(1) defines the terms **financial institution**, **long-term debt**, and **reserves**.
- Subsection 181(3) provides the basis to determine the carrying value of a corporation's assets or any other amount under Part I.3 for its capital, investment allowance, taxable capital, or taxable capital employed in Canada, or for a partnership in which it has an interest.
- If the corporation was a non-resident of Canada throughout the year and carried on a business through a permanent establishment in Canada, go to Part 4, **Taxable capital employed in Canada**.

Part 1 – Capital

Add the following year-end amounts:

	Line	Amount		
Reserves that have not been deducted in calculating income for the year under Part I	101	1,543,554,594		
Capital stock (or members' contributions if incorporated without share capital)	103	5,196,000,000		
Retained earnings	104	4,431,420,457		
Contributed surplus	105	5,000,000		
Any other surpluses	106			
Deferred unrealized foreign exchange gains	107			
All loans and advances to the corporation	108	10,454,581,811		
All indebtedness of the corporation represented by bonds, debentures, notes, mortgages, hypothecary claims, bankers' acceptances, or similar obligations	109			
Any dividends declared but not paid by the corporation before the end of the year	110			
All other indebtedness of the corporation (other than any indebtedness for a lease) that has been outstanding for more than 365 days before the end of the year	111			
The total of all amounts, each of which is the amount, if any, in respect of a partnership in which the corporation held a membership interest at the end of the year, either directly or indirectly through another partnership (see note below)	112			
Subtotal (**add** lines 101 to 112)		21,630,556,862	21,630,556,862	A

Note:

Line 112 is determined by the formula (A – B) x C/D (as per paragraph 181.2(3)(g)) where:

A is the total of all amounts that would be determined for lines 101, 107, 108, 109, and 111 in respect of the partnership for its last fiscal period that ends at or before the end of the year if
- a) those lines applied to partnerships in the same manner that they apply to corporations, and
- b) those amounts were computed without reference to amounts owing by the partnership
  - (i) to any corporation that held a membership interest in the partnership either directly or indirectly through another partnership, or
  - (ii) to any partnership in which a corporation described in subparagraph (i) held a membership interest either directly or indirectly through another partnership.

B is the partnership's deferred unrealized foreign exchange losses at the end of the period,

C is the share of the partnership's income or loss for the period to which the corporation is entitled either directly or indirectly through another partnership, and

D is the partnership's income or loss for the period.

Part 1 – Capital (continued)

Subtotal A (from page 1)			21,630,556,862	A
Deduct the following amounts:				
Deferred tax debit balance at the end of the year	121	1,205,000,000		
Any deficit deducted in calculating its shareholders' equity (including, for this purpose, the amount of any provision for the redemption of preferred shares) at the end of the year	122			
To the extent that the amount may reasonably be regarded as being included in any of lines 101 to 112 above for the year, any amount deducted under subsection 135(1) in calculating income under Part I for the year.	123			
Deferred unrealized foreign exchange losses at the end of the year	124			
Subtotal (**add** lines 121 to 124)		1,205,000,000	1,205,000,000	B
Capital for the year (amount A **minus** amount B) (if negative, enter "0")	190		20,425,556,862	

Part 2 – Investment allowance

Add the carrying value at the end of the year of the following assets of the corporation:

A share of another corporation	401	999
A loan or advance to another corporation (other than a financial institution)	402	3,083,701
A bond, debenture, note, mortgage, hypothecary claim, or similar obligation of another corporation (other than a financial institution)	403	
Long-term debt of a financial institution	404	
A dividend payable on a share of the capital stock of another corporation	405	
A loan or advance to, or a bond, debenture, note, mortgage, hypothecary claim or similar obligation of, a partnership each member of which was, throughout the year, another corporation (other than a financial institution) that was not exempt from tax under this Part (otherwise than because of paragraph 181.1(3)(d)), or another partnership described in paragraph 181.2(4)(d.1)	406	
An interest in a partnership (see note 2 below)	407	
Investment allowance for the year (add lines 401 to 407)	490	3,084,700

Notes:

1. Lines 401 to 405 should not include the carrying value of a share of the capital stock of, a dividend payable by, or indebtedness of a corporation that is exempt from tax under Part I.3 (other than a non-resident corporation that at no time in the year carried on business in Canada through a permanent establishment).
2. Where the corporation has an interest in a partnership held either directly or indirectly through another partnership, refer to subsection 181.2(5) for additional rules regarding the carrying value of an interest in a partnership.
3. Where a trust is used as a conduit for loaning money from a corporation to another related corporation (other than a financial institution), the loan will be considered to have been made directly from the lending corporation to the borrowing corporation. Refer to subsection 181.2(6) for special rules that may apply.

Part 3 – Taxable capital

Capital for the year (line 190)		20,425,556,862	C
Deduct: Investment allowance for the year (line 490)		3,084,700	D
Taxable capital for the year (amount C **minus** amount D) (if negative, enter "0")	500	20,422,472,162	

Part 4 – Taxable capital employed in Canada

To be completed by a corporation that was resident in Canada at any time in the year

Taxable capital for the year (line 500) 20,422,472,162 x (Taxable income earned in Canada **610** 1,000 / Taxable income 1,000) = **Taxable capital employed in Canada** **690** 20,422,472,162

Notes:
1. Regulation 8601 gives details on calculating the amount of taxable income earned in Canada.
2. Where a corporation's taxable income for a tax year is "0," it shall, for the purposes of the above calculation, be deemed to have a taxable income for that year of $1,000.
3. In the case of an airline corporation, Regulation 8601 should be considered when completing the above calculation.

To be completed by a corporation that was a non-resident of Canada throughout the year and carried on a business through a permanent establishment in Canada

Total of all amounts each of which is the carrying value at the end of the year of an asset of the corporation used in the year or held in the year, in the course of carrying on any business during the year through a permanent establishment in Canada . . . . **701** ______

Deduct the following amounts:

Corporation's indebtedness at the end of the year [other than indebtedness described in any of paragraphs 181.2(3)(c) to (f)] that may reasonably be regarded as relating to a business it carried on during the year through a permanent establishment in Canada . . . . **711** ______

Total of all amounts each of which is the carrying value at the end of year of an asset described in subsection 181.2(4) of the corporation that it used in the year, or held in the year, in the course of carrying on any business during the year through a permanent establishment in Canada . . . . **712** ______

Total of all amounts each of which is the carrying value at the end of year of an asset of the corporation that is a ship or aircraft the corporation operated in international traffic, or personal or movable property used or held by the corporation in carrying on any business during the year through a permanent establishment in Canada (see note below) . . . . **713** ______

Total deductions (**add** lines 711, 712, and 713) ______ ______ E

Taxable capital employed in Canada (line 701 **minus** amount E) (if negative, enter “0“) . . . . **790** ______

Note: Complete line 713 only if the country in which the corporation is resident did not impose a capital tax for the year on similar assets, or a tax for the year on the income from the operation of a ship or aircraft in international traffic, of any corporation resident in Canada during the year.

Part 5 – Calculation for purposes of the small business deduction

This part is applicable to corporations that are not associated in the current year, but were associated in the prior year.

Taxable capital employed in Canada (amount from line 690) . . . . ______ F

Deduct: . . . . 10,000,000 G

Excess (amount F **minus** amount G) (if negative, enter "0") ______ H

Calculation for purposes of the small business deduction (amount H x 0.225%) . . . . ______ I

Enter this amount at line 415 of the T2 return.

Attached Schedule with Total

Part 1 – All loans and advances to the corporation

Title Schedule 33 - Supplementary Schedule

Description	Operator (Note)	Amount	
LT Debt payable within a year (FS)		600,000,000	00
Primary Debt (FS)	+	9,340,000,000	00
Intercompany demand facility	+	462,000,000	00
Customer deposit (a/c 390000/391010/392000/392010)	+	46,625,639	00
Banked vacation (a/c 362100)	+	5,956,172	00
	Total	10454581811	00

Note: The calculations are performed one at a time, from the first to the last line, and not according to the priority rules of the operations. For example, the formula 1+2*3 will not result in the same thing as the formula 1+3*2.

Attached Schedule with Total

Part 2 – A loan or advance to another corporation (other than a financial institution)

Title Schedule 33/CT23 - Supplementary Schedule

Description	Operator (Note)	Amount	
Prepaid insurance (a/c 277180)		2,125,605	00
Deposit -Bnft Provider (a/c 277290)	+	958,096	00
	+		
	+		
	Total	3,083,701	00

Note: The calculations are performed one at a time, from the first to the last line, and not according to the priority rules of the operations. For example, the formula 1+2*3 will not result in the same thing as the formula 1+3*2.

Attached Schedule with Total

Schedule 55

Part III.1 Tax on Excessive Eligible Dividend Designations

Corporation's name	Business number	Tax year-end Year Month Day
HYDRO ONE NETWORKS INC.	87086 5821 RC0001	2016-12-31

Do not use this area

- Every corporation resident in Canada that pays a taxable dividend (other than a capital gains dividend within the meaning assigned by subsection 130.1(4) or 131(1)) in the tax year must file this schedule.
- Canadian-controlled private corporations (CCPC) and deposit insurance corporations (DIC) must complete Part 1 of this schedule. All other corporations must complete Part 2.
- Every corporation that has paid an eligible dividend must also file Schedule 53, *General Rate Income Pool (GRIP) Calculation*, or Schedule 54, *Low Rate Income Pool (LRIP) Calculation*, whichever is applicable.
- File the completed schedules with your *T2 Corporation Income Tax Return* no later than six months from the end of the tax year.
- All legislative references are to the *Income Tax Act* and the *Income Tax Regulations*.
- Subsection 89(1) defines the terms eligible dividend, excessive eligible dividend designation, general rate income pool (GRIP), and low rate income pool (LRIP).
- The calculations in Part 1 and Part 2 do not apply if the excessive eligible dividend designation arises from the application of paragraph (c) of the definition of excessive eligible dividend designation in subsection 89(1). This paragraph applies when an eligible dividend is paid to artificially maintain or increase the GRIP or to artificially maintain or decrease the LRIP.

Part 1 – Canadian-controlled private corporations and deposit insurance corporations

Taxable dividends paid in the tax year **not included** in Schedule 3				
Taxable dividends paid in the tax year **included** in Schedule 3				
Total taxable dividends paid in the tax year	100			
Total eligible dividends paid in the tax year		150		A
GRIP at the end of the tax year (line 590 on Schedule 53) (if negative, enter "0")		160		B
Excessive eligible dividend designation (line 150 **minus** line 160)				C
Deduct:				
Excessive eligible dividend designations elected under subsection 185.1(2) to be treated as ordinary dividends *		180		D
Subtotal (amount C **minus** amount D)				E
Part III.1 tax on excessive eligible dividend designations – CCPC or DIC (amount E **multiplied** by 20 %)		190		F

Enter the amount from line 190 on line 710 of the T2 return.

Part 2 – Other corporations

Taxable dividends paid in the tax year **not included** in Schedule 3				
Taxable dividends paid in the tax year **included** in Schedule 3	26,500,564			
Total taxable dividends paid in the tax year	26,500,564			
Total excessive eligible dividend designations in the tax year (amount from line A of Schedule 54)				G
Deduct:				
Excessive eligible dividend designations elected under subsection 185.1(2) to be treated as ordinary dividends *		280		H
Subtotal (amount G **minus** amount H)				I
Part III.1 tax on excessive eligible dividend designations – Other corporations (amount I **multiplied** by 20 %)		290		J

Enter the amount from line 290 on line 710 of the T2 return.

* You can elect to treat all or part of your excessive eligible dividend designation as a separate taxable dividend in order to eliminate or reduce the Part III.1 tax otherwise payable. You must file the election on or before the day that is 90 days **after** the day the notice of assessment for Part III.1 tax was sent. We will accept an election before the assessment of the tax. For more information on how to make this election, go to **www.cra.gc.ca/eligibledividends**.

Schedule 508

Ontario Research and Development Tax Credit

Corporation's name	Business number	Tax year-end Year Month Day
HYDRO ONE NETWORKS INC.	87086 5821 RC0001	2016-12-31

- Use this schedule to:
  - calculate an Ontario research and development tax credit (ORDTC);
  - claim an ORDTC earned in the tax year or carried forward from any of the 20 previous tax years that are a tax year ending after December 31, 2008, to reduce Ontario corporate income tax payable in the current tax year;
  - carry back an ORDTC to reduce Ontario corporate income tax payable in any of the three previous tax years;
  - add an ORDTC that was allocated to the corporation by a partnership of which it was a member;
  - transfer an ORDTC after an amalgamation or windup; or
  - calculate a recapture of the ORDTC.
- The ORDTC is a non-refundable tax credit on eligible expenditures incurred by a corporation in a tax year. The ORDTC rate is:
  - 4.5% for tax years that end before June 1, 2016
  - 3.5% for tax years that start after May 31, 2016.
  - prorated for a tax year that ends on or after June 1, 2016 and include May 31, 2016.
- An eligible expenditure is an expenditure for a permanent establishment in Ontario of a corporation, that is a qualified expenditure for the purposes of section 127 of the federal *Income Tax Act* for scientific research and experimental development (SR&ED) carried on in Ontario.
- Only corporations that are not exempt from Ontario corporate income tax and non of whose income is exempt income can claim the ORDTC.
- Complete and attach this schedule to the *T2 Corporation Income Tax Return* for the tax year.
- To claim this credit, you must also send in completed copies of the Form T661, *Scientific Research and Experimental Development (SR&ED) Expenditures Claim*, and the Schedule 31, *Investment Tax Credit - Corporations*, within 18 months of the tax year end.

Part 1 – Ontario SR&ED expenditure pool

Total eligible expenditures incurred by the corporation in Ontario in the tax year	100	7,350,636	A		
Government assistance, non-government assistance, or a contract payment for eligible expenditures	105	110,000	B		
Net eligible expenditures for the tax year (amount A **minus** amount B) (if negative, enter "0")		7,240,636	C		
Eligible expenditures transferred to the corporation by another corporation	110		D		
Subtotal (amount C **plus** amount D)		7,240,636	▶	7,240,636	E
Eligible expenditures the corporation transferred to another corporation (cannot exceed amount E)				115	F
Ontario SR&ED expenditure pool (amount E **minus** amount F) (if negative, enter "0")				120: 7,240,636	G

Part 2 – Eligible repayments

The repayment of the ORDTC is calculated using the ORDTC rate that you used to determine your tax credit at the time your eligible expenditures were reduced because of the government or non-government assistance, or contract payments. Enter the amount of the repayment on the line that corresponds to the appropriate rate.

Repayments for tax years that end before June 1, 2016 . . . . 210 ______ x 4.5 % = 215 ______ H

Repayment for a tax year that ends on or after June 1, 2016 and includes May 31, 2016. Complete the proration calculation below.

Number of days in the tax year before June 1, 2016 (152) / Number of days in the tax year 241 (366) x 4.5 % = 1.8689 % 1

Number of days in the tax year after May 31, 2016 242 (214) / Number of days in the tax year 243 (366) x 3.5 % = 2.0464 % 2

Subtotal (percentage 1 **plus** percentage 2) 3.9153 % 3

Repayments for a tax year that ends on or after June 1, 2016 and includes May 31, 2016 . . . . . . 211 ______ x percentage 3 3.9153 % = 216 ______ I

Part 2 – Eligible repayments (continued)

Repayments for tax years that start after May 31, 2016	212				x	3.5 %	= 217		J
Repayments made in the tax year of government or non-government assistance or contract payments that reduced eligible expenditures for first term or second term shared-use equipment acquired before 2014	220		x	1 / 4 =		x 4.5 %	= 225		K
Eligible repayments (Total amount H to amount K)							229		L

Part 3 – Calculation of the current part of the ORDTC

For tax years that end before June 1, 2016

Ontario SR&ED expenditure pool (amount G in Part 1)		x 4.5 %	= 200		M
ORDTC allocated to the corporation by a partnership of which it is a member (other than a specified member) for a fiscal period that ends in the corporation's tax year *			205		N

* If there is a disposal or change of use of eligible property, see Part 7 on page 4.

Eligible repayments (amount L in Part 2)			O
Current part of the ORDTC for tax years that end before June 1, 2016 (total of amounts M to O)	230		P

For a tax year that ends on or after June 1, 2016 and includes May 31, 2016

Number of days in the tax year before June 1, 2016 / Number of days in the tax year	152 / 366	x	4.5 %	=	1.8689 %	4
Number of days in the tax year after May 31, 2016 / Number of days in the tax year	214 / 366	x	3.5 %	=	2.0464 %	5
Subtotal (percentage 4 **plus** percentage 5)					3.9153 %	6

Ontario SR&ED expenditure pool (amount G in Part 1)	7,240,636	x percentage 6	3.9153 %	= 201	283,493	Q
ORDTC allocated to the corporation by a partnership of which it is a member (other than a specified member) for a fiscal period that ends in the corporation's tax year *				206		R

* If there is a disposal or change of use of eligible property, see Part 7 on page 4.

Eligible repayments (amount L in Part 2)			S
Current part of the ORDTC for tax years that end on or after June 1, 2016 and include May 31, 2016, (total of amounts Q to S)	231	283,493	T

For tax years that start after May 31, 2016

Ontario SR&ED expenditure pool (amount G in Part 1)		x 3.5 %	= 202		U
ORDTC allocated to the corporation by a partnership of which it is a member (other than a specified member) for a fiscal period that ends in the corporation's tax year *			207		V

* If there is a disposal or change of use of eligible property, see Part 7 on page 4.

Eligible repayments (amount L in Part 2)			W
Current part of the ORDTC for tax years that start after May 31, 2016 (total of amounts U to W)	232		X

Part 4 – Calculation of ORDTC available for deduction and ORDTC balance

ORDTC balance at the end of the previous tax year			67,131	Y
Deduct: ORDTC expired after 20 tax years	300			Z
ORDTC at the beginning of the tax year (amount Y **minus** amount Z)	305		67,131	AA
Add:				
ORDTC transferred to the corporation on amalgamation or windup	310			BB
Current part of ORDTC (amounts P, T or X in Part 3 whichever applies)		283,493 CC		

Are you waiving all or part of the current part of the ORDTC? . . . . . . **315** Yes 1 [ ] No 2 [X]

If you answered **yes** at line 315, enter the amount of the tax credit waived on line 320.

If you answered **no** at line 315, enter "0" on line 320.

Deduct: Waiver of the current part of the ORDTC	320	DD			
Subtotal (amount CC **minus** amount DD)		283,493	283,493	EE	
ORDTC available for deduction (total of amounts AA, BB and EE)			350,624		350,624 FF
Deduct:					
ORDTC claimed * (Enter amount GG on line 416 on page 5 of Schedule 5, *Tax Calculation Supplementary – Corporations*)				GG	
ORDTC carried back to previous tax years (from Part 5)				HH	
Subtotal (amount GG **plus** amount HH)					II
ORDTC balance at the end of the tax year (amount FF **minus** amount II)	325				350,624 JJ

* This amount cannot be more than the lesser of the following amounts:
- ORDTC available for deduction (amount FF); or
- Ontario corporate income tax payable before the ORDTC and the Ontario corporate minimum tax credit (amount from line E6 of Schedule 5).

Part 5 – Request for carryback of tax credit

	Year Month Day			
1st previous tax year	2015-12-31	Credit to be applied	901	
2nd previous tax year	2015-11-04	Credit to be applied	902	
3rd previous tax year	2015-10-31	Credit to be applied	903	
		Total (enter amount on line HH in Part 4)		

Part 6 – Analysis of tax credit available for carryforward by tax year of origin

You can complete this part to show all the credits from preceding tax years available for carryforward, by year of origin. This will help you determine the amount of credit that could expire in following years.

Tax year of origin (earliest tax year first) Year/Month/Day	Credit available
1999-12-31	
2000-12-31	
2001-12-31	
2002-12-31	
2003-12-31	
2004-12-31	
2005-12-31	
2006-12-31	
2007-12-31	

Tax year of origin (earliest tax year first) Year/Month/Day	Credit available
2008-12-31	
2009-12-31	
2010-12-31	
2011-12-31	
2012-12-31	
2013-12-31	
2014-12-31	
2015-10-31	
2015-11-04	
2015-12-31	67,131
Current tax year 2016-12-31	283,493
Total (equals line 325 in Part 4)	350,624

The amount available from the 20th preceding tax year will expire after this year. When you file your return for the next year, you will enter the expired amount on line 300 of Schedule 508 for that year.

Part 7 – Calculation of a recapture of ORDTC

You will have a recapture of ORDTC in a tax year when you meet **all** of the following conditions:

- you acquired a particular property in the current year or in any of the 20 previous tax years if the ORDTC was earned in a tax year ending after 2008;
- you claimed the cost of the property as an eligible expenditure for the ORDTC;
- the cost of the property was included in computing your ORDTC or was subject to an agreement made under subsection 127(13) of the federal Act to transfer qualified expenditures and section 42 of the *Taxation Act, 2007* (Ontario) applied; and
- you disposed of the property or converted it to commercial use in a tax year ending after December 31, 2008. You also meet this condition if you disposed of or converted to commercial use a property which incorporates the particular property previously referred to.

  Note: The recapture **does not apply** if you disposed of the property to a non-arm's length purchaser who intended to use it all or substantially all for SR&ED in Ontario. When the non-arm's length purchaser later sells or converts the property to commercial use, the recapture rules will apply to the purchaser based on the historical federal investment tax credit (ITC) rate * of the original user in Calculation 1 below.

You have to report the recapture on Schedule 5 for the year in which you disposed of the property or converted it to commercial use. If the corporation is a member of a partnership, report its share of the recapture.

Complete the columns for each disposition for which a recapture applies, using the calculation formats below.

* Federal ITC in calculations 1 and 2 should be determined without reference to paragraph (e) of the definition **investment tax credit** in subsection 127(9) of the federal Act.

Calculation 1 – Complete this part If you meet all of the above conditions

	KK Amount of federal ITC you originally calculated for the property you acquired, or the original user's federal ITC where you acquired the property from a non-arm's length party, as described in the note above 700	LL Amount calculated using the federal ITC rate at the date of acquisition (or the original user's date of acquisition) on either the proceeds of disposition (if sold in an arm's length transaction) or the fair market value of the property (in any other case) 710	MM Amount from column 700 or 710, whichever is less
1.			

Subtotal (enter amount NN, on line WW in Part 8 on page 5) ________ NN

Part 7 – Calculation of a recapture of ORDTC (continued)

Calculation 2 – If the corporation is deemed by subsection 42(1) of the *Taxation Act, 2007* (Ontario) to have transferred all or part of the eligible expenditure to another corporation as a consequence of an agreement described in subsection 127(13) of the federal Act complete Calculation 2. Otherwise, enter nil on line SS.

	OO Rate percentage that the transferee used to determine its federal ITC for qualified expenditure that was transferred under an agreement under subsection 127(13) of the federal Act 720	PP Proceeds of disposition of the property if you dispose of it to a person at arm's length; or, in any other case, the fair market value of the property at conversion or disposition 730	QQ Amount, if any, already provided for in Calculation 1 (this allows for the situation where only part of the cost of a property is transferred for an agreement under subsection 127(13) of the federal Act) 740
1.			

	RR Amount determined by the formula (OO x PP) - QQ (using the columns above)	SS Federal ITC earned by the transferee for the qualified expenditure that was transferred 750	TT Amount from column RR or SS, whichever is less
1.			

Subtotal (enter amount UU on line XX below) UU

Calculation 3

As a member of a partnership, you will report your share of the ORDTC of the partnership after the ORDTC has been reduced by the amount of the recapture. If this is a positive amount, you will report it on line 205, 206, or 207 in Part 3, whichever applies. However, if the partnership does not have enough ORDTC otherwise available to offset the recapture, then the amount by which reductions to the ORDTC exceeds additions (the excess) will be determined and reported on line VV.

Corporate partner's share of the excess of ORDTC (enter amount VV at line ZZ below) . . . . 760 VV

Part 8 – Total recapture of ORDTC

Recaptured federal ITC for Calculation 1 (amount from line NN on page 4) . . . . . . WW

Recaptured federal ITC for Calculation 2 (amount from line UU above) XX

Amount WW **plus** amount XX . . . . x 23.56 % = YY

Add: Corporate partner's share of the excess of ORDTC for Calculation 3 (amount from line VV in Part 7) . . . . ZZ

Recapture of ORDTC (amount YY **plus** amount ZZ) (enter amount AAA on line 277 on page 5 of Schedule 5) . . . . AAA

Schedule A - Worksheet for eligible expenditures incurred by the corporation in Ontario for the current taxation year

This worksheet allows you to report the amount of eligible expenditures entered on Form T661, *Scientific Research and Experimental Development (SR&ED) Expenditures Claim* which represents eligible expenditures as defined in section 127 of the *Income Tax Act* (ITA) with regard to scientific research and experimental development (SR&ED) **carried on in Ontario and attributable to a permanent establishment in Ontario of a corporation**.

Data on the worksheet is calculated based on the amounts on Form T661, but will have to be adjusted according to the rules of Ontario, if applicable, in particular when the corporation has had a permanent establishment in more than one jurisdiction. This data will be used when calculating Schedule 508 and Schedule 566.

Enter the breakdown between current and capital expenditures

	Current Expenditures		Capital Expenditures	
Total expenditures for SR&ED	8,423,776			
Add				
• payment of prior years' unpaid expenses (other than salary or wages)	+			
• prescribed proxy amount (Enter "0" if you use the traditional method)	+			
• expenditures on shared-use equipment			+	
• other additions	+		+	
Subtotal	= 8,423,776		=	
Less				
• current expenditures (other than salary or wages) not paid within 180 days of the tax year end	–

Schedule 510

Ontario Corporate Minimum Tax

Corporation's name	Business number	Tax year-end Year Month Day
HYDRO ONE NETWORKS INC.	87086 5821 RC0001	2016-12-31

- File this schedule if the corporation is subject to Ontario corporate minimum tax (CMT). CMT is levied under section 55 of the *Taxation Act, 2007* (Ontario), referred to as the "Ontario Act".
- Complete Part 1 to determine if the corporation is subject to CMT for the tax year.
- A corporation not subject to CMT in the tax year is still required to file this schedule if it is deducting a CMT credit, has a CMT credit carryforward, or has a CMT loss carryforward or a current year CMT loss.
- A corporation that has Ontario special additional tax on life insurance corporations (SAT) payable in the tax year must complete Part 4 of this schedule even if it is not subject to CMT for the tax year.
- A corporation is exempt from CMT if, throughout the tax year, it was one of the following:
  1) a corporation exempt from income tax under section 149 of the federal *Income Tax Act*;
  2) a mortgage investment corporation under subsection 130.1(6) of the federal Act;
  3) a deposit insurance corporation under subsection 137.1(5) of the federal Act;
  4) a congregation or business agency to which section 143 of the federal Act applies;
  5) an investment corporation as referred to in subsection 130(3) of the federal Act; or
  6) a mutual fund corporation under subsection 131(8) of the federal Act.
- File this schedule with the *T2 Corporation Income Tax Return*.

Part 1 – Determination of CMT applicability

Total assets of the corporation at the end of the tax year *	112	23,201,000,000
Share of total assets from partnership(s) and joint venture(s) *	114	
Total assets of associated corporations (amount from line 450 on Schedule 511)	116	
Total assets (total of lines 112 to 116)		23,201,000,000
Total revenue of the corporation for the tax year **	142	6,343,000,000
Share of total revenue from partnership(s) and joint venture(s) **	144	
Total revenue of associated corporations (amount from line 550 on Schedule 511)	146	
Total revenue (total of lines 142 to 146)		6,343,000,000

The corporation is subject to CMT if:
- for tax years ending before July 1, 2010, the total assets at the end of the year of the corporation or the associated group of corporations are more than $5,000,000, or the total revenue for the year of the corporation or the associated group of corporations is more than $10,000,000.
- for tax years ending after June 30, 2010, the total assets at the end of the year of the corporation or the associated group of corporations are equal to or more than $50,000,000, and the total revenue for the year of the corporation or the associated group of corporations is equal to or more than $100,000,000.

If the corporation is not subject to CMT, do not complete the remaining parts unless the corporation is deducting a CMT credit, or has a CMT credit carryforward, a CMT loss carryforward, a current year CMT loss, or SAT payable in the year.

* **Rules for total assets**
- Report total assets according to generally accepted accounting principles, adjusted so that consolidation and equity methods are not used.
- Do not include unrealized gains and losses on assets and foreign currency gains and losses on assets that are included in net income for accounting purposes but not in income for corporate income tax purposes.
- The amount on line 114 is determined at the end of the last fiscal period of the partnership or joint venture that ends in the tax year of the corporation. Add the proportionate share of the assets of the partnership(s) and joint venture(s), and deduct the recorded asset(s) for the investment in partnerships and joint ventures.
- A corporation's share in a partnership or joint venture is determined under paragraph 54(5)(b) of the Ontario Act and, if the partnership or joint venture had no income or loss, is calculated as if the partnership's or joint venture's income were $1 million. For a corporation with an indirect interest in a partnership or joint venture, determine the corporation's share according to paragraph 54(5)(c) of the Ontario Act.

** **Rules for total revenue**
- Report total revenue in accordance with generally accepted accounting principles, adjusted so that consolidation and equity methods are not used.
- If the tax year is less than 51 weeks, **multiply** the total revenue of the corporation or the partnership, whichever applies, by 365 and **divide** by the number of days in the tax year.
- The amount on line 144 is determined for the partnership or joint venture fiscal period that ends in the tax year of the corporation. If the partnership or joint venture has 2 or more fiscal periods ending in the filing corporation's tax year, **multiply** the sum of the total revenue for each of the fiscal periods by 365 and **divide** by the total number of days in all the fiscal periods.
- A corporation's share in a partnership or joint venture is determined under paragraph 54(5)(b) of the Ontario Act and, if the partnership or joint venture had no income or loss, is calculated as if the partnership's or joint venture's income were $1 million. For a corporation with an indirect interest in a partnership or joint venture, determine the corporation's share according to paragraph 54(5)(c) of the Ontario Act.

Part 2 – Adjusted net income/loss for CMT purposes

Net income/loss per financial statements *			210	726,760,330
Add (to the extent reflected in income/loss):				
Provision for current income taxes/cost of current income taxes	220	22,472,359		
Provision for deferred income taxes (debits)/cost of future income taxes	222	114,779,881		
Equity losses from corporations	224			
Financial statement loss from partnerships and joint ventures	226			
Dividends deducted on financial statements (subsection 57(2) of the Ontario Act), excluding dividends paid by credit unions under subsection 137(4.1) of the federal Act	230			
Other additions (see note below):				
Share of adjusted net income of partnerships and joint ventures **	228			
Total patronage dividends received, not already included in net income/loss	232			
281	282			
283	284			
Subtotal		137,252,240		137,252,240 A
Deduct (to the extent reflected in income/loss):				
Provision for recovery of current income taxes/benefit of current income taxes	320			
Provision for deferred income taxes (credits)/benefit of future income taxes	322			
Equity income from corporations	324			
Financial statement income from partnerships and joint ventures	326			
Dividends deductible under section 112, section 113, or subsection 138(6) of the federal Act	330			
Dividends not taxable under section 83 of the federal Act (from Schedule 3)	332			
Gain on donation of listed security or ecological gift	340			
Accounting gain on transfer of property to a corporation under section 85 or 85.1 of the federal Act ***	342			
Accounting gain on transfer of property to/from a partnership under section 85 or 97 of the federal Act ****	344			
Accounting gain on disposition of property under subsection 13(4), subsection 14(6), or section 44 of the federal Act *****	346			
Accounting gain on a windup under subsection 88(1) of the federal Act or an amalgamation under section 87 of the federal Act	348			
Other deductions (see note below):				
Share of adjusted net loss of partnerships and joint ventures **	328			
Tax payable on dividends under subsection 191.1(1) of the federal Act **multiplied** by 3	334			
Interest deducted/deductible under paragraph 20(1)(c) or (d) of the federal Act, not already included in net income/loss	336			
Patronage dividends paid (from Schedule 16) not already included in net income/loss	338			
381	382			
383	384			
385	386			
387	388			
389	390			
Subtotal				B
Adjusted net income/loss for CMT purposes (line 210 **plus** amount A **minus** amount B)			490	864,012,570

If the amount on line 490 is positive and the corporation is subject to CMT as determined in Part 1, enter the amount on line 515 in Part 3.

If the amount on line 490 is negative, enter the amount on line 760 in Part 7 (enter as a positive amount).

Note

In accordance with *Ontario Regulation 37/09*, when calculating net income for CMT purposes, accounting income should be adjusted to:

– exclude unrealized gains and losses due to mark-to-market changes or foreign currency changes on specified mark-to-market property (assets only);
– include realized gains and losses on the disposition of specified mark-to-market property not already included in the accounting income, if the property is not a capital property or is a capital property disposed in the year or in a previous tax year ended after March 22, 2007.

"Specified mark-to-market property" is defined in subsection 54(1) of the Ontario Act.

These rules also apply to partnerships. A corporate partner's share of a partnership's adjusted income flows through on a proportionate basis to the corporate partner.

* **Rules for net income/loss**

– Banks must report net income/loss as per the report accepted by the Superintendent of Financial Institutions under the federal *Bank Act*, adjusted so consolidation and equity methods are not used.

Part 2 – Calculation of adjusted net income/loss for CMT purposes (continued)

– Life insurance corporations must report net income/loss as per the report accepted by the federal Superintendent of Financial Institutions or equivalent provincial insurance regulator, before SAT and adjusted so consolidation and equity methods are not used. If the life insurance corporation is resident in Canada and carries on business in and outside of Canada, **multiply** the net income/loss by the ratio of the Canadian reserve liabilities **divided** by the total reserve liability. The reserve liabilities are calculated in accordance with Regulation 2405(3) of the federal Act.

– Other corporations must report net income/loss in accordance with generally accepted accounting principles, except that consolidation and equity methods must not be used. When the equity method has been used for accounting purposes, equity losses and equity income are removed from book income/loss on lines 224 and 324 respectively.

– Corporations, other than insurance corporations, should report net income from line 9999 of the GIFI (Schedule 125) on line 210.

** The share of the adjusted net income of a partnership or joint venture is calculated as if the partnership or joint venture were a corporation and the tax year of the partnership or joint venture were its fiscal period. For a corporation with an indirect interest in a partnership through one or more partnerships, determine the corporation's share according to clause 54(5)(c) of the Ontario Act.

*** A joint election will be considered made under subsection 60(1) of the Ontario Act if there is an entry on line 342, and an election has been made for transfer of property to a corporation under subsection 85(1) of the federal Act.

**** A joint election will be considered made under subsection 60(2) of the Ontario Act if there is an entry on line 344, and an election has been made under subsection 85(2) or 97(2) of the federal Act.

***** A joint election will be considered made under subsection 61(1) of the Ontario Act if there is an entry on line 346, and an election has been made under subsection 13(4) or 14(6) and/or section 44 of the federal Act.

For more information on how to complete this part, see the *T2 Corporation – Income Tax Guide*.

Part 3 – CMT payable

Adjusted net income for CMT purposes (line 490 in Part 2, if positive)		515	864,012,570	
Deduct:				
CMT loss available (amount R from Part 7)				
Minus: Adjustment for an acquisition of control *	518			
Adjusted CMT loss available				C
Net income subject to CMT calculation (if negative, enter "0")		520	864,012,570	

Amount from line 520	864,012,570	x	Number of days in the tax year before July 1, 2010 / Number of days in the tax year	/ 366	x 4 % =		1
Amount from line 520	864,012,570	x	Number of days in the tax year after June 30, 2010 / Number of days in the tax year	366 / 366	x 2.7 % =	23,328,339	2
			Subtotal (amount 1 **plus** amount 2)			23,328,339	3

Gross CMT: amount on line 3 above x OAF **	540	23,328,339	
Deduct:			
Foreign tax credit for CMT purposes ***	550		
CMT after foreign tax credit deduction (line 540 **minus** line 550) (if negative, enter "0")		23,328,339	D
Deduct:			
Ontario corporate income tax payable before CMT credit (amount F6 from Schedule 5)			
Net CMT payable (if negative, enter "0")		23,328,339	E

Enter amount E on line 278 of Schedule 5, *Tax Calculation Supplementary – Corporations*, and complete Part 4.

* Enter the portion of CMT loss available that exceeds the adjusted net income for the tax year from carrying on a business before the acquisition of control. See subsection 58(3) of the Ontario Act.

*** Enter "0" on line 550 for life insurance corporations as they are not eligible for this deduction. For all other corporations, enter the cumulative total of amount J for the province of Ontario from Part 9 of Schedule 21 on line 550.

** **Calculation of the Ontario allocation factor (OAF):**

If the provincial or territorial jurisdiction entered on line 750 of the T2 return is "Ontario," enter "1" on line F.

If the provincial or territorial jurisdiction entered on line 750 of the T2 return is "multiple," complete the following calculation, and enter the result on line F:

Ontario taxable income **** / Taxable income ***** =

Ontario allocation factor 1.00000 F

**** Enter the amount allocated to Ontario from column F in Part 1 of Schedule 5. If the taxable income is nil, calculate the amount in column F as if the taxable income were $1,000.

*****Enter the taxable income amount from line 360 or amount Z of the T2 return, whichever applies. If the taxable income is nil, enter "1,000".

Part 4 – Calculation of CMT credit carryforward

CMT credit carryforward at the end of the previous tax year *		2,562,806	G		
Deduct:					
CMT credit expired *	600				
CMT credit carryforward at the beginning of the current tax year * (see note below)		2,562,806	620	2,562,806	
Add:					
CMT credit carryforward balances transferred on an amalgamation or the windup of a subsidiary (see note below)			650		
CMT credit available for the tax year (amount on line 620 **plus** amount on line 650)				2,562,806	H
Deduct:					
CMT credit deducted in the current tax year (amount P from Part 5)					I
Subtotal (amount H **minus** amount I)				2,562,806	J
Add:					
Net CMT payable (amount E from Part 3)		23,328,339			
SAT payable (amount O from Part 6 of Schedule 512)					
Subtotal		23,328,339		23,328,339	K
CMT credit carryforward at the end of the tax year (amount J **plus** amount K)			670	25,891,145	L

* For the first harmonized T2 return filed with a tax year that includes days in 2009:
- do not enter an amount on line G or line 600;
- for line 620, enter the amount from line 2336 of Ontario CT23 Schedule 101, *Corporate Minimum Tax (CMT)*, for the last tax year that ended in 2008.

For other tax years, enter on line G the amount from line 670 of Schedule 510 from the previous tax year.

Note: If you entered an amount on line 620 or line 650, complete Part 6.

Part 5 – Calculation of CMT credit deducted from Ontario corporate income tax payable

CMT credit available for the tax year (amount H from Part 4)					2,562,806	M
Ontario corporate income tax payable before CMT credit (amount F6 from Schedule 5)				1		
For a corporation that is not a life insurance corporation:						
CMT after foreign tax credit deduction (amount D from Part 3)	23,328,339	2				
For a life insurance corporation:						
Gross CMT (line 540 from Part 3)		3				
Gross SAT (line 460 from Part 6 of Schedule 512)		4				
The **greater** of amounts 3 and 4		5				
Deduct: line 2 or line 5, whichever applies:			23,328,339	6		
Subtotal (if negative, enter "0")						N
Ontario corporate income tax payable before CMT credit (amount F6 from Schedule 5)						
Deduct:						
Total refundable tax credits excluding Ontario qualifying environmental trust tax credit (amount J6 **minus** line 450 from Schedule 5)			6,219,599			
Subtotal (if negative, enter "0")						O
CMT credit deducted in the current tax year (least of amounts M, N, and O)						P

Enter amount P on line 418 of Schedule 5 and on line I in Part 4 of this schedule.

Is the corporation claiming a CMT credit earned before an acquisition of control? **675** 1 Yes ☐ 2 No ☒

If you answered **yes** to the question at line 675, the CMT credit deducted in the current tax year may be restricted. For information on how the deduction may be restricted, see subsections 53(6) and (7) of the Ontario Act.

Part 6 – Analysis of CMT credit available for carryforward by year of origin

Complete this part if:
- the tax year includes January 1, 2009; or
- the previous tax year-end is deemed to be December 31, 2008, under subsection 249(3) of the federal Act.

Year of origin	CMT credit balance *
10th previous tax year	
9th previous tax year	
8th previous tax year	
7th previous tax year	
6th previous tax year	
5th previous tax year	
4th previous tax year	
3rd previous tax year	
2nd previous tax year	
1st previous tax year	
Total **	

* CMT credit that was earned (by the corporation, predecessors of the corporation, and subsidiaries wound up into the corporation) in each of the previous 10 tax years and has not been deducted.

** Must equal the total of the amounts entered on lines 620 and 650 in Part 4.

Part 7 – Calculation of CMT loss carryforward

CMT loss carryforward at the end of the previous tax year * .... _______ Q

Deduct:

CMT loss expired * .... 700 _______

CMT loss carryforward at the beginning of the tax year * (see note below) .... _______ 720 _______

Add:

CMT loss transferred on an amalgamation under section 87 of the federal Act ** (see note below) .... 750 _______

CMT loss available (line 720 **plus** line 750) .... _______ R

Deduct:

CMT loss deducted against adjusted net income for the tax year (lesser of line 490 (if positive) and line C in Part 3) .... _______

Subtotal (if negative, enter "0") _______ S

Add:

Adjusted net loss for CMT purposes (amount from line 490 in Part 2, if **negative**) (enter as a positive amount) .... _______

CMT loss carryforward balance at the end of the tax year (amount S **plus** line 760) .... 770 _______ T

* For the first harmonized T2 return filed with a tax year that includes days in 2009:
- do not enter an amount on line Q or line 700;
- for line 720, enter the amount from line 2214 of Ontario CT23 Schedule 101, *Corporate Minimum Tax (CMT)*, for the last tax year that ended in 2008.

For other tax years, enter on line Q the amount from line 770 of Schedule 510 from the previous tax year.

** Do not include an amount from a predecessor corporation if it was controlled at any time before the amalgamation by any of the other predecessor corporations.

Note: If you entered an amount on line 720 or line 750, complete Part 8.

Part 8 – Analysis of CMT loss available for carryforward by year of origin

Complete this part if:

- the tax year includes January 1, 2009; or
- the previous tax year-end is deemed to be December 31, 2008, under subsection 249(3) of the federal Act.

Year of origin	Balance earned in a tax year ending before March 23, 2007 *	Balance earned in a tax year ending after March 22, 2007 **
10th previous tax year	810	820
9th previous tax year	811	821
8th previous tax year	812	822
7th previous tax year	813	823
6th previous tax year	814	824
5th previous tax year	815	825
4th previous tax year	816	826
3rd previous tax year	817	827
2nd previous tax year	818	828
1st previous tax year		829
Total ***		

* Adjusted net loss for CMT purposes that was earned (by the corporation, by subsidiaries wound up into or amalgamated with the corporation before March 22, 2007, and by other predecessors of the corporation) in each of the previous 10 tax years that ended before March 23, 2007, and has not been deducted.

** Adjusted net loss for CMT purposes that was earned (by the corporation and its predecessors, but not by a subsidiary predecessor) in each of the previous 20 tax years that ended after March 22, 2007, and has not been deducted.

*** The total of these two columns must equal the total of the amounts entered on lines 720 and 750.

28	1937681 ONTARIO INC.	81722 4363 RC0001	0	0
		Total	450	550

Enter the total assets from line 450 on line 116 in Part 1 of Schedule 510, *Ontario Corporate Minimum Tax*.
Enter the total revenue from line 550 on line 146 in Part 1 of Schedule 510.

Note 1: Enter ¨NR¨ if a corporation is not registered.

Note 2: If the associated corporation does not have a tax year that ends in the filing corporation's current tax year but was associated with the filing corporation in the previous tax year of the filing corporation, enter the total revenue and total assets from the tax year of the associated corporation that ends in the previous tax year of the filing corporation.

* **Rules for total assets**

– Report total assets in accordance with generally accepted accounting principles, adjusted so that consolidation and equity methods are not used.
– Include the associated corporation's share of the total assets of partnership(s) and joint venture(s) but exclude the recorded asset(s) for the investment in partnerships and joint ventures.
– Exclude unrealized gains and losses on assets that are included in net income for accounting purposes but not in income for corporate income tax purposes.

** **Rules for total revenue**

– Report total revenue in accordance with generally accepted accounting principles, adjusted so that consolidation and equity methods are not used.
– If the associated corporation has 2 or more tax years ending in the filing corporation's tax year, **multiply** the sum of the total revenue for each of those tax years by 365 and **divide** by the total number of days in all of those tax years.
– If the associated corporation's tax year is less than 51 weeks and is the only tax year of the associated corporation that ends in the filing corporation's tax year, **multiply** the associated corporation's total revenue by 365 and **divide** by the number of days in the associated corporation's tax year.
– Include the associated corporation's share of the total revenue of partnerships and joint ventures.
– If the partnership or joint venture has 2 or more fiscal periods ending in the associated corporation's tax year, **multiply** the sum of the total revenue for each of the fiscal periods by 365 and **divide** by the total number of days in all the fiscal periods.

Canada Revenue Agency / Agence du revenu du Canada

SCHEDULE 550

ONTARIO CO-OPERATIVE EDUCATION TAX CREDIT

Name of corporation	Business Number	Tax year-end Year Month Day
HYDRO ONE NETWORKS INC.	87086 5821 RC0001	2016-12-31

- Use this schedule to claim an Ontario co-operative education tax credit (CETC) under section 88 of the *Taxation Act, 2007* (Ontario).
- The CETC is a refundable tax credit that is equal to an eligible percentage (10% to 30%) of the eligible expenditures incurred by a corporation for a qualifying work placement. The maximum credit amount is $1,000 for each qualifying work placement ending before March 27, 2009, and $3,000 for each qualifying work placement beginning after March 26, 2009. For a qualifying work placement that straddles March 26, 2009, the maximum credit amount is prorated.
- Eligible expenditures are salaries and wages (including taxable benefits) paid or payable to a student in a qualifying work placement, or fees paid or payable to an employment agency for services performed by the student in a qualifying work placement. These expenditures must be paid on account of employment or services, as applicable, at a permanent establishment of the corporation in Ontario. Expenditures for a work placement (WP) are not eligible expenditures if they are greater than the amounts that would be paid to an arm's length employee.
- A WP must meet all of the following conditions to be a qualifying work placement:
  - the student performs employment duties for a corporation under a qualifying co-operative education program (QCEP);
  - the WP has been developed or approved by an eligible educational institution as a suitable learning situation;
  - the terms of the WP require the student to engage in productive work;
  - the WP is for a period of at least 10 consecutive weeks or, in the case of an internship program, not less than 8 consecutive months and not more than 16 consecutive months;
  - the student is paid for the work performed in the WP;
  - the corporation is required to supervise and evaluate the job performance of the student in the WP;
  - the institution monitors the student's performance in the WP; and
  - the institution has certified the WP as a qualifying work placement.
- Make sure you keep a copy of the letter of certification from the Ontario eligible educational institution containing the name of the student, the employer, the institution, the term of the WP, and the name/discipline of the QCEP to support the claim. Do not submit the letter of certification with the *T2 Corporation Income Tax Return*.
- File this schedule with the *T2 Corporation Income Tax Return*.

Part 1 – Corporate information

110 Name of person to contact for more information	120 Telephone number including area code
Glendy Cheung	(416) 345-6812

Is the claim filed for a CETC earned through a partnership?* . . . . **150** 1 Yes ☐ 2 No ☒

If you answered **yes** to the question at line 150, what is the name of the partnership? . . . . **160** ______

Enter the percentage of the partnership's CETC allocated to the corporation . . . . **170** ______ %

* When a corporate member of a partnership is claiming an amount for eligible expenditures incurred by a partnership, complete a Schedule 550 for the partnership as if the partnership were a corporation. Each corporate partner, other than a limited partner, should file a separate Schedule 550 to claim the partner's share of the partnership's CETC. The allocated amounts can not exceed the amount of the partnership's CETC.

Part 2 – Eligibility

1. Did the corporation have a permanent establishment in Ontario in the tax year? . . . . **200** 1 Yes ☒ 2 No ☐
2. Was the corporation exempt from tax under Part III of the *Taxation Act*, 2007 (Ontario)? . . . . **210** 1 Yes ☐ 2 No ☒

If you answered **no** to question 1 or **yes** to question 2, then the corporation is **not eligible** for the CETC.

Part 3 – Eligible percentage for determining the eligible amount

Corporation's salaries and wages paid in the previous tax year * **300** 843,179,826

For eligible expenditures incurred before March 27, 2009:

– If line 300 is $400,000 or less, enter 15% on line 310.
– If line 300 is $600,000 or more, enter 10% on line 310.
– If line 300 is more than $400,000 and less than $600,000, enter the percentage on line 310 using the following formula:

$$\text{Eligible percentage} = 15\,\% - \left[5\,\% \times \left(\frac{\text{amount on line 300} \quad \textbf{minus} \quad \$ \quad 400{,}000}{\$ \quad 200{,}000} \right) \right]$$

Eligible percentage for determining the eligible amount . . . . . **310** 10.000 %

For eligible expenditures incurred after March 26, 2009:

– If line 300 is $400,000 or less, enter 30% on line 312.
– If line 300 is $600,000 or more, enter 25% on line 312.
– If line 300 is more than $400,000 and less than $600,000, enter the percentage on line 312 using the following formula:

$$\text{Eligible percentage} = 30\,\% - \left[5\,\% \times \left(\frac{\text{amount on line 300} \quad \textbf{minus} \quad \$ \quad 400{,}000}{\$ \quad 200{,}000} \right) \right]$$

Eligible percentage for determining the eligible amount . . . . . **312** 25.000 %

* If this is the first tax year of an amalgamated corporation and subsection 88(9) of the *Taxation Act, 2007* (Ontario) applies, enter the salaries and wages paid in the previous tax year by the predecessor corporations.

Part 4 – Calculation of the Ontario co-operative education tax credit

Complete a separate entry for each student for each qualifying work placement that ended in the corporation's tax year. If a qualifying work placement would otherwise exceed four consecutive months, divide the WP into periods of four consecutive months and enter each full period of four consecutive months as a separate WP. If the WP does not divide equally into four-month periods and if the period that is less than 4 months is 10 or more consecutive weeks, then enter that period as a separate WP. If that period is less than 10 consecutive weeks, then include it with the WP for the last period of 4 consecutive months. Consecutive WPs with two or more associated corporations are deemed to be with only one corporation, as designated by the corporations.

Ontario co-operative education tax credit (total of amounts in column K) 1,364,783 **L**

or, if the corporation answered **yes** at line 150 in Part 1, determine the partner's share of amount L:

Amount L ________ x percentage on line 170 in Part 1 ________ % = ... ________ **M**

Enter amount L or M, whichever applies, on line 452 of Schedule 5, *Tax Calculation Supplementary – Corporations*. If you are filing more than one Schedule 550, add the amounts from line L or M, whichever applies, on all the schedules and enter the total amount on line 452 of Schedule 5.

Note 1: Reduce eligible expenditures by all government assistance, as defined under subsection 88(21) of the *Taxation Act, 2007* (Ontario), that the corporation has received, is entitled to receive, or may reasonably expect to receive, for the eligible expenditures, on or before the filing due date of the *T2 Corporation Income Tax Return* for the tax year.

Note 2: Calculate the eligible amount (Column G) using the following formula:

Column G = (column F1 x percentage on line 310) + (column F2 x percentage on line 312)

Note 3: If the WP ends before March 27, 2009, the maximum credit amount for the WP is $1,000.
If the WP begins after March 26, 2009, the maximum credit amount for the WP is $3,000.
If the WP begins before March 27, 2009, and ends after March 26, 2009, calculate the maximum credit amount using the following formula:

($1,000 x X/Y) + [$3,000 x (Y – X)/Y]

where "X" is the number of consecutive weeks of the WP completed by the student before March 27, 2009, and "Y" is the total number of consecutive weeks of the student's WP.

Note 4: When claiming a CETC for repayment of government assistance, complete a **separate entry** for each repayment and complete columns A to E and J and K with the details for the previous year WP in which the government assistance was received. Include the amount of government assistance repaid in the tax year multiplied by the eligible percentage for the tax year in which the government assistance was received, to the extent that the government assistance reduced the CETC in that tax year.

Canada Revenue Agency / Agence du revenu du Canada

Schedule 552

Ontario Apprenticeship Training Tax Credit

Corporation's name	Business number	Tax year-end Year Month Day
HYDRO ONE NETWORKS INC.	87086 5821 RC0001	2016-12-31

- Use this schedule to claim an Ontario apprenticeship training tax credit (ATTC) under section 89 of the *Taxation Act, 2007* (Ontario).
- The ATTC is a refundable tax credit that is equal to a specified percentage (25% to 45%) of the eligible expenditures incurred by a corporation for a qualifying apprenticeship. For eligible expenditures incurred after March 26, 2009 for an apprenticeship program that began before April 24, 2015, the maximum credit for each qualifying apprenticeship is $10,000 per year to a maximum credit of $40,000 over the first 48-month period of the qualifying apprenticeship. For an apprenticeship program that began after April 23, 2015, the maximum credit for each qualifying apprenticeship is $5,000 per year to a maximum credit of $15,000 over the first 36-month period of the qualifying apprenticeship.
- Eligible expenditures are salaries and wages (including taxable benefits) paid to an apprentice in a qualifying apprenticeship or fees paid to an employment agency for the provision of services performed by the apprentice in a qualifying apprenticeship. These expenditures must be:
  - paid on account of employment or services, as applicable, at a permanent establishment of the corporation in Ontario;
  - for services provided by the apprentice during the first 48 months of the apprenticeship program, if an apprenticeship program began before April 24, 2015; and
  - for services provided by the apprentice during the first 36 months of the apprenticeship program, if an apprenticeship program began after April 23, 2015.
- An expenditure is not eligible for an ATTC if:
  - the same expenditure was used, or will be used, to claim a co-operative education tax credit; or
  - it is more than an amount that would be paid to an arm's length apprentice.
- An apprenticeship must meet the following conditions to be a qualifying apprenticeship:
  - the apprenticeship is in a qualifying skilled trade approved by the Ministry of Training, Colleges and Universities (Ontario) or a person designated by him or her; and
  - the corporation and the apprentice must be participating in an apprenticeship program in which the training agreement has been registered under the *Ontario College of Trades and Apprenticeship Act, 2009, or* the *Apprenticeship and Certification Act, 1998,* or in which the contract of apprenticeship has been registered under the *Trades Qualification and Apprenticeship Act*.
- Do not submit the training agreement or contract of apprenticeship with your *T2 Corporation Income Tax Return*. Keep a copy of the training agreement or contract of apprenticeship to support your claim.
- File this schedule with your *T2 Corporation Income Tax Return*.

Part 1 – Corporate information

110 Name of person to contact for more information	**120** Telephone number
Glendy Cheung	(416) 345-6812

Is the claim filed for an ATTC earned through a partnership? * . . . . **150** 1 Yes ☐ 2 No ☒

If you answered **yes** to the question at line 150, what is the name of the partnership? . **160** ______

Enter the percentage of the partnership's ATTC allocated to the corporation . . . . **170** ______ %

* When a corporate member of a partnership is claiming an amount for eligible expenditures incurred by a partnership, complete a Schedule 552 for the partnership as if the partnership were a corporation. Each corporate partner, other than a limited partner, should file a separate Schedule 552 to claim the partner's share of the partnership's ATTC. The total of the partners' allocated amounts can never exceed the amount of the partnership's ATTC.

Part 2 – Eligibility

1. Did the corporation have a permanent establishment in Ontario in the tax year? . . . . **200** 1 Yes ☒ 2 No ☐
2. Was the corporation exempt from tax under Part III of the *Taxation Act, 2007* (Ontario)? . . . . **210** 1 Yes ☐ 2 No ☒

If you answered **no** to question 1 or **yes** to question 2, then you are **not eligible** for the ATTC.

Part 3 – Specified percentage

Corporation's salaries and wages paid in the previous tax year * **300** 843,179,826

For eligible expenditures incurred after March 26, 2009 for an apprenticeship program that began before April 24, 2015:

- If line 300 is $400,000 or less, enter 45% on line 312.
- If line 300 is $600,000 or more, enter 35% on line 312.
- If line 300 is more than $400,000 and less than $600,000, enter the percentage on line 312 using the following formula:

$$\text{Specified percentage} = 45\% - \left[10\% \times \left(\frac{\text{amount on line 300} \ \textbf{minus} \ 400{,}000}{200{,}000} \right) \right]$$

Specified percentage . . . . . **312** 35.000 %

For eligible expenditures incurred for an apprenticeship program that began after April 23, 2015:

- If line 300 is $400,000 or less, enter 30% on line 314.
- If line 300 is $600,000 or more, enter 25% on line 314.
- If line 300 is more than $400,000 and less than $600,000, enter the percentage on line 314 using the following formula:

$$\text{Specified percentage} = 30\% - \left[5\% \times \left(\frac{\text{amount on line 300} \ \textbf{minus} \ 400{,}000}{200{,}000} \right) \right]$$

Specified percentage . . . . . **314** 25.000 %

* If this is the first tax year of an amalgamated corporation and subsection 89(6) of the *Taxation Act, 2007* (Ontario) applies, enter salaries and wages paid in the previous tax year by the predecessor corporations.

Part 4 – Ontario apprenticeship training tax credit

Complete a **separate entry** for each apprentice for each qualifying apprenticeship with the corporation. When claiming an ATTC for repayment of government assistance, complete a **separate entry** for each repayment, and complete columns A to G and M and N with the details for the employment period in the previous tax year in which the government assistance was received.

Note 1: Enter the original registration date of the apprenticeship contract or training agreement in all cases, even when multiple employers employed the apprentice.

Note 2: When there are multiple employment periods as an apprentice in the tax year with the corporation, enter the date that is the first day of employment as an apprentice in the tax year with the corporation. When claiming an ATTC for repayment of government assistance, enter the start date of employment as an apprentice for the tax year in which the government assistance was received.

Note 3: When there are multiple employment periods as an apprentice in the tax year with the corporation, enter the date that is the last day of employment as an apprentice in the tax year with the corporation. When claiming an ATTC for repayment of government assistance, enter the end date of employment as an apprentice for the tax year in which the government assistance was received.

Part 4 – Ontario apprenticeship training tax credit (continued)

	H1 Number of days in the tax year employed as an apprentice in a qualifying apprenticeship program that began before April 24, 2015 (see note 1) 442	H2 Number of days in the tax year employed as an apprentice in a qualifying apprenticeship program that began after April 23, 2015 (see note 1) 443	I Maximum credit amount for the tax year (see note 2) 445

Note 1: When there are multiple employment periods as an apprentice in the tax year with the corporation, do not include days in which the individual was not employed as an apprentice.
For H1: The days employed as an apprentice must be within 48 months of the registration date provided in column E.
For H2: The days employed as an apprentice must be within 36 months of the registration date provided in column E.

Note 2: Maximum credit = ($10,000 × H1/365*) or ($5,000 × H2/365*), whichever applies.
* 366 days, if the tax year includes February 29

	J1 Eligible expenditures incurred after March 26, 2009 for a qualifying apprenticeship program that began before April 24, 2015 (see note 3) 452	J2 Eligible expenditures incurred for a qualifying apprenticeship program that began after April 23, 2015 (see note 3) 453	K Eligible expenditures **multiplied** by specified percentage (see note 4) 460

Note 3: Reduce eligible expenditures by all government assistance, as defined under subsection 89(19) of the *Taxation Act, 2007* (Ontario), that the corporation has received, is entitled to receive, or may reasonably expect to receive, in respect of the eligible expenditures, on or before the filing due date of the *T2 Corporation Income Tax Return* for the tax year.

For J1: Eligible expenditures must be for services provided by the apprentice to the taxpayer during the first 48 months of the apprenticeship program, and not relating to services performed before the apprenticeship program began or after it ended.

For J2: Eligible expenditures must be for services provided by the apprentice to the taxpayer during the first 36 months of the apprenticeship program, and not relating to services performed before the apprenticeship began or after it ended.

Note 4: Calculate the amount in column K as follows:
Column K = (J1 × line 312) or (J2 × line 314), whichever applies.

	L ATTC on eligible expenditures (lesser of columns I and K) 470	M ATTC on repayment of government assistance (see note 5) 480	N ATTC for each apprentice (column L or M, whichever applies) 490

SCHEDULE 568

ONTARIO BUSINESS-RESEARCH INSTITUTE TAX CREDIT

Name of corporation	Business Number	Tax year-end Year Month Day
HYDRO ONE NETWORKS INC.	87086 5821 RC0001	2016-12-31

- Use this schedule to claim the Ontario business-research institute tax credit (OBRITC) under section 97 of the *Taxation Act, 2007* (Ontario).
- The OBRITC is a 20% refundable tax credit based on qualified expenditures incurred in Ontario under an eligible contract with an eligible research institute (ERI).
- A list of eligible research institutes and the applicable ERI codes for eligible contracts can be found on our website. Go to **www.cra.gc.ca/ctao** and select "business-research institute tax credit".
- The criteria for a corporation to be eligible for the OBRITC include the eligibility requirements in Part 1 of this schedule.
- The annual qualified expenditure limit is $20 million. If a corporation is associated with other corporations at any time in the calendar year, the $20 million limit must be allocated among the associated corporations.
- Qualifying corporations are defined in subsection 97(3) of the *Taxation Act, 2007* (Ontario).
- For each eligible contract, you must complete a separate Schedule 569, *Ontario Business-Research Institute Tax Credit Contract Information*.
- Keep the eligible contract to support your claim. Do not submit the contract with the *T2 Corporation Income Tax Return*.
- To claim the OBRITC, include the following with the *T2 Corporation Income Tax Return*:
  – a completed copy of this schedule; and
  – a completed copy of Schedule 569 for each eligible contract.

Part 1 – Eligibility

1. Did the corporation, for the tax year, carry on business in Ontario through a permanent establishment in Ontario? . . . . **100** 1 Yes [X] 2 No [ ]
2. Was the corporation exempt from tax for the tax year under Part III of the *Taxation Act, 2007* (Ontario)? . . . . **105** 1 Yes [ ] 2 No [X]

If you answered **no** to question 1 or **yes** to question 2, the corporation is **not eligible** for the OBRITC.

Part 2 – Qualified expenditure limit for the tax year

Was the corporation associated at any time in the tax year with another corporation? . . . . **200** 1 Yes [X] 2 No [ ]

If the corporation answered **no** at line 200, enter $20,000,000 on line 205. If the corporation answered **yes** at line 200, complete Part 3 and enter on line 205 the expenditure limit allocated to the corporation in column 310 in Part 3.

Qualified expenditure limit . . . . **205** 20,000,000 A

If the tax year is 51 weeks or more, enter amount A on line 210.

If the tax year of the filing corporation is less than 51 weeks, complete the following proration calculation:

Amount A 20,000,000 x (days in the tax year 366 / 365) = ... ______ B

Qualified expenditure limit for the tax year (amount A or amount B, whichever applies) . . . . **210** 20,000,000 C

Part 3 – Allocation of the $20 million expenditure limit between associated corporations

Use this part to allocate the $20 million expenditure limit to the filing corporation and all its associated corporations for each of their tax years ending in the calendar year. See subsection 38(4) of Ontario Regulation 37/09 for expenditure limit allocation rules for associated corporations. Attach additional schedules if you need more space.

	Name of all associated corporations, including the filing corporation (include the associated corporations that have a tax year that ends in the calendar year) 300	305	Expenditure limit allocated 310

SCHEDULE 569

ONTARIO BUSINESS-RESEARCH INSTITUTE TAX CREDIT CONTRACT INFORMATION

Name of corporation	Business Number	Tax year-end Year Month Day
HYDRO ONE NETWORKS INC.	87086 5821 RC0001	2016-12-31

- Use this schedule to support your claim for the Ontario business-research institute tax credit (OBRITC), which is made on Schedule 568, *Ontario Business-Research Institute Tax Credit*. Complete a separate Schedule 569 for each eligible contract.
- The OBRITC is a 20% refundable tax credit based on qualified expenditures incurred in Ontario under an eligible contract with an eligible research institute (ERI). An ERI, for purposes of the OBRITC, is defined in subsection 97(27) of the *Taxation Act, 2007* (Ontario).
- A list of eligible research institutes and the applicable ERI codes for eligible contracts can be found on our web site. Go to **www.cra.gc.ca/ctao** and select "business-research institute tax credit".
- The eligibility requirements in Part 2 of this schedule must be met for the qualifying corporation to claim an OBRITC for this contract.
- Eligible contracts entered into before August 10, 2007 were subject to advanced ruling legislation. OBRITC claims relating to one of these contracts must have the corresponding Ontario Ministry of Revenue ruling reference number entered at line 130 in Part 1 of this schedule.
- Corporations can only claim the OBRITC for the number of days in the tax year that the corporation **was not** connected to the ERI. Connected corporations, for the purposes of the OBRITC, are defined in subsection 97(4) of the *Taxation Act*, 2007 (Ontario).
- Eligible contracts and qualified expenditures are defined in subsections 97(6) and 97(8), respectively, of the *Taxation Act, 2007* (Ontario).
- According to subsections 97(16) and (19) of the *Taxation Act, 2007* (Ontario), qualified expenditures must be reduced by contributions the corporation received, is entitled to receive or may reasonably expect to receive. Qualified expenditures include repayment of government assistance made by the corporation during the year. Contribution and government assistance are defined in subsection 97(27) of the *Taxation Act, 2007* (Ontario).

