The Corporate Governance Guidelines provide that no non-executive director will stand for re-election at the first annual meeting of shareholders after 12 years following the date on which the director first began serving on the Board; provided that such a non-executive director may continue to stand for re-election, in special circumstances (including if necessary to facilitate orderly board renewal) and on the recommendation of the Nominating, Corporate Governance, Public Policy & Regulatory Committee, if the director continues to receive solid annual performance assessments and meets other Board policies or legal requirements for Board service. The Corporate Governance Guidelines also provide that no director shall be appointed or elected as a director after that person has reached 75 years of age unless otherwise determined by the Board.

Diversity

The Board has adopted a written board diversity policy (the "**Diversity Policy**") which formalizes the Company's commitment to diversity and its desire to maintain a Board comprising talented and dedicated directors whose skills and backgrounds reflect the diverse nature of the business environment in which it operates. Accordingly, the composition of the Board is intended to reflect a diverse mix of skills, experience, knowledge and backgrounds, including an appropriate number of women directors. The Board aspires towards a Board composition in which at least 40% of the directors of the Board are women and, initially, 40% of the directors of the Board are women (6 out of the 15). In considering the composition of the Board and the identification of qualified nominees for election as directors, the Nominating, Corporate Governance, Public Policy & Regulatory Committee has regard to, among other things, the Diversity Policy, and will assess the Diversity Policy's effectiveness in promoting a diverse Board, which includes an appropriate number of women directors, on an annual basis.

In addition to the Board's formal Diversity Policy, Hydro One strives for an inclusive corporate culture where all employees are valued and have equal access to opportunities and, in particular, Hydro One strives to ensure that its gender diversity is appropriately reflected at all levels of the organization, including executive officer positions after taking into account all relevant factors, such as merit, capability and equal treatment of employees. Of the executive officers across Hydro One, as at June 30, 2015, approximately 26%, or 6 of 23 executive officer positions, are women. Targets are not currently in place for the number of women in executive officer positions, and the Board has not yet made any determination as to whether or not targets should be set for the number of women in executive officer positions. As a new board of directors and senior leadership team were appointed in advance of this offering, the new directors and management require an appropriate amount of time to make any determination as to whether or not such targets should be set. For instance, in order to make such determination, it may be necessary to work with and assess the Company's management team, consult with the appropriate board committee(s), review the level of gender diversity below the executive officer level and succession plans for management and to consider the relevant needs and opportunities of the Company, its business and industry. It is anticipated that the new board of directors and management will make such determination in due course.

Committees of the Board

The Board has established four committees: (i) the Audit Committee; (ii) the Nominating, Corporate Governance, Public Policy & Regulatory Committee; (iii) the Health, Safety, Environment and First Nations & Métis Committee; and (iv) the Human Resources Committee. All members of these committees will be persons determined by the Board to be "independent" directors within the meaning of all Canadian securities laws governing the disclosure of corporate governance practices, stock exchange rules applicable to service on the relevant committee (if any) and the Governance Agreement. A majority of the members of each committee will be residents of Canada.

Audit Committee

The Audit Committee will consist of at least three directors, all of whom are persons determined by Hydro One to be both "independent" (within the meaning of all Canadian securities laws and stock exchange requirements and the Governance Agreement) and "financially literate" (within the meaning of other applicable requirements or guidelines for audit committee service under securities laws or the rules of any applicable stock exchange, including National Instrument 52-110 – *Audit Committees*). At least one member of the Audit Committee will qualify as an "audit committee financial expert" as defined by the applicable rules of the United States Securities and Exchange Commission. The Audit Committee will initially comprise Philip Orsino (Chair), Charles Brindamour, George Cooke, James Hinds, Roberta Jamieson and Frances Lankin. Each of the Audit Committee members has an understanding of the accounting principles used to prepare Hydro One's financial statements and varied experience as to the general application of such accounting principles, as well as an understanding of the internal controls and procedures necessary for financial reporting. For additional details regarding the relevant education and experience of each member of the Audit Committee, see "Directors and Management of the Company – Biographical Information".

The Board has adopted a written charter for the Audit Committee, in the form set out under Appendix "B" to this prospectus, which sets out the Audit Committee's responsibilities. The Audit Committee's responsibilities will include overseeing: (i) the independence, qualification and appointment of external auditors; (ii) the integrity of Hydro One's financial statements and financial reporting process, including the audit process and Hydro One's internal control over financial reporting, disclosure controls and procedures and compliance with other related legal and regulatory requirements; (iii) the performance of Hydro One's finance function, internal auditors and external auditors; and (iv) the auditing, accounting and financial reporting process. The Audit Committee is also responsible for reviewing with the external auditors and management and recommending to the Board for approval Hydro One's annual and quarterly results.

External Auditor Service Fees

In 2013 and 2014, Hydro One Inc. was billed the following fees by its external auditor, KPMG LLP:

	Fiscal 2014		Fiscal 2013	
Type of Fees	**Fees**	**% of Total**	**Fees**	**% of Total**
Audit Fees	$735,776	84.1%	$ 807,176	78.1%
Audit-Related Fees	$139,083(1)	15.9%	$ 204,083(2)	19.8%
Tax Fees	—	—	—	—
All Other Fees(3)	—	—	$ 21,714	2.1%
Total	$874,859	100%	$1,032,973	100%

Notes:

(1) The nature of services rendered were: audit of the Hydro One Inc. Pension Plan, audit of the Hydro One Inc. Employees' and Pensioners' Charity Trust, audit of the Apprenticeship Enhancement Fund Audit, French translations, and executive expense reviews.

(2) The nature of services rendered were: audit of the Hydro One Inc. Pension Plan, audit of the Hydro One Inc. Employees' and Pensioners' Charity Trust, audit of the Apprenticeship Enhancement Fund Audit, French translations, incremental procedures performed over implementation of the Customer Information System, and executive expense reviews.

(3) These fees were related to a review of the sufficiency of Hydro One Inc.'s documentation of the controls and procedures identified as addressing certain additional laws and regulations as a result of becoming an SEC registrant.

Nominating, Corporate Governance, Public Policy & Regulatory Committee

The Nominating, Corporate Governance, Public Policy & Regulatory Committee will consist of at least three directors, all of whom must be "independent" (within the meaning of all Canadian securities laws governing the disclosure of corporate governance practices, stock exchange rules applicable to service on this committee and the Governance Agreement). These individuals will be charged with reviewing, overseeing and evaluating the corporate governance and nominating policies of Hydro One. The Nominating, Corporate Governance, Public Policy & Regulatory Committee will initially comprise Jane Peverett (Chair), Ian Bourne, Marc Caira, Christie Clark, Kathryn Jackson, Frances Lankin and Philip Orsino.

The Board has adopted a written charter for the Nominating, Corporate Governance, Public Policy & Regulatory Committee setting out its responsibilities for: (i) managing and overseeing the process for nominating new directors to the Board in accordance with the Governance Agreement; (ii) making recommendations respecting the Board's approach to corporate governance; (iii) planning for Chair succession; (iv) overseeing director orientation and continuing education; (v) overseeing the Board and director performance evaluation process; (vi) making recommendations with respect to director compensation and protection; (vii) overseeing Hydro One's relationship with shareholders, communities, stakeholders, electricity regulators, customers, and the Province; and (viii) the Company's approach to corporate social responsibility, including its sponsorship and donation program.

The Nominating, Corporate Governance, Public Policy & Regulatory Committee is also responsible for the identification and nomination of qualified nominees for election to the Board and for making recommendations regarding committee assignments, director compensation, and corporate governance policy for the committees and the Board as a whole. See "– Nomination of Directors". The Nominating, Corporate Governance, Public Policy & Regulatory Committee is also responsible for: (i) assessing, on an annual basis, the effectiveness of the Board as a whole, each committee of the Board, the Chair, each committee chair and each individual director (having regard to the mandate of the Board and the mandate of the relevant committee, as the case may be) and making recommendations to the Board; (ii) reviewing the annual Board and committee performance evaluation process itself; and (iii) reporting to the Chair the results of both the annual assessment and performance evaluation process.

The Board believes that the members of the Nominating, Corporate Governance, Public Policy & Regulatory Committee individually and collectively possess the requisite knowledge, skill and experience in governance and compensation matters, including executive compensation matters and general business leadership, to fulfill the committee's mandate.

Health, Safety, Environment and First Nations & Métis Committee

The Health, Safety, Environment and First Nations & Métis Committee will consist of at least three directors, all of whom must be "independent" (within the meaning of all Canadian securities laws governing the disclosure of corporate governance practices, stock exchange rules applicable to service on this committee and the Governance Agreement). The Health, Safety, Environment and First Nations & Métis Committee will initially comprise Marianne (Margaret) Harris (Chair), George Cooke, James Hinds, Kathryn Jackson, Roberta Jamieson and Gale Rubenstein. The Health, Safety, Environment and First Nations & Métis Committee is responsible for assisting the Board in discharging its oversight responsibilities relating to: (i) effective occupational health and safety and environmental policies and practices at Hydro One; and (ii) Hydro One's relationship with First Nations and Métis communities.

Human Resources Committee

The Human Resources Committee will consist of at least three directors, all of whom must be "independent" directors (within the meaning of all Canadian securities laws governing the disclosure of corporate governance practices, stock exchange rules applicable to service on this committee and the Governance Agreement). The Human Resources Committee will initially comprise Ian Bourne (Chair), Charles Brindamour, Marc Caira, Christie Clark, Marianne Harris, Gale Rubenstein and Jane Peverett. All of the committee members have gained experience in human resources and compensation by serving as an executive officer (or equivalent) of a major organization and/or prior service on the compensation committee of a stock exchange listed company. For additional disclosure regarding the skills and experience that enable the members of the Human Resources Committee to make decisions on the suitability of the Company's compensation policies and practices, as well as the direct experience that is relevant to each committee member's responsibilities in executive compensation, see "Directors and Management of the Company – Biographical Information".

The Human Resources Committee is responsible for assisting the Board in fulfilling its oversight responsibilities relating to the compensation, attraction and retention of key senior management. The Human Resources Committee is responsible for assisting the Board in discharging its oversight responsibilities relating to: (i) reviewing and recommending to the Board compensation payable, including appropriate performance incentives, to the Chief Executive Officer and certain designated employees; (ii) reviewing the administration of employee compensation and incentive plans and programs; and (iii) reviewing executive and director compensation disclosure to be made in the Company's management information circular prepared in connection with the Company's annual meeting of shareholders and other public disclosure as appropriate. The Human Resource Committee's responsibilities also include reviewing the compensation policies of the Company, ensuring that the Company's compensation programs are aligned with the Company's strategic plans and risk profile, and reviewing the Company's succession planning and talent management processes.

EXECUTIVE COMPENSATION

Since the appointment of a new independent Board, Hydro One has been focused on recruitment of experienced executive leadership to lead the Company through this offering, and formulate a strategy for future growth. It has also recognized a need to implement a compensation system for incumbent management employees that is performance-based and reflects compensation systems appropriate for similarly-situated public companies.

Hydro One's compensation strategy is to attract, motivate and retain highly qualified executives with the skills to sustain and develop safe, reliable and affordable services for the Company's customers, while also aligning the interests of executives with the Company's shareholders. The compensation philosophy for Hydro One will reflect a stronger alignment between pay and performance, especially over the longer term, to provide a foundation to drive growth, deliver strong financial performance and create and sustain shareholder value. Leading compensation practices have been adopted for new management hires, including:

- a peer group for benchmarking Chief Executive Officer and Chief Financial Officer compensation prepared, with the assistance of the independent compensation advisor to the Human Resources Committee of the Board, following a careful review of power generation, transmission and distribution industry peers and comparably-sized companies with a similar business model within the broader energy industry;
- a substantially larger portion of executive compensation being variable and tied to performance over multiple years;

- provisions for the clawback of compensation in the event the executive is overpaid as a result of an error resulting in a restatement of reported financial results or due to inaccurate financial data;
- no incremental benefits if there is a change in control unless there has been a termination of employment without cause or for good reason; and
- significant share ownership requirements (which extend past retirement).

The Board also decided to introduce a new, lower cost defined contribution pension plan for externally hired executives to be implemented in 2016 in place of Hydro One's Defined Benefit Pension Plan.

Although some new executives have been hired on the basis of Hydro One's new approach to executive compensation, adjustments to the Company's structure and compensation system have not yet been implemented as the complexity and change related to these new structures is significant and the Board will introduce these changes for incumbent management employees during 2016. As such, transitional arrangements are in place for 2015 and in some cases into 2016, pending the determination and implementation of detailed initiatives consistent with the Company's new approach. Therefore, longer-serving members of the senior leadership team will continue to receive compensation in line with the Company's historic approach, pending their transition to new arrangements.

Compensation Governance

Human Resources Committee

The Human Resources Committee is responsible for assisting the Board in fulfilling its oversight responsibilities relating to the compensation, attraction and retention of key senior management, and it will consist of at least three directors, all of whom must be "independent" directors (within the meaning of all Canadian securities laws governing the disclosure of corporate governance practices, stock exchange rules applicable to service on this committee and the Governance Agreement). See "Directors and Management of the Company—Committees of the Board – Human Resources Committee" for additional information regarding the Human Resources Committee, its mandate, composition and the relevant experience of its members. All of the committee members have gained experience in human resources and compensation by serving as an executive officer (or equivalent) of a major organization and/or prior service on the compensation committee of a stock exchange listed company. For additional disclosure regarding the skills and experience that enable the members of the Human Resources Committee to make decisions on the suitability of the Company's compensation policies and practices, see "Directors and Management of the Company".

Compensation Consultant

In 2014, Hugessen Consulting Inc. ("**Hugessen**"), an independent consulting firm that provides advice to boards and compensation committees on executive compensation, was retained to provide advice to the former corporate governance and human resources committee of Hydro One Inc. with respect to the approval of Hydro One Inc.'s performance scorecard for that year and the assessment of the year end scorecard results. In 2015, Hugessen was engaged to assist in the development of the compensation structure for the new Board, to review and make recommendations with respect to the development of a new compensation peer group in anticipation of the leadership changes and this offering, conduct comparative analyses of compensation arrangements, provide advice on the new compensation structures and arrangements for the new Chief Executive Officer and Chief Financial Officer, and more broadly provide advice on the development of the new compensation framework to be considered for introduction in 2016.

Hugessen's fees incurred to date during 2015 and during 2014 regarding services provided to the Company and Hydro One Inc. are as follows:

Fiscal Year Ended	Executive Compensation-Related Fees	All Other Fees
December 31, 2015(1)	$183,222	$21,639(2)
December 31, 2014	$ 33,845	$ 0

Notes:

(1) Fees incurred up until July 31, 2015, inclusive of taxes and administration fees.

(2) Fees incurred for advice regarding director compensation.

Compensation Discussion and Analysis

As noted above, since the appointment of the new Board, Hydro One's approach to executive compensation has been focussed on recruitment and retention of experienced executive leadership. Initially, with the help of its independent compensation advisor, the Human Resources Committee focussed on developing a market competitive approach to compensation targeting total direct compensation for executives consistent with similarly-positioned executives at comparable publicly-traded companies. Thus far, the Board of Hydro One has successfully recruited Mayo Schmidt as President and Chief Executive Officer and Michael Vels as Chief Financial Officer.

The following section discusses the compensation structure, programs and significant elements of compensation for Mayo Schmidt and Michael Vels and the Company's approach to executive compensation going forward. This section also references compensation arrangements for the three next most highly compensated executive officers who are continuing to provide services to the Company and its subsidiaries, being: Carmine Marcello, Special Advisor to the Chief Executive Officer and to Chair of the Board; Sandy Struthers, Chief Operating Officer; and Robert Cultraro, Senior Vice President and Chief Investment and Pension Officer. Collectively, these five executive officers are the Company's Named Executive Officers ("**NEOs**").

Approach to Compensation

Hydro One's compensation strategy is to attract, motivate and retain highly qualified executives with the skills to sustain and develop safe, reliable, and affordable services for the Company's customers while also aligning the interests of the executives with the Company's shareholders. The Company's executive compensation framework is based on the following objectives and principles:

- *Support Business Strategy* – support the achievement of Hydro One's short term and long term corporate objectives, future work and infrastructure program, and be consistent with Hydro One's vision, mission and core values;
- *Market Competitive* – facilitate attraction of new talent and foster retention of existing employees;
- *Performance Focus* – reflect a strong pay-for-performance philosophy by delivering a substantial proportion of total compensation using variable pay primarily tied to the Company's performance with some element of individual performance, and the majority of variable compensation tied to long term performance; and
- *Shareholder Alignment* – focus on specific performance objectives that contribute to the enhancement of shareholder value in the long term.

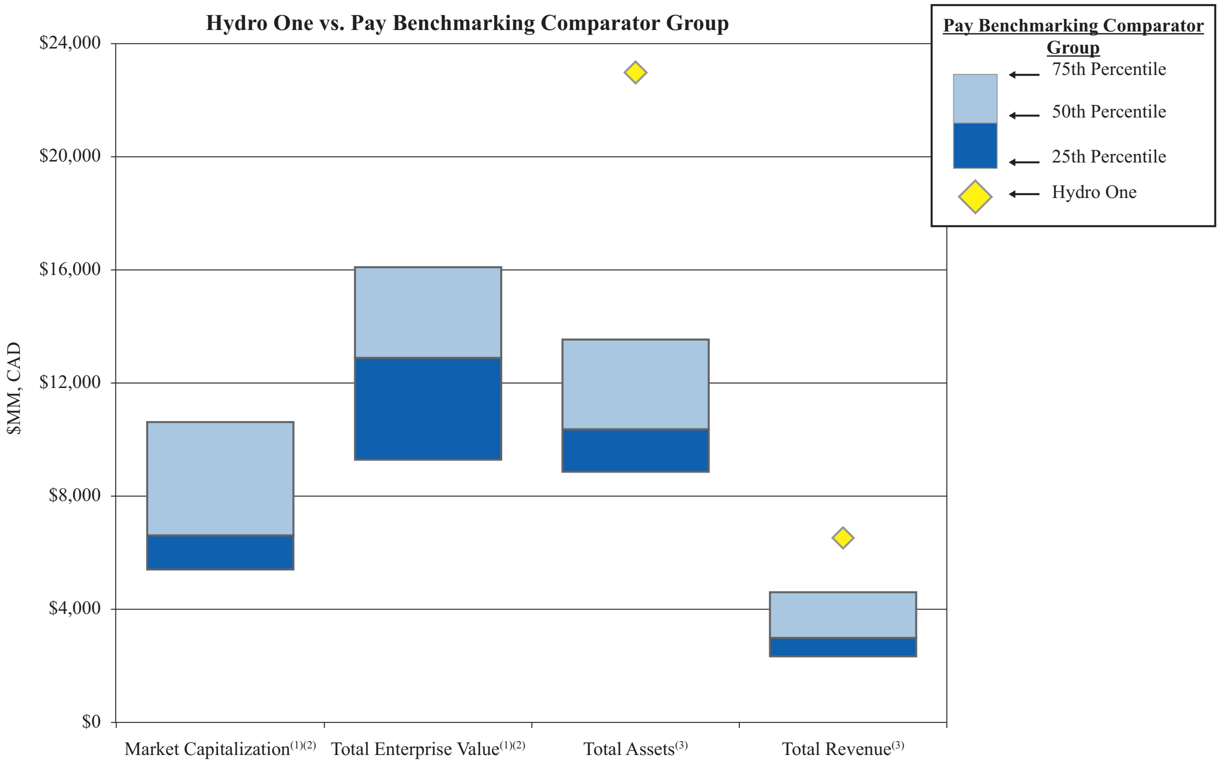
Benchmarking and Pay Positioning for New Chief Executive Officer and New Chief Financial Officer

The Company's compensation philosophy is to provide total compensation opportunities that are competitive in the context of relevant peer groups for various management levels. For purposes of recruiting Hydro One's new Chief Executive Officer and Chief Financial Officer, the Company identified a primary reference group consisting of the four largest utilities listed on the TSX plus four other TSX listed companies within the broader energy industry of comparable size and scope of operations to Hydro One. These eight companies are listed in the following table:

Compensation Peer Group

Fortis Inc.	ATCO Inc.
Emera Incorporated	TransAlta Corp.
Pembina Pipeline Corporation	Keyera Corp.
AltaGas Ltd.	Inter Pipeline Ltd.

In selecting this group of peers, the Company considered scoping criteria that are reflective of the size, scale and complexity of the businesses, including revenue, assets, market capitalization and enterprise value. Companies were selected generally based on a range of approximately 0.5x to 2.0x Hydro One's positioning on specific criteria. Following the closing of this offering, Hydro One is expected to be relatively large by all such metrics, as summarized in the following chart (attributable to the fact that there are few Canadian publicly traded similar businesses).



Notes:

(1) As at May 1, 2015. "Market Capitalization" is calculated based on the number of common voting shares multiplied by the closing share price and "Total Enterprise Value" is calculated based on Market Capitalization, plus net debt.

(2) It is expected that the "Market Capitalization" and "Total Enterprise Value" of Hydro One following completion of this offering will be in the upper quartile of its comparator group.

(3) Last twelve months' total assets and total revenues are calculated as at June 30, 2015.

(4) Information in this chart was prepared by Hugessen using data from S&P Capital IQ.

For additional context, the Human Resources Committee also considered a subgroup of members of the S&P/TSX 60 index companies consisting of the 30 members of such index with the lowest market capitalization, as Hydro One was expected to be of comparable size to such companies (the "**Smaller Subgroup S&P/TSX60**"). These 30 members are listed in the following table:

Smaller Subgroup S&P/TSX60 Companies	
Agnico Eagle Mines Limited	Gildan Activewear Inc.
ARC Resources Ltd.	Kinross Gold Corporation
BlackBerry Limited	Metro Inc.
Bombardier Inc.	National Bank of Canada
Cameco Corporation	Pembina Pipeline Corporation
Canadian Oil Sands Limited	Penn West Petroleum Ltd.
Canadian Tire Corp. Ltd.	Power Corporation of Canada
Cenovus Energy Inc.	Saputo Inc.
CGI Group, Inc.	Shaw Communications, Inc.
Eldorado Gold Corporation	Silver Wheaton Corp.
Encana Corporation	SNC-Lavalin Group Inc.
Enerplus Corporation	Talisman Energy Inc.
First Quantum Minerals Ltd.	Teck Resources Limited
Fortis Inc.	TransAlta Corp.
George Weston Limited	Yamana Gold, Inc.

The target total direct pay for 2016 for the new Chief Executive Officer and Chief Financial Officer was set by the new Board, taking a range of factors into account, including the benchmarking results, and the fact that arrangements were agreed upon with each candidate in the context of a thorough executive search process with specific requirements for each role requiring a high level of skill and proven experience with large, complex publicly traded enterprises. Target total direct pay includes base salary, target short term incentive and target long term incentive. The target total direct pay for the Chief Executive Officer for 2016 is positioned close to the average of the four other large utilities (although Hydro One is the largest of them all based on the various metrics noted above), and is in the bottom quartile of the Smaller Subgroup S&P/TSX60. Similarly, the target total direct pay for the Chief Financial Officer is in the bottom quartile of the Smaller Subgroup S&P/TSX60. The target total direct pay for 2016 for each of these two executive officers is summarized in the table below.

	Base Salary	Target Short Term Incentive	Target Long Term Incentive	Target Total Direct Compensation
Chief Executive Officer	$850,000	$765,000	$2,385,000	$4,000,000
Chief Financial Officer	$500,000	$300,000	$ 700,000	$1,500,000

Components of Compensation

Overall compensation will include base salary, annual short term incentives, and long term incentives, as well as benefits. Realized compensation will be dependent on achieved Company and individual performance. The Human Resources Committee has not yet made any determination as to the types of awards to be granted and the performance objectives to be used in respect of both the Long Term Incentive Plan (described below under "– Long Term Incentive Plan") and the Short Term Incentive Plan (described below under "– Short Term Incentive Plan"). The Company expects that these determinations will be made in 2016.