Part 1 – Contract details

100 Name of person to contact for more information: [redacted]

105 Telephone number including area code: [redacted]

110 Name of the ERI on the contract: [redacted]

115 ERI code: 118

120 Date of contract (Year Month Day): 2016-07-28

If the date on line 120 is before August 10, 2007, was the contract subject to an advanced ruling? . . . **125** 1 Yes [ ] 2 No [X]

For all contracts entered into before August 10, 2007, enter the Ontario Ministry of Revenue ruling reference number . . . . . . **130** ______ – ______

Is the claim filed for an OBRITC earned through a partnership?* . . . . . . **135** 1 Yes [ ] 2 No [X]

If the answer on line 135 is **yes**, are you a specified member? . . . . . . **140** 1 Yes [ ] 2 No [ ]

If the answer on line 135 is **yes**, what is the name of the partnership? . . . . . . **145** ______

Enter the corporation's percentage share of the income or loss of the partnership's fiscal period ending in the corporation's tax year . . . . . . **150** ______ %

* When a corporate member of a partnership is claiming an amount for qualified expenditures incurred during the tax year under the eligible contract by the partnership, complete Schedule 569 as if the partnership were a corporation. Each corporate member, other than a specified member, should file a Schedule 569 as if it, instead of the partnership, had entered into the contract with the ERI and can claim the corporation's share of the partnership's qualified expenditures. Specified members of a partnership cannot claim an OBRITC. A definition of "specified member" can be found in subsection 248(1) of the federal *Income Tax Act*.

Part 2 – Eligibility

Contract:

1. Did the corporation enter into a contract with an ERI? . . . . . **200** 1 Yes [X] 2 No [ ]
2. Do the terms of the contract state that the ERI agrees to perform, in Ontario, scientific research and experimental development (SR&ED) related to the business carried on in Canada by the corporation? . . . . . **205** 1 Yes [X] 2 No [ ]
3. Was the corporation entitled to exploit the results of the SR&ED carried out under the contract? . . . . . **210** 1 Yes [X] 2 No [ ]

If you answered **no** to question 1, 2, or 3, the contract is **not** an **eligible** contract for the purposes of an OBRITC.

Expenditures:

4. Were the expenditures made by a payment of money by the corporation to the ERI or by a prescribed payment? . . . . . **215** 1 Yes [X] 2 No [ ]
5. Were the expenditures incurred in respect of SR&ED carried on in Ontario by the ERI? . . . . . **220** 1 Yes [X] 2 No [ ]
6. Are the expenditures identified in subparagraph 37(1)(a)(i), (i.1) or (ii) of the federal *Income Tax Act* and would they also qualify as qualified expenditures, as defined in subsection 127(9) of the federal Act, other than prescribed types of expenditures and certain salaries or wages? . . . . . **225** 1 Yes [X] 2 No [ ]
7. Were the expenditures incurred by the corporation for purposes of SR&ED related to the business carried on in Canada by the corporation? . . . . . **230** 1 Yes [X] 2 No [ ]

If you answered **no** to question 4, 5, 6, or 7, the expenditures are **not eligible** expenditures for the purposes of an OBRITC.

Part 3 – Qualified expenditures for this contract for the tax year

Qualified expenditures incurred in the tax year **300** 300,000

If the corporation answered **yes** at line 135 in Part 1, and **no** at line 140 in Part 1, determine the partnerships' share of qualified expenditures available to claim in the tax year:

Line 300 300,000 x percentage on line 150 in Part 1 % = A

Number of days in this tax year that the corporation was **not** connected to the ERI identified on line 110 in Part 1 . . . . . **305** 366

Qualified expenditures for this contract for the tax year:

$\frac{\text{(Line 300 or amount A, whichever applies) x line 305}}{\text{number of days in the tax year}}$ $\frac{109{,}800{,}000}{366}$ = ... **310** 300,000 B

Enter amount B on line 405 of **Schedule 568**, *Ontario Business-Research Institute Tax Credit*.

Canada Revenue Agency / Agence du revenu du Canada

SCHEDULE 569

ONTARIO BUSINESS-RESEARCH INSTITUTE TAX CREDIT CONTRACT INFORMATION

Name of corporation	Business Number	Tax year-end Year Month Day
HYDRO ONE NETWORKS INC.	87086 5821 RC0001	2016-12-31

- Use this schedule to support your claim for the Ontario business-research institute tax credit (OBRITC), which is made on Schedule 568, *Ontario Business-Research Institute Tax Credit*. Complete a separate Schedule 569 for each eligible contract.
- The OBRITC is a 20% refundable tax credit based on qualified expenditures incurred in Ontario under an eligible contract with an eligible research institute (ERI). An ERI, for purposes of the OBRITC, is defined in subsection 97(27) of the *Taxation Act, 2007* (Ontario).
- A list of eligible research institutes and the applicable ERI codes for eligible contracts can be found on our web site. Go to **www.cra.gc.ca/ctao** and select "business-research institute tax credit".
- The eligibility requirements in Part 2 of this schedule must be met for the qualifying corporation to claim an OBRITC for this contract.
- Eligible contracts entered into before August 10, 2007 were subject to advanced ruling legislation. OBRITC claims relating to one of these contracts must have the corresponding Ontario Ministry of Revenue ruling reference number entered at line 130 in Part 1 of this schedule.
- Corporations can only claim the OBRITC for the number of days in the tax year that the corporation **was not** connected to the ERI. Connected corporations, for the purposes of the OBRITC, are defined in subsection 97(4) of the *Taxation Act*, 2007 (Ontario).

Name of corporation	Business Number	Tax year-end Year Month Day
HYDRO ONE NETWORKS INC.	87086 5821 RC0001	2016-12-31

- Use this schedule to support your claim for the Ontario business-research institute tax credit (OBRITC), which is made on Schedule 568, *Ontario Business-Research Institute Tax Credit*. Complete a separate Schedule 569 for each eligible contract.
- The OBRITC is a 20% refundable tax credit based on qualified expenditures incurred in Ontario under an eligible contract with an eligible research institute (ERI). An ERI, for purposes of the OBRITC, is defined in subsection 97(27) of the *Taxation Act, 2007* (Ontario).
- A list of eligible research institutes and the applicable ERI codes for eligible contracts can be found on our web site. Go to **www.cra.gc.ca/ctao** and select "business-research institute tax credit".
- The eligibility requirements in Part 2 of this schedule must be met for the qualifying corporation to claim an OBRITC for this contract.
- Eligible contracts entered into before August 10, 2007 were subject to advanced ruling legislation. OBRITC claims relating to one of these contracts must have the corresponding Ontario Ministry of Revenue ruling reference number entered at line 130 in Part 1 of this schedule.
- Corporations can only claim the OBRITC for the number of days in the tax year that the corporation **was not** connected to the ERI. Connected corporations, for the purposes of the OBRITC, are defined in subsection 97(4) of the *Taxation Act*, 2007 (Ontario).
- Eligible contracts and qualified expenditures are defined in subsections 97(6) and 97(8), respectively, of the *Taxation Act, 2007* (Ontario).
- According to subsections 97(16) and (19) of the *Taxation Act, 2007* (Ontario), qualified expenditures must be reduced by contributions the corporation received, is entitled to receive or may reasonably expect to receive. Qualified expenditures include repayment of government assistance made by the corporation during the year. Contribution and government assistance are defined in subsection 97(27) of the *Taxation Act, 2007* (Ontario).

Part 1 – Contract details

100 Name of person to contact for more information: [redacted]

105 Telephone number including area code: [redacted]

110 Name of the ERI on the contract: [redacted]

115 ERI code: 117

120 Date of contract (Year Month Day): 2016-10-12

If the date on line 120 is before August 10, 2007, was the contract subject to an advanced ruling? . . . **125** 1 Yes [ ] 2 No [X]

For all contracts entered into before August 10, 2007, enter the Ontario Ministry of Revenue ruling reference number . . . **130** ____ – ____

Is the claim filed for an OBRITC earned through a partnership?* . . . 1 Yes [ ] 2 No [X]

If the answer on line 135 is **yes**, are you a specified member? . . . 1 Yes [ ] 2 No [ ]

If the answer on line 135 is **yes**, what is the name of the partnership? . . . ____

Enter the corporation's percentage share of the income or loss of the partnership's fiscal period ending in the corporation's tax year . . . **150** ____ %

* When a corporate member of a partnership is claiming an amount for qualified expenditures incurred during the tax year under the eligible contract by the partnership, complete Schedule 569 as if the partnership were a corporation. Each corporate member, other than a specified member, should file a Schedule 569 as if it, instead of the partnership, had entered into the contract with the ERI and can claim the corporation's share of the partnership's qualified expenditures. Specified members of a partnership cannot claim an OBRITC. A definition of "specified member" can be found in subsection 248(1) of the federal *Income Tax Act*.

Part 2 – Eligibility

Contract:

1. Did the corporation enter into a contract with an ERI? . . . . . 200 1 Yes X 2 No ☐
2. Do the terms of the contract state that the ERI agrees to perform, in Ontario, scientific research and experimental development (SR&ED) related to the business carried on in Canada by the corporation? . . . . . 205 1 Yes X 2 No ☐
3. Was the corporation entitled to exploit the results of the SR&ED carried out under the contract? . . . . . 210 1 Yes X 2 No ☐

If you answered **no** to question 1, 2, or 3, the contract is **not** an **eligible** contract for the purposes of an OBRITC.

Expenditures:

4. Were the expenditures made by a payment of money by the corporation to the ERI or by a prescribed payment? . . . . . 215 1 Yes X 2 No ☐
5. Were the expenditures incurred in respect of SR&ED carried on in Ontario by the ERI? . . . . . 220 1 Yes X 2 No ☐
6. Are the expenditures identified in subparagraph 37(1)(a)(i), (i.1) or (ii) of the federal *Income Tax Act* and would they also qualify as qualified expenditures, as defined in subsection 127(9) of the federal Act, other than prescribed types of expenditures and certain salaries or wages? . . . . . 225 1 Yes X 2 No ☐
7. Were the expenditures incurred by the corporation for purposes of SR&ED related to the business carried on in Canada by the corporation? . . . . . 230 1 Yes X 2 No ☐

If you answered **no** to question 4, 5, 6, or 7, the expenditures are **not eligible** expenditures for the purposes of an OBRITC.

Part 3 – Qualified expenditures for this contract for the tax year

Qualified expenditures incurred in the tax year 300 100,000

If the corporation answered **yes** at line 135 in Part 1, and **no** at line 140 in Part 1, determine the partnerships' share of qualified expenditures available to claim in the tax year:

Line 300 100,000 x percentage on line 150 in Part 1 % = ______ A

Number of days in this tax year that the corporation was **not** connected to the ERI identified on line 110 in Part 1 . . . . . 305 366

Qualified expenditures for this contract for the tax year:

$$\frac{\text{(Line 300 or amount A, whichever applies) x line 305}}{\text{number of days in the tax year}} \quad \frac{36,600,000}{366} = \ldots \quad 310 \quad 100,000 \text{ B}$$

Enter amount B on line 405 of **Schedule 568**, *Ontario Business-Research Institute Tax Credit*.

OEB Staff Interrogatory # 12

Issue:

Issue 3: Is the overall increase in the distribution revenue requirement from 2018 to 2022 reasonable?

Reference:

C1-07-03
December 31, 2015 Tax Return, Schedule 4
Schedule 4 of the December 31, 2015 Tax Return indicates that Hydro One has significant non-capital loss carryforwards.

Interrogatory:

Please explain how these losses have been considered in the calculation of regulatory taxes for the test period.

Response:

Hydro One's non-capital loss carryforwards arose as a result of the additional tax deductions from the fair market value revaluation as a consequence of the IPO and the departure from the PILs regime.

These non-capital losses were not considered in the calculation of the regulatory taxes for the test period.

This was noted in Procedural Order No. 2 of this proceeding which stated:

> "The OEB understands that Hydro One's proposed treatment of tax savings resulting from the Government of Ontario's decision to sell its ownership interest in Hydro One Limited by way of an IPO and subsequent sale of shares in this Distribution Rates Application is consistent with its proposed approach to those savings in the Transmission application. That is, Hydro One does not intend to apply any tax savings resulting from the IPO to reduce Hydro One's distribution revenue requirement. As Hydro One notes "Neither the departure tax nor the change in tax regime will have any impact on ratepayers. For regulatory purposes, income tax expenses will continue to be calculated according to the method prescribed by the Board's 2006 EDR Tax Model and 2006 EDR Handbook, Section 7.1 "OEB 2006 Regulatory Taxes Expense Methodology"1. The OEB does not intend to have that

matter re-litigated in the current proceeding while the motion and appeal are pending. Accordingly, the OEB will not permit the Tax Savings Determination issue to be addressed in the distribution case, pending the outcomes of the Hydro One Motion and Appeal." (Decision on Issues List, Interim Rates and Procedural Order No. 2, December 1, 2017, page 3-4)

OEB Staff Interrogatory # 13

Issue:

Issue 3: Is the overall increase in the distribution revenue requirement from 2018 to 2022 reasonable?

Reference:

C1-07-03
December 31, 2015 Tax Return, Schedule 10
Schedule 10 of the December 31, 2015 tax return indicates that Hydro One is eligible to receive a significant annual CEC deduction.

Interrogatory:

Although Hydro One does consider a CEC deduction in their calculation of the test period regulatory taxes, the deduction being allocated to the regulatory tax calculation is significantly less compared to what is available as per Schedule 10. Please explain why.

Response:

Hydro One's CEC balance mainly comprised of goodwill that was recognized from the fair market value revaluation of its assets when Hydro One exited the PILs regime as a consequence of the IPO and the goodwill that was purchased on LDC acquisitions. The CEC deduction on these portions of the goodwill was excluded from the regulatory tax calculations for reasons that are consistent with Exhibit I-03-Staff-12, and RP-2004-0188 Report of the Board for the purchased goodwill.

Arbourbrook Estates Interrogatory # 1

Issue:

Issue 4: Are the rate and bill impacts in each customer class in each year in the 2018 to 2022 period reasonable?

Reference:

A-03-01

REF: Ontario Regulation 442/01 s. 1
Ontario Regulation 198/17 s. 2
Exhibit H1/Tab4/Schedule1/Attachment 4/pp. 5 to12.

Interrogatory:

a) Please provide updated bill impact schedules for the R1 and R2 Rate Classes (for all consumption levels included in the Application) that incorporate the impact of the Fair Hydro Plan on rates, including specifically the impact of Distribution Rate Protection (in conjunction with the already included RRRP).

Response:

a) The bill impacts for the R1 and R2 Rate Classes are included in the material provided in the response to Exhibit I-4-PWU-4.

Balsam Lake Coalition Interrogatory # 2

Issue:

Issue 4: Are the rate and bill impacts in each customer class in each year in the 2018 to 2022 period reasonable?

Reference:

H1-04-01 Page 2

Interrogatory:

It appears to Balsam Lake that the filed bill impacts do not include the various impacts of the Fair Hydro Plan and related legislation on the proposed 2018 rates.

a) Please provide a version of Table 1: Distribution and Total Bill Impacts by Rate Class for Hydro One Customers that incorporates all the impacts of the Fair Hydro Plan; in doing so, please add a column that shows the 2017 DX Bill ($) that the column 2018 Change in DX Bill ($) is relative to, and a column that shows the 2017 Total Bill ($) that the 2017 Total Bill ($) is relative to.

Response:

a) Please see Attachment 1 to Exhibit I-4-PWU-4 for the revised version of Tables 1 and 2 of Exhibit H1, Tab 4, Schedule 1 that incorporates the impacts of the Fair Hydro Plan, and includes the 2017 Dx Bill ($).

Balsam Lake Coalition Interrogatory # 3

Issue:

Issue 4: Are the rate and bill impacts in each customer class in each year in the 2018 to 2022 period reasonable?

Reference:

H1-01-01 Page 2
Ontario Regulation 442/01 s. 1
Ontario Regulation 198/17 s. 2

Interrogatory:

Ontario Regulation 442/01 s. 1 defines, in part, residential premises as "a dwelling occupied as a residence continuously for at least eight months of the year. . .".

Ontario Regulation 198/17 s. 2 provides Distribution Rate Protection to Hydro One's R1 and R2 customers so long as each such customer "resides continuously at the service address to which the account relates for at least eight months of the year".

Hydro One's Tariff of Rates and Charges asserts the following:

RESIDENTIAL SERVICE CLASSIFICATIONS

A year-round residential customer classification applies to a customer's main place of abode and may include additional buildings served through the same meter, provided they are not rental income units. All of the following criteria must be met:

1. Occupant represents and warrants to Hydro One Networks Inc. that for so long as he/she has year-round residential rate status for the identified dwelling, he/she will not designate another property that he/she owns as a year-round residence for purposes of Hydro One rate classification.
2. Occupier must live in this residence for at least four (4) days of the week for eight (8) months of the year and the Occupier must not reside anywhere else for more than three (3) days a week during eight (8) months of the year.
3. The address of this residence must appear on documents such as the occupant's electric bill, driver's licence, credit card invoice, property tax bill, etc.

4. Occupants who are eligible to vote in Provincial or Federal elections must be enumerated for this purpose at the address of this residence.

Seasonal Residential customer classification is defined as any residential service that does not meet residential year- round criteria. It includes dwellings such as cottages, chalets and camps.

The bill impacts experienced by Seasonal Customers relative to the UR, R1 and R2 classes results largely from the exclusion of customers designated as Seasonal Customers from Rural or Remote Electricity Rate Protection and Distribution Rate Protection.

a) Please confirm that Hydro One's Tariff of Rates and Charges as proposed in the proceeding distinguishes between "residential' and "seasonal" customers, in part, so as to distinguish between customers that qualify in accordance with Ontario Regulation 442/01 for Rural or Remote Electricity Rate Protection (RRRP) and customers that do not based on the criteria under that regulation that qualifying customers must occupy residential premises, which is defined as "a dwelling occupied as a residence continuously for at least eight months of the year. . .". If not confirmed, please explain why Hydro One distinguishes between "residential" and "seasonal" customers.

b) Please confirm that, with the introduction of Ontario Regulation 198/17, Hydro One's Tariff of Rates and Charges as proposed in the proceeding will serve to distinguish between "residential' and "seasonal" customers, in part, so as to distinguish between customers that qualify in accordance with Ontario Regulation 198/17 for Distribution Rate Protection (DRP) and customers that do not based on the criteria in the regulation that a qualifying customer must reside "continuously at the service address to which the account relates for at least eight months of the year". If not confirmed, please explain how Hydro One intends to distinguish between customers that qualify for DRP and those that do not.

c) Please confirm that when Hydro One refers in its Tariff to a year-round residential customer classification applying to a customer's "main place of abode", Hydro One's reference to a customer's "main place of abode" is intended to convey that in order to qualify as a "year-round residential customer" the customer must occupy residential premises, defined as a "dwelling occupied as a residence continuously for at least eight months of the year". If not confirmed please explain why Hydro One refers to a customer's main place of abode?
d) Does Hydro One agree that a customer could occupy two (or more) residences continuously for at least eight months of the year? If not why not?

e) Does Hydro One agree that a customer can occupy a residence continuously for at least eight months of the year without living at the residence 4 days of the week for 8 months of the year? If not why not?

f) Does Hydro One agree that a customer can occupy a residence continuously for at least eight months of the year without the address of the residence appearing on documents such as the occupant's electric bill, driver's licence, credit card invoices, property tax bill, etc.? If not why not?

g) Does Hydro One agree that a customer can occupy a residence continuously for at least eight months of the year without being enumerated for the purpose of voting in Provincial or Federal elections at the address of that residence? If not why not?

h) What independent dispute process does Hydro One have in place for customers wishing to dispute their Seasonal Class designation?

i) What steps does Hydro One take, if any, to confirm the "year round" status of its customers on an ongoing basis?

Response:

a) Confirmed.

b) Regulation 198/17 applies specifically to customers in the R1 and R2 year-round residential classes, and the criteria in the regulation that a qualifying customer must reside "continuously at the service address to which the account relates for at least eight months of the year" was specifically added to the regulation so as to exclude seasonal residential customers from getting the DRP should seasonal customers be included in the R1 or R2 rate classes at some point in the future.

c) The intent is in part to satisfy the requirement that the dwelling is occupied as a residence continuously for at least eight months of the year, but it is also linked to the first criteria which requires that a customer will not designate another property as a year-round residence for purposes of Hydro One rate classification.

d) Hydro One does not agree. Hydro One interprets the requirement to “reside continuously for at least eight months of the year” as referring to a customer’s year-round residential classification, and as stated in the first criteria above, for purposes of Hydro One’s rate classification a customer cannot designate another property as a year-round residence.

e) Hydro One expects that a customer with a year-round residential property would typically reside at that property for at least 4 days of the week for 8 months of the year, but there may be unusual situations during which a customer may not be using their year-round residential property in this manner.

f) Hydro One expects that a customer with a year-round residential property would typically show the address of that property on the documents referenced in the question.

g) Hydro One expects that a customer with a year-round residential property would typically show the address of that property for the purpose of voting in Provincial or Federal elections.

h) Hydro One aims to resolve any customer concern the first time a customer contacts Hydro One. Hydro One has a three step dispute resolution process. Additionally a customer has the opportunity to contact either, or both, the independent Hydro One Ombudsman or the Regulator (Ontario Energy Board) if a customer is dissatisfied with the resolution outcome.

i) Year round status of residential customers is confirmed upon new service connection or upgrade, at time of customer move into a property and at time of a customer notification of change to their service or account.

Building Owners and Managers Association Toronto Interrogatory # 17

Issue:

Issue 4: Are the rate and bill impacts in each customer class in each year in the 2018 to 2022 period reasonable?

Issue 3: Is the overall increase in the distribution revenue requirement from 2018 to 2022 reasonable?

Issue 29: Are the proposed capital expenditures resulting from the Distribution System Plan appropriate, and have they been adequately planned and paced?

Issue 51: Are the revenue-to-cost ratios for all rate classes over the 2018 – 2022 period appropriate?

Reference:

A-03-01

Interrogatory:

a) p2 - Please provide the forecast percentage rate increase for each year over the period 2018 to 2022, commencing with the 2018 rates over existing 2017 rates.

   i. Please provide the derivation underlying calculations of the 4.7% as the 3.0% of the cited at lines 19 and 20.
   ii. Please provide the same data as in (i) for historical years 2017 over 2016, 2016 over 2015, 2015 over 2014, 2014 over 2013, and 2013 over 2012.

b) p23 - What are 2016 Actual Revenue Requirement relative to Board-approved Revenue Requirement?

c) What are the 2017 actual OM&A to date (September 30, 2017)? Extend revenue to date?

d) p5 – Please provide the derivation of the 4.2% reduction in capital expenditures from 2017 Board-approved levels. What is the year to date and current forecast 2017 actual capital expenditures?

e) Please confirm that for residential customers in 2018, the distribution rate is determined to the extent of 75% by customer charge, which does not vary with electricity consumption on demand.

f) Please show the corresponding bill increases for section **Error! Reference source not ound.** above

Response:

a) The forecast percentage rate increase of 4.9% shown in the reference A-03-01 was subsequently updated to 6.1% as shown on page 3 of Exhibit Q-01-01 filed with the Board on December, 21, 2017. The answers below are provided based on Hydro One's current proposal as per Exhibit Q-01-01.

The forecast percentage rate increases are provided in the table below as requested.

2018 increase over 2017	**2019 increase over 2018**	**2020 increase over 2019**	**2021 increase over 2020**	**2022 increase over 2021**
6.1%	3.6%	2.9%	2.4%	2.2%

i. The Derivation of 6.1% is the combined impact of a 3.1% increase in 2018 revenue requirement plus riders and other revenues over the equivalent amounts in 2017, plus a 3.0% increase due to the revenue deficiency associated with rebasing the load forecast in 2018. The calculations are shown in the table below. Details of the revenue deficiency associated with the load forecast impact of 3.0% is provided in the response to Exhibit I-19-BOMA-19 part h).

	2017	**2018**
Revenue Requirement	1,467.6	1,517.1
Rate Riders	11.1	6.2
Other revenue impacts	(52.7)	(53.6)
Rates Revenue Requirement	**1,426.0**	**1,469.7**
Rates Increase over 2017		3.1%
Load Impact		3.0%
Rate Increase Required		6.1%

ii. Please see the table below for the information requested.

	2013 over 2012	**2014 over 2013**	**2015 over 2014**	**2016 over 2015**	**2017 over 2016**
Change in Revenue	1.1%	3.5%	11.2%	6.3%	0.4%
Load Impact	0% *	0% *	0.7%	-0.5%	-0.8%
Total	**1.1%**	**3.5%**	**11.9%**	**5.8%**	**-0.4%**

* IRM years – no changes to load forecast.

b) Please refer to the following exhibits where actuals have been filed. For 2016 actual OM&A, please refer to Exhibit C1, Tab 1, Schedule 1. For actual depreciation expense, please refer to C1, Tab 6, Schedule 1. For actual calculation of utility income taxes, please refer to Exhibit C1, Tab 7, Schedule 2, Attachment 3. For actual external revenues, please refer to Exhibit E1, Tab 1, Schedule 2.

c) While this interrogatory requests "the actual OM&A to date (September 30, 2017), Hydro One proposes to provide year end actual 2017 OM&A when available, consistent with other requests.

d) The 4.2% reduction in capital expenditures is captured in the 2017 Bridge Variance column of Exhibit A-03-01 (Table 9). 2017 actuals will be made available at a later date.

e) No that is not correct. As shown in the evidence at Exhibit H1, Tab 1, Schedule 2, page 1, the fixed customer charges collected from the residential classes in 2018 account for 83% of UR class revenue, 65% of the R1 class revenue, 68% of the R2 class revenue, and 66% of the Seasonal class revenue.

f) The bill increases for each rate class corresponding with the proposed revenue requirement and load forecast for all years of this application are provided in Table 1 of Exhibit H1, Tab 4, Schedule 1 of the evidence.

Building Owners and Managers Association Toronto Interrogatory # 30

Issue:

Issue 4: Are the rate and bill impacts in each customer class in each year in the 2018 to 2022 period reasonable?

Reference:

A-03-01 Page: 36

Interrogatory:

Big increase in bill (10%) for DG customer. Please provide an additional column showing the Rate Impact for each customer class.

Response:

The impact of the proposed rates on distribution portion of the bill are shown in the table provided in Exhibit H1, Tab 4, Schedule 1, Attachment 1, page 1.

Building Owners and Managers Association Toronto Interrogatory # 124

Issue:

Issue 4: Are the rate and bill impacts in each customer class in each year in the 2018 to 2022 period reasonable?

Reference:

Exhibit B, Tab 1, Schedule 1; DSP 2.6 Page 9 Table 31

Interrogatory:

a) Please calculate the average of the actual increase from 2012 to 2017 and the average forecast annual price increase from 2018 to 2022.

b) Please provide the rationale for the near doubling of the forecast rates from the actual rates for the last five years.

c) Please provide copies of some documents for the above data. Why does it exceed the CPI to such a large extent, prices forecast from the forecast global usage?

d) What does the impact of a one percent increase in the CDN$/US$ (increase in strength of the CDN $) have on HONI's capital and OM&A budget?

Response:

a) The average increases are provided in the following table.

Average Increase of Escalators (%)

	2012-2017	2018-2022
Distribution Cost Escalation for Construction	2.2	2.88
Distribution Cost Escalation for Operations & Maintenance	0.65	2.22

b) The escalators include various material and labour costs relevant to the distribution business. The actual and forecast of escalators were provided by IHS Global Insight. However, the figures are consistent with decline in commodity prices and slow wage growth between 2012 and 2017 and expected improvement in this regard over the forecast period.

c) Components of distribution cost escalators are different from those in CPI. The escalators include various material and labour costs relevant to distribution system, while CPI includes cost of various consumer goods. Consequently, distribution cost escalators are not comparable with CPI. The forecast was provided by IHS Global Insight using an international model, and Hydro One does not have documentation for the model.

d) In 2016, Hydro One had approximately $53.4 million of purchases in US$ currency. Based on that, a one percent increase in the strength of the Canadian dollar would have a $0.5 million impact ($53.4M * 1%).

Canadian Manufacturers & Exporters Interrogatory # 96

Issue:
Issue 4: Are the rate and bill impacts in each customer class in each year in the 2018 to 2022 period reasonable?

Reference:
H1-03-01

Interrogatory:
a) Are the rate riders for any of the rate classes calculated in Table 2 impacted by the Distribution Rate Protection program and/or the First Nations On-Reserve Delivery Credit as set out in the Fair Hydro Act? Please explain fully.

Response:
a) The rate riders calculated in Table 2 are not impacted by the Distribution Rate Protection program or the First Nations On-Reserve Delivery Credit as set out in the Fair Hydro Act.

The Distribution Rate Protection only provides a subsidy to the base distribution rates, which is defined in the regulation as specifically excluding any fixed or variable rate riders or adders.

The First Nations Delivery Credit ("FNDC") provides on-reserve First Nations customers a credit that is equivalent to the delivery charge, which includes rate riders. However, the rate rider calculations are not affected by the FNDC, as Hydro One will recover the rate rider amounts from the Ontario government instead of the customer.

Canadian Manufacturers & Exporters Interrogatory # 97

Issue:

Issue 4: Are the rate and bill impacts in each customer class in each year in the 2018 to 2022 period reasonable?

Reference:

Canadian Manufacturers & Exporters Interrogatory # 98

Issue:
Issue 4: Are the rate and bill impacts in each customer class in each year in the 2018 to 2022 period reasonable?

Reference:
None

Interrogatory:
a) Please provide any prospectuses or reports produced to shareholders or in connection with the sale of additional shares in the company.

Response:
Attached the prospectus relating to the IPO (Filed October 29, 2015), the Short Form Base Shelf Prospectus (Filed March 30, 2016) under which the secondary offerings subsequent to the IPO as well as the Short Form Prospectus (Filed August 1, 2017) used in conjunction with the offering of convertible debentures.

Readers are cautioned that there may be additional documents incorporated by reference to the Prospectus documents provided and such additional documents would be filed with the Ontario Securities Commission and available on SEDAR (www.sedar.com).

SUPPLEMENTED PREP PROSPECTUS

Initial Public Offering
by way of Secondary Offering

October 29, 2015

HYDRO ONE LIMITED

$1,662,550,000

81,100,000 Common Shares

This prospectus qualifies the distribution of 81,100,000 common shares of Hydro One Limited ("**common shares**") being offered by the Province of Ontario (the "**Province**" or the "**Selling Shareholder**") at a price of $20.50 per common share. **Hydro One Limited will not receive any proceeds from this offering**. See "Principal and Selling Shareholder".

Immediately following the closing of this offering, and the other transactions contemplated by this prospectus, the Province will hold approximately 85% of Hydro One Limited's total issued and outstanding common shares (approximately 84% if the Over-Allotment Option is exercised in full). As a result, the Province will have a significant influence over Hydro One Limited and its affairs. See "Governance and Relationship with Principal Shareholder" and "Risk Factors".

Prior to the closing of this offering, Hydro One Limited will acquire all of the issued and outstanding shares of Hydro One Inc. Hydro One is the largest electricity transmission and distribution company in Ontario. Hydro One owns and operates substantially all of Ontario's electricity transmission network, and is the largest electricity distributor in Ontario by number of customers.

On August 31, 2015, at the direction of the Province, as sole shareholder of Hydro One Inc., Hydro One Inc. declared a dividend in-kind on its common shares payable in all of the issued and outstanding shares of Hydro One Brampton Networks Inc. The dividend was paid to the Province, at its direction, by transferring all of the issued and outstanding shares of Hydro One Brampton Networks Inc. to a company wholly-owned by the Province. See "Pre-Closing Transactions" for additional detail concerning this dividend and related transactions. Hydro One Brampton Networks Inc. was previously a wholly-owned subsidiary of Hydro One Inc.

There is currently no market through which Hydro One Limited's common shares may be sold, and purchasers may not be able to resell common shares purchased under this prospectus. This may affect the pricing of the common shares in the secondary market, the transparency and availability of trading prices, the liquidity of the common shares, and the extent of issuer regulation. See "Risk Factors". The Toronto Stock Exchange (the "**TSX**") has conditionally approved the listing of the common shares distributed under this prospectus on the TSX under the symbol "H". Listing will be subject to Hydro One Limited fulfilling all of the requirements of the TSX on or before January 25, 2016. See "Plan of Distribution".

Price: $20.50 per Common Share

	Price to the Public(1)	Underwriters' Fee(2)	Net Proceeds to the Selling Shareholder(3)
Per common share	$ 20.50	$0.205/$0.615	$ 20.172
Total offering(4)	$1,662,550,000	$ 26,600,800	$1,635,949,200

Notes:

(1) The offering price for the common shares will be determined by negotiations between the Province and the Underwriters (as defined below).

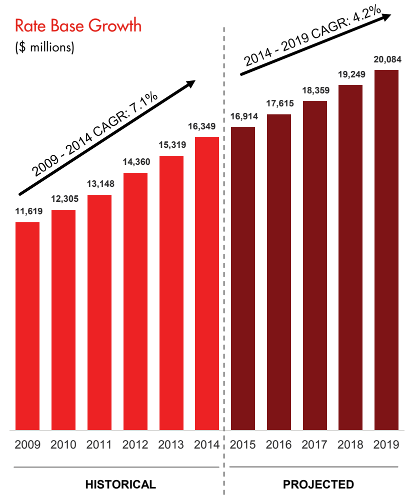
(continued on next page)

INVESTMENT HIGHLIGHTS

- ▶ Significant Scale and Leadership Position in Ontario
- ▶ Consistent and Stable, Rate-Regulated Environment
- ▶ Proven Senior Management Team and Experienced, Independent Board of Directors
- ▶ Stable Regulated Cash Flows and Strong Balance Sheet
- ▶ Robust and Predictable Organic Growth Profile

STABLE REGULATED CASH FLOWS AND STRONG BALANCE SHEET

- Essential rate-regulated infrastructure services generate 99% of revenues
- Stable, growing rate base underpins growth in net cash from operating activities and net income
  - Rate base growth of 7.1% (2009–2014 CAGR)
  - Net cash from operating activities growth of 7.1% (2009 – 2014 CAGR)
  - Net Income growth of 9.7% (2009 – 2014 CAGR)
- Active participant in public debt capital markets with strong "A" credit ratings



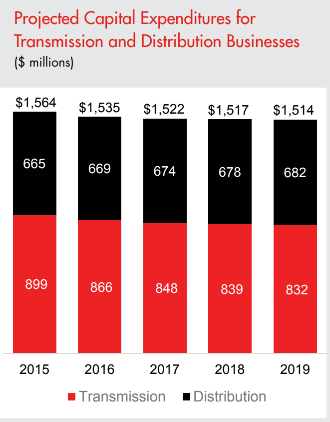
SIGNIFICANT SCALE AND LEADERSHIP POSITION IN ONTARIO

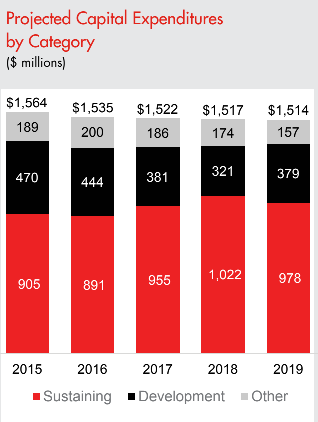
Key Advantages

- Low cost of borrowing and broad access to debt capital markets
- In-house team of industry experts
  - Asset management
  - Operations
  - Post-outage recovery
  - Project design
  - Engineering
  - Project management and construction
- Resources and commitment to invest in innovation, continuous improvement, customer service
- Comprehensive stakeholder engagement process
- Extensive experience building and maintaining effective relationships with First Nations and Métis communities
- Leading role in working with regulatory authorities on energy policy, regulatory changes, etc.

ROBUST AND PREDICTABLE ORGANIC GROWTH PROFILE

- Rate base growth represents greatest near term opportunity
- Estimated average annual capital investments of ~$1.5 billion per year over the next 5 years, with the focus on improving existing assets
- All capital expenditures are included in rate base
- Additional LDC consolidation opportunities





CONSISTENT AND STABLE, RATE-REGULATED ENVIRONMENT

- Stable and sophisticated regulator
- Transparent and predictable rate setting process
  - ROE set by a formula linked to long-term government bond yields and corporate bond spreads
- OEB-approved rates based on recovery of costs plus approved rate of return and incentive for productivity improvements
- Hydro One has earned or exceeded its allowed ROE on a consolidated basis

	2010	2011	2012	2013	2014	2015
Allowed ROE on Deemed Equity (40% of Capital Structure)						
Transmission	8.39%	9.66%	9.42%	8.93%	9.36%	9.30%
Distribution	9.85%	9.66%	9.66%	9.66%	9.66%	9.30%

(2) The Province has agreed to pay the Underwriters a fee of $0.205 for each common share sold to institutional investors and $0.615 for each common share sold to other investors (the "**Underwriters' Fee**"). The Underwriters' Fee shown in the table above and in note (4) below assumes that 70% of the Hydro One Limited common shares offered hereunder are sold to institutional investors. See "Plan of Distribution".

(3) After deducting the Underwriters' Fee shown in the table above but before deducting expenses of this offering, estimated to be $12,500,000, which will be paid by the Province. The Province has also agreed to reimburse the Underwriters for their reasonable expenses in connection with this offering.

(4) The Province has granted to the Underwriters an over-allotment option (the "**Over-Allotment Option**"), exercisable, in whole or in part, at any time for a period of 30 days after the closing date of this offering, to purchase from the Province up to an additional 8,150,000 common shares, on the same terms as set out above solely to cover over-allotments, if any. If the Over-Allotment Option is exercised in full, the total "Price to the Public", "Underwriters' Fee" and "Net Proceeds to the Selling Shareholder" will be $1,829,625,000, $29,274,000 and $1,800,351,000, respectively. This prospectus also qualifies the grant of the Over-Allotment Option and the distribution of up to 8,150,000 common shares sold by the Province if the Over-Allotment Option is exercised. A purchaser who acquires common shares forming part of the Underwriters' over-allocation position acquires those common shares under this prospectus, regardless of whether the Underwriters' over-allocation position is ultimately filled through the exercise of the Over-Allotment Option or secondary market purchases. See "Plan of Distribution".

The following table sets out the number of common shares that may be sold by the Province to the Underwriters pursuant to the exercise of the Over-Allotment Option:

	Maximum Size or Number of Shares Available	Exercise Period	Exercise Price
Over-Allotment Option	8,150,000 common shares	For a period of 30 days after the closing date of this offering	$20.50 per common share

The underwriters for this offering are RBC Dominion Securities Inc., Scotia Capital Inc., BMO Nesbitt Burns Inc., CIBC World Markets Inc., TD Securities Inc., National Bank Financial Inc., Barclays Capital Canada Inc., Credit Suisse Securities (Canada), Inc., Goldman Sachs Canada Inc., Canaccord Genuity Corp., Desjardins Securities Inc., GMP Securities L.P., Raymond James Ltd., Dundee Securities Ltd., Industrial Alliance Securities Inc. and Manulife Securities Incorporated (collectively, the "**Underwriters**"). The Underwriters, as principals, conditionally offer the common shares, subject to prior sale, if, as and when sold by the Province and accepted by the Underwriters in accordance with the conditions contained in the underwriting agreement referred to under "Plan of Distribution" and subject to the approval of certain legal matters on behalf of Hydro One Limited by Osler, Hoskin & Harcourt LLP, on behalf of the Province by Torys LLP and on behalf of the Underwriters by Blake, Cassels & Graydon LLP.

In connection with this offering, the Underwriters may over-allot or effect transactions that stabilize or maintain the market price of the common shares at levels other than those which otherwise might prevail on the open market. **The Underwriters may offer the common shares at a lower price than stated above. See "Plan of Distribution".**

RBC Dominion Securities Inc., Scotia Capital Inc., BMO Nesbitt Burns Inc., CIBC World Markets Inc., TD Securities Inc., National Bank Financial Inc. and Desjardins Securities Inc. are subsidiaries or affiliates of lenders that have made certain existing credit facilities available to Hydro One Inc., which will become a wholly-owned subsidiary of Hydro One Limited prior to the closing of this offering and, in addition, are subsidiaries or affiliates of lenders that are anticipated to make certain new credit facilities available to both Hydro One Limited and Hydro One Inc. **Although Hydro One Limited is not offering common shares pursuant to this offering, it may be considered a connected issuer of the Underwriters who are affiliates of such lenders for purposes of securities laws in Canada.** See "Plan of Distribution" and "Pre-Closing Transactions".

Subscriptions will be received subject to rejection or allotment in whole or in part and the Underwriters reserve the right to close the subscription books at any time without notice. Closing of this offering is expected to occur on or about November 5, 2015 or such later date as Hydro One Limited, the Selling Shareholder and the Underwriters may agree, but in any event not later than November 26, 2015 (the "**Closing Date**"). The common shares offered under this prospectus will be deposited with CDS Clearing and Depository Services Inc. in electronic form on the Closing Date. A purchaser of common shares pursuant to this offering will not receive a share certificate on closing.

An investment in Hydro One Limited's common shares is subject to a number of risks that should be considered by a prospective purchaser. Under securities laws in certain jurisdictions, the statutory remedies of rescission or damages where this prospectus contains a misrepresentation are not available against the Province, as selling shareholder or as a promoter of Hydro One Limited. The commencement of actions and enforcement of remedies against the Province may also be subject to limitations. The Province will not provide any guarantee in respect of the common shares. Prospective purchasers should carefully consider the risk factors described under "Risk Factors" before purchasing common shares.

Purchasers are advised that it may not be possible for investors to enforce judgments obtained in Canada against any person or company that is incorporated, continued or otherwise organized under the laws of a foreign jurisdiction or resides outside of Canada, even if the party has appointed an agent for service of process. See "Agent for Service of Process in Canada."

All of the information contained in the supplemented PREP prospectus that is not contained in this base PREP prospectus will be incorporated by reference into this base PREP prospectus as of the date of the supplemented PREP prospectus.

Hydro One Limited's registered office and head office is located at 483 Bay Street, 8th Floor, South Tower, Toronto, Ontario, M5G 2P5.

MEANING OF CERTAIN REFERENCES

Capitalized terms used in this prospectus are defined under "Glossary". Words importing the singular number include the plural, and vice versa, and words importing any gender include all genders.

Unless otherwise noted or the context otherwise requires, references to "**Hydro One**" or the "**Company**" refer to Hydro One Limited, Hydro One Inc. and their subsidiaries taken together as a whole as they will exist immediately following the closing of this offering and the related pre-closing steps described under "Pre-Closing Transactions". References to "**Hydro One Inc.**" refer only to Hydro One Inc. and references to "**Hydro One Limited**" refer only to Hydro One Limited.

In addition, "**Province**" refers to the Province of Ontario as a provincial government entity, and "**Ontario**" or the "**province**" in lower case type refers to the Province of Ontario as a geographical area.

References to "**management**" in this prospectus mean the persons who are identified in this prospectus as executive officers of Hydro One Limited and who will be the executive officers of Hydro One Limited and its operating subsidiaries, as the case may be, following the closing of this offering. Any statements in this prospectus made by or on behalf of management are made in such persons' respective capacities as executive officers of Hydro One Limited and its operating subsidiaries, as applicable, and not in their personal capacities. See "Directors and Management of the Company".

This prospectus refers to certain terms commonly used in the electricity industry, such as "**rate-regulated**", "**rate base**" and "**return on equity**". For a description of these terms, see "Rate-Regulated Utilities". The terms rate base and return on equity are not considered non-GAAP measures. Rate base is an amount that a utility is required to calculate for regulatory purposes, and refers to the net book value of the utility's assets for regulatory purposes. Return on equity is a percentage that is set or approved by a utility's regulator and represents the rate of return that a regulator allows the utility to earn on the equity component of the utility's rate base. Hydro One refers to the rate base and return on equity of its transmission and distribution businesses because it believes that such terms assist in understanding Hydro One's business and are commonly used by investors and research analysts to help evaluate the performance of rate-regulated utilities.

In this prospectus, all dollar amounts are expressed in Canadian dollars unless otherwise indicated. All references to "**$**" or "**dollars**" are to Canadian dollars, and all references to "**U.S.$**" are to U.S. dollars.

ABOUT THIS PROSPECTUS

A prospective purchaser should rely only on the information contained in this prospectus and is not entitled to rely on parts of the information contained or incorporated by reference in this prospectus to the exclusion of others. Hydro One, the Selling Shareholder and the Underwriters have not authorized anyone to provide prospective purchasers with additional or different information. The Selling Shareholder and the Underwriters are not offering to sell the common shares in any jurisdiction where the offer or sale of such securities is not permitted. The information contained in this prospectus is accurate only as of the date of this prospectus or the date indicated, regardless of the time of delivery of this prospectus or of any sale of the common shares.

Unless otherwise indicated or the context otherwise requires, the disclosure contained in this prospectus assumes that: (i) the Over-Allotment Option has not been exercised; and (ii) the transactions referred to under the heading "Pre-Closing Transactions" have been completed, following which Hydro One Inc. will be a wholly-owned subsidiary of Hydro One Limited. See "Pre-Closing Transactions".

On August 31, 2015, at the direction of the Province, as sole shareholder of Hydro One Inc., Hydro One Inc. declared a dividend in-kind on its common shares payable in all of the issued and outstanding shares of Hydro One Brampton Networks Inc. The dividend was paid to the Province, at its direction, by transferring all of the issued and outstanding shares of Hydro One Brampton Networks Inc. to a company wholly-owned by the Province. See "Pre-Closing Transactions" for additional detail concerning this dividend and related transactions. Hydro One Brampton Networks Inc. was previously a wholly-owned subsidiary of Hydro One Inc.

Because this dividend occurred after the dates of, and periods covered by, the consolidated financial statements of Hydro One Inc. appearing elsewhere in this prospectus, those financial statements and the consolidated financial information derived from those financial statements include the assets, liabilities and results of operations of Hydro One Brampton Networks Inc.

To see the impact of certain transactions related to this offering on the financial statements of Hydro One Inc., including the transfer of all of the issued and outstanding shares of Hydro One Brampton Networks Inc. to a company wholly-owned by the Province, see the unaudited pro forma condensed consolidated financial statements of Hydro One Inc. appearing elsewhere in this prospectus, together with "Summary Consolidated Financial Information" and "Selected Consolidated Financial Information".

For prospective purchasers outside Canada, none of Hydro One, the Selling Shareholder or any of the Underwriters has done anything that would permit this offering or possession or distribution of this prospectus in any jurisdiction where action for that purpose is required, other than in Canada. Prospective purchasers are required to inform themselves about, and to observe any restrictions relating to, this offering and the possession or distribution of this prospectus.

This prospectus includes a summary description of certain material agreements relating to Hydro One. See "Material Contracts". The summary description is not complete and is qualified by reference to the terms of the material agreements, which will be filed with the Canadian securities regulatory authorities and available on SEDAR at www.sedar.com. Prospective purchasers are encouraged to read the full text of such material agreements.

Any graphs, tables or other information demonstrating the historical performance of Hydro One Inc. or any other entity contained in this prospectus are intended only to illustrate past performance of such entities and are not necessarily indicative of future performance of Hydro One Limited, Hydro One Inc. or such entities.

NON-GAAP MEASURES

Hydro One Limited and Hydro One Inc. prepare and present their financial statements in accordance with U.S. GAAP.

Hydro One Limited intends to report certain non-GAAP measures in its future continuous disclosure documents after it becomes a publicly-listed company. It currently intends to report "Adjusted Net Income" and "FFO" (funds from operations), both of which are referred to (for Hydro One Inc.) in "Summary Consolidated Financial Information" and "Selected Consolidated Financial Information". These measures are not recognized measures under U.S. GAAP and do not have a standardized meaning prescribed by U.S. GAAP. They are therefore unlikely to be comparable to similar measures presented by other companies. They should not be considered in isolation nor as a substitute for analysis of the Company's financial information reported under U.S. GAAP.

To the extent that "**Adjusted Net Income**" is used in future continuous disclosure documents of Hydro One Limited, it will be defined as net income, adjusted for certain items, including non-recurring items and other items that management does not consider reflect the operating performance of the Company. No adjustments to net income are presented in this prospectus. Management believes that this measure, as the Company will define it, will be helpful in assessing the Company's financial and operating performance.

"**FFO**" is defined as net cash from operating activities, adjusted for the following: (i) changes in non-cash balances related to operations, (ii) dividends paid on preferred shares, and (iii) noncontrolling interest distributions. Management believes that this measure will be helpful as a supplemental measure of the Company's operating cash flows.

FORWARD-LOOKING INFORMATION

This prospectus contains "forward-looking information" within the meaning of applicable Canadian securities laws. Forward-looking information in this prospectus is based on current expectations, estimates, forecasts and projections about Hydro One's business and the industry in which Hydro One operates and includes beliefs of and assumptions made by management. Such statements include, but are not limited to: expectations regarding the ability to generate stable and growing net cash from operating activities to fund the Company's ongoing sustaining capital investments and to support a strong and growing dividend; the Company's intention to use a portion of its net cash from operating activities in combination with additional debt to fund future development capital investments; projected future capital expenditures and the nature of those capital expenditures; projected rate bases; estimates with respect to the amount of investment required to connect the East-West Tie Line to Hydro One's transmission system; the fact that the Company may consider larger-scale acquisition opportunities or other strategic initiatives outside of Ontario and that these acquisition opportunities may include other providers of electrical transmission, distribution and other similar services in Canada or in the United States; anticipated annual adjustments to the Company's revenue requirements; expectations regarding allowed return on equity; expectations regarding the ability of the Company to recover expenditures in future rates; Hydro One's expectations for industry growth and demand for electricity in Canada and the United States and new sources of electricity generation, including renewable energy; expectations regarding Hydro One's current and anticipated plans for sustaining and development capital expenditures for its distribution and transmission systems; expectations regarding anticipated levels of funds from operations or "FFO" and the ability to draw down on the Company's existing and new credit facilities; expectations regarding Hydro One's expected load growth and the impact of Hydro One's conservation and demand management requirements and targets; expectations regarding the ability to negotiate collective agreements consistent with rate orders and to maintain stable outsourcing arrangements; Hydro One's relationship with the Province and the Province's investment in Hydro One; the estimated impact of changes in the forecasted long-term Government of Canada bond yield (used in determining Hydro One's allowed return on equity) on Hydro One's net income; expectations regarding the amount of the departure tax payable by Hydro One under the Electricity Act; future pension contributions and anticipated changes to Hydro One's pension plan arrangements; expectations regarding future executive compensation; expectations regarding the Governance Agreement and other agreements with the Province and the implementation of corporate governance practices and appointment of directors and officers; expectations regarding the manner in which Hydro One will operate; expectations regarding Hydro One's dividend policy and the Company's intention to declare and pay dividends, including the anticipated annual dividend amount of approximately $500 million in the aggregate initially, based on a target payout ratio of 70% to 80% of net income; the Company's intention to implement a dividend reinvestment plan and to operate the plan on a basis that does not result in significant dilution to holders of common shares; and legal proceedings in which Hydro One is currently involved.

Words such as "aim", "could", "would", "expect", "anticipate", "intend", "attempt", "may", "plan", "will", "believe", "seek", "estimate", "goal", "target", and variations of such words and similar expressions are intended to identify such forward-looking information. These statements are not guarantees of future performance and involve assumptions and risks and uncertainties that are difficult to predict. Therefore, actual outcomes and results may differ materially from what is expressed, implied or forecasted in such forward-looking information. Hydro One does not intend, and it disclaims any obligation to update any forward-looking information, except as required by law.

The forward-looking information in this prospectus is based on a variety of factors and assumptions including, but not limited to: no unforeseen changes in the legislative and operating framework for Ontario's electricity market; favourable decisions from the Ontario Energy Board and other regulatory bodies concerning outstanding and future rate and other applications; no unexpected delays in obtaining the required approvals; no unforeseen changes in rate orders or rate setting methodologies for Hydro One's distribution and transmission businesses; no unfavourable changes in environmental regulation; continuing exemptive relief being granted by the Canadian securities regulatory authorities for Hydro One Limited's preparation of its financial statements in accordance with U.S. GAAP or Hydro One Limited otherwise being eligible under Canadian securities laws to prepare its financial statements in accordance with U.S. GAAP; a stable regulatory environment; and no significant event occurring outside the ordinary course of business of Hydro One. These assumptions are based on information currently available to Hydro One, including information obtained by Hydro One from third-party sources. Actual results may differ materially from those predicted by such forward-looking information. While Hydro One does not know what impact any of these differences may have, Hydro One's business, results of operations and financial condition may be materially adversely affected if any such differences occur. Factors that could cause actual results or outcomes to differ materially from the results expressed or implied by forward-looking information include, among other things:

- regulatory risks and risks relating to Hydro One's revenues, including risks relating to rate orders, actual performance against forecasts and capital expenditures,
- the risk of claims by First Nations and Métis communities related to sovereignty and jurisdiction over reserve and traditional territories, or a perceived failure by the Crown to sufficiently consult a First Nations or Métis community,
- the risk that the Company may be unable to comply with regulatory and legislative requirements or that the Company may incur additional costs for compliance that are not recoverable through rates,
- the risk of exposure by the Company's facilities to the effects of severe weather conditions, natural disasters or other unexpected occurrences for which the Company is uninsured or to which the Company could be subject to claims for damage,
- the risk of labour disputes and inability to negotiate appropriate collective agreements on acceptable terms consistent with the Company's rate decisions,
- risks that the Company is not able to arrange sufficient cost-effective financing to repay maturing debt and to fund capital expenditures,
- risks associated with fluctuations in interest rates and failure to manage exposure to credit risk,
- the risk that the Company may not be able to execute plans for capital projects necessary to maintain the performance of the Company's assets or to carry out projects in a timely manner,
- the risk of non-compliance with environmental regulations or failure to mitigate significant health and safety risks and inability to recover environmental expenditures in rate applications,
- the risk of not being able to recover the Company's pension expenditures in future rates and uncertainty regarding the future regulatory treatment of pension, other post-employment and post-retirement benefits costs,
- risks associated with the Province's significant share ownership and other relationships with the Province, including potential conflicts of interest that may arise between the Company, the Province and related parties,
- the risk of future sales of common shares by the Province or issuance of additional common shares by Hydro One Limited which may adversely affect the market prices for the common shares,
- the risk that Hydro One Inc.'s liability for payment-in-lieu of tax under the Electricity Act may be impacted by the valuation of the shares and debt of Hydro One Brampton Networks Inc. and risks associated with changes to Hydro One's tax status as a result of this offering, and
- assumptions and estimates required for the preparation of pro forma financial statements may be materially different from the Company's actual results and experience in the future.

Hydro One cautions you that the above list of factors is not exclusive. Some of these and other factors are discussed in more detail under "Risk Factors". You should review such section in detail.

In addition, Hydro One cautions the reader that information provided in this prospectus regarding Hydro One's outlook on certain matters, including potential future expenditures, is provided in order to give context to the nature of some of Hydro One's future plans and may not be appropriate for other purposes.

MARKET AND INDUSTRY DATA

This prospectus includes market and industry data obtained from third party sources, industry publications, and publicly available information, including Natural Resources Canada's *About Electricity*, the National Energy Board's *Canada's Energy Future 2013: Energy Supply and Demand Projections to 2035*, the Ontario Energy Board's *Yearbook of Distributors (2014)*, the Edison Electric Institute's *2014 Financial Review: Annual Report of the U.S. Investor-Owned Electric Utility Industry,* the U.S. Energy Information Administration's *Annual Energy Outlook 2015 with Projections to 2014* and market data sourced from Bloomberg, as well as industry and other data prepared by

Hydro One on the basis of its knowledge of the Canadian market and economy (including its estimates and assumptions relating to the Canadian market and economy based on that knowledge). Hydro One believes that this market and economic data is accurate and that its estimates and assumptions are reasonable, but there can be no assurance as to the accuracy or completeness thereof. The accuracy and completeness of the market and economic data used throughout this prospectus are not guaranteed and none of Hydro One, the Selling Shareholder or any of the Underwriters make any representation as to the accuracy of such information. Although Hydro One believes it to be reliable, none of Hydro One, the Selling Shareholder or any of the Underwriters has independently verified any of the data from third party sources referred to in this prospectus, nor analyzed or verified the underlying studies or surveys relied upon or referred to by such sources, or ascertained the underlying economic and other assumptions relied upon by such sources.

TRADE-MARKS AND TRADE-NAMES

This prospectus includes trademarks which are protected under applicable intellectual property laws and are the property of Hydro One Inc. or its subsidiaries. Solely for convenience, the trade-marks and trade-names referred to in this prospectus may appear without the ® or ™ symbols, but such references are not intended to indicate, in any way, that Hydro One will not assert, to the fullest extent under applicable law, its rights or the right of the applicable licensor to these trade-marks and trade-names. All other trademarks used in this prospectus are the property of their respective owners.

MARKETING MATERIALS

A "template version" of the following "marketing materials" (each such term as defined in National Instrument 41-101 – *General Prospectus Requirements*) for this offering filed with the securities commission or similar regulatory authority in each of the provinces or territories of Canada is specifically incorporated by reference into this prospectus:

1. the term sheet dated October 9, 2015 and filed on SEDAR on October 9, 2015; and
2. the investor presentation dated October 9, 2015 and filed on SEDAR on October 13, 2015.

The term sheet and investor presentation referred to above will be available under Hydro One Limited's profile on SEDAR at www.sedar.com.

In addition, any template version of any other marketing materials filed with the securities commission or similar regulatory authority in each of the provinces and territories of Canada in connection with this offering, after the date hereof, but prior to the termination of the distribution of the common shares under this prospectus (including any amendments to, or an amended version of, any template version of any marketing materials), is deemed to be incorporated by reference herein. Any template version of any marketing materials utilized in connection with this offering are not part of this prospectus to the extent that the contents of the template version of the marketing materials have been modified or superseded by a statement contained in this prospectus.

PROSPECTUS SUMMARY

The following is a summary of the principal features of this offering and should be read together with the more detailed information and financial data and statements contained elsewhere in this prospectus. This summary does not contain all of the information prospective investors should consider before investing in Hydro One Limited's common shares. Please refer to the "Glossary" for a list of defined terms used herein.

ELECTRICITY INDUSTRY

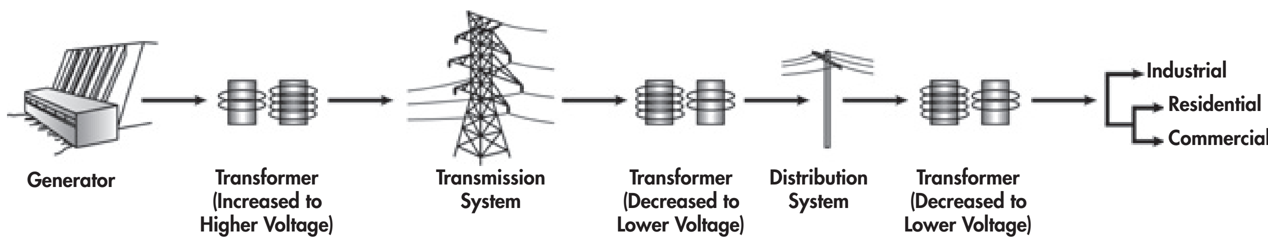
Overview

The electricity industry is made up of businesses that generate, transmit, distribute and sell electricity. Hydro One's business is focused on the transmission and distribution of electricity.

- Transmission refers to the delivery of electricity over high voltage lines, typically over long distances, from generating stations to local areas and large industrial customers.
- Distribution refers to the delivery of electricity over low voltage power lines to end users such as homes, businesses and institutions.

Overview of an Electricity System

The basic configuration of a typical electricity system showing electricity generation, transmission and distribution is illustrated in the following diagram:



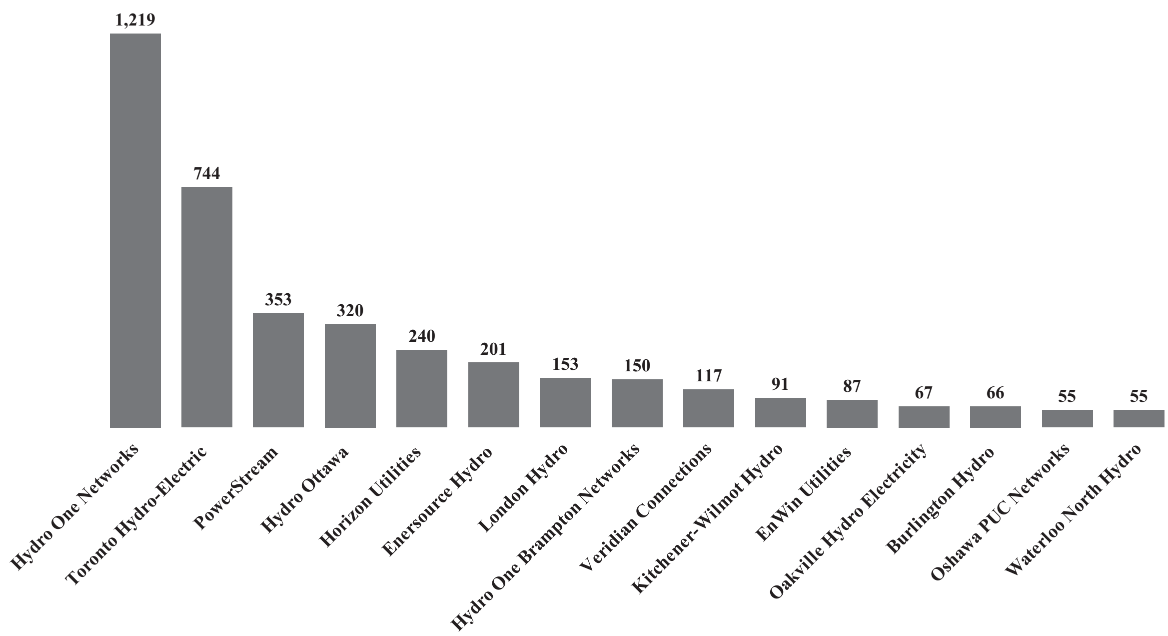
Transmission of Electricity in Ontario

Transmission companies own and operate transmission systems that deliver electricity over high voltage lines. Hydro One's transmission system accounts for 96% of Ontario's electricity transmission network. Investments in transmission infrastructure are required to ensure the safe and reliable delivery of electricity. These investments are made to maintain the function and reliability of transmission systems, accommodate increased demand for electricity and respond to developments affecting the electricity industry. Developments with respect to electricity generation often have a direct impact on transmission companies, since significant investments in transmission systems may be required to accommodate new generation sources (such as renewable energy) or the retirement of existing generation facilities (such as coal-fired facilities). Major changes affecting the generation of electricity must be closely coordinated with transmission considerations in mind. Recent discussions and initiatives by provincial governments to examine opportunities for Ontario to import additional electricity from Québec and Newfoundland and Labrador may also require new transmission infrastructure. These types of investments are in addition to the investments that transmission companies must undertake to sustain their existing assets, maintain reliability and provide connections to the transmission system.

Distribution of Electricity in Ontario

Distributors own and operate distribution systems that deliver electricity over low voltage power lines to end users. Distributors in Ontario are also known as "local distribution companies". In Ontario, 72 local distribution companies currently provide electricity to approximately five million customers. The distribution industry in Ontario is fragmented, with the 15 largest local distribution companies accounting for approximately 78% of the province's five million customers. Hydro One owns the largest local distribution company in Ontario, Hydro One Networks Inc., with approximately 1.3 million customers, or approximately 25% of the total number of customers in Ontario.

15 Largest Distributors in Ontario(1)
(Thousands of Customers)



Notes:

(1) Source: *Ontario Energy Board Yearbook of Distributors* (2014). For Hydro One Networks Inc., the 1,219 figure excludes certain classes of customers which are included in the total number of customers reported elsewhere in this prospectus.

(2) On August 31, 2015, all of the issued and outstanding shares of Hydro One Brampton Networks Inc. were transferred to a company wholly-owned by the Province. See "Pre-Closing Transactions" for additional detail concerning the transfer and related transactions. Hydro One Brampton Networks Inc. was previously a wholly-owned subsidiary of Hydro One Inc.

Most of the local distribution companies in Ontario are owned or jointly owned by municipalities. A local distribution company is responsible for distributing electricity to customers in its service territory, which may cover large portions or all of a particular municipality, or an otherwise-defined geographic area.

To create more efficiencies in the distribution sector, the Premier's Advisory Council on Government Assets has endorsed the need for faster consolidation among local distribution companies in Ontario. The Province has responded by announcing tax incentives in the 2015 Ontario Budget which are intended to promote consolidation.

For more information, see "Electricity Industry".

RATE-REGULATED UTILITIES

Overview

The rates charged for electricity transmission and distribution services are regulated in Canada and many other jurisdictions. The term “rate-regulated” is used to refer to an electricity business whose rates for transmission, distribution or other services are subject to approval by a regulator. The Ontario Energy Board is the regulator responsible for approving electricity transmission and distribution rates in Ontario.

In Canada, regulators generally use two different models for approving the rates charged by rate-regulated utilities: (i) a “cost of service” model, and (ii) a “performance-based” model (sometimes also referred to as an “incentive-based” model).

In a cost of service model, a utility charges rates for its services that allow it to recover the costs of providing its services and earn an allowed return on equity. The costs of providing its services must be prudently-incurred.

In a performance-based model, a utility also charges rates for its services that allow it to recover the costs of providing its services and earn an allowed return on equity. However, the rates charged by the utility in a performance-based model assume that the utility becomes increasingly efficient over time, resulting in lower costs to provide the same service. If a utility achieves cost savings in excess of those established by the regulator, the utility may retain some or all of the benefits of those cost savings, which may permit the utility to earn more than its allowed return on equity.

Value Drivers for a Rate-Regulated Utility

Management believes that the key drivers of value for a rate-regulated utility are:

- the utility’s rate base,
- the utility’s deemed capital structure, as set by the regulator,
- the utility’s allowed return on equity, as set by the regulator,
- capital expenditures that ultimately add to the utility’s rate base,
- the ability to generate efficiencies and cost savings in the operations of the utility, and
- the ability to maintain a constructive relationship with its regulator.

For a description of these drivers, see “Rate-Regulated Utilities”.

BUSINESS OF HYDRO ONE

Overview

Upon completion of this offering, Hydro One Limited will be one of Canada's largest publicly-listed electricity companies, measured by assets. With a stable regulated business, strong "A" category credit ratings and projected increases in its rate base, Hydro One expects to continue generating stable and growing net cash from operating activities to fund its ongoing sustaining capital investments and to support a strong and growing dividend. The Company will operate independently of the Province and will be overseen by an experienced and independent board of directors.

Investment Highlights

Stable Regulated Cash Flows and Strong Balance Sheet

The transmission and distribution of electricity are essential infrastructure services. Hydro One's transmission and distribution businesses are fully rate-regulated and represent 99% of its overall business, measured by revenues. These businesses generate stable and growing net cash from operating activities and net income. Hydro One's net cash from operating activities grew to $1,256 million in 2014 from $892 million in 2009 and $911 million in 2004, representing a compound annual growth rate of 7.1% and 3.3% on a five and ten year basis, respectively. Hydro One's net income grew to $747 million in 2014 from $470 million in 2009 and $498 million in 2004, representing a compound annual growth rate of 9.7% and 4.1% on a five-and ten-year basis, respectively.

Hydro One Inc. has been a reporting issuer in Canada for over 15 years and has been an active participant in the public debt markets. Hydro One Inc. has one of the strongest credit profiles of any public company regulated electricity utility in Canada, with its debt currently rated A (stable) by Standard & Poor's, A2 (negative) by Moody's, and A (high) (under review with developing implications) by DBRS. Standard & Poor's has also assigned a long-term corporate credit rating to Hydro One Limited of A (stable). Hydro One Inc. has a strong track record of raising capital in the public debt markets, and has raised over $3.2 billion in gross proceeds through the sale of debt in the past three and a half years alone. Management expects that maintaining a strong credit profile and a low cost of borrowing will be a key element of Hydro One's business and regulatory strategy following this offering, and that Hydro One will have significant debt capacity to fund future investments. Hydro One Inc. will remain a reporting issuer in Canada following the closing of this offering. Hydro One Limited does not intend to provide a guarantee in respect of Hydro One Inc.'s debt.

Driven by a stable regulated business, strong "A" category credit ratings and projected increases in its rate base, Hydro One expects to continue generating stable and growing net cash from operating activities to fund its ongoing sustaining capital investments and to support a strong and growing dividend. Additionally, the Company intends to use a portion of its net cash from operating activities in combination with additional debt to fund future development capital investments.

Robust and Predictable Growth Profile

Additions to Rate Base through Approved Capital Expenditures

Hydro One must continually invest in its transmission and distribution businesses in order to provide safe and reliable electricity service and meet its obligations as a regulated utility. A significant number of Hydro One's transmission and distribution assets were built in the 1960s and 1970s or earlier and are reaching the end of their service lives. The Company therefore expects that it will be required to make significant investments in its existing infrastructure over the long term. Over the past five fiscal years, the Company has spent an average of $1.5 billion per year on capital expenditures. When placed into service, these investments add to Hydro One's rate base, which grew during that period from $11.6 billion to $16.3 billion, representing a compound annual growth rate of 7.1%.

The Company incurs capital expenditures to maintain safety, reliability and integrity of its transmission and distribution assets and to allow for prudent growth necessary to continue to meet the evolving needs of its customers and the electricity market. This is achieved through a combination of sustaining capital expenditures, which are required to support the continued operation of Hydro One's existing assets, and development capital expenditures, which involve both additions to existing assets and large scale projects such as new transmission lines and transmission stations. Sustaining capital expenditures are recurring in nature and involve less regulatory and completion risk compared to large scale development projects.

Hydro One anticipates that it will spend an average of $1.5 billion per year over the next five years on total capital expenditures, with sustaining capital expenditures representing an average of approximately 60% of total capital expenditures in each year. The Company anticipates that these investments will contribute to improved reliability, customer service and operating efficiencies, as well as increased net cash from operating activities and net income from a growing rate base.

Projected Capital Expenditures for Transmission and Distribution Businesses	**2015**	**2016**	**2017**	**2018**	**2019**
			(millions)		
Transmission	$ 899	$ 866	$ 848	$ 839	$ 832
Distribution	$ 665	$ 669	$ 674	$ 678	$ 682
Total	**$1,564**	**$1,535**	**$1,522**	**$1,517**	**$1,514**

Projected Capital Expenditures by Category	**2015**	**2016**	**2017**	**2018**	**2019**
			(millions)		
Sustaining	$ 905	$ 891	$ 955	$1,022	$ 978
Development	$ 470	$ 444	$ 381	$ 321	$ 379
Other	$ 189	$ 200	$ 186	$ 174	$ 157
Total	**$1,564**	**$1,535**	**$1,522**	**$1,517**	**$1,514**

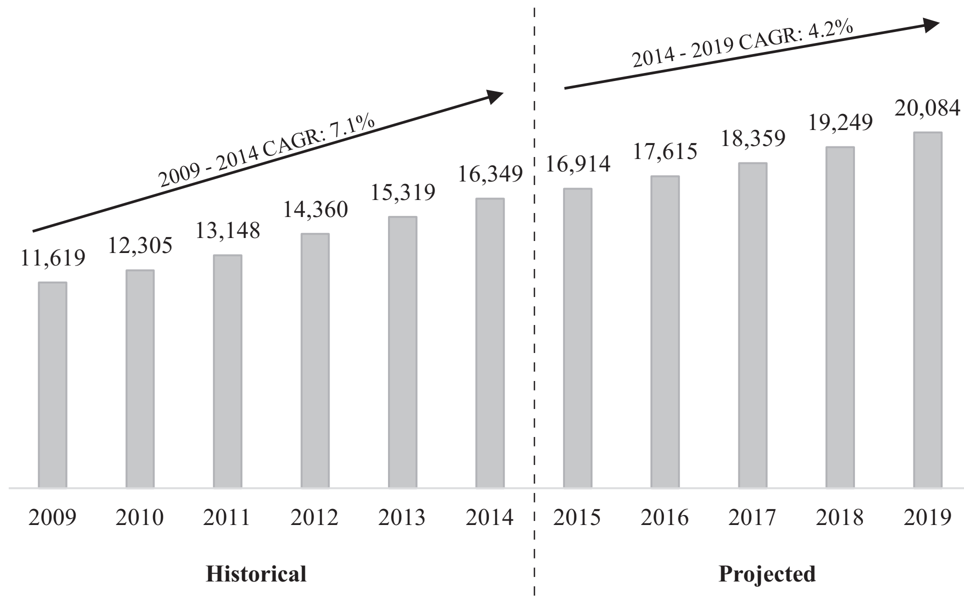
Notes:

(1) Projected capital expenditures may be considered forward-looking information, and reflect the Company's current expectations and assumptions relating to projects contemplated in the Company's capital expenditure programs and Ontario Energy Board approvals received to date. Transmission capital expenditures for 2015 and 2016 were previously approved by the board of directors of Hydro One Inc. and are consistent with the capital expenditures information presented in the most recent transmission rates application filed with the Ontario Energy Board, which led to the Ontario Energy Board's approval of Hydro One's 2015 rate order for transmission services. Distribution capital expenditures for 2015, 2016 and 2017 were previously approved by the board of directors of Hydro One Inc. and are consistent with the capital expenditures information presented in the most recent distribution rate application filed with the Ontario Energy Board, which led to the Ontario Energy Board's distribution rates decision for Hydro One's 2015, 2016 and 2017 years. Actual capital expenditures for any of the years referred to above may be greater or less than projected capital expenditures. See "Forward-Looking Information". See "Risk Factors" for a discussion of material factors that could cause actual capital expenditures to differ from projected capital expenditures.

(2) "Other" capital expenditures consist of special projects, such as those relating to information technology.

The impact of Hydro One's capital expenditures on its rate base is illustrated in the following graph, which shows both the historical rate base of Hydro One for the past five fiscal years and its projected rate base over the next five fiscal years through the addition of assets that are anticipated to be placed into service.

Rate Base
($ millions)



Notes:

(1) "CAGR" means compound annual growth rate.

(2) Projected rate base may be considered forward-looking information. The rate base in each year represents the combined rate base for Hydro One's transmission and distribution businesses. The transmission rate bases of Hydro One Networks Inc. for 2015 and 2016 have been approved by the Ontario Energy Board, subject to certain conditions in respect of in-service additions. The distribution rate bases of Hydro One Networks Inc. for 2015, 2016 and 2017, have been approved by the Ontario Energy Board. Transmission rate bases for 2017, 2018 and 2019, and distribution rate bases for 2018 and 2019, are projected based on Hydro One's current expectations and assumptions regarding investments in its transmission and distribution infrastructure and the timing of assets being included in Hydro One's rate base, and will be subject to Ontario Energy Board approval in connection with Hydro One's rate applications for those years. Transmission rate bases for 2017, 2018 and 2019, and distribution rate bases for 2018 and 2019, as approved by the Ontario Energy Board, may be higher or lower than the rate bases shown. See "Forward-Looking Information".

Development Capital Projects

Hydro One anticipates spending an average of approximately $400 million per year over the next five years on development capital projects for its transmission and distribution businesses. These capital projects typically involve longer development timelines. Hydro One has significant development experience, having designed and built substantially all of Ontario's transmission system and a large portion of its distribution system. This includes the Bruce-to-Milton transmission project, which was completed in 2012 on budget and six months ahead of schedule. This was the largest transmission infrastructure project in Ontario in 20 years and involved the construction of approximately 700 transmission towers and approximately 180 kilometres of double circuit lines. More recently, Hydro One was selected to develop the Northwest Bulk Transmission Line, another large scale transmission project that, if approved by the Ontario Energy Board, would reinforce the connection between Thunder Bay and Dryden.

As the Company owns substantially all of Ontario's transmission network, the Company believes that additional development opportunities for Hydro One may arise as a result of the requirement to connect new transmission lines to Hydro One's transmission system, even where Hydro One may not be the developer of the new line. For instance, in the case of the East-West Tie Line, which is being developed by NextBridge Infrastructure, management estimates that Hydro One may need to invest over $100 million in station upgrades in order to connect the new line to Hydro One's transmission system if the project is approved by the Ontario Energy Board.

Acquisition Opportunities

As the largest distributor in Ontario, Hydro One has been an active consolidator of local distribution companies. In the late 1990s and early 2000s, when significant changes were made to the electricity sector in Ontario, Hydro One acquired 88 individual local distribution companies, which were subsequently integrated into Hydro One's distribution business (with the exception of Hydro One Brampton Networks Inc., which was operated as a stand-alone entity). More recently, the Company acquired Haldimand Hydro in June 2015 and Norfolk Power in August 2014, adding more than 40,000 customers to its distribution network. A third Hydro One acquisition, of Woodstock Hydro, received Ontario Energy Board approval on September 11, 2015 and is expected to close later in 2015. Through these recent acquisitions, the Company will have increased its customer base by approximately 5%. Hydro One will continue to evaluate local distribution company consolidation opportunities in Ontario in the future and intends to pursue those acquisitions which deliver value to the Company and its shareholders.

Over time, the Company may also consider larger-scale acquisition opportunities or other strategic initiatives outside of Ontario to diversify its asset base and leverage its strong operational expertise. These acquisition opportunities may include other providers of electrical transmission, distribution and other similar services in Canada or in the United States.

Significant Scale and Leadership Position in Ontario

Hydro One plays an essential role in the electricity system of Canada's most populous province. Hydro One owns and operates substantially all of Ontario's transmission system, and is also the largest electricity distributor in Ontario. Management believes that Hydro One's significant scale and leading position in the electricity industry in Ontario provide it with several key competitive advantages that may not be available to smaller utilities, including:

- a low cost of borrowing and broad access to debt capital markets in order to fund its development and growth initiatives,
- the ability to draw on a large and highly experienced in-house team of experts covering all key aspects of Hydro One's business, including asset management, operations, post-outage recovery, project design, engineering, procurement, project management and construction,
- the resources and commitment to prudently invest in innovation, continuous improvement and customer service initiatives and to improve the reliability and performance of Hydro One's transmission and distribution systems and reduce operations, maintenance and administration costs,
- a refined and comprehensive stakeholder engagement process that covers Hydro One's customers, municipalities, remote communities and other parties,
- extensive experience building and maintaining effective relationships with First Nations and Métis communities, and
- a leading role in working with regulatory authorities on developments with respect to energy policy, regulatory changes, new transmission and distribution investments, regional planning and new technologies.

Management believes that these strengths have increased Hydro One's operational effectiveness, helped it maintain a positive and constructive relationship with its regulators, customers and stakeholders and ultimately contributed to achieving successful outcomes in its applications for the approval of transmission and distribution rates, new development projects and the acquisition of local distribution companies.

Consistent and Stable, Rate-Regulated Environment

Hydro One's transmission and distribution businesses operate in a stable, rate-regulated environment. Management believes the Ontario Energy Board is regarded in the electricity industry as a stable and sophisticated regulator with a transparent and predictable rate setting process. The allowed return on equity determined by the Ontario Energy Board is set by a formula linked to long-term government bond yields and corporate bond spreads. See "Rate-Regulated Utilities – Value Drivers for a Rate-Regulated Utility – Return on Equity". Hydro One does not set the price of electricity and has no direct exposure to electricity price risk because the cost of electricity is passed on directly to consumers. The rates approved by the Ontario Energy Board for transmission and distribution services are intended to allow utilities to recover their cost of providing services and earn an allowed return on equity, while achieving productivity gains for the mutual benefit of utilities and their customers.

Over the past six years, the Company's allowed return on equity approved by the Ontario Energy Board has ranged from 8.39% to 9.66% for its transmission business and 9.30% to 9.85% for its distribution business.

Allowed Return on Equity

	2010	2011	2012	2013	2014	2015
Transmission	8.39%	9.66%	9.42%	8.93%	9.36%	9.30%
Distribution	9.85%	9.66%	9.66%	9.66%	9.66%	9.30%

Notes:

(1) Management anticipates that the return on equity set by the Ontario Energy Board will be lower in 2016 compared to 2015 due to decreases in interest rates.

Hydro One has earned or exceeded its allowed return on equity on a consolidated basis. For instance, the Company's actual returns on equity were 10.60% in 2010, 10.50% in 2011, 11.50% in 2012, 11.50% in 2013 and 10.00% in 2014, in each case, on a consolidated basis.

Proven Senior Management Team and Experienced, Independent Board of Directors

Following this offering, Hydro One Limited will operate as an independent, commercially-oriented public company, with an experienced, independent board of directors and proven senior leadership team. Hydro One's current leadership has demonstrated the capability to execute Hydro One's strategic plan and drive performance improvements and shareholder returns. The Company will operate with an independent board of directors and autonomous decision-making. As a shareholder of Hydro One Limited, the Province will engage in the business and affairs of Hydro One as an investor and not as a manager, as contemplated by the Governance Agreement. To support Hydro One's new direction, a new board of directors and senior leadership team were appointed in connection with this offering. Members of the new board of directors meet high standards of independence, commercial experience and director expertise and will oversee the Company's strategy, operations and growth as a publicly-listed company. The group includes Canadian business leaders, electricity sector experts, corporate directors and a former provincial Ombudsman.

Hydro One will be led by a highly experienced management team that together has extensive industry, operating and public company experience. Mayo Schmidt, the Company's new President and Chief Executive Officer, was formerly the Chief Executive Officer of Viterra Inc. and its predecessor, Saskatchewan Wheat Pool. Mr. Schmidt has a track record of leading large scale business transformation and growth while generating value and benefits for investors, employees and customers. At Viterra, Mr. Schmidt transformed a relatively small regional co-operative into a publicly-held, multi-billion dollar corporation with nearly 7,000 employees and operations around the world. In recognition of his accomplishments at Viterra, Mr. Schmidt was named "Chief Executive of the Year in 2009" by Canadian Business Magazine. Michael Vels, the Company's new Chief Financial Officer, was formerly the Chief Financial Officer of Maple Leaf Foods Inc. Mr. Vels brings to Hydro One considerable executive level experience in public company governance, debt and equity capital raising, mergers and acquisitions, business transformation and information technology. Mr. Schmidt and Mr. Vels join an established management team at Hydro One that has extensive experience with the Company's operations, assets and regulators. Mr. Schmidt and Mr. Vels are committed to improving the management of the Company and driving performance improvements and cultural change.

GOVERNANCE AGREEMENT

Concurrently with the closing of this offering, Hydro One Limited will enter into the Governance Agreement with the Province. The purpose of the Governance Agreement is to prescribe the role of the Province, as a holder of Voting Securities, in the governance of Hydro One Limited. Although the Governance Agreement does not address all aspects of the governance of Hydro One Limited, it comprehensively deals with, and limits, the role of the Province in that governance. It describes the principles that govern how Hydro One Limited will be managed and operated, including that the Province, in its capacity as a holder of Voting Securities, will engage in the business and affairs of Hydro One Limited as an investor and not as a manager. It also contains commitments by the Province restricting the exercise of its rights as a holder of Voting Securities.

The Governance Agreement specifically addresses the following matters: (i) the governance principles under which Hydro One Limited and its subsidiaries will be managed and operated; (ii) the nomination of directors, which includes: (a) the requirement for a fully independent board of directors (other than the Chief Executive Officer), and (b) the maximum number of directors that may be nominated by the Province; (iii) the election and replacement of directors; (iv) approvals requiring a special resolution of the directors; (v) restrictions on the right of the Province to initiate fundamental changes; (vi) pre-emptive rights provided to the Province with respect to future issuances of Voting Securities by Hydro One Limited; and (vii) limits with respect to the Province's acquisition of outstanding Voting Securities. See "Governance and Relationship with Principal Shareholder." For a description of the governance of Hydro One Limited more generally, see "Directors and Management of the Company".

THE OFFERING

Issuer:	Hydro One Limited.
Selling Shareholder:	The Province.
Offering:	81,100,000 common shares of Hydro One Limited to be sold by the Province (89,250,000 common shares if the Over-Allotment Option is exercised in full). See "Plan of Distribution". It is anticipated that the base offering will represent 13.63% of the common shares of Hydro One Limited issued and outstanding immediately prior to the closing of this offering. Assuming full exercise of the 10% over-allotment option, this offering will represent 15% of the common shares of Hydro One Limited issued and outstanding immediately prior to the closing of this offering.
Offering Price:	$20.50 per common share.
Offering Size:	$1,662,550,000, before giving effect to the Over-Allotment Option ($1,829,625,000 if the Over-Allotment Option is exercised in full).
Over-Allotment Option:	The Province has granted to the Underwriters the Over-Allotment Option, exercisable, in whole or in part, at any time for a period of 30 days after the Closing Date, to purchase from the Province up to an additional 8,150,000 common shares, on the same terms as set out above solely to cover over-allotments, if any.
Common Shares Outstanding Following Closing:	Immediately following the closing of this offering and the other transactions described in "Principal and Selling Shareholder – Share Purchase Arrangements with the Province", 595,000,000 common shares will be issued and outstanding. See "Principal and Selling Shareholder".
Common Shares Held by the Selling Shareholder Following Closing:	Immediately following the closing of this offering and the other transactions described in "Principal and Selling Shareholder – Share Purchase Arrangements with the Province", the Province will hold approximately 85% of Hydro One Limited's total issued and outstanding common shares (approximately 84% if the Over-Allotment Option is exercised in full). See "Principal and Selling Shareholder".
Proceeds to the Selling Shareholder:	The net proceeds to the Selling Shareholder from this offering will be approximately $1,635,949,200 after deducting the Underwriters' Fee referred to on the cover page of this prospectus but before deducting the expenses of this offering. If the Over-Allotment Option is exercised in full, the net proceeds to the Selling Shareholder from this offering will be approximately $1,800,351,000 after deducting the Underwriters' Fee referred to on the cover page of this prospectus (assuming that 70% of the common shares offered under this prospectus are sold to institutional investors) but before deducting the expenses of this offering. Hydro One Limited will not receive any proceeds from this offering. See "Use of Proceeds".
Dividend Policy:	The Board is expected to establish a dividend policy pursuant to which Hydro One Limited will pay a quarterly dividend, initially in the amount of $0.21 per common share. The annual amount of the dividend is anticipated to be approximately $500 million in the aggregate initially, based on a target payout ratio of 70% to 80% of net income. Assuming the closing of this offering occurs on November 5, 2015, the first dividend for the period from the closing of this offering to March 17, 2016 is expected to be paid on or about March 31, 2016 to shareholders of record on March 17, 2016. The payment of dividends is not guaranteed and the amount and timing of any dividends payable will be at the discretion of the Board. Hydro One intends to increase its debt as its rate base increases in order to maintain debt at 60% of its rate base and does not anticipate any increases in debt to fund the payment of dividends, although it may draw on its revolving credit facilities for general purposes. See "Dividends – Dividend Policy".
Dividend Reinvestment Plan:	Following the closing of this offering and subject to the receipt of any required regulatory approvals, Hydro One Limited intends to adopt a dividend reinvestment plan pursuant to which resident Canadian holders of common shares will be entitled to elect

	to have all of the cash dividends of Hydro One Limited payable to them automatically reinvested in additional common shares, which will be either purchased on the open market or issued from treasury. The dividend reinvestment plan is currently intended to operate on a basis that does not result in significant dilution to holders of common shares. See "Dividends – Dividend Reinvestment Plan".
Lock-Up:	During the period beginning on the closing date of this offering and ending on the date that is 180 days following the closing date of this offering, each of Hydro One Limited and the Selling Shareholder will not, directly or indirectly, without the prior written consent of RBC Dominion Securities Inc. and Scotia Capital Inc., on behalf of the Underwriters, issue, sell, offer or grant any option, warrant or other right to purchase or agree to issue or sell, or otherwise lend, transfer, assign, pledge or dispose of any common shares or other securities of Hydro One Limited or other securities convertible into, exchangeable for, or otherwise exercisable into the common shares or other equity securities of Hydro One Limited or agree to do any of the foregoing or publicly announce any intention to do any of the foregoing, subject to certain exceptions. See "Plan of Distribution".
Pre-Closing Transactions:	Certain pre-closing transactions will occur prior to the closing date of this offering. This will include steps taken to complete the acquisition of Hydro One Inc. by Hydro One Limited, recapitalize Hydro One Inc.'s subsidiary, Hydro One Networks Inc., and pay a dividend or make a return of capital to the Province in the amount of $800 million. See "Pre-Closing Transactions".
Risk Factors:	Investors should read the "Risk Factors" section of this prospectus for a discussion of factors to consider carefully before deciding to invest in Hydro One Limited's common shares. These risks include, without limitation: **Risks Relating to Hydro One's Business** • Regulatory Risks and Risks Relating to Hydro One's Revenues • First Nations and Métis Claims Risk • Risk of Natural and Other Unexpected Occurrences • Risks Associated with Information Technology Infrastructure and Data Security • Work Force Demographic Risk and Labour Relations Risk **Risks Relating to the Company's Relationship with the Province** • Ownership by the Province and Voting Power • Continued Influence by the Province • Nomination of Directors and Confirmation of Chief Executive Officer and Chair • Board Removal Rights • 10% Ownership Restriction • Potential Difficulties in Enforcing Civil Liabilities Against the Province, Hydro One Limited and Other Persons **Risks Relating to this Offering** • Absence of a Prior Public Market • Potentially Volatile Market Price for Common Shares • Payment of Dividends • Tax Risks Relating to this Offering • Pro Forma Financial Information • First Nations and Métis Proceedings The above list of risk factors is not exclusive. These and other risk factors are discussed in more detail under "Risk Factors".

SUMMARY CONSOLIDATED FINANCIAL INFORMATION

The following presents historical and pro forma summary consolidated financial information of Hydro One Inc., in each case, for the periods ended and as at the dates indicated below. The selected consolidated financial information has been derived from the unaudited interim financial statements of Hydro One Inc. as at and for the three and six month periods ended June 30, 2015 and June 30, 2014 and the audited consolidated financial statements of Hydro One Inc. as at and for the years ended December 31, 2014, December 31, 2013 and December 31, 2012 appearing elsewhere in this prospectus. Hydro One's historical results for any prior period are not necessarily indicative of its results to be expected in any future period. The selected pro forma condensed financial information as at and for the six months ended June 30, 2015 and for the year ended December 31, 2014 has been derived from the unaudited pro forma condensed consolidated financial statements of Hydro One Inc. appearing elsewhere in this prospectus, and give effect to the transactions described in the notes to those statements as if they had occurred on January 1, 2014 for the unaudited pro forma condensed consolidated statements of operations and June 30, 2015 for the unaudited pro forma condensed consolidated balance sheet. Those transactions relate to the following events:

- the payment by Hydro One Inc. and certain of its subsidiaries of the "departure tax", as described in "Departure Tax",
- the recognition by Hydro One Inc. of a deferred tax asset as a consequence of leaving the payments in lieu of corporate income taxes ("**PILs**") regime and entering the corporate tax regime (see "Management's Discussion and Analysis of Financial Condition and Results of Operations – Factors Affecting Results of Operations – Payments in Lieu of Corporate Income Taxes"),
- the recapitalization of Hydro One Networks Inc., as described in "Pre-Closing Transactions", and
- the transfer of all of the issued and outstanding shares of Hydro One Brampton Networks Inc. to a company wholly-owned by the Province, as described in "Pre-Closing Transactions".

The selected pro forma condensed financial information is unaudited, for informational purposes only, and not necessarily indicative of what Hydro One Inc.'s financial position or results of operations would have been had such transactions been completed as at the dates indicated and does not purport to represent what the financial position or results of operations might be for any future period.

The following information should be read in conjunction with "Risk Factors", "Consolidated Capitalization", "Management's Discussion and Analysis of Financial Condition and Results of Operations", the consolidated financial statements of Hydro One Inc., and the unaudited pro forma condensed consolidated financial statements of Hydro One Inc. and the related notes included elsewhere in this prospectus. The financial statements of Hydro One Inc. included in this prospectus have been prepared in accordance with U.S. GAAP.

Notes:

(1) On August 31, 2015, all of the issued and outstanding shares of Hydro One Brampton Networks Inc. were transferred to a company wholly-owned by the Province. See "Pre-Closing Transactions" for additional detail concerning the transfer and related transactions. Hydro One Brampton Networks Inc. was previously a wholly-owned subsidiary of Hydro One Inc. Because this transfer occurred after the dates of, and periods covered by, the historical consolidated financial statements of Hydro One Inc. appearing elsewhere in this prospectus, those financial statements and the historical summary data appearing in the table above include the assets, liabilities and results of operations of Hydro One Brampton Networks Inc. during the periods and as at the dates indicated, except in the columns marked as "pro forma".

(2) Prior to the closing of this offering, Hydro One Limited will issue $418 million of Series 1 preferred shares to the Province at a price of $25.00 per share. The existing preferred shares of Hydro One Inc. held by the Province will be cancelled. The initial dividend amount on the Series 1 preferred shares will be $1.0625 per share per year, and the dividend rate will be reset every five years in accordance with the terms of such shares. See "Description of Share Capital – Preferred Shares".

(3) Net income presented is before the payment of dividends on preferred shares of Hydro One Inc. and prior to net income (loss) attributable to noncontrolling interest. Net income is therefore not equivalent to net income attributable to common shareholders. Dividends on preferred shares of Hydro One Inc. were $9 million for each of the six months ended June 30, 2015 and 2014. Net income attributable to noncontrolling interest for the six months ended June 30, 2015 was $3 million and for the six months ended June 30, 2014 was nil.

(4) Net income presented is before the payment of dividends on preferred shares of Hydro One Inc. and prior to net income (loss) attributable to noncontrolling interest. Net income is therefore not equivalent to net income attributable to common shareholders. Dividends on preferred shares of Hydro One Inc. were $18 million for each of the years ended December 31, 2014, 2013 and 2012. Net loss attributable to noncontrolling interest for the year ended December 31, 2014 was $2 million and for each of the years ended December 31, 2013 and 2012 were nil.

(5) Pro forma net income of Hydro One Inc. for the year ended December 31, 2014 reflects an estimated deferred tax asset adjustment arising as a result of Hydro One leaving the PILs regime and entering the corporate tax regime. See "Departure Tax". This estimated deferred tax asset adjustment was based on an estimated fair market value of Hydro One's net assets of approximately $13,522 million, which was the same estimated fair market value used for the purposes of determining the departure tax amount of $2.6 billion payable by Hydro One as referred to in "Departure Tax". This estimated fair market value of Hydro One's net assets was determined by Hydro One principally using a discounted cash flow approach for certain assets and an asset-based approach for other assets, and was used in calculating the amount of the departure tax payable that was agreed between Hydro One and the Province in early September 2015. The actual amount of the deferred tax asset for the year ended December 31, 2015 will be based on the actual fair market value of Hydro One's net assets, which will be determined following pricing of this offering. The departure tax payable by Hydro One has been fixed at $2.6 billion, and will not be adjusted based on the fair market value of Hydro One's net assets as finally determined. Net income for the year ended December 31, 2015 will reflect the payment of the departure tax and recognition of the actual amount of the deferred tax asset, which may be different from the recognition of the estimated deferred tax asset reflected in pro forma net income of Hydro One Inc. for the year ended December 31, 2014. As a result, net income for the year ended December 31, 2015 may be impacted by the difference, if any, between the actual and estimated fair market value of Hydro One's net assets. Any impact on net income as a result of such difference will be non-cash-related and will only impact net income for the year ended December 31, 2015 and not subsequent years. The Company estimates that a $1,000 million increase or decrease in the fair market value of Hydro One's net assets would result in a corresponding increase or decrease in the deferred tax asset, and therefore net income, of approximately $200 million.

Other Financial Measures[1]	Six months ended June 30 2015	Six months ended June 30 2014	Year ended December 31 2014	Year ended December 31 2013	Year ended December 31 2012

Notes:

(1) On August 31, 2015, all of the issued and outstanding shares of Hydro One Brampton Networks Inc. were transferred to a company wholly-owned by the Province. See "Pre-Closing Transactions" for additional detail concerning the transfer and related transactions. Hydro One Brampton Networks Inc. was previously a wholly-owned subsidiary of Hydro One Inc. Because this transfer occurred after the dates of, and periods covered by, the historical consolidated financial statements of Hydro One Inc. appearing elsewhere in this prospectus, those financial statements and the other financial measures appearing in the table above include amounts contributed by Hydro One Brampton Networks Inc. during the periods indicated.

(2) Adjusted net income and FFO are non-GAAP measures. See "Non-GAAP Measures".

(3) In 2014, there was a $72 million noncontrolling interest contribution. This was a one-time item, and has been excluded from the calculation of FFO in 2014.

(4) FFO, as shown, has been calculated based on the historical financial information of Hydro One Inc. and does not reflect any of the pro forma adjustments set out in the unaudited pro forma condensed consolidated financial statements of Hydro One Inc. appearing elsewhere in this prospectus, including the net pro forma reduction in cash tax of $56 million for the year ended December 31, 2014 and $49 million for the six month period ended June 30, 2015. See note 2C(vi) of the unaudited pro forma condensed consolidated financial statements of Hydro One Inc. included elsewhere in this prospectus.

Notes:

(1) On August 31, 2015, all of the issued and outstanding shares of Hydro One Brampton Networks Inc. were transferred to a company wholly-owned by the Province. See "Pre-Closing Transactions" for additional detail concerning the transfer and related transactions. Hydro One Brampton Networks Inc. was previously a wholly-owned subsidiary of Hydro One Inc. Because this transfer occurred after the dates of, and periods covered by, the historical consolidated financial statements of Hydro One Inc. appearing elsewhere in this prospectus, those financial statements and the summary operating statistics appearing in the table above include amounts contributed by Hydro One Brampton Networks Inc. during the periods indicated.

(2) Rate base in each year refers to the rate base of Hydro One Networks Inc.'s transmission business or distribution business, as the case may be, approved by the Ontario Energy Board for that year. See "Meaning of Certain References".

(3) On August 31, 2015, all of the issued and outstanding shares of Hydro One Brampton Networks Inc. were transferred to a company wholly-owned by the Province. See “Pre-Closing Transactions” for additional detail concerning the transfer and related transactions.

(4) Includes certain classes of customers which are excluded in the *Ontario Energy Board Yearbook of Distributors* (2014).

(5) Capital investments consists of capital expenditures presented in Hydro One’s consolidated statement of cash flows, adjusted for capitalized depreciation, if any, and net changes in related accruals.

ELECTRICITY INDUSTRY

Overview

The electricity industry is made up of businesses that generate, transmit, distribute and sell electricity. Hydro One's business is focused on the transmission and distribution of electricity.

Generation

Generation refers to the production of electricity by a generator. Generators include generating stations (commonly known as power plants) that produce electricity on a large scale, as well as generating equipment that produces electricity on a small scale, such as rooftop solar panels. Small-scale generators installed at or near the end-user's location are sometimes referred to as "distributed generation" sources, which distinguish them from centralized generation sources, which tend to be large scale generators that produce electricity for transportation to other locations. Electricity may be generated using non-renewable fuel sources such as natural gas, coal or nuclear material, or using renewable resources such as water, wind, biomass, solar energy or geothermal heat.

Transmission

Transmission refers to the delivery of electricity over high voltage lines, typically over long distances, from generating stations to local areas and large industrial customers. Transmission customers include distributors of electricity, as well as industrial companies who are directly connected to transmission networks. Transmission also involves the delivery of electricity between different jurisdictions, such as provinces, states or countries. This is accomplished through the use of "interties", which are transmission facilities that physically connect adjacent transmission systems in different jurisdictions. Transmitters own and operate transmission assets such as transmission lines, transformer stations and communications and control facilities.

Distribution

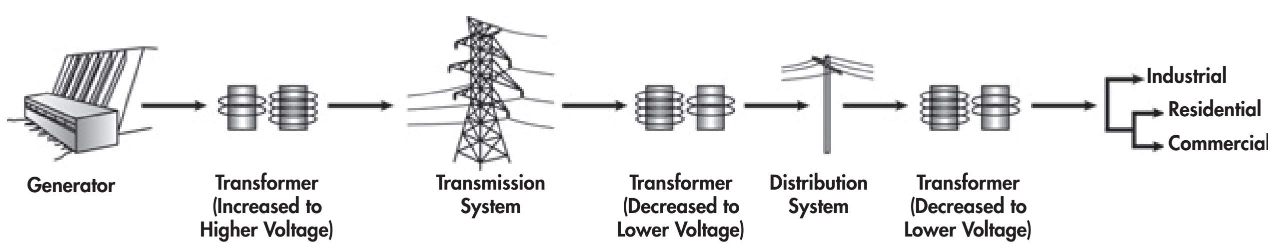
Distribution refers to the delivery of electricity over low voltage power lines to end users such as homes, businesses and institutions. Distributors usually deliver electricity to customers in a particular municipality or geographic area. Distributors may also distribute electricity to other distributors. Distributors own and operate distribution assets such as distribution stations, poles, distribution lines, switches and meters.

Retailing

Retailing refers to the sale of electricity to consumers. In Ontario, retailing of electricity is normally conducted by businesses that do not own the infrastructure or equipment necessary to distribute electricity. Retailers sell electricity to homes and small businesses but rely on distributors to deliver the electricity sold by the retailers. Retailers sometimes also rely on distributors to prepare and deliver electricity bills on behalf of the retailers. Retailers generally offer differentiated products as compared with distributors, such as fixed rate electricity contracts or electricity produced from renewable energy sources. Retailers do not exist in all markets.

Overview of an Electricity System

The basic configuration of a typical electricity system showing electricity generation, transmission and distribution is illustrated in the following diagram:



Transmission and distribution networks are sometimes referred to as the "electricity grid" or simply "the grid". For simplicity, the diagram above does not show customers directly connected to the transmission system or distributed generation sources or other distributors that may be connected to the distribution system.

Canada's Electricity Industry

In Canada, the generation, transmission and distribution of electricity has historically been carried out by government-owned, vertically-integrated utilities. This is still the case in many provinces and territories. However, consistent with general trends in the North American electricity industry, some jurisdictions in Canada, including Ontario, have moved away from this model towards more competitive market structures. In these jurisdictions, vertically-integrated utilities have been reorganized into separate generation, transmission and distribution companies. This separation is intended to promote competition among generators and to facilitate non-discriminatory or "open" access to transmission and distribution systems in order to increase competition in the supply of electricity. As a result, there are some electricity companies in Canada that engage solely in electricity generation, while others engage in either transmission or distribution, or both. Electricity companies in Canada may be investor-owned with shares listed on a stock exchange, or they may be owned by provincial governments, municipal governments or private investors.

The market structure and regulation of the electricity industry has evolved further in some jurisdictions, such as Ontario and Alberta. For instance, in Alberta, generation has been de-regulated, resulting in a competitive market for the generation and sale of electricity. However, all provinces and territories in Canada continue to regulate transmission and distribution rates. This function is carried out by a regulator, which is typically an independent board or commission that oversees and regulates certain aspects of the electricity industry in each province and territory.

The demand for electricity in Canada is affected by many factors, including population growth, economic growth and the electricity needs of households and businesses. The demand for electricity varies continuously. Electricity demand is typically seasonal, rising with the increased use of air conditioning in the summer or electric heating in the winter. Increased electricity usage over the medium to long term generally results in additional investments that are required to be made by generation, transmission and distribution businesses.

The provinces of Ontario, Québec, British Columbia and Alberta are the largest consumers of electricity in Canada. According to the National Energy Board, electricity demand in Canada is expected to grow at an annual rate of 1% from 2013 until 2035, with most of the demand originating from the industrial sector. In recent years, Canada has been a net exporter of electricity to the United States.

Electricity is generated in Canada using a variety of non-renewable and renewable sources. Hydroelectric generation accounts for most of the electricity produced in Canada on an overall basis. Fossil fuels, such as coal, natural gas and oil, are the second most common source of electricity generation, followed by nuclear power. The actual mix of generation varies in each province and territory based on the type of generation sources available. For instance, hydroelectric power is common in provinces such as Québec, Ontario, Manitoba and British Columbia because of the availability of water resources suitable for electricity production, while coal-fired generation is common in Alberta and Saskatchewan in part because of the large coal deposits that exist in those provinces. Nuclear power is a significant source of generation in Ontario. Electricity generation from renewable sources has increased in recent years and is expected to increase further in Canada over the long term, while generation from coal and oil are expected to decrease.

The transmission system in Canada includes more than 160,000 kilometres of transmission lines. Generators, transmitters, distributors and system operators must work to ensure that enough electricity and transmission and distribution capacity is available to meet demand at any given time and avoid power outages. Adequate transmission capacity and well-maintained transmission and distribution networks are key elements of a reliable electricity grid.

Ontario's Electricity Industry

Evolution

The structure of Ontario's electricity industry underwent significant change in the late 1990s and early 2000s. Prior to April 1, 1999, Ontario Hydro, a Crown corporation owned by the Province, supplied most of Ontario's needs with respect to electricity generation, transmission and distribution. Consistent with initiatives taken in other electricity markets in North America at the time, the Province initiated a restructuring of the electricity industry in Ontario in order to encourage greater competition. The adoption of the *Electricity Act, 1998* (Ontario) (the "**Electricity Act**") resulted in the reorganization of Ontario Hydro into five separate entities, including Hydro One Inc., as the successor to its transmission and distribution business, and Ontario Power Generation Inc., as the successor to its generation business. Each of Hydro One Inc. and Ontario Power Generation Inc. is currently 100% owned by the Province.

The Electricity Act also established the requirement of transmitters and distributors to provide non-discriminatory or "open" access to their transmission and distribution systems in order to facilitate greater competition in the supply of electricity.

As part of the restructuring of Ontario's electricity industry, the province's municipally-owned electricity distributors were reorganized into separate business corporations. These distributors are typically referred to in Ontario as local distribution companies, or "**LDCs**". Many of these distributors were sold by their municipal owners, who benefitted from limited exemptions from the transfer tax that applies to certain transfers that they would otherwise have had to pay on the fair market value of the utility. This led initially to a significant reduction in the number of local distribution companies in Ontario, with Hydro One Inc. as the primary consolidator. Consolidation activity involving local distribution companies has since slowed.

Other major regulatory developments affecting Ontario's electricity industry that have occurred since the 1990s include:

- the expansion of the mandate of the Ontario Energy Board to regulate the electricity industry, in addition to the natural gas industry, in Ontario,
- the creation of the Independent Electricity System Operator ("**IESO**") to manage the operation and reliability of Ontario's bulk power system and administer the wholesale electricity market;
- the creation of the Ontario Power Authority in 2004 (recently merged with the IESO in 2015) to engage in conservation initiatives, generation development and power system planning,
- the promotion of renewable energy production in Ontario, including through Ontario's Feed-in Tariff programs which followed the adoption of the *Green Energy and Green Economy Act, 2009* (Ontario),
- since 2010, the issuance by the Province every three years of a Long-Term Energy Plan (most recently in 2013) to serve as a planning document to guide future energy decisions in Ontario,
- the promotion of energy conservation measures, including through mandatory conservation and demand management requirements that must be followed by distributors, and
- the retirement of coal-fired generation in Ontario, which was completed in 2014.

Premier's Advisory Council on Government Assets

In April 2014, the Province formed the Premier's Advisory Council on Government Assets (the "**Council**"). The mandate of the Council was to review certain provincially-owned assets, including Ontario Power Generation Inc. and Hydro One Inc., and to recommend ways to maximize their value to the people of Ontario. In its final electricity sector report released in April 2015, the Council recommended, among other things, that the Province should proceed with a partial sale of its interest in Hydro One Inc. to create a growth-oriented company centred in Ontario. The Council recommended that the partial sale occur by way of a public offering, with approximately 15% of the shares of Hydro One Inc. to be offered to the market initially. The Council recommended that the Province indicate its intention to retain its remaining shares after selling down to 40% ownership, and that the balance should be widely held with no other individual shareholder having more than a 10% holding. The Council separately recommended proceeding with a sale or merger of the Province's interest in Hydro One Brampton Networks Inc. to or with other local distribution companies in Ontario in order to act as a catalyst for consolidation and to strengthen competition in the electricity distribution sector.

In response to the Council's recommendations, the Province is proceeding with this offering to broaden the ownership of Hydro One Inc. indirectly through its sale of shares in Hydro One Limited. The Province also announced that it would proceed with the sale or merger of Hydro One Brampton Networks Inc. In anticipation of that transaction, on August 31, 2015, all of the issued and outstanding shares of Hydro One Brampton Networks Inc. were transferred to a company wholly-owned by the Province. See "Pre-Closing Transactions" for additional detail concerning the transfer and related transactions.

Regulation of Transmission and Distribution

General

The Electricity Act and the *Ontario Energy Board Act, 1998* (the "**Ontario Energy Board Act**") together establish the general legislative framework for Ontario's electricity market. The activities of transmitters and distributors in Ontario are overseen by three main regulatory authorities: (i) the Ontario Energy Board, (ii) the IESO, and (iii) the National Energy Board.

Ontario Energy Board

The Ontario Energy Board was established in 1960 and is the regulator of natural gas and electric utilities in Ontario. The Ontario Energy Board is an independent and impartial public regulatory agency. Its mandate changed significantly with the restructuring of the electricity market in Ontario in the late 1990s, when it became responsible for regulating local electricity distribution companies and for ensuring that distributors fulfill their obligations to connect and serve their customers. The Ontario Energy Board also became responsible for licensing certain participants in the electricity market, including transmitters and distributors. The Ontario Energy Board Act provides the Ontario Energy Board with the authority to regulate Ontario's electricity market, including the activities of transmitters and distributors.

The Ontario Energy Board has the following objectives in relation to the electricity industry:

- to protect the interests of consumers with respect to prices and the adequacy, reliability and quality of electricity service,
- to promote economic efficiency and cost effectiveness in the generation, transmission, distribution, sale and demand management of electricity and to facilitate the maintenance of a financially viable electricity industry,
- to promote electricity conservation and demand management in a manner consistent with the policies of the Province, including having regard to the consumer's economic circumstances,
- to facilitate the implementation of a smart grid in Ontario, and
- to promote the use and generation of electricity from renewable energy sources in a manner consistent with the policies of the Province, including the timely expansion or reinforcement of transmission systems and distribution systems to accommodate the connection of renewable energy generation facilities.

The Ontario Energy Board is responsible for, among other things, approving transmission and distribution rates in Ontario. It also approves the construction, expansion, or reinforcement of transmission lines greater than two kilometres in length, as well as mergers, acquisitions, amalgamations and divestitures involving distributors and other entities which it licenses. The activities of transmitters and distributors are subject to the conditions of their licenses and a number of industry codes issued by the Ontario Energy Board. These codes and other requirements prescribe minimum standards of conduct and service for licensed participants in the electricity market.

Bill 112 was introduced in the Legislative Assembly of Ontario in June 2015. The Bill, as proposed, would amend the Ontario Energy Board Act to enhance the Ontario Energy Board's authority to continue to protect electricity ratepayers with respect to retailer contracts, as well as enhance consumer protection and reliability. These changes, if enacted, would provide the Ontario Energy Board with: stronger compliance and enforcement powers by increasing penalties for companies that are not complying with its rules and directions; enhanced ability to ensure reliability and continuity of service if distribution or transmission companies are unable to fulfil their license obligations; enhanced oversight for ensuring best practices regarding utility consolidation activities; and stricter oversight of retailers as well as more protection for consumers who sign energy retail contracts.

IESO

The IESO is a not-for-profit corporation established in 1998 under the Electricity Act. It was created to manage the operation and reliability of Ontario's bulk power system and administer the wholesale electricity market that was created with the restructuring of Ontario's electricity industry in the late 1990s. It is governed by an independent board whose chair and directors are appointed by the Province. Today, the IESO oversees the wholesale electricity market and directs the real time operation of the power system by balancing the supply and demand of electricity in Ontario and directing the flow of electricity across transmission lines.

Transmitters and other wholesale market participants, which include many distributors, must comply with the Market Rules issued by the IESO. The Market Rules establish a number of requirements that affect transmitters, including the requirement to comply with mandatory North American reliability standards for transmission issued by the North American Electric Reliability Corporation ("**NERC**") and the Northeast Power Coordinating Council, Inc. ("**NPCC**"). These reliability standards became mandatory as a result of regulatory changes following the Northeast blackout that occurred in 2003. The IESO enforces these reliability standards through its Market Assessment and Compliance Division and also coordinates with system operators and reliability agencies in other jurisdictions to ensure energy adequacy and security across the interconnected bulk electricity system in North America.

In 2015, the IESO merged with the Ontario Power Authority and assumed responsibility for integrated medium and long-term power system planning in Ontario, including the planning of electricity needs and the procurement of clean sources of electricity supply. These activities include identifying the need for new transmission capacity. The IESO also coordinates province-wide conservation efforts, including approval of mandatory conservation and demand management programs for distributors.

National Energy Board

The National Energy Board is an independent federal regulatory agency that was established in 1959 with the mandate to regulate aspects of the Canadian energy industry under federal jurisdiction, and to inform the government and public about energy matters. The National Energy Board is governed by the *National Energy Board Act* (Canada) and has jurisdiction over the construction and operation of international power lines, as well as interprovincial lines that are designated as being under federal jurisdiction (of which there are currently none). As Hydro One owns and operates 11 active international power lines connecting Ontario's transmission system with transmission systems in Michigan, Minnesota and New York, Hydro One is required to hold several certificates and permits issued by the National Energy Board, and is subject to its mandatory electricity reliability standards and reporting requirements.

Generation

In Ontario, electricity generation is supplied by a number of providers, with Ontario Power Generation Inc. producing approximately half of the electricity produced in Ontario. Its generation is largely rate-regulated, with rates approved by the Ontario Energy Board. The remainder of Ontario's electricity is produced by non-government-owned producers. These producers generally sell their electricity pursuant to long-term power purchase agreements entered into with the IESO.

According to the IESO, the total installed generation capacity in Ontario was 35,163 MW as of September 21, 2015, of which 37% was supplied by nuclear facilities, 28% by gas or oil-fired facilities, 24% by hydroelectric facilities, 9% by wind-powered facilities and 1% by biofuel facilities. In its most recent Long-Term Energy Plan issued in 2013, the Province indicated that it is targeting to have a total of 20,000 MW of renewable generation on-line by 2025, which is forecast to represent approximately half of Ontario's generation capacity.

Transmission

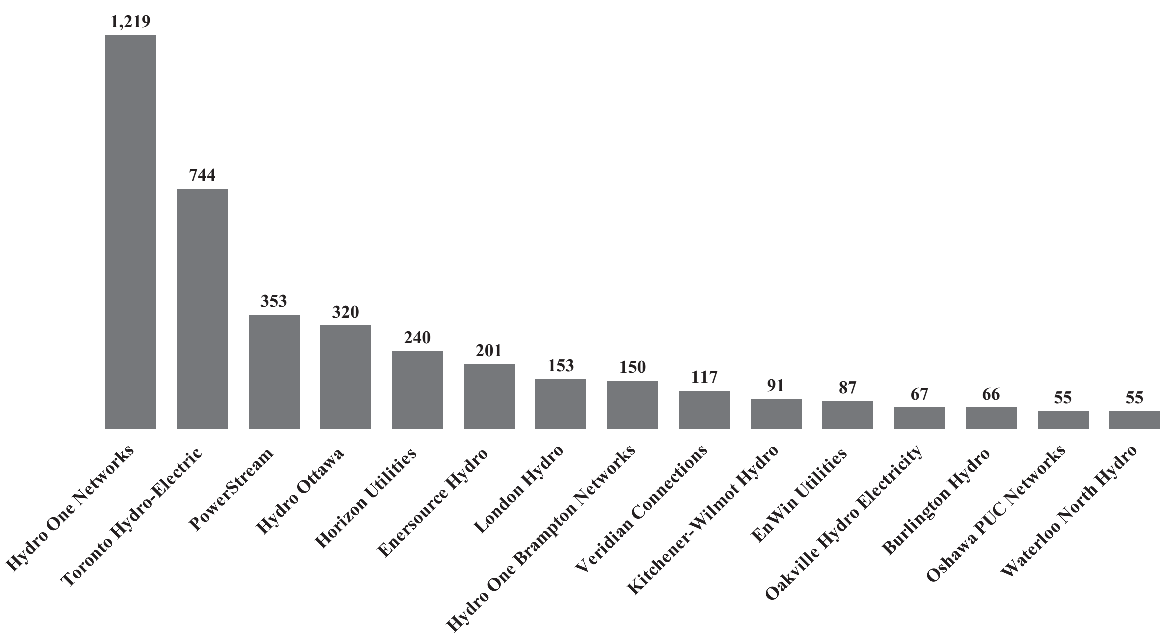
Transmission companies own and operate transmission systems that deliver electricity over high voltage lines. Hydro One's transmission system accounts for 96% of Ontario's electricity transmission network. The Company's transmission system is interconnected to systems in Manitoba, Michigan, Minnesota, New York and Québec and is part of the larger North American system known as the Eastern Interconnection. The Eastern Interconnection is a contiguous electricity transmission system that extends from Manitoba to Florida and from east of the Rocky Mountains to the North American east coast. Being part of the Eastern Interconnection provides benefits to Ontario, such as greater security and stability for Ontario's transmission system, emergency support when there are generation constraints or shortages in Ontario, and the ability to exchange electricity with other jurisdictions, which facilitates a more competitive marketplace.

Investments in transmission infrastructure are required to ensure the safe and reliable delivery of electricity. These investments are made to maintain the function and reliability of transmission systems, accommodate increased demand for electricity and respond to developments affecting the electricity industry. Developments with respect to electricity generation often have a direct impact on transmitters, since significant investments in transmission systems may be required to accommodate new generation sources (such as renewable energy) or the retirement of existing generation facilities (such as coal-fired facilities). For instance, as coal-fired generation in Ontario was retired, significant transmission investments were required to accommodate the subsequent changes in electricity flows across the transmission system. Similarly, Hydro One is currently constructing a major transformer station (the Clarington transformer station) in order to accommodate changes to the transmission system arising from the eventual retirement of the Pickering nuclear generation facility. Major changes affecting the generation of electricity must be closely coordinated with transmission considerations in mind. Recent discussions and initiatives by provincial governments to examine opportunities for Ontario to import additional electricity from Québec and Newfoundland and Labrador may also require new transmission infrastructure. These types of investments are in addition to the investments that transmission companies must undertake to sustain their existing assets, maintain reliability, and provide connections to the transmission system.

Distribution

Distributors own and operate distribution systems that deliver electricity over low voltage power lines to end users. In Ontario, 72 local distribution companies currently provide electricity to approximately five million customers. The distribution industry in Ontario is fragmented, with the 15 largest local distribution companies accounting for approximately 78% of the province's five million customers. Hydro One owns the largest local distribution company in Ontario, Hydro One Networks Inc., with approximately 1.3 million customers, or approximately 25% of the total number of customers in Ontario.

15 Largest Distributors in Ontario(1)
(Thousands of Customers)



Notes:

(1) Source: *Ontario Energy Board Yearbook of Distributors* (2014). For Hydro One Networks Inc., the 1,219 figure excludes certain classes of customers which are included in the total number of customers reported elsewhere in this prospectus.

(2) On August 31, 2015, all of the issued and outstanding shares of Hydro One Brampton Networks Inc. were transferred to a company wholly-owned by the Province. See "Pre-Closing Transactions" for additional detail concerning the transfer and related transactions. Hydro One Brampton Networks Inc. was previously a wholly-owned subsidiary of Hydro One Inc.

Most of the local distribution companies in Ontario are owned or jointly owned by municipalities. A local distribution company is responsible for distributing electricity to customers in its Ontario Energy Board-licensed service territory, and in some cases to other distributors. A service territory may cover large portions or all of a particular municipality, or an otherwise-defined geographic area. Some municipalities in Ontario are served by more than one local distribution company, each covering a particular area of the municipality. Distribution customers include homes, businesses and institutions such as governments, schools and hospitals.

To create more efficiency in the distribution sector, the Council has endorsed the need for faster consolidation among local distribution companies in Ontario. The Council also noted that the system needs private sector capital and a level of competition that will encourage innovation among companies that can adjust nimbly to the changing energy world. In addition, the Council has recommended time-limited tax incentives to promote consolidation. These tax incentives were included in the 2015 Ontario Budget, which announced a reduction in the transfer tax rate from 33% to 22%, an exemption from transfer tax for distributors with fewer than 30,000 customers and an exemption from the capital gains portion of the departure tax. These changes, which are intended to promote consolidation, would apply for the period beginning January 1, 2016 and ending December 31, 2018.

Electricity Industry in the United States

The general structure of the electricity industry in the United States is similar to that in Canada, particularly with respect to the regulation of transmission and distribution. Although the regulatory framework varies on a state-by-state basis, electricity transmitters and distributors generally operate under a regulated cost of service model.

In the United States, electric utilities range from fully integrated utilities to pure-play utilities which focus solely on transmission or distribution. There is a wide range of utility owners in the United States, including strategic and financial investors, both domestic and international, as well as governments and municipalities. The term "investor owned utility" is used in the United States to refer to electric and other utilities that are not government owned. The number of investor owned utilities has declined significantly as a result of consolidation – from 98 in 1995 to 47 in 2014. In recent years, investor owned utilities have followed a trend of migrating back toward a traditional regulated structure which has occurred as a result of a combination of organic growth in rate base, the acquisitions of regulated businesses and divestiture of non-regulated businesses. According to Bloomberg, mergers and acquisition activity in the North American power and utilities sector has been active in recent years, with 351 transactions announced since 2014. The total value of transactions with a disclosed acquisition price was $132.5 billion.

The U.S. electric transmission grid consists of more than 320,000 kilometres of high-voltage lines. The transmission system is regulated by the Federal Energy Regulatory Commission, which governs the planning and investment of transmission infrastructure, including setting a utility's return on equity. Reliability standards for transmission are issued by the NERC and regional reliability councils such as the NPCC.

Recent years have seen significant transmission investment. According to the Edison Electric Institute, investor-owned electric utilities made transmission investments of approximately U.S.$16.9 billion in 2013. An additional U.S.$60.6 billion in transmission investments are expected to be necessary to modernize the transmission system through 2024. Investment in transmission is currently significantly higher than in previous years, with the largest component related to transmission expansion or new line development to ease congestion, interconnection of new sources of generation, including renewables, and support for production of shale gas. Investment is also required for improved system reliability and resiliency as well as replacement of existing lines.

The electricity distribution industry in the United States is generally subject to regulation by the state public utility commission in the jurisdiction in which the utility operates, which leads to significant variations in the allowable return on equity and other components of the rate setting process. Investment in electric distribution infrastructure by investor owned utilities in 2013 totaled U.S.$20.8 billion. Investment in the electricity distribution sector is primarily driven by the ongoing need to replace assets that have outlived their life cycle, to serve new loads or demand, to preserve reliability, to improve system security, resiliency and restoration capabilities, and increasingly in recent years, to accommodate growth in distributed generation.

Certain Trends in the Electricity Industry

Opportunities for Sector Consolidation

A number of regulated utilities have pursued acquisitions outside of their home jurisdictions to seek growth and diversification opportunities. The rationale for this strategy is to increase their scale and scope and diversify their asset base. Many electric utilities have also acquired regulated utilities outside of the electricity sector, such as gas distribution or water distribution. In addition to the potential for increased scale, scope and diversification, this strategy offers the potential to create synergies within given service territories from a regulatory and operations perspective.

Consolidation trends have been evident in Europe and in the United States, but have not been prevalent in Canada given its limited number of privately-owned utilities. Pension and infrastructure funds have also been active participants in acquisitions in the utilities sector.

Impact of Green Energy Initiatives

Environmental regulations are being adopted in many jurisdictions in order to facilitate the development of cleaner forms of energy. Many governments and regulators are setting targets with specified compliance dates to meet green energy standards. These may take the form of targets for the reduction of carbon dioxide emissions or the procurement of renewable generation. These initiatives may result in changes to the electricity generation mix in those jurisdictions, potentially creating the need for upgrades to transmission infrastructure in order to preserve the reliability of the electricity grid. For example, as coal-fired generation was retired in Ontario, significant investments were required to accommodate the subsequent changes in power flows across the transmission system.

In August 2015, the Environmental Protection Agency in the United States announced the final version of what is commonly known as the Clean Power Plan, a series of regulatory changes that would, among other things, impose significant emissions restrictions on electric generation facilities. The final version of the plan sets a goal of reducing emissions from power plants by 32% by the year 2030, as compared with 2005 levels. These emissions restrictions are particularly aimed at coal-fired generation facilities. In a preliminary assessment of the reliability impacts in meeting this plan in North America, the NERC noted the potential opportunity for coordinated cross-border transmission flows, including the increased potential for Canadian companies to export up to three times more power to the United States. This may provide additional opportunities for renewable generation development in Ontario. Regulators, system planners and other parties are in the process of assessing the impact of the Clean Power Plan and increased intertie capacity to the United States.

Developments with Respect to Distributed Generation, Microgrids and Energy Storage

Alternatives to the traditional model of “centralized” generation are continually being developed. For instance, distributed generation sources, such as rooftop solar panels or natural gas generators integrated into industrial facilities, are becoming increasingly common. Where distributed generation sources are connected to the electricity grid, they may act as a source of supply to the grid, or reduce the amount of power supplied from the grid, while still making use of the grid as a stand-by source of power. Related to distributed generation are microgrids, which are small scale electricity grids with their own sources of generation that can operate independently of the electricity grid.

Energy storage technologies seek to store energy for use at a later time. Historically, there have been technical limitations on the ability to store large amounts of electricity. For this reason, electricity systems are designed to generate more electricity than is required in order to meet anticipated peak demand, which creates inefficiencies. The development of larger and more effective energy storage technologies could provide an additional means to facilitate the reliability of the electricity grid by acting as a source of back-up power, which would allow generators to produce less electricity in order to meet anticipated peak demand. Energy storage technologies may also facilitate improvements to power quality by smoothing fluctuations in power demand and enhance reliability by easing points of congestion in transmission and distribution networks.

These developments represent an opportunity to employ new technologies to improve reliability and power quality, or provide an alternative to constructing or maintaining traditional “wires” infrastructure. For instance, microgrids could be used in remote or other locations where it is not cost-effective to build transmission and distribution networks to serve customers in those locations.

Smart Meter and Smart Grid Technologies

The increasing adoption of energy conservation measures together with initiatives to reduce emissions from the generation of electricity has led to the development of technologies such as smart meters, which, unlike traditional electricity meters, provide customers with information about their electricity usage to enable them to change their consumption patterns and reduce their costs. Smart grids are an extension of this concept, and generally refer to a combination of technologies, such as computer systems, two-way communications technologies and monitoring systems aimed at improving the reliability and performance of the electricity grid and at expanding opportunities to provide demand response, price information and ability to control usage to electricity customers. For example, in the event of a power interruption, smart grid technology can be used to more quickly detect and locate the source of the interruption and restore service by re-routing electricity to alternative supply lines and generation sources. Smart grids are at varying stages of development and usage. One of the objectives of the Ontario Energy Board is to facilitate the implementation of a smart grid in Ontario.

Competitive Processes for Developing Transmission Infrastructure

Consistent with the general trend seen in government procurement programs for infrastructure investments, governments and electricity sector regulators are increasingly using competitive bidding processes to select the applicant to develop new large transmission projects. For instance, in Ontario, the Ontario Energy Board used a competitive process to select the designated transmitter for the development phase of the proposed East-West Tie Line, which would be a transmission line running between Thunder Bay and Wawa, Ontario. In Alberta, the Alberta Electric System Operator conducted a similar process to award the agreement for the Fort-McMurray West Transmission Project.

Incumbent transmission companies may experience increased competition from other utilities, construction companies and private investors in the competitive bidding processes for new transmission projects and are using a greater range of strategies to bid for the development and construction of new transmission infrastructure. These include forming consortiums, alliances and joint ventures, such as those with First Nations and Métis communities, and adopting cost and revenue sharing arrangements to share project risk. Larger and more established electric utilities may be well-positioned to enter into these arrangements due to their experience, expertise and effectiveness in engaging with stakeholders, and their existing infrastructure and transmission corridors.

RATE-REGULATED UTILITIES

Overview

The rates charged for electricity transmission and distribution services are regulated in Canada and many other jurisdictions. The term “rate-regulated” is used to refer to an electricity business whose rates for transmission, distribution or other services are subject to approval by a regulator. The Ontario Energy Board is the regulator responsible for approving electricity transmission and distribution rates in Ontario.

In Canada, regulators generally use two different models for approving the rates charged by rate-regulated utilities: (i) a “cost of service” model, and (ii) a “performance-based” model (sometimes also referred to as an “incentive-based” model).

In a cost of service model, a utility charges rates for its services that allow it to recover the costs of providing its services and earn an allowed return on equity. The costs of providing its services must be prudently-incurred. Cost savings are typically passed on to customers in the form of lower rates reflected in future rate decisions. In a cost of service model, the utility has the potential to retain cost savings that are achieved in the intervening years between rate decisions.

In a performance-based model, a utility also charges rates for its services that allow it to recover the costs of providing its services and earn an allowed return on equity. However, the rates charged by the utility in a performance-based model assume that the utility becomes increasingly efficient over time, resulting in lower costs to provide the same service. If a utility achieves cost savings in excess of those established by the regulator, the utility may retain some or all of the benefits of those cost savings, which may permit the utility to earn more than its allowed return on equity.

Value Drivers for a Rate-Regulated Utility

Management believes that the key drivers of value for a rate-regulated utility are:

- the utility’s rate base,
- the utility’s deemed capital structure, as set by the regulator,
- the utility’s allowed return on equity, as set by the regulator,
- capital expenditures that ultimately add to the utility’s rate base,
- the ability to generate efficiencies and cost savings in the operations of the utility, and
- the ability to maintain a constructive relationship with its regulator.