The table below describes the proposed components of compensation for the Company's Chief Executive Officer and Chief Financial Officer for 2016. As described under "– Transitional Arrangements" below, for 2015 the Chief Executive Officer and Chief Financial Officer are entitled to receive a cash payment equal to the sum of their annualized target short term incentive and annualized long term incentive pro rated for the length of their service in 2015. Compensation for 2015 for the other NEOs, by contrast, does not include any long term incentive component and a substantially higher proportion of compensation is fixed.

	Component	Objectives
Fixed	Base Salary	• Attract and retain talent, as well as provide a predictable and steady income. • Annual base salaries are based on job function, individual performance and experience, market competitiveness, and internal equity considerations.
	Pension and Benefits	• NEOs participate in benefit programs (including registered pension plans and supplementary pension plans) and flexible benefits plans available to all employees. • Provide market-competitive benefits to attract and retain talent.
Variable	Short Term Incentive	• Primarily motivate and reward achievement of annual corporate business and financial performance objectives. In addition, a portion of annual incentives are tied to an element of individual performance. • Incentive targets are based on market competitiveness, measured with reference to business and industry performance benchmarks set by the Board.
	Long Term Incentive	• Motivate and align executives with long term strategy and shareholders' interests.

Fixed Compensation

Base Salary

Base salary is provided as a fixed source of compensation for the NEOs in connection with their day-to-day ongoing performance. Initial base salary levels for the NEOs have been determined after review of the competitive compensation practices of peer groups giving consideration to the overall level of pay competitiveness and the performance of the NEO. Adjustments to base salaries will be determined annually and may be increased based on the executive's success in meeting or exceeding individual objectives and an assessment of the competitiveness of current compensation. Additionally, base salaries can be adjusted as warranted throughout the year to reflect promotions or other changes in the scope of breadth of an executive's role or responsibilities, as well as to maintain market competitiveness.

Pension and Benefits

The Board has decided to introduce a new, lower cost defined contribution pension plan. The Chief Executive Officer and Chief Financial Officer are entitled to participate in such defined contribution pension plan and supplementary executive retirement plan when they are established in 2016. NEOs other than the Chief Executive Officer and Chief Financial Officer currently participate in Hydro One's Defined Benefit Pension Plan. The Company has closed participation in Hydro One's Defined Benefit Pension Plan to externally hired Company management entrants. See "– Existing Pension Arrangements".

The NEOs participate in benefit programs and in a flexible benefits plan, which is also available to all other management employees. The flexible benefits plan provides various benefits, including life insurance, vacation and health care benefits. Hydro One provides to each executive and management employee certain core benefits, which include basic life insurance, accident insurance, extended health benefits, dental, sick leave and long term disability, pension and basic vacation. However, benefits are not intended to be a significant element of compensation for the NEOs.

Variable Compensation

Short Term Incentives

The Company will adopt for 2016 a short term incentive plan ("**Short Term Incentive Plan**") designed to motivate NEOs to achieve the Company's short term corporate goals, and rewards individual and overall Hydro One performance. See "– Short Term Incentive Plan".

Incentives will have a high degree of focus on key drivers of shorter term success and will be linked to the annual business planning cycle. Bonus targets will vary by position and will be reviewed periodically to ensure market competitiveness. Performance is intended to be measured based on a combination of both Company and individual performance measures.

Long Term Incentives

The Company's Long Term Incentive Plan, described below under "– Long Term Incentive Plan", allows the Board to grant long term incentives to the NEOs, senior executive team, and other management executives consistent with the provisions of the plan. Long term incentives are designed to align executive long term interests with those of the Company's shareholders. The mix of long term incentive vehicles has not been determined and, accordingly, the Long Term Incentive Plan provides flexibility to award a range of vehicles, including restricted share units ("**RSUs**"), performance share units ("**PSUs**"), stock options ("**Options**"), share appreciation rights, restricted shares, deferred share units and other share-based awards. The mix of vehicles is intended to vary by role to recognize the level of executive accountability for overall business performance, but for the executive officers is intended to include some combination of:

- Grants of Options to be used in a targeted way, to focus the NEOs and senior executive team on activities aimed at maximizing long term shareholder value;
- Performance-vesting PSUs to be used to encourage the NEOs, senior executive team and other executives to achieve specific corporate objectives; and
- Time-vesting RSUs to be used to attract and retain executives and other management employees.

Transitional Arrangements

Hydro One has for several years applied compensation practices that are consistent with the *Broader Public Sector Accountability Act, 2010* (Ontario) (the "**BPSAA**"). The BPSAA imposes compensation restraint measures on the compensation plans of defined designated executives from March 31, 2012 until such time as the Province proclaims that the restraint measures have expired, which cannot be before the fiscal year in which the Province no longer has a deficit. Effective from June 4, 2015, the BPSAA is no longer applicable to Hydro One. In addition, as of June 4, 2015, the *Broader Public Sector Executive Compensation Act, 2014* (Ontario) (the "**BPSECA**"), legislation which would otherwise have applied to Hydro One in the place of the BPSAA, also does not apply to Hydro One. Hydro One's Chief Executive Officer and Chief Financial Officer were retained after the BPSAA ceased to apply to the Company and their compensation arrangements reflect Hydro One's new approach to executive compensation.

While the legislative requirements of the BPSAA and BPSECA no longer apply to the Company, the compensation of the other NEOs continues to be governed by Hydro One's prior arrangements and practices. Compensation for 2015 for the other NEOs also reflects consideration of a separate compensation peer group consisting of 30 Canadian-based entities (15 public and 15 private) selected based on criteria such as organizations with revenue of at least $1 billion, reporting in the heavy industrial sector, with a large unionized workforce, a pay-for-performance culture, and many engineering/technologist job positions.

These 30 companies are listed in the following table:

Public Sector	Private Sector
Atomic Energy of Canada Limited	ArcelorMittal Canada
Business Development Bank of Canada	Amec Americas Limited
Canada Mortgage and Housing Corporation	Barrick Gold Corporation
Canadian Standards Association/CSA Group	Bombardier Transportation Canada Inc.
Enersource Hydro Mississauga Inc.	Bruce Power LP
Farm Credit Canada	Canadian National Railway Company
Government of Ontario	Fortis Inc.
Hydro Ottawa Limited	FortisBC Energy Inc.
NB Power Holding Corporation	Glencore
Ontario Power Authority	Goldcorp Inc.
Ontario Power Generation	Newfoundland Power Inc.
Royal Canadian Mint	Siemens Canada Limited
SaskEnergy Incorporated	Suncor Energy Inc.
Sask Tel	Ultramar Ltée
Toronto Hydro	Vale Canada
Total: 15	**Total: 15**

For 2015, the NEOs other than the Chief Executive Officer and Chief Financial Officer have a maximum allowable short term incentive fixed at a percentage of their salary. Also, such NEOs are not entitled to long term incentive compensation as for 2015 Hydro One did not have a long term incentive compensation component in its compensation program.

Certain transitional arrangements are in place in respect of short term incentives and long term incentives for the Chief Executive Officer and the Chief Financial Officer for 2015, as they were both hired in the second half of the current year. Pursuant to the terms of their employment arrangements, the Chief Executive Officer and the Chief Financial Officer are entitled to receive a cash payment equal to their target short term incentive payment pro rated for the length of their service in 2015. No long term incentive payments will be awarded for 2015. However, under their employment agreements, the Chief Executive Officer and the Chief Financial Officer are each entitled to receive a cash payment in lieu of a long term incentive award equal to his annualized target long term incentive award pro rated for his length of service in 2015. Cash received in lieu of a long term incentive award for 2015 will be paid in early 2016. Each of the Chief Executive Officer and the Chief Financial Officer will be required to take the after-tax amount received from such payment in lieu of a long term incentive award to purchase shares on the open market in order to accelerate achievement of share ownership guidelines.

For NEOs other than the Chief Executive Officer and the Chief Financial Officer, no target compensation levels were established for 2015. The Company's intention is that in time all of its executive officers will be compensated in a manner generally consistent with the philosophy and direction reflected in the Company's arrangements with its Chief Executive Officer and Chief Financial Officer. For 2016, it is anticipated that the Board will set business and industry performance benchmarks for incentive awards, the Company will establish target awards for all executive officers measured with reference to such benchmarks and the Board will grant awards to executive officers under the Long Term Incentive Plan.

Compensation Mix

For the Chief Executive Officer and Chief Financial Officer, target total direct compensation will consist of the elements noted below. Determinations for the other NEOs have not yet been made.

	Chief Executive Officer		Chief Financial Officer	
	Target	Percentage total direct compensation	Target	Percentage of total direct compensation
Base Salary	$850,000	21%	$500,000	33%
Short Term Incentive(1)	90% of base salary	19%	60% of base salary	20%
Long Term Incentive(2)	280% of base salary	60%	140% of base salary	47%

Notes:

(1) Each of the Chief Executive Officer and the Chief Financial Officer may elect to receive up to 100% of his annual incentive bonus as deferred share units.

(2) In addition to its general discretion with respect to long term incentive awards, the Board has the discretion to vary the actual award level for the long term incentive from 75% to 125% of the target award level based on a range of factors, including individual executive performance and company performance.

Compared to existing compensation arrangements in place for the other NEOs, the compensation mix for the Chief Executive Officer and Chief Financial Officer reflects relatively lower salaries and short term incentives, but a relatively greater proportion of variable "at risk" compensation, in each case as a percentage of total direct compensation awarded.

Compensation Risk Management

Hydro One intends to structure its compensation program to employ the procedures designed to avoid any excessive risks which may result from the implementation of its executive compensation policy and practices. Such procedures are intended to include:

Pay Mix	The variable component of Hydro One's compensation program (which includes both short term and long term incentives) represents a sufficient percentage of "at-risk" compensation to motivate executives and other employees of the Company to focus on both short term and long term results and performance criteria. Elements of compensation, together, ensure a balance in the mix of fixed and variable compensation, short term and long term incentives, cash versus equity, and performance-based versus time-based awards.
Capped Payouts	The maximum amount an executive can receive under the Short Term Incentive Plan is intended to be capped at not more than 200% of the target level.
Effective Design of Long Term Incentive Mix	Long term incentives will vest over time, either in instalments or via cliff-vesting. A balance of time-vesting and performance-vesting long term incentives and varied performance measures mitigate against taking short term risks and aligns management with longer-term shareholder interests.

Hydro One intends to implement a compensation program which provides an appropriate balance of risk and reward consistent with the risk profile of the Company. Hydro One seeks to ensure that its compensation practices do not encourage excessive risk-taking behaviour by the executive team.

All of Hydro One's directors, officers (including the NEOs) and employees will be subject to the Company's insider trading policy, which will, among other things, prohibit trading in the securities of the Company while in possession of material undisclosed information concerning the Company. Further, such individuals will be prohibited from undertaking certain types of trades in securities of the Company which can raise particular concerns about potential breaches of applicable securities law or that the interests of the persons making the trade are not aligned with those of the Company.

All grants under the Long Term Incentive Plan will be subject to clawback by the Company in certain circumstances. See "– Long Term Incentive Plan".

Summary Compensation Table

The following table summarizes the compensation the Company intends to pay its NEOs for the year ending December 31, 2015, Hydro One Limited's first fiscal year as a public company.

					Non-equity incentive plan compensation ($)				
Name and Principal Position	**Year**	**Salary[1] ($)**	**Share-based awards ($)**	**Option-based awards ($)**	**Annual incentive plans ($)**	**Long-term incentive plans ($)**	**Pension value ($)**	**All other compensation[2][3] ($)**	**Total compensation ($)**
Mayo Schmidt *President and Chief Executive Officer*	2015	281,154	Nil	Nil	253,038[4]	Nil	37,956[5]	787,231[4]	1,359,379
Michael Vels *Chief Financial Officer*	2015	253,846	Nil	Nil	152,308[6]	Nil	34,269[5]	355,385[6]	795,808
Carmine Marcello *Special Advisor to the Chief Executive Officer and Chair of the Board*	2015	525,000	Nil	Nil	205,542[7]	Nil	(619,000)[8]	407,500[9]	519,042
Sandy Struthers *Chief Operating Officer*	2015	435,000	Nil	Nil	161,333[7]	Nil	(2,000)[8]	Nil	594,333
Robert Cultraro *SVP, Chief Investment and Pension Officer*	2015	250,000	Nil	Nil	116,667[7]	Nil	54,000[8]	Nil	420,667

Notes:

(1) Base salaries presented are amounts expected to be paid for fiscal 2015 (pro rated in the case of the Chief Executive Officer and the Chief Financial Officer to reflect their respective start dates).

(2) As a percentage of annualized base salary, represents grant date target fair value (and financial statement amounts) of awards under the Long Term Incentive Plan at 280% for Mr. Schmidt and 140% for Mr. Vels. See "– Long Term Incentive Plan".

(3) None of the NEOs are entitled to perquisites or other personal benefits which, in the aggregate, are worth over $50,000 or over 10% of their annualized base salary for 2015.

(4) For 2015 only, in place of his long term incentive, Mr. Schmidt will receive a cash payment in respect of his target long term incentive award of 280% of base salary and a payment in respect of his target short term incentive award of 90% of base salary, in each case pro-rated from his September 3, 2015 start date.

(5) The 2015 compensatory value is equal to the expected contribution in respect of expected 2015 earnings expected to be remitted to a defined contribution supplementary executive retirement plan established following the closing of this offering. The terms of the defined contribution supplementary executive retirement plan are not currently known. The Company anticipates that the 2015 contribution will be credited to the defined contribution supplementary executive retirement plan during 2016 and it is not expected that this contribution will be increased with interest. Accordingly, no interest has been included in the non-compensatory element of the pension table.

(6) For 2015 only, in place of his long term incentive, Mr. Vels will receive a cash payment in respect of his target long term incentive award of 140% of base salary and a payment in respect of his target short term incentive award of 60% of base salary, in each case pro-rated from his July 1, 2015 start date.

(7) Represents the three-year average of the actual percentage of base salary paid on short term incentive, multiplied by the base salary for the respective NEO for 2015. Short term incentive payable to incumbent management executives is capped as a percentage of base salary at 65% for Mr. Marcello, 60% for Mr. Struthers and 60% for Mr. Cultraro. Incumbent management executives have historically received short term incentive awards at below the capped amounts.

(8) The pension value will include a combination of annual current service cost as well as the past service impact of other compensating amounts. The pension plan provides a benefit, in respect of all years of service, which is based on each plan member's highest average earnings at the time of his or her termination or retirement. The value of the increase or decrease in the present value of the defined benefit obligation is affected by differences between actual compensation for the year and the earnings increase assumptions for the year, assumed at the end of the prior year. When the actual earnings increase is not in line with the assumed level, it impacts the total defined benefit obligation in respect of past service. If the expected highest average earnings based on the most recent information is lower than the highest average earnings based on the prior year estimate, it results in a decrease in the defined benefit obligation. For certain NEOs, this has resulted in a negative pension value. See "– Existing Pension Arrangements".

(9) Mr. Marcello will receive payment on December 31, 2015 for an amount equivalent to 6-months of his base salary plus 50% of his short term incentive payment for 2014 with respect to his provision of continuity services to the Chief Executive Officer and to the Chair of the Board, provided he continues to devote his full time and attention to his responsibilities at Hydro One to such date.

Long Term Incentive Plan ("Long Term Incentive Plan")

The Board has adopted the Long Term Incentive Plan effective August 31, 2015 and all equity-based awards to be settled in newly-issued shares will be granted under the Long Term Incentive Plan. In the future, the Company may consider adopting other long term incentive plans where awards will be settled in cash or market-purchased shares. The following summary describes the material terms of the Long Term Incentive Plan. This summary of the Long Term Incentive Plan is not a complete description of all provisions of the Long Term Incentive Plan and is qualified in its entirety by reference to the Long Term Incentive Plan.

Administration

The Long Term Incentive Plan is administered by the Human Resources Committee. The Human Resources Committee has the authority to, among other things, determine eligibility for awards to be granted, determine, modify or waive the type or types of, form of settlement (whether in cash, common shares or other property) of, and terms and conditions of awards, to accelerate the vesting or exercisability of awards, to adopt rules, guidelines and practices governing the operation of the Long Term Incentive Plan as the Human Resources Committee deems advisable, to interpret the terms and provisions of the Long Term Incentive Plan and any award agreement, and to otherwise do all things necessary or appropriate to carry out the purposes of the Long Term Incentive Plan. The Human Resources Committee's decisions with respect to the Long Term Incentive Plan and any award under the Long Term Incentive Plan are binding upon all persons.

Eligibility

Hydro One's key employees who, in the opinion of the Human Resources Committee, have the capacity to contribute to the Company's and the Company's affiliates' success are eligible to participate in the Long Term Incentive Plan. Non-employee directors on the Board are not entitled to receive awards under the Plan.

Authorized Shares

Subject to adjustment, as described below, the maximum number of common shares that are available for issuance under the Long Term Incentive Plan is 11,900,000 common shares, representing 2% of the common shares issued and outstanding on the completion of this offering. The maximum number of common shares which may be issued as RSUs, PSUs or deferred share units ("**DSUs**") is 4,760,000 common shares, representing 0.8% of the common shares issued and outstanding on the completion of this offering.

Common shares subject to an award that, for any reason expires without having been exercised, is cancelled, forfeited or terminated or otherwise is settled without the issuance of shares, will again be available for grant under the Long Term Incentive Plan. The grant of a tandem award of an Option and a share appreciation right ("**SAR**") will reduce the number of common shares available for awards under the Long Term Incentive Plan by the number of common shares subject to the related Option (and not as to both awards). To the extent consistent with applicable legal requirements (including applicable stock exchange requirements), common shares issued under awards of an acquired company that are converted, replaced or adjusted in connection with the acquisition will not reduce the number of shares available for awards under the Long Term Incentive Plan.

Types of Awards

The Long Term Incentive Plan provides for awards of Options, SARs, RSUs, PSUs, restricted shares, DSUs, and other share-based awards. Eligibility for Options is limited to the Company's employees. Dividend equivalents may also be provided in connection with an award under the Long Term Incentive Plan.

- *Options and SARs*. The exercise price of a stock option, and the base price against which a SAR is to be measured, may not be less than the fair market value of the common shares on the date of grant. The Human Resources Committee will determine the time or times at which Options or SARs become exercisable and the terms upon which such awards remain exercisable. The maximum term of Options and SARs is ten years. However, if an award is scheduled to expire during, or within five business days after, a period imposed by Hydro One Limited restricting employees from engaging in any open-market sales of the common shares, then the award shall expire ten business days after such restricted trading period is lifted by Hydro One Limited.

  A SAR that is granted in tandem with a stock option will become vested and exercisable on the same date or dates as the related stock option and may only be exercised upon the surrender of the right to exercise the related option for an equivalent number of common shares.

- *RSUs*. An RSU award is an award that entitles the participant to receive common shares in the future. The delivery of common shares under an RSU award may be subject to the satisfaction of performance conditions or other vesting conditions.
- *PSUs.* A performance share unit is an award that entitles the participant to receive common shares in the future, but the vesting, settlement or exercisability of which is subject to specified performance criteria.
- *Restricted shares*. A restricted share award is an award of common shares subject to forfeiture restrictions.
- *DSUs*. A DSU is an award that entitles the participant to receive common shares following termination of employment or service with the Company. DSUs may be subject to performance conditions or other vesting conditions.
- *Other awards*. Other awards are awards that are convertible into or otherwise based on the common shares.

Performance Awards

The Long Term Incentive Plan provides for the grant of PSUs and allows awards to be made based upon, and subject to achieving, performance objectives. Performance objectives may relate to any, or any combination, of the following: shareholder return; net income or earnings measures, whether or not on an adjusted basis; return on equity; one or more operating ratios; share price; cash flow measures, whether or not on an adjusted basis; expenses; capital expenditures; working capital levels; borrowing levels, leverage ratios or credit rating measures; workplace safety goals; workforce satisfaction and diversity goals; employee retention; completion of key projects; implementation and achievement of synergy targets; joint ventures and strategic alliances; customer satisfaction measures; acquisitions and divestitures; and financings (issuance of debt or equity). When establishing performance objectives, the Human Resources Committee may exclude any or all "extraordinary items" as determined under applicable accounting standards. The foregoing list is for illustration only and is not exclusive.

Performance objectives may be measured either in absolute terms or relative to the performance of one or more similarly situated companies or a published index covering the performance of a number of companies and determined either on a consolidated basis or, as the context permits, with respect to one or more business units, divisions, subsidiaries, products, projects or geographic locations, or on combinations thereof.

The Human Resources Committee may provide that performance objectives will be adjusted in an objectively determinable manner to reflect events occurring during the performance period that affect the applicable performance objective.

Limits on Grants of Awards

The maximum aggregate number of common shares issuable to insiders of Hydro One at any time and the maximum aggregate number of common shares issued to an insider of Hydro One within any one year period under the Long Term Incentive Plan, and any other Hydro One security based compensation arrangements involving the newly-issued common shares, is 10% of the issued and outstanding common shares.

Vesting; Termination of Employment or Service

The Human Resources Committee has the authority to determine the vesting schedule applicable to each award, and to accelerate the vesting or exercisability of any award. The Human Resources Committee will determine the effect of termination of employment or service on an award. Unless otherwise provided by the Human Resources Committee, upon a termination of a participant's employment or service under the following circumstances, the following treatment will apply:

- *Death and Disability*. A portion of the next instalment of any awards due to vest shall immediately vest, such portion to equal to the number of awards next due to vest multiplied by a fraction the numerator of which is the number of days elapsed since the date of vesting of the last instalment of the awards (or if none have vested, the date of grant) to the date of death or disability and the denominator of which is the number of days between the date of vesting (or date of grant) and the date of vesting of the next instalment. Any associated performance targets will be deemed to have been met at the target performance level. Awards that have vested but are subject to exercise will remain exercisable until the earlier of 90 days after the participant's death, disability, or the award's normal expiration date.
- *Retirement*. All unvested awards shall continue to vest and be settled and exercised in accordance with their terms. A "Retirement" means a termination of employment where (a) in the case of the Chief Executive Officer and the Chief Executive Officer's direct reports, the retirement has been approved by the Board and the participant complies with such conditions as the Board may require, and in the case of other participants participating in the Hydro One Defined Benefit Pension Plan, the participant qualifies for retirement according to Plan rules and takes an immediate pension without obtaining access to the commuted value, and in the case of other participants participating in the new Hydro One defined contribution pension plan, the participant has reached age 65 with a minimum of 5 years of service or such lesser age and/or service thresholds as Hydro One may determine; (b) the participant has given formal notice of their intention to retire six months in advance or such lesser period as the Human Resources Committee may approve; (c) no cash severance payment or retirement allowance or equivalent is paid; and (d) the participant has complied with such transitional activities as may be reasonably required by Hydro One until the date the participant has ceased active employment.
- *Resignation by Participant (other than pursuant to a Retirement)*. All unvested awards will be forfeited. Awards subject to exercise will remain exercisable until the earlier of 90 days after the participant's termination of employment or the award's normal expiration date.
- *Termination by the Company for cause.* All awards, whether vested or unvested, will be forfeited and cancelled.
- *Termination by the Company other than for cause*. Awards other than Options and SARs will be forfeited. Options and SARs, to the extent vested, will remain exercisable until the earlier of 90 days after the participant's termination of service or the award's normal expiration date.
- *Termination by the Company other than for cause within 12 months following a change in control.* To the extent granted prior to the time of the change in control and then outstanding, all time-based awards will vest and be exercised or settled in accordance with their terms.

Non-Transferability of Awards

Awards under the Long Term Incentive Plan may not be sold, assigned, transferred, pledged or otherwise encumbered other than by the laws of succession or descent and distribution or, in the case of awards other than Options, to a permitted assign (within the meaning of the National Instrument 45-106 *Prospectus Exemptions* of the Canadian Securities Administrators).

Recovery of Compensation

The Human Resources Committee may provide that an award may be subject to potential cancellation, recoupment, rescission, payback or other action in accordance with the terms of any clawback, recoupment or similar policy adopted by the Company or as otherwise required by law or applicable stock exchange listing standards.

Change in Control

Subject to certain exceptions, in the event of a transaction pursuant to which a person or group (other than Hydro One Limited or a subsidiary of Hydro One Limited or the Province of Ontario) acquires direct or indirect beneficial ownership of, or acquires the right to exercise control or direction over, more than 50% of the outstanding voting securities of Hydro One Limited, including as a result of a take-over bid, an exchange of securities, an amalgamation, an arrangement, a capital reorganization or any other business combination or reorganization; the sale of all or substantially all of the assets of Hydro One Limited, other than to a wholly-owned subsidiary of Hydro One Limited; certain instances involving the dissolution or liquidation of Hydro One Limited; the acquisition of Hydro One in certain situations via consolidation, merger, exchange of securities, purchase of assets, amalgamation, statutory arrangement or otherwise; or as the Board may determine, the Human Resources Committee may provide for the conversion or exchange of outstanding awards for new awards or other securities of substantially equivalent value (or greater value) in any entity participating in or resulting from the change in control, or, if no equivalent awards are available, for the accelerated vesting or delivery of shares under awards, or for a cash-out of outstanding awards. The ownership of common shares of Hydro One Limited by the Province, together with the 10% ownership restriction referred to in "Governance and Relationship with Principal Shareholders", makes it less likely that such a change of control would occur.

Certain Adjustments

In the event of an extraordinary dividend, share dividend, share split or share combination (including a reverse stock split) or any recapitalization, business combination, merger, consolidation, spin-off, exchange of shares, liquidation or dissolution of Hydro One Limited or other similar transaction affecting the common shares, the Human Resources Committee will make adjustments as it determines in its sole discretion to the number of shares available for issuance under the Long Term Incentive Plan and/or the terms of any award, and the maximum number of shares that may be issued. The Human Resources Committee may also make adjustments of the type described in the preceding sentence to take into account distributions and events other than those listed above if it determines that adjustments are appropriate to avoid distortion in the operation of the Long Term Incentive Plan.

Amendment; Termination

The Human Resources Committee may amend the Long Term Incentive Plan or outstanding awards, or terminate the Long Term Incentive Plan as to future grants of awards, except that the Human Resources Committee will not be able to alter the terms of an award if it would affect materially and adversely a participant's rights under the award without the participant's consent (unless expressly provided in the Long Term Incentive Plan or the right to alter the terms of an award was expressly reserved by the Human Resources Committee at the time the award was granted). Shareholder approval will be required for any amendment to the Long Term Incentive Plan that increases the number of common shares available for issuance under the Long Term Incentive Plan or the individual award limitations specified in the Long Term Incentive Plan (except with respect to certain adjustments described above), permits non-employee directors to receive awards under the Long Term Incentive Plan, allows Options to be issued with an exercise price below fair market value on the date of grant, extends the term of any award granted under the Long Term Incentive Plan beyond its original expiration date or permits an award to be exercisable beyond 10 years from its grant date (except where an expiration date would have fallen within a blackout period of Hydro One Limited), permits awards to be transferred other than for normal estate settlement purposes, or deletes or reduces the range of amendments which require approval of the holders of voting shares of Hydro One Limited.

Short Term Incentive Plan

The Board will adopt a Short Term Incentive Plan for 2016 and future years. Cash award opportunities for executive officers, including the NEOs, and other management employees will be granted under the Short Term Incentive Plan. This summary is not a complete description of all provisions of the Short Term Incentive Plan and is qualified in its entirety by reference to the Short Term Incentive Plan.

For 2015, the short term incentive entitlement of NEOs other than the Chief Executive Officer and Chief Financial Officer will be determined in accordance with Hydro One's existing short term incentive plan. On a transitional basis, the Chief Executive Officer and Chief Financial Officer will receive a fixed amount in lieu of short term incentive equal to a pro rated portion of their respective annual target short term incentive opportunity.

Administration

The Short Term Incentive Plan will be administered by the Human Resources Committee. The Human Resources Committee has authority to interpret the Short Term Incentive Plan and awards granted under it, to determine eligibility for awards and to do all things necessary to administer the Short Term Incentive Plan. Any interpretation or decision by the Human Resources Committee will be final and conclusive on all participants.

Short Term Incentive Plan Participation

Executive officers and other management employees of the Company will be selected from time to time by the Human Resources Committee to participate in the Short Term Incentive Plan.

Awards

With respect to each award granted under the Short Term Incentive Plan, the Human Resources Committee will establish the performance criteria applicable to the award and the period over which performance will be measured, the amount or amounts payable if the performance criteria are achieved, and such other terms and conditions as the Human Resources Committee deems appropriate.

Performance Criteria

Awards under the Short Term Incentive Plan will be made based on, and subject to achieving, performance criteria established by the Human Resources Committee, which may be applied to a participant or participants on an individual basis, to a business unit or division, or to the Company as a whole.

Payment under an Award

A participant will be entitled to payment under an award only if all conditions of payment have been satisfied in accordance with the Short Term Incentive Plan and the terms of the award. The Human Resources Committee will determine the payment date or dates for awards under the Short Term Incentive Plan, which will generally be no later than mid-March of the calendar year following the year in which the relevant performance period ended. Following the close of the performance period, the Human Resources Committee will determine whether and to what extent the applicable performance criteria have been satisfied. The Human Resources Committee will then determine the actual payment, if any, under each award. The Human Resources Committee has the sole and absolute discretion to reduce the actual payment to be made under any award. A participant may defer payment of an award subject to the requirements of applicable law.

Recovery of Compensation

Awards under the Short Term Incentive Plan will be subject to forfeiture, termination and rescission, and a participant who receives a payment pursuant to the Short Term Incentive Plan may be obligated to return such payment to the Company, in accordance with the terms of any clawback, recoupment or similar policy adopted by the Company, or as otherwise required by law or applicable stock exchange listing standards.

Amendment

The Human Resources Committee may amend the Short Term Incentive Plan at any time.

Pension Plan Benefits

New Pension Arrangements

The Company intends to establish a defined contribution registered pension plan for employees in respect of services provided. The Company will match the contributions of participating employees to the defined contribution pension plan on the basis and to the extent of the percentages specified in the plan. The Chief Executive Officer and Chief Financial Officer will participate in the defined contribution pension plan and supplementary executive retirement plan when they are established in 2016.

The Company expects to make a contribution to Mr. Schmidt's and Mr. Vels' pension arrangements in respect of 2015, once these are established following closing of this offering. In each case, the contribution will be based on 9% of his base salary plus short term incentive (up to a maximum of 50% of base salary) pro rated for the period since his date of hire. The terms of the defined contribution supplementary executive retirement plan are not currently known. The Company anticipates that the 2015 contribution will be credited to the defined contribution supplementary executive retirement plan during 2016 and it is not expected that this contribution will be increased with interest.

Existing Pension Arrangements

The Company established a defined benefit registered pension plan (the "**Hydro One Defined Benefit Pension Plan**") on December 31, 1999. Hydro One Inc. manages and invests the assets and liabilities of the pension fund as plan sponsor and administrator of the plan.

The current NEOs (other than the Chief Executive Officer and Chief Financial Officer) participate in the Hydro One Defined Benefit Pension Plan. The benefits for these individuals are calculated in a manner consistent with all other Hydro One employees, as described below. The Company has closed participation in the Hydro One Defined Benefit Pension Plan to externally hired Company management entrants. It is intended that new externally hired executive officers of the Company will participate in the Company's defined contribution pension plan.

For each year of credited service under the Hydro One Defined Benefit Pension Plan, to a maximum of 35 years, the benefit provided for each of the employees who participate in the plan is equal to 2% of the member's average base annual earnings during the 36 consecutive months (60 consecutive months for management employees hired on or after January 1, 2004) when his or her base annual earnings were highest. Base annual earnings consist of the member's salary and 50% of his or her short term incentive.

The approximate projected credited years of service that each applicable NEO will have if he or she works until the age of 65 is as follows: Carmine Marcello – 35 years, Sandy Struthers – 24 years and Robert Cultraro – 28.2 years. This pension is reduced by 0.625% of the member's average base annual earnings up to the average year's maximum pensionable earnings during the 36 consecutive months (60 consecutive months for management employees hired after January 1, 2004) when his or her base earnings were highest. The reduction is intended to offset Canada Pension Plan benefits.

The plan terms also include a bridge pension which is payable from the date of retirement to age 65 for all members except for management employees hired on or after January 1, 2004. The Hydro One Defined Benefit Pension Plan provides for early retirement with an unreduced pension at the earlier of age 65 and the attainment of years of age plus continuous employment totalling 82 or more (years of age plus credited service totalling 85 for management employees hired on or after January 1, 2004). A plan member who is not eligible for an unreduced pension can retire with a reduced pension any time after attaining age 55.

Pension benefits payable to pensioners, beneficiaries and terminated employees with deferred pensions are increased annually, effective January 1 of each year equal to 100% of the increase in the Ontario consumer price index for the 12 month period ending in June of the previous year (75% for management employees hired on or after January 1, 2004). The normal form of pension for a member who does not have a spouse at retirement is a pension payable for life and guaranteed for five years, payable to an estate if not paid to the retiree. The normal form of pension for a member who has a spouse at retirement is a pension payable for the life of the member, and continuing after the member's death to his or her spouse at the rate of 66 2/3% of the amount the member was receiving.

The following table summarizes the following projected information for the NEOs intended to be participating in the Company's defined benefit pension plan arrangements as at December 31, 2015:

Named Executive Officer	Number of years credited service[(1)]	Annual benefits payable[(2)] ($) At Dec 31/15	At age 65	Opening present value of defined benefit obligation[(3)] ($)	Compensatory Change[(4)] ($) Service Cost[(5)]	Other[(6)]	Non-Compensatory Change[(7)] ($)	Closing present value of defined benefit obligation[(8)] ($)
Carmine Marcello . . . . *Special Advisor to the Chief Executive Officer and Chair of the Board*	28.1	344,000	428,000	8,595,000	299,000	(918,000)	375,000	8,351,000
Sandy Struthers . . . . *Chief Operating Officer*	15.9	145,000	219,000	2,968,000	181,000	(183,000)	145,000	3,111,000
Robert Cultraro . . . . *SVP, Chief Investment and Pension Officer*	9.8	55,000	158,000	886,000	83,000	(29,000)	58,000	998,000

Notes:

(1) As at December 31, 2015.

(2) For service up to December 31, 2015 and up to the normal retirement age of 65.

(3) The opening present value of the defined benefit obligation is the value of the projected pension earned for service as of December 31, 2014. The values have been determined using the same actuarial assumptions used for determining the pension plan obligations at December 31, 2014 as disclosed in the notes to Hydro One Inc.'s 2014 consolidated financial statements, based on the actual earnings for 2014 and adjusted to reflect expected increases in pensionable earnings.

(4) Reconciliation of the present value of the defined benefit obligation from December 31, 2014 to December 31, 2015. The present value of the defined benefit obligations reflects the impact of the annual bonus earned in the year even though it is paid in the following year.

(5) Value of the projected pension earned for service in the current fiscal year (reduced by the NEO's own contributions).

(6) Value of the increase or decrease in the present value of the defined benefit obligation that relates to service prior to the current fiscal year is due to the differences between actual compensation for the year and the earnings increase assumptions for the year, assumed at the end of the prior year. When the actual earnings increase is not in line with the assumed level, it impacts the total defined benefit obligation in respect of past service. If the expected highest average earnings based on the most recent information is lower than the highest average earnings based on the prior year estimate, it results in a decrease in the defined benefit obligation.

(7) Value includes the impact of amounts attributable to interest accruing on the beginning-of-year obligation, changes in the actuarial assumptions, the NEO's own contributions and any other experienced gains and losses.

(8) The closing present value of the defined benefit obligation is the value of the projected pension earned for service to December 31, 2015. The values have been determined using the same actuarial assumptions used for determining the pension plan obligations at December 31, 2014 as disclosed in the notes to the 2014 consolidated financial statements, based on the actual earnings for 2014 and adjusted to reflect expected increases in pensionable earnings.

The amounts above make no allowance for the different tax treatment of the portion of pension not paid from the registered or qualified pension plans. All amounts shown above are estimated based on assumptions and represent contractual entitlements that may change over time.

The method and assumptions used to determine estimated amounts will not be identical to the method and assumptions used by other issuers and, as a result, the figures may not be directly comparable to other issuers.

Supplementary Pension Plan Benefits

Like benefits paid under registered pension plans of other Canadian companies, benefits payable under the Hydro One Defined Benefit Pension Plan and its planned new defined contribution registered pension plan will be restricted by the Tax Act. For example, in 2014, this limit on benefits would have affected members whose average annual earnings exceed approximately $155,000. Participants whose pensions would otherwise be restricted by the Tax Act participate in an unregistered supplementary pension plan that provides benefits equal to the difference between the Tax Act maximum pension benefits and the benefits determined in accordance with the formula set out in Hydro One's registered pension plan. The supplementary pension plan is unfunded and the additional retirement income is paid from general revenues. Hydro One's obligations to participants under the supplementary pension plan are secured by a letter of credit.

Effective December 31, 1999, the Company established the Hydro One Inc. Supplementary Pension Plan to provide supplementary pension benefits. On October 30, 2001, this plan was amended to require the establishment of a trust for the purpose of creating security for payment of the supplementary pension benefits provided for therein. This trust was constituted as a retirement compensation arrangement under the provisions of the Tax Act, and security was issued in the form of a letter of credit.

Termination and Change of Control Benefits

Each of the NEOs is a party to an employment agreement with Hydro One governing the terms of their employment. None of the NEOs have any rights or receive benefits that will be triggered on the closing of this offering.

Under their employment agreements, on termination of employment without cause each of Mr. Schmidt and Mr. Vels will be entitled to 24 months' pay in lieu of notice of termination, consisting of base salary and an amount in respect of short term incentive. For each of Messrs. Schmidt and Vels, the amount in respect of short term incentive will reflect the lower of his actual average annual bonus for the three prior years and his target bonus for the year in which termination occurs. Their awards under the Long Term Incentive Plan continue to vest for 90 days following termination. They will also be permitted to receive group health and welfare benefits for the lesser of 24 months or when alternative coverage has been secured. Payment of such amounts are conditional upon delivery of a full and final release document to the Company and compliance with post-employment covenants respecting non-competition, non-solicitation and non-disparagement and the maintaining the confidentiality of Hydro One's confidential information. For further details respecting the treatment of awards granted under the Long Term Incentive Plan in the event of termination without cause, see "– Long Term Incentive Plan".

Neither Mr. Schmidt nor Mr. Vels is entitled to receive any payment in the event of termination for cause or voluntary resignation. In the event either of them retires after giving six months prior notice with the approval of the Board, complies with such conditions as the Board may require in connection with its approval and as may be reasonably required to facilitate transitional matters and is paid no cash severance payment or retirement allowance or equivalent, then his long term incentive awards will continue to vest and be paid in accordance with their terms.

In the event that within 24 months following a change in control of the Company the employment of Mr. Schmidt or Mr. Vels is terminated by the Company without cause or by the executive with good reason, he will be entitled to the same benefits as on a termination without cause except that the provisions respecting unvested long term incentive awards will only apply to long term incentive awards which were rolled over on the change in control or were granted subsequently. "Change in control" has the meaning given in the Long Term Incentive Plan. As a result of limitations on the ownership of the Company's shares under the Electricity Act, there would have to be an amendment to such statute for a change in control to occur. "Good reason" means a material change in title, responsibilities or authority or a material reduction in salary or in short term and long term incentive opportunity.

With respect to the other NEOs, if their employment is terminated by Hydro One without cause, the following will apply: Mr. Marcello and Mr. Struthers are entitled to receive an amount equal to his base salary at the date of termination in equal monthly instalments for a period of 24 months and to receive benefits over the same period (including Short Term Incentive Plan payments equal to the average of the three previous Short Term Incentive Plan payments, payable in monthly instalments). Each of Mr. Marcello and Mr. Struthers would continue to earn credited service under the Hydro One Defined Benefit Pension Plan during such 24-month period. Continuation of benefits will also continue until expiry of the severance period, except for disability insurance and accrual of vacation. Regarding Mr. Cultraro, if his employment were terminated by Hydro One without cause, he is entitled to a lump sum payment equivalent to 12 months of base salary and to no other entitlements.

Upon retirement, NEOs other than the Chief Executive Officer and Chief Financial Officer are entitled to group health and welfare benefits identical to the retirement benefits provided to other management employees. No benefits are provided in the event of a termination of employment for any other reason in such NEOs' employment contracts.

The table below shows the incremental payments that would be made to the Company's NEOs upon the occurrence of certain events, if such events were to occur immediately following the completion of this offering.

Name	Event	Severance[(1)]
Mayo Schmidt *President and Chief Executive Officer*	Termination without Cause	$3,230,000
Michael Vels *Chief Financial Officer*	Termination without Cause	$1,600,000
Carmine Marcello *Special Advisor to the Chief Executive Officer and Chair of the Board*	Termination without Cause	$1,461,083
Sandy Struthers *Chief Operating Officer*	Termination without Cause	$1,192,667
Robert Cultraro *SVP, Chief Investment and Pension Officer*	Termination without Cause	$ 250,000

Notes:

(1) In the case of the Chief Executive Officer and Chief Financial Officer, severance payments are calculated based on the annualized salary and target short term incentive for fiscal 2015. For other NEOs, severance reflects their entitlements based on their current base salary and average short term incentive plan payments over the prior three years. The calculation of severance payments does not include any amounts payable with respect to the Long Term Incentive Plan as previously referenced.

Executive Officer Share Ownership Guidelines and Anti-Hedging Policy

Hydro One strongly supports share ownership by its Chief Executive Officer and senior executive team and, accordingly, has introduced minimum share ownership guidelines. The Chief Executive Officer and senior executive team can meet share ownership requirements through direct or beneficial ownership of the Company's common shares, including RSUs subject to time-vesting only granted under the Company's Long Term Incentive Plan. Individuals have until the later of five years from: (a) the closing date of this offering; and (b) the date they first became subject to these requirements in order to satisfy the share ownership requirements. Employees who were subject to these requirements and are promoted or appointed into a position that is subject to a higher share ownership requirement have three years from the date of their promotion or appointment to meet the higher minimum requirement.

The ownership requirements as a multiple of annual base salary are set forth in the table below:

Position	Multiple of Base Salary
Chief Executive Officer	5x
Chief Financial Officer and other direct reports to the Chief Executive Officer	3x
Other Senior Executive Officers	1x

Executives are prohibited from purchasing financial instruments that are designed to hedge, offset or otherwise reduce or limit their economic risk, including with respect to a decrease in market value of equity securities of the Company granted as compensation or held, directly or indirectly, by such individuals. Prohibited transactions include hedging strategies, equity monetization transactions, transactions using short sales, puts, calls, exchange contracts, derivatives and other types of financial instruments (including, but not limited to, prepaid variable forward contracts, equity swaps, collars and exchange funds), and the pledging of or granting of any other security interest in equity securities of the Company as security for any loan where recourse is limited to the pledged security.

DIRECTORS' COMPENSATION

Director Compensation

The by-laws of the Company provide that directors may receive such remuneration for their services as the Board may determine, together with reimbursement for all expenses incurred in fulfilment of their duties, including travel expenses.

Directors will receive 50% of their annual director retainer as an equity component in the form of common shares or director deferred share units ("**Director DSUs**"). Following completion of this offering, Hydro One will adopt a non-employee director deferred share unit plan providing for awards of Director DSUs to Hydro One directors other than the Chief Executive Officer. A Director DSU is an award that entitles the participant to receive following termination of service with Hydro One and its subsidiaries an amount equivalent to the value of a common share at settlement. Director DSUs vest immediately and accrue dividend equivalents when dividends are paid on the common shares. Directors may also elect to receive 100% of their compensation in DSUs. Pending the adoption of the non-employee director deferred share unit plan, the full amount of the director retainer payable shall be paid in cash.

The chart below outlines Hydro One's director compensation program.

	Cash Component	Equity Component	Total
Chair of the Board	$130,000	$130,000	$260,000
All Other Directors	$ 80,000	$ 80,000	$160,000
Committee Chair Retainers	$ 20,000	—	$ 20,000
Board / Committee Meeting Attendance		No Meeting Fees	

Directors also receive a reasonable per meeting allowance for travel time to attend meetings in accordance with the Company's approved policy. No additional compensation will be paid to the directors to prepare for Board or committee meetings.

Director Share Ownership Guidelines

Directors who are not also executive officers of Hydro One are subject to share ownership guidelines of 3x their total Board retainer (calculated including the equity portion), valued at the original grant value or acquisition cost, to be achieved within six years of the closing of this offering or the date of appointment to the Board. Directors can meet share ownership requirements through direct or beneficial ownership of Company common shares and Director DSUs.

SHARE GRANT PLANS

Hydro One Limited intends to establish an employee share grant plan for the benefit of certain members of the Power Workers' Union (the "**PWU Share Grant Plan**") and an employee share grant plan for the benefit of certain employees represented by The Society of Energy Professionals (the "**Society Share Grant Plan**").

Under the PWU Share Grant Plan, employees of Hydro One who are employees represented by the Power Workers' Union and who have been contributing to the Hydro One Defined Benefit Pension Plan as of April 1, 2015 will be eligible to receive common shares effective April 1 of each year (each, a "**Grant Date**") beginning April 1, 2017 up until the earlier of April 1, 2028 and the earlier of the date such eligible employee has more than 35 years of pensionable service under the Hydro One Defined Benefit Pension Plan and the date on which the eligible employee must, due to age, cease contributing to such plan under the current provisions of the Tax Act. The number of common shares granted to each eligible employee on each Grant Date will be equal to 2.7% of such eligible employee's salary as at April 1, 2015, divided by the offering price of the common shares being distributed under this prospectus. The aggregate number of common shares issuable under the PWU Share Grant Plan is expected to be limited to approximately 4,086,000 common shares.

Under the Society Share Grant Plan, employees of Hydro One who are employees represented by The Society of Energy Professionals and who have been contributing to the Hydro One Defined Benefit Pension Plan as of September 1, 2015 will be eligible to receive common shares effective April 1 of each year, beginning April 1, 2018 up until the earlier of April 1, 2029 and the earlier of the date such eligible employee has more than 35 years of pensionable service under the Hydro One Defined Benefit Pension Plan and the date on which the eligible employee must, due to age, cease contributing to such plan under the current provisions of the Tax Act. The number of common shares granted to each eligible employee on each Grant Date will be equal to 2.0% of such eligible employee's salary as at September 1, 2015, divided by the offering price of the common shares being distributed under this prospectus. The aggregate number of common shares issuable under the Society Share Grant Plan is expected to be limited to approximately 1,470,000 common shares.

The PWU Share Grant Plan and the Society Share Grant Plan are each expected to include customary anti-dilution provisions providing that the number of shares to which an employee is entitled shall be adjusted in the event that the common shares of Hydro One Limited are split, consolidated or reclassified, or in the event that there is a declaration of a special dividend or a dividend payable in common shares (other than a share dividend paid in lieu of ordinary cash dividends) or in the event of a merger or reorganization of Hydro One Limited in order to prevent dilution or enlargement of the share grants under the plan. Both plans will also include customary tax or other withholding provisions.

The Board may amend the PWU Share Grant Plan and the Society Share Grant Plan from time to time, without shareholder approval, provided however that shareholder approval will be required for the following amendments: (i) an increase in the number of common shares reserved for issuance under each plan; (ii) an amendment to the definition of "Eligible Employee" under each plan that would permit the inclusion and participation by non-employee directors; (iii) an amendment that permits equity based awards other than grants of common shares to be made under each plan; and (iv) an amendment to the provisions of the plan respecting matters requiring shareholder approval, other than the addition of matters to be subject to shareholder approval. Amendments to each of the PWU Share Grant Plan and the Society Share Grant Plan may not prejudice the right of any eligible employees to be granted common shares under such plan without the consent of the eligible employee. Any amendment to the PWU Share Grant Plan requires the approval of the Power Workers' Union and any amendment to the Society Share Grant Plan requires the approval of The Society of Energy Professionals.