Rate Base

The rate base of a rate-regulated utility refers to the net book value of the utility’s assets for regulatory purposes. Rate base is an important regulatory term because a utility is permitted to earn a return on the equity portion of its rate base. An increase in a utility’s rate base will generally result in an increase in the utility’s net income, all other things being equal.

Rate base differs from a utility’s total assets for accounting purposes, primarily because it only includes the regulated assets of a utility. If a utility also owns and operates non-rate-regulated businesses, the assets of those businesses are not included in the utility’s rate base. A utility’s rate base must be calculated in accordance with the requirements of the utility’s regulator and must be approved by the regulator as part of the utility’s application for transmission or distribution rates. In Ontario, the rate base for a transmission or distribution company generally includes the gross value of the company’s regulated assets (such as transmission lines and transformers or distribution lines and poles), less accumulated depreciation, and adding an allowance for working capital. The rate base of a utility is reduced by ongoing depreciation of the utility’s regulated assets.

Capital Structure

Rate-regulated utilities have a “deemed” or approved capital structure that is set by the regulator. This is typically expressed as ratio of debt-to-equity. In Ontario, the deemed capital structure for electricity transmitters and distributors set by the Ontario Energy Board is 60/40. This means that a utility is considered to have a capital structure consisting of 60% debt and 40% equity. This capital structure is applied to the utility's rate base. For instance, if a utility has a rate base of $100 million and a 60/40 capital structure, this means that the regulated assets of the utility are deemed to be capitalized with $60 million of debt and $40 million of equity. The deemed capital structure is important to a utility because it is used to calculate the dollar amount of a utility's return on equity that the utility is entitled to be paid through rates. See "– Return on Equity" below. A utility's deemed capital structure also reflects the regulator's view of the amount of debt that a utility should have in order to operate prudently.

Return on Equity

A utility's return on equity or "ROE" is the rate of return that a regulator allows the utility to earn on the equity portion of the utility's rate base. Return on equity is expressed as a percentage. For instance, over the past six years, Hydro One's allowed return on equity approved by the Ontario Energy Board has ranged from 8.39% to 9.66% for its transmission business and 9.30% to 9.85% for its distribution business.

A utility's return on equity represents the amount, over and above a utility's costs associated with providing services, that a utility is permitted to earn as its net income after tax. A utility's allowed return on equity is therefore a significant factor that affects the financial performance of rate-regulated utilities.

In order to calculate its allowed return on equity as a dollar amount, the utility applies the allowable return on equity percentage set by the regulator to the equity portion of its rate base. The equity portion of its rate base is, in turn, determined by multiplying the utility's rate base by the percentage of equity reflected in its deemed capital structure (i.e., 40% in Ontario).

Regulators use different methods to set a utility's allowed return on equity, and these methods vary from jurisdiction to jurisdiction. In Ontario, the Ontario Energy Board sets the allowed return on equity for transmission and distribution companies. In doing so, it sets a percentage, and adjusts this percentage by applying a formula that takes into account the interest rates on certain government debt securities and a risk premium based on utility bond spreads. The allowed return on equity is reviewed and changed by the Ontario Energy Board annually.

Capital Expenditures

Transmission and distribution companies incur capital expenditures to allow them to meet their obligations to deliver electricity safely and reliably, at a reasonable cost to customers. Utilities incur both sustaining capital expenditures, which maintain the performance of existing assets, and development capital expenditures, which add to or expand existing assets. Development capital expenditures include those investments required to develop and build large-scale projects such as new transmission lines and stations as well as smaller projects such as transmission line or station reinforcements, extensions or additions. Capital expenditures tend to increase a utility's rate base after the assets produced by the capital expenditures become operational (sometimes referred to as "in-service") and are approved by the regulator for inclusion in the utility's rate base. Capital expenditures are therefore a key driver of value for a rate-regulated utility.

Operational Cost Savings and Efficiencies

Utilities seek greater efficiency and cost savings, including from economies of scale, productivity improvements or the use of new technology and systems. These cost savings are typically passed on to customers in the form of lower rates. In a cost of service model for rates, this means that the lower costs may be reflected in a lower revenue requirement approved by the regulator in the utility's next rate application, while the utility has the potential to retain cost savings that are achieved in the intervening years between rate decisions. In other words, in a cost of service model, cost savings, if any, are generally only retained by the utility until new rates are approved by the regulator. In a performance-based model for rates, the utility has the potential to retain some or all of the benefit of cost savings achieved in excess of those established by the regulator, thereby increasing its return on equity. The ability to demonstrate greater efficiency and cost savings in the operations of a utility is a key factor in a regulator's decision to approve rates. This, together with the utility's desire to increase profitability while keeping rates low, provides incentives for utilities to continue to seek more efficient ways to deliver their service to customers.

Relationship with Regulator

The ability of a utility to maintain a constructive relationship with its regulator is a key driver of value. This relationship lays the foundation for all decisions made by the regulator in respect of the utility's business, including with respect to revenue requirements. The term "revenue requirement" refers to the amount that a utility is entitled to charge through rates that covers its cost of providing services plus the dollar amount of its allowed return on equity. A utility must justify and provide supporting evidence for its performance and forecasted cost of service. A rate-regulated utility seeks to obtain approval from its regulator for its revenue requirement in a manner that covers the actual costs of providing services and generates an adequate return on equity. To the extent that the utility earns any ancillary revenues from its regulated assets or personnel, these are subtracted from the revenue requirement.

Rate Applications in Ontario

Framework

The Ontario Energy Board is the regulator that approves electricity transmission and distribution rates in Ontario. Transmission rates are currently determined based on a cost of service model, while distribution rates are generally determined using a performance-based model. These models are reviewed and modified by the Ontario Energy Board from time to time. The Ontario Energy Board has indicated that it will provide guidance regarding how the policies in its performance-based framework for distribution rates may be applied to transmitters in the future.

Transmission Rates (Cost of Service Model)

In the current model for determining transmission rates in Ontario, a transmitter applies to the Ontario Energy Board for approval of its revenue requirement for each year covered by its rate application (typically two years in total). The revenue requirement for each year covers the anticipated costs of providing the service for that year and an amount that represents the allowable return on equity approved by the Ontario Energy Board.

Cost of Service ($)	+	**Return on Equity ($)**	=	**Revenue Requirement ($)**

For example, if a utility is applying for the approval of rates for 2017 and 2018, it may request a revenue requirement of $1,000 million for 2017 and $1,050 million for 2018. The cost of service would generally consist of: (i) income taxes (or payments in lieu of taxes), (ii) the utility's cost of debt, (iii) depreciation on the utility's assets, and (iv) operation, maintenance and administration costs.

The following diagram illustrates the components of a hypothetical transmitter's revenue requirement of $1,000 million for a particular year.

Return on Equity	$200 million	Calculated by multiplying the allowed return on equity set by the regulator by the equity component of the utility's rate base
Income Taxes	$50 million	Taxes or payments in lieu of taxes
Cost of Debt	$150 million	The approved cost of debt for the utility at the deemed capital structure
Depreciation	$300 million	Depreciation and amortization on transmission assets such as towers, stations and components
Operation, Maintenance and Administration Costs	$300 million	Labour, materials, equipment and other costs to operate and maintain the utility's transmission system
Revenue Requirement	$1,000 million	

In the example above, $800 million of the transmitter's revenue requirement is to cover the transmitter's anticipated cost of service for that year. The $200 million amount represents the allowed net after tax return on equity over and above the transmitter's cost of service.

Distribution Rates (Performance-Based Model)

In the current model for determining distribution rates in Ontario, a utility applies to the Ontario Energy Board to have its cost of service reviewed as part of its application for distribution rates. However, the process for applying for distribution revenue requirements differs from the process for applying for transmission revenue requirements in the following ways:

- the period covered by a distribution rate application is typically at least five years, which is longer than the typical period covered by a transmission rate application,
- the utility applies for the approval of its revenue requirement only for the first year covered by the rate decision,
- the revenue requirement for each of the subsequent years is determined based on a formula that accounts for inflation and certain productivity factors set by the regulator. The revenue requirement in these subsequent years is set on the assumption that the utility is lowering its cost of service over the period covered by the rate decision due to efficiency or productivity improvements,
- the utility is permitted to retain all or a portion of the cost savings achieved in excess of those established by the regulator during the period covered by the rate decision, thereby allowing the utility to earn more than its allowed return on equity, and
- the utility and the Ontario Energy Board must, as part of the application process, agree on a set of performance measures that the utility must meet and on which it must report on an ongoing basis to the Ontario Energy Board. These are intended to reduce the incentive of utilities to allow service or performance levels to deteriorate as the utilities lower their cost of service.

Under a performance-based model, the utility must effectively manage its business to earn its allowed return on equity over the period covered by the rate decision. Under this model, revenues earned from rates may not correspond to the utility's actual costs.

Application Process

Transmitters and distributors must file a rate application with the Ontario Energy Board to seek approval of their revenue requirement, which forms the basis for the rates to be charged for the approved period. Hydro One typically files a rate application every two years for transmission rates, which are applicable for the prospective two year period. The period between its applications for distribution rates tends to be more variable, and depends on the type of application selected by Hydro One for distribution rates.

A rate application is supported by pre-filed evidence, which contains details on the various categories of expenses proposed to be incurred by the transmitter or distributor, including operations, maintenance and administration costs, depreciation and amortization, costs of debt and income taxes (or payments in lieu of taxes). A rate application will also include details on the capital expenditures proposed to be made based on available information and assumptions made at the time of the rate application. It is generally expected that a utility would exercise discretion in selecting, prioritizing and adjusting the timing of capital projects. This can result in deviations from the projects listed in the rate application. A utility must demonstrate to the Ontario Energy Board that capital investments were appropriate and prudent for inclusion in the utility's rate base, which must be approved by the Ontario Energy Board. The rates paid to the utility are based on the rate base, which is periodically adjusted by the Ontario Energy Board to reflect assets that are placed into service.

Intervenors, such as consumer groups and other electricity industry participants, and staff of the Ontario Energy Board, may also participate in the applicant's stakeholder activities, in technical conferences, and in the tribunal process itself, and they may also file questions and their own evidence. The parties may attempt to negotiate a full or partial settlement of the issues raised by the application. Unsettled issues are referred to a hearing, in which the applicant is required to defend its rate application through a written or oral hearing. After the completion of the hearing, the Ontario Energy Board issues a decision with reasons. In the case of rate proceedings, the applicant must submit a draft rate order reflecting the decision of the Ontario Energy Board. The Ontario Energy Board will approve the final rate order or request revisions to better reflect its decision.

Transmitters and distributors such as Hydro One must forecast and make assumptions regarding their expected costs and the demand for electricity during the periods covered by the rate application, and they must support their applications with information about prior or historical years and the current year. In Ontario, rate applications use "forward test years", rather than historical test years, which means that rates are set based on forecasts and projections of electricity demand and costs of service in the years covered by the rate decision, rather than based on historical electricity demand and cost information, which may not accurately reflect actual future electricity demand and costs.

A transmitter or distributor may apply to the Ontario Energy Board during the period between rate decisions for the approval of "deferral accounts" or "variance accounts", which are accounts used by the utility to record amounts due to, or amounts to be received from, rate payers at a future date, generally in conjunction with a rate decision from the Ontario Energy Board. For instance, these accounts may be used to track, among other items, unforeseen capital expenditures or particular operation, maintenance and administration costs incurred during that period that were not included in the utility's last application for rates. The Ontario Energy Board will determine in connection with a subsequent rate application whether to allow a utility to include the assets produced from these capital expenditures in the utility's rate base or to recover such costs in rates.

Once distribution rates are approved, the Ontario Energy Board has the right to revisit distribution rates in cases where the utility's actual earnings are above or below 300 basis points of its allowed return on equity or if performance erodes to unacceptable levels.

BUSINESS OF HYDRO ONE

Business Segments

Hydro One is the largest electricity transmission and distribution company in Ontario. Hydro One owns and operates substantially all of Ontario's electricity transmission network, and is the largest electricity distributor in Ontario by number of customers.

Hydro One has three business segments: (i) transmission; (ii) distribution; and (iii) other business (telecommunications).

Hydro One's transmission business consists of owning, operating and maintaining Hydro One's transmission system, which accounts for 96% of Ontario's transmission network. This includes the Company's 66% interest in B2M Limited Partnership, a limited partnership between Hydro One and the Saugeen Ojibway Nation in respect of the Bruce-to-Milton transmission line. The Company's transmission business is a rate-regulated business that earns revenues mainly from charging transmission rates that must be approved by the Ontario Energy Board. Hydro One's transmission business represented approximately 56% of its total assets as at June 30, 2015, and accounted for approximately 72% of its total net income in 2014. All of the Company's transmission business is carried out by its wholly-owned subsidiary, Hydro One Networks Inc., except for the portion of its business held through B2M Limited Partnership, which the Company controls.

Hydro One's distribution business consists of owning, operating and maintaining Hydro One's distribution system, which it owns primarily through its wholly-owned subsidiary, Hydro One Networks Inc., the largest local distribution company in Ontario. The Company's distribution system is also the largest in Ontario, and principally serves rural communities. The Company's distribution business is a rate-regulated business that earns revenues mainly by charging distribution rates that must be approved by the Ontario Energy Board. Hydro One's distribution business represented approximately 42% of its total assets as at June 30, 2015, and accounted for approximately 28% of its total net income in 2014. Hydro One's distribution business also includes the business of its wholly-owned subsidiary, Hydro One Remote Communities Inc., which operates on a cost-recovery basis and supplies electricity to customers in remote communities in northern Ontario.

Hydro One's transmission and distribution businesses are both operated through Hydro One Networks Inc. This allows both businesses to utilize common operating platforms, technology, work processes, equipment and field staff and thereby take advantage of operating efficiencies and synergies. For regulatory purposes, Hydro One Networks Inc. files separate rate applications with the Ontario Energy Board for each of its licensed transmission and distribution businesses.

Hydro One's other business segment principally consists of its telecommunications business, which provides telecommunications support for the Company's transmission and distribution businesses, and also markets and sells fibre optic capacity to telecommunications carriers and commercial customers with broadband network requirements. Hydro One's other business segment is not rate-regulated. This segment represented approximately 2% of Hydro One's total assets as at June 30, 2015, and accounted for less than 1% of its total net income in 2014. The telecommunications business is carried out by the Company's wholly-owned subsidiary, Hydro One Telecom Inc.

Upon completion of this offering, Hydro One Limited will be one of Canada's largest publicly-listed electricity companies, measured by assets. With a stable regulated business, strong "A" category credit ratings and projected increases in its rate base, Hydro One expects to continue generating stable and growing net cash from operating activities to fund its ongoing sustaining capital investments and to support a strong and growing dividend. The Company will operate independently of the Province and will be overseen by an experienced and independent board of directors.

Investment Highlights

Stable Regulated Cash Flows and Strong Balance Sheet

The transmission and distribution of electricity are essential infrastructure services. Hydro One's transmission and distribution businesses are fully rate-regulated and represent 99% of its overall business, measured by revenues. These businesses generate stable and growing net cash from operating activities and net income. Hydro One's net cash from operating activities grew to $1,256 million in 2014 from $892 million in 2009 and $911 million in 2004, representing a compound annual growth rate of 7.1% and 3.3% on a five and ten year basis, respectively. Hydro One's net income grew to $747 million in 2014 from $470 million in 2009 and $498 million in 2004, representing a compound annual growth rate of 9.7% and 4.1% on a five-and ten-year basis, respectively.

Hydro One Inc. has been a reporting issuer in Canada for over 15 years and has been an active participant in the public debt markets. Hydro One Inc. has one of the strongest credit profiles of any public company regulated electricity utility in Canada, with its debt currently rated A (stable) by Standard & Poor's, A2 (negative) by Moody's, and A (high) (under review with developing implications) by DBRS. Standard & Poor's has also assigned a long-term corporate credit rating to Hydro One Limited of A (stable). Hydro One Inc. has a strong track record of raising capital in the public debt markets, and has raised over $3.2 billion in gross proceeds through the sale of debt in the past three and a half years alone. Management expects that maintaining a strong credit profile and low cost of borrowing will be a key element of Hydro One's business and regulatory strategy following this offering, and that Hydro One will have significant debt capacity to fund future investments. Hydro One Inc. will remain a reporting issuer in Canada following the closing of this offering. Hydro One Limited does not intend to provide a guarantee in respect of Hydro One Inc.'s debt.

Driven by a stable regulated business, strong "A" category credit ratings and projected increases in its rate base, Hydro One expects to continue generating stable and growing net cash from operating activities to fund its ongoing sustaining capital investments and to support a strong and growing dividend. Additionally, the Company intends to use a portion of its net cash from operating activities in combination with additional debt to fund future development capital investments.

Robust and Predictable Growth Profile

Additions to Rate Base through Approved Capital Expenditures

Hydro One must continually invest in its transmission and distribution businesses in order to provide safe and reliable electricity service and meet its obligations as a regulated utility. A significant number of Hydro One's transmission and distribution assets were built in the 1960s and 1970s or earlier and are reaching the end of their service lives. The Company therefore expects that it will be required to make significant investments in its existing infrastructure over the long term. Over the past five fiscal years, the Company has spent an average of $1.5 billion per year on capital expenditures. When placed into service, these investments add to Hydro One's rate base, which grew during that period from $11.6 billion to $16.3 billion, representing a compound annual growth rate of 7.1%.

The Company incurs capital expenditures to maintain safety, reliability and integrity of its transmission and distribution assets and to allow for prudent growth necessary to continue to meet the evolving needs of its customers and the electricity market. This is achieved through a combination of sustaining capital expenditures, which are required to support the continued operation of Hydro One's existing assets, and development capital expenditures, which involve both additions to existing assets and large scale projects such as new transmission lines and transmission stations. Sustaining capital expenditures are recurring in nature and involve less regulatory and completion risk compared to large scale development projects.

Hydro One anticipates that it will spend an average of $1.5 billion per year over the next five years on total capital expenditures, with sustaining capital expenditures representing an average of approximately 60% of total capital expenditures in each year. The Company anticipates that these investments will contribute to improved reliability, customer service and operating efficiencies, as well as increased net cash from operating activities and net income from a growing rate base.

Projected Capital Expenditures for Transmission and Distribution Businesses	2015	2016	2017	2018	2019
			(millions)		
Transmission	$ 899	$ 866	$ 848	$ 839	$ 832
Distribution	$ 665	$ 669	$ 674	$ 678	$ 682
Total	**$1,564**	**$1,535**	**$1,522**	**$1,517**	**$1,514**

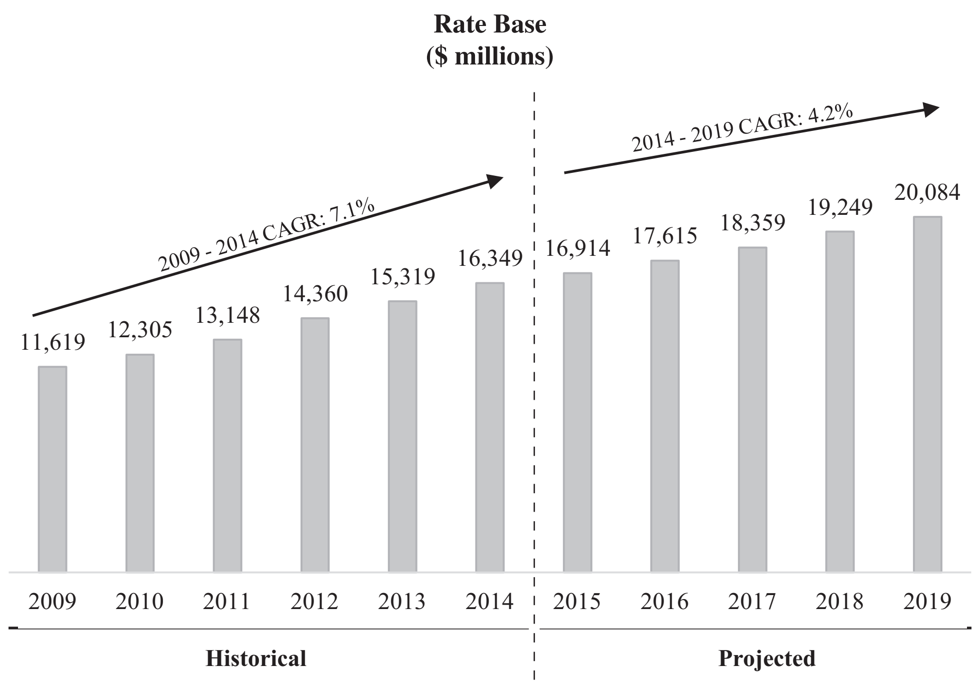
Projected Capital Expenditures by Category	2015	2016	2017	2018	2019
			(millions)		
Sustaining	$ 905	$ 891	$ 955	$1,022	$ 978
Development	$ 470	$ 444	$ 381	$ 321	$ 379
Other	$ 189	$ 200	$ 186	$ 174	$ 157
Total	**$1,564**	**$1,535**	**$1,522**	**$1,517**	**$1,514**

Notes:

(1) Projected capital expenditures may be considered forward-looking information, and reflect the Company's current expectations and assumptions relating to projects contemplated in the Company's capital expenditure programs and Ontario Energy Board approvals received to date. Transmission capital expenditures for 2015 and 2016 were previously approved by the board of directors of Hydro One Inc. and are consistent with the capital expenditures information presented in the most recent transmission rates application filed with the Ontario Energy Board, which led to the Ontario Energy Board's approval of Hydro One's 2015 rate order for transmission services. Distribution capital expenditures for 2015, 2016 and 2017 were previously approved by the board of directors of Hydro One Inc. and are consistent with the capital expenditures information presented in the most recent distribution rate application filed with the Ontario Energy Board, which led to the Ontario Energy Board's distribution rates decision for Hydro One's 2015, 2016 and 2017 years. Actual capital expenditures for any of the years referred to above may be greater or less than projected capital expenditures. See "Forward-Looking Information". See "Risk Factors" for a discussion of material factors that could cause actual capital expenditures to differ from projected capital expenditures.

(2) "Other" capital expenditures consist of special projects, such as those relating to information technology.

The impact of Hydro One's capital expenditures on its rate base is illustrated in the following graph, which shows both the historical rate base of Hydro One for the past five fiscal years and its projected rate base over the next five fiscal years through the addition of assets that are anticipated to be placed into service.



Notes:

(1) "CAGR" means compound annual growth rate.

(2) Projected rate base may be considered forward-looking information. The rate base in each year represents the combined rate base for Hydro One's transmission and distribution businesses. The transmission rate bases of Hydro One Networks Inc. for 2015 and 2016 have been approved by the Ontario Energy Board, subject to certain conditions in respect of in-service additions. The distribution rate bases of Hydro One Networks Inc. for 2015, 2016 and 2017, have been approved by the Ontario Energy Board. Transmission rate bases for 2017, 2018 and 2019, and distribution rate bases for 2018 and 2019, are projected based on Hydro One's current expectations and assumptions regarding investments in its transmission and distribution infrastructure and the timing of assets being included in Hydro One's rate base, and will be subject to Ontario Energy Board approval in connection with Hydro One's rate applications for those years. Transmission rate bases for 2017, 2018 and 2019, and distribution rate bases for 2018 and 2019, as approved by the Ontario Energy Board, may be higher or lower than the rate bases shown. See "Forward-Looking Information".

Development Capital Projects

Hydro One anticipates spending an average of approximately $400 million per year over the next five years on development capital projects for its transmission and distribution businesses. These capital projects typically involve longer development timelines. Hydro One has significant development experience, having designed and built substantially all of Ontario's transmission system and a large portion of its distribution system. This includes the Bruce-to-Milton transmission project, which was completed in 2012 on budget and six months ahead of schedule. This was the largest transmission infrastructure project in Ontario in 20 years and involved the construction of approximately 700 transmission towers and approximately 180 kilometres of double circuit lines. More recently, Hydro One was selected to develop the Northwest Bulk Transmission Line, another large scale transmission project that, if approved by the Ontario Energy Board, would reinforce the connection between Thunder Bay and Dryden.

As the Company owns substantially all of Ontario's transmission network, the Company believes that additional development opportunities for Hydro One may arise as a result of the requirement to connect new transmission lines to Hydro One's transmission system, even where Hydro One may not be the developer of the new line. For instance, in the case of the East-West Tie Line, which is being developed by NextBridge Infrastructure, management estimates that Hydro One may need to invest over $100 million in station upgrades in order to connect the new line to Hydro One's transmission system if the project is approved by the Ontario Energy Board.

Acquisition Opportunities

As the largest distributor in Ontario, Hydro One has been an active consolidator of local distribution companies. In the late 1990s and early 2000s, when significant changes were made to the electricity sector in Ontario, Hydro One acquired 88 individual local distribution companies, which were subsequently integrated into Hydro One's distribution business (with the exception of Hydro One Brampton Networks Inc., which was operated as a stand-alone entity). More recently, the Company acquired Haldimand Hydro in June 2015 and Norfolk Power in August 2014, adding more than 40,000 customers to its distribution network. A third Hydro One acquisition, of Woodstock Hydro, received Ontario Energy Board approval on September 11, 2015 and is expected to close later in 2015. Through these recent acquisitions, the Company will have increased its customer base by approximately 5%. Hydro One will continue to evaluate local distribution company consolidation opportunities in Ontario in the future and intends to pursue those acquisitions which deliver value to the Company and its shareholders.

Over time, the Company may also consider larger-scale acquisition opportunities or other strategic initiatives outside of Ontario to diversify its asset base and to leverage its strong operational expertise. These acquisition opportunities may include other providers of electrical transmission, distribution and other similar services in Canada or in the United States.

Significant Scale and Leadership Position in Ontario

Hydro One plays an essential role in the electricity system of Canada's most populous province. Hydro One owns and operates substantially all of Ontario's transmission system, and is also the largest electricity distributor in Ontario. Management believes that Hydro One's significant scale and leading position in the electricity industry in Ontario provides it with several key competitive advantages that may not be available to smaller utilities, including:

- a low cost of borrowing and broad access to debt capital markets in order to fund its development and growth initiatives,
- the ability to draw on a large and highly experienced in-house team of experts covering all key aspects of Hydro One's business, including asset management, operations, post-outage recovery, project design, engineering, procurement, project management and construction,
- the resources and commitment to prudently invest in innovation, continuous improvement and customer service initiatives and to improve the reliability and performance of Hydro One's transmission and distribution systems and reduce operations, maintenance and administration costs,
- a refined and comprehensive stakeholder engagement process that covers Hydro One's customers, municipalities, remote communities and other parties,
- extensive experience building and maintaining effective relationships with First Nations and Métis communities, and
- a leading role in working with regulatory authorities on developments with respect to energy policy, regulatory changes, new transmission and distribution investments, regional planning and new technologies.

Management believes that these strengths have increased Hydro One's operational effectiveness, helped it maintain a positive and constructive relationship with its regulators, customers and stakeholders and ultimately contributed to achieving successful outcomes in its applications for the approval of transmission and distribution rates, new development projects and the acquisition of local distribution companies.

Consistent and Stable, Rate-Regulated Environment

Hydro One's transmission and distribution businesses operate in a stable, rate-regulated environment. Management believes the Ontario Energy Board is regarded in the electricity industry as a stable and sophisticated regulator with a transparent and predictable rate setting process. The allowed return on equity determined by the Ontario Energy Board is set by a formula linked to long-term government bond yields and corporate bond spreads. See "Rate-Regulated Utilities – Value Drivers for a Rate-Regulated Utility – Return on Equity". Hydro One does not set the price of electricity and has no direct exposure to electricity price risk because the cost of electricity is passed on directly to consumers. The rates approved by the Ontario Energy Board for transmission and distribution services are intended to allow utilities to recover their cost of providing services and earn an allowed return on equity, while achieving productivity gains for the mutual benefit of utilities and their customers.

Over the past six years, the Company's allowed return on equity approved by the Ontario Energy Board has ranged from 8.39% to 9.66% for its transmission business and 9.30% to 9.85% for its distribution business.

Allowed Return on Equity

	2010	2011	2012	2013	2014	2015
Transmission	8.39%	9.66%	9.42%	8.93%	9.36%	9.30%
Distribution	9.85%	9.66%	9.66%	9.66%	9.66%	9.30%

Notes:

(1) Management anticipates that the return on equity set by the Ontario Energy Board will be lower in 2016 compared to 2015 due to decreases in interest rates.

Hydro One has earned or exceeded its allowed return on equity on a consolidated basis. For instance, the Company's actual returns on equity were 10.60% in 2010, 10.50% in 2011, 11.50% in 2012, 11.50% in 2013 and 10.00% in 2014, in each case, on a consolidated basis.

Proven Senior Management Team and Experienced Independent Board of Directors

Following this offering, Hydro One Limited will operate as an independent, commercially-oriented public company, with an experienced, independent board of directors and proven senior leadership team. Hydro One's current leadership has demonstrated the capability to execute Hydro One's strategic plan and drive performance improvements and shareholder returns. The Company will operate with an independent board of directors and autonomous decision making. As a shareholder of Hydro One Limited, the Province will engage in the business and affairs of Hydro One as an investor and not as a manager, as contemplated by the Governance Agreement. To support Hydro One's new direction, a new board of directors and senior leadership team were appointed in connection with this offering. Members of the new board of directors meet high standards of independence, commercial experience and director expertise and will oversee the Company's strategy, operations and growth as a publicly-listed company. The group includes Canadian business leaders, electricity sector experts, corporate directors and a former provincial Ombudsman.

Hydro One will be led by a highly experienced management team that together has extensive industry, operating and public company experience. Mayo Schmidt, the Company's new President and Chief Executive Officer, was formerly the Chief Executive Officer of Viterra Inc. and its predecessor, Saskatchewan Wheat Pool. Mr. Schmidt has a track record of leading large scale business transformation and growth while generating value and benefits for investors, employees and customers. At Viterra, Mr. Schmidt transformed a relatively small regional co-operative into a publicly-held, multi-billion dollar corporation with nearly 7,000 employees and operations around the world. In recognition of his accomplishments at Viterra, Mr. Schmidt was named "Chief Executive of the Year in 2009" by Canadian Business Magazine. Michael Vels, the Company's new Chief Financial Officer, was formerly the Chief Financial Officer of Maple Leaf Foods Inc. Mr. Vels brings to Hydro One considerable executive level experience in public company governance, debt and equity capital raising, mergers and acquisitions, business transformation and information technology. Mr. Schmidt and Mr. Vels join an established management team at Hydro One that has extensive experience with the Company's operations, assets and regulators. Mr. Schmidt and Mr. Vels are committed to improving the management of the Company and driving performance improvements and cultural change.

Transmission Business

Overview

Hydro One’s transmission business consists of owning, operating and maintaining Hydro One’s transmission system, which accounts for 96% of Ontario’s transmission network. This includes the Company’s 66% interest in B2M Limited Partnership, a limited partnership between Hydro One and the Saugeen Ojibway Nation, which owns most of the assets relating to specific Bruce-to-Milton transmission line assets. The Company’s transmission business is one of the largest in North America, and is a rate-regulated business that earns revenues mainly from charging transmission rates that must be approved by the Ontario Energy Board. The Company’s transmission rates are determined based on a cost of service model. Transmission rates are collected by the IESO and are remitted by the IESO to Hydro One on a monthly basis, which means that Hydro One’s transmission business has no direct exposure to end-customer counterparty risk.

Transmission rates are based on monthly peak electricity demand across Hydro One’s transmission network. This gives rise to seasonal variations in Hydro One’s transmission revenues, which are generally higher in the summer and winter due to increased demand, and lower during other periods of reduced demand. Hydro One’s transmission revenues also include export revenues associated with transmitting excess generation to markets outside of Ontario. Ancillary revenue include revenues from providing maintenance services to generators and from allowing third parties to use certain Company lands.

Business

The Company’s transmission system serves substantially all of Ontario, with the exception of the Sault Ste. Marie, James Bay and Fort Erie areas, and transported approximately 139.8 TWh of energy throughout the province in 2014. Hydro One’s transmission customers consist of 48 local distribution companies (including Hydro One’s own distribution business) and 90 large industrial customers connected directly to the transmission network, including automotive, manufacturing, chemical and natural resources businesses. Electricity delivered over the Company’s transmission network is supplied by 116 generators in Ontario and electricity sourced from outside the province through interties.

The high voltage power lines in Hydro One’s transmission network are categorized as either lines which form part of the “bulk electricity system”, or “area supply lines”. Power lines which form part of the bulk electricity system typically connect major generation facilities with transmission stations and often cover long distances, while area supply lines serve a local region. Ontario’s transmission system is connected to the transmission systems of Manitoba, Michigan, Minnesota, New York and Québec through the use of interties, allowing for the import and export of electricity to and from Ontario.

Hydro One’s transmission assets were $12,822 million as at June 30, 2015 and include transmission stations, transmission lines, a control centre and telecommunications facilities. Hydro One has approximately 291 transmission stations and approximately 29,000 circuit kilometres of high voltage lines whose major components include cables, conductors and wood or steel support structures. All of these lines are overhead power lines except for approximately 274 circuit kilometres of underground cables located in certain urban areas.

B2M Limited Partnership is Hydro One’s partnership with the Saugeen Ojibway Nation with respect to the Bruce-to-Milton transmission line. B2M Limited Partnership owns the high-voltage transmission lines and related equipment, such as the steel support structures, conductors and foundations, while Hydro One owns the transmission stations that connect to the lines. Hydro One maintains and operates the Bruce-to-Milton line. It also owns the general partner of B2M Limited Partnership, and has a 66% economic interest in the partnership.

Hydro One’s transmission network is managed from a central location north of Toronto, Ontario. This centre monitors and controls the Company’s entire transmission network, and has the capability to remotely monitor and operate transmission equipment, respond to alarms and contingencies and restore and re-route interrupted power. There is a fully functional back-up facility which would be staffed in the event of an evacuation of the centre. The Company is currently developing plans to replace its current back-up facility with a new facility.

Hydro One uses special telecommunications systems that are necessary for the protection and operation of its transmission and distribution networks. These systems are subject to very stringent reliability and security requirements, as they must be secure and continue to function during periods of prolonged power outages. These systems help the Company meet its reliability obligations and facilitate the restoration of power following service interruptions.

Regulation

Transmission Rate Setting

In Ontario, transmission rates are currently determined based on a cost of service model. The Ontario Energy Board sets transmission rates based on a two-step process.

First, all transmitters, including Hydro One, apply to the Ontario Energy Board for the approval of their revenue requirements, which cover the transmitters' cost of service for providing transmission services and allowed return on equity. Once approved by the Ontario Energy Board, transmission revenue requirements generally cover the subsequent two-year period with an acknowledged adjustment to occur in the second year to update for the then current cost of debt and return on equity.

Second, the Ontario Energy Board aggregates the total revenue requirements of all transmitters in Ontario and applies a formula in order to arrive at a single set of rates that are charged for the three types of transmission services applicable in Ontario. These consist of network services, line connection services and transformation connection services. The three separate rates charged for these services are the same for all transmitters, and are referred to in Ontario as "uniform transmission rates".

Uniform transmission rates for all transmitters are set by the Ontario Energy Board on an annual basis, using the revenue requirements set out in the most recent rate decision issued with respect to each transmitter.

Applications to the Ontario Energy Board for the approval of a transmitter's revenue requirements use a forward test year. See "Rate-Regulated Utilities – Rate Applications in Ontario – Application Process". A transmitter earns more revenues from transmission rates when peak electricity demand is higher than forecast in its rate application, and conversely earns less revenues from transmission rates when peak electricity demand is lower than forecast in its rate application.

Recent Transmission Rate Applications

Hydro One and B2M Limited Partnership make separate applications for the approval of their revenue requirements for transmission services based on a cost of service model.

On January 8, 2015, the Ontario Energy Board approved Hydro One's 2015 transmission rate order for transmission services, which provided for a revenue requirement of $1,477 million for 2015 and $1,516 million for 2016. These revenue requirements reflect an approved rate base of $9,651 million, return on equity of 9.30% and deemed capital structure of 60% debt and 40% equity. The Ontario Energy Board annually adjusts Hydro One's revenue requirements previously approved in a rate decision to reflect more current costs of debt and return on equity. The adjustment to Hydro One's 2016 revenue requirement will be reflected in a subsequent rate order. Management anticipates that the revenue requirement for 2016 will be adjusted downward due to an anticipated decrease in the allowable return on equity set by the Ontario Energy Board, reflecting lower interest rates.

B2M Limited Partnership is currently subject to an interim rate order that was approved by the Ontario Energy Board in December 2014. In March 2015, B2M Limited Partnership filed an application for revenue requirements covering the 2015 to 2019 period. B2M Limited Partnership has requested revenue requirements of $39 million for 2015, $36 million for 2016, $37 million for 2017, $38 million for 2018 and $37 million for 2019. A decision is expected in the fourth quarter of 2015.

For a summary of Hydro One's recent applications to the Ontario Energy Board, see "Management's Discussion and Analysis of Financial Condition and Results of Operations – Developments in 2015 – Applications to the Ontario Energy Board". Copies of Hydro One's applications to the Ontario Energy Board and related documentation and the approvals of the Ontario Energy Board are publicly available on the website of the Ontario Energy Board at www.ontarioenergyboard.ca. Such applications, documentation and approvals are not incorporated by reference in, and do not form part of, this prospectus.

Reliability Standards for Transmission

The Company's transmission business is required to comply with various rules and standards for transmission reliability, including mandatory standards established by the NERC and the NPCC, both of which are industry organizations involved in promoting and improving the reliability of transmission networks in North America. These reliability standards are enforced by both the IESO and the National Energy Board.

Among its standards, the NERC has also established and continues to issue revised requirements to ensure that utilities and other users, owners and operators of the bulk electricity system in North America have appropriate procedures in place to protect critical infrastructure from cyber-attack. Hydro One's physical, electronic and information security processes have been and are being upgraded to meet these revised requirements. Hydro One expects to continue to perform additional work and incur further costs in order to comply with the NERC's updated and revised standards.

Hydro One anticipates that the costs associated with meeting applicable reliability and critical infrastructure standards will be incurred annually over a number of years, and will be recovered in rates.

Regional Planning

The Ontario Energy Board oversees regional planning processes to ensure that transmission and distribution investments are coordinated at a regional level. The Ontario Energy Board has indicated it will rely on regional planning studies and reports to support rate applications submitted by transmitters and distributors and "leave to construct" applications submitted by transmitters. In Ontario, the regional planning process is led by the transmitter responsible for a particular geographic region. For this purpose, the province is divided into 21 regions. As Hydro One is the largest transmitter in Ontario, it plays a key role in the regional planning process and is responsible for leading the regional planning process in 19 of the 21 designated regions. The completion of the first cycle of regional plans is expected over the next two years. Once a plan is finalized and approved by the Ontario Energy Board, the transmitter responsible for each region will implement the recommended transmission investments and distributors in the region will implement the recommended distribution investments in their respective service territories.

In conducting the regional planning, Hydro One works closely with the IESO and all distributors in the region to jointly identify needs and develop transmission and distribution investment options. Hydro One also coordinates with the IESO on its Integrated Regional Resource Planning process.

Capital Expenditures

The Company's transmission capital expenditure plan is designed to address Ontario's changing generation profile, accommodate load growth in areas throughout Ontario and support the expected increase in renewable energy generation. Additionally, this plan seeks to sustain or improve Hydro One's transmission reliability performance, as determined by measures such as the average length (in minutes) of unplanned interruptions per delivery point. The Company's capital expenditure plans are included in Hydro One's applications for transmission rates submitted to the Ontario Energy Board.

Investments in Hydro One's existing infrastructure are critical in order to maintain the safety, reliability and integrity of its transmission network. The Company incurs both sustaining capital expenditures and development capital expenditures required to upgrade or to enhance Hydro One's system capabilities and networks. Sustaining capital expenditures are those investments required to replace or refurbish lines or station components to ensure that existing transmission assets function as originally designed. Development capital expenditures include those investments required to develop and build large-scale projects such as new transmission lines and stations as well as smaller projects such as transmission line or station reinforcements, extensions or additions. The Company expects that it will be required to make significant investments in its existing infrastructure over the long term. The Company anticipates that it will spend $800 million to $900 million per year over the next five years on capital expenditures relating to its transmission business. See "Business of Hydro One – Investment Highlights – Robust and Predictable Growth Profile". Work related to the Company's sustaining or development capital projects may require the Company to shut down primary transmission lines in order to accommodate the work. While this may increase the duration of outages, the Company believes it is important to continue with its planned capital projects work. See "Management's Discussion and Analysis of Financial Condition and Results of Operations – Summary of Annual Results – Performance Measures and Targets – Continuous Improvement and Cost-effectiveness".

Hydro One's plans to maintain, refurbish or replace existing assets are developed on the basis of maintenance standards, transmission asset condition assessments and end-of-service life criteria specific to each type of asset.

Priorities are assigned to each type of investment based on the risks that it mitigates. Hydro One is continuously enhancing its asset planning process through the development and use of new tools. Multi-variable planning optimization software is employed to develop a prioritized portfolio of investments spanning Hydro One's entire operations, in order to establish investment plans that manage the risks associated with electrical safety, reliability, environmental considerations, customer satisfaction and operational efficiencies.

A key input to Hydro One's planning process and the optimization software is an accurate assessment of transmission asset condition. In 2013, Hydro One began using its Asset Analytics tool, which uses data regarding its assets and performance algorithms to improve its ability to establish transmission asset condition and criticality. The results from the tool support fact-based decisions regarding maintenance, refurbishment or replacement needs of specific assets and are one of a number of key inputs into the planning process. The Asset Analytics tool is relatively new and the Company continues to work on adding to this tool's data set, improving the quality of its data and refining its algorithms and logic. Hydro One's planners use the information drawn from the Asset Analytics tool along with other information and data to make planning or investment decisions.

The Company also engages with various stakeholders, including its customers, to determine the need, timing and technical solutions for new connection and transmission facilities or upgrades, as well as with affected communities and parties who may be impacted by the project. The Company also engages with First Nations and Métis communities whose rights may be affected as part of the project development process for new or upgraded transmission lines.

Competitive Conditions

The Company's operations are currently limited to Ontario, where the Company operates and maintains substantially all of Ontario's transmission system. Competition for transmission services in Ontario is currently limited. The adoption by the Ontario Energy Board of uniform transmission rates that apply to all transmitters also reduces the financial incentive for customers to seek alternative transmission providers, since each transmitter in Ontario charges the same uniform rate for transmission services. Hydro One competes with other transmitters for the opportunity to build new large-scale transmission facilities in Ontario. Management believes that Hydro One is well-positioned to pursue the development of such facilities. Hydro One does not compete with other transmitters with respect to investments which are made to sustain or develop its existing transmission infrastructure.

Distribution Business

Overview

Hydro One's distribution business consists of owning, operating and maintaining Hydro One's distribution system, which it owns primarily through Hydro One Networks Inc., the largest local distribution company in Ontario. The Company's distribution system is also the largest in Ontario. The Company's distribution business is a rate-regulated business that earns revenues mainly by charging distribution rates that must be approved by the Ontario Energy Board. The Company's distribution rates are generally determined using a performance-based model, except for the distribution rates of Hydro One Remote Communities Inc., which are set on a cost recovery basis and do not include a return on equity.

Distribution revenues include distribution rates approved by the Ontario Energy Board and amounts to reimburse Hydro One for the cost of purchasing electricity delivered to its distribution customers. Distribution revenues also include minor ancillary service revenues, such as fees related to the joint use of the Company's distribution poles by participants in the telecommunications and cable television industries, as well as miscellaneous charges such as charges for late payments.

As at June 30, 2015, Hydro One's distribution assets were $9,888 million, including Hydro One Brampton Networks Inc. Hydro One's current distribution business no longer includes the business of Hydro One Brampton Networks Inc. as on August 31, 2015, all of the issued and outstanding shares of Hydro One Brampton Networks Inc. were transferred to a company wholly-owned by the Province. See "Pre-Closing Transactions" for additional detail concerning the transfer and related transactions.

Business

During 2014, Hydro One (excluding Hydro One Brampton Networks Inc.) delivered electricity through its distribution network to approximately 1.3 million residential and business customers, most of whom are located in rural areas, as well as 56 local distribution companies.

Hydro One's distribution system (excluding Hydro One Brampton Networks Inc.) includes approximately 122,000 circuit kilometres of primary low-voltage distribution lines and approximately 1,000 distribution and regulating stations. Other distribution assets include poles, transformers, service centres and equipment.

Hydro One's distribution system was designed to service a rural territory. Because of the lower population density in the Company's service territory, the Company's costs to provide distribution services may be higher than distributors who service urban areas. As well, unlike the distribution systems found in urban areas, Hydro One's distribution system was not designed to be inter-connected in loops with other distribution lines, with the result that interruptions experienced at any point along a distribution line in Hydro One's network can cause all customers downstream of the interruption point to lose power. Accordingly, the reliability of Hydro One's distribution system would generally be expected to be inherently lower than that of local distribution companies which service urban territories. Fallen trees and component failures on the Company's distribution lines require immediate repair or replacement in order to restore service. As a result, the Company engages in vegetation management activities to maintain the reliability of Hydro One's distribution system on a preventative basis. This consists of the trimming or removal of trees to lower the risk of contact with distribution lines, thereby reducing the risk of power outages. The Company's monitoring systems assist with determining areas of priority and with system restoration. The Company relies on its local line crews comprised of full-time and union hiring hall staff for these preventive power outage and restoration activities. Hydro One may have a longer vegetation management cycle as compared with that of other local distribution companies. The Company believes this is consistent with its goal of maintaining a reasonable balance of reliability for its distribution system at a reasonable cost to its customers.

The Company completed the acquisitions of Haldimand Hydro in June 2015 and Norfolk Power in August 2014, adding more than 40,000 customers to its distribution network. A third acquisition – Hydro One's acquisition of Woodstock Hydro – received Ontario Energy Board approval on September 11, 2015 and is expected to close later in 2015. Woodstock Hydro has approximately 16,000 customers. Through these acquisitions, the Company will have increased its customer base by approximately 5%. Customers of Haldimand Hydro and Norfolk Power have seen, and customers of Woodstock Hydro are expected to see, a reduction in their monthly distribution rates, as well as a freeze in distribution rates for five years.

Hydro One is committed to continuously improving customer service and putting customers first. This includes specific, measurable commitments to customers that encompass all areas of service, backed-up by best-in-class practices and performance metrics that Hydro One will share openly with its customers. The Company implemented a new billing system in 2013 as part of a larger initiative to adopt a new enterprise management platform. In connection with this implementation, some of Hydro One's customers experienced problems with their electricity bills, including errors or delays in receiving bills. The Company corrected the cause of these errors and delays and sought to address the resulting inconvenience caused to customers. Hydro One's new billing system is now outperforming its previous system in terms of timeliness, accuracy and reliability. Better processes have also been implemented for addressing and resolving billing issues in a timely manner. For the second quarter of 2015, "billing accuracy", as defined by the Ontario Energy Board, was 98.6% against Hydro One's target of 98.0% (which reflects the approval by the Ontario Energy Board of an exemption application excluding certain customers from this calculation), and the Company's internal measure of billing quality was 99.8% against a target of 99.0%. Further action and improvements are continuing to be pursued. Despite having taken these measures, the Company understands that a customer of Hydro One has commenced an action, proposed as a class action, alleging improper billing and account management practices in connection with the implementation of Hydro One's billing system. This claim is in a very early stage and has not been certified as a class action. Hydro One intends to defend the action. See "Management's Discussion and Analysis of Financial Condition and Results of Operations – Developments in 2015 – Class Action Lawsuit".

Hydro One's distribution business is involved in the connection of new sources of electricity generation, including renewable energy. Hydro One invests in upgrades and modifications to its distribution system in order to accommodate these new sources of generation and ensure the continued reliability of its distribution network. Hydro One has connected approximately 13,000 small, mid-size and large embedded generators to its distribution network, including approximately 12,200 generators with capacities of up to 10 kW. Hydro One also currently has approximately 1,500 generators that are pending connection.

As the largest distributor in Ontario, Hydro One played a major role in the installation of smart meters and the migration of distribution customers to time of use pricing. Smart meters are regarded by the Province and Hydro One as an integral means of promoting a culture of conservation. As of December 31, 2014, Hydro One had installed approximately 1.4 million smart meters (including smart meters for customers of Hydro One Brampton Networks Inc.), which provide customers with access to information about their electricity consumption on a daily basis, allowing customers to change their electricity consumption patterns and reduce their costs. Hydro One has completed all material activities associated with the implementation of smart meters, and has transitioned the vast majority of its customers to time of use pricing.

Hydro One's distribution business also includes the business of its wholly-owned subsidiary, Hydro One Remote Communities Inc., which supplies electricity to customers in remote communities in northern Ontario. Electricity used by these remote communities is produced by diesel generators, supplemented by small amounts of wind or hydroelectric generation. Hydro One operates this business on a cost recovery basis.

Regulation

Distribution Rates

In Ontario, distribution rates are determined using a performance-based model set out in the Ontario Energy Board's *Renewed Regulatory Framework for Electricity Distributors: A Performance-Based Approach*, which is sometimes referred to as the "**RRFE**". Under the RRFE, which was issued in 2012, distributors in Ontario may choose one of three rate-setting methods, depending on their capital requirements:

- **4th Generation Incentive Rate-Setting** – suitable for distributors that anticipate some incremental investment needs will arise during the plan term,
- **Custom Incentive Rate-Setting** – suitable for those distributors with large or highly variable capital requirements, and
- **Annual Incentive Rate-Setting Index** – suitable for distributors with limited incremental capital requirements.

The RRFE contemplates that a distributor will apply for the approval of its revenue requirement for an initial base year covered by the rate decision. The revenue requirement for subsequent years is determined based on a formula that accounts for inflation and certain productivity factors set by the regulator. The revenue requirement in these subsequent years is set on the assumption that the distributor is lowering its cost of service over the period covered by the rate decision due to efficiency or productivity improvements. The RRFE allows the distributor to retain all or a portion of the cost savings achieved in excess of those established by the regulator during the period covered by the rate decision. This allows the distributor to earn more than its allowed return on equity.

The RRFE provides incentives for distributors to achieve certain performance outcomes, namely:

- **Customer Focus** – services are provided in a manner that responds to identified customer preferences,
- **Operational Effectiveness** – continuous improvement in productivity and cost performance is achieved, and utilities deliver on system reliability and quality objectives,
- **Public Policy Responsiveness** – utilities deliver on obligations mandated by government, and
- **Financial Performance** – financial viability is maintained and savings from operational effectiveness are sustainable.

A distributor must submit proposed performance measures as part of its application for distribution rates under the RRFE. The Ontario Energy Board issued its report, *Performance Measurement for Electricity Distributors: A Scorecard Approach*, which sets out its policies on measures to assess a distributor's effectiveness and methods of improvement in achieving the performance outcomes referred to above. The scorecard currently contains quantitative measures in the areas of service quality, customer satisfaction, safety, system reliability, asset management, cost control and financial ratios.

Distributors may also propose their own performance measures for approval by the Ontario Energy Board. In its most recent distribution application, Hydro One submitted eight additional quantitative measures relating to areas that will be the subject of increased spending levels over the next few years, such as pole replacements, distribution station refurbishments and vegetation management. Distributors are required to report to the Ontario Energy Board on their performance against the performance measures approved as part of their most recent rate decision.

The Ontario Energy Board's review process under the RRFE follows a similar process to that of a transmission rate application for the review of the anticipated cost of service for providing distribution services, other than as noted above. Once the revenue requirement for distribution services is determined, it is allocated across the distributor's customer rate classes using a methodology approved by the Ontario Energy Board. This results in the setting of individual rates for distribution services based on each customer rate class. Customer rate classes for Hydro One are reflective of the size and type of customer (such as residential, small commercial, large commercial/industrial, etc.) and are in part tied to the population density of the areas served (such as high density urban areas, medium density areas, and low density rural areas). Hydro One currently has 13 customer classes.

Unlike uniform transmission rates, distribution rates in Ontario are not the same for all distributors and reflect the particular circumstances of each distributor, including its own costs of providing electricity service to its own particular customers. The recently issued Ontario Energy Board policy, *A New Distribution Rate Design for Residential Electricity Customers*, will change the current distribution rate design (a combination of a fixed monthly rate and a variable charge) to a fixed monthly charge only. Implementation will occur over the next four to seven years for Hydro One's residential customers.

The OEB has also initiated a working group to consider possible changes to the design of rates for commercial industrial customers. Changes to rate design will not impact the rates revenue requirement to be collected for each customer class.

Distribution Rate Applications

The Company's distribution rates, other than the distribution rates of Hydro One Remote Communities Inc., are determined using a performance-based model.

In December 2013, Hydro One filed its 2015 to 2019 distribution rate application with the Ontario Energy Board under the RRFE framework. Hydro One selected the Custom Incentive Rate-Setting option because it believed that this option most closely fit the Company's circumstances, as the Company is contemplating significant capital expenditures over the term of its application, which would have been in excess of what would be permitted under the two other RRFE rate application options. On March 12, 2015, the Ontario Energy Board issued a decision regarding Hydro One's distribution rates for a three year period from 2015 to 2017, providing for a revenue requirement of $1,326 million for 2015, $1,430 million for 2016 and $1,486 million for 2017. The 2015 revenue requirement reflects an approved rate base of $6,552 million, return on equity of 9.30% and a deemed capital structure of 60% debt and 40% equity. The rates are effective as of January 1 in each year. Hydro One's revenue requirement for 2016 and 2017 are anticipated to be adjusted to reflect more current costs of debt and return on equity. These adjustments will be reflected in subsequent rate orders. Management anticipates that the revenue requirement for 2016 will be adjusted downward due to an anticipated decrease in the allowable return on equity set by the Ontario Energy Board, reflecting lower interest rates.

Hydro One filed its application as a "Custom Cost of Service" application and included within the application certain productivity improvements and cost performance metrics. However, the Ontario Energy Board did not consider Hydro One's application to be sufficiently aligned with the objectives of the RRFE policy to approve the application as presented. The Ontario Energy Board approved rates for 2015, 2016 and 2017 using a cost of service methodology, based on the evidence that was provided. The Ontario Energy Board directed Hydro One to enhance its next distribution rate application in the areas of outcome-based regulation, externally imposed incentives, benchmarking, continuous improvement and value to customers. This includes the preparation of a number of benchmarking and cost related studies in order to provide the necessary benchmarking evidence and incentives for continuous improvement. Hydro One intends to comply with these directions, and anticipates that rates beyond 2017 will be set under the performance-based model.

Hydro One Remote Communities Inc. is not subject to the Ontario Energy Board's performance-based model for rate-setting, as it is exempt from certain provisions of the Electricity Act which relate to the competitive market. Hydro One Remote Communities Inc. applies for rates on an annual basis. The Ontario Energy Board has approved its distribution rates for 2015. The distribution rates of Hydro One Remote Communities Inc. are set on a cost recovery basis and do not include a return on equity.

For a summary of Hydro One's recent applications to the Ontario Energy Board, see "Management's Discussion and Analysis of Financial Condition and Results of Operations – Developments in 2015 – Applications to the Ontario Energy Board". Copies of Hydro One's applications to the Ontario Energy Board and related documentation and the approvals of the Ontario Energy Board are publicly available on the website of the Ontario Energy Board at www.ontarioenergyboard.ca. Such applications, documentation and approvals are not incorporated by reference in, and do not form part of, this prospectus.

Conservation and Demand Management

Conservation initiatives are becoming a more important part of energy policy in Ontario and other jurisdictions. Conservation and demand management ("**CDM**") requirements in Ontario require distributors to achieve specific energy savings targets by encouraging their customers to reduce their energy usage. Distributors seek to achieve these targets through a number of different initiatives, including by offering customers energy saving devices for use at home, cash rebates for the purchase of energy efficient appliances and incentives for the purchase of energy efficient lightbulbs and other products. Distributors are responsible for developing and submitting CDM plans and reporting on their progress towards achieving specific energy-savings targets. The IESO oversees compliance with CDM requirements in Ontario, and also reimburses distributors for the costs of complying with CDM requirements. Hydro One expects that its costs of complying with CDM requirements will be fully reimbursed by the IESO. As a result, CDM-related costs that are reimbursed by the IESO are not included in Hydro One's rate applications to the Ontario Energy Board.

Distributors in Ontario are collectively required to achieve a total of 7 TWh of electricity savings by December 31, 2020, with each local distribution company being allocated individual energy-savings targets. Hydro One Networks Inc.'s distribution business was assigned a peak demand reduction target of approximately 214 MW and an energy reduction target of 1,130 GWh for the 2011-2014 years, which was equivalent to approximately a 5% peak demand reduction and a 5% energy reduction. Hydro One Networks Inc. achieved 167.4 MW in peak demand savings and 898.4 GWh in energy savings, which represent 78.4% and 79.5% of its peak demand and energy reduction targets, respectively. The Ontario Energy Board has recently advised that it will allow rounding up of numbers that end in 0.5% or higher such that the 80% threshold for a CDM target will be considered to have been met if a distributor has achieved 79.5% to 79.9% of its target. As a result, Hydro One Networks Inc. did not meet its peak demand reduction target but is considered to have met 80% of its energy savings target. The Ontario Energy Board has indicated that it will not take any compliance action related to a distributor who does not meet its peak demand target, and will review on a case-by-case basis any instances where a distributor has not met 80% of its energy savings target and will determine next steps at that time. The Ontario Energy Board has further indicated that it expects that distributors will provide detail on their performance in achieving their peak demand and energy savings targets, both successes and challenges. Distributors that have not met at least 80% of their energy savings target are also expected to include details of efforts they took during the 2011-2014 period to address the shortfall in the expected results and to explain why those efforts were insufficient or unsuccessful. As Hydro One Networks Inc. is considered to have achieved 80% of its energy reduction target, it will therefore not be subject to the requirement to include these additional details in its CDM reports.

New targets and budgets were allocated to distributors in October 2014. Hydro One Networks Inc.'s 2015-2020 CDM savings target is 1,159 GWh. Hydro One Networks Inc.'s CDM plan was approved by the IESO on July 8, 2015.

Capital Expenditures

Hydro One is continually engaged in the replacement of distribution assets that have reached the end of their service lives. Capital expenditures for the Company's distribution business in the near term are anticipated to focus on new load connections, trouble calls and storm damage, wood pole replacement, and system capability reinforcement. In addition, the Company expects to continue to construct new distribution lines and stations in the future in response to system growth forecasts, continued suburban community development, high load relief requirements and requirements to connect new sources of generation. The Company expects that it will spend $600 million to $700 million per year over the next five years on capital expenditures relating to its distribution business. See "Business of Hydro One – Investment Highlights – Robust and Predictable Growth Profile".

Hydro One is continuing its efforts to make the distribution system more efficient and reliable, including investments in Hydro One's smart grid project, which it refers to as its Distribution Modernization Project. The Distribution Modernization Project involves the development of a functioning smart grid located in Owen Sound, Ontario. Through this project, Hydro One is piloting, testing, validating and creating a foundation for implementing a smart grid on a larger scale in order to enable distributed generation integration, improve reliability and operations, and enhance outage restoration and network planning. Work on the initial phase of the Distribution Modernization Project is expected to be completed by 2017.

Competitive Conditions

Hydro One's distribution service area is set out in its licence issued by the Ontario Energy Board. Only one distributor is permitted to provide distribution services in a service territory, and distributors have exclusive rights to provide service to new customers located within their service territory. As a result, there is very little direct competition for distribution services in Ontario, except near the borders of adjoining service territories where a distributor may apply to the Ontario Energy Board to claim the right to serve new customers who are not currently connected to its distribution grid. In order to create more efficiency in the distribution sector, the Council has endorsed the need for faster consolidation among local distribution companies in Ontario. This may result in competition for acquisition or merger opportunities. Potential acquirors may include strategic and financial buyers, in addition to other local distribution companies.

Other Business

Hydro One's other business segment principally consists of its telecommunications business, which provides telecommunications support for the Company's transmission and distribution businesses, and also markets and sells fibre optic capacity to telecommunications carriers and commercial customers with broadband network requirements. This business is carried out by its wholly-owned subsidiary, Hydro One Telecom Inc.

Hydro One's telecommunications business is not rate-regulated. However, Hydro One Telecom Inc. is registered with the Canadian Radio-television and Telecommunications Commission as a non-dominant, facilities-based carrier, providing broadband telecommunications services in Ontario with connections to Montreal, Québec, Buffalo, New York and Detroit, Michigan.

Review of Operations

Hydro One has been focused on the identification of opportunities for improved corporate performance and the development of strategies to drive more efficient, cost-effective operations. Hydro One conducts regular reviews of key corporate activities and programs, covering areas such as construction services and project management practices, asset deployment and controls, information technology and cybersecurity, vegetation management practices, fleet services and utilization, supply chain management and business continuity planning, and has identified areas requiring improvements. The Ontario Energy Board's rate decisions also contain directions to Hydro One to reduce costs and improve value to customers. In May 2015, the Auditor General of Ontario announced that Hydro One's asset management practices would be covered among the 13 "value-for-money" audits planned for inclusion in her 2015 Annual Report, which is expected to be tabled and become public in December 2015. This will be the last "value-for-money" audit that the Auditor General conducts for Hydro One. Hydro One expects that report to be critical of its management practices in some of these areas, including its interactions with the Ontario Energy Board, and is continuing to work with the Auditor General and her staff in connection with the audit. Hydro One expects to provide formal responses to her recommendations, once finalized, for inclusion in the Auditor General's 2015 Annual Report.

Hydro One's recently appointed board of directors and senior management team are committed to improving the management of the Company's assets and driving performance improvements across the Company's operations. The new management team expects to draw on internal reviews, objectives communicated in the Ontario Energy Board's rate decisions, as well as any recommendations forthcoming in the Auditor General's audit, in developing and implementing the Company's strategy and related performance goals.

First Nations and Métis Communities

Management believes that building and maintaining effective relationships with First Nations and Métis communities is important to achieving the Company's corporate objectives. Hydro One is committed to working with First Nations and Métis peoples in a spirit of cooperation and shared responsibility, which it believes it has been able to demonstrate by developing an equity partnership with the Saugeen Ojibway Nation in respect of the Bruce-to-Milton transmission line. Hydro One's First Nations and Métis Relations policy guides all employees of Hydro One, and the Company has a dedicated team responsible for First Nations and Métis matters. Hydro One has several programs in place to ensure that the interests of First Nations and Métis communities and their citizens are considered and addressed. These include dedicated summer student positions, pre-apprenticeship training opportunities, scholarships which provide opportunities for work terms, First Nations and Métis procurement procedures and community investments.

The Company's engagement with First Nations and Métis communities is overseen by the Company's Health, Safety, Environment and First Nations & Métis Committee. This Committee is responsible for assisting the Board in discharging the Board's oversight responsibilities relating to effective occupational health and safety and environmental policies and practices at Hydro One, and its relationship with First Nations and Métis communities.

Employees and Outsourced Services

Hydro One has a highly skilled and flexible work force of over 5,400 regular employees and over 3,300 non-regular employees province-wide, comprising a mix of skilled trades, lines staff, engineering, professional, managerial and executive personnel. Employees work on a variety of projects covering different aspects of the Company's business, which include field work in relation to the Company's transmission and distribution networks, engineering and construction services and stations and operations and maintenance activities. Hydro One's experienced engineering and construction services team was responsible for designing and building Hydro One's transmission system, with approximately one-third of the engineering, procurement and construction work being executed by external contractors.

Hydro One's regular employees are supplemented primarily by accessing a large external labour force available through arrangements with the Company's trade unions for variable workers, sometimes referred to as "hiring halls", and also by access to contract personnel. The hiring halls offer Hydro One the ability to access highly trained and appropriately skilled workers on a project-by-project basis. This provides the Company with more flexibility to address seasonal needs and unanticipated changes to its budgeted work programs. The Company also offers apprenticeship and technical training programs to ensure that future staffing needs will continue to be met.

Hydro One's capital projects are staffed using a combination of in-house engineering, design, procurement, project management, construction and commissioning personnel and third party service providers who may be contracted to provide some or all of these services, depending on the circumstances. Decisions with respect to the use of third party service providers are made based on the complexity of the capital project, estimated cost differential and an evaluation of various risks and factors. These factors include project risk, potential risks to other assets of Hydro One, the impact on customers and worker safety considerations. Hydro One's experienced hiring hall construction staff is typically utilized for sustainment work on assets involving working in a "live" electricity environment, while third parties are typically engaged for new construction, standard design work or lower risk projects. All construction personnel, regardless of their source, are unionized.

To gain efficiencies and cost reductions, Hydro One has outsourced certain non-core functions, including facilities management services with respect to its stations and other facilities, and certain back-office services such as information technology, payroll, supply chain, call centre and accounting services. Inergi LP (an affiliate of Capgemini Canada Inc.) provides the Company with back-office services and call centre services under an agreement that expires on December 31, 2019 for back-office services and February 28, 2018 for call centre services. The Company has an option to renew the agreement for two additional terms of one year each. Brookfield Global Integrated Solutions (formerly Brookfield Johnson Controls Canada) provides the Company with facilities management services under an agreement that expires on December 31, 2024, with an option in favour of the Company to renew the agreement for an additional term of three years.

The following table sets out the number of Hydro One employees represented by unions as of June 30, 2015. The Company also has 614 regular management employees and 28 non-regular management employees.