PLAN OF DISTRIBUTION

Pursuant to an underwriting agreement between Hydro One Limited, Hydro One Inc., the Selling Shareholder and the Underwriters (the "**Underwriting Agreement**"), the Selling Shareholder has agreed to sell and the Underwriters have agreed to severally purchase, as principals, on the Closing Date, subject to the terms and conditions of the Underwriting Agreement, 81,100,000 common shares from the Selling Shareholder, at a price of $20.50 per share, for aggregate gross proceeds of $1,662,550,000 payable in cash to the Selling Shareholder against delivery of the common shares. The offering price of Hydro One Limited's common shares has been determined by negotiation between the Province and the Underwriters.

This offering is being made in each of the provinces and territories of Canada. Hydro One Limited's common shares will be offered in each of the provinces and territories of Canada through those Underwriters or their affiliates who are registered to offer the shares for sale in such provinces and territories and such other registered dealers as may be designated by the Underwriters. Subject to applicable law and the provisions of the Underwriting Agreement, the Underwriters may offer Hydro One Limited's common shares outside of Canada.

The obligations of the Underwriters under the Underwriting Agreement are several and not joint, are subject to certain closing conditions and may be terminated upon written notice to Hydro One Limited and the Province upon the occurrence of certain stated events, including: (i) any material change or any change in a material fact in relation to Hydro One Limited which could be expected to result in the purchasers of a material number of common shares exercising their rights to withdraw from their purchase or would be expected to have a significant adverse effect on the market price or value of the common shares; (ii) certain events affecting the state of the financial markets; (iii) certain investigations, proceedings or orders made by a governmental authority in relation to Hydro One Limited which may prevent or restrict the distribution or trading of the common shares; (iv) any order is made by a securities regulatory authority which may restrict the distribution of the common shares, or proceedings are announced for such order which have not been rescinded or withdrawn; (v) any changes or proposed changes in law which could be expected to materially adversely affect the trading or distribution of the common shares or any other securities of Hydro One Limited; or (vi) the state of financial markets in Canada or the United States is such that, in the reasonable opinion of any of the Underwriters, the common shares cannot be marketed profitably. The Underwriters are, however, obligated to take up and pay for all of the common shares if any common shares are purchased under the Underwriting Agreement. The Province has agreed to pay the Underwriters' Fee, which will be equal to 1.0% of the gross proceeds of this offering for each common share sold to institutional investors and equal to 3.0% of the gross proceeds of this offering for each common share sold to other investors. The Underwriters are entitled under the Underwriting Agreement to customary indemnification against certain liabilities and expenses, including certain liabilities and related expenses under applicable securities legislation in connection with this offering.

There is currently no market through which Hydro One Limited's common shares may be sold, and purchasers may not be able to resell common shares purchased under this prospectus. This may affect the pricing of the common shares in the secondary market, the transparency and availability of trading prices, the liquidity of the common shares, and the extent of issuer regulation. The TSX has conditionally approved the listing of the common shares distributed under this prospectus on the TSX under the symbol "H". Listing will be subject to Hydro One Limited fulfilling all of the requirements of the TSX on or before January 25, 2016.

Hydro One Limited's common shares offered under this prospectus have not been, and will not be, registered under the 1933 Act or any U.S. state securities laws, and may not be offered or sold within the U.S. absent registration or an exemption from the registration requirements of the 1933 Act, and applicable U.S. state securities laws. Accordingly, except to the extent permitted by the Underwriting Agreement, the common shares may not be offered or sold within the U.S. Each Underwriter has agreed that it will not offer or sell common shares within the U.S., except in transactions exempt from the registration requirements of the 1933 Act and applicable U.S. state securities laws. The Underwriting Agreement provides that the Underwriters may re-offer and re-sell the common shares that they have acquired pursuant to the Underwriting Agreement to qualified institutional buyers in the U.S. in accordance with Rule 144A under the 1933 Act. The Underwriting Agreement also provides that the Underwriters may offer and sell the common shares outside the U.S. in accordance with Regulation S under the 1933 Act.

In addition, until 40 days after the commencement of this offering, an offer or sale of Hydro One Limited's common shares within the U.S. by any dealer (whether or not participating in this offering) may violate the registration requirements of the 1933 Act, unless such offer is made pursuant to an exemption from registration under the 1933 Act.

The common shares may also be sold internationally as permitted pursuant to private placement exemptions under local securities laws.

RBC Dominion Securities Inc., Scotia Capital Inc., BMO Nesbitt Burns Inc., CIBC World Markets Inc., TD Securities Inc., National Bank Financial Inc. and Desjardins Securities Inc. are subsidiaries or affiliates of lenders that have made the Liquidity Facility available to Hydro One Inc., which will become a subsidiary of Hydro One Limited prior to the closing of this offering. Hydro One will not receive any proceeds from the sale of the common shares by the Province. As such, none of the proceeds of this offering will be applied, directly or indirectly, by Hydro One to repay any indebtedness under the Liquidity Facility. As of the date of this prospectus, there was no outstanding indebtedness under the Liquidity Facility. In addition, RBC Dominion Securities Inc., Scotia Capital Inc., BMO Nesbitt Burns Inc., CIBC World Markets Inc., TD Securities Inc., National Bank Financial Inc. and Desjardins Securities Inc. are subsidiaries or affiliates of lenders that are anticipated to make the Operating Credit Facility available to Hydro One Limited and the New Term Facility available to Hydro One Inc. See "Pre-Closing Transactions". Although Hydro One Limited is not offering common shares pursuant to this offering, it may be considered a connected issuer of the Underwriters who are affiliates of such lenders for purposes of securities laws in Canada.

Price Stabilization, Short Positions and Passive Market Making

In connection with this offering, the Underwriters may over-allocate or effect transactions which stabilize or maintain the market price of Hydro One Limited's common shares at levels other than those which otherwise might prevail on the open market, including:

- stabilizing transactions,
- short sales,
- purchases to cover positions created by short sales,
- imposition of penalty bids, and
- syndicate covering transaction.

Stabilizing transactions consist of bids or purchases made for the purpose of preventing or retarding a decline in the market price of Hydro One Limited's common shares while this offering is in progress. These transactions may also include making short sales of the common shares, which involve the sale by the Underwriters of a greater number of common shares than they are required to purchase in this offering. Short sales may be "covered short sales", which are short positions in an amount not greater than the Over-Allotment Option, or may be "naked short sales", which are short positions in excess of that amount.

The Underwriters may close out any covered short position either by exercising the Over-Allotment Option, in whole or in part, or by purchasing common shares in the open market. In making this determination, the Underwriters will consider, among other things, the price of common shares available for purchase in the open market compared with the price at which they may purchase common shares through the Over-Allotment Option.

The Underwriters must close out any naked short position by purchasing common shares in the open market. A naked short position is more likely to be created if the Underwriters are concerned that there may be downward pressure on the price of the common shares in the open market that could adversely affect prospective purchasers who purchase in this offering.

Any naked short position would form part of the Underwriters' over-allocation position and a prospective purchaser who acquires common shares forming part of the Underwriters' over-allocation position acquires such common shares under this prospectus, regardless of whether the over-allocation position is ultimately filled through the exercise of the Over-Allotment Option or secondary market purchases.

In addition, in accordance with policy statements of certain Canadian securities regulatory authorities and the Universal Market Integrity Rules for Canadian Marketplaces ("**UMIR**"), the Underwriters may not, at any time during the period of distribution, bid for or purchase common shares. The foregoing restriction is, however, subject to certain exceptions as permitted by such policy statements and UMIR. These exceptions include a bid or purchase permitted under the provisions of such policy statements and the UMIR relating to market stabilization and market balancing activities and a bid or purchase on behalf of a customer where the order was not solicited.

As a result of these activities, the price of Hydro One Limited's common shares may be higher than the price that otherwise might exist in the open market. If these activities are commenced, they may be discontinued by the Underwriters at any time. The Underwriters may carry out these transactions on any stock exchange on which the common shares are listed, in the over-the-counter market, or otherwise.

The Selling Shareholder has granted to the Underwriters the Over-Allotment Option, exercisable, in whole or in part, for a period of 30 days from the Closing Date, to purchase up to 8,150,000 additional common shares, at the offering price, payable in cash against delivery of such additional common shares. The Over-Allotment Option is exercisable only for the purpose of covering over-allotments, if any. The Selling Shareholder will pay the Underwriters' Fee in respect of common shares sold pursuant to the exercise of the Over-Allotment Option.

The Underwriters propose to offer Hydro One Limited's common shares initially at the offering price stated on the cover page of this prospectus. After the Underwriters have made a reasonable effort to sell all of the common shares offered by this prospectus at that price, the initially stated offering price may be decreased, and further changed from time to time, by the Underwriters to an amount not greater than the initially stated offering price and, in such case, the compensation realized by the Underwriters will be decreased by the amount that the aggregate price paid by the purchasers for the common shares is less than the gross proceeds paid by the Underwriters to the Selling Shareholder.

Lock-Up Arrangements

Each of Hydro One Limited and the Selling Shareholder will agree in the Underwriting Agreement that, during the period beginning on the closing date of this offering and ending on the date that is 180 days following the closing date of this offering, each of Hydro One Limited and the Selling Shareholder will not, directly or indirectly, without the prior written consent of RBC Dominion Securities Inc. and Scotia Capital Inc., issue, sell, offer, grant any option, warrant or other right to purchase or agree to issue or sell, or otherwise lend, transfer, assign, pledge or dispose of (including without limitation by making any short sale, engaging in any hedging, monetization or derivative transaction or entering into any swap or other arrangement that transfers to another, in whole or in part, any of the economic consequences of ownership of common shares or other securities of the Hydro One Limited or securities convertible into, exchangeable for, or otherwise exercisable into common shares or other securities of Hydro One Limited, whether or not cash settled), in a public offering or by way of private placement or otherwise, any equity securities of Hydro One Limited or other securities convertible into, exchangeable for, or otherwise exercisable into common shares or other equity securities of Hydro One Limited, or agree to do any of the foregoing or publicly announce any intention to do any of the foregoing, other than: (i) the common shares sold to the Underwriters pursuant to this prospectus; (ii) common shares or other securities of Hydro One Limited issued as part of the Pre-Closing Steps; (iii) common shares issued or delivered under Hydro One Limited's dividend reinvestment plan; (iv) common shares sold pursuant to the transactions with the parties described under "Principal and Selling Shareholder" (provided that the transferee is subject to a resale restriction ending not later than the expiry of the 180 day period); or (v) as may be granted or issued in the ordinary course of business under Hydro One Limited's security-based compensation arrangements, or employee share ownership plans, or pursuant to the conversion, exchange or exercise of any securities so granted or issued.

OPTIONS TO PURCHASE SECURITIES

The Board has adopted the Long Term Incentive Plan as described in "Executive Compensation". Hydro One Limited has not to date granted any options or other entitlements to purchase its securities, whether under the Long Term Incentive Plan or otherwise.

Hydro One Inc. does not have a stock option or other form of equity-based compensation plan.

PRIOR SALES

On August 31, 2015, in connection with the incorporation of Hydro One Limited, Hydro One Limited issued 100,000 common shares to the Province for $1.00 per common share. In connection with the Pre-Closing Steps, prior to the closing of this offering, the Province will subscribe for an additional 2,600,000,000 common shares for $1.00 per common share in connection with the funding of amounts to pay the departure tax. The Province will also receive common shares and 16,720,000 Series 1 preferred shares from Hydro One Limited in consideration for the purchase of all of the issued and outstanding shares of Hydro One Inc. held by the Province by Hydro One Limited. The outstanding common shares of Hydro One Limited will be consolidated such that 595,000,000 common shares will be issued and outstanding immediately prior to the closing of this offering. The Province has entered into an agreement to sell, immediately following the closing of this offering, between 3,666,667 and 4,052,632 common shares to trusts for the benefit of the Power Workers' Union and between 1,840,000 and 2,033,684 common shares to trusts for the benefit of The Society of Energy Professionals, in each case, at the same price as the offering price of the common shares sold in this offering. See "Pre-Closing Transactions – Province's Share Purchase Arrangements".

ELIGIBILITY FOR INVESTMENT

In the opinion of Osler, Hoskin & Harcourt LLP, counsel to Hydro One Limited, and Blake, Cassels & Graydon LLP, counsel to the Underwriters, provided that on the Closing Date the common shares are listed on a "designated stock exchange" as defined in the Tax Act (which currently includes the TSX), the common shares acquired on the Closing Date pursuant to this offering will be qualified investments under the Tax Act for trusts governed by a registered retirement savings plan ("**RRSP**"), deferred profit sharing plan, registered retirement income fund ("**RRIF**"), registered education savings plan, registered disability savings plan, and a tax-free savings account ("**TFSA**").

Notwithstanding that the common shares may be qualified investments for a trust governed by an RRSP, RRIF or TFSA, the annuitant of an RRSP or RRIF or the holder of a TFSA will be subject to a penalty tax on the common shares held in such trust (and other tax consequences may result) if the common shares are a "prohibited investment" for the RRSP, RRIF or TFSA, as the case may be. The common shares will not be a "prohibited investment" in respect of such RRSP, RRIF or TFSA held by a particular holder or annuitant provided the holder or annuitant deals at arm's length with Hydro One Limited for purposes of the Tax Act and does not have a "significant interest" (as defined in the Tax Act for purposes of the prohibited investment rules) in Hydro One Limited. In addition, the common shares will generally not be a prohibited investment if such shares are "excluded property" as defined in the Tax Act for purposes of the prohibited investment rules. Shareholders should consult their own tax advisors as to whether the common shares will be a prohibited investment in their particular circumstances.

CERTAIN CANADIAN FEDERAL INCOME TAX CONSIDERATIONS

The following summary describes the principal Canadian federal income tax considerations generally applicable to a purchaser who acquires as beneficial owner common shares pursuant to this offering and who, at all relevant times, for purposes of the Tax Act, (1) is, or is deemed to be, resident in Canada, (2) deals at arm's length with Hydro One Limited and the Underwriters; (3) is not affiliated with Hydro One Limited or any of the Underwriters; and (4) holds the common shares as capital property (a "**Holder**"). Generally, the common shares will be capital property to a Holder provided the Holder does not acquire or hold those common shares in the course of carrying on a business or as part of an adventure or concern in the nature of trade. Certain Holders may be entitled to make or may have already made the irrevocable election permitted by subsection 39(4) of the Tax Act the effect of which may be to deem to be capital property any common shares (and all other "Canadian securities", as defined in the Tax Act) owned by such Holder in the taxation year in which the election is made and in all subsequent taxation years. Holders whose common shares might not otherwise be considered to be capital property should consult their own tax advisors concerning this election.

This summary is not applicable to (i) a purchaser that is a "specified financial institution"; (ii) a purchaser an interest in which is a "tax shelter investment"; (iii) a purchaser that is, for purposes of certain rules (referred to as the mark-to-market rules) applicable to securities held by financial institutions, a "financial institution"; (iv) a purchaser that reports its "Canadian tax results" in a currency other than Canadian currency; or (v) a purchaser that enters into, with respect to their common shares, a "derivative forward agreement", each as defined in the Tax Act. Such purchasers should consult their own tax advisors.

This summary is based on the current provisions of the Tax Act, and an understanding of the current administrative policies and assessing practices of the Canada Revenue Agency published in writing prior to the date hereof. This summary takes into account all specific proposals to amend the Tax Act publicly announced by or on behalf of the Minister of Finance (Canada) prior to the date hereof (the "**Proposed Amendments**") and assumes that all Proposed Amendments will be enacted in the form proposed. No assurances can be given that the Proposed Amendments will be enacted as proposed, or at all. This summary does not otherwise take into account or anticipate any changes in law or administrative policy or assessing practice whether by legislative, administrative or judicial action nor does it take into account tax legislation or considerations of any province, territory or foreign jurisdiction, which may differ from those discussed herein.

This summary is of a general nature only and is not, and is not intended to be, legal or tax advice to any particular shareholder. This summary is not exhaustive of all Canadian federal income tax considerations. Accordingly, prospective purchasers of common shares should consult their own tax advisors having regard to their own particular circumstances.

Taxation of Holders of Common Shares

Dividends

A Holder will be required to include in computing its income for a taxation year any dividends received or deemed to be received on the common shares. In the case of a Holder that is an individual (other than certain trusts), such dividends will be subject to the gross-up and dividend tax credit rules applicable to taxable dividends received or deemed to be received from taxable Canadian corporations, including the enhanced gross-up and dividend tax credit applicable to any dividends designated by Hydro One Limited as an eligible dividend in accordance with the provisions of the Tax Act. A dividend received by a Holder that is a corporation will generally be deductible in computing the corporation's taxable income. In certain circumstances, subsection 55(2) of the Tax Act (as proposed to be amended by Proposed Amendments released on July 31, 2015) will treat a taxable dividend received by a Holder that is a corporation as proceeds of disposition or a capital gain. Holders that are corporations should consult their own tax advisors having regard to their own circumstances.

A Holder that is a "private corporation", as defined in the Tax Act, or any other corporation controlled, whether because of a beneficial interest in one or more trusts or otherwise, by or for the benefit of an individual (other than a trust) or a related group of individuals (other than trusts), will generally be liable to pay a refundable tax of 33⅓% under Part IV of the Tax Act on dividends received or deemed to be received on the common shares to the extent such dividends are deductible in computing the Holder's taxable income for the taxation year.

The cost to a Holder of common shares for purposes of the Tax Act purchased on the reinvestment of dividends pursuant to the dividend reinvestment plan will be the price paid for such common shares. For the purpose of computing the adjusted cost base of such common shares to the Holder, the cost of such common shares will be averaged with the adjusted cost base of all other common shares held by the Holder as capital property at that time.

Dispositions

Generally, on a disposition or deemed disposition of a common share, a Holder will realize a capital gain (or capital loss) equal to the amount, if any, by which the proceeds of disposition, net of any reasonable costs of disposition, exceed (or are less than) the adjusted cost base to the Holder of the common share immediately before the disposition or deemed disposition.

Generally, a Holder is required to include in computing its income for a taxation year one-half of the amount of any capital gain (a "**taxable capital gain**") realized in the year. Subject to and in accordance with the provisions of the Tax Act, a Holder is required to deduct one-half of the amount of any capital loss (an "**allowable capital loss**") realized in a taxation year from taxable capital gains realized by the Holder in the year and allowable capital losses in excess of taxable capital gains for the year may be carried back and deducted in any of the three preceding taxation years or carried forward and deducted in any subsequent taxation year against net taxable capital gains realized in such years, to the extent and under the circumstances prescribed by the Tax Act.

The amount of any capital loss realized by a Holder that is a corporation on the disposition or deemed disposition of a common share may be reduced by the amount of any dividends received by the Holder on such common share to the extent and under the circumstances prescribed by the Tax Act. Similar rules may apply where a common share is owned by a partnership or trust of which a corporation, trust or partnership is a member or beneficiary. Such Holders should consult their own tax advisors.

RISK FACTORS

Investing in Hydro One Limited's common shares involves risk. You should carefully consider the risks and uncertainties described below, together with all of the other information contained in this prospectus, including the consolidated financial statements and the related notes appearing at the end of this prospectus, before deciding to invest in Hydro One Limited's common shares. If any of the following risks actually occurs, the Company's business, prospects, operating results and financial condition could be materially adversely affected, the trading price of the common shares could decline and you could lose all or part of your investment. The risks and uncertainties described below are not the only ones the Company faces. Additional risks and uncertainties not presently known to the Company or that the Company currently believes to be immaterial may also adversely affect the Company's business.

Risks Relating to Hydro One's Business

Regulatory Risks and Risks Relating to Hydro One's Revenues

Risks Relating to Obtaining Rate Orders

The Company is subject to the risk that the Ontario Energy Board will not approve the Company's transmission and distribution revenue requirements requested in future applications for rates. Rate applications for revenue requirements are subject to the Ontario Energy Board's review process, which may involve participation from intervenors and, in certain circumstances, a litigated public hearing process. There can be no assurance that resulting decisions or rate orders issued by the Ontario Energy Board will permit Hydro One to recover all costs actually incurred, including operations, maintenance and administration costs, costs accumulated in other regulatory accounts (including, for instance, deferral and variance accounts), costs of debt and income taxes, or to earn a particular return on equity. A failure to obtain acceptable rate orders, or approvals of appropriate returns on equity and costs actually incurred, may materially adversely affect Hydro One's transmission or distribution businesses, the undertaking or timing of capital expenditures, ratings assigned by credit rating agencies, the issuance of long-term debt and other matters, any of which may in turn have a material adverse effect on the Company. In addition, there is no assurance that the Company will receive regulatory decisions in a timely manner and, therefore, costs may be incurred prior to having an approved revenue requirement.

Risks Relating to Actual Performance Against Forecasts

The Company's ability to recover the actual costs of providing service and earn the allowed return on equity depends on the Company achieving its forecasts established and approved in the rate-setting process. Actual costs could exceed the approved forecasts if, for example, the Company incurs operations, maintenance and administration costs above those included in the Company's approved revenue requirement, higher capital expenditures than those approved in rate decisions, or additional financing charges because of increased debt amounts or higher interest rates. The inability to obtain acceptable rate decisions or to otherwise recover any significant difference between forecast and actual expenses could materially adversely affect the Company's financial condition and results of operations. Further, the Ontario Energy Board approves the Company's transmission and distribution rates based on projected electricity load and consumption levels, among other factors.

If actual load or consumption materially falls below projected levels, the Company's revenue and net income for either, or both, of these businesses could be materially adversely affected. Also, the Company's current revenue requirements for these businesses are based on cost and other assumptions that may not materialize. There is no assurance that the Ontario Energy Board would allow rate increases sufficient to offset unfavourable financial impacts from unanticipated changes in electricity demand or in the Company's costs.

The Company is subject to risk of revenue loss from other factors, such as economic trends and weather conditions that influence the demand for electricity. The Company's overall operating results may fluctuate substantially on a seasonal and year-to-year basis based on these trends and weather conditions. For instance, a cooler-than-normal summer or warmer-than-normal winter may reduce demand for electricity below that forecast by the Company, causing a decrease in the Company's revenues from the same period of the previous year. The Company's load could also be negatively affected by successful CDM programs whose results exceed forecasted expectations.

Risks Relating to Rate-Setting Models for Transmission and Distribution

The Ontario Energy Board's rate-setting model for distributors requires that the term of a custom rate application (distribution business) be a minimum five-year period. There are risks associated with forecasting over such a long period. For instance, if unanticipated capital expenditures arise that were not contemplated in the Company's most recent rate decision, the Company may be required to incur costs that may not be recoverable in future rates. This could have a material adverse effect on the Company.

The Ontario Energy Board has stated its intention to examine the policies that may apply to transmission rate-setting, and this may result in changes to the rate-setting model for transmission services. No specific changes have been proposed, and it is therefore too early to assess the impact of any such changes on the Company. However, a change to the rate-setting model for transmission services could result in a decrease in the Company's revenues or financial performance.

The Ontario Energy Board approves and periodically changes the return on equity for transmission and distribution businesses. The Ontario Energy Board may in the future decide to reduce its allowed return on equity for either of these businesses, or to modify the formula or methodology it uses to determine the return on equity. Any such reduction could reduce the net income of the Company.

Risks Relating to Capital Expenditures

In order to be recoverable, capital expenditures require the approval of the Ontario Energy Board, either through the approval of capital expenditure plans, rate base or revenue requirements for the purposes of setting transmission and distribution rates, which include the impact of capital expenditures on rate base or cost of service. There can be no assurance that all capital expenditures incurred by Hydro One will be approved by the Ontario Energy Board. Capital cost overruns may not be recoverable in transmission or distribution rates. The Company could incur unexpected capital expenditures in maintaining or improving its assets, particularly given that new technology is required to support renewable generation and unforeseen technical issues may be identified through implementation of projects. There is risk that the Ontario Energy Board may not allow full recovery of such expenditures in the future. To the extent possible, Hydro One aims to mitigate this risk by ensuring prudent expenditures, seeking from the regulator clear policy direction on cost responsibility, and pre-approval of the need for capital expenditures.

While the Company expects all of its expenditures and regulatory assets to be fully recoverable after Ontario Energy Board review, any future regulatory decision to disallow or limit the recovery of such costs would lead to a lower-than-expected approved revenue requirement or rate base, potential asset impairment and charges to the Company's results of operations, any of which could have a material adverse effect on the Company.

Risks Relating to Deferred Tax Asset

As a result of leaving the PILs regime and entering the corporate tax regime, Hydro One will recognize a deferred tax asset due to the revaluation of the tax basis of Hydro One's fixed assets at their fair market value and recognition of eligible capital expenditures. Management believes this will result in annual net cash savings over the next five years due to the reduction of cash taxes payable by Hydro One. There is a risk that, in future rate applications, the Ontario Energy Board will reduce the Company's revenue requirement by all or a portion of those net cash savings. If the Ontario Energy Board were to reduce the Company's revenue requirement in this manner, it could have a material adverse effect on the Company.

Risks Relating to Other Applications to the Ontario Energy Board

The Company is also subject to the risk that it will not obtain required regulatory approvals for other matters, such as leave to construct applications, applications for mergers, acquisitions, amalgamations and divestitures and environmental approvals. Decisions to acquire or divest other regulated businesses licensed by the Ontario Energy Board are subject to Ontario Energy Board approval. Accordingly, there is the risk that such matters may not be approved or that unfavourable conditions will be imposed by the Ontario Energy Board.

First Nations and Métis Claims Risk

Some of the Company's current and proposed transmission and distribution assets are or may be located on Reserve lands, and lands over which First Nations and Métis have Aboriginal, treaty or other legal claims. Although the Company has a recent history of successful negotiations and engagement with First Nations and Métis communities in Ontario, some First Nations and Métis leaders, communities and their members have made assertions related to sovereignty and jurisdiction over Reserve lands and traditional territories and are increasingly willing to assert their claims through the courts, tribunals, or by direct action. These claims could have a material adverse effect on the Company or otherwise materially adversely impact the Company's operations, including the development of current and future projects.

The Company's operations and activities may, on occasion, give rise to the Crown's duty to consult and potentially accommodate First Nations and Métis communities. Procedural aspects of the duty to consult may be delegated to the Company by the Province or the federal government. A perceived failure by the Crown to sufficiently consult a First Nations or Métis community, or a perceived failure by the Company in relation to delegated consultation obligations, could result in legal challenges against the Crown or the Company, including judicial review or injunction proceedings, or could potentially result in direct action against the Company by a community or its members. If this occurs, it could disrupt or delay the Company's operations and activities, including current and future projects, and have a material adverse effect on the Company.

Risk from Transfer of Assets Located on Reserves

The transfer orders by which the Company acquired certain of Ontario Hydro's businesses as of April 1, 1999 did not transfer title to some assets located on Reserves. The transfer of title to these assets did not occur because authorizations originally granted by the federal government for the construction and operation of these assets on Reserves could not be transferred without required consent. In several cases, the authorizations had either expired or had never been issued.

Currently, the Ontario Electricity Financial Corporation holds legal title to these assets and it is expected that the Company will manage them until it has obtained necessary authorizations to complete the title transfer. To occupy Reserves, the Company must have valid permits issued by Her Majesty the Queen in the Right of Canada. For each permit, the Company must negotiate an agreement (in the form of a memorandum of understanding) with the First Nation, the Ontario Electricity Financial Corporation and any members of the First Nation who have occupancy rights. The agreement includes provisions whereby the First Nation consents to the federal government (presently Aboriginal Affairs and Northern Development Canada) issuing a permit. Where the agreement and permit are for transmission assets, the Company must negotiate terms of payment. It is difficult to predict the aggregate amount that the Company may have to pay, either on an annual or one-time basis, to obtain the required agreements from First Nations. If the Company cannot reach satisfactory agreements and obtain federal permits, it may have to relocate these assets to other locations at a cost that could be substantial. In a limited number of cases, it may be necessary to abandon a line and replace it with diesel generation facilities. In either case, the costs relating to these assets could have a material adverse effect on the Company if it is not able to recover them in future rate orders.

Compliance with Laws and Regulations

Hydro One must comply with numerous laws and regulations affecting its business, including requirements relating to transmission and distribution companies, environmental laws, employment laws and health and safety laws. The failure of the Company to comply with these laws could have a material adverse effect on the Company's business. See also "– Health, Safety and Environmental Risk".

For instance, Hydro One's licensed transmission and distribution businesses are required to comply with the terms of their licenses, with codes and rules issued by the Ontario Energy Board and with other regulatory requirements, including regulations of the National Energy Board. In Ontario, the Market Rules issued by the IESO require the Company to, among other things, comply with the reliability standards established by the NERC and NPCC. The incremental costs associated with compliance with these reliability standards are expected to be recovered through rates, but there can be no assurance that the Ontario Energy Board will approve the recovery of all of such incremental costs. Failure to obtain such approval could have a material adverse effect on the Company.

There is the risk that new legislation, regulations or policies will be introduced in the future. These may require Hydro One to incur additional costs, which may or may not be recovered in future transmission and distribution rates.

Risk of Natural and Other Unexpected Occurrences

The Company's facilities are exposed to the effects of severe weather conditions, natural disasters, man-made events including but not limited to cyber and physical terrorist type attacks or any other potentially catastrophic events. Although constructed, operated and maintained to industry standards, the Company's facilities may not withstand occurrences of this type in all circumstances. The Company does not have insurance for damage to its transmission and distribution wires, poles and towers located outside its transmission and distribution stations resulting from these or other events. Losses from lost revenues and repair costs could be substantial, especially for many of the Company's facilities that are located in remote areas. The Company could also be subject to claims for damages caused by its failure to transmit or distribute electricity. Hydro One's risk is partly mitigated because its transmission system is designed and operated to withstand the loss of any major element and possesses inherent redundancy that provides alternate means to deliver large amounts of power. In the event of a large uninsured loss, Hydro One would apply to the Ontario Energy Board for recovery of such loss; however, there can be no assurance that the Ontario Energy Board would approve any such applications, in whole or in part, which could have a material adverse effect on the Company.

Risk Associated with Information Technology Infrastructure and Data Security

The Company's ability to operate effectively in the Ontario electricity market is, in part, dependent upon it developing, maintaining and managing complex information technology systems which are employed to operate its transmission and distribution facilities, financial and billing systems and other business systems. The Company's increasing reliance on information systems and expanding data networks increases its exposure to information security threats. The Company's transmission business is required to comply with various rules and standards for transmission reliability, including mandatory standards established by the NERC and the NPCC. These include standards relating to cyber-security and information technology, which only apply to certain of the Company's assets (generally being those whose failure could impact the functioning of the bulk electricity system). The Company may maintain lower levels of information technology security for its assets that are not subject to these mandatory standards. Unauthorized access to corporate and information technology systems or cyber-attacks could result in service disruptions and system failures, which could have a material adverse effect on the Company, including as a result of a failure to provide electricity to customers. In addition, in the normal course of its operations, the Company may collect, process or retain access to confidential customer, supplier, counterparty or employee information, which could be exposed in the event of a cyber-security incident.

Hydro One mitigates these risks, including through the use of security event management tools on its power and business systems, by separating its transmission and distribution system networks from its other business system networks, by performing scans of its systems for known cyber threats and by providing company-wide awareness training to Hydro One personnel. Hydro One also engages the services of external experts to evaluate the security of its information technology infrastructure and controls. Hydro One performs vulnerability assessments on its critical cyber assets and it ensures security and privacy controls are incorporated into new information technology capabilities. Although these security and system disaster recovery controls are in place, there can be no assurance that there will not be system failures or security breaches or that such threats would be detected or mitigated on a timely basis. Upon occurrence and detection, the focus would shift from prevention to isolation, remediation and recovery until the incident has been fully addressed. Any such system failures or security breaches could have a material adverse effect on the Company.

Work Force Demographic Risk

By the end of 2014, approximately 17% of the Company's employees were eligible for retirement and by the end of 2015 up to 19% could be eligible. These percentages are not evenly spread across the Company's workforce, but tend to be most significant in the most senior levels of the Company's staff and especially among management and executive staff. Accordingly the Company's continued success will be tied to its ability to attract and retain sufficient qualified staff to replace the capability lost through retirements and to meet the demands of the Company's work programs.

In addition, the Company expects the skilled labour market for its industry to be highly competitive in the future. Many of the Company's current employees and many of the potential employees it would seek in the future possess skills and experience that would also be highly sought after by other organizations inside and outside the electricity sector. The failure to attract and retain qualified personnel for Hydro One's business could have a material adverse effect on the Company.

Labour Relations Risk

The substantial majority of the Company's employees are represented by either the Power Workers' Union or The Society of Energy Professionals. Over the past several years, significant effort has been expended to increase Hydro One's flexibility to conduct operations in a more cost efficient manner. Although the Company has achieved improved flexibility in its collective agreements, the Company may not be able to achieve further improvements. The Company recently reached an agreement with the Power Workers' Union for a renewal collective agreement with a three-year term, covering the period from April 1, 2015 to March 31, 2018 and an early renewal collective agreement with The Society of Energy Professionals with a three-year term, covering the period from April 1, 2016 to March 31, 2019. The Company also reached a renewal collective agreement with the Canadian Union of Skilled Workers for a three-year term, covering the period from May 1, 2014 to April 30, 2017, although this remains subject to ratification by the Canadian Union of Skilled Workers. However, there can be no assurance that future collective agreement renewals with these unions or that collective agreements with the other unions with which Hydro One has contractual relationships, will be renewed on acceptable terms. The Company faces financial risks related to its ability to negotiate collective agreements consistent with its rate orders. In addition, in the event of a labour dispute, the Company could face operational risk related to continued compliance with its license requirements of providing service to customers. Any of these could have a material adverse effect on the Company.

Risk Associated with Arranging Debt Financing

The Company expects to borrow to repay its existing indebtedness, to fund the payment of an $800 million cash dividend or make a return of capital to the Province prior to the closing of this offering, and to fund a portion of capital expenditures. Hydro One Inc. has substantial amounts of existing debt, including $550 million maturing in 2015, $500 million maturing in 2016, and $600 million maturing in 2017. The Company plans to incur capital expenditures of approximately $1,564 million in 2015 and $1,535 million in 2016. Cash generated from operations, after the payment of expected dividends, will not be sufficient to fund the repayment of the Company's existing indebtedness and capital expenditures. The Company's ability to arrange sufficient and cost-effective debt financing could be materially adversely affected by numerous factors, including the regulatory environment in Ontario, the Company's results of operations and financial position, market conditions, the ratings assigned to its debt securities by credit rating agencies and general economic conditions. A downgrade in the Company's credit ratings could restrict the Company's ability to access debt capital markets and increase the Company's cost of debt. Any failure or inability on the Company's part to borrow substantial amounts of debt on satisfactory terms could impair its ability to repay maturing debt, fund capital expenditures and meet other obligations and requirements and, as a result, could have a material adverse effect on the Company.

Market, Financial Instrument and Credit Risk

Market risk refers primarily to the risk of loss that results from changes in costs, foreign exchange rates and interest rates. The Company is exposed to fluctuations in interest rates as its regulated return on equity is derived using a formulaic approach that takes into account anticipated interest rates, but is not currently exposed to material commodity price risk or material foreign exchange risk.

The Ontario Energy Board-approved adjustment formula for calculating return on equity in a deemed regulatory capital structure of 60% debt and 40% equity provides for increases and decreases depending on changes in benchmark rates of return for Government of Canada debt. The Company estimates that a 1% decrease in the forecasted long-term Government of Canada bond yield used in determining its rate of return would reduce the Company's transmission business' 2016 net income by approximately $21 million and its distribution business' 2016 net income by approximately $14 million. The Company's net income is adversely impacted by rising interest rates as the Company's maturing long-term debt is refinanced at market rates. The Company periodically utilizes interest rate swap agreements to mitigate elements of interest rate risk.

Financial assets create a risk that a counterparty will fail to discharge an obligation, causing a financial loss. Derivative financial instruments result in exposure to credit risk, since there is a risk of counterparty default. Hydro One monitors and minimizes credit risk through various techniques, including dealing with highly-rated counterparties, limiting total exposure levels with individual counterparties, entering into master agreements which enable net settlement**,** and by monitoring the financial condition of counterparties. The Company does not trade in any energy derivatives. Currently, there are no significant concentrations of credit risk with respect to any class of financial assets. The Company is required to procure electricity on behalf of competitive retailers and certain local distribution companies for resale to their customers. The resulting concentrations of credit risk are mitigated through the use of various security arrangements, including letters of credit, which are incorporated into the Company's service agreements with these retailers in accordance with the Ontario Energy Board's Retail Settlement Code.

The failure to properly manage these risks could have a material adverse effect on the Company.

Risks Relating to Asset Condition and Capital Projects

The Company continually incurs sustainment and development capital expenditures and monitors the condition of its assets to manage the risk of equipment failures and to determine the need for and timing of major refurbishments or replacements of its transmission and distribution infrastructure. The risk of distribution equipment failures is higher due to the lack of real-time monitoring of these assets. The connection of large amounts of distributed generation on the distribution network has resulted in more equipment usage than in the past for the Company. This increases maintenance requirements and may accelerate the aging of the Company's assets.

Execution of the Company's capital expenditure programs, particularly for development capital expenditures, is partially dependent on external factors, such as environmental approvals, municipal permits, equipment outage schedules that accommodate the IESO, generators and transmission-connected customers, and supply chain availability for equipment suppliers and consulting services. Approvals may also include *Environmental Assessment Act* (Ontario), approvals which require public meetings, and appropriate engagement with First Nations and Métis communities or receipt of Ontario Energy Board approvals which may require early access to property or expropriation. Obtaining approvals and carrying out these processes may also be impacted by opposition to the proposed site of the capital investments. Delays in obtaining required regulatory approvals or failure to complete capital projects on a timely basis could materially adversely affect transmission reliability or customers' service quality, both of which could have a material adverse effect on the Company.

External factors are considered in the Company's planning process. However, if the Company is unable to carry out capital expenditure plans in a timely manner, equipment performance may degrade, which may reduce transmission capacity, compromise the reliability of the Company's transmission system or increase the costs of operating and maintaining these assets. Any of these consequences could have a material adverse effect on the Company.

Competitive bidding processes may become a more common means of selecting developers of large transmission projects. To date, there has been only one transmission project, the East-West Tie Line, which has been the subject of a competitive bidding process initiated by the Ontario Energy Board. However, this may change in the future. Increased competition for the development of large transmission projects could impact the Company's ability to expand its existing transmission system, which may have an adverse effect on the Company. To the extent that other parties are selected to construct, own and operate new transmission assets, this would reduce the Company's share of Ontario's transmission network.

Health, Safety and Environmental Risk

Hydro One's health, safety and environmental management system is designed to ensure hazards and risks are identified and assessed, and controls are implemented to mitigate significant risks. This system includes a standing committee of the Board that has governance over health, safety and environmental matters (see "Directors and Management of the Company – Committees of the Board – Health, Safety, Environment and First Nations & Métis Committee"). However, given the territory that the Company's system encompasses and the amount of equipment that it owns, the Company cannot guarantee that all such risks will be identified and mitigated without significant cost and expense to the Company. The following are some of the areas that may have a significant impact on the Company's operations.

The Company is subject to extensive Canadian federal, provincial and municipal environmental regulation. Failure to comply could subject the Company to fines or other penalties. In addition, the presence or release of hazardous or other harmful substances could lead to claims by third parties or governmental orders requiring the Company to take specific actions such as investigating, controlling and remediating the effects of these substances. Hydro One currently has a voluntary land assessment and remediation program for off-site migration in place to identify and, where necessary, remediate historical contamination that has resulted from past operational practices and uses of certain long-lasting chemicals at the Company's facilities. Any contamination of the Company's properties could limit its ability to sell these assets in the future.

In addition, actual future environmental expenditures may vary materially from the estimates used in the calculation of the environmental liabilities on the Company's balance sheet. The Company does not have insurance coverage for these environmental expenditures.

There is also risk associated with obtaining governmental approvals, permits, or renewals of existing approvals and permits related to constructing or operating facilities. This may require environmental assessment or result in the imposition of conditions, or both, which could result in delays and cost increases.

Although Hydro One is not a large emitter of greenhouse gases, the Company monitors all of these emissions and has a management plan in place to track and report on all sources, including sulphur hexafluoride or "SF6". In addition, the Company recognizes the risks associated with potential climate change and has developed plans to respond as appropriate.

The Company anticipates that all of its future environmental expenditures will continue to be recoverable in future rates. However, any future regulatory decision to disallow or limit the recovery of such costs could have a material adverse effect on the Company.

Pension Plan Risk

Hydro One has the Hydro One Defined Benefit Pension Plan in place for the majority of its employees. Contributions to the pension plan are established by actuarial valuations which are minimally required to be filed with the Financial Services Commission of Ontario on a triennial basis. The most recently filed valuation was prepared as at December 31, 2013, and was filed in June 2014, covering a three year period from 2014 to 2016. Hydro One contributed approximately $160 million in respect of 2013, approximately $174 million in respect of 2014, and will contribute approximately $174 million by the end of 2015 to its pension plan to satisfy minimum funding requirements. Contributions beyond 2015 are expected to continue to be significant; actual amounts will depend on investment returns, changes in benefits and actuarial assumptions and may include additional voluntary contributions from time to time. A determination by the Ontario Energy Board that some of the Company's pension expenditures are not recoverable from customers could have a material adverse effect on the Company, and this risk may be exacerbated if the amount of required pension contributions increases.

The Ontario Energy Board has begun a consultation process that will examine pensions and other post-employment benefits in regulated utilities. See "– Other Post-Employment and Post-Retirement Benefits Risks". The outcome of this consultation process is uncertain and the Company is unable to assess the impact of the potential changes stemming from the review at this time.

Risk of Recoverability of Total Compensation Costs

The Company manages all of its total compensation costs, including pension and other post-employment and post-retirement benefits, subject to restrictions and requirements imposed by the collective bargaining process. Should any element of total compensation costs be disallowed in whole or part by the Ontario Energy Board and not be recoverable from customers in rates, the costs could be material and could lead to changes to the Company's results of operations and decrease net income, which could have a material adverse effect on the Company.

Other Post-Employment and Post-Retirement Benefits Risks

The Company provides other post-employment and post-retirement benefits, including workers compensation benefits and long-term disability benefits to qualifying employees. The Ontario Energy Board has begun a consultation process that will examine pensions and other post-employment benefits in regulated utilities. The objectives of the consultation are to develop standard principles to guide the Ontario Energy Board's review of pension and other post-employment and post-retirement benefits costs in the future, to establish specific information requirements for application and to establish appropriate regulatory mechanisms for cost recovery which can be applied consistently across the gas and electricity sectors for rate-regulated utilities. The outcome of this consultation process is uncertain and the Company is unable to assess the impact of the potential changes stemming from the review at this time. A determination that some of the Company's post-employment and post-retirement benefit costs are not recoverable could have a material adverse effect on the Company.

Risk Associated with Outsourcing Arrangements

Consistent with Hydro One's strategy of reducing operating costs, it has entered into an outsourcing arrangement with Inergi LP. See "Business of Hydro One – Employees and Outsourced Services". If the outsourcing arrangement or statements of work thereunder are terminated for any reason or expire before a new supplier is selected, the Company could be required to incur significant expenses to transfer to another service provider or insource, which could have a material adverse effect on the Company's business, operating results, financial condition or prospects.

Risk from Provincial Ownership of Transmission Corridors

The Province owns some of the Company's transmission corridor lands underlying its transmission system. Although the Company has the statutory right to use these transmission corridors, the Company may be limited in its options to expand or operate its systems. Also, other uses of the transmission corridors by third parties in conjunction with the operation of the Company's systems may increase safety or environmental risks, which could have a material adverse effect on the Company.

Litigation Risks

In the normal course of the Company's operations, it may become involved in, be named as a party to or be the subject of, various legal proceedings, including regulatory proceedings, tax proceedings and legal actions, relating to actual or alleged violations of law, common law damages claims, personal injuries, property damage, property taxes, land rights, the environment and contract disputes. The outcome with respect to outstanding, pending or future proceedings cannot be predicted with certainty and may be determined adversely to the Company, which could have a material adverse effect on the Company. Even if the Company prevails in any such legal proceeding, the proceedings could be costly and time-consuming and would divert the attention of management and key personnel from the Company's business operations, which could adversely affect the Company.

Risks Relating to the Company's Relationship with the Province

Ownership by the Province and Voting Power

The Province will own approximately 85% of the common shares immediately following this offering and the share purchase arrangements referred to in "Principal and Selling Shareholder – Share Purchase Arrangements with the Province" (84% of the common shares if the Over-Allotment Option is exercised in full). See "Principal and Selling Shareholder". In addition, the Electricity Act restricts the Province from selling Voting Securities (including common shares) of any class or series if it would own less than 40% of the outstanding number of Voting Securities of that class or series after the sale and in certain circumstances also requires the Province to take steps to maintain that level of ownership. See "Governance and Relationship with Principal Shareholder – Province's Ownership of Common Shares and Preferred Shares". Accordingly, the Province is expected to continue to maintain a significant ownership interest in Voting Securities of Hydro One Limited for an indefinite period.

As a result of its significant ownership of the common shares, the Province has, and is expected indefinitely to have, the ability to determine or significantly influence the outcome of shareholder votes, subject only to the restrictions in the Governance Agreement. While, with respect to its ownership interest in Hydro One Limited, the Province has agreed to engage in the business and affairs of Hydro One Limited only as an investor and has stated its intention to achieve its policy objectives through legislation and regulation as it would with respect to any other utility operating in Ontario, the Governance Agreement preserves the Province's right to vote its common shares in its sole interest, which may not be aligned with the interests of other shareholders. See "Governance and Relationship with Principal Shareholder – Governance Agreement – Governance Principles".

The Share Ownership Restrictions and the Province's significant ownership of common shares together effectively prohibit one or more persons acting together from acquiring control of Hydro One Limited. They also may limit or discourage transactions involving other fundamental changes to Hydro One Limited and the ability of other shareholders to successfully contest the election of the directors proposed for election pursuant to the Governance Agreement.

Continued Influence by the Province

Historically, as the sole shareholder of the Company, the Province has exercised significant influence over the business and affairs of the Company by directing corporate actions or strategies through unanimous shareholder declarations that removed authority from the board, by making appointments to the board and informally, through the interaction of Ministers, ministerial staff and officials with executives of the Company. In exercising this influence, the Province has been free to pursue its policy objectives rather than exclusively commercial interests of the Company. See "Interests of Management and Others in Certain Material Transactions – Relationships with the Province and Other Parties".

Under the Governance Agreement, the Province has agreed to engage in the business and affairs of the Company as an investor and not as a manager and has agreed to other restrictions and limitations with respect to the governance of the Company and the Province's rights as a holder of Voting Securities. See "Governance and Relationship with Principal Shareholder – Governance Agreement."

There is a risk, however, that the Province's engagement in the business and affairs of the Company as an investor will be informed by its policy objectives and may influence the conduct of the business and affairs of the Company in ways that may not be aligned with the interests of other shareholders.

Nomination of Directors and Confirmation of Chief Executive Officer and Chair

Under the Governance Agreement, the Province is entitled to nominate 40% of the directors of Hydro One Limited (except where the Province ceases to own 40% of the Voting Securities, in which case it will be entitled after a period of time to nominate its proportionate share of the directors of Hydro One Limited as set forth in "Governance and Relationship with Principal Shareholder – Governance Agreement – Nomination of Directors – Board Nominees") and all directors, other than the Chief Executive Officer, including those nominated by the Province, are required to be independent of the Province. See "Governance and Relationship with Principal Shareholder – Governance Agreement – Nomination of Directors – Director Qualification Standards". In addition, under the Governance Agreement, the appointment of both the Chief Executive Officer and the Chair of the Board must be approved (and confirmed annually) by a special resolution of the Board passed by at least two-thirds of the votes cast at a meeting of the Board. See "Governance and Relationship with Principal Shareholder – Governance Agreement – Board Approvals Requiring a Special Resolution of the Directors".

There is a risk that the Province will nominate or confirm individuals who satisfy the independence requirements but who it considers are disposed to support and advance its policy objectives and give disproportionate weight to the Province's interests in exercising their business judgment and balancing the interests of the stakeholders of Hydro One Limited. This, combined with the fact certain matters require a two-thirds vote of the Board could allow the Province to unduly influence certain Board actions such as confirmation of the Chair and confirmation of the Chief Executive Officer.