Union	Regular Employees	Non-Regular Employees
Power Workers' Union	3,455	1,932(1)
The Society of Energy Professionals	1,402	55
Canadian Union of Skilled Workers and construction building trade unions(2)	0	1,351

Notes:

(1) Includes 1642 non-regular "hiring hall" employees covered by the Power Workers' Union agreement.

(2) Employees are jointly represented by both unions. The construction building trade unions have collective agreements with the Electrical Power Sector Construction Association ("EPSCA").

The Power Workers' Union represents the majority of the skilled trade personnel employed by Hydro One. On April 14, 2015, Hydro One Inc. reached an agreement with the Power Workers' Union for the renewal of their collective agreement. This new collective agreement was ratified by the board of directors of Hydro One Inc. on

July 21, 2015 and by the Power Workers' Union on July 3, 2015. The agreement is for a three-year term, covering the period from April 1, 2015 to March 31, 2018. It provides a 1% wage increase annually to the employees represented by the Power Workers' Union, which is offset by savings derived from flexibility negotiated in the collective agreement, including new contracting-out provisions. Under the renewal collective agreement, employees represented by the Power Workers' Union will also be subject to increased annual employee pension contributions. Regular employees who were contributing to the Hydro One Inc. pension plan as of April 1, 2015 will receive, while they remain employed by Hydro One, lump sum cash payments in 2015 and 2016 and annual share grants for a 12 year period after that, made possible as a result of increased employee pension contributions. The share grants will be made under an employee share grant plan to be established by Hydro One Limited prior to the closing of this offering. See "Share Grant Plans". The annual share grant per participant under such plan will be based on 2.7% of an eligible employee's salary as at April 1, 2015. New employees will be subject to the pension contribution increases but will not be eligible for these cash payments and share grants.

The Society of Energy Professionals represents professional and first-level supervisory staff employed by Hydro One. On July 24, 2015, Hydro One Inc. reached an agreement with The Society of Energy Professionals for an early renewal collective agreement. This new collective agreement was ratified by the board of directors of Hydro One Inc. on August 11, 2015 and by The Society of Energy Professionals on August 31, 2015. The agreement is for a three-year term, covering the period from April 1, 2016 to March 31, 2019. It provides a 0.5% wage increase annually to the employees represented by The Society of Energy Professionals, which is offset by savings derived from flexibility within the collective agreement. Under the renewal collective agreement, employees represented by The Society of Energy Professionals will also be subject to increased annual employee pension contributions. Regular employees who were contributing to the Hydro One Inc. pension plan as September 1, 2015 will receive, while they remain employed by Hydro One, lump sum cash payments in 2016 and 2017 and annual share grants for a 12 year period after that, made possible as a result of increased employee pension contributions. The share grants will be made under an employee share grant plan to be established by Hydro One Limited prior to the closing of this offering. See "Share Grant Plans". The annual share grant per participant under such plan will be based on 2.0% of an eligible employee's salary as at September 1, 2015. New employees will be subject to the pension contribution increases but will not be eligible for these cash payments and share grants.

The settlements of the renewal collective agreements for the Power Workers' Union and The Society of Energy Professionals were intended by management to be "net zero," meaning any increase in pay or benefits is expected to be offset by savings elsewhere in the renewal collective agreements. Both renewal collective agreements contain important changes to pension arrangements which are expected to reduce the Company's future exposure to pension costs and move the relative share of pension costs to or close to 50/50 as between employer and employee.

Regular employees represented by The Society of Energy Professionals who are not participants in the employee share grant plan referred to above or whose participation has ended will have the opportunity to participate in an employee share ownership plan to be established by Hydro One Limited. Participants under this plan may elect to contribute between 1% and 4% of their base salary to the plan, with the Company matching 25% of each participant's total contributions, subject to a two year holding requirement. Common shares delivered under this plan will be purchased on the open market.

On July 28, 2015, Hydro One Inc. and the Canadian Union of Skilled Workers reached a renewal collective agreement for a three-year term, covering the period from May 1, 2014 to April 30, 2017. The agreement was ratified by the board of directors of Hydro One Inc. on August 31, 2015 and remains subject to ratification by the Canadian Union of Skilled Workers.

The EPSCA is an employers' association of which Hydro One Inc. is a member. A number of the EPSCA construction collective agreements, which bind Hydro One Inc., expired on April 30, 2015. Tentative agreements have been reached with the United Association of Plumbers and Pipefitters, the Boilermakers, and the Insulators for a five-year term, covering May 1, 2015 to April 30, 2020. These agreements have been ratified by the board of directors of the EPSCA and the unions. Negotiations for renewals for the remaining collective agreements have commenced.

Health, Safety and Environmental Management

Hydro One has integrated the management of health and safety into a single Health, Safety and Environment Management System, which holds OHSAS 18001 registration and is ISO 14001 compliant. OHSAS 18001 is an international recognized standard for occupational health and safety management systems. Effective risk assessment and management are key elements to the successful minimization of risk and performance improvements. Within Hydro One, health, safety and environmental hazards and risks have been identified and assessed and controls have been implemented to mitigate significant risks. The Company has policies in place regarding health and safety, public safety, environmental and workplace human rights and anti-harassment.

In January 2015, Hydro One Networks Inc. was designated a "Sustainable Electricity Company". The Sustainable Electricity Company™ brand mark is a designation established by the Canadian Electricity Association. Companies that wish to use the Sustainable Electricity Company™ brand mark must commit to core subjects, issues and related actions and expectations contained in the standard that are deemed applicable and significant to the Company and its stakeholders. The brand mark is granted for five years, with the option for renewal thereafter. The use of the Sustainable Electricity Company™ brand mark demonstrates Hydro One's commitment to responsible environmental, social and economic practices, and to the principles of sustainable development.

Given the nature of the work undertaken by Hydro One employees, health and safety remains one of the Company's top priorities. The Company is committed to creating and maintaining an injury-free workplace and maintaining public safety through a concentrated focus on the elimination of serious injuries or "near-misses" which have the potential to cause serious injuries. The Company has developed and is continuing to develop a number of programs and initiatives for accident prevention and to minimize the risk of injury to the public associated with its facilities and operations.

Measures are in place to monitor, on a regular basis, health, safety and environment performance using proactive and reactive measures and/or qualitative and quantitative measures. The 10 year evolution of Hydro One's recordable rate, its key health and safety performance measure, has seen an approximate 75% reduction. All measures are monitored by management and by the Health, Safety & Environment and First Nations & Métis Committee. Management compensation has been tied, in part, to success in achieving annual health and safety performance targets. A program allowing for an effective early and safe return to work has allowed the Company to ensure that, when injuries occur, employees recover and return to the workplace as soon as possible.

In 2015, Hydro One continued with its "Journey to Zero" safety initiative that was started in 2009. This initiative compares Hydro One to other companies to see where performance gaps might exist. Safety perception assessments were completed in 2009 and 2013 and will continue in 2015. The results of these assessments identify opportunities for improvement and the development of new health and safety initiatives using cross-functional teams from across the province.

Environmental Regulation

Hydro One is subject to extensive federal, provincial and municipal regulation relating to the protection of the environment that governs, among other things, environmental assessments, discharges to water and land and the generation, storage, transportation, disposal and release of various hazardous substances. Estimated environmental liabilities are reviewed annually or more frequently if significant changes in regulation or other relevant factors occur. Estimated changes are accounted for prospectively.

Permits and Approvals

The Company is required to obtain and maintain specified permits and approvals from federal, provincial and municipal authorities relating to the design, construction and operation of new and upgraded transmission and distribution facilities. Examples include environmental assessment approvals, permits for facilities to be located in parks or other regulated areas, water crossing permits, and approvals to discharge to air and water. Some projects may require environmental approvals from the federal government. Interconnections with neighbouring utilities in other provinces and states also require federal approval and will be subject to federal regulatory review.

In general, larger projects are subject to an individual environmental assessment process. The majority of approvals fall under a class environmental assessment process which provides for more streamlined approvals. The scope, timing and cost of environmental assessments are dependent on the scale and type of project, the location (urban versus rural), the environmental sensitivity of affected lands and the significance of potential environmental effects.

Regulation of Releases

Federal, provincial and municipal environmental legislation regulates the release of specific substances into the environment through the prohibition of discharges that will or may have an adverse effect on the environment. Spills and leaks of substances occur in the course of our normal operations. Accordingly, Hydro One has spill, leak prevention and leak mitigation programs involving the testing, replacement, repair and installation of containment systems including re-gasketting of transformers and sulphur-hexafluoride filled equipment. In addition, the Company has an emergency response capability which the Company believes is sufficient to minimize the environmental impact of spills and to comply with its legal obligations.

Hazardous Substances

Hydro One manages a number of hazardous substances, such as PCBs, herbicides, and wood preservatives. In addition, some facilities have substances present which are designated for special treatment under occupational health and safety legislation, such as asbestos, lead and mercury. The Company has environmental management programs in place to deal with PCBs, herbicides, asbestos, and other hazardous substances.

Land Assessment and Remediation

Hydro One has a voluntary land assessment and remediation program in place to identify and, where necessary, remediate historical contamination that has resulted from past operational practices and uses of certain long-lasting chemicals at the Company's facilities. These programs involve the systematic identification of any contamination at or from these facilities and, where necessary, the development of remediation plans for the Company's properties and affected adjacent private properties. Future consolidated expenditures related to Hydro One's land assessment and remediation program are currently estimated at approximately $66 million as at June 30, 2015. These expenditures are expected to be spent over the period ending 2023. The consolidated expenditures on this program for 2014 were approximately $13 million. These costs are expected to be recovered in the Company's transmission and distribution rates.

Insurance

Hydro One maintains insurance coverage, including liability, all risk property, boiler and machinery and directors' and officers' insurance. The Company also maintains other insurance coverage that is required by law, covering risks such as automobile liability, pesticide liability and aircraft liability. The Company does not have insurance for damage to its transmission and distribution wires, poles or towers located outside transmission and distribution stations, including damage caused by severe weather, other natural disasters or catastrophic events or for environmental remediation costs. The Ontario Energy Board has generally permitted the recovery of costs associated with extreme weather events, such as the ice storm that occurred in 1998.

USE OF PROCEEDS

Hydro One will not receive any proceeds from the sale of the common shares by the Province.

The net proceeds of this offering to the Province will be $1,635,949,200 ($1,800,351,000, assuming the exercise of the Over-Allotment Option in full), after deducting the Underwriters' Fee (assuming that 70% of the common shares offered under this prospectus are sold to institutional investors), but excluding the expenses of the offering set out on the cover page of this prospectus, all of which will be borne by the Province.

SELECTED CONSOLIDATED FINANCIAL INFORMATION

The following presents historical and pro forma summary consolidated financial information of Hydro One Inc., in each case, for the periods ended and as at the dates indicated below. The selected consolidated financial information has been derived from the unaudited interim financial statements of Hydro One Inc. as at and for the three and six month periods ended June 30, 2015 and June 30, 2014 and the audited consolidated financial statements of Hydro One Inc. as at and for the years ended December 31, 2014, December 31, 2013 and December 31, 2012 appearing elsewhere in this prospectus. Hydro One's historical results for any prior period are not necessarily indicative of its results to be expected in any future period. The selected pro forma condensed financial information as at and for the six months ended June 30, 2015 and for the year ended December 31, 2014 has been derived from the unaudited pro forma condensed consolidated financial statements of Hydro One Inc. appearing elsewhere in this prospectus, and give effect to the transactions described in the notes to those statements as if they had occurred on January 1, 2014 for the unaudited pro forma condensed consolidated statements of operations and June 30, 2015 for the unaudited pro forma condensed consolidated balance sheet. Those transactions relate to the following events:

- the payment by Hydro One Inc. and certain of its subsidiaries of the "departure tax", as described in "Departure Tax",
- the recognition by Hydro One Inc. of a deferred tax asset as a consequence of leaving the PILs regime and entering the corporate tax regime (see "Management's Discussion and Analysis of Financial Condition and Results of Operations – Factors Affecting Results of Operations – Payments in Lieu of Corporate Income Taxes"),
- the recapitalization of Hydro One Networks Inc., as described in "Pre-Closing Transactions", and
- the transfer of all of the issued and outstanding shares of Hydro One Brampton Networks Inc. to a company wholly-owned by the Province, as described in "Pre-Closing Transactions".

The selected pro forma condensed financial information is unaudited, for informational purposes only, and not necessarily indicative of what Hydro One Inc.'s financial position or results of operations would have been had such transactions been completed as at the dates indicated and does not purport to represent what the financial position or results of operations might be for any future period.

The following information should be read in conjunction with "Risk Factors", "Consolidated Capitalization", "Management's Discussion and Analysis of Financial Condition and Results of Operations", the consolidated financial statements of Hydro One Inc., and the unaudited pro forma condensed consolidated financial statements of Hydro One Inc. and the related notes included elsewhere in this prospectus. The financial statements of Hydro One Inc. included in this prospectus have been prepared in accordance with U.S. GAAP.

Notes:

(1) On August 31, 2015, all of the issued and outstanding shares of Hydro One Brampton Networks Inc. were transferred to a company wholly-owned by the Province. See “Pre-Closing Transactions” for additional detail concerning the transfer and related transactions. Hydro One Brampton Networks Inc. was previously a wholly-owned subsidiary of Hydro One Inc. Because this transfer occurred after the dates of, and periods covered by, the historical consolidated financial statements of Hydro One Inc. appearing elsewhere in this prospectus, those financial statements and the historical summary data appearing in the table above include the assets, liabilities and results of operations of Hydro One Brampton Networks Inc. during the periods and as at the dates indicated, except in the columns marked as “pro forma”.

(2) Prior to the closing of this offering, Hydro One Limited will issue $418 million of Series 1 preferred shares to the Province at a price of $25.00 per share. The existing preferred shares of Hydro One Inc. held by the Province will be cancelled. The initial dividend amount on the Series 1 preferred shares will be $1.0625 per share per year, and the dividend rate will be reset every five years in accordance with the terms of such shares. See “Description of Share Capital – Preferred Shares”.

(3) Net income presented is before the payment of dividends on preferred shares of Hydro One Inc. and prior to net income (loss) attributable to noncontrolling interest. Net income is therefore not equivalent to net income attributable to common shareholders. Dividends on preferred shares of Hydro One Inc. were $9 million for each of the six months ended June 30, 2015 and 2014. Net income attributable to noncontrolling interest for the six months ended June 30, 2015 was $3 million and for the six months ended June 30, 2014 was nil.

(4) Net income presented is before the payment of dividends on preferred shares of Hydro One Inc. and prior to net income (loss) attributable to noncontrolling interest. Net income is therefore not equivalent to net income attributable to common shareholders. Dividends on preferred shares of Hydro One Inc. were $18 million for each of the years ended December 31, 2014, 2013 and 2012. Net loss attributable to noncontrolling interest for the year ended December 31, 2014 was $2 million and for each of the years ended December 31, 2013 and 2012 were nil.

(5) Pro forma net income of Hydro One Inc. for the year ended December 31, 2014 reflects an estimated deferred tax asset adjustment arising as a result of Hydro One leaving the PILs regime and entering the corporate tax regime. See “Departure Tax”. This estimated deferred tax asset adjustment was based on an estimated fair market value of Hydro One’s net assets of approximately $13,522 million, which was the same estimated fair market value used for the purposes of determining the departure tax amount of $2.6 billion payable by Hydro One as referred to in “Departure Tax”. This estimated fair market value of Hydro One’s net assets was determined by Hydro One principally using a discounted cash flow approach for certain assets and an asset-based approach for other assets, and was used in calculating the amount of the departure tax payable that was agreed between Hydro One and the Province in early September 2015. The actual amount of the deferred tax asset for the year ended December 31, 2015 will be based on the actual fair market value of Hydro One’s net assets, which will be determined following pricing of this offering. The departure tax payable by Hydro One has been fixed at $2.6 billion, and will not be adjusted based on the fair market value of Hydro One’s net assets as finally determined. Net income for the year ended December 31, 2015 will reflect the payment of the departure tax and recognition of the actual amount of the deferred tax asset, which may be different from the recognition of the estimated deferred tax asset reflected in pro forma net income of Hydro One Inc. for the year ended December 31, 2014. As a result, net income for the year ended December 31, 2015 may be impacted by the difference, if any, between the actual and estimated fair market value of Hydro One’s net assets. Any impact on net income as a result of such difference will be non-cash-related and will only impact net income for the year ended December 31, 2015 and not subsequent years. The Company estimates that a $1,000 million increase or decrease in the fair market value of Hydro One’s net assets would result in a corresponding increase or decrease in the deferred tax asset, and therefore net income, of approximately $200 million.

Other Financial Measures(1)	Six months ended June 30		Year ended December 31		
	2015	2014	2014	2013	2012
	($, in millions)

Notes:

(1) On August 31, 2015, all of the issued and outstanding shares of Hydro One Brampton Networks Inc. were transferred to a company wholly-owned by the Province. See "Pre-Closing Transactions" for additional detail concerning the transfer and related transactions. Hydro One Brampton Networks Inc. was previously a wholly-owned subsidiary of Hydro One Inc. Because this transfer occurred after the dates of, and periods covered by, the historical consolidated financial statements of Hydro One Inc. appearing elsewhere in this prospectus, those financial statements and the other financial measures appearing in the table above include amounts contributed by Hydro One Brampton Networks Inc. during the periods indicated.

(2) Adjusted net income and FFO are non-GAAP measures. See "Non-GAAP Measures".

(3) In 2014, there was a $72 million noncontrolling interest contribution. This was a one-time item, and has been excluded from the calculation of FFO in 2014.

(4) FFO, as shown, has been calculated based on the historical financial information of Hydro One Inc. and does not reflect any of the pro forma adjustments set out in the unaudited pro forma condensed consolidated financial statements of Hydro One Inc. appearing elsewhere in this prospectus, including the net pro forma reduction in cash tax of $56 million for the year ended December 31, 2014 and $49 million for the six month period ended June 30, 2015. See note 2C(vi) of the unaudited pro forma condensed consolidated financial statements of Hydro One Inc. included elsewhere in this prospectus.

Notes:

(1) On August 31, 2015, all of the issued and outstanding shares of Hydro One Brampton Networks Inc. were transferred to a company wholly-owned by the Province. See "Pre-Closing Transactions" for additional detail concerning the transfer and related transactions. Hydro One Brampton Networks Inc. was previously a wholly-owned subsidiary of Hydro One Inc. Because this transfer occurred after the dates of, and periods covered by, the historical consolidated financial statements of Hydro One Inc. appearing elsewhere in this prospectus, those financial statements and the summary operating statistics appearing in the table above include amounts contributed by Hydro One Brampton Networks Inc. during the periods indicated.

(2) Rate base in each year refers to the rate base of Hydro One Networks Inc.'s transmission business or distribution business, as the case may be, approved by the Ontario Energy Board for that year. See "Meaning of Certain References".

(3) On August 31, 2015, all of the issued and outstanding shares of Hydro One Brampton Networks Inc. were transferred to a company wholly-owned by the Province. See "Pre-Closing Transactions" for additional detail concerning the transfer and related transactions.

(4) Includes certain classes of customers which are excluded in the *Ontario Energy Board Yearbook of Distributors* (2014).

(5) Capital investments consists of capital expenditures presented in Hydro One's consolidated statement of cash flows, adjusted for capitalized depreciation, if any, and net changes in related accruals.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Hydro One Limited was incorporated on August 31, 2015. It has not completed its first fiscal year and has had limited activity. Prior to the completion of this offering, Hydro One Inc. will become a wholly-owned subsidiary of Hydro One Limited. See "Pre-Closing Transactions".

This management's discussion and analysis of financial condition and results of operations ("**MD&A**") has been prepared with respect to Hydro One Inc. (the "**Company**" or "**Hydro One**"). In this MD&A only, references to the "Company" or "Hydro One" refer to Hydro One Inc. and its consolidated subsidiaries, and do not include or refer to Hydro One Limited and references to "Shareholder" refer to the Province of Ontario.

This MD&A should be read in conjunction with the consolidated financial statements and accompanying notes of Hydro One that appear elsewhere in this prospectus. Those financial statements consist of the unaudited interim financial statements of Hydro One for the three and six month periods ended June 30, 2015 and the balance sheet as at June 30, 2015 and December 31, 2014, the audited consolidated financial statements of Hydro One as at and for the years ended December 31, 2014 and 2013, and the audited consolidated financial statements of Hydro One as at and for the years ended December 31, 2013 and 2012, in each case, together with the notes accompanying such financial statements.

On August 31, 2015, all of the issued and outstanding shares of Hydro One Brampton Networks Inc. were transferred from Hydro One Inc. to a company wholly owned by the Province, as described in "Pre-Closing Transactions". Hydro One Brampton Networks Inc. was previously a wholly owned subsidiary of Hydro One. Because this transfer occurred after the dates of, and periods covered by, the consolidated financial statements of Hydro One appearing elsewhere in this prospectus, those financial statements and the summary consolidated financial information derived from those financial statements include the assets, liabilities and results of operations of Hydro One Brampton Networks Inc. **Accordingly, all financial information of Hydro One referred to or discussed in this MD&A includes the assets, liabilities and results of operations of Hydro One Brampton Networks Inc. To see the impact of certain transactions related to the offering on the financial statements of Hydro One Inc., including the transfer of all of the issued and outstanding shares of Hydro One Brampton Networks Inc. to a company wholly owned by the Province, see the unaudited pro forma condensed consolidated financial statements of Hydro One Inc., together with "Summary Consolidated Financial Information" and "Selected Consolidated Financial Information" elsewhere in this prospectus.**

The Company's consolidated financial statements are presented in Canadian dollars and have been prepared in accordance with U.S. GAAP. The Ontario Energy Board approved the use of U.S. GAAP for rate setting and regulatory accounting and reporting by Hydro One Networks Inc.'s ("**Hydro One Networks**") transmission and distribution businesses, as well as by Hydro One Remote Communities Inc., beginning with the 2012 financial year. Hydro One Networks and Hydro One Remote Communities Inc. are wholly owned subsidiaries of Hydro One. During the periods presented, Hydro One Brampton Networks Inc. used Canadian GAAP (Part V) for its distribution rate-setting purposes.

All financial information in this MD&A is presented in Canadian dollars, unless otherwise indicated.

Some of the information contained in this MD&A contains forward-looking information that involves risks and uncertainties. See "Forward-Looking Information" and "Risk Factors" for a discussion of the uncertainties and assumptions associated with these statements. Actual results may differ materially from those indicated or underlying forward-looking information as a result of various factors, including those described under "Risk Factors" and elsewhere in this MD&A.

Overview

Hydro One has three business segments: (i) transmission; (ii) distribution; and (iii) other business (primarily telecommunications).

Hydro One's transmission business consists of owning, operating and maintaining Hydro One's transmission system, which accounts for 96% of Ontario's entire transmission network based on revenue approved by the Ontario

Energy Board. This includes the Company's 66% ownership interest in B2M Limited Partnership, a limited partnership between Hydro One and the Saugeen Ojibway Nation in respect of the Bruce-to-Milton transmission line. All of the Company's transmission business is carried out by Hydro One Networks, except for the portion of its business held through B2M Limited Partnership, which the Company controls and operates.

Hydro One's distribution business consists of owning, operating and maintaining Hydro One's distribution system, which the Company owns primarily through Hydro One Networks, the largest local distribution company in Ontario. The Company's distribution system is also the largest in Ontario, spanning approximately 75% of the geographic area of the province. Hydro One's distribution business also includes the business of Hydro One Remote Communities Inc., which supplies electricity to customers in remote communities in northern Ontario, as well as the distribution businesses of Norfolk Power and Haldimand Hydro.

Hydro One's other business segment principally consists of its telecommunications business, which provides telecommunications support for the Company's transmission and distribution businesses, and also markets and sells fibre optic capacity to telecommunications carriers and commercial customers with broadband network requirements. The telecommunications business is carried out by the Company's wholly-owned subsidiary, Hydro One Telecom Inc.

Summary of Results for Three and Six Month Periods

Consolidated Statements of Operations and Comprehensive Income	Three months ended June 30		Six months ended June 30	
	2015	2014	2015	2014
	(millions of Canadian dollars, except per share amounts)			
Total revenue	1,563	1,566	3,371	3,330
Net income attributable to Shareholder of Hydro One	136	115	368	355
Earnings per common share *(Canadian dollars)*	1,308	1,099	3,594	3,456
Dividends per common share *(Canadian dollars)*	250	250	500	2,196
Dividends per preferred share *(Canadian dollars)*	0.34	0.34	0.69	0.69

Consolidated Balance Sheets	June 30, 2015	December 31, 2014
	(millions of Canadian dollars)	
Total assets	23,167	22,550
Total long-term debt	9,290	8,925
Preferred shares	323	323
Net assets	8,257	7,947

During the six months ended June 30, 2015, Hydro One earned net income of $368 million and revenues of $3,371 million. The Company made capital investments totalling $774 million to improve its transmission and distribution systems' reliability and performance, address its aging power system infrastructure, facilitate new generation, and improve service to its customers.

Developments in 2015

Change in Credit Ratings

On April 17, 2015, Moody's Investors Service (Moody's) affirmed the senior unsecured ratings of Hydro One at A1 but revised its outlook on the Company to negative from stable. On September 18, 2015, Moody's downgraded the senior unsecured ratings of Hydro One to A2 from A1, and maintained its outlook on the Company as negative. Moody's noted that the negative outlook reflects the high probability of a further downgrade to A3 following this offering. Moody's also stated that a downgrade to A3 would lead to a downgrade of Hydro One's short-term debt rating to Prime-2.

On April 20, 2015, Standard & Poor's Rating Services Inc. (S&P) downgraded its long-term corporate credit rating on Hydro One to A from A+, and revised its outlook on the Company to stable from negative. On September 18, 2015, S&P affirmed its long-term corporate credit rating on Hydro One of A (stable).

On September 18, 2015, DBRS Limited (DBRS) placed Hydro One's issuer rating and senior unsecured debentures rating "under review with developing implications" and placed its short-term debt rating "under review with negative implications".

The Moody's and S&P ratings changes and actions were related to the announcement by the Province that it intended to dispose of up to 15% of its shares in Hydro One via an initial public offering, and the subsequent filing of a preliminary base PREP prospectus of Hydro One Limited dated September 17, 2015 relating to this offering. The action taken by DBRS followed the filing of the preliminary base PREP prospectus of Hydro One Limited dated September 17, 2015 relating to this offering in anticipation of the impact of certain of the transactions disclosed in "Pre-Closing Transactions".

A summary of the Company's corporate credit ratings can be found in the section "Liquidity and Capital Resources for Three and Six Month Periods – Financing Activities" in this MD&A and under "Credit Ratings of Securities."

Haldimand Hydro Acquisition

In June 2015, Hydro One acquired 100% of the common shares of Haldimand Hydro, an electricity distribution company located in southwestern Ontario, following approval of the acquisition by the Ontario Energy Board in March 2015. The Haldimand Hydro acquisition is part of the Company's local distribution company consolidation strategy to better serve Ontario's distribution system and improve system reliability and efficiency across the grid. Hydro One is committed to delivering reliable service for Haldimand Hydro's customers and improving efficiencies in both the Haldimand Hydro and Hydro One systems as a result of the acquisition. The purchase price for Haldimand Hydro was approximately $65 million, subject to final closing adjustments. Closing adjustments to the purchase price and the final allocation of the consideration paid are expected to be completed by the end of 2015.

Class Action Lawsuit

On July 22, 2015, two Toronto law firms issued a joint press release announcing that a $125 million lawsuit had been commenced in the Ontario Superior Court of Justice against Hydro One and four of its subsidiaries. The statement of claim dated September 9, 2015 alleges improper billing and account management practices. The action is proposed as a class action. This claim is in a very early stage and has not been certified as a class action. It is too early to assess the merits of the claim. Hydro One intends to defend the action.

Outlook

The following is a discussion of certain factors that have impacted or are anticipated to impact the Company's results of operations in 2015, as well as certain events that occurred in 2014 that may impact the comparability of the Company's results of operations for 2015 and interim periods during 2015.

- The Company continues to benefit from increased transmission and distribution rates in 2015 as a result of the Company's most recent transmission and distribution rate decisions.
- During the first half of 2015, operation, maintenance and administration costs relative to the same period in 2014 were lower due to the stabilization of the Company's customer information system and the acceleration of collections on aged accounts receivable. These costs declined significantly in the fourth quarter of 2014, partially offsetting a large portion of the increased costs earlier in the year. These in-year timing differences combined with certain other reductions resulted in lower overall operation, maintenance and administration costs in the fourth quarter of 2014 compared to the preceding three quarters. These costs have returned to a more normalized level and are more equally spread over the course of 2015.
- During 2014, the Company's results of operations were positively affected by increased system usage and transmission load due to weather conditions. These positive impacts may not recur during 2015.
- As part of its settlement of 2013 and 2014 transmission rates, the Company is subject to a revenue clawback intended to account for the difference between actual and forecast load attributable to any shortfalls in the forecasted province-wide conservation and demand management or "CDM" savings. The Company is obligated to transfer to a variance account the amount of transmission revenues that reflects the impact on the Company's revenue requirement of actual province-wide CDM savings versus the forecast province-wide CDM savings for those years. The amount to be transferred for 2014 is $27.8 million. The impact was recorded in the third quarter of 2015.
- During the fourth quarter of 2015, the Company is anticipated to incur costs related to the granting of shares to certain unionized employees pursuant to the share grant plans to be established for the benefit of certain employees represented by the Power Workers' Union and The Society of Energy Professionals, as described in "Share Grant Plans". These costs are anticipated to result in a non-cash charge to net income of approximately $8 million, which would be included in operation, maintenance and administration costs.

- As a result of Hydro One leaving the PILs regime and entering the corporate tax regime, Hydro One will recognize a deferred tax asset that is currently estimated in the unaudited pro forma condensed consolidated financial statements of Hydro One Inc. included elsewhere in this prospectus to be $1,245 million due to the revaluation of the tax basis of Hydro One's fixed assets at their fair market value and recognition of eligible capital expenditures. See "Departure Tax". This estimated deferred tax asset adjustment was based on an estimated fair market value of Hydro One's net assets of approximately $13,522 million, which was the same estimated fair market value used for the purposes of determining the departure tax amount of $2.6 billion payable by Hydro One as referred to in "Departure Tax". The actual amount of the deferred tax asset for the year ended December 31, 2015 will be based on the actual fair market value of Hydro One's net assets, which will be determined following pricing of this offering. Net income for the year ended December 31, 2015 may be impacted by the difference, if any, between the actual and estimated fair market value of Hydro One's net assets, since this difference will impact the actual amount of the deferred tax asset. Any impact on net income as a result of such difference will be non-cash-related and will only impact net income for the year ended December 31, 2015 and not subsequent years. The Company estimates that a $1,000 million increase or decrease in the fair market value of Hydro One's net assets would result in a corresponding increase or decrease in the deferred tax asset, and therefore net income, of approximately $200 million. See "Summary Consolidated Financial Information" and "Selected Consolidated Financial Information".
- In the third and fourth quarters of 2014, Hydro One recognized in net income non-recurring insurance proceeds of $11 million related to 2013 floods at the Company's Richview and Manby transformer stations.
- During 2014, the Company realized an effective tax rate of approximately 10%. For the six months ended June 30, 2015, the Company realized an effective tax rate of approximately 16% and anticipates an effective tax rate of approximately 15% for the remainder of 2015. The difference in the effective tax rate between 2014 and 2015 is due primarily to accelerated capital cost allowance recognized in 2014 for certain classes of assets.
- The transfer of Hydro One Brampton Networks Inc. as described in "Pre-Closing Transactions" is expected to have a non-material effect on net income in 2015, but will more significantly impact distribution revenues and purchased power costs.

In addition to the factors described above, see the unaudited pro forma condensed consolidated financial statements of Hydro One Inc. and the related notes included elsewhere in this prospectus which give effect to certain transactions described in the notes to those statements for the periods shown, including the transfer of Hydro One Brampton Networks Inc.

Applications to the Ontario Energy Board

The following table summarizes Hydro One's recent major regulatory applications to the Ontario Energy Board:

Application	Year(s)	Type	Date Filed	Status
Electricity Rates – Transmission Rate Applications				
Hydro One Networks	2015-2016	Cost-of-service	September 16, 2014	Decision received on January 8, 2015
B2M Limited Partnership	2015	Interim	October 24, 2014	Decision received on December 11, 2014
B2M Limited Partnership	2015-2019	Cost-of-service	March 30, 2015	Decision anticipated in 2015
Electricity Rates – Distribution Rate Applications				
Hydro One Networks	2015-2017	Custom	December 19, 2013	Decision received on March 12, 2015(1)
Hydro One Brampton Networks Inc.	2015	Cost-of-service	April 23, 2014	Decision received on January 15, 2015
Hydro One Remote Communities Inc.	2015	IRM	September 24, 2014	Decision received on March 19, 2015
Mergers Acquisitions Amalgamations and Divestitures (MAAD) Applications				
Woodstock Hydro	n/a	Acquisition	July 9, 2014	Decision received on September 11, 2015
Leave to Construct Application				
Supply to Essex County Transmission Reinforcement Project	n/a	Section 92	January 22, 2014	Decision for Phase 1 received on July 16, 2015 Decision for Phase 2 anticipated in late 2015

(1) The application filed by Hydro One Networks on December 19, 2013 was for years 2015-2019. On March 12, 2015, the Ontario Energy Board issued a Decision and Rate Order for years 2015-2017 only. See "Business of Hydro One – Distribution Business – Regulation."

Factors Affecting Results of Operations

Transmission Revenues

Transmission revenues primarily consist of the Company's transmission rates approved by the Ontario Energy Board, which are based on the monthly peak electricity demand across Hydro One's high-voltage network. Transmission rates are designed to recover revenues necessary to support a transmission system with sufficient capacity to accommodate maximum forecasted demand. Demand is primarily influenced by weather and economic conditions. Transmission revenues also include export revenues associated with transmitting excess generation to surrounding markets, ancillary revenues primarily attributable to maintenance services provided to generators, and secondary use of the Company's land rights.

Distribution Revenues

Distribution revenues include the distribution rates approved by the Ontario Energy Board and amounts to recover the cost of purchased power used by the customers of the distribution business. Accordingly, distribution revenues are influenced by the amount of electricity the Company distributes, the cost of purchased power and distribution rates. Distribution revenues also include minor ancillary distribution service revenues, such as fees related to the joint use of Hydro One's distribution poles by the telecommunications and cable television industries, as well as miscellaneous charges such as charges for late payments.

Purchased Power Costs

Purchased power costs are incurred by the distribution business and represent the cost of purchased electricity delivered to customers within Hydro One's distribution service territory. These costs comprise the wholesale commodity cost of energy, the IESO wholesale market service charges, and transmission charges levied by the IESO. The commodity cost of energy is based on the Ontario Energy Board's regulated price plan or the market price for electricity. Except for short-term timing differences, Hydro One recovers the cost of electricity that it delivers, and is therefore not financially exposed to commodity price risk related to electricity.

Operation, Maintenance and Administration Costs

Operation, maintenance and administration costs include work program costs and costs to support the operation and maintenance of the transmission and distribution systems. Also included in these costs are payments in lieu of property taxes related to the transmission and distribution lines, stations and buildings. The transmission operation, maintenance and administration costs are incurred to sustain the Company's high-voltage transmission stations, lines and rights-of-way, and include preventive and corrective maintenance costs related to power equipment, overhead transmission lines, transmission station sites, and brush control. The distribution operation, maintenance and administration costs are required to maintain the Company's low-voltage distribution system, and include costs related to distribution line clearing and brush control, line maintenance and repair, as well as land assessment and remediation. Hydro One continues to focus on managing its costs, while continuing to complete its planned work programs for both its transmission and distribution businesses.

Depreciation and Amortization

Depreciation and amortization costs relate primarily to depreciation and amortization of the Company's property, plant and equipment, intangible assets and certain regulatory assets. Depreciation expense also includes the costs incurred to remove property, plant and equipment where no asset retirement obligations have been recorded.

Financing Charges

Financing charges relate to the Company's financing activities, and include interest expense on the Company's long-term debt, gains and losses on interest rate swap agreements, interest earned on short-term and long-term investments. A portion of financing charges incurred by the Company is capitalized to the cost of property, plant and equipment.

Payments in Lieu of Corporate Income Taxes

Generally, Hydro One Inc. and its subsidiaries have been exempt from regular federal and Ontario income tax and instead paid an equivalent amount referred to as payments in lieu of corporate income taxes or "PILs" to the Ontario Electricity Financial Corporation under the Electricity Act. Once Hydro One is less than 90% owned by the Province, it will cease to be exempt from regular federal and Ontario income tax, and will be deemed, for purposes of the Tax Act, to have disposed of its assets before it loses its tax-exempt status for proceeds equal to the fair market value of those assets at that time, and will be deemed to have acquired all such assets at the time of the loss of tax-exempt status at a cost equal to fair market value. See "Departure Tax".

Results of Operations – Three Months Ended June 30, 2015 Compared to Three Months Ended June 30, 2014

Three months ended June 30 (millions of Canadian dollars)	2015	2014	$ change	% change
Revenues	1,563	1,566	(3)	(0.2)
Purchased power	838	824	14	1.7
Operation, maintenance and administration	282	334	(52)	(15.6)
Depreciation and amortization	190	181	9	5.0
	1,310	1,339	(29)	(2.2)
Income before financing charges and provision for PILs	**253**	**227**	**26**	**11.5**
Financing charges	93	95	(2)	(2.1)
Income before provision for PILs	**160**	**132**	**28**	**21.2**
Provision for PILs	23	17	6	35.3
Net income	**137**	**115**	**22**	**19.1**
Net income (loss) attributable to noncontrolling interest	1	—	1	100.0
Net income attributable to Shareholder of Hydro One	**136**	**115**	**21**	**18.3**

Net Income

The net income attributable to the Shareholder of Hydro One for the three months ended June 30, 2015 was $136 million, compared to $115 million during the same period in 2014, an increase of $21 million or 18.3%. The increase is primarily due to the following:

- a decrease in operation, maintenance and administration costs, primarily resulting from lower expenditures related to the Company's Customer Information System ("**CIS**"); lower bad debt expense resulting from the reinstatement of certain collection activities in September 2014; lower expenditures associated with responding to and restoring power outages; and decreased vegetation management requirements for brush control programs; partially offset by
- a decrease in transmission revenues, mainly due to lower average Ontario 60-minute peak demand in the second quarter of 2015, as the weather in the quarter was milder than last year, and
- an increase in depreciation and amortization costs, mainly due to higher property, plant and equipment depreciation expense related to growth in capital assets as the Company continues to place new assets in-service, consistent with its ongoing capital work programs.

Revenues

Three months ended June 30 (millions of Canadian dollars)	2015	2014	$ change	% change
Transmission	364	382	(18)	(4.7)
Distribution	1,185	1,170	15	1.3
Other	14	14	—	—
	1,563	1,566	(3)	(0.2)
Average annual Ontario 60-minute peak demand (MW)[(1)]	18,986	19,403	(417)	(2.1)
Distribution – units distributed to Hydro One customers (TWh)[(1)]	6.7	6.7	—	—

(1) System-related statistics are preliminary.

Transmission

Transmission revenues for the three months ended June 30, 2015 were $364 million, compared to $382 million during the same period in 2014, a decrease of $18 million or 4.7%. The components of the decrease include the following:

- lower average Ontario 60-minute peak demand in the second quarter of 2015, as peak demand towards the end of the quarter did not reach the Company's forecast, as weather patterns during the quarter and extending into the third quarter have been milder than 2014, and

- disposition of certain Ontario Energy Board-approved transmission regulatory accounts; partially offset by
- higher new transmission rates effective January 1, 2015 approved by the Ontario Energy Board in January 2015.

Distribution

Distribution revenues for the three months ended June 30, 2015 were $1,185 million, compared to $1,170 million during the same period in 2014, an increase of $15 million or 1.3%. The components of the increase include the following:

- higher purchased power costs, as described below under "Purchased Power Costs", and
- higher new distribution rates effective January 1, 2015 approved by the Ontario Energy Board in March 2015; partially offset by
- the expiry of certain Ontario Energy Board-approved rate riders and regulatory accounts.

Purchased Power Costs

Purchased power costs for the three months ended June 30, 2015 were $838 million, compared to $824 million during the same period in 2014, an increase of $14 million or 1.7%. The components of the increase include the following:

- higher Ontario Energy Board Regulated Price Plan rates for residential and other eligible customers, and
- higher purchased power costs for customers who are not eligible for the Regulated Price Plan; partially offset by
- lower demand for electricity in the second quarter of 2015, , as the weather in the quarter was milder than last year; and
- lower wholesale market service charges levied by the IESO.

Operation, Maintenance and Administration Costs

Three months ended June 30 (millions of Canadian dollars)	2015	2014	$ change	% change
Transmission	98	105	(7)	(6.7)
Distribution	168	214	(46)	(21.5)
Other	16	15	1	6.7
	282	334	(52)	(15.6)

Transmission

Transmission operation, maintenance and administration costs for the three months ended June 30, 2015 were $98 million, compared to $105 million during the same period in 2014, a decrease of $7 million or 6.7%. The components of the decrease include the following:

- decreased forestry expenditures related to brush control and line clearing on the Company's transmission rights-of-way, and
- lower volume of corrective maintenance work required on overhead lines; partially offset by
- higher expenditures related to compliance with NERC Critical Infrastructure Protection ("**Cyber Security**") standards. See "Business of Hydro One – Transmission Business – Regulation".

Distribution

Distribution operation, maintenance and administration costs for the three months ended June 30, 2015 were $168 million, compared to $214 million during the same period in 2014, a decrease of $46 million or 21.5%. The components of the decrease include the following:

- lower expenditures related to the CIS system, as remediation of issues related to the installation of the system is completed, and the system is now stable,

- decrease in bad debt expense, resulting from the reinstatement of certain collection activities in September 2014, which were temporarily suspended during several months in 2014 due to system issues, as Hydro One has made improvements in its customer service during 2015, restored service levels at its call centre, and restored its billing system performance, which has enabled more active collections of overdue balances,
- decreased vegetation management requirements for the brush control program,
- lower expenditures associated with locating and restoring power outages, as well as responding to power quality-related issues, and
- lower volume of work on the land assessment and remediation program to assess the degree of environmental contamination at Hydro One's owned stations and facilities.

Financing Charges

Financing charges for the three months ended June 30, 2015 were $93 million, compared to $95 million during the same period in 2014, a decrease of $2 million or 2.1%. The decrease is primarily due to an increase in capitalized interest, resulting from higher average property, plant and equipment construction in progress balances eligible for interest capitalization.

Provision for PILs

The provision for PILs for the three months ended June 30, 2015 was $23 million, compared to $17 million during the same period in 2014, an increase of $6 million or 35.3%. The increase is primarily due to higher pre-tax income.

Results of Operations – Six Months Ended June 30, 2015 Compared to Six Months Ended June 30, 2014

Six months ended June 30 (millions of Canadian dollars)	2015	2014	$ change	% change
Revenues	3,371	3,330	41	1.2
Purchased power	1,808	1,746	62	3.6
Operation, maintenance and administration	560	645	(85)	(13.2)
Depreciation and amortization	377	348	29	8.3
	2,745	2,739	6	0.2
Income before financing charges and provision for PILs	**626**	**591**	**35**	**5.9**
Financing charges	187	185	2	1.1
Income before provision for PILs	**439**	**406**	**33**	**8.1**
Provision for PILs	68	51	17	33.3
Net income	**371**	**355**	**16**	**4.5**
Net income (loss) attributable to noncontrolling interest	3	—	3	100.0
Net income attributable to Shareholder of Hydro One	**368**	**355**	**13**	**3.7**

Net Income

Net income attributable to the Shareholder of Hydro One for the six months ended June 30, 2015 was $368 million, compared to $355 million during the same period in 2014, an increase of $13 million or 3.7%. The increase is primarily due to the following:

- a decrease in operation, maintenance and administration costs, primarily resulting from lower expenditures related to the Company's CIS; lower bad debt expense resulting from the reinstatement of certain collection activities in September 2014; lower expenditures associated with responding to and restoring power outages; and lower volume of work on the land assessment and remediation program,
- an increase in distribution revenues, mainly due to higher new Ontario Energy Board-approved 2015 distribution rates, partially offset by the expiry of certain Ontario Energy Board-approved rate riders and regulatory accounts,

- a decrease in transmission revenues, mainly due to lower average Ontario 60-minute peak demand in the first half of 2015, as well as the disposition of certain Ontario Energy Board-approved regulatory accounts, partially offset by an increase due to higher new Ontario Energy Board-approved 2015 transmission rates, and
- an increase in depreciation and amortization costs, mainly due to higher property, plant and equipment depreciation expense, related to the growth in capital assets as the Company continues to place new assets in-service, consistent with its ongoing capital work programs.

Revenues

Six months ended June 30 (millions of Canadian dollars)	2015	2014	$ change	% change
Transmission	770	804	(34)	(4.2)
Distribution	2,574	2,497	77	3.1
Other	27	29	(2)	(6.9)
	3,371	3,330	41	1.2
Average annual Ontario 60-minute peak demand (MW)(1)	20,182	20,757	(575)	(2.8)
Distribution – units distributed to Hydro One customers (TWh)(1)	15.4	15.4	—	—

(1) System-related statistics are preliminary.

Transmission

Transmission revenues for the six months ended June 30, 2015 were $770 million, compared to $804 million during the same period in 2014, a decrease of $34 million or 4.2%. The components of the decrease include the following:

- lower average Ontario 60-minute peak demand in the first six months of 2015, partially due to industrial customers shifting their energy use away from system-wide peaks in the winter months of 2015, as well as milder weather in 2015, compared to the same period in 2014, and
- disposition of certain Ontario Energy Board-approved transmission regulatory accounts; partially offset by
- higher new transmission rates effective January 1, 2015 approved by the Ontario Energy Board in January 2015.

Distribution

Distribution revenues for the six months ended June 30, 2015 were $2,574 million, compared to $2,497 million during the same period in 2014, an increase of $77 million or 3.1%. The components of the increase include the following:

- higher purchased power costs, as described below under "Purchased Power Costs", and
- higher new distribution rates effective January 1, 2015 approved by the Ontario Energy Board in March 2015; partially offset by
- the expiry of certain Ontario Energy Board-approved rate riders and regulatory accounts.

Purchased Power Costs

Purchased power costs for the six months ended June 30, 2015 were $1,808 million, compared to $1,746 million during the same period in 2014, an increase of $62 million or 3.6%. The components of the increase include the following:

- higher Ontario Energy Board Regulated Price Plan rates for residential and other eligible customers, and
- higher purchased power costs for customers who are not eligible for the Regulated Price Plan; partially offset by

- lower demand for electricity in the first six months of 2015, mainly resulting from milder weather in 2015, and
- lower wholesale market service charges levied by the IESO.

Operation, Maintenance and Administration

Six months ended June 30 (millions of Canadian dollars)	2015	2014	$ change	% change
Transmission	197	220	(23)	(10.5)
Distribution	334	395	(61)	(15.4)
Other	29	30	(1)	(3.3)
	560	645	(85)	(13.2)

Transmission

Transmission operation, maintenance and administration costs for the six months ended June 30, 2015 were $197 million, compared to $220 million during the same period in 2014, a decrease of $23 million or 10.5%. The components of the decrease include the following:

- decreased forestry expenditures related to brush control and line clearing on the Company's transmission rights-of-way,
- lower volume of corrective maintenance work required on overhead lines,
- decreased requirements related to corrective maintenance work for mineral oil spills,
- increased attribution of overheads to capital project expenditures reflecting the higher expenditures related to capital projects in the first half of 2015, and
- cost savings reflecting various management initiatives to reduce overhead costs; partially offset by
- higher expenditures related to compliance with NERC's Cyber Security standards. See "Business of Hydro One – Transmission Business – Regulation".

Distribution

Distribution operation, maintenance and administration costs for the six months ended June 30, 2015 were $334 million, compared to $395 million during the same period in 2014, a decrease of $61 million or 15.4%. The components of the decrease include the following:

- lower expenditures related to the Company's CIS, as remediation of issues related to the installation of the system was completed, and the system is now stable,
- decrease in bad debt expense, resulting from the reinstatement of certain collection activities in September 2014, which were temporarily suspended during several months in 2014 due to system issues,
- lower volume of work associated with locating and restoring power outages, responding to and resolving power quality customer complaints, identifying and correcting abnormal system conditions, as well as responding to power quality-related issues and outages as a result of lower storm activity and enhanced response times, and
- lower volume of work on the land assessment and remediation program to assess the degree of environmental contamination at Hydro One's owned stations and facilities; partially offset by
- increased volume of lines maintenance work to ensure long term sustainability of line assets and safety.

Depreciation and Amortization

Depreciation and amortization costs for the six months ended June 30, 2015 were $377 million, compared to $348 million during the same period in 2014, an increase of $29 million or 8.3%. The increase was primarily attributable to higher property, plant and equipment depreciation expense in the first half of 2015, mainly related to the growth in capital assets as the Company continues to place new assets in-service, consistent with its ongoing capital work program.

Financing Charges

Financing charges for the six months ended June 30, 2015 were $187 million, compared to $185 million during the same period in 2014, an increase of $2 million or 1.1%. The increase is primarily due to a decrease in interest earned on the Company's investment in Province of Ontario floating-rate notes which matured in November 2014.

Provision for PILs

The provision for PILs for the six months ended June 30, 2015 was $68 million, compared to $51 million during the same period in 2014, an increase of $17 million or 33.3%. The increase is primarily due to the following:

- higher pre-tax income, and
- changes in temporary differences, such as capital cost allowance in excess of depreciation.

Selected Financial Highlights and Ratios

	Three months ended June 30		Six months ended June 30	
	2015	2014	2015	2014
	(millions of Canadian dollars, except per share amounts and ratios)			
Net income attributable to Shareholder of Hydro One	136	115	368	355
Net cash from operating activities	287	185	713	334
Capital investments	429	380	774	676
Earnings per common share *(Canadian dollars)*	1,308	1,099	3,594	3,456

	June 30, 2015	December 31, 2014
Earnings coverage ratio[1]	2.79	2.81
Net assets coverage on long-term debt ratio[2]	1.89	1.89
Total debt to capitalization ratio[3]	53.2%	53.1%

(1) The earnings coverage ratio has been presented for the twelve months ended June 30, 2015 and June 30, 2014, and has been calculated as the sum of net income attributable to Shareholder of Hydro One, provision for PILs and financing charges divided by the sum of financing charges, capitalized interest and cumulative preferred dividends.

(2) The net asset coverage on long-term debt ratio has been presented as at June 30, 2015 and December 31, 2014, and has been calculated as total assets minus total liabilities excluding long-term debt (including current portion) divided by long-term debt (including current portion).

(3) Total debt to capitalization ratio has been presented as at June 30, 2015 and December 31, 2014, and has been calculated as total long-term debt divided by total long-term debt plus total shareholder's equity and preferred shares. This ratio is expected to be 51.1% immediately following the recapitalization referred to in "Pre-Closing Transactions" and the closing of this offering.

Liquidity and Capital Resources for Three and Six Months Periods

Hydro One's primary sources of liquidity and capital resources are funds generated from operations, debt capital market borrowings and bank financing that are used to satisfy Hydro One's capital resource requirements, including the Company's capital expenditures, servicing and repayment of debt, and dividends.

Summary of Sources and Uses of Cash

	Three months ended June 30		Six months ended June 30	
	2015	2014	2015	2014
	(millions of Canadian dollars)			
Operating activities	287	185	713	334
Financing activities				
Long-term debt issued	350	453	350	628
Dividends paid	(30)	(30)	(59)	(229)
Investing activities				
Capital expenditures	(422)	(367)	(766)	(659)
Net cash paid for Haldimand Hydro	(58)	—	(58)	—

Net change in cash and cash equivalents	89	258	170	74

Cash from Operating Activities

Three months ended June 30, 2015

Net cash from operating activities increased by $102 million to $287 million during the three months ended June 30, 2015, compared to the same period in 2014. The increase was primarily due to the following:

- changes in regulatory accounts, primarily due to the retail settlement and external revenue variance accounts,
- changes in accounts receivable balances, due to improved collections in 2015, and
- higher net income before taxes and depreciation; partially offset by
- changes in accrual balances, mainly related to timing and higher activity of capital projects.

Six months ended June 30, 2015

Net cash from operating activities increased by $379 million to $713 million during the six months ended June 30, 2015, compared to the same period in 2014. The increase was primarily due to the following:

- changes in accounts receivable balances, due to improved collections in 2015,
- changes in regulatory accounts, primarily due to the retail settlement and external revenue variance accounts,
- lower pension plan contributions compared to last year, as contributions are being made evenly over the year in 2015, compared to 2014, when payments were made in advance in the beginning of the year, and
- higher net income before taxes and depreciation; partially offset by
- changes in accrual balances, mainly related to timing and higher activity of capital projects.

Financing Activities

Short-term liquidity is provided through funds from operations, the Company's commercial paper program, and the Company's revolving credit facility.

At June 30, 2015, under the commercial paper program, Hydro One was authorized to issue up to $1 billion in short-term notes with a term to maturity of less than 365 days. On October 9, 2015, Hydro One increased the amount it was authorized to issue under this program to $1.5 billion. The commercial paper program is supported by a $1.5 billion committed revolving credit facility with a syndicate of banks, which matures in June 2020. The short-term liquidity under this program and anticipated levels of funds from operations are expected to be sufficient to fund the Company's normal operating requirements.

At June 30, 2015, Hydro One had $9,289 million in long-term debt outstanding, including the current portion. The Company's notes and debentures mature between 2015 and 2064. Long-term financing is primarily provided by Hydro One's medium-term note program ("**MTN Program**"). The maximum authorized principal amount of medium-term notes issuable under this program is $3 billion. At June 30, 2015, $837 million remained available until October 2015. The Company plans to file a base shelf prospectus to renew its MTN Program for another 25 months by the end of 2015.

Hydro One relies on debt financing through its MTN Program and commercial paper program to repay its existing indebtedness and fund a portion of its capital expenditures. The credit ratings assigned to Hydro One's debt securities by external rating agencies are important to the Company's ability to raise low-cost capital and funding to support its business operations. Maintaining strong credit ratings allows Hydro One to access capital markets on competitive terms. A material downgrade of the Company's credit ratings would likely increase its cost of funding significantly, and its ability to access funding and capital through the capital markets could be reduced.

At June 30, 2015, Hydro One's corporate credit ratings from approved rating organizations were as follows:

	Rating *(at June 30, 2015)*	
Rating Agency	**Short-term Debt**	**Long-term Debt**
DBRS Limited[(1)]	R-1 (middle)	A (high)
Moody's[(2)]	Prime-1	A1
S&P[(3)]	A-1	A

(1) On September 18, 2015, DBRS placed Hydro One's issuer rating and senior unsecured debentures rating "under review with developing implications" and placed its short-term debt rating "under review with negative implications".

(2) On April 17, 2015, Moody's affirmed the senior unsecured ratings of Hydro One at A1 but revised its outlook on the Company to negative from stable. On September 18, 2015, Moody's downgraded the senior unsecured ratings of Hydro One to A2 from A1, and maintained its outlook on the Company as negative. Moody's noted that the negative outlook reflects the high probability of a further downgrade to A3 following this offering. Moody's also stated that a downgrade to A3 would lead to a downgrade of Hydro One's short-term debt rating to Prime-2.

(3) On April 20, 2015, S&P downgraded the rating on Hydro One's long-term debt to A from A+, and revised its outlook to stable from negative. On September 18, 2015, S&P affirmed its long-term corporate credit rating on Hydro One of A (stable).

Hydro One is subject to customary covenants normally associated with long-term debt. The Company's long-term debt covenants limit its permissible debt as a percentage of its total capitalization, limit the Company's ability to sell assets, and impose a negative pledge provision, subject to customary exceptions. The agreements also provide limitations that debt cannot exceed 75% of total capitalization and that third party debt issued by Hydro One's subsidiaries cannot exceed 10% of the total book value of the Company's assets. Hydro One was in compliance with all of these and other covenants and limitations as at June 30, 2015.

Three months ended June 30, 2015

During the three months ended June 30, 2015, Hydro One issued $350 million of long-term debt under its MTN Program, and assumed $16 million of debt as part of the Haldimand Hydro acquisition, compared to $453 million of long-term debt issued during the same period in 2014. No long-term debt matured or was repaid during the three months ended June 30, 2015 or 2014. The Haldimand Hydro debt was repaid in July 2015.

During the three months ended June 30, 2015, Hydro One paid dividends to the Province in the amount of $30 million, consisting of $25 million of common share dividends and $5 million of preferred share dividends, consistent with dividends paid to the Province during the same period in 2014.

Six months ended June 30, 2015

During the six months ended June 30, 2015, Hydro One issued $350 million of long-term debt under its MTN Program, and assumed $16 million of debt as part of the Haldimand Hydro acquisition, compared to $628 million of long-term debt issued during the same period in 2014. No long-term debt matured or was repaid during the six months ended June 30, 2015 or 2014. The Haldimand Hydro debt was repaid in July 2015.

During the six months ended June 30, 2015, Hydro One paid dividends to the Province in the amount of $59 million, consisting of $50 million of common share dividends and $9 million of preferred share dividends, compared to dividends of $229 million, consisting of $220 million of common share dividends and $9 million of preferred share dividends, paid to the Province during the same period in 2014.

Investing Activities

During the six months ended June 30, 2015, Hydro One continued to focus on making important investments in its transmission and distribution systems to address its aging power system infrastructure, improve system reliability and performance, and improve service to its customers. During the six months ended June 30, 2015, the Company made capital investments totalling $774 million and placed $531 million of new assets in-service, compared to $676 million of capital investments and $533 million of new assets placed in-service during the same period in 2014.

The Company's current transmission sustainment programs include transformers, circuit breakers, switches, protection and control systems, wood poles, and other equipment replacements. Current transmission development projects include transmission system upgrades, local area supply projects, and inter-area network projects. These investments will expand and reinforce power reliability for electricity customers throughout the province, including the Company's residential and industrial customers.

The Company's current distribution sustainment programs include wood pole and meter replacements, emergency work for storm restoration, distribution station refurbishments and upgrades, and work related to joint-use and relocation of its distribution lines. Current development projects to expand and reinforce the Company's distribution network include new customer connections and upgrades, system capability reinforcement projects, line transfers requested by customers, and connections to new generation facilities.

The following table presents Hydro One's capital investments by reportable segment during the three and six months ended June 30, 2015 and 2014:

	Three months ended June 30		Six months ended June 30	
	2015	2014	2015	2014
	(millions of Canadian dollars)			
Transmission	234	203	445	376
Distribution	192	175	324	298
Other	3	2	5	2
Total capital investments	429	380	774	676

Three months ended June 30, 2015

Three months ended June 30 (millions of Canadian dollars)	2015	2014	$ change	% change
Transmission	234	203	31	15.3
Distribution	192	175	17	9.7
Other	3	2	1	50.0
Total capital investments	429	380	49	12.9

Transmission Capital Investments

The following table presents the main components of the Company's transmission capital investments during the three months ended June 30, 2015 and 2014:

Three months ended June 30 (millions of Canadian dollars)	2015	2014	$ change	% change
Sustainment	193	167	26	15.6
Development	40	26	14	53.8
Other	1	10	(9)	(90.0)
Total transmission capital investments	234	203	31	15.3

Transmission Sustainment Capital Investments

During the three months ended June 30, 2015, Hydro One's transmission sustainment capital investments were $193 million, compared to $167 million during the same period in 2014, an increase of $26 million or 15.6%. The increase was mainly due to the following:

- system re-investments, and end-of-life equipment replacement work at several transmission stations, including the Bruce, Richview, and Wiltshire Transmission Stations, as well as the completion of refurbishments of the Dunnville Transmission Station,
- increased volume of work related to station security upgrades to prevent unauthorized entry to stations and enhance safety, and increased cyber system replacements to adhere to NERC's Cyber Security standards,
- increased work on overhead lines refurbishment and replacement projects and programs, and
- increased volume of transformer purchases for the Company's station demand and spares program to ensure readiness for unplanned replacements; partially offset by
- decreased expenditures related to underground lines system replacements, as the end-of-life underground transmission cables between the Strachan Transformer Station and Riverside Junction, which were originally planned for a 2015 in-service date, were replaced earlier and put in-service in 2014.

Transmission Development Capital Investments

During the three months ended June 30, 2015, Hydro One's transmission capital investments to expand and reinforce its transmission system were $40 million, compared to $26 million during the same period in 2014, an increase of $14 million or 53.8%. The increase was mainly due to the following:

- the timing of work on some of the Company's major inter-area network and local area supply projects, such as the Clarington transmission station and Guelph area transmission refurbishment projects; partially offset by
- decreased expenditures on generation customer connection related projects mainly due to the completion of the Barwick and Orleans transmission station projects to replace end-of-life equipment and ensure reliable supply to customers; and
- the completion of transmission station upgrades at the Allanburg transmission station in the Niagara area to enhance system reliability.

Distribution Capital Investments

The following table presents the main components of Hydro One's distribution capital investments during the three months ended June 30, 2015 and 2014:

Three months ended June 30 (millions of Canadian dollars)	**2015**	**2014**	**$ change**	**% change**
Sustainment	123	96	27	28.1
Development	57	60	(3)	(5.0)
Other	12	19	(7)	(36.8)
Total distribution capital investments	192	175	17	9.7

Distribution Sustainment Capital Investments

During the three months ended June 30, 2015, Hydro One's distribution sustainment capital investments were $123 million, compared to $96 million during the same period in 2014, an increase of $27 million or 28.1%. The increase was mainly due to the following:

- increased work within the station refurbishment programs due to the timing of transformer purchases and more refurbishments accomplished during the second quarter of 2015,
- increased focus on capital lines work, mainly due to a higher volume of component replacements and the lines large sustainment initiatives program, which includes line relocations and voltage upgrades,
- the investment in a project to ensure continuity of smart meter and enhance network communications,
- increased volume of joint use and line relocations,
- higher volume of emergency equipment replacements caused by an increased number of trouble calls, and
- higher volume of end-of-life wood pole replacements; partially offset by
- the completion of iTron Sentinel 16S meter replacements in 2014.

Distribution Development Capital Investments

During the three months ended June 30, 2015, Hydro One's distribution development capital investments were $57 million, compared to $60 million during the same period in 2014, a decrease of $3 million, or 5.0%. The decrease is mainly due to the following:

- the completion of the Company's smart meter project in 2014,
- lower volume of distribution generation connection customer-driven work, and
- lower investments related to smart grid initiatives as the next phase is solidified, which will modernize the Company's distribution system to enable remote capability for some functions; partially offset by
- investments in distribution system modifications to improve supply reliability and load capacity.

Distribution Other Capital Investments

During the three months ended June 30, 2015, Hydro One's distribution other capital investments were $12 million, compared to $19 million during the same period in 2014, a decrease of $7 million or 36.8%, due to investments in the Company's payroll, human resources reporting, expense transformation and talent management systems nearing completion.

Six months ended June 30, 2015

Six months ended June 30 (millions of Canadian dollars)	2015	2014	$ change	% change
Transmission	445	376	69	18.4
Distribution	324	298	26	8.7
Other	5	2	3	150.0
Total capital investments	774	676	98	14.5

Transmission Capital Investments

The following table presents the main components of Hydro One's transmission capital investments during the six months ended June 30, 2015 and 2014:

Six months ended June 30 (millions of Canadian dollars)	2015	2014	$ change	% change
Sustainment	362	290	72	24.8
Development	73	64	9	14.1
Other	10	22	(12)	(54.5)
Total transmission capital investments	445	376	69	18.4

Transmission Sustainment Capital Investments

During the six months ended June 30, 2015, Hydro One's transmission sustainment capital investments were $362 million, compared to $290 million during the same period in 2014, an increase of $72 million or 24.8%. The increase was mainly due to the following:

- several system re-investments, including various end-of-life transformer replacements at the Wiltshire, Dunnville and Timmins transmission stations, the expedited work on 27 circuit breakers replacements at the Richview transmission station to address their deteriorated condition, breaker replacements at the Bruce transmission station to improve reliability and to meet the needs of Bruce Power. In addition, the Company placed in-service the refurbishments work at the Dunnville transmission station in Haldimand County and the transformer replacements at the Dymond transmission station in northeastern Ontario,
- increased volume of station component replacements related to addressing aging equipment as part of the new Station Centric Bundling methodology which addresses a number of capital requirements and enables savings in materials job planning and reduces outage requirements,
- the continued work on overhead lines refurbishment and replacement projects and programs, including investments to address the condition of the conductors on a circuit from the Chats Falls switching station to the Havelock transmission station in southeastern Ontario, as well as increased work on clearance corrections,
- increased volume of transformer purchases for the Company's station demand and spares program,
- increased volume of work related to station security upgrades to prevent unauthorized entry to stations and enhance safety, and increased cyber system replacements to adhere to NERC's Cyber Security standards, and
- a firewall replacement project which will ensure secure access to corporate applications from within the electronic security perimeters at the Company's grid control centre and back-up centre; partially offset by
- decreased expenditures related to underground lines system replacements, as the end-of-life underground transmission cables between the Strachan transformer station and Riverside Junction, which were originally planned for a 2015 in-service date, were replaced and placed in-service in 2014; as well as the completion of refurbishment conductor work on a circuit from the Bannockburn Junction to the Havelock transmission station in the Peterborough area.

Transmission Development Capital Investments

During the six months ended June 30, 2015, Hydro One's transmission development capital investments to expand and reinforce its transmission system were $73 million, compared to $64 million during the same period in 2014, an increase of $9 million or 14.1%. The increase was mainly due to the following:

- increased expenditures related to the timing of work on some of the Company's major local area supply and inter-area network projects, such as the Clarington transmission station and Guelph Area transmission refurbishment projects; partially offset by
- the completion of end-of-life equipment replacements at the Barwick transmission station to meet the needs of transmission customers and ensure reliable supply; and
- the completion of transmission station upgrades at the Allanburg transmission station in the Niagara area to enhance system reliability and allow for the incorporation of new generation in the area, including both transmission and distribution connected renewable generation.

Transmission Other Capital Investments

During the six months ended June 30, 2015, Hydro One's transmission other capital investments were $10 million, compared to $22 million during the same period in 2014, a decrease of $12 million or 54.5%, due to investments in the Company's payroll, human resources reporting, expense transformation and talent management systems nearing completion.

Distribution Capital Investments

The following table presents the main components of Hydro One's distribution capital investments during the six months ended June 30, 2015 and 2014:

Six months ended June 30 (millions of Canadian dollars)	2015	2014	$ change	% change
Sustainment	193	154	39	25.3
Development	101	109	(8)	(7.3)
Other	30	35	(5)	(14.3)
Total distribution capital investments	324	298	26	8.7

Distribution Sustainment Capital Investments

During the six months ended June 30, 2015, Hydro One's distribution sustainment capital investments were $193 million, compared to $154 million during the same period in 2014, an increase of $39 million or 25.3%. The increase was mainly due to the following:

- increased work within the station refurbishment programs due to more refurbishments accomplished and timing of transformer purchases,
- increased focus on capital lines work, primarily related to the large and small sustainment initiatives programs and higher volume of component replacements,
- higher volume of end-of-life wood pole replacements, and
- increased focus on investment in a project to ensure continuity of smart meter and enhance network communications; partially offset by
- the completion of iTron Sentinel 16S meter replacements in 2014.

Distribution Development Capital Investments

During the six months ended June 30, 2015, Hydro One's distribution development capital investments were $101 million, compared to $109 million during the same period in 2014, a decrease of $8 million, or 7.3%. The decrease is mainly due to the following:

- the completion of the Company's smart meter project in 2014,

- lower volume of distribution generation connection customer-driven work, and
- lower expenditures related to smart grid initiatives; partially offset by
- investments in distribution system modifications to improve supply reliability and load capacity.

Distribution Other Capital Investments

During the six months ended June 30, 2015, Hydro One's distribution other capital investments were $30 million, compared to $35 million during the same period in 2014, a decrease of $5 million or 14.3%, due to investments in the Company's payroll, human resources reporting, expense transformation and talent management systems nearing completion.

Major Transmission Projects

The following table summarizes Hydro One's major transmission projects in process during the six months ended June 30, 2015:

Project Name	Location	Type	Anticipated In-Service Date	Estimated Cost	Capital Cost To-Date	Status
Toronto Midtown Transmission Reinforcement	Toronto Southwestern Ontario	New transmission line	2016	$123 million	$88 million	Project is in progress
Guelph Area Transmission Refurbishment	Guelph area Southwestern Ontario	Transmission line upgrade	2016	$103 million	$45 million	Project is in progress
Manby Transmission Station	Toronto Southwestern Ontario	Transmission station upgrade	2016	$24 million	$19 million	Project is in progress
Clarington Transmission Station	Oshawa area Eastern GTA	New transmission station	2018/2019	$297 million	$68 million	Project is in progress
Supply to Essex County Transmission Reinforcement	Windsor-Essex area Southwestern Ontario	New transmission line and station	2018	To be determined	—	Ontario Energy Board decision for Phase 1 received in July 2015.
Northwest Bulk Transmission Line	Thunder Bay Northwestern Ontario	New transmission line	As early as 2020	To be determined	—	Development work is in progress.

Off-Balance Sheet Arrangements

There are no off-balance sheet arrangements that have, or are reasonably likely to have, a material current or future effect on the Company's financial condition, changes in financial condition, revenues or expenses, results of operations, liquidity, capital expenditures or capital resources.

Summary of Contractual Obligations and Other Commercial Commitments

The following table presents a summary of Hydro One's debt and other major contractual obligations, as well as other major commercial commitments:

June 30, 2015 (millions of Canadian dollars)	Total	Less than 1 year	1-3 years	3-5 years	More than 5 years
Contractual obligations *(due by year)*					
Long-term debt – principal repayments[1]	9,289	1,016	650	1,628	5,995
Long-term debt – interest payments[1]	7,581	416	758	675	5,732
Pension[2]	272	173	99	—	—
Environmental and asset retirement obligations[3]	275	27	73	66	109
Outsourcing agreements[4]	583	158	264	149	12
Operating lease commitments	46	9	19	11	7
Total contractual obligations	18,046	1,799	1,863	2,529	11,855
Other commercial commitments *(by year of expiry)*					
Bank line[5]	1,500	—	—	1,500	—
Letters of credit[6]	131	131	—	—	—
Guarantees[6]	348	348	—	—	—
Total other commercial commitments	1,979	479	—	1,500	—

(1) The "long-term debt – principal repayments" amounts are not charged to the Company's results of operations, but are reflected on the Company's Consolidated Balance Sheets and Consolidated Statements of Cash Flows. Interest associated with the long-term debt is recorded in financing charges on the Company's Consolidated Statements of Operations and Comprehensive Income or as a cost of capital programs.

(2) Contributions to the Hydro One Pension Fund are generally made one month in arrears. The 2015 and 2016 minimum pension contributions are based on an actuarial valuation as at December 31, 2013. Minimum pension contributions beyond 2016 will be based on an actuarial valuation effective no later than December 31, 2016, and will depend on future investment returns, changes in benefits, or actuarial assumptions. Pension contributions beyond 2016 are not estimable at this time.

(3) Hydro One records a liability for the estimated future expenditures associated with the removal and destruction of PCB-contaminated insulating oils and related electrical equipment, and for the assessment and remediation of chemically-contaminated lands owned by the Company. Hydro One also records a liability for asset retirement obligations associated with the removal and disposal of asbestos-containing materials installed in some of its facilities. The forecasted expenditure pattern reflects the company's planned work programs for the periods.

(4) In 2014, Hydro One has finalized a new outsourcing agreement with Inergi LP (Inergi) for the provision of certain services, as well as a facilities outsourcing agreement with Brookfield Johnson Controls Canada LP (Brookfield). The contractual amounts disclosed include an estimated contractual annual inflation adjustment in the range of 1.9% to 2.1%. Payments in respect of the Company's outsourcing agreements are recorded in operation, maintenance and administration costs on the Company's Consolidated Statements of Operations and Comprehensive Income or as a cost of capital programs.

(5) In support of Hydro One's liquidity requirements, the Company had a $1,500 million revolving standby credit facility with a syndicate of banks. On June 1, 2015, the Company extended the maturity date of the revolving standby credit facility from June 2019 to June 2020. No amount was drawn on this facility as at June 30, 2015.

(6) Hydro One currently has outstanding bank letters of credit of $126 million relating to retirement compensation arrangements. These letters of credit have been issued to provide security for the Company's liability under the terms of a trust fund established pursuant to the supplementary pension plan for eligible employees of Hydro One. The supplementary pension plan trustee is required to draw upon these letters of credit if Hydro One is in default of its obligations under the terms of this plan. The Company also provides prudential support to the IESO in the form of letters of credit, the amount of which is calculated based on forecasted monthly power consumption. At June 30, 2015, Hydro One has provided a letter of credit to the IESO in the amount of $5 million to meet the Company's current prudential requirement. Hydro One has also provided prudential support to the IESO on behalf of its subsidiaries as required by the IESO's Market Rules, using parental guarantees of $347 million, and on behalf of a distributor using total guarantees of $1 million.

Summary of Annual Results

Consolidated Statements of Operations and Comprehensive Income	Year ended December 31		
	2014	2013	2012
	(millions of Canadian dollars, except per share amounts)		
Total revenue	6,548	6,074	5,728
Net income attributable to Shareholder of Hydro One	749	803	745
Earnings per common share *(Canadian dollars)*	7,319	7,850	7,280

Preferred shares	323	323	323
Net assets	7,947	7,415	6,830

During 2014, the Company earned net income of $749 million and revenues of $6,548 million. The Company made capital investments totalling $1,530 million to improve its transmission and distribution systems' reliability and performance, address its aging power system infrastructure, facilitate new generation, and improve service to its customers.

In August 2014, Hydro One completed the acquisition of Norfolk Power, an electricity distribution and telecom company located in southwestern Ontario. Hydro One has been an electricity distributor in Norfolk County for decades, serving approximately 14,000 Norfolk County customers. The acquisition of Norfolk Power enables the Company to extend its service to the entire Norfolk County and a further 18,000 distribution customers. Hydro One is committed to delivering cost-effective service for Norfolk Power's customers and it remains focused on prudent management, efficient operations and improving the customer experience for everyone it serves. In 2014, the Company also signed agreements to purchase two more local distribution companies: Woodstock Hydro and Haldimand Hydro.

In addition, the Company completed a partnership transaction with the Saugeen Ojibway Nation, where the Saugeen Ojibway Nation acquired a noncontrolling equity interest in a new limited partnership, B2M Limited Partnership.

Performance Measures and Targets

The Company targets and measures its performance by using a balanced scorecard approach. Key performance drivers are closely monitored throughout the year to ensure that Hydro One maintains a focus on its strategic objectives and take mitigating actions as required. In 2014, the Company met or exceeded eight of 14 performance measure targets. Overall, the Company is making progress towards achieving many of the Company's strategic goals.

Injury-free Workplace

The safety of Hydro One's employees is paramount. For 2014, the Company used the measure of all work-related injuries or illnesses as the performance measure for this strategic objective. A "recordable" injury/illness is one of the following: medical attention (treatment beyond first aid); modified work (restricted duties); lost time; or death. For 2014, the Board of Directors set the target at 1.9 recordable injuries per 200,000 hours worked for this measure. The Company exceeded this target.

Satisfying Hydro One's Customers

In 2014, the Company approached the objective of customer satisfaction by addressing five measures related to improving customer relations. These measures relate to transmission and distribution customer satisfaction, and connection of new services, as well as estimated bills and no bill volume, as part of the Company's customer service recovery project. The Company customer service recovery project was a result of billing issues it encountered due to the implementation in May 2013 of its new customer information system.

- ***Customer Satisfaction – Transmission***

  This measure is to determine the degree to which the Company's transmission customers are satisfied with the service they receive from the Company. It is based on survey results of customer surveys conducted on the Company's behalf by independent third parties. The survey is given to three major groups of transmission customers. In 2014, the Company targeted a transmission customer satisfaction rate of 84%. The Company did not meet this target, achieving 77%.

- ***Customer Satisfaction – Distribution***

  Similar to the transmission customers, the Company surveys its distribution customers to assess the degree to which they are satisfied with the service they receive from the Company. The results arise from surveys conducted on the Company's behalf by independent third parties. This measure reflects the overall satisfaction levels of three major distribution customer segments, based on transaction satisfaction levels, annual satisfaction surveys and the meeting of Ontario Energy Board milestones, respectively, for the three segments. For 2014, the Company set a target for distribution customer satisfaction at 87%, and did well on the transactional elements, but did not meet this target on an overall basis, achieving 85%.

- ***Connection of New Customers***

  This measure relates to distribution low-voltage connections that is reported annually to the Ontario Energy Board. It addresses the Company's customers' needs for a specific and timely connection date and assesses its efficiency in connecting new customers. It measures the percentage of connections for a requested new service (< 750 volts). The connection must be completed within five business days from the day on which all applicable service conditions are satisfied, or at a later date agreed upon by the customer and the Company. Hydro One set a 2014 target of 90%, which it exceeded, by achieving 97%.

- ***Unscheduled Estimated Bills***

  With respect to this measure, Hydro One seeks to track its ability to provide accurate bills to customers. The Company tracks the percentage of total customers that have received unscheduled estimates in any billing period. The Company established a target of 1.8% of all bills for this measure. The Company exceeded the target, with only 1.2% of customers receiving unscheduled bills.

- ***No Bill Volume***

  No bill volume is a customer service measure related to the Company's ability to provide timely bills to customers. This measure tracks the number of customers who have not received a bill in three consecutive billing periods. The Company's expectation was to have fewer than 8,000 no-bill customers by September 2014, and sustain this level beyond that date. The Company exceeded this target with only 2,600 no-bill customers.

Continuous Improvement and Cost-effectiveness

As part of the Company's strategic objectives to increase productivity through efficiency improvements and effective management of costs, the Company measures transmission unit cost and distribution unit cost and sets targets for those costs. Regarding the maintenance and reliability of the transmission and distribution systems, the Company continues to build and retain public confidence and trust in the Company's operations. In 2014, the Company continued its focus on this strategic priority by investing in the key assets of the electricity delivery system and by operating the existing system for customers in a safe, reliable and efficient fashion. The Company is conscious that commercial customers of all sizes require reliable service to allow them to deliver their products and services and that customers' expectations are for a reasonably limited duration when interruptions occur. Transmission and distribution reliability is measured through the duration of customer interruptions.

- ***Transmission Unit Costs***

  For 2014, the transmission unit cost measure shows the transmission business cost-effectiveness by comparing the ratio of operation, maintenance and administration spending to gross fixed asset costs, using benchmarking initiatives. The Company set a target of 2.9% for 2014, and exceeded the target, with a 2.7% ratio.

- ***Distribution Unit Costs***

  Similar to transmission unit cost, the distribution unit cost measure demonstrates the distribution cost-effectiveness by comparing the ratio of operation, maintenance and administration spending to gross fixed asset costs, using benchmarking initiatives. For 2014, the Company set a target of 5.7%, but did not meet this target, with a 6.1% ratio.

- ***Customer Interruption Duration – Transmission***

  This measure monitors the reliability of the transmission system by tracking the average length of unplanned interruptions (in minutes) to multiple-circuit supplied delivery points. The Company has set a target of 8.9 minutes per delivery point for 2014. During 2014, the Company was aware that it would miss the target, which was not indicative of degrading reliability, but rather a result of refurbishing aging assets. In doing so, this resulted in occasions where load with a multiple-circuit supply was placed on single supply to accommodate the work program. This exposed the system to interruptions if there was a loss of the single supply. The Company determined that it was important to continue with the maintenance program even if this would result in missing the target. The Company, in fact, did not meet this target, with actual performance at 11.8 minutes per delivery point.

- ***Customer Interruption Duration – Distribution***

  This measure is an indicator of the distribution system reliability that expresses the average length of outages in hours that a customer can expect to experience in the year. This measure excludes force majeure events and loss of supply events (events caused by the transmission system or other distributors). The Company set a target of 6.7 hours per customer for this measure. In 2014, there were numerous storm events which were not considered force majeure events and comparatively more equipment outages that resulted in higher than normal customer interruptions. In the circumstances, the Company did not meet this target, with actual outage duration of 7.4 hours per customer.

Maintaining a Commercial Culture

- ***Net Income***

  Achievement of strong financial performance is measured by a performance measure of targeted level of net income after tax. The Company's target was $668 million net income after tax for 2014, and the Company exceeded the target, with net income after tax of $749 million.

- ***Customer Service Recovery Cost***

  As a result of billing issues that arose from the implementation of the Company's customer information system in 2013, the effects of which became acute in early 2014, the Company established the customer service recovery project to dedicate staff to resolve outstanding and any new billing issues and stabilize the billing system. The Company anticipated, and fixed as a target, costs of $48 million (including revenue impacts) for this project. The project was completed in 2014 and the customer information system is now in sustainment mode. As the costs of the customer service recovery project exceeded the target, the Company did not meet this anticipated target, with actual costs of $88.3 million.

- ***In-Service Capital – Transmission***

  This new measure for 2014 evaluates how the Company is meeting the Ontario Energy Board targets for in-service capital. For the transmission business, the 2014 target of 85% of in-service capital to the Company's business plan is based on historical performance, its increasing capital work program, and the additional variability caused by external commitments and required approvals. The Company's 2014 result shows that the Company exceeded the target, with 99% of in-service capital.

- ***In-Service Capital – Distribution***

  For the distribution business, the Company set the 2014 target of 87% of in-service capital to the Company's business plan based on historical performance, with adjustments to reflect that its distribution business has more storm-related capital spending than its transmission business, as well as the performance of the Company's smart meter and distributed generation capital work programs. The Company's 2014 result was better than the target, with 97% of in-service capital.

B2M Limited Partnership

In 2012, Hydro One entered into an agreement with the Saugeen Ojibway Nation, where a noncontrolling equity interest in B2M Limited Partnership was made available for purchase at fair value by the Saugeen Ojibway Nation. B2M Limited Partnership was formed by Hydro One in 2013 to hold certain assets relating to the Bruce-to-Milton transmission line and a licence to use the related land. Hydro One maintains and operates the Bruce-to-Milton line. In November 2013, the Ontario Energy Board issued a Decision and Order granting B2M Limited Partnership a transmission licence and granting Hydro One leave to sell the relevant Bruce-to-Milton line transmission assets to B2M Limited Partnership.

On December 16, 2014, the relevant Bruce-to-Milton line transmission assets totalling $526 million were transferred from Hydro One to B2M Limited Partnership. This was financed by 60% debt ($316 million) and 40% equity ($210 million). On December 17, 2014, the Saugeen Ojibway Nation acquired a 34.2% equity interest in B2M Limited Partnership for consideration of $72 million, representing the fair value of the equity interest acquired.

Norfolk Power Acquisition

On August 29, 2014, the Company completed the acquisition of the outstanding shares of Norfolk Power from The Corporation of Norfolk County. Norfolk Power is a holding company that owns Norfolk Power Distribution Inc. ("**NPDI**"), a local electricity distribution company, and Norfolk Energy Inc., a non-rate regulated energy services company, located in southwestern Ontario. The selection of Hydro One as successful bidder followed a comprehensive, competitive sales process initiated by Norfolk Power.

The total purchase price for Norfolk Power, net of the long-term debt assumed and adjusted for preliminary working capital and other closing adjustments, was approximately $68 million. The determination of the fair values of assets acquired and liabilities assumed has been based upon management's estimates and certain assumptions with respect to the fair values of the assets acquired and liabilities assumed. Hydro One determined the preliminary purchase price adjustments based on agreed working capital and other balances at the acquisition date. The resulting preliminary goodwill of approximately $40 million arising from the Norfolk Power acquisition consists largely of the synergies and economies of scale expected from combining the operations of Hydro One and Norfolk Power. The purchase price was finalized during the three months ended March 31, 2015 with no adjustments to the preliminary purchase price allocation as disclosed at December 31, 2014. Norfolk Power contributed revenues of $18 million and net income of less than $1 million for the year ended December 31, 2014.

Woodstock Hydro Acquisition

On May 21, 2014, Hydro One entered into an agreement with the City of Woodstock to acquire 100% of the common shares of Woodstock Hydro for approximately $29 million, subject to final closing adjustments. Woodstock Hydro is an urban electricity distribution company located in southwestern Ontario. The transaction is the result of extensive discussions between Hydro One and the City of Woodstock which involved consideration of economic development opportunities and other benefits resulting from the sale of Woodstock Hydro. On July 9, 2014, Hydro One filed a Mergers Acquisitions Amalgamations and Divestitures application with the Ontario Energy Board for the approval of the acquisition of Woodstock Hydro. Ontario Energy Board approval of the Woodstock Hydro acquisition was received on September 11, 2015 and closing of the acquisition is anticipated later in 2015.

Outsourcing Agreements

On November 28, 2014, the Company entered into an agreement with Inergi LP ("**Inergi**"), an affiliate of Capgemini Canada Inc., for back office and information technology outsourcing services for a term of 58 months, from March 1, 2015 to December 31, 2019. Under the agreement, Inergi will provide Hydro One with payroll, pay operations, information technology and accounting services. Coincident with the conclusion of negotiations on the Inergi agreement, Hydro One reached agreement with Inergi to provide it with call centre operations outsourcing services for a fixed period of three years beginning March 1, 2015 to February 28, 2018.

In September 2014, the Company entered into an agreement with Brookfield Johnson Controls Canada LP ("**Brookfield**") for facilities management services for a term of ten years, from January 1, 2015 to December 31, 2024, with the option to renew for an additional term of three years. The Brookfield agreement has a value of up to approximately $658 million over the ten-year term of the agreement, including the facilities management portion of the contract, plus a variable amount of capital work depending on the needs that may arise as determined by Hydro One, with no minimum capital work guarantee.

See "Liquidity and Capital Resources – Summary of Contractual Obligations and Other Commercial Commitments" in this MD&A.

Results of Operations – Year Ended December 31, 2014 Compared to Year Ended December 31, 2013

Year ended December 31 (millions of Canadian dollars)	2014	2013	$ change	% change
Revenues	6,548	6,074	474	7.8
Purchased power	3,419	3,020	399	13.2
Operation, maintenance and administration	1,192	1,106	86	7.8

	5,333	4,802	531	11.1
Income before financing charges and provision for PILs	**1,215**	**1,272**	**(57)**	**(4.5)**
Financing charges	379	360	19	5.3
Income before provision for PILs	**836**	**912**	**(76)**	**(8.3)**
Provision for PILs	89	109	(20)	(18.3)
Net income	**747**	**803**	**(56)**	**(7.0)**
Net income (loss) attributable to noncontrolling interest	(2)	—	(2)	(100.0)
Net income attributable to Shareholder of Hydro One	**749**	**803**	**(54)**	**(6.7)**

Net Income

The Company's 2014 net income attributable to the Shareholder of Hydro One decreased by $54 million, or 6.7%, to $749 million, compared to 2013. The decrease is primarily due to the following:

- $70 million increase in the Company's 2014 distribution operation, maintenance and administration costs, mainly due to its customer service recovery initiatives and the increase in its bad debt expense, resulting from higher electricity consumption due to a substantially colder than normal winter, combined with higher electricity prices and the suspension of certain collection tools and efforts during several months in 2014, and
- $46 million increase in the Company's 2014 depreciation and amortization costs, mainly due to higher property, plant and equipment depreciation expense in 2014, related to the growth in capital assets as it continues to place new assets in-service, consistent with its ongoing capital work program; partially offset by
- $59 million increase in its 2014 transmission revenues, mainly due to new Ontario Energy Board-approved 2014 transmission rates.

Revenues

Year ended December 31 (millions of Canadian dollars)	2014	2013	$ change	% change
Transmission	1,588	1,529	59	3.9
Distribution	4,903	4,484	419	9.3
Other	57	61	(4)	(6.6)
	6,548	6,074	474	7.8
Average annual Ontario 60-minute peak demand (MW)[(1)]	20,596	21,493	(897)	(4.2)
Distribution – units distributed to Hydro One customers (TWh)[(1)]	29.8	29.8	—	—

(1) System-related statistics are preliminary.

Transmission

The Company's 2014 transmission revenues increased by $59 million, or 3.9%, compared to 2013. The components of the increase include the following:

- $90 million increase due to new transmission rates effective January 1, 2014 approved by the Ontario Energy Board in January 2014, and
- $42 million increase due to the Ontario Energy Board's approval of increased export service revenues in recognition of higher electricity exports to other jurisdictions and the disposition of certain Ontario Energy Board-approved transmission regulatory accounts; partially offset by
- $45 million decrease due to lower average Ontario 60-minute peak demand in 2014. The lower electricity demand in 2014 was mainly due to milder weather in the summer and fall of 2014, compared to 2013, and
- $28 million decrease due to ancillary transmission revenues, primarily associated with Ontario Energy Board-approved regulatory accounts.

Distribution

The Company's 2014 distribution revenues increased by $419 million, or 9.3%, compared to 2013. The components of the increase include the following:

- $399 million increase due to the recovery of higher purchased power costs, as described below under "Purchased Power Costs",
- $12 million increase due to new distribution rates effective January 1, 2014 approved by the Ontario Energy Board in December 2013, and
- $8 million increase due to ancillary distribution revenues, primarily associated with Ontario Energy Board-approved regulatory accounts.

Purchased Power Costs

The Company's purchased power costs increased by $399 million, or 13.2%, in 2014, compared to 2013. The components of the increase include the following:

- $291 million increase resulting from higher purchased power costs for customers who are not eligible for the Regulated Price Plan,
- $78 million increase resulting from the impact of changes in the Ontario Energy Board's Regulated Price Plan rates for residential and other eligible customers,
- $26 million increase resulting from the Ontario Energy Board transmission rate decision effective January 1, 2014,

- $10 million increase due to wholesale market service charges levied by the IESO, and
- $4 million increase resulting from the IESO's smart metering entity charge effective May 1, 2013; partially offset by
- $10 million decrease due to lower energy consumption in 2014, mainly resulting from a milder summer and a warmer fall in 2014.

Operation, Maintenance and Administration Costs

Year ended December 31 (millions of Canadian dollars)	2014	2013	$ change	% change
Transmission	394	375	19	5.1
Distribution	742	672	70	10.4
Other	56	59	(3)	(5.1)
	1,192	1,106	86	7.8

Transmission

The Company's 2014 transmission operation, maintenance and administration costs increased by $19 million, or 5.1%, compared to 2013. The components that contributed to the increase include the following:

- increased forestry expenditures related to brush control and line clearing on the Company's transmission rights-of-way,
- higher volume of corrective and preventive maintenance on power equipment and overhead lines, and transmission site facilities maintenance requirements, and
- one-time reduction to Hydro One's provision for payments in lieu of property taxes in 2013 related to transmission stations for the years 1999 to 2012, inclusive, following the finalization of the related regulations and receipt of a final assessment of its property tax returns; partially offset by
- lower expenditures due to the recovery of insurance proceeds for the 2013 floods at Hydro One's Richview and Manby transmission stations, and
- increased attribution of overheads to capital project expenditures in 2014.

Distribution

The Company's 2014 distribution operation, maintenance and administration costs increased by $70 million, or 10.4%, compared to 2013. The increase is mainly due to the following:

- the Company's customer service recovery initiatives and the increase in its bad debt expense, resulting from higher electricity consumption due to a substantially colder than normal winter, combined with higher electricity prices and the suspension of certain collection tools and efforts during several months in 2014. The Company resumed some of its collection tools and efforts in September 2014. Hydro One Networks Inc.'s customer service recovery initiatives and related bad debt expense totalled $88 million in 2014.

The increase was partially offset by decreased expenditures in 2014 related to the CIS, as it was placed in-service in May 2013.

Depreciation and Amortization

The Company's 2014 depreciation and amortization costs increased by $46 million, or 6.8%, compared to 2013. This increase was primarily attributable to higher property, plant and equipment depreciation expense in 2014, mainly related to the growth in capital assets as Hydro One continues to place new assets in-service, consistent with its ongoing capital work program.

Financing Charges

The Company's 2014 financing charges increased by $19 million, or 5.3%, compared to 2013. The increase is primarily due to the following:

- increase in interest expense on its long-term debt due to a higher average level of debt; partially offset by
- lower average interest rate.

Provision for PILs

The provision for PILs decreased by $20 million, or 18.3%, to $89 million in 2014, compared to 2013, primarily due to lower levels of pre-tax income in 2014 compared to 2013.

Quarterly Results of Operations

The following table sets forth unaudited quarterly information for each of the eight quarters, from the quarter ended March 31, 2013 through to December 31, 2014. This information has been derived from the Company's unaudited interim consolidated financial statements and its audited annual consolidated financial statements.

	2014				2013			
Quarter ended	**Dec. 31**	**Sept. 30**	**Jun. 30**	**Mar. 31**	**Dec. 31**	**Sept. 30**	**Jun. 30**	**Mar. 31**
	(millions of Canadian dollars)							
Total revenue	1,662	1,556	1,566	1,764	1,557	1,542	1,403	1,572
Net income attributable to Shareholder of Hydro One	221	173	115	240	160	218	168	257
Net income to common Shareholder of Hydro One	216	169	110	236	155	214	163	253

Electricity demand generally follows normal weather-related variations, and consequently, the Company's electricity-related revenues and profit, all other things being equal, would tend to be higher in the first and third quarters than in the second and fourth quarters.

Results of Operations – Three Months Ended December 31, 2014 Compared to Three Months Ended December 31, 2013

Three months ended December 31 (millions of Canadian dollars)	2014	2013	$ change	% change
Revenues	1,662	1,557	105	6.7
Purchased power	893	794	99	12.5
Operation, maintenance and administration	247	286	(39)	(13.6)
Depreciation and amortization	190	184	6	3.3
	1,330	1,264	66	5.2
Income before financing charges and provision for PILs	**332**	**293**	**39**	**13.3**
Financing charges	98	93	5	5.4
Income before provision for PILs	234	**200**	34	17.0
Provision for PILs	15	40	(25)	(62.5)
Net income	**219**	**160**	**59**	**36.9**
Net income (loss) attributable to noncontrolling interest	(2)	—	(2)	(100.0)
Net income attributable to Shareholder of Hydro One	**221**	**160**	**61**	**38.1**

Net Income

Net income attributable to the Shareholder of Hydro One for the three months ended December 31, 2014 was $221 million, compared to $160 million during the same period in 2013, an increase of $61 million or 38.1%. The increase is mainly due to the following:

- decreased distribution operation, maintenance and administration costs, primarily due to lower storm response expenditures as a result of lower storm activity in 2014, compared to 2013, and decreased expenditures related to brush control and distribution line maintenance work,

- decrease in the Company's provision for PILs, primarily due to changes in net temporary differences, and
- increase in the Company's 2014 transmission revenues, mainly due to new Ontario Energy Board-approved 2014 transmission rates.

Revenues

Hydro One's total revenues for the three months ended December 31, 2014 were $1,662 million, compared to $1,557 million during the same period in 2013, an increase of $105 million or 6.7%. The increase is mainly due to the following:

- the recovery of higher purchased power costs,
- new transmission and distribution rates effective January 1, 2014, and
- the Ontario Energy Board's approval of increased export service revenues in recognition of higher electricity exports to other jurisdictions and the disposition of certain Ontario Energy Board-approved transmission regulatory accounts; partially offset by
- lower average Ontario 60-minute peak demand and energy consumption in the fourth quarter of 2014, mainly due to milder weather in the fall of 2014, and
- lower ancillary revenues, primarily associated with Ontario Energy Board-approved regulatory accounts.

Purchased Power Costs

The Company's purchased power costs for the three months ended December 31, 2014 were $893 million, compared to $794 million during the same period in 2013, an increase of $99 million or 12.5%. The increase is mainly due to the following:

- higher purchased power costs for customers who are not eligible for the Regulated Price Plan; and
- partially offset by lower energy consumption in the fourth quarter of 2014, mainly due to milder weather in the fall of 2014,
- wholesale market service charges levied by the IESO, and
- Ontario Energy Board transmission rate decision effective January 1, 2014.

Operation, Maintenance and Administration

The Company's operation, maintenance and administration costs for the three months ended December 31, 2014 were $247 million, compared to $286 million during the same period in 2013, a decrease of $39 million or 13.6%. The decrease is mainly due to the following:

- decreased distribution operation, maintenance and administration costs, primarily due to lower storm response expenditures as a result of lower storm activity in 2014, compared to 2013, and
- decreased expenditures related to brush control and distribution line maintenance work.

Depreciation and Amortization

The Company's depreciation and amortization costs for the three months ended December 31, 2014 were $190 million, compared to $184 million during the same period in 2013, an increase of $6 million or 3.3%. The increase is mainly due to higher property, plant and equipment depreciation expense in 2014, mainly related to the growth in capital assets as the Company continue to place new assets in-service, consistent with its ongoing capital work program.

Financing Charges

The Company's financing charges for the three months ended December 31, 2014 were $98 million, compared to $93 million during the same period in 2013, an increase of $5 million or 5.4%. The increase is mainly due to the following:

- increase in interest expense on its long-term debt due to a higher average level of debt; partially offset by
- lower average interest rates.

Provision for PILs

Hydro One's provision for PILs for the three months ended December 31, 2014 was $15 million, compared to $40 million during the same period in 2013, a decrease of $25 million or 62.5%. The decrease is due to the following:

- changes in net temporary differences, such as capital cost allowance in excess of depreciation, deductions for pension payments made in excess of amounts expensed for accounting purposes, and interest deducted for tax purposes in excess of interest expensed for accounting purposes; partially offset by
- higher pre-tax income for the three months ended December 31, 2014 compared to the same period in 2013.

Results of Operations – Year Ended December 31, 2013 Compared to Year Ended December 31, 2012

Year ended December 31 (millions of Canadian dollars)	2013	2012	$ change	% change

Net income	803	**745**	**58**	**7.8**
Net income (loss) attributable to noncontrolling interest	—	—	—	—
Net income attributable to Shareholder of Hydro One	**803**	**745**	**58**	**7.8**

Net Income

The Company's 2013 net income increased by $58 million, or 7.8%, to $803 million, compared to 2012. The Company experienced higher distribution revenues in 2013 mainly reflecting increased purchased power costs, primarily related to the Ontario Energy Board's Regulated Price Plan rate-setting process and the IESO's spot market. It also experienced increased transmission revenues in 2013 reflecting a higher peak demand due to intermittent periods of hot weather in the summer of 2013, as well as extreme cold winter weather. The Company's 2013 net income was also positively impacted by a lower provision for PILs and by a reduction to its provision for payments in lieu of transmission station property taxes, following the finalization of the assessment of certain prior years' property tax returns. This reduction was partially offset by power restoration expenditures following several major storms in 2013.

Revenues

Year ended December 31 (millions of Canadian dollars)	2013	2012	$ change	% change
Transmission	1,529	1,482	47	3.2
Distribution	4,484	4,184	300	7.2
Other	61	62	(1)	(1.6)
	6,074	5,728	346	6.0
Average annual Ontario 60-minute peak demand (MW)(1)	21,493	21,132	361	1.7
Distribution – units distributed to Hydro One customers (TWh)(1)	29.8	29.2	0.6	2.1

(1) System-related statistics are preliminary.

Transmission

Hydro One's 2013 transmission revenues were higher by $47 million, or 3.2%, compared to 2012. The average Ontario 60-minute peak demand was higher in 2013 compared to 2012, resulting in an increase in transmission revenues of $26 million, compared to 2012. The higher energy consumption in 2013 mainly resulted from a warmer summer and a colder winter, as compared to 2012. In addition, the Company experienced higher revenues of $21 million in 2013, associated with the Ontario Energy Board's approval of export service revenues and ancillary services.

Distribution

The Company's 2013 distribution revenues were higher by $300 million, or 7.2%, compared to 2012. The increase was primarily due to the recovery of higher purchased power costs of $246 million, as described below under "Purchased Power Costs." In addition, energy consumption was higher by $29 million in 2013, mainly resulting from a warmer summer and a colder winter, as compared to 2012. Distribution revenues also increased by $15 million as a result of the Company's placement in service of new smart grid and smart meter investments, which are currently being recovered through separate rate mechanisms.

In December 2012, the Ontario Energy Board approved new distribution rates effective January 1, 2013, based on its third generation incentive regulation mechanism process. As part of this decision, the Ontario Energy Board approved the Company's application for an additional rate rider related to an incremental capital module adjustment to its rates, reflecting its placement in service of certain specific capital investments. This approval resulted in an increase in distribution revenues of $13 million, compared to 2012. In addition, the Ontario Energy Board's incentive regulation mechanism decision resulted in higher distribution revenues of $10 million, which will support the maintenance and investment requirements of the Company's distribution system and enable the safe and reliable delivery of electricity to its customers throughout Ontario. The 2013 distribution revenue increases were partially offset by lower 2013 ancillary distribution revenues of $13 million, primarily associated with Ontario Energy Board-approved regulatory accounts.

Purchased Power Costs

The Company's 2013 purchased power costs increased by $246 million, or 8.9%, to $3,020 million, compared to 2012. The components of increase include the following:

- $104 million increase resulting from higher purchased power costs for customers who are not eligible for the Regulated Price Plan,
- $85 million increase resulting from the impact of changes in the Ontario Energy Board's Regulated Price Plan rates for residential and other eligible customers,
- $44 million increase due to higher electricity demand, and
- $9 million increase resulting from the IESO's smart metering entity charge effective May 1, 2013; partially offset by
- $4 million reduction in wholesale market service charges levied by the IESO.

Operation, Maintenance and Administration

Year ended December 31 (millions of Canadian dollars)	2013	2012	$ change	% change
Transmission	375	402	(27)	(6.7)
Distribution	672	608	64	10.5
Other	59	61	(2)	(3.3)
	1,106	1,071	35	3.3

Transmission

The Company's 2013 transmission operation, maintenance and administration costs decreased by $27 million, or 6.7%, to $375 million, compared to 2012. Within the Company's work programs, it continued to invest in the safe and reliable operation of its transmission system.

Expenditures in support of the Company's transmission system decreased by $33 million in 2013, compared to 2012, primarily due to a reduction to its provision for payments in lieu of property taxes related to transmission stations for the years 1999 to 2012, inclusive, following the finalization of the related regulations and receipt of a final assessment of its property tax returns. The decrease in the Company's transmission system support costs was partially offset by an increase of $6 million in its work program costs, compared to 2012. This increase was primarily due to higher expenditures related to the Company's forestry work program on its transmission rights-of-way resulting from heavy tree densities, power equipment preventive and corrective maintenance, and emergency restoration requirements as a result of severe flooding at Richview and Manby transmission stations caused by a major rainstorm in July 2013. The Company also experienced increased cyber security and internal compliance program requirements related to the reliability standards and criteria mandated by the NERC. These increases in work program costs were partially offset by lower expenditures related to the Ontario Power Authority's (IESO effective January 1, 2015) recommendation to increase short circuit and/or transformer capacity at ten of the Company's transmission stations to enable the connection of small renewable projects, as this work was substantially completed by the end of 2012. Expenditures for these station upgrades were recorded within operation, maintenance and administration rather than as capital expenditures, given that recovery was restricted pursuant to a shareholder declaration made in April 2011. No such declarations were issued in 2013. In addition, the Company experienced lower expenditures within its overhead lines program

Distribution

The Company's 2013 distribution operation, maintenance and administration costs increased by $64 million, or 10.5%, to $672 million, compared to 2012. The Company's work program expenditures increased by $63 million compared to 2012, mainly as a result of increased power restoration expenditures following major storms in 2013, increased customer-driven work related to trouble calls and cable locates in support of the Company's "One Call" program, higher requirements within the line patrol program, higher expenditures on its customer care programs, higher information technology improvements and enhancements, and continued work on the Company's smart grid project. These impacts were partially offset by lower station corrective and preventive maintenance expenditures, as well as lower line clearing expenditures, compared to 2012. The Company's expenditures in support of its distribution system increased marginally by $1 million, compared to 2012.

Depreciation and Amortization

The Company's 2013 depreciation and amortization costs increased by $17 million, or 2.6%, compared to 2012. This increase was attributable to higher 2013 depreciation expense, primarily related to its placement of new assets in service consistent with its ongoing capital work program, as well as higher asset removal costs in 2013.

Financing Charges

Financing charges increased by $2 million, or 0.6%, to $360 million for 2013, compared to 2012. Higher financing costs in 2013 were mainly due to a decrease in interest capitalized, partially offset by a decrease in interest expense on long-term debt due to lower average interest rates.

Provision for PILs

The provision for PILs decreased by $12 million, or 9.9%, to $109 million in 2013, compared to 2012. This decrease primarily resulted from changes in net temporary differences, and a true-up relating to the 2012 research and development tax credits. This reduction was partially offset by the impact of higher levels of pre-tax income in 2013, compared to 2012.

Liquidity and Capital Resources for Annual Periods

Hydro One's primary sources of liquidity and capital resources are funds generated from the Company's operations, debt capital market borrowings and bank financing. These resources will be used to satisfy its capital resource requirements, which continue to include its capital expenditures, servicing and repayment of its debt, and dividends.

Summary of Sources and Uses of Cash

Year ended December 31 (millions of Canadian dollars)	2014	2013	2012
Operating activities	1,256	1,404	1,294

Net change in cash and cash equivalents	(465)	370	(33)

Cash from Operating Activities

Year Ended December 31, 2014 Compared to Year Ended December 31, 2013

Net cash from operating activities decreased by $148 million to $1,256 million in 2014, compared to 2013. The decrease was primarily due to the following:

- lower 2014 net income, compared to 2013,
- changes in accrual balances, mainly related to timing of capital projects, and
- changes in regulatory accounts, including the retail settlement and external revenue variance accounts; partially offset by
- higher property, plant and equipment depreciation expense in 2014, mainly related to the growth in capital assets as the Company continues to place new assets in-service, consistent with the Company's ongoing capital work program.

Year Ended December 31, 2013 Compared to Year Ended December 31, 2012

Net cash from operating activities increased by $110 million to $1,404 million in 2013, compared to 2012. The increase was primarily due to higher 2013 net income, compared to 2012, as well as changes in accrual balances, mainly related to timing of tax payments and to capital projects. The increase was partially offset by growth in accounts receivable balances, resulting from higher revenues and lower collections in the period.

Financing Activities

Short-term liquidity is provided through funds from operations, the Company's commercial paper program, and the Company's revolving credit facility.

At December 31, 2014, under the commercial paper program, Hydro One was authorized to issue up to $1 billion in short-term notes with a term to maturity of less than 365 days. The commercial paper program is supported by a $1.5 billion committed revolving credit facility with a syndicate of banks. The short-term liquidity under this program and anticipated levels of funds from operations are expected to be sufficient to fund the Company's normal operating requirements.

At December 31, 2014, the Company had $8,923 million in long-term debt outstanding, including the current portion. The Company's notes and debentures mature between 2015 and 2064. Long-term financing is provided by the Company's access to the debt markets, primarily through its MTN Program. The maximum authorized principal amount of medium-term notes issuable under this program is $3,000 million. At December 31, 2014, $1,187 million remained available until October 2015. The Company plans to file a base shelf prospectus to renew its MTN Program for another 25 months by the end of 2015.

At December 31, 2013, the Company had $9,045 million in long-term debt outstanding, including the current portion. At December 31, 2013, $1,815 million of $3 billion maximum authorized principal amount of medium-term notes under the MTN Program remained available until October 2015.

In 2014, the Company issued $628 million of long-term debt under the Company's MTN Program, compared to $1,185 million of long-term debt issued in 2013. In 2014, the Company also repaid $750 million in maturing long-term debt, compared to $600 million of long-term debt repaid in 2013. In addition, long-term debt totalling $26 million assumed on the Norfolk Power acquisition was repaid in September 2014.

In 2013, Hydro One issued $1,185 million of long-term debt under the Company's MTN Program, compared to $1,085 million of long-term debt issued in 2012. In 2013, the Company also repaid $600 million in maturing long-term debt, compared to $600 million of long-term debt called and redeemed in 2012, prior to its maturity date of November 15, 2012.

The Company had no short-term notes outstanding at December 31, 2014, 2013, or 2012.

During 2014, Hydro One paid dividends to the Province in the amount of $287 million, consisting of $269 million in common share dividends and $18 million in preferred share dividends, compared to dividends of $218 million, consisting of $200 million of common share dividends and $18 million of preferred share dividends, paid to the Province in 2013, and dividends of $370 million, consisting of $352 million in common dividends and $18 million in preferred dividends paid to the province in 2012. In 2013, cash dividends per common share were $2,000, compared to $3,523 per common share in 2012. Cash dividends per preferred share were $1.375 in each of 2013 and 2012.

The Company's objectives with respect to its capital structure are to maintain effective access to capital on a long-term basis at reasonable rates and to deliver appropriate financial returns to its Shareholder.

Investing Activities

During 2014, the Company continued to focus on making important investments in its transmission and distribution systems to address its aging power system infrastructure, improve its systems' reliability and performance, and improve service to its customers. Hydro One made capital investments totalling $1,530 million in 2014, compared to $1,394 million of capital investments in 2013, and have placed $1,574 million of new assets in-service in 2014, compared to $1,491 million of new assets placed in-service in 2013.

Capital investments consist of cash capital expenditures and related accruals. Capital investments primarily relate to sustaining, enhancing and reinforcing the Company's transmission and distribution infrastructure.

	Year ended December 31		
	2014	**2013**	**2012**
	(millions of Canadian dollars)		
Transmission	845	714	776
Distribution	680	673	671
Other	5	7	7
Total capital investments	1,530	1,394	1,454

Transmission Capital Investments

The Company's 2014 transmission capital investments were $845 million, compared to $714 million in 2013, an increase of $131 million or 18.3%, primarily due to sustainment programs to address its aging infrastructure. Given the aging of its infrastructure, the Company has ongoing investment plans which are designed to reliably power the Ontario economy and to support the innovation that can be expected over the next decade.

The Company's 2013 transmission capital investments decreased by $62 million, or 8.0%, to $714 million, compared to 2012.

	Year ended December 31		
	2014	2013	2012
	(millions of Canadian dollars)		
Sustainment	625	481	392
Development	132	170	313
Other	88	63	71
Total transmission capital investments	845	714	776

Transmission Sustainment Capital Investments

The Company's current transmission sustainment programs include protection and control systems, wood poles, breakers and high-voltage instrument transformer replacements. The Company's 2014 transmission sustainment capital investments were $625 million, compared to $481 million in 2013, an increase of $144 million or 29.9%. The increase was mainly due to the following:

- several system re-investments, including the Gerrard and Timmins transmission stations and new type of breakers at its Bruce transmission station, which progressed in 2014, as well as completed projects, such as the Pinard transmission station breakers and the Wallaceburg transmission station;
- several replacements of end-of-life power transformers at its Pembroke transmission Station in eastern Ontario, and its Hanover, Allanburg, and Elmira transmission stations in southwestern Ontario, as well as the emergency replacement of a unit at the Trafalgar transmission station;
- increased work within its station and lines equipment replacement and refurbishment projects and programs, including its investment to address the condition of the conductors on the 170 kilometre circuit from the Chats Falls switching station to the Havelock transmission station in southeastern Ontario, and increased work on overhead lines wood pole structure replacements; and
- increased volume of replacements related to addressing aging protection and control equipment.

Investments to sustain the Company's existing transmission system were $481 million in 2013, representing an increase of $89 million or 22.7%, compared to 2012. In 2013, Hydro One made significant investments in the refurbishment and replacement of end-of-life equipment for overhead lines and system re-investments in order to improve reliability, as well as replacement of circuit breakers. In addition, the Company has experienced higher expenditures associated with the timing of work related to the replacement of end-of-life power transformers. Hydro One continued work on replacing end-of-life underground transmission cables between its Strachan transmission station and Riverside Junction. These new underground cables will maintain a reliable supply of electricity to downtown Toronto. These increases were partially offset by lower expenditures related to the replacement of protection and control equipment.

Transmission Development Capital Investments

The Company's current transmission development projects include transmission system upgrades, local area supply projects, and inter-area network projects. These investments will expand and reinforce power reliability for electricity customers throughout the province, including its residential and industrial customers. The Company's 2014 development capital investments to expand and reinforce its transmission system were $132 million, compared to $170 million in 2013, a decrease of $38 million or 22.4%. The decrease was mainly due to the following:

- the successful completion of Sundusk and Summerhaven switching stations upgrades in 2013 to incorporate renewable energy into its transmission system; and
- reduced expenditures related to some of its major projects which were completed in 2014, such as the Lambton-to-Longwood transmission upgrade project, the Barwick transmission station, and the Allanburg transmission station to ensure mandatory transmission system standards were met.

Investments to expand and reinforce the Company's transmission system were $170 million in 2013, representing a decrease of $143 million, compared to 2012. The decrease was mainly due to the completion of the Company's Bruce-to-Milton transmission line to connect refurbished nuclear and new wind generation sources in the Huron-Grey-Bruce area. This project was placed in-service in May 2012. In addition, the Company experienced lower expenditures as a result of completing its Commerce Way transmission station, a new load supply station in the City of Woodstock to address load growth issues in the Woodstock area, and the switchyard reconstruction project at its Burlington transmission station, where two new switchyards were constructed to increase the load supply capacity and to ensure reliability of supply to customers in the area. These projects were placed in-service in February 2013 and December 2012, respectively.

During 2013, the Company continued to invest in inter-area network projects to support the Province's supply mix objectives for generation, and in load customer connections and local area supply projects to address growing loads. The Company's local area supply project expenditures included investments in its Midtown transmission reinforcement project, which will provide additional supply capability to meet future load growth in midtown Toronto as well as areas to the west. Work at the Company's Hearn switching station was partially completed in December 2013, where the Company rebuilt an existing switchyard that had reached the end of its service life. The Company was also constructing its Lambton-to-Longwood transmission upgrade to increase transmission capability between its Lambton (Sarnia) and Longwood (London) transmission stations.

Transmission Other Capital Investments

The Company's 2014 other transmission capital investments were $88 million, compared to $63 million in 2013, an increase of $25 million or 39.7%. The increase was mainly due to the following:

- the development phase investment in its network management system project, a critical operating tool used for monitoring and control of its transmission system, and
- the investment in its payroll transformation project to realize various process efficiencies; partially offset by
- higher investments in 2013 as a result of emergency flood restoration work at its Richview transmission station resulting from a major rainstorm in July 2013.

The Company's other transmission capital investments were $63 million in 2013, representing a decrease of $8 million, compared to 2012. The decrease was mainly due to lower requirements associated with information technology initiatives, including its entity-wide enterprise information system replacement and improvement project, and timing of field facilities improvements. These reductions were partially offset by increased fleet acquisitions and emergency flood restoration work at its Richview transmission station caused by a major rainstorm in July 2013.

Distribution Capital Investments

The Company's 2014 distribution capital investments were $680 million, compared to $673 million in 2013, an increase of $7 million or 1.0%, primarily due to its distribution sustainment programs to address its aging infrastructure.

The Company's 2013 distribution capital investments increased by $2 million, or 0.3%, to $673 million, compared to 2012.

	Year ended December 31		
	2014	**2013**	**2012**
	(millions of Canadian dollars)		
Sustainment	356	324	245
Development	236	235	284
Other	88	114	142
Total distribution capital investments	680	673	671

Distribution Sustainment Capital Investments

The Company's current distribution sustainment programs include wood pole and meter replacements, emergency work for storm restoration, distribution station refurbishments and upgrades, and work related to joint-use and relocation of its distribution lines. The Company's 2014 distribution sustainment capital investments were $356 million, compared to $324 million in 2013, an increase of $32 million or 9.9%. The increase is mainly due to the following:

- increased investments in meter replacements, including certain meter replacements and field metering services installations,
- higher volume of end-of-life wood pole replacements,
- increased focus on capital lines work, mainly due to the lines large sustainment initiatives program, and
- increased work within its station refurbishment programs due to more refurbishments accomplished in 2014; partially offset by
- reduced storm restoration work in 2014 due to lower storm activity compared to 2013.

Investments to sustain the Company's distribution system were $324 million in 2013, representing an increase of $79 million or 32.2%, compared to 2012. The increase was primarily due to increased expenditures for replacements related to storm restoration work caused by major storms in 2013. The Company also experienced increased work within its wood pole replacement program and station refurbishment projects. Investments were also impacted by the timing of customer contribution payments received in 2012 relating to work for joint use and relocation of its lines. These increases were partially offset by lower work within the Company's lines programs.

Distribution Development Capital Investments

The Company's current development projects to expand and reinforce its distribution network include new customer connections and upgrades, system capability reinforcement projects, line transfers requested by customers, and connections to new generation facilities. The Company's 2014 distribution development capital expenditures were $236 million, compared to $235 million in 2013, an increase of $1 million or 0.4%. The increase is mainly due to the following:

- increased work for subdivision connections, new customer connections, and upgrades, and
- the purchase of retail revenue meters for all new connections and service upgrades; partially offset by
- reduced lines and stations work related to upgrading and adding capacity to the Company's distribution system.

Investments to expand and reinforce its distribution network were $235 million in 2013, representing a decrease of $49 million, compared to 2012. Hydro One experienced reduced expenditures related to some of its major projects, including its smart grid project, as it completed the deployment of its distribution management system within the Owen Sound pilot area in 2012, and the smart metering project, as most of the network expansion work was completed in 2012. In 2013, the Company also experienced a lower demand for new customer connections and upgrades. These decreases were partially offset by increased work on upgrading and adding capacity to its system to enable new customer connections and timing of generation connection projects.

Distribution Other Capital Investments

The Company's 2014 other distribution capital expenditures were $88 million, compared to $114 million in 2013, a decrease of $26 million or 22.8%. The decrease is mainly due to the following:

- decreased expenditures in 2014 related to the CIS, as it was placed in-service in May 2013,
- decrease due to higher investments in 2013 as a result of emergency flood restoration work at its Richview transmission station resulting from a major rainstorm in July 2013; partially offset by
- investment in a payroll transformation project to realize various process efficiencies.

The Company's other distribution capital investments were $114 million in 2013, representing a decrease of $28 million or 19.7%, compared to 2012. The majority of these expenditures were related to the CIS phase of its entity-wide information system replacement and improvement project, which was placed into service in May 2013. In addition to replacing end-of-life systems, this implementation is expected to result in process improvements that are expected to provide many benefits including enhancements to customer satisfaction through reduced call times and first call resolution of issues given faster availability of information. Productivity savings are also anticipated to result from performance improvements, consolidation and/or decommissioning of legacy information technology systems. In addition, the Company experienced decreased expenditures associated with information technology initiatives, including its entity-wide enterprise information system replacement and improvement project, and the timing of field facilities improvements, partially offset by an increase in fleet acquisitions and emergency flood restoration work at its Richview transmission station.

Related Party Transactions

Hydro One is currently owned by the Province. The Ontario Electricity Financial Corporation, IESO, Ontario Power Authority (merged with IESO effective January 1, 2015), Ontario Power Generation Inc., and the Ontario Energy Board are related parties to the Company because they are controlled or significantly influenced by the Province.

Three and six months ended June 30, 2015 compared to June 30, 2014

The Province

- During the three and six months ended June 30, 2015, Hydro One paid dividends to the Province totalling $30 million and $59 million, respectively, compared to $30 million and $229 million paid in the same periods in 2014.

IESO

- During the three and six months ended June 30, 2015, Hydro One purchased power in the amount of $471 million and $1,262 million, respectively, from the IESO-administered electricity market, compared to $568 million and $1,343 million purchased in the same periods in 2014.
- Hydro One receives revenues for transmission services from the IESO, based on Ontario Energy Board-approved transmission rates. The Company's transmission revenues for the three and six months ended June 30, 2015 include $363 million and $768 million, respectively, related to these services, compared to $368 million and $776 million in the same periods in 2014.
- Hydro One receives amounts for rural rate protection from the IESO. The Company's distribution revenues for the three and six months ended June 30, 2015 include $32 million and $64 million, respectively, related to this program, compared to $32 million and $64 million in the same periods in 2014.
- Hydro One receives revenues related to the supply of electricity to remote northern communities from the IESO. The Company's distribution revenues for the three and six months ended June 30, 2015 include $8 million and $16 million, respectively, related to these services, compared to $8 million and $16 million in the same periods in 2014.
- The IESO (Ontario Power Authority prior to January 1, 2015) funds substantially all of Hydro One's Conservation and Demand Management ("**CDM**") programs. The funding includes program costs, incentives, and management fees. During the three and six months ended June 30, 2015, the Company received $11 million and $23 million, respectively, from the IESO related to these programs, compared to $14 million and $21 million received in the same periods in 2014.

Ontario Power Generation Inc.

- During the three and six months ended June 30, 2015, Hydro One purchased power in the amount of $2 million and $8 million, respectively, from Ontario Power Generation Inc., compared to $4 million and $18 million purchased in the same periods in 2014.

- Hydro One has service level agreements with Ontario Power Generation Inc. These services include field, engineering, logistics and telecommunications services. The Company's other revenues for the three and six months ended June 30, 2015 include $1 million and $3 million, respectively, related to these service level agreements, compared to $3 million and $6 million in the same periods in 2014. Operation, maintenance and administration costs related to the purchase of services with respect to these service level contracts were insignificant during the three months ended June 30, 2015 and 2014, and $1 million during the six months ended June 30, 2015 and 2014.

Ontario Electricity Financial Corporation

- During the three and six months ended June 30, 2015, Hydro One paid PILs to the Ontario Electricity Financial Corporation totalling $14 million and $32 million, respectively, compared to payments of $21 million and $43 million made in the same periods in 2014.
- During the three and six months ended June 30, 2015, Hydro One purchased power in the amount of $2 million and $4 million, respectively, from power contracts administered by the Ontario Electricity Financial Corporation, compared to $2 million and $7 million purchased in the same periods in 2014.
- During the six months ended June 30, 2015, the Company paid a $5 million annual fee to the Ontario Electricity Financial Corporation, compared to $5 million paid in the same period in 2014, for indemnification against adverse claims in excess of $10 million paid by the Ontario Electricity Financial Corporation with respect to certain of Ontario Hydro's businesses transferred to Hydro One on April 1, 1999.

Ontario Energy Board

- Under the Ontario Energy Board Act, the Ontario Energy Board is required to recover all of its annual operating costs from gas and electricity distributors and transmitters. During the three and six months ended June 30, 2015, Hydro One incurred $3 million and $6 million, respectively, in Ontario Energy Board fees, compared to $3 million and $6 million incurred in the same periods in 2014.

At June 30, 2015, the amounts due from and due to related parties as a result of the transactions described above were $177 million and $52 million, respectively, compared to $224 million and $227 million at December 31, 2014, respectively. At June 30, 2015, included in amounts due to related parties were amounts owing to the IESO in respect of power purchases of $41 million, compared to $214 million at December 31, 2014.

Year ended December 31, 2014 compared to year ended December 31, 2013

The Province

- During 2014, Hydro One paid dividends to the Province totalling $287 million, compared to $218 million paid in 2013.
- In November 2014, Hydro One redeemed the $250 million Province of Ontario Floating-Rate Notes held as a long-term investment. These notes were originally purchased in January 2010 with a maturity date of November 19, 2014.

IESO

- During 2014, Hydro One purchased power in the amount of $2,601 million from the IESO-administered electricity market, compared to $2,477 million purchased in 2013.
- The Company's 2014 transmission revenues include $1,556 million related to transmission services, compared to $1,509 million in 2013.
- The Company's 2014 distribution revenues include $127 million related to the rural rate protection program, compared to $127 million in 2013.
- The Company's 2014 distribution revenues include $32 million related to the supply of electricity to remote northern communities, compared to $33 million in 2013.

Ontario Power Authority (merged with IESO effective January 1, 2015)

- During 2014, Hydro One received $33 million related to CDM programs, compared to $34 million received in 2013.

Ontario Power Generation Inc.

- During 2014, Hydro One purchased power in the amount of $23 million from Ontario Power Generation Inc., compared to $15 million in 2013.
- Hydro One's 2014 other revenues include $12 million related to service level agreements with Ontario Power Generation Inc., compared to $9 million in 2013. Hydro One's 2014 operation, maintenance and administration costs related to the purchase of services with respect to these service level contracts were $1 million, compared to $1 million in 2013.

Ontario Electricity Financial Corporation

- During 2014, Hydro One paid PILs to the Ontario Electricity Financial Corporation totalling $86 million, compared to payments of $138 million made in 2013.
- During 2014, Hydro One purchased power in the amount of $9 million from power contracts administered by the Ontario Electricity Financial Corporation, compared to $8 million purchased in 2013.
- During 2014, the Company paid a $5 million annual fee to the Ontario Electricity Financial Corporation, compared to $5 million paid in 2013, for indemnification against adverse claims in excess of $10 million paid by the Ontario Electricity Financial Corporation with respect to certain of Ontario Hydro's businesses transferred to Hydro One on April 1, 1999.

Ontario Energy Board

- During 2014, Hydro One incurred $12 million in Ontario Energy Board fees, compared to $12 million incurred in 2013.

At December 31, 2014, the amounts due from and due to related parties as a result of the transactions described above were $224 million and $227 million, respectively, compared to $197 million and $230 million at December 31, 2013, respectively. At December 31, 2014, included in amounts due to related parties were amounts owing to the IESO in respect of power purchases of $214 million, compared to $217 million at December 31, 2013.

Year ended December 31, 2013 compared to year ended December 31, 2012

Transmission revenues include $1,509 million (2012 – $1,474 million) received from IESO related to transmission services. Distribution revenues include $127 million (2012 – $127 million) received from the IESO related to the rural rate protection program. Distribution revenues also include $33 million (2012 – $28 million) received from the IESO related to the supply of electricity to remote northern communities.

In 2013, Hydro One purchased power in the amount of $2,477 million (2012 – $2,392 million) from the IESO-administered electricity market; $15 million (2012 – $10 million) from Ontario Power Generation Inc.; and $8 million (2012 – $7 million) from power contracts administered by the Ontario Electricity Financial Corporation.

In 2013, Hydro One incurred $12 million (2012 – $11 million) in Ontario Energy Board fees.

In 2013, revenues related to the provision of construction and equipment maintenance services with respect to the service level agreements with Ontario Power Generation Inc. were $9 million (2012 – $10 million), primarily for the transmission business. Operation, maintenance and administration costs related to the purchase of services with respect to these service level agreements were $1 million in 2013 (2012 – $2 million).

In 2013, Hydro One received $34 million (2012 – $39 million) from the Ontario Power Authority (IESO effective January 1, 2015) related to CDM programs.

PILs and payments in lieu of property taxes are paid to the Ontario Electricity Financial Corporation, and dividends are paid to the Province.

Sales to and purchases from related parties occur at normal market prices or at a proxy for fair value based on the requirements of the Ontario Energy Board's affiliate relationships code. Outstanding balances at period end are interest free and settled in cash.

At December 31, 2013, the Company held $250 million in Province of Ontario floating-rate notes with a fair value of $251 million (2012 – $251 million).

The amounts due to and from related parties as a result of the transactions referred to above are as follows:

December 31 (millions of Canadian dollars)	2013	2012
Due from related parties	197	154
Due to related parties(1)	(230)	(261)
Investment	251	251

(1) Included in due to related parties at December 31, 2013 are amounts owing to the IESO in respect of power purchases of $217 million (2012 – $199 million).

Considerations of Current Economic Conditions

Effect of Load on Revenue

The Company's load, based on normal weather patterns, is expected to increase in 2015 due to economic growth in all sectors of the Ontario economy, partially offset by the load impact of CDM and embedded generation. Overall load growth due to the economy alone is forecasted to be approximately 1.9%, with the commercial and industrial sectors slightly outperforming the residential sector. The load impacts of CDM and embedded generation are expected to have a negative impact on load growth of approximately 0.6% and 0.4%, respectively. On the whole, load is expected to increase by approximately 0.9% in 2015. The Company's approved revenue requirement for 2015 has taken the negative load impact of CDM and embedded generation into account. A load growth below the Company's load forecast, included in its approved revenue requirement, would negatively impact the Company's financial results.

Effect of Interest Rates

Changes in interest rates will impact the calculation of the revenue requirements upon which Hydro One's rates are based. The first component impacted by interest rates is the Company's return on equity. The Ontario Energy Board-approved adjustment formula for calculating return on equity will increase or decrease by 50% of the change between the current Long Canada Bond Forecast and the risk-free rate established at 4.25% and 50% of the change in the spread in 30-year "A"-rated Canadian utility bonds over the 30-year benchmark Government of Canada bond yield established at 1.415%. All other things being equal, Hydro One estimates that a 1% decrease in the forecasted long-term Government of Canada bond yield used in determining its return on equity would reduce Hydro One Networks Inc.'s transmission and distribution businesses' 2015 results of operations by approximately $20 million and $13 million, respectively. As interest rates decline, there is more risk of a decline in net income. The second component of revenue requirement that would be impacted by interest rates is the return on debt. The difference between actual interest rates on new debt issuances and those approved for return by the Ontario Energy Board would impact the Company's results of operations.

Input Costs

In support of the Company's ongoing work programs, Hydro One is required to procure materials, supplies and services. To manage total costs, the Company regularly establishes security of supply, strategic material and services contracts, general outline agreements, and vendor alliances and it also manages a stock of commonly used items. Such arrangements are for a defined period of time and are monitored. Where advantageous, the Company develops long-term contractual relationships with suppliers to optimize the cost of goods and services and to ensure the availability and timely supply of critical items. As a result of its strategic sourcing practices, Hydro One does not foresee any adverse impacts on its business from current economic conditions in respect of adequacy and timing of supply and credit risk of its counterparties. Further, the Company has been able to realize significant savings through its strategic sourcing initiatives.

Pension Plan

During the six months ended June 30, 2015, Hydro One contributed approximately $89 million to its pension plan, compared to contributions of approximately $174 million made in the same period in 2014, and incurred $82 million in net periodic pension benefit costs, compared to $79 million incurred in the same period in 2014. Contributions of $174 million made during the six months ended June 30, 2014, included contributions for the balance of the 2014 year, whereas no pension plan contributions prepayments were made during the six months ended June 30, 2015.