Board Removal Rights

The Province is required under the Governance Agreement to vote in favour of all director nominees of Hydro One Limited. That obligation is subject, however, to the Province's overriding right to withhold from voting in favour of all director nominees and its right to seek to remove and replace the entire Board, including in each case its own director nominees but excluding the Chief Executive Officer and, at the Province's discretion, the Chair. If the Province exercises those rights, any new nominees proposed for election or appointment must be nominated in accordance with the Governance Agreement and meet the independence and qualification standards, and the Province may not re-nominate any of the directors who have been removed. See "Governance and Relationship with Principal Shareholder – Governance Agreement – Election and Replacement of Directors". In exercising these rights in any particular circumstance, the Province is entitled to vote in its sole interest, which may not be aligned with the interests of other shareholders.

More Extensive Regulation

Under the Governance Agreement, the Province has agreed to engage in the business and affairs of Hydro One Limited as an investor and not as a manager and has stated that its intention is to achieve its policy objectives through legislation and regulation as it would with respect to any other utility operating in Ontario. As a result, the Province has restricted the manner in which it may seek to influence Hydro One Limited. See "Governance and Relationship with Principal Shareholder – Governance Agreement." Accordingly, there is a risk that the Province will exercise its legislative and regulatory power to achieve policy objectives in a manner that has a material adverse effect on Hydro One Limited.

Prohibitions on Selling the Company's Transmission or Distribution Business

The Electricity Act prohibits the Company from selling all or substantially all of the business, property or assets related to its transmission system or distribution system that is regulated by the Ontario Energy Board. There is a risk that these prohibitions may limit the ability of the Company to engage in sale transactions involving a substantial portion of either system, even where such a transaction may otherwise be considered to provide substantial benefits to the Company and the holders of the common shares.

10% Ownership Restriction

As a result of the Share Ownership Restrictions, no person or company (or combination of persons or companies acting jointly or in concert) may beneficially own or exercise control or direction over more than 10% of any class or series of Voting Securities of Hydro One Limited, including the common shares, other than the Province and other than an underwriter who holds the Voting Securities solely for the purpose of distributing Voting Securities to purchasers who comply with the Share Ownership Restrictions. A holder of Voting Securities who contravenes the Share Ownership Restrictions may also have its Voting Securities sold or redeemed and have dividend and voting entitlements on its Voting Securities suspended. See "Governance and Relationship with Principal Shareholder – 10% Ownership Restriction". The Share Ownership Restrictions also effectively prohibit one or more persons acting together from acquiring control of Hydro One Limited, including pursuant to a change of control transaction in which holders of Voting Securities could otherwise receive a premium for their Voting Securities. The Share Ownership Restrictions may also discourage trading in, and may limit the market for, the common shares and other Voting Securities.

Future Sales of Common Shares by the Province

The Province has indicated that it currently intends to sell further common shares over time, until it holds approximately 40% of the common shares, subject to the selling restrictions agreed with the Underwriters. See "Plan of Distribution". The Registration Rights Agreement also grants the Province the right to request that Hydro One Limited file one or more prospectuses and take other procedural steps to facilitate secondary offerings by the Province of the common shares. See "Governance and Relationship with Principal Shareholder – Province's Ownership of Common Shares and Preferred Shares – Registration Rights Agreement". Future sales of common shares by the Province, or the perception that such sales could occur, may materially adversely affect market prices for the common shares and impede Hydro One Limited's ability to raise capital through the issuance of additional common shares, including the number of common shares that Hydro One Limited may be able to sell at a particular time or the total proceeds that may be realized.

Limitations on Enforcing the Governance Agreement

The Governance Agreement includes commitments by the Province restricting the exercise of its rights as a holder of Voting Securities, including with respect to the maximum number of directors that the Province may nominate and on how the Province will vote with respect to other director nominees. See “Governance and Relationship with Principal Shareholder – Governance Agreement – Election and Replacement of Directors”. Hydro One Limited’s ability to obtain an effective remedy against the Province, if the Province were not to comply with these commitments, is limited as a result of the *Proceedings Against the Crown Act* (Ontario). This legislation provides that the remedies of injunction and specific performance are not available against the Province, although a court may make an order declaratory of the rights of the parties, which may influence the Province’s actions. A remedy of damages would be available to Hydro One Limited, but damages may not be an effective remedy, depending on the nature of the Province’s non-compliance with the Governance Agreement.

Potential Difficulties in Enforcing Civil Liabilities Against the Province, Hydro One Limited and other Persons

Under the securities legislation of Ontario and Newfoundland and Labrador, the statutory remedies of rescission or damages where the prospectus or any amendment contains a misrepresentation are not available against the Province, as selling shareholder or as a promoter of Hydro One Limited. It is also possible, based on prior court decisions, that a claim against the Province based on these statutory remedies would have to be brought in the Ontario courts, rather than in the courts of the purchaser’s province or territory of residence. If the claim was brought in the Ontario courts, and Ontario law was applied in respect of the claim, the statutory remedies would not be available against the Province. Alternatively, if a purchaser of common shares were to successfully assert a statutory misrepresentation claim against the Province in a jurisdiction other than Ontario, the resulting judgment may not be enforceable in Ontario for reasons which include that an Ontario court could conclude that it would be contrary to Ontario public policy to do so. Nonetheless, recourse may continue to be available against Hydro One Limited and any other parties that may be liable for any such misrepresentation.

Hydro One Limited is incorporated under the laws of Ontario, Canada and substantially all of the Company’s assets are located in Canada. Substantially all of the directors and officers of Hydro One Limited, and some experts named in this prospectus reside or are located in Canada, and their assets are located in Canada. As a result, it may be difficult for non-Canadian or other investors to effect service of process outside of Canada against Hydro One Limited the directors and officers of Hydro One Limited or these experts or to sue Hydro One Limited or those others in the United States or other courts. If a lawsuit were successful, it may be difficult to collect any money awarded.

In relation to potential claims by U.S. investors, the *United States Foreign Sovereign Immunities Act of 1976* (the “**FSIA**”) provides that, subject to existing international agreements to which the United States was a party at the time of the enactment of the FSIA, a foreign state or any agency or instrumentality of a foreign state is immune from U.S. federal and state court jurisdiction unless a specific exception to the immunity applies. One such exception applies to claims arising out of “commercial activity” by a foreign state or its agency or instrumentality. However, it is not certain that a court would consider any acts or omissions by Hydro One Limited, Hydro One Inc. or the Province in connection with this offering or otherwise to be “commercial activities” under the FSIA. Absent an applicable exception from immunity under the FSIA, any attempt to assert a claim against Hydro One Limited, Hydro One Inc. or the Province alleging a violation of the U.S. securities laws resulting from an alleged material misstatement in or material omission from this prospectus, or any other act or omission in connection with this offering, may be barred. Further, absent an applicable exception from immunity under the FSIA, any attempt to assert a claim against Hydro One Limited, Hydro One Inc. or the Province or any of their respective agents or employees alleging any other complaint, including as a result of any future action by the Province as a shareholder of Hydro One Limited, may also be barred.

In addition, even if a U.S. judgment could be obtained in such an action, the results of such judgment may not be enforceable in Ontario.

Risks Relating to this Offering

Absence of a Prior Public Market

There is currently no public market for Hydro One Limited’s common shares. The offering price of the common shares offered hereunder has been determined by negotiation between the Province and the Underwriters. The Company cannot predict the price at which Hydro One Limited’s common shares will trade upon closing and there can be no assurance that an active trading market will develop after closing or, if developed, that such a market will be sustained. In addition, if an active public market does not develop or is not maintained, investors may have difficulty selling their common shares.

Potentially Volatile Market Price for Common Shares

The market price for Hydro One Limited's common shares may be volatile and subject to wide fluctuations in response to numerous factors, many of which are beyond the Company's control, including, but not limited to, the following: (i) actual or anticipated fluctuations in the Company's quarterly results of operations; (ii) changes in forecasts, estimates or recommendations of securities research analysts regarding the Company's future results of operations or financial performance; (iii) changes in the economic performance or market valuations of other issuers that investors deem comparable to the Company; (iv) addition or departure of the Company's executive officers and other key personnel; (v) increases or decreases in the amount of dividends to be paid or expected to be paid by the Company; (vi) release or expiration of lock-up or other transfer restrictions on outstanding common shares; (vii) sales or anticipated sales of additional common shares by Hydro One Limited or the Selling Shareholder; (viii) significant acquisitions or business combinations, strategic partnerships, joint ventures or capital commitments by or involving the Company or its competitors; and (ix) news reports relating to trends, concerns, technological or competitive developments, regulatory changes and other related issues in the Company's industry or target markets.

Financial markets may experience significant price and volume fluctuations that affect the market prices of equity securities of public entities, even though unrelated to the operating performance, underlying asset values or prospects of such entities. Accordingly, the market price of Hydro One Limited's common shares may decline even if its operating results, underlying asset values or prospects have not changed. As well, certain institutional investors may base their investment decisions on consideration of the Company's environmental, governance and social practices and performance against such institutions' respective investment guidelines and criteria, and failure to satisfy such criteria may result in limited or no investment in, or divestiture of the common shares by those institutions, which could materially adversely affect the trading price of the common shares. There can be no assurance that continuing fluctuations in price and volume will not occur. If such increased levels of volatility and market turmoil occur or continue for a protracted period of time, the Company's operations and the trading price of Hydro One Limited's common shares may be materially adversely affected.

Payment of Dividends

Payment of dividends is dependent on cash flows of the Company's business and subject to change. The declaration and payment of future dividends will be at the discretion of the Board, may be subject to restrictions under Hydro One Limited and Hydro One Inc.'s credit facilities and may be affected by various other factors, including the Company's revenues, financial condition, acquisitions and legal, regulatory or contractual restrictions. There can be no assurance that Hydro One Limited will be in a position to pay dividends at the rate anticipated in this prospectus (or at all) in the future. A reduction or cessation of the payment of dividends could materially adversely affect the trading price of the common shares.

Dilution

The issuance of additional common shares by Hydro One Limited may have a dilutive effect on the interests of Hydro One Limited's shareholders. The number of common shares that Hydro One Limited is authorized to issue is unlimited. Hydro One Limited may, in its sole discretion, subject to applicable laws and the rules of the TSX and any stock exchange on which its securities may be listed from time to time, issue additional common shares from time to time (including pursuant to the Company's Long Term Incentive Plan, the PWU Share Grant Plan and the Society Share Grant Plan), and the interests of shareholders may be diluted thereby.

Securities Analysts' Research or Reports Could Impact Price of Common Shares

The trading market for Hydro One Limited's common shares may be facilitated in part by the research and reports that industry or financial analysts publish about the Company or its business. If no or few analysts commence coverage of the Company, the trading price of the common shares could be lower than otherwise. Even if the Company does obtain analyst coverage, if one or more of the analysts covering the Company's business downgrade their evaluations of Hydro One Limited's common shares or share price, the price of the common shares could decline. If one or more of these analysts cease to cover Hydro One Limited's common shares, the Company could lose visibility in the market for its shares, which in turn could cause Hydro One Limited's common share price to decline.

Tax Risks Relating to this Offering

Hydro One Inc.'s liability for payment-in-lieu of tax under the Electricity Act for the taxation year that includes August 31, 2015 will be impacted by the fair market value of the shares and debt of Hydro One Brampton Networks Inc. transferred, at the Province's direction, to a company wholly-owned by the Province on August 31, 2015 by way of a dividend-in-kind and a return of capital, respectively. No advance ruling has been obtained from the Ministry of Finance (Ontario) as to the valuation of such shares and debt at the time of these dispositions. The Company could be materially adversely affected if the valuation of such shares and debt is reassessed or challenged.

As a result of this offering, Hydro One Limited and each of its subsidiaries will lose its tax exempt status and will be subject to income tax under the Tax Act, the *Taxation Act, 2007* (Ontario), and any other provincial or income tax statute applicable after the loss of such status. Despite the fact that Hydro One has made payments in lieu of tax, certain taxation issues may arise as a result of Hydro One's change in tax status which could negatively impact Hydro One and which may subject Hydro One to various types of tax. Hydro One has taken, and expects in the future to take, actions to minimize these potential impacts. No advance income tax ruling has been obtained from the Canada Revenue Agency in respect of any potential impacts.

Holding Company Risk

Following completion of this offering, Hydro One Limited will be a holding company and a substantial portion of its assets will be the shares of its subsidiaries. As a result, prospective purchasers of common shares are subject to the risks attributable to Hydro One Limited's subsidiaries. As a holding company, Hydro One Limited will conduct substantially all of its business through its subsidiaries, which will generate substantially all of its revenues. Consequently, Hydro One Limited's cash flows and ability to complete current or desirable future enhancement opportunities are dependent on the earnings of its subsidiaries and the distribution of those earnings to Hydro One Limited. The ability of these entities to pay dividends and other distributions will depend on their operating results and will be subject to applicable laws and regulations which require that solvency and capital standards be maintained by such companies and contractual restrictions contained in the instruments governing their debt. In the event of a bankruptcy, liquidation or reorganization of any of Hydro One Limited's subsidiaries, holders of indebtedness and other creditors will generally be entitled to payment of their claims from the assets of such subsidiaries before any assets are made available for distribution to Hydro One Limited.

Pro Forma Financial Information

In preparing the unaudited pro forma condensed consolidated financial statements of Hydro One Inc. appearing elsewhere in this prospectus, the Company has given effect to certain transactions, as described in the notes to such financial statements. While management believes that the estimates and assumptions underlying the pro forma condensed consolidated financial statements are reasonable, such assumptions and estimates, including with respect to the annual net cash savings due to the reduction of cash taxes payable by Hydro One, may be materially different than the Company's actual results and experience in the future.

First Nations and Métis Proceedings

Certain First Nations and Métis organizations have asserted that the Province has an obligation to consult with them in respect of asserted potential adverse effects of the Province's proposed sale of common shares in this offering on their Aboriginal and treaty rights. Whether the Province has a duty to consult or not, it has indicated that it is in discussions regarding potential equity participation by the First Nations. The Company understands that these discussions focus on facilitating equity participation for such communities through future offerings by the Province. These discussions are ongoing and are not expected to affect the number of shares available for purchase in this offering. In addition, the Métis Nation of Ontario has expressed an interest in a dialogue with the Province in relation to this offering. The Province has indicated that it is also prepared to engage in a dialogue with the Métis in relation to broadened ownership of the Company. See "Principal and Selling Shareholder".

In addition, if a duty to consult exists in respect of this offering, it would rest with the Province and not Hydro One Limited and its subsidiaries. Broadening the ownership of Hydro One Limited will not alter the regulatory framework under which the Company operates and in which consultation with First Nation and Métis communities occurs, nor will it affect the Province's duty to consult, as appropriate.

To date, Canadian courts have been reluctant to enforce Aboriginal or treaty rights in a manner that would disturb established third party ownership interests, and the Province is not aware of any Canadian case where a court has unwound a public offering (whether as a result of an alleged breach of a duty to consult or otherwise). Accordingly, the Province has indicated that it considers it unlikely that any rights of holders of common shares that have been sold by the Province would be adversely affected by a claim that the Province has breached its duty to consult in respect of this offering. It is nevertheless possible that one or more First Nation or Métis organizations may commence legal proceedings in relation to this offering, seeking remedies that could include injunctive relief, damages or rescission of this offering.

PROMOTERS

Hydro One Inc. has taken the initiative in founding and organizing Hydro One Limited and may therefore be considered a promoter of Hydro One Limited for the purposes of applicable securities legislation. Hydro One Inc. will be Hydro One Limited's wholly owned subsidiary and will not hold any common shares or preferred shares of Hydro One Limited following the closing of this offering. Hydro One Inc. will not receive any benefits or proceeds, directly or indirectly, in connection with this offering. See "Corporate Structure – Corporate Structure and Subsidiaries".

Neither Hydro One Limited nor the Province is of the view that the Province is a promoter of Hydro One Limited for the purpose of this offering. However, as the Province may be perceived as having taken the initiative in founding, organizing or substantially reorganizing the business of Hydro One and who, in connection thereof, received consideration from the proceeds of the sale of common shares, the Province may be considered a promoter of Hydro One Limited for the purposes of applicable securities legislation. Accordingly, the Province has provided a promoter certificate in this prospectus.

The net proceeds to the Province from this offering will be approximately $1,635,949,200 after deducting the Underwriters' Fee (assuming that 70% of the common shares offered under this prospectus are sold to institutional investors) but before deducting the expenses of this offering ($1,800,351,000 if the Over-Allotment Option is exercised in full). Immediately following the closing of this offering, and the other transactions described in "Principal and Selling Shareholder – Share Purchase Arrangements with the Province", the Province will hold between 507,813,684 and 508,393,333 common shares (between 499,663,684 and 500,243,333 common shares if the Over-Allotment Option is exercised in full), representing approximately 85% of Hydro One Limited's total issued and outstanding common shares (approximately 84% if the Over-Allotment Option is exercised in full) and 16,720,000 Series 1 preferred shares, representing 100% of the total issued and outstanding Series 1 preferred shares of Hydro One Limited. See "Principal and Selling Shareholder" and "Governance and Relationship with Principal Shareholder".

LEGAL PROCEEDINGS AND REGULATORY MATTERS

The Company is from time to time involved in legal proceedings of a nature considered normal to its business. Except as disclosed below, Hydro One believes that none of the litigation in which it is currently involved, or has been involved since the beginning of the most recently completed financial year, individually or in the aggregate, is material to its consolidated financial condition or results of operations.

In connection with the reorganization of Ontario Hydro, Hydro One Inc. succeeded Ontario Hydro as a party to various pending legal proceedings relating to the businesses, assets, real estate and employees transferred to it. Hydro One Inc. also assumed responsibility for future claims relating to the businesses, assets, real estate and employees acquired by Hydro One Inc. and arising out of events occurring prior to, as well as after, April 1, 1999. In addition to claims assumed by the Company, it is, from time to time, named as a defendant in legal actions arising in the normal course of business. There are currently no actions that are outstanding which are expected to have a material adverse effect on the Company.

LEGAL MATTERS

Certain legal matters in connection with this offering will be passed upon by Osler, Hoskin & Harcourt LLP on behalf of Hydro One Limited, by Torys LLP on behalf of the Selling Shareholder and by Blake, Cassels & Graydon LLP on behalf of the Underwriters. The partners and associates of each of Osler, Hoskin & Harcourt LLP, Torys LLP and Blake, Cassels & Graydon LLP beneficially own, directly or indirectly, less than one percent of the securities of Hydro One Limited or any associate or affiliate of Hydro One Limited.

INTERESTS OF MANAGEMENT AND OTHERS IN MATERIAL TRANSACTIONS

Other than as noted below and elsewhere in this prospectus, there are no material interests, direct or indirect, of any director or executive officer of the Company, any shareholder that beneficially owns, or controls or directs (directly or indirectly), more than 10% of any class or series of Hydro One Limited's outstanding voting securities, or any associate or affiliate of any of the foregoing persons, in any transaction within the three years before the date hereof that has materially affected or is reasonably expected to materially affect the Company.

Relationships with the Province and Other Parties

Overview

The Province will be Hydro One Limited's principal shareholder. The Ontario Energy Board is the principal regulator of Ontario's electricity industry. The Province appoints the board members of the Ontario Energy Board and fills any vacancies on the Ontario Energy Board. The Ontario Energy Board is obligated to implement approved directives of the Province concerning general policy and objectives to be pursued by the Ontario Energy Board and other directives aimed at addressing existing or potential abuses of market power by industry participants. The IESO, among other matters, directs the operation of the Ontario power system by balancing supply and demand of electricity and directing electricity flow and assumed the responsibility for forecasting supply and demand of electricity over the medium and long term to meet the needs of the province. The board of directors of the IESO, other than its Chief Executive Officer, is appointed by the Province in accordance with the regulations in effect from time to time under the Electricity Act.

Transfer Orders

The transfer orders pursuant to which Hydro One Inc. acquired Ontario Hydro's electricity transmission, distribution and energy services businesses as of April 1, 1999, did not transfer certain assets, rights, liabilities or obligations where the transfer would constitute a breach of the terms of any such asset, right, liability or obligation or a breach of any law or order. The transfer orders also did not transfer title to some assets located on Reserves. See "Risk Factors – Risk from Transfer of Assets Located on Reserves".

Hydro One is obligated under the transfer orders to manage both the assets held in trust until it has obtained all consents necessary to complete the transfer of title to these assets to Hydro One and the assets otherwise retained by the Ontario Electricity Financial Corporation that relate to Hydro One's businesses. Hydro One has entered into an agreement with the Ontario Electricity Financial Corporation under which it is obligated, in managing these assets, to take instructions from the Ontario Electricity Financial Corporation if Hydro One's actions could have a material adverse effect on the Ontario Electricity Financial Corporation. The Ontario Electricity Financial Corporation has retained the right to take control of and manage the assets, although it must notify and consult with Hydro One before doing so and must exercise its powers relating to the assets in a manner that will facilitate the operation of Hydro One's businesses. The consent of the Ontario Electricity Financial Corporation is also required prior to any disposition of these assets.

The Province also transferred officers, employees, assets, liabilities, rights and obligations of Ontario Hydro in a similar manner to its other successor transferees. These transfer orders include a dispute resolution mechanism to resolve any disagreement among the various transferees with respect to the transfer of specific assets, liabilities, rights or obligations.

The transfer orders do not contain any representations or warranties from the Province or the Ontario Electricity Financial Corporation with respect to the transferred officers, employees, assets, liabilities, rights and obligations. Furthermore, under the Electricity Act, the Ontario Electricity Financial Corporation was released from liability in respect of all assets and liabilities transferred by the transfer orders, except for liability under Hydro One's indemnity from the Ontario Electricity Financial Corporation. See "Governance and Relationship with Principal Shareholder – Ontario Electricity Financial Corporation Indemnity". By the terms of the transfer orders, each transferee indemnifies the Ontario Electricity Financial Corporation with respect to any assets and liabilities related to that transferee's business not effectively transferred, and is obligated to take all reasonable measures to complete the transfers where the transfers were not effective.

Hydro One has indemnified the Ontario Electricity Financial Corporation in respect of the damages, losses, obligations, liabilities, claims, encumbrances, penalties, interest, taxes, deficiencies, costs and expenses arising from matters relating to the Company's business and any failure by Hydro One to comply with its obligations to the Ontario Electricity Financial Corporation under agreements dated as of April 1, 1999. These obligations include obligations to employ the employees transferred to Hydro One under the transfer orders, make and remit employee source deductions (including tax withholding amounts, and employer contributions), manage the real and personal properties which the Ontario Electricity Financial Corporation continues to hold in trust or otherwise and take any necessary action to transfer all of these properties to the Company, to pay realty taxes and other costs, provide access to books and records and to assume other responsibilities in respect of the assets held by the Ontario Electricity Financial Corporation in trust for the Company.

AUDITORS, TRANSFER AGENT AND REGISTRAR

KPMG LLP, Chartered Professional Accountants, Licensed Public Accountants, located at 333 Bay Street, Suite 4600, Bay Adelaide Centre, Toronto, Ontario, M5H 2S5, is the auditor of Hydro One Limited and Hydro One Inc. and has confirmed that it is independent of Hydro One Limited and Hydro One Inc. within the meaning of the relevant rules and related interpretations prescribed by the relevant professional bodies in Canada and any applicable legislation or regulation.

The transfer agent and registrar for Hydro One Limited's common shares will be Computershare Investor Services Inc. at its principal office in Toronto, Ontario.

MATERIAL CONTRACTS

The following are the only material contracts, other than those contracts entered into in the ordinary course of business, which Hydro One Limited has entered into since the beginning of the last financial year before the date of this prospectus, entered into prior to such date but which contract is still in effect, or to which Hydro One Limited is or will become a party on or prior to the closing of this offering:

(a) the Underwriting Agreement, described under "Plan of Distribution";

(b) the Governance Agreement, described under "Governance and Relationship with Principal Shareholder"; and

(c) the Registration Rights Agreement, described under "Governance and Relationship with Principal Shareholder".

Copies of the foregoing material agreements, once executed, will be filed with the Canadian securities regulatory authorities and available on SEDAR at www.sedar.com. Prospective purchasers are encouraged to read the full text of such material agreements.

PURCHASERS' STATUTORY RIGHTS OF WITHDRAWAL AND RESCISSION

Securities legislation in certain of the provinces and territories of Canada provides purchasers with the right to withdraw from an agreement to purchase securities. This right may be exercised within two business days after receipt or deemed receipt of a prospectus and any amendment. In several of the provinces and territories of Canada, the securities legislation further provides a purchaser with remedies for rescission or, in some jurisdictions, revisions of the price or damages if the prospectus and any amendment contains a misrepresentation or is not delivered to the purchaser, provided that the remedies for rescission, revisions of the price or damages are exercised by the purchaser within the time limits prescribed by the securities legislation of the purchaser's province or territory. The purchaser should refer to any applicable provisions of the securities legislation of the purchaser's province or territory for the particulars of these rights or consult with a legal advisor.

Certain remedies, including statutory rights for rescission or damages, may not be available against the Province of Ontario as selling shareholder or as a promoter of Hydro One Limited. See "Risk Factors – Risks Relating to the Company's Relationship with the Province – Potential Difficulties in Enforcing Civil Liabilities Against the Province, Hydro One Limited and Other Persons". The purchaser should refer to any applicable provisions of the securities legislation of the purchaser's province or territory for the particulars of these rights or consult with a legal advisor.

EXEMPTIONS

Hydro One Inc. applied to the Ontario Securities Commission, as principal regulator, for a decision exempting Hydro One Limited from the requirements in section 3.2 of National Instrument 52-107 – *Acceptable Accounting Principles and Auditing Standards* which requires financial statements to be prepared in accordance with and disclosed in compliance with International Financial Reporting Standards. On August 27, 2015, the exemption was granted. The decision granting the exemption permits Hydro One Limited to prepare and present its financial statements required to be filed with the securities regulatory authorities in each of the provinces and territories of Canada (including financial statements included in any prospectus of Hydro One Limited) in accordance with U.S. GAAP until the earliest to occur of the following:

(a) if Hydro One Limited does not complete the pre-closing reorganization and this offering in the manner described in the decision granting the exemption;

(b) January 1, 2019;

(c) if, after all of the outstanding shares of Hydro One Inc. are acquired by Hydro One Limited, Hydro One Limited ceases to have activities subject to rate regulation, the first day of Hydro One Limited's financial year commencing after its ceases to have such activities subject to rate regulation; and

(d) the effective date prescribed by the International Accounting Standards Board for the mandatory application of a standard within International Financial Reporting Standards specific to entities with activities subject to rate regulation.

The exemptive relief was requested: (i) due to continuing uncertainty of accounting treatment and lack of a specific mandatory standard for entities with activities subject to rate regulation under International Financial Reporting Standards; (ii) because U.S. GAAP provides a more suitable set of accounting principles for entities with activities subject to rate regulation and is more consistent with those prescribed by the Ontario Energy Board in its Accounting Procedures Handbook for Electric Distribution Utilities; and (iii) to ensure consistency with and comparability to the financial statements of Hydro One Inc. which reports in U.S. GAAP, as well as Hydro One Limited's industry peers that currently report in U.S. GAAP.

Hydro One Limited has applied to the Ontario Securities Commission, as principal regulator, for exemptive relief from item 32.1(1)(b) of Form 41-101F1 as prescribed under National Instrument 41-101 – *General Prospectus Requirements* with respect to certain historical financial statements relating to Haldimand Hydro, Norfolk Power and Woodstock Hydro (collectively, the "**Non-Significant Acquisitions**"), which Hydro One Limited understands may be considered a primary business of the issuer pursuant to item 32.1(1)(b) of Form 41-101F1. The treatment of the acquired businesses as a primary business of the issuer would require Hydro One Limited to include in the prospectus audited financial statements for such businesses for the three completed financial years prior to the date of the prospectus, together with interim financial statements for the relevant interim periods. Hydro One Limited has applied for exemptive relief from the requirement to include audited financial statements relating to the Non-Significant Acquisitions for the three completed financial years prior to the date of the prospectus and interim financial statements relating to the Non-Significant Acquisitions for the relevant interim periods. The exemptions requested will be evidenced by the issuance of a receipt for this prospectus. In its application, Hydro One Limited made, among others, the following submissions:

- The Non-Significant Acquisitions are not significant or otherwise material having regard to the overall size and value of the Company's business and operations. Including the financial statements and related management's discussion and analysis disclosure with respect to the Non-Significant Acquisitions would be confusing to investors and would not add any additional meaningful disclosure.

- The historical financial statements of Hydro One Inc. are the more appropriate financial statements for the purposes of allowing investors to form a reasonable judgment regarding the Company and the securities offered under this prospectus.

- Haldimand Hydro and Norfolk Power were acquired, and Woodstock Hydro will be acquired, by Hydro One Inc., which is a reporting issuer. No financial statement disclosure was required to be provided by Hydro One Inc. for those businesses under the significant acquisition provisions of applicable securities laws. Further, if

Hydro One Inc. had been the issuer in this offering, it would not have been subject to the requirement to provide financial statements for the three businesses by virtue of item 32.1(2) of Form 41-101F1.

- Based on the foregoing, Hydro One Limited does not believe that the financial statements in respect of which the relief was requested are necessary for the prospectus to contain full, true and plain disclosure of all material facts with respect to the common shares.

AGENT FOR SERVICE OF PROCESS IN CANADA

Kathryn Jackson, a director of Hydro One Limited, resides outside of Canada. Ms. Jackson has appointed Hydro One Limited, 483 Bay Street, 8th Floor, South Tower, Toronto, Ontario, M5G 2P5, Canada, as agent for service of process in Canada. Purchasers are advised that it may not be possible for investors to enforce judgments obtained in Canada against any person or company that is incorporated, continued or otherwise organized under the laws of a foreign jurisdiction or resides outside of Canada, even if the party has appointed an agent for service of process.

GLOSSARY

"**$**" or "**dollar**" means Canadian Dollars.

"**1933 Act**" means the *United States Securities Act of 1933*, as amended.

"**allowable capital loss**" has the meaning given to such term set out under "Certain Canadian Federal Income Tax Considerations – Taxation of Holders of Common Shares – Dispositions".

"**Board**" means the Board of Directors of Hydro One Limited.

"**BPSAA**" has the meaning given to such term set out under "Executive Compensation – Components of Compensation – Transitional Arrangements".

"**BPSECA**" has the meaning given to such term set out under "Executive Compensation – Components of Compensation – Transitional Arrangements".

"**CAGR**" means compound annual growth rate.

"**CDM**" means conservation and demand management.

"**Closing Date**" has the meaning given to such term set out on the cover page of this prospectus.

"**Code of Conduct**" has the meaning given to such term set out under "Directors and Management of the Company – Ethical Business Conduct".

"**common shares**" has the meaning given to such term set out on the cover page of this prospectus.

"**Corporate Governance Guidelines**" has the meaning given to such term set out under "Directors and Management of the Company – Board Renewal".

"**Council**" means the Premier's Advisory Council on Government Assets.

"**demand registration**" has the meaning given to such term set out under "Governance and Relationship with Principal Shareholder – Province's Ownership of Common Shares and Preferred Shares – Registration Rights Agreement".

"**Diversity Policy**" has the meaning given to such term set out under "Directors and Management of the Company – Diversity".

"**DSU**" has the meaning given to such term set out under "Executive Compensation – Long Term Incentive Plan – Authorized Shares".

"**Election Meeting**" has the meaning given to such term set out under "Directors and Management of the Company – Majority Voting Policy".

"**Electricity Act**" has the meaning given to such term set out under "Electricity Industry – Ontario's Electricity Industry – Evolution".

"**EPSCA**" means the Electrical Power Sector Construction Association.

"**FSIA**" means the *United States Foreign Sovereign Immunities Act of 1976*.

"**Governance Agreement**" means the governance agreement to be entered into as of the Closing Date between Hydro One Limited and the Province.

"**Grant Date**" has the meaning given to such term set out under "Share Grant Plans".

"**GWh**" means gigawatt-hours.

"**Haldimand Hydro**" means Haldimand County Utilities Inc.

"**Holder**" has the meaning given to such term set out under "Certain Canadian Federal Income Tax Considerations".

"**Hugessen**" has the meaning given to such term set out under "Executive Compensation – Compensation Consultant".

"**Human Resources Committee**" has the meaning given to such term set out under "Executive Compensation – Compensation Governance – Human Resources Committee".

"**Hydro One**" or the "**Company**" refer to Hydro One Limited, Hydro One Inc. and their subsidiaries taken together as a whole as they will exist immediately following the time of closing of this offering and the related Pre-Closing Transactions.

"**Hydro One Defined Benefit Pension Plan**" has the meaning given to such term set out under "Executive Compensation – Pension Plan Benefits – Existing Pension Arrangements".

"**Hydro One Entitlements**" has the meaning given to such term set out under "Governance and Relationship with Principal Shareholder – Ontario Electricity Financial Corporation Indemnity".

"**IESO**" means the Independent Electricity System Operator.

"**kV**" means kilovolt.

"**kW**" means kilowatt.

"**kWh**" means kilowatt hour.

"**LDC**" has the meaning given to such term set out under "Electricity Industry – Ontario's Electricity Industry – Evolution".

"**Liquidity Facility**" has the meaning given to such term set out under "Pre-Closing Transactions – Hydro One Inc. Credit Facilities".

"**Long Term Incentive Plan**" or "**LTIP**" means Hydro One's Long Term Incentive Plan.

"**Majority Withheld Vote**" has the meaning given to such term set out under "Directors and Management of the Company – Majority Voting Policy".

"**management**" has the meaning given to such term set out under "Meaning of Certain References".

"**Market Rules**" means the rules made under section 32 of the Electricity Act that are administered by the IESO.

"**Micro FIT**" means the micro feed-in-tariff program of the IESO.

"**MW**" means megawatt.

"**NEOs**" has the meaning given to such term set out under "Executive Compensation – Compensation Discussion and Analysis".

"**NERC**" has the meaning given to such term set out under "Electricity Industry – Ontario's Electricity Industry – Evolution – IESO".

HYDRO ONE LIMITED

INDEPENDENT AUDITORS' REPORT

To the Board of Directors of Hydro One Limited

We have audited the accompanying financial statements of Hydro One Limited, which comprise the balance sheet as at August 31, 2015, statements of changes in equity and cash flows for the one day period ended August 31, 2015 and notes, comprising a summary of significant accounting policies and other explanatory information.

Management's Responsibility for the Financial Statements

Management is responsible for the preparation and fair presentation of these financial statements in accordance with United States Generally Accepted Accounting Principles, and for such internal control as management determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

Auditors' Responsibility

Our responsibility is to express an opinion on these financial statements based on our audit. We conducted our audit in accordance with Canadian generally accepted auditing standards. Those standards require that we comply with ethical requirements and plan and perform the audit to obtain reasonable assurance about whether the financial statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the financial statements. The procedures selected depend on our judgment, including the assessment of the risks of material misstatement of the financial statements, whether due to fraud or error. In making those risk assessments, we consider internal control relevant to the entity's preparation and fair presentation of the financial statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management, as well as evaluating the overall presentation of the financial statements.

We believe that the audit evidence we have obtained in our audit is sufficient and appropriate to provide a basis for our audit opinion.

Opinion

In our opinion, the Hydro One Limited financial statements present fairly, in all material respects, the financial position of Hydro One Limited as at August 31, 2015 and its results of operations and its cash flows for the one day period ended August 31, 2015 in accordance with United States Generally Accepted Accounting Principles.

1. DESCRIPTION OF THE BUSINESS

Hydro One Limited (Hydro One or the Company), was incorporated on August 31, 2015, under the *Business Corporations Act* (Ontario) and issued 100,000 common shares to the Province of Ontario (the Province) on that date. The Company was formed for the purpose of completing a public offering of its common shares.

The Company's registered and head offices are located at 483 Bay Street, 8th Floor, South Tower, Toronto, Ontario M5G 2P5.

2. SIGNIFICANT ACCOUNTING POLICIES

Basis of Accounting

These Financial Statements are prepared and presented in accordance with United States (US) Generally Accepted Accounting Principles (GAAP) and in Canadian dollars.

Hydro One performed an evaluation of subsequent events through to October 28, 2015, the date these Financial Statements were available to be issued, to determine whether any events or transactions warranted recognition and disclosure in these Financial Statements. See Note 4 – Subsequent Events.

Cash

Cash consists of cash on hand.

3. SHARE CAPITAL

Common Shares

The Company is authorized to issue an unlimited number of common shares. The Company has 100,000 issued and outstanding common shares.

4. SUBSEQUENT EVENTS

Equity Compensation Plans

On October 8, 2015 the Company adopted two share grant plans, one for the benefit of employees represented by the Power Workers' Union (the PWU Plan) and one for the benefit of The Society of Energy Professionals (the Society Plan, and together with the PWU Plan, the Plans). The Plans provide for the issuance of common shares to certain employees represented by these unions for up to a twelve year period commencing April 1, 2017 for the PWU Plan and commencing April 1, 2018 for the Society Plan.

Public Offering

The Company filed a final prospectus by way of a secondary offering on October 28, 2015 for the sale to the public of 81,100,000 common shares held by the Province, subject to the terms of an underwriting agreement. The underwriters of the Public Offering will be granted an over-allotment option, exercisable, in whole or in part, at the sole discretion of the underwriters, for a period of 30 days from the closing of the Public Offering, to purchase up to an additional 8,150,000 common shares. Immediately following the closing of the Public Offering and the other transactions contemplated therein, the Company will have 595,000,000 common shares issued and outstanding. The Company will not receive any proceeds from this Public Offering.

1. DESCRIPTION OF THE BUSINESS

Hydro One Inc. (Hydro One or the Company) was incorporated on December 1, 1998, under the *Business Corporations Act* (Ontario) and is wholly owned by the Province of Ontario (Province). The principal businesses of Hydro One are the transmission and distribution of electricity to customers within Ontario. The electricity rates of these businesses are regulated by the Ontario Energy Board (OEB).

The demand for electricity generally follows normal weather-related variations, and therefore the Company's energy-related revenues, all other things being equal, will tend to be higher in the first and third quarters than in the second and fourth quarters.

2. SIGNIFICANT ACCOUNTING POLICIES

Basis of Consolidation

These unaudited interim Consolidated Financial Statements include the accounts of the Company and its wholly owned subsidiaries, including Hydro One Networks Inc. (Hydro One Networks), Hydro One Remote Communities Inc. (Hydro One Remote Communities), Hydro One Brampton Networks Inc. (Hydro One Brampton), Hydro One Telecom Inc., Hydro One Lake Erie Link Management Inc., Municipal Billing Services Inc. (previously Hydro One Lake Erie Link Company Inc.), Norfolk Power Distribution Inc. (NPDI), Norfolk Energy Inc. and Hydro One B2M Holdings Inc. Intercompany transactions and balances have been eliminated.

Basis of Accounting

These unaudited interim Consolidated Financial Statements are prepared and presented in accordance with United States (US) Generally Accepted Accounting Principles (GAAP) and in Canadian dollars. These unaudited interim Consolidated Financial Statements do not contain all disclosures required by US GAAP for annual audited consolidated financial statements. Accordingly, they should be read in conjunction with the Company's annual Consolidated Financial Statements as at, and for the year ended December 31, 2014. In particular, the Company's significant accounting policies are presented in Note 2 to the annual Consolidated Financial Statements and have been applied consistently in the preparation of these unaudited interim Consolidated Financial Statements. In the opinion of management, these unaudited interim Consolidated Financial Statements include all adjustments that are necessary to fairly state the financial position and results of operations of Hydro One as at, and for the three and six months ended June 30, 2015. Financial results for this interim period are not necessarily indicative of results that may be expected for any other interim periods or for the year ending December 31, 2015.

Hydro One performed an evaluation of subsequent events through to August 11, 2015, the date these unaudited interim Consolidated Financial Statements were issued, to determine whether any events or transactions warranted recognition and disclosure in these unaudited interim Consolidated Financial Statements. See Note 19 – Subsequent Events.

Rate Setting

The Company's Transmission Business includes the transmission business of Hydro One Networks, as well as its ownership interest in B2M Limited Partnership (B2M LP). The Company's consolidated Distribution Business includes the distribution business of Hydro One Networks, as well as the subsidiaries Hydro One Brampton, Hydro One Remote Communities, and NPDI.

Transmission

On September 16, 2014, Hydro One Networks filed an application with the OEB for 2015 and 2016 transmission rates. On January 8, 2015, the OEB approved the 2015 Hydro One transmission rates revenue requirement, excluding the B2M LP revenue requirement, of $1,477 million and the 2016 revenue requirement of $1,516 million, subject to adjustments for the cost of capital parameters.

On October 24, 2014, B2M LP filed an application with the OEB for an interim transmission rate, seeking approval for a revenue requirement of $42 million in 2015. The interim Rate Order was approved by the OEB on December 11, 2014. On March 30, 2015, B2M LP filed a full cost-of-service application for 2015-2019 transmission rates. In its application, B2M LP is seeking approval of a revenue requirement of $43 million for 2015, $45 million for 2016, $46 million for 2017, $47 million for 2018, and $47 million for 2019.

On June 30, 2015, B2M LP was re-financed with debt bearing interest at a lower coupon rate. This has lowered the B2M LP revenue requirement. As a result of the reduced cost of debt, B2M LP's requested revenue requirement was amended to $39 million for 2015, $36 million for 2016, $37 million for 2017, $38 million for 2018, and $37 million for 2019. As part of its application, B2M LP is seeking the recovery of its initial start-up costs totalling $8 million over the 2016 to 2019 test years at a rate of $2 million per year.

Distribution

On December 19, 2013, Hydro One Networks filed a 2015-2019 distribution custom rate application with the OEB, for rates effective January 1 of each test year. On December 18, 2014, the OEB issued a Decision and interim Rate Order approving the 2014 distribution rates as interim 2015 rates effective January 1, 2015. On March 12, 2015, the OEB issued a Decision and Rate Order approving a revenue requirement of $1,326 million for 2015, $1,435 million for 2016 and $1,491 million for 2017. The rates for 2015 are effective on May 1, 2015, and are retroactive to January 1, 2015. The rates for 2016 and 2017 are estimates that may change based on 2016 and 2017 Rate Orders. On April 23, 2015, the Final Rate Order was approved by the OEB.

On April 23, 2014, Hydro One Brampton Networks filed a cost-of-service application with the OEB for 2015 distribution rates. The 2015 distribution rate application was seeking the approval of a revenue requirement of approximately $74 million for 2015. In its application, Hydro One Brampton Networks also requested OEB approval for retail transmission service rates and the approval of rate riders to dispose of certain deferral and variance accounts. On December 18, 2014, the OEB approved a revenue requirement of $72 million. On January 15, 2015, the OEB issued its final Rate Order approving the application.

On September 24, 2014, Hydro One Remote Communities filed an Incentive Regulation Mechanism (IRM) application with the OEB for 2015 rates, seeking approval for increased base rates for the distribution and generation of electricity of 1.7%. On March 19, 2015, the OEB approved an increase of approximately 1.6% to basic rates for the distribution and generation of electricity, with an effective date of May 1, 2015.

3. NEW ACCOUNTING PRONOUNCEMENTS

Recent Accounting Guidance Not Yet Adopted

In January 2015, the Financial Accounting Standards Board (FASB) issued Accounting Standards Update (ASU) 2015-01, Income Statement – Extraordinary and Unusual Items (Subtopic 225-20): Simplifying Income Statement Presentation by Eliminating the Concept of Extraordinary Items. This ASU eliminates the requirements for reporting entities to consider whether an underlying event or transaction is extraordinary and to show the item separately in the income statement. This ASU is effective for fiscal years, and interim periods within these years, beginning after December 15, 2015. The adoption of this ASU is not anticipated to have an impact on the company's consolidated financial statements.

In February 2015, the FASB issued ASU 2015-02, Consolidation (Topic 810): Amendments to the Consolidation Analysis. This ASU provides guidance about the analysis that a reporting entity must perform to determine whether it should consolidate certain types of legal entities. This ASU is effective for fiscal years, and interim periods within those years, beginning after December 15, 2015. The Company is currently assessing the impact of adoption of ASU 2015-02 on its consolidated financial statements.

In April 2015, the FASB issued ASU 2015-03, Interest – Imputation of Interest (Subtopic 835-30): Simplifying the Presentation of Debt Issuance Costs. This ASU requires that debt issuance costs related to a recognized debt liability be presented in the balance sheet as a direct deduction from the carrying amount of that debt liability. The recognition and measurement guidance for debt issuance costs are not affected. This ASU is effective for fiscal years, and interim periods within those years, beginning after December 15, 2015. Upon adoption of this ASU in the first quarter of 2016, the Company's deferred debt issuance costs that are currently presented under other long-term assets will be reclassified as a deduction from the carrying amount of long-term debt.

In April 2015, the FASB issued ASU 2015-04, Compensation – Retirement Benefits (Topic 715): Practical Expedient for the Measurement Date of an Employer's Defined Benefit Obligation and Plan Assets. This ASU permits an entity with a fiscal year-end that does not coincide with a month-end and an entity that has a significant event in an interim period that calls for a remeasurement of defined benefit plan assets and obligations to measure the defined benefit plan assets and obligations using the month-end that is closest to the entity's fiscal year-end. This ASU is effective for fiscal years, and interim periods within these years, beginning after December 15, 2015. The adoption of this ASU is not anticipated to have an impact on the company's consolidated financial statements.

In April 2015, the FASB issued ASU 2015-05, Intangibles – Goodwill and Other – Internal-Use Software (Subtopic 350-40): Customer's Accounting for Fees Paid in a Cloud Computing Arrangement. This ASU provides guidance to customers about whether a cloud computing arrangement includes a software license, as well as the related accounting for the arrangement. This ASU is effective for fiscal years, and interim periods within these years, beginning after December 15, 2015. The Company is currently assessing the impact of adoption of ASU 2015-05 on its consolidated financial statements.

4. BUSINESS COMBINATIONS

Acquisition of Haldimand Hydro

On June 30, 2015, Hydro One acquired 100% of the common shares of Haldimand County Utilities Inc. (Haldimand Hydro), an electricity distribution company located in southwestern Ontario. The total purchase price for Haldimand Hydro is approximately $65 million.

The following table summarizes the preliminary determination of the fair value of the assets acquired and liabilities assumed recognized at the acquisition date:

(millions of Canadian dollars)	
Cash and cash equivalents	5
Working capital	4
Property, plant and equipment	48
Deferred income tax assets	1
Goodwill	26
Long-term debt	(16)
Regulatory liabilities	(3)
	65

The preliminary determination of the fair value of assets acquired and liabilities assumed has been based upon the most recent available information for Haldimand Hydro, management's preliminary estimates and certain assumptions with respect to the fair values of the assets acquired and liabilities assumed.

The Company has not yet completed the final fair value measurements as at June 30, 2015. In addition, the purchase agreement provides for final purchase price adjustments based on agreed working capital and other balances at the acquisition date which have not yet been determined. The Company will continue to review information and perform further analysis prior to finalizing the total purchase price and the fair values of the assets acquired and liabilities assumed. The actual total purchase price and the fair values of the assets acquired and liabilities assumed may differ from the amounts above.

Goodwill arising from the Haldimand Hydro acquisition consists largely of the synergies and economies of scale expected from combining the operations of Hydro One and Haldimand Hydro. All of the goodwill was assigned to Hydro One's Distribution Business segment. None of the goodwill recognized is expected to be deductible for income tax purposes.

All costs related to the acquisition have been expensed through the consolidated statements of operations and comprehensive income. The disclosure of Haldimand Hydro's pro forma information has been deemed immaterial to the Company's consolidated financial results for the three and six months ended June 30, 2015.