In 2014, Hydro One contributed approximately $174 million to its pension plan, compared to contributions of approximately $160 million made in 2013, and incurred $158 million in net periodic pension benefit costs, compared to $287 million incurred in 2013. The Company currently estimates its total annual pension contributions to be approximately $174 million for 2015 and $175 million for 2016, based on an actuarial valuation as at December 31, 2013 and projected levels of pensionable earnings. Actuarial valuations are required to be filed at least every three years. Future minimum contributions beyond 2016 will be based on an actuarial valuation effective no later than December 31, 2016. In 2014, the Company's pension plan experienced positive returns of approximately 12.3%, compared to approximately 17.9% in 2013.

As at December 31, 2014, the projected benefit obligation of the Company's pension plan was $7,535 million (December 31, 2013 – $6,576 million) and the fair value of plan assets was $6,299 million (December 31, 2013 – $5,731 million), giving rise to an unfunded status liability of $1,236 million (December 31, 2013 – $845 million). For more information regarding the funded status of the Company's pension plan, see note 15 of the audited consolidated financial statements of Hydro One Inc. as at and for the years ended December 31, 2014 and 2013 included elsewhere in this prospectus.

The Company's pension benefits obligation is impacted by various assumptions and estimates, such as discount rate, rate of return on plan assets, rate of cost of living increase, and mortality assumptions. A full discussion of the significant assumptions and estimates can be found in the section "Critical Accounting Estimates–Employee Future Benefits" in this MD&A.

Risk Management

Hydro One has an Enterprise Risk Management ("**ERM**") Program that aims at balancing business risks and returns. A company-wide approach enables regulatory, strategic, operational and financial risks to be managed and aligned with its strategic goals. The Company's ERM program helps it to better understand uncertainty and its potential impact on the Company's strategic goals. It sets out the uniform principles, processes and criteria for identifying, assessing, evaluating, treating, monitoring and communicating risks across all lines of business. It supports the Company's Board of Directors' corporate governance needs and the due diligence responsibilities of senior management.

While the Company's philosophy is that risk management is the responsibility of all employees, the Board is responsible for overseeing the Company's ERM system. The Audit Committee reviews the ERM framework for the Company and assesses the adequacy and completeness of the process for identifying and assessing the key risks facing the Company. The Audit Committee will also meet with the head of the Company's risk management function at least twice per year. The Board has, in the past, reviewed the Company's risk profile, which is the list of key risks prepared by senior management, and represents the greatest threats to meeting its strategic objectives. The Board committees review risks relevant to their mandate at every meeting.

The Company's President and Chief Executive Officer has ultimate accountability for risk management. The Company's leadership team provides senior management oversight of its risk portfolio and its risk management processes. The leadership team provides direction on the evolution of these processes and identifies priority areas of focus for risk assessment and mitigation planning.

The Company's Chief Financial Officer is responsible for ensuring that the risk management program is an integral part of Hydro One's business strategy, planning and objective setting. The Chief Financial Officer has specific accountability for ensuring that ERM processes are established, properly documented and maintained by the Company.

The Company's senior managers, line and functional managers are responsible for managing risks within the scope of their authority and accountability. Risk acceptance or mitigation decisions are made within the risk tolerances specified by the head of the subsidiary or function.

The Chief Financial Officer provides support to the committees of the Board of Directors, the President and CEO, the senior management team and key managers within the company. This support includes developing risk management frameworks, policies and processes, introducing and promoting new techniques, establishing risk tolerances, preparing annual corporate risk profiles, maintaining a registry of key business risks and facilitating risk assessments across the Company. Hydro One's internal audit staff is responsible for performing independent reviews of the effectiveness of risk management policies, processes and systems. Starting in 2013, the Company's Board of Directors has taken on an enhanced role in the Company's risk governance structure. Each committee of the Board of Directors takes accountability for reviewing specific risks of the Company.

Key elements of the Company's ERM Program enable it to identify, assess and monitor its risks effectively. These include having an ERM policy and framework which communicates the Company's philosophy and process for risk management across the Company. A discussion of risks is an integral part of each line of business' planning documents on an annual basis. Risk identification is also considered as part of each business case for investments. Finally, discrete risk assessments and workshops are performed for specific lines of business, key projects and various profiles, such as customer relationships and regulatory compliance. In order to drive consistency throughout the risk identification and risk management processes, the Company uses a standard list of risk sources known as risk universe. These sources are maintained in a single database that provides a consistent basis for risk identification and classification and serves as a repository for risk assessments. All risk assessments in the Company start with this risk universe. The Company also uses standard risk criteria, which establish the metrics and terminology used for assessing and communicating on risks, and helps ensure a consistent basis for its risk assessments and risk evaluations across all lines of business. Risk criteria include formally established risk tolerances and standard scales for assessing the probability of a risk materializing and the strength of controls in place to mitigate them.

For an understanding of key risks and other potential risks of the Company, including non-financial risks, see "Risk Factors".

Critical Accounting Estimates

The preparation of the Company's consolidated financial statements requires the Company to make estimates and judgments that affect the reported amounts of assets, liabilities, revenues and costs, and related disclosures of contingencies. Hydro One bases its estimates and judgments on historical experience, current conditions and various other assumptions that are believed to be reasonable under the circumstances, the results of which form the basis for making judgments about the carrying values of assets and liabilities, as well as identifying and assessing its accounting treatment with respect to commitments and contingencies. Actual results may differ from these estimates and judgments. The Company has identified the following critical accounting estimates used in the preparation of its consolidated financial statements:

Revenues

The Company's monthly distribution revenue is estimated based on wholesale electricity purchases. At the end of each month, the electricity delivered to customers, but not billed, is estimated and revenue is recognized. The newly implemented CIS phase of the Company's entity-wide system improvement project will allow Hydro One to use historical trends at a customer level to better estimate unbilled revenue each period. This change in methodology for estimating revenue is anticipated to be implemented in 2015. Any changes in estimates will be accounted for prospectively.

Allowance for Doubtful Accounts

The allowance for doubtful accounts reflects management's best estimate of losses on billed accounts receivable balances. The allowance is based on accounts receivable aging, historical experience and other currently available information. The allowance for doubtful accounts on customer receivables is estimated by applying internally developed loss rates to the outstanding receivable balances by risk segment. Risk segments represent groups of customers with similar credit quality indicators and are computed based on various attributes, including number of days receivables are past due, delinquency of balances and payment history. Loss rates applied to the accounts receivable balances are based on historical average write-offs as a percentage of accounts receivable in each risk segment.

Regulatory Assets and Liabilities

The Company's regulatory assets represent certain amounts receivable from future electricity customers and costs that have been deferred for accounting purposes because it is probable that they will be recovered in future rates. The Company's regulatory assets mainly include costs related to the pension benefit liability, deferred income tax liabilities, post-retirement and post-employment benefit liability, and environmental liabilities. The Company's regulatory liabilities represent certain amounts that are refundable to future electricity customers, and pertain primarily to Ontario Energy Board deferral and variance accounts. The regulatory assets and liabilities can be recognized for rate-setting and financial reporting purposes only if the amounts have been approved for inclusion in the electricity rates by the Ontario Energy Board, or if such approval is judged to be probable by management. If management judges that it is no longer probable that the Ontario Energy Board will allow the inclusion of a regulatory asset or liability in future electricity rates, the applicable carrying amount of the regulatory asset or liability will be reflected in results of operations in the period that the judgment is made by management.

Environmental Liabilities

The Company records a liability for the estimated future expenditures associated with the removal and destruction of PCB-contaminated insulating oils and related electrical equipment, and for the assessment and remediation of chemically-contaminated lands.

There are uncertainties in estimating future environmental costs due to potential external events such as changes in legislation or regulations and advances in remediation technologies. In determining the amounts to be recorded as environmental liabilities, the Company estimates the current cost of completing required work and makes assumptions as to when the future expenditures will actually be incurred, in order to generate future cash flow information. All factors used in estimating the Company's environmental liabilities represent management's best estimates of the present value of costs required to meet existing legislation or regulations. However, it is reasonably possible that numbers or volumes of contaminated assets, cost estimates to perform work, inflation assumptions and the assumed pattern of annual cash flows may differ significantly from the Company's current assumptions. Environmental liabilities are reviewed annually or more frequently if significant changes in regulations or other relevant factors occur. Estimate changes are accounted for prospectively.

In April 2014, changes were made to the existing federal PCB regulations, which included the extension of the end-of-use deadline from 2014 to 2025 for equipment containing certain concentrations of PCBs. As a result of an annual review of environmental liabilities, the Company recorded a revaluation adjustment in 2014 to reduce its environmental liabilities by $20 million that included the impact of the PCB regulations amendment.

Employee Future Benefits

The Company's employee future benefits consist of pension and post-retirement and post-employment plans, and include pension, group life insurance, health care, and long-term disability benefits provided to its current and retired employees. Employee future benefits costs are included in its labour costs that are either charged to results of operations or capitalized as part of the cost of property, plant and equipment and intangible assets. Changes in assumptions affect the benefit obligation of the employee future benefits and the amounts that will be charged to results of operations or capitalized in future years. The following significant assumptions and estimates are used to determine employee future benefit costs and obligations:

Weighted Average Discount Rate

The weighted average discount rate used to calculate the employee future benefits obligation is determined at each year end by referring to the most recently available market interest rates based on "AA"-rated corporate bond yields reflecting the duration of the applicable employee future benefit plan. The discount rate at December 31, 2014 decreased to 4.00% from 4.75% used at December 31, 2013, in conjunction with decreases in bond yields over this period. The decrease in the discount rate has resulted in a corresponding increase in employee future benefits liabilities for accounting purposes. The liabilities are determined by independent actuaries using the projected benefit method prorated on service and based on assumptions that reflect management's best estimates.

Expected Rate of Return on Plan Assets

The expected rate of return on pension plan assets is based on expectations of long-term rates of return at the beginning of the year and reflects a pension asset mix consistent with the pension plan's current investment policy. The expected long-term rate of return on pension plan assets for the year ending December 31, 2015 is 6.5%, consistent with the prior year.

Rates of return on the respective portfolios are determined with reference to respective published market indices. The expected rate of return on pension plan assets reflects Hydro One's long-term expectations. The Company believes that this assumption is reasonable because, with the pension plan's balanced investment approach, the higher volatility of equity investment returns is intended to be offset by the greater stability of fixed-income and short-term investment returns. The net result, on a long-term basis, is a lower return than might be expected by investing in equities alone. In the short term, the pension plan can experience fluctuations in actual rates of return.

Rate of Cost of Living Increase

The rate of cost of living increase is determined by considering differences between long-term Government of Canada nominal bonds and real return bonds, which decreased from 2.00% per annum as at December 31, 2013 to approximately 1.70% per annum as at December 31, 2014. Given the Bank of Canada's commitment to keep long-term inflation between 1.00% and 3.00%, management believes that the current rate is reasonable to use as a long-term assumption and as such, has used a 2.0% per annum inflation rate for employee future benefits liability valuation purposes as at December 31, 2014.

Mortality Assumptions

The Company's employee future benefits liability is also impacted by changes in life expectancies used in mortality assumptions. Increases in life expectancies of plan members result in increases in the employee future benefits liability. The mortality assumption at December 31, 2014 was updated to the final tables issued by the Canadian Institute of Actuaries (for public sector, with projection scale CPM-B and no adjustment due to pension size). As at December 31, 2013, the draft tables published by the Canadian Institute of Actuaries were used.

Rate of Increase in Health Care Cost Trends

The costs of post-retirement and post-employment benefits are determined at the beginning of the year and are based on assumptions for expected claims experience and future health care cost inflation. A 1% increase in the health care cost trends would result in a $23 million increase in 2014 interest cost plus service cost, and a $248 million increase in the year-end 2014 benefit liability.

Asset Impairment

Within the Company's regulated businesses, the carrying costs of most of its long-lived assets are included in the rate base where they earn an Ontario Energy Board-approved rate of return. Asset carrying values and the related return are recovered through Ontario Energy Board-approved rates. As a result, such assets are only tested for impairment in the event that the Ontario Energy Board disallows recovery, in whole or in part, or if such a disallowance is judged to be probable. Hydro One regularly monitors the assets of its unregulated Hydro One Telecom subsidiary for indications of impairment. As at December 31, 2014 and 2013, no asset impairment had been recorded for assets within its regulated or unregulated businesses.

Goodwill represents the cost of acquired local distribution companies that is in excess of the fair value of the net identifiable assets acquired at the acquisition date. Goodwill is evaluated for impairment on an annual basis, or more frequently if circumstances require. The Company has concluded that goodwill was not impaired at December 31, 2014 and 2013.

New Accounting Pronouncements

In May 2014, the Financial Accounting Standards Board (FASB) issued an accounting standards update that provides guidance on revenue recognition which depicts the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expects to be entitled in exchange for those goods and services. This update is applicable to the Company for the years and interim periods beginning on January 1, 2017. The Company is currently assessing the impact of adoption of this accounting standards update on its consolidated financial statements.

In November 2014, the FASB issued an accounting standards update that provides guidance on accounting for hybrid financial instruments issued in the form of a share. This update is applicable to the Company for the years and interim periods beginning on January 1, 2016. Hydro One is currently assessing the impact of adoption of this accounting standards update on its consolidated financial statements.

In January 2015, the FASB issued an accounting standards update that eliminates the requirements for reporting entities to consider whether an underlying event or transaction is extraordinary and to show the item separately in the income statement. This update is applicable to Hydro One for the years and interim periods beginning on January 1, 2016. The Company does not anticipate that the adoption of this accounting standards update will have a significant impact on its consolidated financial statements.

In February 2015, the FASB issued an accounting standards update that provides guidance about the analysis that a reporting entity must perform to determine whether it should consolidate certain types of legal entities. This update is applicable to Hydro One for the years and interim periods beginning on January 1, 2016. The Company is currently assessing the impact of adoption of this accounting standards update on its consolidated financial statements.

In April 2015, the FASB issued an accounting standards update that requires debt issuance costs related to a recognized debt liability to be presented in the balance sheet as a direct deduction from the carrying amount of that debt liability. The recognition and measurement guidance for debt issuance costs are not affected. This update is applicable to Hydro One for the years and interim periods beginning on January 1, 2016. Upon adoption of this update, the Company's deferred debt issuance costs that are currently presented under other long-term assets will be reclassified as a deduction from the carrying amount of long-term debt.

In April 2015, the FASB issued an accounting standards update that permits an entity with a fiscal year-end that does not coincide with a month-end and an entity that has a significant event in an interim period that calls for a remeasurement of defined benefit plan assets and obligations to measure the defined benefit plan assets and obligations using the month-end that is closest to the entity's fiscal year-end. This update is applicable to Hydro One for the years and interim periods beginning on January 1, 2016. The Company does not anticipate that the adoption of this accounting standards update will have a significant impact on its consolidated financial statements.

In April 2015, the FASB issued an accounting standards update that provides guidance to customers about whether a cloud computing arrangement includes a software license, as well as the related accounting for the arrangement. This update is applicable to Hydro One for the years and interim periods beginning on January 1, 2016. The Company is currently assessing the impact of adoption of this accounting standards update on its consolidated financial statements.

PRE-CLOSING TRANSACTIONS

Hydro One Brampton Networks Inc.

As recommended in the final electricity sector report of the Council dated April 16, 2015, the Company understands that the Province intends to proceed with a sale or merger transaction involving Hydro One Brampton Networks Inc. In anticipation of that transaction, on August 31, 2015, Hydro One Inc. subscribed for additional shares of Hydro One Brampton Networks Inc. in order to repay certain short term debt owing to Hydro One Inc. and thereafter Hydro One Inc. declared a dividend in-kind on its common shares payable in all of the issued and outstanding shares of Hydro One Brampton Networks Inc. In addition on that date, Hydro One Inc. reduced its stated capital by an amount equal to the fair market value of certain long term debt owing by Hydro One Brampton Networks Inc. to Hydro One

Inc. The subscription for additional shares, the dividend and the return of capital were authorized by the Province, the sole shareholder of Hydro One Inc., pursuant to a unanimous shareholder agreement dated April 16, 2015 that had removed the power of the directors of Hydro One Inc. to take action involving Hydro One Brampton Networks Inc. in connection with the transaction. The dividend was paid to the Province, at its direction, by transferring all of the issued and outstanding shares of Hydro One Brampton Networks Inc. to a company wholly owned by the Province and the return of capital was satisfied by transferring the indebtedness that was the subject of the return of capital to that same company at the direction of the Province. These transactions are separate from this offering.

Accordingly, Hydro One no longer owns any of the shares or indebtedness of Hydro One Brampton Networks Inc. and will not be a participant in or receive any proceeds from any sale or transaction involving Hydro One Brampton Networks Inc.

Prior to August 31, 2015, Hydro One Brampton Networks Inc. was operated by Hydro One as a stand-alone entity, with Hydro One providing certain management, administrative and smart meter network services to Hydro One Brampton Networks Inc. pursuant to existing service level agreements. These agreements will continue until the end of 2016 (except in the case of smart meter network services, which will continue until the end of 2017). Hydro One Brampton Networks Inc. has the right to renew these agreements (other than smart meter network services) for additional one-year terms to end no later than December 31, 2019. Additionally, on August 31, 2015, Hydro One Inc. and Hydro One Brampton Networks Inc. entered into a license agreement which permits Hydro One Brampton Networks Inc. to use the "Hydro One" name and related licensed marks. These agreements will terminate if the Province disposes of its interest in Hydro One Brampton Networks Inc., except in the case of the smart meter network services agreement, which is anticipated to continue for a transition period after the Province disposes of its interest in Hydro One Brampton Networks Inc.

Hydro One Inc. Credit Facilities

Hydro One Inc. currently has certain existing credit facilities available to it, including a $1.5 billion committed revolving standby credit facility (the "**Liquidity Facility**") with a syndicate of banks, which matures in June 2020. See "Management's Discussion and Analysis of Financial Condition and Results of Operations – Liquidity and Capital Resources for Three and Six Month Periods". The Liquidity Facility is unsecured, and may be used for general corporate purposes, including meeting short-term funding requirements. Hydro One Inc. may draw on the Liquidity Facility as described in "– Recapitalization of Hydro One Networks Inc. and Dividend or Return of Capital to the Province" below.

On or prior to closing of this offering, it is anticipated that Hydro One Inc. will enter into a new credit agreement in order to provide for an additional new three-year senior, unsecured revolving term credit facility (the "**New Term Facility**") in the amount of $800 million. The New Term Facility will be a revolving credit facility to be used by Hydro One Inc. for working capital and general corporate purposes. Hydro One Inc. may draw on the New Term Facility as described in "– Recapitalization of Hydro One Networks Inc. and Dividend or Return of Capital to the Province" below. The New Term Facility will rank equally with any existing and future senior debt of Hydro One Inc.

The New Term Facility is expected to have customary covenants substantially similar to the covenants under the existing Liquidity Facility.

Hydro One Inc. Commercial Paper Program

Currently, Hydro One Inc. has a commercial paper program under which Hydro One Inc. is authorized to issue up to $1.5 billion in short-term notes (increased from $1.0 billion on October 9, 2015) with a term to maturity of less than 365 days which is supported by the Liquidity Facility.

Hydro One Limited Credit Facility

On or prior to closing of this offering, it is anticipated that Hydro One Limited will enter into a credit agreement with a syndicate of banks providing for a new operating credit facility (the "**Operating Credit Facility**") in the amount of $250 million. The Operating Credit Facility will be a revolving credit facility to be used by Hydro One Limited for working capital and general corporate purposes.

Recapitalization of Hydro One Networks Inc. and Dividend or Return of Capital to the Province

Certain steps will be taken to recapitalize Hydro One's subsidiary, Hydro One Networks Inc., and pay a dividend or make a return of capital to the Province in the amount of $800 million, rather than $1 billion as previously disclosed, reflecting a revised estimate of approximately $200 million in additional payments in lieu of taxes that are expected to be payable by Hydro One Inc. to the Ontario Electricity Financial Corporation. See "Departure Tax" and note 2C(iii) of the unaudited pro forma condensed consolidated financial statements of Hydro One Inc. included elsewhere in this prospectus. These steps are expected to occur prior to the closing date of this offering, and are expected to include the following:

- Hydro One Inc., either through issuances of commercial paper or drawings under the Liquidity Facility or the New Term Facility, will make $800 million in cash available. The amount of the new borrowings for this step is expected to be approximately $800 million.
- Hydro One Inc. will use a portion of the $800 million in cash made available as described above to make an interest bearing loan to its wholly-owned subsidiary, Hydro One Networks Inc. in order to re-set the capital structure of Hydro One Networks Inc. for regulatory purposes to 60% debt and 40% equity, after accounting for the additional common shares of Hydro One Networks Inc. that will be issued pursuant to the last step referred to below under "– Pre-Closing Steps".
- Hydro One Networks Inc. will use the proceeds of the loan from Hydro One Inc. to either pay a dividend or make a return of capital to Hydro One Inc.
- Hydro One Inc. will use the proceeds received from Hydro One Networks Inc. and any amounts retained from the $800 million in cash made available to pay a dividend or make a return of capital to the Province in the amount of $800 million.

Pre-Closing Steps

Prior to the completion of this offering, Hydro One will complete a series of transactions that will result in, among other things, the acquisition by Hydro One Limited of all of the issued and outstanding shares of Hydro One Inc. and the issuance of new common shares and preferred shares of Hydro One Limited to the Province (the "**Pre-Closing Steps**"). The Province will then sell a portion of its common shares of Hydro One Limited pursuant to this offering. The following pre-closing steps are expected to occur prior to the closing date of this offering:

- Hydro One Inc. will purchase or redeem its existing preferred shares held by the Province for cancellation at a price equal to the redemption price of the preferred shares (being equal to approximately $323 million) which will be satisfied by the issuance to the Province of common shares of Hydro One Inc. having an aggregate fair market value equal to the price to be paid for the preferred shares.
- All of the issued and outstanding common shares of Hydro One Inc. will be acquired by Hydro One Limited in return for common shares of Hydro One Limited and Series 1 preferred shares of Hydro One Limited being issued to the Province. See "Description of Share Capital – Preferred Shares – Series 1 Preferred Shares and Series 2 Preferred Shares".
- As referred to under "Departure Tax", Hydro One Inc. and certain of its subsidiaries are required to pay the $2.6 billion "departure tax" to the Ontario Electricity Financial Corporation as a consequence of this offering. See "Departure Tax".
- In order to provide funding to support the departure tax payments referred to above, the Province, as shareholder, will subscribe for additional common shares of Hydro One Limited for an aggregate subscription price equal to the amount of the departure tax anticipated to be paid by Hydro One Inc. and its subsidiaries.
- The funds received by Hydro One Limited will be provided to certain subsidiaries of Hydro One Limited, including Hydro One Inc. and Hydro One Networks Inc., in order to allow those subsidiaries to pay their respective portions of the departure tax. These funds will be transferred to those subsidiaries by way of subscriptions for additional shares.
- Hydro One Networks Inc., as the subsidiary bearing the largest portion of the departure tax, will issue a significant number of additional shares to Hydro One Inc. in return for receiving funding to support the payment of its portion of the departure tax.
- The outstanding common shares of Hydro One Limited will be consolidated such that 595,000,000 common shares will be issued and outstanding immediately prior to the closing of this offering.

CORPORATE STRUCTURE

Incorporation and Office

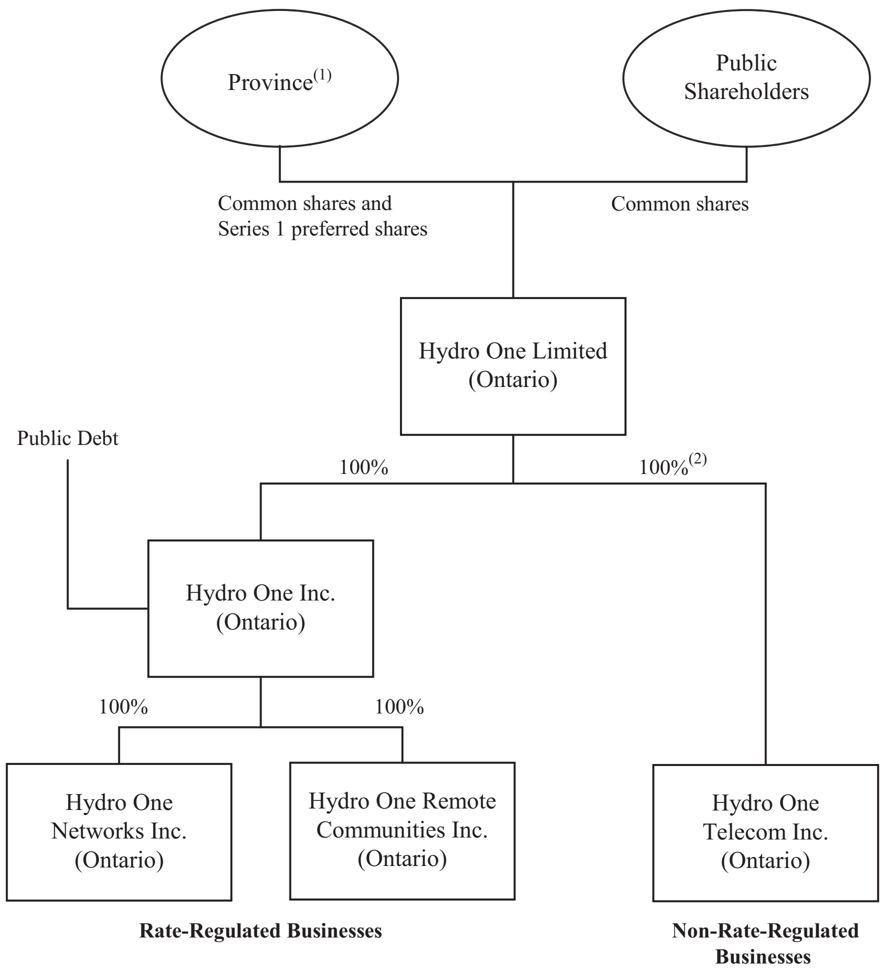
Hydro One Limited was incorporated on August 31, 2015 under the *Business Corporations Act* (Ontario) (the "**OBCA**"). Its registered office and head office is located at 483 Bay Street, 8th Floor, South Tower, Toronto, Ontario, M5G 2P5.

Prior to the closing of this offering, the articles of Hydro One Limited will be amended to authorize the Series 1 preferred shares and Series 2 preferred shares, with the Series 1 preferred shares to be issued to the Province as part of the transactions described in "Pre-Closing Transactions – Pre-Closing Steps". See also "Description of Share Capital – Preferred Shares".

Hydro One Limited's principal subsidiary, Hydro One Inc., which acts as the holding company of Hydro One's rate-regulated businesses, was incorporated as Ontario Hydro Services Company Inc. by Articles of Incorporation dated December 1, 1998, under the OBCA. On May 1, 2000, it changed its name to Hydro One Inc.

Corporate Structure and Subsidiaries

The following is a simplified chart showing the organizational structure of Hydro One after giving effect to the transactions described in "Pre-Closing Transactions", this offering and certain post-closing transactions that involve the transfer of all of the issued and outstanding shares of Hydro One Telecom Inc. from Hydro One Inc. to another wholly-owned subsidiary of Hydro One Limited. This chart does not include all legal entities within Hydro One's organizational structure.



Notes:

(1) Following the closing of this offering and the other transactions described in "Principal and Selling Shareholder – Share Purchase Arrangements with the Province", it is expected that the Province will own approximately 85% of Hydro One Limited's common shares (approximately 84% if the Over-Allotment Option is exercised in full) and 100% of the outstanding Series 1 preferred shares.

(2) Will be indirectly held through a wholly-owned subsidiary of Hydro One Limited that will act as a holding company for Hydro One's non-rate-regulated businesses.

Certain of Hydro One's subsidiaries are described below:

- **Hydro One Inc.** – will act as a holding company for Hydro One's rate-regulated businesses. Its publicly-issued debt will continue to be outstanding.
- **Hydro One Networks Inc.** – will continue to be the principal operating subsidiary that carries on Hydro One's rate-regulated transmission and distribution businesses.
- **Hydro One Remote Communities Inc.** – will continue to generate and supply electricity to remote communities in northern Ontario.
- **Hydro One Telecom Inc.** – will continue to carry on Hydro One's non-rate-regulated telecommunications business.

DIVIDENDS

Dividend Policy

Hydro One Limited has not declared or paid any dividends since its incorporation and will not declare or pay any dividends prior to completion of this offering. The Board is expected to establish a dividend policy pursuant to which Hydro One Limited will pay a quarterly dividend, initially in the amount of $0.21 per common share. The annual amount of the dividend is anticipated to be approximately $500 million in the aggregate initially, based on a target payout ratio of 70% to 80% of net income. Assuming the closing of this offering occurs on November 5, 2015, the first dividend for the period from the closing of this offering to March 17, 2016 is expected to be paid on or about March 31, 2016 to shareholders of record on March 17, 2016. Dividends will be declared and paid in arrears. The amount and timing of any dividends payable by Hydro One Limited will be at the discretion of the Board and will be established on the basis of Hydro One's results of operations, maintenance of its deemed regulatory capital structure, financial condition, cash requirements, the satisfaction of solvency tests imposed by corporate laws for the declaration and payment of dividends and other factors that the Board may consider relevant. Hydro One intends to increase its debt as its rate base increases in order to maintain debt at 60% of its rate base and does not anticipate any increases in debt to fund the payment of dividends, although it may draw on its revolving credit facilities for general purposes. See "Risk Factors".

Dividend Reinvestment Plan

Following the closing of this offering and subject to the receipt of any required regulatory approvals, Hydro One Limited intends to adopt a dividend reinvestment plan pursuant to which resident Canadian holders of common shares will be entitled to elect to have all of the cash dividends of Hydro One Limited payable to them automatically reinvested in additional common shares, which will be either purchased on the open market or issued from treasury. The dividend reinvestment plan is currently intended to operate on a basis that does not result in significant dilution to holders of common shares.

DESCRIPTION OF SHARE CAPITAL

The following describes Hydro One Limited's share capital as it will exist immediately prior to the closing of this offering. The following description may not be complete and is subject to, and qualified in its entirety by reference to, the terms and provisions of Hydro One Limited's articles, as they may be amended from time to time.

Hydro One Limited's authorized share capital will consist of an unlimited number of common shares and an unlimited number of preferred shares, issuable in series. Two series of preferred shares will be authorized for issuance prior to the closing of this offering: the Series 1 preferred shares and the Series 2 preferred shares. Immediately prior to the closing of this offering, there will be 595,000,000 common shares, 16,720,000 Series 1 preferred shares and no Series 2 preferred shares issued and outstanding.

Common Shares

Holders of common shares are entitled to receive notice of and to attend all meetings of shareholders, except meetings at which only the holders of another class or series of shares are entitled to vote separately as a class or series, and holders of common shares are entitled to one vote per share at all such meetings of shareholders. Hydro One Limited's common shares are not redeemable or retractable. Subject to the rights, privileges, restrictions and conditions attaching to any other class or series of shares, including the Series 1 preferred shares and Series 2 preferred shares, holders of common shares are entitled to receive dividends if, as, and when declared by the Board. Subject to the rights, privileges, restrictions and conditions attaching to any other class or series of shares, including the Series 1 preferred shares and Series 2 preferred shares, holders of common shares are also entitled to receive the remaining assets of Hydro One Limited upon its liquidation, dissolution or winding-up or other distribution of Hydro One Limited's assets for the purposes of winding-up its affairs. For a description of Hydro One Limited's dividend policy, see "Dividends – Dividend Policy".

The Voting Securities of Hydro One Limited, which include the common shares, are subject to share ownership restrictions under the Electricity Act and certain other provisions contained in the articles of Hydro One Limited related to the enforcement of those share ownership restrictions. The share ownership restrictions provide that no person or company (or combination of persons or companies acting jointly or in concert), other than the Province or an underwriter who holds Voting Securities solely for the purposes of distributing them to purchasers who comply with the share ownership restrictions, may beneficially own or exercise control or direction over more than 10% of any class or series of Voting Securities of Hydro One Limited. See "Governance and Relationship with Principal Shareholder – 10% Ownership Restriction".

Preferred Shares

Hydro One Limited may from time to time issue preferred shares in one or more series. Prior to issuing shares in a series, the Board is required to fix the number of shares in the series and determine the designation, rights, privileges, restrictions and conditions attaching to that series of preferred shares. Hydro One Limited expects to authorize for issuance the Series 1 preferred shares and the Series 2 preferred shares prior to the closing of this offering.

Subject to the OBCA, holders of Hydro One Limited's preferred shares or a series thereof are not entitled to receive notice of, to attend or to vote at any meeting of the shareholders of Hydro One Limited except that votes may be granted to a series of preferred shares when dividends have not been paid on any one or more series as determined by the applicable series provisions. Each series of preferred shares ranks on parity with every other series of preferred shares with respect to dividends and the distribution of assets and return of capital in the event of the liquidation, dissolution or winding up of Hydro One Limited. The preferred shares are entitled to a preference over the common shares and any other shares ranking junior to the preferred shares with respect to payment of dividends and the distribution of assets and return of capital in the event of the liquidation, dissolution or winding up of Hydro One Limited.

Series 1 Preferred Shares and Series 2 Preferred Shares

Prior to the closing of this offering, Hydro One Limited will issue $418 million of Series 1 preferred shares to the Province at a price of $25.00 per share. The existing preferred shares of Hydro One Inc. held by the Province will be cancelled. See "Pre-Closing Transactions – Pre-Closing Steps".

For the period commencing from the date of issue of the Series 1 preferred shares and ending on and including November 19, 2020, the holders of Series 1 preferred shares will be entitled to receive fixed cumulative preferential dividends of $1.0625 per share per year, if and when declared by the Board, payable quarterly on the 20th day of November, February, May and August in each year. The dividend rate will reset on November 20, 2020 and every five years thereafter at a rate equal to the sum of the then five-year Government of Canada bond yield and 3.53%. The Series 1 preferred shares will not be redeemable by Hydro One Limited prior to November 20, 2020, but will be redeemable by Hydro One Limited on November 20, 2020 and on November 20 every fifth year thereafter at a redemption price equal to $25.00 for each Series 1 preferred share redeemed, plus any accrued or unpaid dividends. The holders of Series 1 preferred shares will have the right, at their option, on November 20, 2020 and on November 20 every fifth year thereafter, to convert all or any of their Series 1 preferred shares into Series 2 preferred shares on a one-for-one basis, subject to certain restrictions on conversion.

The holders of Series 2 preferred shares will be entitled to receive quarterly floating rate cumulative dividends, if and when declared by the Board, at a rate equal to the sum of the then three-month Government of Canada treasury bill rate and 3.53% as reset quarterly. The Series 2 preferred shares will be redeemable by Hydro One Limited at a redemption price equal to $25.00 for each Series 2 preferred share redeemed if redeemed on November 20, 2025 or on November 20 every fifth year thereafter or $25.50 for each Series 2 preferred share redeemed if redeemed on any other date after November 20, 2020, in each case plus any accrued or unpaid dividends. The holders of Series 2 preferred shares will have the right, at their option, on November 20, 2025 and on November 20 every fifth year thereafter, to convert all or any of their Series 2 preferred shares into Series 1 preferred shares on a one-for-one basis, subject to certain restrictions on conversion.

In the event of the liquidation, dissolution or winding-up of Hydro One Limited, or any other distribution of assets of Hydro One Limited for the purpose of winding-up its affairs, the holders of Series 1 preferred shares and Series 2 preferred shares will be entitled to receive $25.00 for each Series 1 preferred share and each Series 2 preferred share held by them, plus any unpaid dividends, before any amounts are paid or any assets of Hydro One Limited are distributed to holders of common shares and any shares ranking junior to the Series 1 preferred shares and Series 2 preferred shares. After payment of those amounts, the holders of Series 1 preferred shares and Series 2 preferred shares will not be entitled to share in any further distribution of the property or assets of Hydro One Limited.

Except as required by the OBCA, neither the holders of Series 1 preferred shares nor the holders of Series 2 preferred shares shall be entitled to receive notice of, or to attend meetings of shareholders of Hydro One Limited and shall not be entitled to vote at any such meeting, unless Hydro One Limited fails for eight quarters, whether or not consecutive, to pay in full the dividends payable on the Series 1 preferred shares or Series 2 preferred shares, as applicable, whereupon the holders of Series 1 preferred shares and Series 2 preferred shares, as applicable, shall become entitled to receive notice of and attend all meetings of shareholders, except class meetings of any other class of shares, and shall have one vote for each Series 1 preferred share or Series 2 preferred share held at such meetings, as applicable.

PRINCIPAL AND SELLING SHAREHOLDER

Ownership of Common Shares

The following table sets forth certain information regarding the Province's ownership of shares before and after completion of the transactions described in "Pre-Closing Transactions" and following this offering and the transactions described below in "– Share Purchase Arrangements with the Province".

Name	Number of common shares owned before the pre-closing transactions(1)	Number of common shares owned immediately after the pre-closing transactions(2)	Number of common shares to be sold in this offering(4)	Number of shares owned immediately following this offering and the share purchase arrangements(3)(4)	Percentage of shares owned immediately following this offering and the share purchase arrangements(3)(4)
Province of Ontario	100,000	595,000,000 common shares	81,100,000	Between 507,813,684 and 508,393,333 common shares	85%
				16,720,000 Series 1 preferred shares	100%

Notes:

(1) On August 31, 2015, Hydro One Limited issued 100,000 common shares to the Province at a subscription price of $1.00 per common share in connection with the incorporation of Hydro One Limited.

(2) Prior to the closing of this offering, Hydro One Limited will issue common shares to the Province at a price of $1.00 per common share as partial consideration for the acquisition of all of the issued and outstanding common shares of Hydro One Inc. by Hydro One Limited from the Province. In order to provide funding to support the departure tax payable as a consequence of this offering, the Province, as shareholder, will also subscribe for 2,600,000,000 additional common shares of Hydro One Limited at a subscription price of $1.00 per common share for an aggregate subscription price equal to the amount of the departure tax to be paid by Hydro One Inc. and its subsidiaries. The outstanding common shares of Hydro One Limited will then be consolidated such that 595,000,000 common shares will be issued and outstanding immediately prior to the closing of this offering. See "Pre-Closing Transactions", "Departure Tax", "Governance and Relationship with Principal Shareholder" and "Prior Sales".

(3) The Province has agreed to sell, immediately following the closing of this offering, additional common shares as described in "– Share Purchase Arrangements with the Province". These transactions are separate from this offering.

(4) Assuming no exercise of the Over-Allotment Option. If the Underwriters exercise their Over-Allotment Option in full, the Province will sell 89,250,000 common shares in this offering and the number of common shares owned by the Province immediately following this offering and the transactions described in "– Share Purchase Arrangements with the Province" will be between 499,663,684 and 500,243,333 common shares or approximately 84% of the total issued and outstanding common shares. Other than the Over-Allotment Option, there are no other securities convertible into common shares of Hydro One Limited.

The common shares owned by the Province will be owned beneficially or of record. To the knowledge of the Company, other than as described above: (i) there is no other person who beneficially owns, controls or directs, 10% or more of the common shares of Hydro One Limited, and (ii) immediately following the closing of this offering and the transactions described in "– Share Purchase Arrangements with the Province", there will be no other person who beneficially owns, controls or directs, 10% or more of the common shares of Hydro One Limited. The Electricity Act precludes any person or company (or combination of persons or companies acting jointly or in concert), other than the Province or an underwriter who holds Voting Securities solely for the purposes of distributing them to purchasers who comply with the share ownership restrictions, from owning, or exercising control or direction over, more than 10% of any class or series of Voting Securities, including common shares of Hydro One Limited.

Share Purchase Arrangements with the Province

Following the Province's announcement of its endorsement of the Council's recommendations to proceed with this offering, the Power Workers' Union expressed an interest in investing in the common shares, in order to invest in high quality jobs for Ontarians. In subsequent discussions, The Society of Energy Professionals indicated that it also wished to invest in common shares on a comparable basis to the Power Workers' Union. These unions have a significant number of members employed in the Ontario electricity sector and, in particular, at Hydro One and Ontario Power Generation Inc. The Province believes that the investment would be consistent with the purpose of this offering and will better align the interests of the members of the unions with the interests of other investors in Hydro One Limited.

The Province therefore agreed in September and October 2015 to sell, immediately following the closing of this offering, between 3,666,667 and 4,052,632 of its common shares to two trusts established for the benefit of the Power Workers' Union (the "**PWU Trusts**") and between 1,840,000 and 2,033,684 of its common shares to two trusts established for the benefit of The Society of Energy Professionals (the "**Society Trusts**" and, together with the PWU Trusts, the "**Trusts**"). In connection with these transactions, each of the Power Workers' Union and The Society of Energy Professionals will establish two trusts: one trust for the purchase of common shares via the loan described below and another trust for the purchase of common shares with funds provided by the relevant union. The Province will sell these common shares to the Trusts at the same price per share as the offering price in this offering. These common shares will be sold under an exemption from the prospectus requirements under applicable Canadian securities laws and not pursuant to this prospectus.

The Province also agreed, subject to conditions, to provide loans to one of the PWU Trusts and one of the Society Trusts in order to finance a portion of the share purchase and certain related expenses. The total principal amount of the loans will be $111 million: $75 million to one of the PWU Trusts and $36 million to one of the Society Trusts. Each borrower Trust will use its loan to acquire common shares and to pay for certain expenses incurred for professional services provided in relation to these transactions and the labour agreements. The loan amounts were agreed based on the number of members that each of the Power Workers' Union and The Society of Energy Professionals has employed at Hydro One and at Ontario Power Generation Inc. The non-borrower PWU Trust and non-borrower Society Trust will fund the purchase of the remaining common shares that the Province has agreed to sell with funds provided by the relevant union and not with a loan from the Province.

The loans will mature on the 15th anniversary of the closing of this offering. Interest on the principal amount will be payable quarterly in arrears at the Government of Ontario borrowing rate, plus 0.15%. Interest will be payable out of quarterly dividends received by the respective Trust on the common shares it has acquired with the proceeds of the loan, provided that if the dividends are insufficient to cover a particular interest payment when due, the interest payment may be deferred and added to the principal balance of the relevant loan. Each loan will be secured by the common shares purchased with that loan and held in the relevant Trust. Each loan will effectively be limited in recourse to the common shares acquired with that loan, because the borrower Trusts are not expected to own any material assets during the term of the loans other than the common shares that they acquired with the loans and permitted investments made with the proceeds of those common shares. The common shares purchased by the other Trusts with funds provided by the relevant union will not be subject to the loan security.

Each borrower Trust has agreed not to vote the common shares it holds from time to time so long as its respective loan amount remains outstanding. Each of the other Trusts has agreed not to dispose of the common shares that it acquired with funds provided by the relevant union for a period of at least one year after the purchase.

Accordingly, after closing of the transactions with the Trusts contemplated above, and after giving effect to the Pre-Closing Transactions and the completion of this offering, the number of common shares owned by the Province will be between 507,813,684 and 508,393,333 common shares (between 499,663,684 and 500,243,333 common shares if the Over-Allotment Option is exercised in full), representing approximately 85% of the issued and outstanding common shares (approximately 84% if the Over-Allotment Option is exercised in full).

Future Investments in Hydro One by First Nations and Métis Communities

In response to the Chiefs of Ontario's expression of First Nations' interest to own a portion of the Company, the Province has indicated that it is in discussions regarding potential equity participation by the First Nations. The Company understands that these discussions focus on facilitating equity participation for such communities through future offerings by the Province. These discussions are ongoing and are not expected to affect the number of shares available for purchase in this offering. In addition, the Métis Nation of Ontario has expressed an interest in dialogue with the Province in relation to this offering. The Province has indicated that it is also prepared to engage in a dialogue with the Métis in relation to broadened ownership of the Company.

DEPARTURE TAX

By virtue of being wholly owned by the Province, Hydro One is exempt from tax under the Tax Act and the *Taxation Act, 2007* (Ontario). However, under the Electricity Act, Hydro One is required to make payments in lieu of tax to the Ontario Electricity Financial Corporation. The payments in lieu of tax are, in general, based on the amount of tax that Hydro One would otherwise be liable to pay under the Tax Act and the *Taxation Act, 2007* (Ontario) if it was not exempt from taxes under those statutes.

In connection with this offering, Hydro One's exemption from tax under the Tax Act and the *Taxation Act, 2007* (Ontario) will cease to apply. Under the Tax Act and the *Taxation Act, 2007* (Ontario), Hydro One will be deemed to have disposed of its assets immediately before it loses its tax exempt status for proceeds equal to the fair market value of those assets at that time. Hydro One will be liable to make a payment in lieu of tax under the Electricity Act in respect of the income and capital gains, calculated by reference to the Tax Act, that arise as a result of this deemed disposition. The amount payable is generally referred to as "departure tax".

In the context of a public offering of shares, and with the consent of the Minister of Finance, Hydro One will be authorized to pay to the Ontario Electricity Financial Corporation an amount that, in the Minister's opinion, reasonably approximates the amount of the departure tax that would be payable by Hydro One in respect of the deemed disposition of its assets. Hydro One has received a letter from the Minister of Finance confirming that the total amount of the departure tax payable by Hydro One is $2.6 billion. Prior to the completion of this offering, the Province, as shareholder, will subscribe for additional common shares of Hydro One Limited for an aggregate subscription price of $2.6 billion, which amount Hydro One will use to pay the applicable departure tax.

As a result of leaving the PILs regime and entering the corporate tax regime, Hydro One will recognize a deferred tax asset that is currently estimated in the unaudited pro forma condensed consolidated financial statements of Hydro One Inc. included elsewhere in this prospectus to be $1,245 million due to the revaluation of the tax basis of Hydro One's fixed assets at their fair market value and recognition of eligible capital expenditures. This estimated deferred tax asset was based on an estimated fair market value of Hydro One's net assets of approximately $13,522 million, which was the same estimated fair market value used for the purposes of determining the departure tax amount of $2.6 billion referred to above. This estimated fair market value of Hydro One's net assets was determined by Hydro One principally using a discounted cash flow approach for certain assets and an asset-based approach for other assets, and was used in calculating the amount of the departure tax payable that was agreed between Hydro One and the Province in early September 2015. The actual fair market value of Hydro One's net assets will be determined following pricing of this offering. The departure tax payable by Hydro One has been fixed at $2.6 billion, and will not be adjusted based on the fair market value of Hydro One's net assets as finally determined. See "Summary Consolidated Financial Information" and "Selected Consolidated Financial Information". Management believes the deferred tax asset will result in annual net cash savings over the next five years due to the reduction of cash taxes payable by Hydro One. See note 2C(vi) of the unaudited pro forma condensed consolidated financial statements of Hydro One Inc. included elsewhere in this prospectus for a presentation of the net cash savings that would have resulted for the periods shown if the transaction triggering the revaluation of the tax basis of Hydro One's fixed assets had occurred on January 1, 2014. Management believes that these net cash savings will not result in a corresponding reduction in its revenue requirement in future rate applications to the Ontario Energy Board. However, no determination has been made by the Ontario Energy Board and there can be no assurance that there will not be such a reduction. See "Risk Factors – Risks Relating to Hydro One's Business – Regulatory Risks and Risks Relating to Hydro One's Revenues".

Hydro One Inc. expects to pay the Ontario Electricity Financial Corporation approximately $200 million in additional payments in lieu of tax in connection with this offering. This is in addition to the departure tax payable of $2.6 billion. See note 2C(iii) of the unaudited pro forma condensed consolidated financial statements of Hydro One Inc. included elsewhere in this prospectus.

CONSOLIDATED CAPITALIZATION

The following table sets out the consolidated capitalization of Hydro One Limited as at August 31, 2015, its date of incorporation, on an actual basis and on an adjusted basis to give effect to the transactions described under "Pre-Closing Transactions – Recapitalization of Hydro One Networks Inc. and Dividend or Return of Capital to the Province" and "Pre-Closing Transactions – Pre-Closing Steps".

This table should be read in conjunction with the financial statements, "Selected Consolidated Financial Information" and "Management's Discussion and Analysis of Financial Condition and Results of Operations" appearing elsewhere in this prospectus.

	As at August 31, 2015	
	Actual	**Adjusted**
	(in millions)	
Debt		
Short-term debt(1)	—	$ 1,017
Operating Credit Facility(2)	—	$ —
Long-term debt(3)	—	$ 9,073
Noncontrolling interest subject to redemption	—	$ 21
Preferred shares(4)	—	$ 418
Equity		
Common shares(5)(6)(7)(8)	$0.1	$11,900
Retained earnings	—	$ 3,501
Accumulated other comprehensive loss	—	$ (9)
Noncontrolling interest	—	$ 50
Total capitalization	**$0.1**	**$25,971**

Notes:

(1) Represents issued and outstanding medium term notes and debentures of Hydro One Inc. due within the next twelve months.

(2) On or prior to closing of this offering, it is anticipated that Hydro One Limited will enter into a credit agreement with a syndicate of banks providing for the Operating Credit Facility in the amount of $250 million. The Operating Credit Facility will be a revolving credit facility to be used by Hydro One Limited for working capital and general corporate purposes. It is anticipated that the Operating Credit Facility will be undrawn immediately following the closing of this offering. See "Pre-Closing Transactions – Hydro One Limited Credit Facility".

(3) Includes commercial paper issued by Hydro One Inc. and drawings under the Liquidity Facility and New Term Facility as described in "Pre-Closing Transactions – Recapitalization of Hydro One Networks Inc. and Dividend or Return of Capital to the Province" and includes issued and outstanding medium term notes and debentures of Hydro One Inc. The Company intends that any commercial paper issued by Hydro One Inc. for such purposes would be replaced by long-term debt.

(4) On or prior to the closing of this offering, Hydro One Limited will issue 16,720,000 Series 1 preferred shares to the Province as partial consideration for the acquisition by Hydro One Limited of all of the issued and outstanding common shares of Hydro One Inc. from the Province. See "Pre-Closing Transactions – Pre-Closing Steps".

(5) On August 31, 2015, Hydro One Limited issued 100,000 common shares to the Province at a subscription price of $1.00 per common share in connection with the incorporation of Hydro One Limited.

(6) On or prior to the closing of this offering, Hydro One Limited will issue common shares at a price of $1.00 per common share to the Province as partial consideration for the acquisition by Hydro One Limited of all of the issued and outstanding common shares of Hydro One Inc. from the Province. See "Pre-Closing Transactions – Pre-Closing Steps".

(7) In order to provide funding to support the departure tax payable as a consequence of this offering, the Province, as shareholder, will subscribe for additional common shares of Hydro One Limited at a subscription price of $1.00 per common share for an aggregate subscription price equal to the amount of the departure tax to be paid by Hydro One Inc. and its subsidiaries. See "Pre-Closing Transactions – Pre-Closing Steps" and "Departure Tax".

(8) After completing the steps contemplated by notes (6) and (7) above, the outstanding common shares of Hydro One Limited will be consolidated such that 595,000,000 common shares will be issued and outstanding immediately prior to the closing of this offering. Adjusted common share amount assumes an offering price for Hydro One Limited's common shares offered under this prospectus of $20.00 per share.

CREDIT RATINGS OF SECURITIES

Credit ratings are intended to provide investors with an independent measure of the credit quality of an issue of securities. As of the date of this prospectus, Hydro One Inc.'s corporate credit ratings from designated rating organizations are as follows:

Rating Agency	Short-term debt	Long-term debt
Standard & Poor's Rating Services Inc. ("**S&P**")	A-1	A (stable)
DBRS Limited ("**DBRS**")	R-1 (middle) (under review with negative implications)	A (high) (under review with developing implications)
Moody's Investors Services Inc. ("**Moody's**")	Prime-1	A2 (negative)

As of the date of this prospectus, S&P has also assigned a long-term corporate credit rating to Hydro One Limited of A (stable).

Long-term debt is issued under Hydro One Inc.'s medium term note program authorized from time to time (currently expired but expected to be renewed by the end of 2015). Short-term debt is issued under Hydro One Inc.'s commercial paper program, under which it is currently authorized to issue up to $1.5 billion in short-term debt (increased from $1.0 billion on October 9, 2015). Hydro One Inc.'s commercial paper program is supported by its $1.5 billion Liquidity Facility.

The rating agencies rate long-term debt instruments by rating categories ranging from a high of "AAA" to a low of "D" ("C" in the case of Moody's). Long-term debt instruments which are rated in the A category by S&P are in the third highest category and mean the obligor's capacity to meet its financial commitments and obligations is strong but is considered somewhat more susceptible to the adverse effects of changes in circumstances and adverse economic conditions than obligations in higher rated categories. S&P may modify the ratings from AA to CCC using a plus (+) or minus (-) sign to show relative standing within the major rating categories. Short-term debt obligations rated A-1 are in the highest category by S&P and means the obligor's capacity to meet its financial commitments on obligations is strong. Within this category, certain obligations are also designated with a plus sign (+). This indicates that the obligor's capacity to meet its financial commitment on these obligations is extremely strong.

Long-term debt instruments which are rated in the A category by DBRS are in the third highest category and are considered to be of a good credit quality, with substantial capacity for the payment of financial obligations. Entities in the "A" category are considered to be vulnerable to future events, but qualifying negative factors are considered manageable. The "high" modifier indicates relative standing within this rating category by DBRS. DBRS' scale for commercial paper ratings range from the highest credit quality of R-1 to R-5. The R-1 and R-2 rating categories are further denoted by the subcategories "(high)", "(middle)", and "(low)". Short-term debt obligations rated R-1(middle) are considered of superior credit quality with very high capacity for the payment of short-term financial obligations as they fall due. The obligor is considered unlikely to be significantly vulnerable to future events.

Long-term debt instruments which are rated in the A category by Moody's are in the third highest category and are considered upper-medium grade and are subject to low credit risk. Moody's applies numerical modifiers 1, 2, and 3 to each generic rating classification from Aa to Caa. The modifier 2 indicates a ranking in the middle of that generic rating category. Short-term debt obligations rated Prime-1 is the highest category by Moody's and means the obligor has superior ability to repay short-term debt obligations.

The credit ratings assigned by S&P, DBRS or Moody's are not a recommendation to purchase, sell or hold Hydro One Inc.'s debt securities or Hydro One Limited's common shares and do not comment on market price or suitability for a particular investor. There can be no assurance that the ratings will remain in effect for any given period of time or that the ratings will not be revised or withdrawn entirely by any or all of S&P, DBRS and Moody's at any time in the future if in their judgment circumstances so warrant. Hydro One Inc. has made, and anticipates making, payments to each of S&P, DBRS and Moody's in connection with the confirmation of such ratings for purposes of the offering of medium term notes in the future, has made payments to S&P for ratings evaluation services in connection with this offering and has made payments to DBRS for ratings evaluation services in connection with the transfer of Hydro One Brampton Networks Inc. to a company wholly-owned by the Province. Hydro One Inc. has not made any payment to S&P, DBRS or Moody's in respect of any other services during the last two years.

GOVERNANCE AND RELATIONSHIP WITH PRINCIPAL SHAREHOLDER

Overview

Hydro One Limited's main subsidiary, Hydro One Inc., has been wholly-owned by the Province since the April 1999 reorganization of Ontario Hydro. See "Electricity Industry – Ontario's Electricity Industry". In April 2014, the Province formed the Council. The mandate of the Council was to review certain provincially-owned assets, including Ontario Power Generation Inc. and Hydro One Inc., and to recommend ways to maximize their value to the people of Ontario.

In its final electricity sector report released in April 2015, the Council recommended, among other things, that the Province should proceed with a partial sale of its interest in Hydro One Inc. to create a growth-oriented company centred in Ontario. The Council recommended that the partial sale occur by way of a public offering, with approximately 15% of the shares of Hydro One Inc. to be offered to the market initially. The Council recommended that the Province indicate its intention to retain its remaining shares after selling down to 40% ownership, and that the balance should be widely held with no other individual shareholder having more than a 10% holding. The report also recommended establishing a new governance framework for Hydro One Inc. as well as additional protections of the public's interest in Ontario's transmission and distribution systems. The Province has implemented certain of those recommendations through legislation, Hydro One Limited's articles and the Governance Agreement, as follows:

- On August 31, 2015, amendments to the Electricity Act were proclaimed into force, which are intended to maintain and support the Company's presence in Ontario by requiring the Company's head office and principal grid control centre to be maintained in Ontario, restricting the disposition of substantially all of its Ontario Energy Board-regulated transmission or distribution business, prohibiting any change to its jurisdiction of incorporation, adding a 10% ownership restriction with respect to Voting Securities and restricting the Province from selling Voting Securities if it would own less than 40% of the Voting Securities of any class or series as a result of the sale. See "– Presence in Ontario", "– 10% Ownership Restriction" and "– Maintenance of 40% Ownership".
- On June 4, 2015, amendments to various Ontario statutes came into force to provide for the appointment of an ombudsman for the Company and to transition the Company from oversight by various officers of the Legislative Assembly of Ontario. See "– Ombudsman" and "– Statutory Oversight and Transitional Provisions for Officers of the Assembly".
- Prior to the closing of this offering, the Province and Hydro One Limited will enter into the Governance Agreement to address the Province's role in the governance of Hydro One Limited, including the Province's right to nominate directors (all of whom must be independent of the Company and the Province), to grant the Province a pre-emptive right to acquire Voting Securities, and to provide for a confidentiality agreement relating to the confidential treatment of information furnished to the Province pursuant to the Governance Agreement or the Registration Rights Agreement. See "– Governance Agreement".
- Prior to the closing of this offering, the Province and Hydro One Limited will enter into the Registration Rights Agreement to provide the Province with the right to require Hydro One Limited to facilitate future secondary offerings of common shares or preferred shares owned or controlled by the Province. See "Province's Ownership of Common Shares and Preferred Shares – Registration Rights Agreement".

Presence in Ontario

Head Office in Ontario

The Electricity Act requires that the Company maintain its head office in Ontario, which will be the case if: (i) the principal executive office for the Company is located in Ontario; (ii) the Chief Executive Officer and substantially all of the officers with strategic decision-making or management authority for the Company principally perform their duties at that principal executive office or elsewhere in Ontario and are resident in Ontario; and (iii) substantially all of the strategic decision-making, corporate planning, corporate finance and other executive functions of the Company are carried out at that principal executive office or elsewhere in Ontario.

Principal Grid Control Centre in Ontario

The Electricity Act requires the Company to maintain, in Ontario, its centres of operation and control necessary for the control, monitoring and coordination of its transmission system that is regulated by the Ontario Energy Board and the control, monitoring and coordination of its distribution system that is regulated by the Ontario Energy Board.

Restriction on Disposition of Transmission or Distribution Businesses

The Electricity Act prohibits the Company from selling all or substantially all of the business, property or assets related to its transmission system or distribution system that is regulated by the Ontario Energy Board.

Incorporation in Ontario

The Electricity Act prohibits the Company from transferring its jurisdiction of incorporation to a jurisdiction outside of Ontario.

10% Ownership Restriction

The Electricity Act imposes share ownership restrictions on the Voting Securities. These restrictions provide that no person or company (or combination of persons or companies acting jointly or in concert) may beneficially own or exercise control or direction over more than 10% of any class or series of Voting Securities, including common shares of the Company (the "**Share Ownership Restrictions**"). The Share Ownership Restrictions do not apply to Voting Securities held by the Province, nor to an underwriter who holds Voting Securities solely for the purpose of distributing those securities to purchasers who comply with the Share Ownership Restrictions.

The articles of Hydro One Limited provide for comprehensive enforcement mechanisms that are applicable in the event of a contravention of the Share Ownership Restrictions. After the Board determines that a contravention has occurred, no person may vote the Voting Securities of the contravening persons or companies, dividends on the Voting Securities that are held in excess of the Share Ownership Restrictions are prohibited (and where the Board determines that the contravention was intentional, dividends on all of the Voting Securities held by the contravening persons or companies may be prohibited) and Hydro One Limited is required to send a notice requiring the sale of those excess Voting Securities. If such a required sale is not made, the exercise of any right or privilege attached to the Voting Securities will be prohibited and Hydro One Limited may sell or redeem the Voting Securities held in contravention and remit the net proceeds to the holder.

The Board may at any time require holders of, or subscribers for, Voting Securities and certain other persons to make declarations and provide related information with respect to ownership, direction, or control of Voting Securities and certain other matters relevant to the Share Ownership Restrictions. The Board may also require those holders or subscribers to produce documents, provide responses to written questions, and attend in person to answer questions concerning any declaration. Hydro One Limited is prohibited from accepting any subscription or issuing or registering a transfer of Voting Securities if it would result in a violation of the Share Ownership Restrictions.

Province's Ownership of Common Shares and Preferred Shares

The Province will own approximately 86% of Hydro One Limited's common shares after the pre-closing transactions and this offering (approximately 85% if the Over-Allotment Option is exercised in full). Thereafter, after closing of the transactions with the Trusts contemplated above, the Province will own approximately 85% of Hydro One Limited's common shares (approximately 84% if the Over-Allotment Option is exercised in full). See "Principal and Selling Shareholder". The Province has indicated that it intends to sell further common shares over time, until it holds approximately 40% of Hydro One Limited. See "Plan of Distribution" and "Risk Factors – Risks Relating to the Company's Relationship with the Province".

In addition, following the completion of the pre-closing transactions and this offering, the Province will own 100% of the outstanding Series 1 preferred shares of Hydro One Limited. See "Pre-Closing Transactions" and "Corporate Structure".

Maintenance of 40% Ownership

The Electricity Act restricts the Province from selling Voting Securities (including common shares of Hydro One Limited) if it would own less than 40% of the outstanding number of Voting Securities of that class or series after the sale. If as a result of the issuance of additional Voting Securities by Hydro One Limited, the Province owns less than 40% of the outstanding number of Voting Securities of any class or series, the Province must, subject to the approval of the Lieutenant Governor in Council and the necessary appropriations from the Legislature, take steps to acquire as many Voting Securities of that class or series as are necessary to increase the Province's ownership to not less than 40% of the outstanding number of Voting Securities of that class or series. The manner in which, and the time by which, the Province must acquire these additional Voting Securities will be determined by the Lieutenant Governor in Council.

The Province has been granted pre-emptive rights by Hydro One Limited to assist it in meeting its ownership requirements under the Electricity Act as described under "– Governance Agreement – Pre-emptive Rights".

45% Acquisition Limit

The Province has agreed in the Governance Agreement not to acquire previously issued Voting Securities if after that acquisition, the Province would own more than 45% of any class or series of Voting Securities (including common shares of Hydro One Limited). This restriction does not apply to the acquisition by the Province of Voting Securities as a result of the enforcement by the Province of any security interest securing payment of debt obligations owing to the Province or to certain acquisitions of Voting Securities by entities related to the Province or by third party managed funds or as passive investments. This restriction also does not require the Province to sell any of the common shares of Hydro One Limited that it currently owns, nor does it limit the Province from acquiring Voting Securities on an issuance by Hydro One Limited, including pursuant to the exercise by the Province of its pre-emptive right. See "– Governance Agreement – Pre-emptive Rights".

Provision of Financial Information to the Province and the Auditor General of Ontario

As the Province will remain a major shareholder of Hydro One Limited, it is expected that the Company's financial results will continue to be included in the Province's financial statements. For so long as this is the case, pursuant to the *Financial Administration Act* (Ontario), the Company must provide information to the Province for the sole purpose of the Province's preparation of its consolidated financial statements set out in the provincial public accounts and any quarterly consolidated financial statements. In addition, for so long as this is the case, pursuant to the *Auditor General Act* (Ontario), the Company and its auditors must also provide the Auditor General of Ontario with information necessary or relevant for the Auditor General of Ontario to prepare her or his report on the consolidated financial statements of the Province for inclusion in the provincial public accounts. The Company is not required to provide any of this information to the Province or the Auditor General of Ontario if it relates to a period for which the Company has not yet disclosed to the public its audited or unaudited financial statements.

Registration Rights Agreement

Prior to the closing of this offering, the Province and Hydro One Limited will enter into the Registration Rights Agreement. Pursuant to the Registration Rights Agreement, Hydro One Limited grants the Province the right, from time to time while the Province is a "control person" of Hydro One Limited within the meaning of applicable Canadian securities laws, to require Hydro One Limited to file, at the expense of the Province (except for internal expenses of Hydro One Limited or other expenses that Hydro One Limited would have incurred even in the absence of such a request), one or more prospectuses and take other procedural steps as may be reasonably necessary to facilitate a secondary offering in Canada of all or any portion of the common shares or preferred shares ("**shares**") held by the Province (a "**demand registration**").

Hydro One Limited can defer a demand registration for up to a maximum of 60 days if the Board determines in good faith that circumstances currently exist which make it in the best interests of Hydro One Limited to do so. These circumstances are either: (i) that the effect of the filing of a prospectus would reasonably be expected to materially interfere with or require the public disclosure of any material corporate development or plan (including any material financing, securities offering, acquisition, disposition, restructuring or merger or other transaction involving Hydro One Limited or any of its subsidiaries); or (ii) that there exists at the time material non-public information relating to Hydro One Limited, (a) the disclosure of which would be reasonably likely to be adverse to Hydro One Limited, or (b) where Hydro One Limited has a bona fide business purpose for keeping that information confidential. In addition, Hydro One Limited shall not be obligated to effect a demand registration more than four times in any 12-month period.

If Hydro One Limited proposes to undertake a Canadian public offering by prospectus, the Province is entitled, while it is a "control person" of Hydro One Limited within the meaning of applicable Canadian securities laws, to include shares owned by it as part of that offering, provided that the underwriters may reduce the number of shares proposed to be sold if in their reasonable judgment all of the shares proposed to be offered by Hydro One Limited and the Province may not be sold in an orderly manner within a price range reasonably acceptable to Hydro One Limited. In that case, the shares to be sold will be allocated pro rata between Hydro One Limited and the Province based on their relative proportionate number of shares requested to be included in the offering. Hydro One Limited and the Province will share the expenses of the offering (except for internal expenses of Hydro One Limited) in proportion to the gross proceeds they each receive from the offering.

Hydro One Limited also agrees to extend the foregoing provisions to facilitate U.S. registered offerings of shares of Hydro One Limited held by the Province, if Hydro One Limited in the future files a registration statement for the distribution of shares to the public in the United States.

Hydro One Limited also agrees to use commercially reasonable efforts to assist, at the Province's expense (except for internal expenses of Hydro One Limited), the Province in any sale by it of shares of Hydro One Limited pursuant to an exemption from the prospectus requirements, in the preparation of an offering memorandum and other documentation and by facilitating due diligence by the prospective buyer.

Hydro One Limited and the Province also agree to enter into customary agreements, including "lock-up" agreements, on customary market terms in connection with such transactions. Hydro One Limited also agrees to certain indemnification and contribution covenants in favour of the Province and any underwriters involved in such transactions.

Governance Agreement

The purpose of the Governance Agreement is to prescribe the role of the Province, as a holder of Voting Securities, in the governance of Hydro One Limited. Although the Governance Agreement does not address all aspects of the governance of Hydro One Limited (for a description of the governance of Hydro One Limited more generally, see "Directors and Management of the Company"), it comprehensively deals with, and limits, the role of the Province in that governance. It describes the principles that govern how Hydro One Limited will be managed and operated, including that the Province, in its capacity as a holder of Voting Securities, will engage in the business and affairs of Hydro One Limited as an investor and not as a manager. It also contains commitments by the Province restricting the exercise of its rights as a holder of Voting Securities.

The Governance Agreement specifically addresses the following matters:

- The governance principles under which Hydro One Limited and its subsidiaries will be managed and operated.
- The nomination of directors, which includes: (i) the requirement for a fully independent board of directors (other than the Chief Executive Officer), and (ii) the maximum number of directors that may be nominated by the Province.
- The election and replacement of directors.
- Approvals requiring a special resolution of the directors.
- Restrictions on the right of the Province to initiate fundamental changes.
- Pre-emptive rights provided to the Province with respect to future issuances of Voting Securities by Hydro One Limited.
- Acquisition limits with respect to the Province's acquisition of outstanding Voting Securities.

Governance Principles

The Governance Agreement provides that the business and affairs of Hydro One Limited will be managed and operated in accordance with the following principles:

- Hydro One Limited will maintain corporate governance policies, procedures and practices consistent with the best practices of leading Canadian publicly listed companies, having regard to Hydro One Limited's ownership structure and the Governance Agreement.
- The Board, which will be independent of both the Company and the Province (other than the Chief Executive Officer), is responsible for the management of or supervision of the management of the business and affairs of Hydro One Limited, including, subject to applicable law, having full authority in respect of:
  - corporate governance;
  - the appointment, termination, supervision and compensation of the Chief Executive Officer, Chief Financial Officer and other senior officers of Hydro One Limited;

    - remuneration of directors;
    - strategic planning and direction;
    - risk management;
    - capital structure;
    - Hydro One Limited's dividend policy; and
    - Hydro One Limited's annual business plan and budget.
- With respect to its ownership interest in Hydro One Limited, the Province will engage in the business and affairs of Hydro One Limited as an investor and not a manager, and the Province intends to achieve its policy objectives through legislation and regulation, as it would with respect to any other utility operating in Ontario.

The governance principles do not restrict the Province in any way: (i) in relation to the regulation of the Company, including by the Ontario Energy Board; (ii) in relation to system planning by the IESO; (iii) in relation to the enforcement of the laws of Ontario applicable to the Company or the enactment, promulgation or amendment of such laws; or (iv) in respect of any communication regarding the Company by an individual in his or her capacity as a member of the Legislative Assembly of Ontario, if made in the Legislative Assembly of Ontario or in another public forum in relation to the enforcement, promulgation or enactment of laws in Ontario or in relation to Ontario regulatory policy. They also do not restrict the exercise by the Province of its rights as a holder of Voting Securities, including its rights to vote any Voting Securities in its sole interest, except as expressly provided for in the Governance Agreement. See "Risk Factors – Risks Relating to the Company's Relationship with the Province."

Nomination of Directors

The Governance Agreement establishes qualification standards for director nominees, provides for the number of directors that each of the Province and the Nominating, Corporate Governance, Public Policy & Regulatory Committee may nominate and establishes a process for confirming nominees. The Governance Agreement recognizes that the Board is to be a fully independent board, with all of the members of the Board independent of both the Company and the Province, with the exception of the Chief Executive Officer.

<u>Director Qualification Standards</u>

General

The Province and the Nominating, Corporate Governance, Public Policy & Regulatory Committee have agreed to nominate individuals as directors who are of high quality and integrity and who have:

- significant experience and expertise in business or that is applicable to business,
- served in a senior executive or leadership position,
- broad exposure to and understanding of the Canadian or international business community,
- skills for directing the management of a company, and
- motivation and availability,

in each case to the extent appropriate for a business of the complexity, size and scale of the business of Hydro One Limited and on a basis consistent with the highest standards for directors of Canada's leading public companies.

Independence

Each director nominee must be independent of Hydro One Limited within the meaning of Ontario securities laws governing the disclosure of corporate governance practices and independent of the Province, other than the Chief Executive Officer. A director will be independent of the Province if he or she would be independent of Hydro One Limited within the meaning of Ontario securities laws governing the disclosure of corporate governance practices if the Province and each Specified Provincial Entity (as provided in the Governance Agreement) were treated as Hydro One Limited's parent under that definition, but excluding, in the case only for the directors named in this prospectus, any prior relationship that ended before August 31, 2015. In addition, he or she may not be an employee or official of the Province or any Specified Provincial Entity, either: (i) currently or, (ii) within the last three years, but for (ii), excluding in the case only for the directors named in this prospectus, any prior relationship that ended before August 31, 2015. In addition, all director nominees must meet the requirement of applicable securities and other laws and any exchange on which Voting Securities are listed. A majority of the Board must be resident Canadians (as defined in the OBCA) and neither the Province nor the Nominating, Corporate Governance, Public Policy & Regulatory Committee will nominate any person as a director if as a result of that nominee being elected or appointed, this requirement would not be met. However, each director named in this prospectus is qualified to be a director of Hydro One Limited on the Closing Date, whether or not he or she satisfies the foregoing director qualification standards on the Closing Date. See "Directors and Management of the Company – Independence of the Board of Directors".

No director nominee may be proposed by the Province or the Nominating, Corporate Governance, Public Policy & Regulatory Committee to replace a current director if, taking into account selection criteria identified by the Province and the Nominating, Corporate Governance, Public Policy & Regulatory Committee for new directors, the Board would not collectively satisfy the Board's skills matrix, the Diversity Policy and any other policy relating to the composition of the Board forming part of Hydro One's governance standards.

If the Province or the Nominating, Corporate Governance, Public Policy & Regulatory Committee nominates an individual who is already a director of Hydro One Limited at the time of the nomination, that person will be treated as meeting the director qualification standards unless there has been a material change in that individual's circumstances that would affect whether she or he would continue to meet those standards. See "Directors and Management of the Company – Independence of the Board of Directors".

Number of Directors

Under the articles of Hydro One Limited, the Board will consist of no fewer than 10 and no more than 15 directors, with the initial Board consisting of 15 directors until the first annual meeting of shareholders after closing of the offering. See "Directors and Management of the Company". The Governance Agreement requires that the articles of Hydro One Limited must at all times provide for this minimum and maximum number. The Board will determine from time to time the number of directors of Hydro One Limited within that minimum and maximum.

Board Nominees

The nominees to be proposed for election to the Board by Hydro One Limited at annual meetings of shareholders will be determined as follows:

- The Chief Executive Officer will be nominated.
- The Province will be entitled to nominate that number of nominees equal to 40% of the number of directors to be elected (rounded to the nearest whole number).
- The Nominating, Corporate Governance, Public Policy & Regulatory Committee will nominate the remaining directors.

If, however, the Province ceases to own Voting Securities to which are attached 40% of the votes that may be cast on the election of directors at a meeting of shareholders and the Province does not subsequently acquire Voting Securities sufficient to meet that ownership threshold by the next annual meeting nomination deadline following the second anniversary of the Province first ceasing to meet that ownership threshold, then until the Province again meets that ownership threshold, the number of Directors that the Province may nominate will be proportionate to the number of votes that the Province may cast on the election of directors. For this purpose, an annual meeting nomination deadline is the date that is 60 days prior to the date by which Hydro One Limited is required to mail proxy solicitation materials for an upcoming annual meeting.

Board Nomination Process

The Province and representatives of the Nominating, Corporate Governance, Public Policy & Regulatory Committee will meet after each annual meeting of shareholders to discuss expected upcoming departures from the

Board (whether due to resignation, retirement or otherwise). In this discussion, the Province and representatives of the Nominating, Corporate Governance, Public Policy & Regulatory Committee will consider the impact on the Board of those departures and identify selection criteria for director nominees to replace departing directors to ensure that the Board will collectively continue to comply with the Governance Agreement and satisfy the Board's skills matrix, the Diversity Policy and any other policy relating to the composition of the Board forming part of Hydro One's governance standards. The representatives of the Nominating, Corporate Governance, Public Policy & Regulatory Committee will also recommend to the Province individuals that the Nominating, Corporate Governance, Public Policy & Regulatory Committee has identified as potential candidates for nomination to the Board. The Province shall have no obligation to nominate any of the recommended individuals as one of its director nominees. This meeting would be expected to occur within 60 days of each annual meeting of shareholders.

The Province and representatives of the Nominating, Corporate Governance, Public Policy & Regulatory Committee will hold further meetings to continue to discuss expected upcoming departures from the Board and proposed replacement nominees under consideration. These additional meetings would be expected to occur within 120 days of each annual meeting of shareholders.

Subsequent to these meetings, each of the Province and the Nominating, Corporate Governance, Public Policy & Regulatory Committee will notify the other of its proposed director nominees. They must do so by no later than the date that is 60 days prior to the date by which proxy solicitation materials must be mailed for Hydro One Limited's next annual meeting of shareholders.

If the Province or the Nominating, Corporate Governance, Public Policy & Regulatory Committee receives a nomination from the other of a person who is not then a director of Hydro One Limited at the time of the nomination or who is then a director but whose circumstances have materially changed in a way that would affect whether she or he would continue to meet the director qualification standards as described under "– Governance Agreement – Nomination of Directors – Director Qualification Standards", then the Province or the Nominating, Corporate Governance, Public Policy & Regulatory Committee, as the case may be, will have ten business days to confirm or reject that nominee. The Province or the Nominating, Corporate Governance, Public Policy & Regulatory Committee may reject a nominee only on the basis that the nominee does not meet those director qualification standards.

If a director nominee of the Province or the Nominating, Corporate Governance, Public Policy & Regulatory Committee is rejected, then the Province or the Nominating, Corporate Governance, Public Policy & Regulatory Committee will be entitled to nominate additional candidates until a nominee is confirmed by the other. If no replacement nominee is confirmed for a director who was expected to depart from the Board and that director does not resign, that director shall be re-nominated.

The Province and the Nominating, Corporate Governance, Public Policy & Regulatory Committee will use commercially reasonable efforts to confirm director nominees prior to the date by which proxy solicitation materials must be mailed for the purposes of Hydro One Limited's next annual meeting of shareholders. If insufficient nominees are confirmed by that date, then the Province and the Nominating, Corporate Governance, Public Policy & Regulatory Committee will consider alternatives so that each nominates the number of directors each is entitled to nominate at that annual meeting. These alternatives may include reducing the number of directors to be elected at that annual meeting or delaying the annual meeting so that sufficient nominees may be confirmed.

If there are disputes as to whether a particular director nominee satisfies the director qualification standards as described under "– Governance Agreement – Nomination of Directors – Director Qualification Standards", either the Province or the Nominating, Corporate Governance, Public Policy & Regulatory Committee may request that the dispute be resolved by arbitration.

Election and Replacement of Directors

The Governance Agreement provides for how:

- the Province will vote with respect to director nominees, including its nominees and those of the Nominating, Corporate Governance, Public Policy & Regulatory Committee,
- the Province may vote at contested elections,
- the Province may seek to replace the Board by withholding votes or voting for removal, and
- Board vacancies will be filled.

Voting on Director Elections

At any meeting of shareholders to elect directors, the Province is required to vote in favour of the nominees nominated as described under "– Governance Agreement – Nomination of Directors – Board Nominees and – Board Nomination Process" except in the case of contested director elections and where the Province seeks to replace the Board in accordance with the Governance Agreement by withholding votes or voting for removal. See "– Governance Agreement – Election and Replacement of Directors – Contested Elections," "– Right to Withhold Votes" and "– Province's Right to Replace the Board".

Contested Elections

At any meeting of shareholders to elect directors of Hydro One Limited at which there are more nominees for directors than there are directors to be elected, the Province may vote its Voting Securities in its sole discretion (including to vote in favour of other candidates instead of the Province's nominees), except that the Province will vote in favour of the election of the Chief Executive Officer as a director.

Right to Withhold Votes

The Province is required under the Governance Agreement to vote in favour of all director nominees of Hydro One Limited. That obligation is subject, however, to the Province's overriding right to withhold from voting in favour of all director nominees and its right to seek to remove and replace the entire Board, including in each case its own director nominees but excluding the Chief Executive Officer and, at the Province's discretion, the Chair. In the case of an annual meeting of shareholders, the Province will notify Hydro One Limited of its intent to withhold from voting in favour of director nominees prior to the date by which proxy solicitation materials must be mailed for the purposes of that annual meeting.

Depending on the number of withheld votes a director nominee receives at a meeting of shareholders at which directors are to be elected, that director nominee may be required to tender his or her resignation to the Board in accordance with Hydro One Limited's majority voting policy. In this circumstance, the Board shall take whatever actions it determines are appropriate in the circumstances, including accepting resignations sequentially after replacement directors are identified and confirmed in accordance with the Governance Agreement, accepting some but not all resignations until sufficient replacement directors have been identified and confirmed in accordance with the Governance Agreement, calling a shareholders' meeting and accepting the resignations only upon the election of their replacements at that meeting, not accepting the resignations until the next annual meeting of shareholders, or rejecting the resignations. See "Directors and Management of the Company". However, for so long as the Province holds Voting Securities sufficient for it to withhold at least 50% of the votes that may be cast at that meeting of shareholders, the Province's withholding of votes will be sufficient to ensure that each of the directors with the exception of the Chief Executive Officer and, at the discretion of the Province, the Chair, are required to tender their resignation to the Board in accordance with Hydro One Limited's majority voting policy.

Province's Right to Replace the Board

The Province may at any time notify Hydro One Limited that it intends to request that Hydro One Limited hold a meeting of shareholders for the purposes removing all of the directors in office, including those nominated by the Province, with the exception of the Chief Executive Officer and, at the sole discretion of the Province, the Chair (a "**Removal Notice**").

If the Province gives Hydro One a Removal Notice, then the Chair shall coordinate the establishment of an ad hoc nominating committee comprising each of the five largest beneficial owners of Voting Securities known to the Company, excluding the Province, willing to provide representatives to serve on that committee. If at least three beneficial owners of Voting Securities are not willing to provide representatives to serve on the ad hoc nominating committee within 30 days of the Province giving a Removal Notice, then the individuals that the Province proposes to nominate as replacement directors, as described in the next paragraph, will serve as the ad hoc nominating committee.

The Province and the ad hoc nominating committee will identify and confirm replacement directors to be nominated at the shareholders' meeting pursuant to a process substantially equivalent to that described under "– Governance Agreement – Nomination of Directors – Board Nomination Process", with the ad hoc nominating committee taking the place of the Nominating, Corporate Governance, Public Policy & Regulatory Committee. For clarity, each replacement director nominee must meet the same qualification standards under the Governance

Agreement as for any director nominee, including the fact that all of them, other than the Chief Executive Officer, in each case, must be independent of Hydro One Limited within the meaning of Ontario securities laws governing the disclosure of corporate governance practices and be independent of the Province. See "– Governance Agreement – Nomination of Directors – Director Qualification Standards." Hydro One Limited will call the shareholders' meeting once the replacement director nominees are confirmed pursuant to this process, and will hold the shareholders' meeting within 60 days of this confirmation.

At the shareholders' meeting, the Province will vote in favour of removing the current directors with the exception of the Chief Executive Officer and, at the Province's discretion, the Chair, and will vote in favour of the independent director nominees described in the preceding paragraph.

From the time that the Province delivers a Removal Notice, the directors will, in exercising their fiduciary duties, take into account the Province's intention to cause a new Board to be constituted and the desirability that the actions of the current Board not interfere with the ability of a new Board to exercise its responsibility to oversee the business and affairs of Hydro One Limited in accordance with Hydro One Limited's governance principles. See "– Governance Agreement – Governance Principles".

The voting results of the shareholders' meeting will determine which individuals are elected as directors. However, for so long as the Province holds more than 50% of the outstanding common shares (and, depending on the number of shares represented at the meeting, possibly where the Province holds less than 50% of the outstanding common shares), the Province's votes will be sufficient to remove the current directors with the exception of the Chief Executive Officer and, at the Province's discretion, the Chair, and to replace them with the new Board as described above.

Filling Board Vacancies

If a vacancy on the Board arises, then a replacement will be nominated by the Province or the Nominating, Corporate Governance, Public Policy & Regulatory Committee, whichever nominated the departing director, and approved by the other in accordance with a process that is substantially equivalent to the process described under "– Governance Agreement – Nomination of Directors – Board Nomination Process". For clarity, each replacement director nominee must meet the same qualification standards under the Governance Agreement as for any director nominee, including the fact that all of them, other than the Chief Executive Officer, in each case, must be independent of Hydro One Limited within the meaning of Ontario securities laws governing the disclosure of corporate governance practices and be independent of the Province. For this purpose, until the first meeting of shareholders to consider the election of directors that is held after the completion of this offering, the Province has designated Ian Bourne, Marc Caira, George Cooke, Kathryn Jackson, Jane Peverett and Gale Rubenstein as its nominees.

If the Chief Executive Officer ceases to be Chief Executive Officer for any reason, the new Chief Executive Officer appointed to take his or her place will fill that vacancy on the Board.

Subsidiary Governance

Subject to applicable law, the board of directors of each of Hydro One Inc. and Hydro One Networks Inc. will be constituted to have the same members as the Board unless the Board determines otherwise.

Company to Cause Compliance

Any obligations of the Board, the Nominating, Corporate Governance, Public Policy & Regulatory Committee, the Chair or any other representative of Hydro One Limited provided for in the Governance Agreement are deemed to be obligations of Hydro One Limited and Hydro One Limited will ensure those obligations are complied with. If Hydro One Limited is unable to comply with the Governance Agreement without being in breach of its by-laws, Hydro One Limited is required to amend its by-laws to enable the performance of its obligations under, and its compliance with, the terms of the Governance Agreement. Any such amendment to Hydro One Limited's by-laws must be submitted to the shareholders for approval at the next meeting of shareholders.

Board Approvals Requiring a Special Resolution of the Directors

<u>Annual Confirmation of Chair and Chief Executive Officer</u>

The appointment of a new Chair at any time must be approved by a resolution of the Board passed by at least two-thirds of the votes cast at a meeting of the directors, or consented to in writing by all of the directors (a "**Special Board Resolution**"). The Chair will be nominated and confirmed annually by a Special Board Resolution at the first meeting of the Board after each annual meeting of shareholders. If the Board does not confirm the Chair at that meeting by a Special Board Resolution, then the Board will remove the Chair as soon as practicable and appoint a new Chair. The Chair may also be removed between annual confirmation meetings by a majority of the votes cast at a meeting of the directors.

The appointment of a new Chief Executive Officer at any time must be approved by a Special Board Resolution. The Chief Executive Officer must be confirmed annually by a Special Board Resolution at the first meeting of the Board after each annual meeting of shareholders. If the Board does not confirm the Chief Executive Officer at that meeting by a Special Board Resolution, then the Board shall remove the Chief Executive Officer as soon as practicable and appoint a replacement Chief Executive Officer. The Chief Executive Officer may also be removed between annual confirmation meetings by a majority of the votes cast at a meeting of the directors.

<u>Changes in Governance Standards</u>

Hydro One Limited has established a number of governance standards, some of which are specified in the Governance Agreement to be "Hydro One's governance standards". As such, no addition, supplement or amendment to these specified governance standards can be effective unless approved by a Special Board Resolution. The governance standards that are subject to this special approval requirement include the Board's skills matrix, the Ombudsman's Mandate, the Diversity Policy and the Majority Voting Policy, the Corporate Governance Guidelines, the mandates of the Board and its committees, position descriptions for the Chief Executive Officer, the Chair, the directors and committee chairs, and the Stakeholder Engagement Policy.

Restrictions on Province's Right to Initiate Fundamental Changes

The Province has agreed not to initiate a fundamental change to Hydro One Limited (as defined in Part XIV of the OBCA), including not to initiate any arrangement or amalgamation involving Hydro One Limited or any amendment to the articles of Hydro One Limited. The Province may, however, vote its Voting Securities as it sees fit in the event any fundamental change is initiated by Hydro One Limited or another shareholder of Hydro One Limited.

Restrictions on Province Acting Jointly or in Concert

The Province has agreed not to act jointly or in concert with any person in connection with the exercise of that person's rights as a holder of Voting Securities in a manner that the Province would be prohibited from directly doing itself. The Province is not, however, restricted from soliciting proxies to vote a person's Voting Securities in a particular manner, if the Province is itself permitted to vote its Voting Securities in that manner. Any pension plan or related pension fund which the Province or any "public entity" (as defined in the *Financial Administration Act* (Ontario)) establishes, sponsors, administers or contributes to will not be treated as a joint actor of the Province except to the extent the Province solicits the administering entity or governing body of the pension plan or related pension fund to take a particular action or step.

Pre-emptive Rights

Hydro One Limited has granted to the Province a pre-emptive right to acquire additional Voting Securities as part of future offerings by Hydro One Limited of Voting Securities. If Hydro One Limited proposes to issue Voting Securities in the future, whether pursuant to a public offering or a private placement, Hydro One Limited must notify the Province of the proposal at least 30 days in advance and must offer the Province the right to purchase up to 45% of the Voting Securities being offered. The offer must also specify the proposed outside date for completing the proposed offering, which cannot be more than 60 days from the date of the offer. If the offer is being delivered in connection with a proposed best-efforts or fully underwritten public offering (including an offering proposed on a "bought deal" basis) through an agent or underwriter, the offer may include a size range and may state that the actual price per Voting

Security will be the offering price agreed to by Hydro One Limited in the agency agreement, bid letter or underwriting agreement, as the case may be, relating to the offering. Otherwise, the offer must specify the price at which the Voting Securities are to be issued and the number of Voting Securities the Province is entitled to purchase. If the offer to the Province is in connection with a proposed best-efforts or fully underwritten public offering (including an offering proposed on a "bought deal" basis), then the Province may specify in its response a maximum price or range of prices at which it will purchase Voting Securities. Otherwise, the Province must specify in its response the number of Voting Securities it wishes to purchase. Any Voting Securities not purchased by the Province pursuant to the offer may be purchased by any other person pursuant to the proposed offering. If Hydro One Limited is continuing in good faith to contemplate a proposed offering after the outside date, it may extend the outside date by up to four months. After that date, including any extensions, Hydro One Limited may not deliver an offer for a further proposed offering for at least 90 days.

The pre-emptive right also applies with respect to any proposed issuance by Hydro One Limited of securities convertible into or exchangeable for Voting Securities. The pre-emptive right does not apply with respect to an issuance of Voting Securities or securities convertible into or exchangeable for Voting Securities: (i) pursuant to employee or director compensation plans existing on the date of the Governance Agreement or plans adopted after the date of the Governance Agreement that comply with the rules of the TSX and, if required, have been approved by the TSX; (ii) pursuant to any dividend re-investment arrangement of the Company that is consistent with dividend reinvestment arrangements of other publicly traded utilities in Canada (including as to discount rates) and that does not include a cash purchase option; (iii) pursuant to a rights offering that is open to all shareholders of Hydro One Limited; or (iv) pursuant to any business combination, take-over bid, arrangement, asset purchase transaction or other acquisition of assets or securities of a third party.

Confidentiality of Information Provided to the Province

The Province and Hydro One Limited will enter into a confidentiality agreement pursuant to which the Province will agree to keep confidential information provided to the Province pursuant to the Governance Agreement and/or the Registration Rights Agreement, subject to certain customary exceptions. The confidentiality obligations of the Province will, subject to certain procedural requirements, permit disclosure by the Province where it is required by applicable law, including pursuant to the *Freedom of Information and Protection of Privacy Act* (Ontario). The Company will similarly agree to keep confidential certain information provided by the Province pursuant to the Governance Agreement and/or the Registration Rights Agreement, subject to certain customary exceptions.

The Province will also agree to use such information only for certain specified purposes relating to the exercise or enforcement of the Province's rights under the Governance Agreement and the Registration Rights Agreement, and in connection with the evaluation, oversight and management of the Province's investment in Hydro One Limited, including the exercise of its rights as a shareholder, in each case in accordance with the Governance Agreement, the Registration Rights Agreement and applicable law. The confidentiality agreement will also require the Province to, among other things, have instituted reasonable internal controls to restrict disclosure of non-public material information of Hydro One Limited and Hydro One Inc. and to restrict trading in their securities by the Province and persons who may receive access, directly or indirectly from the Province, to non-public material information about Hydro One Limited and/or Hydro One Inc.

Termination of Governance Agreement

The Governance Agreement provides that it may be terminated only with the mutual agreement of the Province and Hydro One Limited. If there are changes in circumstances in the future that impact the original purpose and intention of the Province and Hydro One Limited in entering into the Governance Agreement, the Province and Hydro One Limited will cooperate in good faith to amend the Governance Agreement to reflect those changes in circumstances.

Termination of Existing Shareholder Declarations and Resolutions

As the sole shareholder of Hydro One Inc., the Province has from time to time directed corporate actions or strategies through unanimous shareholder declarations that removed authority from the board of Hydro One Inc. In the past, the Province has made unanimous shareholder declarations that, among other things: (i) restricted the rights, powers and duties of the Hydro One Inc. board in relation to the off-shoring of certain jobs and the outsourcing of certain services; (ii) prevented Hydro One Inc. from seeking cost recovery through the regulatory process for upgrades for certain transmission stations from either Micro FIT or Small FIT generators; and (iii) restricted the rights, powers and duties of the Hydro One Inc. board with respect to whether, how and when to proceed with the Hydro One Brampton Networks Inc. transaction. Immediately prior to the closing of the offering, the Province will terminate all existing unanimous shareholder declarations relating to Hydro One Inc. and its subsidiaries. Following the completion of the offering, the Province will no longer be able to make such shareholder declarations.

Ombudsman

The Electricity Act requires the Company to appoint an ombudsman to act as a liaison with customers and to establish procedures for the ombudsman to inquire into and report to the Board on matters raised with the ombudsman by or on behalf of customers. These procedures are set out in a written mandate (the "**Ombudsman's Mandate**") together with, among other things, the ombudsman's other duties and responsibilities. On October 22, 2015, the board of directors of Hydro One announced the appointment of Fiona Crean to the role of Ombudsman for the Company. Her appointment will be effective November 17, 2015 and the Office of the Ombudsman is expected to be operative in the first quarter of 2016.

Statutory Oversight and Transitional Provisions for Officers of the Assembly

Pursuant to legislation which came into force in 2015, Hydro One Inc. and its subsidiaries ceased to be subject to a number of Ontario statutes that apply to entities owned by the Province, including the *Broader Sector Public Accountability Act, 2010,* the *Broader Public Sector Executive Compensation Act, 2014*, the *Financial Accountability Officer Act, 2013*, the *Freedom of Information and Protection of Privacy Act*, the *Management Board of Cabinet Act*, the *Ombudsman Act*, the *Trillium Trust Act, 2014*, the *Public Sector Expenses Review Act, 2009* and the *Public Sector Salary Disclosure Act, 1996*. Hydro One Limited will similarly not be subject to those statutes.

In addition, the Company's obligations under the *Financial Administration Act* (Ontario) and the *Auditor General Act* (Ontario) have been limited to those described under "– Province's Ownership of Common Shares and Preferred Shares – Provision of Financial Information to the Province and Auditor General of Ontario".

The Auditor General of Ontario, the Financial Accountability Officer, the Information and Privacy Commissioner and the Provincial Ombudsman can continue to exercise certain of their powers with respect to the Company. The Information and Privacy Commissioner may also issue orders with respect to those matters until June 4, 2016.

Ontario Electricity Financial Corporation Indemnity

At the time that Hydro One Inc. and certain of its subsidiaries acquired their respective assets from the former Ontario Hydro pursuant to the transfer orders under the Electricity Act, as described under "Interests of Management and Others in Material Transactions – Relationship with the Province and Other Parties – Transfer Orders", the Ontario Electricity Financial Corporation agreed to indemnify Hydro One Inc. and those subsidiaries with respect to:

(a) the failure of the transfer orders to transfer to Hydro One Inc. or those subsidiaries any asset, right or thing or any interest in any asset, right or thing related to their business (the "**Hydro One Entitlements**"); and

(b) adverse claims or interests of third parties (including the Crown) to Hydro One Entitlements or based on any deficiency or lack of title in respect of any Hydro One Entitlement.

The indemnity only applies when the total value of all claims exceeds $10 million. The indemnity also contains certain thresholds and exclusions. This indemnity contains, among other matters, an exclusion for any claim related to any Aboriginal title or rights or the absence of a permit, right of way easement or similar right in respect of lands forming part of a Reserve. The indemnity is guaranteed by the Province.

Hydro One Inc. is required to pay the Ontario Electricity Financial Corporation an annual fee for the indemnity until the indemnity terminates. Hydro One Inc. and its subsidiaries have not made any claim under the indemnity since it was put in place in 1999. The parties, with the consent of the Minister of Finance, have agreed to terminate the indemnity effective October 31, 2015. Any claims for which Hydro One Inc. provides notice to the Ontario Electricity Financial Corporation by the termination date will be covered by the indemnity, subject to the restrictions and exclusions in the indemnity.

DIRECTORS AND MANAGEMENT OF THE COMPANY

Directors and Executive Officers

The following table sets forth information regarding the directors and executive officers of Hydro One Limited at the closing of this offering. Each of the directors was first appointed on August 31, 2015 and is a director of Hydro One Limited as of the date of this prospectus. Each director is elected annually to serve for one year or until his or her successor is elected or appointed.

(2) See "– Biographical Information" for the five year history of each director and executive officer.

(3) These directors have been designated as the Province's nominees for the purpose of filling any vacancies arising until the first meeting of shareholders to consider the election of directors after the completing of this offering. See "Governance and Relationship with Principal Shareholder – Governance Agreement – Election and Replacement of Directors – Filling Board Vacancies".

Biographical Information

The following includes a brief profile of each of the executive officers and directors of Hydro One Limited, which include a description of their present occupation and their principal occupations for the past five years.

Mayo Schmidt

Mr. Mayo Schmidt is the President and Chief Executive Officer of both Hydro One Limited and Hydro One Inc. and a director of both Hydro One Limited and Hydro One Inc. Prior to joining Hydro One, Mr. Schmidt served as President, Chief Executive Officer, and director at Viterra Inc., the global food ingredients company from January 2000 to December 2012. Early in his career, Mr. Schmidt held a number of key management positions of increasing responsibility at General Mills, Inc. until he joined ConAgra Grain, Canada as President and spearheaded ConAgra's expansion. He was promoted to Executive Vice-President, Domestic and International Operations with KBC Trading and Processing Company, a global subsidiary of ConAgra Inc. In 2000, he was appointed Chief Executive Officer of Saskatchewan Wheat Pool, the leading Canadian agriculture corporation and predecessor to Viterra Inc. In 2005, he was named President, joined the Board of Directors, and led Saskatchewan Wheat Pool to become a listed public corporation. In 2007, he led a $2.0 billion acquisition of Agricore United, then a $2.2 billion acquisition of ABB, Australia's leading agriculture corporation. Mr. Schmidt is a transformative leader with a track record of improving operations and efficiencies while building a performance-driven culture. He was the architect of Viterra Inc.'s transformation from a regional agriculture and food business to a global leader, with Viterra Inc. more than tripling revenue to almost $12 billion. Under Mr. Schmidt's leadership, the total enterprise value of Viterra Inc. increased from under $200 million in 2000 to $7.48 billion. Mr. Schmidt currently sits on the Board of Directors of Agrium Inc., a global agriculture firm and the Global Transportation Hub Authority. He was a member of the Canadian Council of Chief Executive Officers, Executive Committee Member of The Conference Board of Canada, Trustee of The Conference Board Inc. USA, and Harvard's Private and Public, Scientific, Academic and Consumer Food Policy Group, and is on Washburn University's Foundation board of Trustees. Mr. Schmidt received his B.B.A. from Washburn in 1980.

Michael H. Vels

Mr. Michael Vels is the Chief Financial Officer of both Hydro One Limited and Hydro One Inc. Prior to joining the Company, Mr. Vels served as Maple Leaf Foods Inc.'s Chief Financial Officer (2004 to 2014), responsible for overseeing the company's finance, mergers and acquisitions, information technology and communications functions, and, in 2014, served as the Chief Transition Officer, responsible for leading the restructuring of management and back office functions of the Company. From 1991 to 2004, Mr. Vels took on increasing roles and responsibility at Maple Leaf Foods. While at Maple Leaf Foods, Mr. Vels drove business transformation and productivity gains in information technology and shared services. He guided Maple Leaf Foods through numerous M&A transactions, including divestitures totaling approximately $3 billion, realizing premium value for shareholders. Prior to 1991, he worked in public accounting in Canada and mergers and acquisitions in the United Kingdom. Mr. Vels brings considerable executive level experience in public company governance, debt and equity capital raising, mergers and acquisitions and information technology. Mr. Vels currently serves as Director of Canada's National Ballet School and formerly served on the board of directors for Canada Bread Company, Ltd. (2007-2014) and Country Style Food Services Inc. (2007-2009). He is a past member of the OSC Continuous Disclosure Advisory Committee. Mr. Vels earned a Bachelor of Accountancy from the University of Witwatersrand, in Johannesburg, South Africa. He is a Chartered Accountant (South African Institute of Chartered Accountants).

Alexander (Sandy) Struthers

Mr. Alexander (Sandy) Struthers is the Chief Operating Officer and Executive Vice President Strategic Planning of Hydro One Inc. and Hydro One Networks Inc. Mr. Struthers previously served as Hydro One Inc.'s Chief Financial Officer and Chief Administrative Officer (2013-2014), overseeing the company's finance, regulatory and corporate support functions. Mr. Struthers first joined Hydro One Inc. in 2000 as a Finance Director responsible for mergers and acquisitions and has since held a number of senior management positions as Chief Financial Officer (2009-2012), and as Vice President and Chief Information Officer (2004-2008), where he was accountable for the information technology organization and information technology strategy. Prior to joining the Company, Mr. Struthers was a partner in the Corporate Finance group of a national accounting firm. Mr. Struthers holds a Masters of Business Administration from York University and a Bachelor of Commerce (Honours) from Queen's University. He is a member of the Institute of Corporate Directors, a Chartered Professional Accountant and a member of the Institute of Chartered Accountants of Ontario, and a past member of the Canadian Institute of Chartered Business Valuators.

David Denison, O.C., FCPA, FCA

Mr. David Denison was appointed the Chair of the Board of Hydro One Inc. on April 16, 2015. Mr. Denison is also a Corporate Director and previously served as President and Chief Executive Officer of the Canada Pension Plan Investment Board from 2005 to 2012. Prior to that, Mr. Denison was President of Fidelity Investments Canada Limited. Mr. Denison is a Director of the Royal Bank of Canada, Bell Canada, Allison Transmission and serves as Vice-Chair of Sinai Health Systems. He had previously also served as Chair of the Board of Bentall Kennedy Limited Partnership. He is also a member of the Investment Board and International Advisory Committee of the Government of Singapore Investment Corporation, the International Advisory Council of China Investment Corporation, the World Bank

Treasury Expert Advisory Committee and the University of Toronto Investment Advisory Committee. In April 2014, Mr. Denison was appointed a member of the Council whose mandate was to review and identify opportunities to modernize government business enterprises. Mr. Denison earned Bachelor degrees in mathematics and education from the University of Toronto and is a Chartered Professional Accountant and a Fellow of the Institute of Chartered Accountants of Ontario. Mr. Denison was appointed an Officer of the Order of Canada on June 30, 2014.

Ian Bourne, ICD.D, F.ICD

Mr. Ian Bourne is the Chair of the Board of Directors of Ballard Power Systems, Inc. (2006-present), a global leader in proton exchange membrane fuel cell technology, and a member of the Board of Directors of the Canada Pension Plan Investment Board, Canadian Oil Sands Limited, Wajax Corporation, and the Canadian Public Accountability Board. He is also the former Chair of SNC-Lavalin Group Inc. (2013-2015) and was a director from 2009 to 2015 during which time he also served as that company's Interim Chief Executive Officer from March 2012 to October 2012. Mr. Bourne has also held a variety of senior financial and executive roles in Canada and internationally with a number of Canadian corporations including: GE Canada, Inc. (1969-1992) where he served as Chief Financial Officer; Canada Post Corporation (1992-1997) where he served as Senior Vice-President and Chief Financial Officer; and TransAlta Corporation (1998-2005) where he served as Executive Vice President and Chief Financial Officer and as President of TransAlta Power LP between 1998-2006. Mr. Bourne has been active in serving a variety of community based organizations including the Calgary Philharmonic Orchestra, The Glenbow Museum, and The Calgary Foundation. He holds a Bachelor of Commerce degree from Mount Allison University and is a Fellow of the Institute of Corporate Directors.

Charles Brindamour

Mr. Charles Brindamour is the Chief Executive Officer of Intact Financial Corporation, Canada's largest provider of home, auto and business insurance. Under his leadership, Intact Financial Corporation became an independent and widely-held Canadian company in 2009 and engineered, two years later, the largest acquisition in the history of the property and casualty insurance industry in the country. With a market capitalization of more than $12 billion, Intact Financial Corporation ranks among the largest companies listed on the TSX. Mr. Brindamour began his career with Intact in 1992 as an actuary and held over the years a number of progressive management positions. He also served in management and executive roles in Europe with ING Groep, Intact's former majority shareholder. Upon his return to Canada in 1999, he led the company's acquisition, strategic planning and capital management functions. Two years later, he became Senior Vice-President of Personal Lines and, in 2004, he was appointed Executive Vice-President, responsible for underwriting, claims, planning, corporate development and investor relations. In 2007, he became Chief Operating Officer, a position he held until his appointment as President and Chief Executive Officer in January 2008. A graduate of Laval University in Actuarial Sciences, Mr. Brindamour is also an Associate of the Casualty Actuarial Society. Mr. Brindamour is a board member of Intact Financial Corporation, of the C.D. Howe Institute, and of the Insurance Bureau of Canada where he was Chair for the past four years. He is also a member of the Advisory Committee of the Climate Change Adaptation Project, an initiative of the University of Waterloo. Mr. Brindamour is a member of the Campaign Cabinet of the CHU Sainte-Justine, Co-Chair of the Grande Campagne de financement de l'Universite Laval, and a past member of the Campaign Cabinet of the United Way of Greater Toronto, where he chaired a number of insurance industry campaigns.

Marcello (Marc) Caira

Mr. Marc Caira is a director and Vice-Chairman of the Board of Directors of Restaurant Brands International Inc., a multinational quick service restaurant company formed by the merger of Tim Hortons Inc. and Burger King Worldwide Inc. He is also a director of the Minto Group. Prior to his appointment as Vice Chairman in December 2014, Mr. Caira was President and Chief Executive Officer of Tim Hortons Inc. (July 2013-December 2014). During his approximate 37-year career within the food and beverage industry, Mr. Caira also held senior management and executive roles with both Nestlé S.A. and Parmalat North America, Inc. Beginning his career with Nestlé Canada in 1977, Mr. Caira took on positions of increasing responsibility becoming Vice-President of Foodservice (1990-1996), and President – Foodservice & Nescafé Beverages (1997-2000). In 2000, he joined Parmalat Canada, Inc. as Chief Operating Officer and assumed the role of President and CEO of Parmalat North America in 2004. In 2006, Mr. Caira returned to Nestlé S.A. in Switzerland as a member of the Executive Board and as Chief Executive Officer of Nestlé Professional until his return to Canada in 2013. Mr. Caira holds a Diploma in Marketing Management from Seneca College, Toronto (1977) and is a graduate of the Director Program at The International Institute for Management Development, Lausanne, Switzerland.

Christie J.B. Clark, FCA, FCPA

Mr. Christie Clark is a Corporate Director and serves as a member of the Board of Directors of Loblaw Companies Limited, Air Canada, and Choice Properties Real Estate Investment Trust. He served as the Chief Executive Officer and Senior Partner of PricewaterhouseCoopers LLP from July 2005 to July 2011. Prior to being elected Chief Executive Officer, Mr. Clark served as National Managing Partner and as a member of the firm's Executive Committee from 2001 to 2005. Mr. Clark is a Fellow Chartered Professional Accountant, and in addition to his public company board memberships, he is on the Board of Alpine Canada and a member of the Advisory Council of Queen's University School of Business. Mr. Clark holds a Bachelor of Commerce degree from Queen's University and a Master of Business Administration degree from the University of Toronto.

George L. Cooke

Mr. George Cooke is President, Martello Associates Consulting, a business strategy consulting firm, and on October 1, 2013 he was appointed as Chair of the Board of Directors of the OMERS Administration Corporation. OMERS is one of Canada's largest pension funds and OMERS Administration Corporation is responsible for pension services and administration, investments, and plan valuation. Mr. Cooke is the former President and CEO, The Dominion of Canada General Insurance Company ("The Dominion"), a position he held from 1992 when he joined the company to August 2012. In August 2012, Mr. Cooke retired from his role as President of The Dominion and continued to hold the position of Chief Executive Officer of the company until December 31, 2012. Prior to his appointment with The Dominion, Mr. Cooke was Vice-President (Ontario Division), S.A. Murray Consulting Inc. (a government relations consulting firm) between 1990 and 1992. His previous experience includes Special Advisor, Policy to the Ontario Deputy Premier and Treasurer (1989-1990), General Manager, Ontario Automobile Insurance Board (1988-1989), and positions with the Ontario Energy Board (1980-1988). Mr. Cooke obtained a Bachelor of Arts degree (Hons.) in Political Studies (1975) and a Masters of Business Administration degree (1977) from Queen's University. He also holds an Honorary Doctor of Laws degree (1999) from Assumption University in Windsor. Mr. Cooke was a member of the Board of Directors of The Dominion (1992-2013), the Insurance Bureau of Canada (1992-2013), E-L Financial Corporation (1992-2012), Empire Life (1992-2002) and Atomic Energy of Canada Limited (1995-1999), and he was also Executive Vice-President with E-L Financial Corporation Limited (1992-2013). He is currently the Chair of the Board of Directors of CANATICS (Canadian National Insurance Crime Services). Mr. Cooke has been a Director of Hydro One Inc. since January 26, 2010.

Margaret (Marianne) Harris

Ms. Marianne Harris is a Corporate Director and the Chair of the Board of Directors of the Investment Industry Regulatory Organization of Canada (IIROC) and a member of its Finance, Audit and Risk Committee. Prior to becoming a Corporate Director, Ms. Harris was Managing Director of the Bank of America Merrill Lynch and President, Corporate and Investment Banking for Merrill Lynch Canada Inc. (2010 – 2013). She has extensive corporate and investment banking experience gained from over 29 years of advisory work in the U.S. and Canada. During her career, Ms. Harris has worked on a wide range of assignments including mergers and acquisitions, takeover defense, unsolicited offers, demutualizations, initial public offerings, secondary equity offerings, and a number of other advisory and corporate finance mandates. Prior to joining Merrill Lynch in 2000, Ms. Harris was Head of the Financial Institutions Group at RBC Capital Markets. In addition to her position as Chair of IIROC, she is a member of the Board of Sun Life Financial Inc. and Sun Life Assurance Company of Canada. Ms. Harris is also a Director and Chair of the Investment Committee of the Princess Margaret Cancer Foundation Board, a Director of the Dean's Advisory Council at the Schulich School of Business (York University), and a member of the Advisory Council of the Hennick Centre for Business and Law (York University). Ms. Harris holds a Masters of Business Administration degree from the Schulich School of Business, a Juris Doctor degree from Osgoode Hall Law School (York University) and a B.Sc. (Honours) from Queen's University.

James Hinds

Mr. James Hinds is a retired investment banker, having specialized in public equity markets underwriting and advice for media, industrial, mining and real estate companies. Mr. Hinds previously served as Managing Director of TD Securities Inc. and has also held positions with CIBC Wood Gundy Inc. and Newcrest Capital Inc. Mr. Hinds was the past Chair of the IESO and has also served as Chair of the former Ontario Power Authority Board of Directors (2010-2014) until its merger with the IESO effective January 1, 2015. Prior to joining the Ontario Power Authority

Board, he served as a Director on and as Chair of the IESO Board of Directors (2005-2010). A native of Sudbury, Ontario, Mr. Hinds received a Bachelor of Arts degree from Victoria University at the University of Toronto, a Master of Business Administration from the Wharton School of Business at the University of Pennsylvania, and a law degree from the University of Toronto.

Kathryn J. Jackson, Ph.D

Dr. Kathryn Jackson is a Corporate Director and former Senior Vice President and Chief Technology Officer of RTI International Metals Inc. (2014 – 2015). In her capacity as RTI's former Top Scientist, Dr. Jackson's responsibilities included oversight of all advanced metallurgical technology, product and process innovation, including additive manufacturing activities. She also served as Head of Overall Research and Development Activities and as a corporate director at RTI. Prior to joining RTI, Dr. Jackson was Senior Vice President and Chief Technology Officer at Westinghouse Electric Company where she was responsible for research and development as well as environmental sustainability initiatives. Dr. Jackson has also held various positions at the Tennessee Valley Authority, including Executive Vice President of River System Operations and Environment, and Corporate Environmental Officer. She also worked for Alcoa Corporation as a technology forecaster and was a post-doctoral fellow at the National Academy of Engineering. Dr. Jackson serves on the Board of Directors of Portland General Electric and previously served as Chair of the Independent System Operator New England. She is also an advisor to Carnegie Mellon University's Engineering School and the Complex Engineered Systems program, and is a member of the advisory board of the Carnegie Mellon Electricity Industry Center. Dr. Jackson received a Doctorate and a Master's degree in Engineering and Public Policy from Carnegie Mellon University. She also holds a Master's degree in Industrial Engineering Management from the University of Pittsburgh and a Bachelor's degree in Physics from Grove City College.

Roberta L. Jamieson

Ms. Roberta Jamieson is a Mohawk woman from the Six Nations of the Grand River Territory in Ontario, where she still resides. In November 2004, she was appointed President and Chief Executive Officer of Indspire, Canada's premiere Indigenous-led charity, and Executive Producer of the Indspire Awards, a nationally broadcast gala honoring Indigenous achievement. Indspire's annual award disbursements have increased seven-fold since Ms. Jamieson's appointment. She has extended Indspire's youth career conferences to all regions of Canada and launched a recognition program for the education of Indigenous students. Ms. Jamieson also led the development of the K-12 Indspire Institute, a virtual resource centre focused on increasing high school completion rates and K-12 success. Under Ms. Jamieson's leadership, Indspire launched an unprecedented $20 million fundraising campaign in 2013 to support Indspire's Building Brighter Futures: Bursaries and Scholarships Awards program. Ms. Jamieson has enjoyed a distinguished career of firsts. She was the first First Nations woman to earn a law degree; the first non-parliamentarian appointed an ex-officio member of a House of Commons Committee; the first woman Ombudsman of Ontario (1989-1999); and in December 2011, she was the first woman elected Chief of the Six Nations of the Grand River Territory. She also served as Commissioner of the Indian Commission of Ontario from 1986 to 1989. She was also a Director of the Ontario Power Generation Inc. Board of Directors (2012 – 2015). Ms. Jamieson has earned numerous awards, including the National Aboriginal Achievement Award (Law and Justice 1998); the Indigenous Bar Association's highest award, Indigenous Peoples Council Award (IPC); the Council of Ontario Universities' 2014 David C. Smith Award; and 24 honorary degrees. She also serves as a member of the Elections Canada Advisory Board and has been named three times to the Women's Executive Network's Top 100 list. Ms. Jamieson was appointed a Member of the Order of Canada in 1994.

Hon. Frances L. Lankin, P.C., C.M.

Hon. Frances Lankin P.C., C.M. is a former President and CEO of the United Way – Toronto (2001-2010) and a former Member of Provincial Parliament for the Toronto (Ontario) riding of Beaches – East York (1990-2001). Ms. Lankin is a recognized leader in the non-profit sector and has been widely honoured for her contributions to the community, including Honorary Doctorate of Laws degrees from Queen's University and Ryerson University, and an Honorary Doctorate of Education from Nipissing University. In 2009, Ms. Lankin was appointed to the Queen's Privy Council for Canada and served for five years as a member of the Security Intelligence Review Committee. In 2012, she was appointed a Member of the Order of Canada. In 2014, Ms. Lankin was appointed to the Council whose mandate was to review and identify opportunities to modernize government business enterprises, and in 2011 and 2012, she co-led a review of Ontario's social assistance system as part of the province's poverty reduction strategy. During her first term as an elected Member of Provincial Parliament, Ms. Lankin served in a variety of Cabinet roles including Chair of

Management Board, Minister of Health and Long-Term Care, and Minister of Economic Development and Trade. Ms. Lankin is currently Chair of the National NewsMedia Council, a member of the Board of Directors of the Ontario Lottery and Gaming Corporation, and a member of the Institute of Corporate Directors.

Philip S. Orsino, O.C., CPA, FCA

Mr. Philip Orsino is a consultant and corporate director and the former President and Chief Executive Officer of Jeld-Wen Inc. (2011-2014), a global integrated manufacturer of building products, and now serves as Corporate Vice Chairman. In addition to other business interests he is a Consultant to Onex Corporation for the building products industry. Mr. Orsino is a Director of The Bank of Montreal and Chair of the Audit and Conduct Review Committee. He is also a Director of The Minto Group and member of the Audit Committee. Mr. Orsino began his professional career in 1979 as a Partner with Hilborn Ellis Grant, Chartered Accountants in Toronto. From 1984 until 2005, Mr. Orsino was the President and Chief Executive Officer of Masonite International Corporation. He was formerly a Director and Chair of the Audit Committee of Clairvest Group Inc. and a Director and Board Chair of Biox Corporation. Mr. Orsino was also formerly the Chairman of the Board of Trustees of the University Health Network. He is responsible for the establishment of The Philip S. Orsino Hematology Centre and Chair in Leukemia Research, and he is an Honorary Trustee. He was appointed an Officer of the Order of Canada in 2004, was the recipient of the 2003 Canada's Outstanding CEO of the Year Award and received the University of Toronto's Distinguished Business Alumni Award for 2002. He is a Fellow of the Institute of Chartered Accountants and holds a degree from Victoria College at the University of Toronto.

Jane L. Peverett, ICD.D, FCMA

Ms. Jane Peverett is a Corporate Director and former President and Chief Executive Officer (2005-2009) of the British Columbia Transmission Corporation (BCTC). She also served as the company's Chief Financial Officer (2003 to 2005). Prior to joining BCTC, Ms. Peverett held progressively senior finance, regulatory and executive roles with Westcoast Energy Inc. between 1988 to 2003, and in 2001, was appointed President and Chief Executive Officer of Union Gas Limited, a Westcoast Energy company, becoming the first woman president of a natural gas company in Canada. Ms. Peverett is also a Director of the Canadian Imperial Bank of Commerce and Chair of its Audit Committee, and a Director of Encana Corporation where she is also Chair of the Audit Committee. She is also a Director of AEGIS Insurance Services Inc., Postmedia Network Canada Corporation, and Northwest Natural Gas Company located in Portland, Oregon. Ms. Peverett's former board service also included the B.C. Ferry Corporation, the Canadian Electricity Association, and the United Way of Lower Mainland (Greater Vancouver). Ms. Peverett earned a Bachelor of Commerce degree from McMaster University and a Master of Business Administration degree from Queen's University. She is also a Certified Management Accountant, a Fellow of the Society of Management Accountants, and holds the ICD.D designation from the Institute of Corporate Directors.

Gale Rubenstein

Ms. Gale Rubenstein is a partner of the law firm Goodmans LLP and a member of the firm's Executive Committee. She practices law primarily in the areas of commercial insolvency and restructuring with emphasis on financial institutions, both domestic and international, and on pension restructurings. Ms. Rubenstein was senior counsel to the liquidators of numerous financial institutions and has been counsel to the Superintendent of Financial Institutions (Canada) and the Superintendent of Financial Services (Ontario). She has authored numerous papers on the insolvency of insurance companies and banks, and is an update author of LexisNexis Canada's Insurance Companies Act: Legislation and Commentary. She obtained her Bachelor of Law degree from Osgoode Hall Law School (York University) and is a current Director of the Insolvency Institute of Canada; a member of Insol International; and a Director of the Osgoode Hall Alumni Association. She has been a Director of Hydro One Inc. since March 30, 2007.

Information Regarding Certain Directors and Executive Officers

None of the directors or executive officers of Hydro One Limited will beneficially own, or control, directly or indirectly, any common shares upon completion of this offering and the pre-closing transactions.

Corporate Cease Trade Orders

None of the directors or executive officers of Hydro One Limited has, within the 10 years prior to the date of this prospectus, been a director, chief executive officer or chief financial officer of any company (including Hydro

One Limited) that, while such person was acting in that capacity (or after such person ceased to act in that capacity but resulting from an event that occurred while that person was acting in such capacity) was the subject of a cease trade order, an order similar to a cease trade order, or an order that denied the company access to any exemption under securities legislation for a period of more than 30 consecutive days.

Bankruptcies

Other than as described below, none of the directors or executive officers of Hydro One Limited is, as at the date of this prospectus, or has been within 10 years before the date of this prospectus, a director or executive officer of any company (including Hydro One Limited) that, while that person was acting in that capacity, or within a year of that person ceasing to act in that capacity, became bankrupt, made a proposal under any legislation relating to bankruptcy or insolvency or was subject to or instituted any proceedings, arrangement or compromise with creditors or had a receiver, receiver manager or trustee appointed to hold its assets.

Saskatchewan Wheat Pool Inc., a predecessor to Viterra Inc., initiated a disposition of one of its businesses in 2004 through a court supervised process under the *Companies' Creditors Arrangement Act* (Canada). The securities of certain of the entities that owned and operated this business on behalf of the Saskatchewan Wheat Pool Inc. and other shareholders were cease traded by the Saskatchewan Financial Services Commission. Substantially all of the assets related to this business were sold under the court supervised process in May 2004. Mr. Schmidt served as an officer and/or director of these entities at the time.

None of the directors or executive officers of Hydro One Limited, nor any shareholder holding shares sufficient to materially affect control of Hydro One Limited, has, within the 10 years prior to the date of this prospectus, become bankrupt, made a proposal under any legislation relating to bankruptcy or insolvency, or become subject to or instituted any proceedings, arrangement or compromise with creditors, or had a receiver, receiver manager or trustee appointed to hold the assets of the director, executive officer or shareholder.

Penalties or Sanctions

None of the directors or executive officers of Hydro One Limited, nor the Province, has been subject to any penalties or sanctions imposed by a court relating to securities legislation or by a securities regulatory authority or has entered into a settlement agreement with a securities regulatory authority or been subject to any other penalties or sanctions imposed by a court or regulatory body that would likely be considered important to a reasonable investor making an investment decision.

Conflicts of Interest

To the best of the Company's knowledge, there are no existing potential conflicts of interest among the Company and the directors or executive officers of the Company as a result of their outside business interests as at the date of this prospectus. Certain of the directors and executive officers serve as directors and executive officers of other public companies. Accordingly, conflicts of interest may arise which could influence these persons in evaluating possible acquisitions or in generally acting on behalf of the Company.

Indebtedness of Directors and Executive Officers

No director, executive officer, employee, former director, former executive officer or former employee or associate of any director or executive officer of Hydro One Limited or any of its subsidiaries had any outstanding indebtedness to Hydro One Limited or any of its subsidiaries except routine indebtedness or had any indebtedness that was the subject of a guarantee, support agreement, letter of credit or other similar arrangement or understanding provided by Hydro One Limited or any of its subsidiaries.

Independence of the Board of Directors

Upon closing of this offering, the Board will consist of 15 directors, 14 of whom are "independent" within the meaning of all Canadian securities laws governing the disclosure of corporate governance practices and stock exchange requirements imposing a number or percentage of independent directors. Pursuant to Canadian securities laws, an independent director is one who is free from any direct or indirect relationship which could, in the view of the Board, be reasonably expected to interfere with a director's independent judgment, with certain specified relationships deemed to be non-independent. The Governance Agreement also requires each of the directors other than the Chief Executive Officer to be independent of the Province. See “Governance and Relationship with Principal Shareholder – Nomination of Directors – Director Qualification Standards”. The initial Chair of the Board is an independent director. Mr. Schmidt, who is a member of the Board, is not independent as he is the President and Chief Executive Officer of Hydro One Limited. Mr. Hinds was previously a director and the Chair of IESO and Ms. Jamieson was previously a director of Ontario Power Generation Inc., but because those relationships ended before August 31, 2015, they are independent of the Province within the meaning of the Governance Agreement.

The Board has separated the roles of Chair of the Board and Chief Executive Officer. The primary responsibility of the Chair is to provide leadership to the Board and to enhance Board effectiveness. The Chair, as the presiding member of the Board, also seeks to ensure that the relationships between the Board, management, the shareholder and other stakeholders are effective, efficient and further the best interests of Hydro One. The Chair also encourages input and significant participation of independent directors in the leadership of Hydro One. See “Position Descriptions”.

At each meeting of the Board, the independent directors will hold an in camera meeting (being a meeting at which members of management and those directors who are not independent directors are not in attendance) unless the Chair otherwise determines. At each meeting of each committee of the Board, the committee will also hold regular in camera meetings, unless the chair of the applicable committee determines otherwise. As well, the Audit Committee is expected to meet at least quarterly with the Chief Financial Officer, the head of the internal audit function (if other than the Chief Financial Officer) and the external auditors in separate in camera executive sessions to discuss any matters that the Audit Committee or any of these groups believes should be discussed privately. The Audit Committee shall also hold in camera sessions at least quarterly to meet without management or non-independent directors present. These sessions encourage open and candid discussion among the directors including among independent directors.

Board Mandate

The mandate of the Board is to oversee the business and affairs of Hydro One. The Board seeks to discharge such responsibility by reviewing, discussing and approving Hydro One's strategic planning and organizational structure and supervising management, with a view to preserving and enhancing the business of Hydro One and its underlying value. The Board has adopted a written mandate, in the form set out under Appendix "A" to this prospectus.

Position Descriptions

The Board has adopted a written position description for the Chair of the Board, which sets out the Chair's key responsibilities, including to provide leadership to the Board to enhance the Board's effectiveness for certain accountabilities. This entails supervision of management of the Company and oversight of the relationships between the Board, management, shareholders, customers and other stakeholders. The Board has similarly adopted a written position description for the committee chairs which sets out each committee chair's key responsibilities, including of providing leadership to their respective committees. The Board has also adopted a written position description for the directors which sets out the Board's expectations of the directors for service on the Board.

The Board has adopted a written position description for the Chief Executive Officer which provides, among other matters, that the primary responsibility of the Chief Executive Officer is to manage and provide strategic direction including the development and implementation of plans, policies, strategies and budgets for the growth and profitable operation of the Company.

Orientation and Continuing Education

Following the closing of this offering, the Company will implement an orientation and continuing education program for new directors in accordance with the mandates of the Board and the Nominating, Corporate Governance, Public Policy & Regulatory Committee and the Corporate Governance Guidelines. New directors will be presented with a director manual that contains Board policies and procedures, the Company's current strategic plan, financial plan and capital plan, the most recent annual and quarterly reports and materials relating to key business issues and overview of the key organizational, financial, regulatory, and operational aspects of Hydro One.

The Board and the Nominating, Corporate Governance, Public Policy & Regulatory Committee will also be responsible for overseeing ongoing educational opportunities for the directors.

Ethical Business Conduct

The Company has a written code of conduct (the "**Code of Conduct**") that applies to all employees, directors and officers of Hydro One Limited and its subsidiaries. In addition, Hydro One requires each of its contractors, suppliers, business partners, consultants and agents to comply with the Code of Conduct, to the extent feasible, in their dealings with or on behalf of Hydro One.

The Code of Conduct sets out Hydro One's core values and establishes standards to define how employees, officers and directors of Hydro One should act. The Code of Conduct addresses, among other things, health and safety matters, conflicts of interest, discrimination and harassment, confidentiality, insider trading, environmental protection, safeguarding Hydro One's assets (including accounting and financial reporting) and relationships with outside stakeholders including investors, customers, public officials and third parties, conduct during investigations and compliance and reporting obligations. Hydro One has a Corporate Ethics Officer who is responsible for investigating actual, potential or suspected violations of the Code of Conduct, monitoring and making determinations regarding potential conflicts of interest between employees, officers and directors and Hydro One and for tracking and reporting violations to the Audit Committee in accordance with Hydro One's Whistleblower Policy. The Board monitors compliance with the Code through the Audit Committee, to whom the Corporate Ethics Officer reports. The Code of Conduct will be filed with the Canadian securities regulatory authorities on SEDAR.

Nomination of Directors

The Nominating, Corporate Governance, Public Policy & Regulatory Committee identifies qualified candidates for election to the Board and maintains an evergreen list of such potential candidates, having regard for the independence, background, employment and qualifications of possible candidates and the alignment of such candidates' competencies, skills and personal qualities with Hydro One's needs, and communicates with and makes recommendations to the Province respecting potential candidates for nomination by the Province to serve as directors of Hydro One, subject to the Governance Agreement.

The Nominating, Corporate Governance, Public Policy & Regulatory Committee also communicates with the Board and makes determinations with respect to: (i) the Committee's proposed nominees for election to the Board; and (ii) the confirmation or rejection of nominees proposed by the Province for election to the Board, in each case in accordance with the Governance Agreement.

The process for nomination of directors is set out in the Governance Agreement. See "Governance Agreement – Nomination of Directors".

Majority Voting Policy

The Company has adopted a majority voting policy as a measure to ensure that each director serving on the Board is supported in his or her role by the shareholders. Any nominee for director in an uncontested election who has more votes cast by ballot at a meeting of shareholders of the Company at which directors are to be elected (an "**Election Meeting**"), or, if no ballot is conducted, votes represented by proxies validly deposited prior to that meeting, "withheld" from his or her election (a "**Majority Withheld Vote**"), than are cast in favour of his or her election at that meeting must, immediately following that meeting, tender his or her resignation to the Board for consideration.

Under the Governance Agreement, the Province may not withhold from voting for the nominees proposed for election in accordance with the Governance Agreement in an uncontested election unless the Province withholds from voting for all the nominees other than the Chief Executive Officer and, at the Province's discretion, the Chair. Where directors have received a Majority Withheld Vote as a result of the Province withholding its vote from their election in an uncontested election and have tendered a resignation for consideration, the Board shall take whatever actions it determines are appropriate, and the directors who received a Majority Withheld Vote may participate in that determination. See "– Governance Agreement – Election and Replacement of Directors – Right to Withhold Votes".

In any other case where directors have received a Majority Withheld Vote, directors other than those who received a Majority Withheld Vote at the same Election Meeting shall consider, and within 90 days of the Election Meeting determine, whether or not to accept the resignation. The resignation shall be accepted absent exceptional circumstances and is effective when accepted by the Board. A press release disclosing the directors' determination shall be issued promptly following such determination, and if the resignation is not accepted, will include the reasons for non-acceptance. The majority voting policy does not apply to a contested election where the number of candidates for director validly nominated exceeds the number of directors to be elected at that meeting.

Board Renewal

Hydro One Limited's Board is committed to a process of renewal and succession planning for directors. In order to assist the Nominating, Corporate Governance, Public Policy & Regulatory Committee and the Board in succession planning for directors and appropriate Board renewal, the Board has adopted limits on Board service and a mandatory retirement age, which are set out in Hydro One's corporate governance guidelines (the "**Corporate Governance Guidelines**").