Acquisition of Norfolk Power

On August 29, 2014, Hydro One acquired 100% of the common shares of Norfolk Power Inc. (Norfolk Power), an electricity distribution and telecom company located in southwestern Ontario. The total purchase price for Norfolk Power, net of the long-term debt assumed and adjusted for working capital and other closing adjustments, was approximately $68 million. The purchase agreement provided for final purchase price adjustments based on agreed working capital and other balances at the acquisition date. The purchase price has been finalized during the six months ended June 30, 2015, with no adjustments to the preliminary purchase price allocation as disclosed at December 31, 2014.

Woodstock Hydro Purchase Agreement

On May 21, 2014, Hydro One reached an agreement with the City of Woodstock to acquire 100% of the common shares of Woodstock Hydro Holdings Inc. (Woodstock Hydro), an electricity distribution company located in southwestern Ontario. The acquisition is pending a regulatory decision from the OEB. The purchase price for Woodstock Hydro will be approximately $29 million, subject to final closing adjustments. The transaction is anticipated to be completed in 2015.

5. PROVISION FOR PAYMENTS IN LIEU OF CORPORATE INCOME TAXES

The current provision for payments in lieu of corporate income taxes (PILs) is remitted to, or received from, the Ontario Electricity Financial Corporation (OEFC). At June 30, 2015, $10 million due from the OEFC was included in due from related parties on the interim Consolidated Balance Sheet (December 31, 2014 – $39 million). The total provision for PILs using the liability method of accounting includes deferred income taxes that are not expected to be recovered from ratepayers. Deferred PILs balances expected to be recovered from ratepayers result in regulatory assets and liabilities to reflect the anticipated recovery or disposition of these balances within future electricity rates.

For the six months ended June 30, 2015, the Company's overall effective tax rate of 15.49% differed from the enacted statutory rate of 26.50% primarily due to the temporary differences included in the rate-setting process, such as capital cost allowance in excess of depreciation, deductions for pension payments made in excess of amounts expensed for accounting purposes, and interest deducted for tax purposes in excess of interest expensed for accounting purposes.

6. ACCOUNTS RECEIVABLE

(millions of Canadian dollars)	**June 30, 2015**	**December 31, 2014**
Accounts receivable – billed	498	496
Accounts receivable – unbilled	591	586
Accounts receivable, gross	1,089	1,082
Allowance for doubtful accounts	(76)	(66)
Accounts receivable, net	1,013	1,016

The following tables show the movements in the allowance for doubtful accounts for the six months ended June 30, 2015 and the year ended December 31, 2014:

Six months ended June 30, 2015 (millions of Canadian dollars)	
Allowance for doubtful accounts – January 1, 2015	(66)
Write-offs	18
Additions to allowance for doubtful accounts	(28)
Allowance for doubtful accounts – June 30, 2015	(76)

Year ended December 31, 2014 (millions of Canadian dollars)	
Allowance for doubtful accounts – January 1, 2014	(36)
Write-offs	24
Additions to allowance for doubtful accounts	(54)
Allowance for doubtful accounts – December 31, 2014	(66)

7. DEBT AND CREDIT AGREEMENTS

Short-Term Notes

Hydro One meets its short-term liquidity requirements in part through the issuance of commercial paper under its Commercial Paper Program which has a maximum authorized amount of $1 billion. These short-term notes are denominated in Canadian dollars with varying maturities not exceeding 365 days. Hydro One had no commercial paper borrowings outstanding as at June 30, 2015 or December 31, 2014.

Hydro One has a $1.5 billion committed and unused revolving standby credit facility with a syndicate of banks, maturing in June 2020. If used, interest on the facility would apply based on Canadian benchmark rates. This credit facility is unsecured and supports the Company's Commercial Paper Program. The Company may use the credit facility for general corporate purposes, including meeting short-term funding requirements. The obligation of each lender to make any credit extension to the Company under its credit facility is subject to various conditions including, among other things, that no event of default has occurred or would result from such credit extension.

Long-Term Debt

The Company issues notes for long-term financing under its Medium-Term Note (MTN) Program. The maximum authorized principal amount of notes issuable under this program is $3 billion. At June 30, 2015, $837 million remained available for issuance until October 2015.

The following table presents the outstanding long-term debt at June 30, 2015 and December 31, 2014:

(millions of Canadian dollars)	**June 30, 2015**	**December 31, 2014**
Notes and debentures	9,289	8,923
Add: Unrealized mark-to-market loss[1]	1	2
Less: Long-term debt payable within one year	(1,017)	(552)
Long-term debt	8,273	8,373

[1] The unrealized mark-to-market loss relates to $250 million of the Series 21 notes due 2015. The unrealized mark-to-market loss is offset by a $1 million (December 31, 2014 – $2 million) unrealized mark-to-market gain on the related fixed-to-floating interest-rate swap agreements, which are accounted for as fair value hedges. See Note 8 – Fair Value of Financial Instruments and Risk Management for details of fair value hedges.

On April 30, 2015, Hydro One issued $350 million notes (MTN Series 33 notes) under its MTN Program, with a maturity date of April 30, 2020 and a coupon rate of 1.62%.

Long-term debt totalling $16 million was assumed by Hydro One as part of the Haldimand Hydro acquisition. It has been classified as current at June 30, 2015, and has been repaid in July 2015.

The long-term debt is unsecured and denominated in Canadian dollars. The long-term debt is summarized by the number of years to maturity in Note 8 – Fair Value of Financial Instruments and Risk Management.

8. FAIR VALUE OF FINANCIAL INSTRUMENTS AND RISK MANAGEMENT

Fair value is considered to be the exchange price in an orderly transaction between market participants to sell an asset or transfer a liability at the measurement date. The fair value definition focuses on an exit price, which is the price that would be received in the sale of an asset or the amount that would be paid to transfer a liability.

Hydro One classifies its fair value measurements based on the following hierarchy, as prescribed by the accounting guidance for fair value, which prioritizes the inputs to valuation techniques used to measure fair value into three levels:

Level 1 inputs are unadjusted quoted prices in active markets for identical assets or liabilities that Hydro One has the ability to access. An active market for the asset or liability is one in which transactions for the asset or liability occur with sufficient frequency and volume to provide ongoing pricing information.

Level 2 inputs are those other than quoted market prices that are observable, either directly or indirectly, for an asset or liability. Level 2 inputs include, but are not limited to, quoted prices for similar assets or liabilities in an active market, quoted prices for identical or similar assets or liabilities in markets that are not active and inputs other than quoted market prices that are observable for the asset or liability, such as interest-rate curves and yield curves observable at commonly quoted intervals, volatilities, credit risk and default rates. A Level 2 measurement cannot have more than an insignificant portion of the valuation based on unobservable inputs.

Level 3 inputs are any fair value measurements that include unobservable inputs for the asset or liability for more than an insignificant portion of the valuation. A Level 3 measurement may be based primarily on Level 2 inputs.

Non-Derivative Financial Assets and Liabilities

At June 30, 2015 and December 31, 2014, the Company's carrying amounts of accounts receivable, due from related parties, cash and cash equivalents, bank indebtedness, accounts payable, and due to related parties are representative of fair value because of the short-term nature of these instruments.

Fair Value Measurements of Long-Term Debt

The fair values and carrying values of the Company's long-term debt at June 30, 2015 and December 31, 2014 are as follows:

	June 30, 2015		December 31, 2014	
(millions of Canadian dollars)	Carrying Value	Fair Value	Carrying Value	Fair Value
Long-term debt				
$250 million of MTN Series 21 notes[1]	251	251	252	252
$50 million of MTN Series 33 notes[1]	50	50	–	–
Other notes and debentures[2]	8,989	10,394	8,673	10,159
	9,290	10,695	8,925	10,411

[1] The fair value of $250 million of the MTN Series 21 notes and $50 million of the MTN Series 33 notes subject to hedging is primarily based on changes in the present value of future cash flows due to a change in the yield in the swap market for the related swap (hedged risk).

[2] The fair value of other notes and debentures, and the portions of the MTN Series 21 notes and the MTN Series 33 notes that are not subject to hedging, represents the market value of the notes and debentures and is based on unadjusted period-end market prices for the same or similar debt of the same remaining maturities.

Fair Value Measurements of Derivative Instruments

At June 30, 2015, the Company had interest-rate swaps totalling $300 million (December 31, 2014 – $250 million) that were used to convert fixed-rate debt to floating-rate debt. These swaps are classified as fair value hedges. The Company's fair value hedge exposure was equal to approximately 3% (December 31, 2014 – 3%) of its total long-term debt of $9,290 million (December 31, 2014 – $8,925 million). At June 30, 2015, the Company had the following interest-rate swaps designated as fair value hedges:

(a) two $125 million fixed-to-floating interest-rate swap agreements to convert $250 million of the $500 million MTN Series 21 notes maturing September 11, 2015 into three-month variable rate debt; and

(b) a $50 million fixed-to-floating interest-rate swap agreement to convert $50 million of the $350 million MTN Series 33 notes maturing April 30, 2020 into three-month variable rate debt.

At June 30, 2015, the Company also had interest-rate swaps and forward rate agreements with a total notional value of $470 million (December 31, 2014 – $409 million) classified as undesignated contracts. The undesignated contracts consist of the following:

(c) a $150 million floating-to-fixed interest-rate swap agreement that locks in the floating rate the Company pays on a portion of the above fixed-to-floating interest-rate swaps from December 11, 2014 to September 11, 2015;

(d) a $137 million floating-to-fixed interest-rate swap agreement that locks in the floating rate the Company pays on $137 million of the $228 million floating-rate MTN Series 31 notes from December 22, 2014 to December 21, 2015;

(e) a $30 million floating-to-fixed interest-rate swap agreement that locks in the floating rate the Company pays on $30 million of the $50 million floating-rate MTN Series 27 notes from March 3, 2015 to December 3, 2015;

(f) a $30 million floating-to-fixed interest-rate swap agreement that locks in the floating rate the Company pays on the $50 million floating-rate MTN Series 22 notes from January 26, 2015 to July 24, 2015;

(g) a $20 million floating-to-fixed interest-rate swap agreement that locks in the floating rate the Company pays on $20 million of the $50 million floating-rate MTN Series 27 notes from June 3, 2015 to December 3, 2015;

(h) a $91 million floating-to-fixed interest-rate swap agreement that locks in the floating rate the Company pays on $91 million of the $228 million floating-rate MTN Series 31 notes from June 22, 2015 to December 21, 2015; and

(i) three interest-rate swaps with a total notional value of $12 million that were assumed as part of the Norfolk Power acquisition. These swaps consist of $8 million and $2 million floating-to-fixed interest-rate swap agreements maturing on September 20, 2029, and a $2 million floating-to-fixed interest-rate swap agreement maturing on September 20, 2019.

Fair Value Hierarchy

The fair value hierarchy of financial assets and liabilities at June 30, 2015 and December 31, 2014 was as follows:

June 30, 2015 (millions of Canadian dollars)	Carrying Value	Fair Value	Level 1	Level 2	Level 3
Assets:					
Cash and cash equivalents	270	270	270	–	–
Derivative instruments					
Fair value hedges – interest-rate swaps	1	1	–	1	–
	271	271	270	1	–
Liabilities:					
Derivative instruments					
Undesignated contracts – interest-rate swaps	3	3	–	3	–
Long-term debt	9,290	10,695	–	10,695	–
	9,293	10,698	–	10,698	–

December 31, 2014 (millions of Canadian dollars)	Carrying Value	Fair Value	Level 1	Level 2	Level 3
Assets:					
Cash and cash equivalents	100	100	100	–	–
Derivative instruments					
Fair value hedges – interest-rate swaps	2	2	–	2	–
	102	102	100	2	–
Liabilities:					
Bank indebtedness	2	2	2	–	–
Derivative instruments					
Undesignated contracts – interest-rate swaps	3	3	–	3	–
Long-term debt	8,925	10,411	–	10,411	–
	8,930	10,416	2	10,414	–

Cash and cash equivalents include cash and short-term investments. At June 30, 2015, short-term investments consisted of bankers' acceptances and money market funds totalling $238 million (December 31, 2014 – $nil). The carrying values are representative of fair value because of the short-term nature of these instruments.

The fair value of the derivative instruments is determined using inputs other than quoted prices that are observable for these assets. The fair value is primarily based on the present value of future cash flows using a swap yield curve to determine the assumptions for interest rates.

The fair value of the hedged portion of the long-term debt is primarily based on the present value of future cash flows using a swap yield curve to determine the assumption for interest rates. The fair value of the unhedged portion of the long-term debt is based on unadjusted period-end market prices for the same or similar debt of the same remaining maturities.

There were no significant transfers between any of the fair value levels during the six months ended June 30, 2015 or the year ended December 31, 2014.

Risk Management

Exposure to market risk, credit risk and liquidity risk arises in the normal course of the Company's business.

Market Risk

Market risk refers primarily to the risk of loss that results from changes in commodity prices, foreign exchange rates and interest rates. The Company does not have commodity risk. The Company does have foreign exchange risk as it enters into agreements to purchase materials and equipment associated with capital programs and projects that are settled in foreign currencies. This foreign exchange risk is not material, although the Company could in the future decide to issue foreign currency-denominated debt which would be hedged back to Canadian dollars consistent with its risk management policy.

The Company uses a combination of fixed and variable-rate debt to manage the mix of its debt portfolio. The Company also uses derivative financial instruments to manage interest-rate risk. The Company utilizes interest-rate swaps, which are typically designated as fair value hedges, as a means to manage its interest rate exposure to achieve a lower cost of debt. In addition, the Company may utilize interest-rate derivative instruments to lock in interest-rate levels in anticipation of future financing.

Fair Value Hedges

For derivative instruments that are designated and qualify as fair value hedges, the gain or loss on the derivative as well as the offsetting loss or gain on the hedged item attributable to the hedged risk are recognized in the Consolidated Statements of Operations and Comprehensive Income. The net unrealized loss (gain) on the hedged debt and the related interest-rate swaps for the three and six months ended June 30, 2015 and 2014 are included in financing charges as follows:

	Three months ended June 30		Six months ended June 30	
(millions of Canadian dollars)	**2015**	**2014**	**2015**	**2014**
Unrealized loss (gain) on hedged debt	(1)	(3)	(1)	(5)
Unrealized loss (gain) on fair value interest-rate swaps	1	3	1	5
Net unrealized loss (gain)	–	–	–	–

At June 30, 2015, Hydro One had $300 million (December 31, 2014 – $250 million) of notional amounts of fair value hedges outstanding related to interest-rate swaps, with assets at fair value of $1 million (December 31, 2014 – $2 million). During the six months ended June 30, 2015 and 2014, there was no significant impact on the results of operations as a result of any ineffectiveness attributable to fair value hedges.

Credit Risk

Financial assets create a risk that a counterparty will fail to discharge an obligation, causing a financial loss. At June 30, 2015 and December 31, 2014, there were no significant concentrations of credit risk with respect to any class of financial assets. The Company's revenue is earned from a broad base of customers. As a result, Hydro One did not earn a significant amount of revenue from any single customer. At June 30, 2015 and December 31, 2014, there was no significant accounts receivable balance due from any single customer.

At June 30, 2015, the Company's provision for bad debts was $76 million (December 31, 2014 – $66 million). Adjustments and write-offs were determined on the basis of a review of overdue accounts, taking into consideration historical experience. At June 30, 2015, approximately 7% of the Company's net accounts receivable were aged more than 60 days (December 31, 2014 – 6%).

Hydro One manages its counterparty credit risk through various techniques including: entering into transactions with highly-rated counterparties; limiting total exposure levels with individual counterparties consistent with the Company's Board-approved Credit Risk Policy; entering into master agreements which enable net settlement and the contractual right of offset; and monitoring the financial condition of counterparties. Counterparty credit limits are based on an internal credit review that considers a variety of factors, including the results of a scoring model, leverage, liquidity, profitability, credit ratings and risk management capabilities. The determination of credit exposure for a particular counterparty is the sum of current exposure plus the potential future exposure with that counterparty. The current exposure is calculated as the sum of the principal value of money market exposures and the market value of all contracts that have a positive mark-to-market position on the measurement date. The Company would offset the positive market values against negative values with the same counterparty only where permitted by the existence of a legal netting agreement such as an International Swap Dealers Association master agreement. The potential future exposure represents a safety margin to protect against future fluctuations of interest rates, currencies, equities, and commodities. It is calculated based on factors developed by the Bank of International Settlements, following extensive historical analysis of random fluctuations of interest rates and currencies. To the extent that a counterparty's margining thresholds are exceeded, the counterparty is required to post collateral with the Company as specified in each agreement. The Company monitors current and forward credit exposure to counterparties both on an individual and an aggregate basis. The Company's credit risk for accounts receivable is limited to the carrying amounts on the interim Consolidated Balance Sheets.

Derivative financial instruments result in exposure to credit risk since there is a risk of counterparty default. The credit exposure of derivative contracts, before collateral, is represented by the fair value of contracts at the reporting date. At June 30, 2015, the counterparty credit risk exposure on the fair value of these interest-rate swap contracts was $3 million (December 31, 2014 – $3 million). At June 30, 2015, Hydro One's credit exposure for all derivative instruments, and applicable payables and receivables, had a credit rating of investment grade, with five financial institutions as the counterparties.

Liquidity Risk

Liquidity risk refers to the Company's ability to meet its financial obligations as they come due. Hydro One meets its short-term liquidity requirements using cash and cash equivalents on hand, funds from operations, the issuance of commercial paper, and the revolving standby credit facility of $1,500 million. The short-term liquidity under the Commercial Paper Program, and anticipated levels of funds from operations should be sufficient to fund normal operating requirements.

At June 30, 2015, accounts payable and accrued liabilities in the amount of $823 million (December 31, 2014 – $784 million) were expected to be settled in cash at their carrying amounts within the next 12 months.

At June 30, 2015, Hydro One had issued long-term debt in the principal amount of $9,289 million (December 31, 2014 – $8,923 million). Principal repayments, total annual interest payments and related weighted average interest rates are summarized by the number of years to maturity in the following table:

Years to Maturity	**Long-term Debt Principal Repayments** *(millions of Canadian dollars)*	**Total Annual Interest Payments** *(millions of Canadian dollars)*	**Weighted Average Interest Rate** *(%)*
1 year	1,016	416	3.6
2 years	50	387	1.4
3 years	600	371	5.2
4 years	978	344	2.4
5 years	650	331	2.9
	3,294	1,849	3.4
6 – 10 years	600	1,505	3.2
Over 10 years	5,395	4,227	5.4
	9,289	7,581	4.6

9. PENSION AND POST-RETIREMENT AND POST-EMPLOYMENT BENEFITS

Estimated 2015 annual pension plan contributions are approximately $174 million, based on an actuarial valuation as at December 31, 2013 and projected levels of 2015 pensionable earnings. Employer contributions of $89 million were paid during the six months ended June 30, 2015.

The following tables provide the components of the net periodic benefit costs for the three and six months ended June 30, 2015 and 2014:

	Pension Benefits		**Post-Retirement and Post-Employment Benefits**	
Three months ended June 30 (millions of Canadian dollars)	**2015**	**2014**	**2015**	**2014**
Current service cost, net of employee contributions	37	27	11	10
Interest cost	76	78	16	19
Expected return on plan assets, net of expenses[1]	(102)	(92)	–	–
Actuarial loss amortization	30	26	3	5
Net periodic benefit costs	41	39	30	34
Charged to results of operations[2]	22	22	14	15

Six months ended June 30 (millions of Canadian dollars)	Pension Benefits 2015	Pension Benefits 2014	Post-Retirement and Post-Employment Benefits 2015	Post-Retirement and Post-Employment Benefits 2014
Current service cost, net of employee contributions	74	55	22	20
Interest cost	152	156	32	38
Expected return on plan assets, net of expenses[1]	(204)	(184)	–	–
Actuarial loss amortization	60	52	6	10
Prior service cost amortization	–	–	–	1
Net periodic benefit costs	82	79	60	69
Charged to results of operations[2]	41	41	26	30

[1] The expected long-term rate of return on pension plan assets for the year ending December 31, 2015 is 6.5% (2014 – 6.5%).

[2] The Company follows the cash basis of accounting consistent with the inclusion of pension costs in OEB-approved rates. During the three and six months ended June 30, 2015, pension benefit costs of $48 million (2014 – $47 million) and $90 million (2014 – $88 million), respectively, were attributed to labour, of which $22 million (2014 – $22 million) and $41 million (2014 – $41 million), respectively, were charged to operations, and $26 million (2014 – $25 million) and $49 million (2014 – $47 million), respectively, were capitalized as part of the cost of property, plant and equipment and intangible assets.

10. ENVIRONMENTAL LIABILITIES

The following tables show the movements in environmental liabilities for the six months ended June 30, 2015 and the year ended December 31, 2014:

Six months ended June 30, 2015 (millions of Canadian dollars)	PCB	LAR	Total
Environmental liabilities, January 1	172	67	239
Interest accretion	4	1	5
Expenditures	(5)	(4)	(9)
Environmental liabilities, June 30	171	64	235
Less: current portion	16	12	28
	155	52	207

Year ended December 31, 2014 (millions of Canadian dollars)	PCB	LAR	Total
Environmental liabilities, January 1	201	65	266
Interest accretion	9	2	11
Expenditures	(5)	(13)	(18)
Revaluation adjustment	(33)	13	(20)
Environmental liabilities, December 31	172	67	239
Less: current portion	8	10	18
	164	57	221

The following tables show the reconciliation between the undiscounted basis of the environmental liabilities and the amount recognized on the Consolidated Balance Sheets after factoring in the discount rate:

June 30, 2015 (millions of Canadian dollars)	PCB	LAR	Total
Undiscounted environmental liabilities	190	66	256
Less: discounting accumulated liabilities to present value	19	2	21
Discounted environmental liabilities	171	64	235

December 31, 2014 (millions of Canadian dollars)	PCB	LAR	Total
Undiscounted environmental liabilities	195	70	265
Less: discounting accumulated liabilities to present value	23	3	26
Discounted environmental liabilities	172	67	239

At June 30, 2015, the estimated future environmental expenditures were as follows:

(millions of Canadian dollars)	
2015[1]	9
2016	37
2017	36
2018	35
2019	33
Thereafter	106
	256

[1] The amounts disclosed represent amounts for the period from July 1, 2015 to December 31, 2015.

Hydro One records a liability for the estimated future expenditures for the contaminated land assessment and remediation (LAR) and for the phase-out and destruction of polychlorinated biphenyl (PCB)-contaminated mineral oil removed from electrical equipment when it is determined that future environmental remediation expenditures are probable under existing statute or regulation and the amount of the future expenditures can be reasonably estimated.

There are uncertainties in estimating future environmental costs due to potential external events such as changes in legislation or regulations, and advances in remediation technologies. In determining the amounts to be recorded as environmental liabilities, the Company estimates the current cost of completing required work and makes assumptions as to when the future expenditures will actually be incurred, in order to generate future cash flow information. A long-term inflation rate assumption of approximately 2% has been used to express these current cost estimates as estimated future expenditures. Future expenditures have been discounted using factors ranging from approximately 2.3% to 6.3%, depending on the appropriate rate for the period when expenditures are expected to be incurred. All factors used in estimating the Company's environmental liabilities represent management's best estimates of the present value of costs required to meet existing legislation or regulations. However, it is reasonably possible that numbers or volumes of contaminated assets, cost estimates to perform work, inflation assumptions and the assumed pattern of annual cash flows may differ significantly from the Company's current assumptions. In addition, with respect to the PCB environmental liability, the availability of critical resources such as skilled labour and replacement assets and the ability to take maintenance outages in critical facilities may influence the timing of expenditures.

At June 30, 2015, the Company's best estimate of the total estimated future expenditures to comply with current PCB regulations is $190 million (December 31, 2014 – $195 million). These expenditures are expected to be incurred over the period from 2015 to 2025.

At June 30, 2015, the Company's best estimate of the total estimated future expenditures to complete its LAR program is $66 million (December 31, 2014 – $70 million). These expenditures are expected to be incurred over the period from 2015 to 2023.

11. SHARE CAPITAL

Preferred Shares

The Company has 12,920,000 issued and outstanding 5.5% cumulative preferred shares with a redemption value of $25 per share or $323 million total value. The Company is authorized to issue an unlimited number of preferred shares.

The Company's preferred shares are entitled to an annual cumulative dividend of $18 million, or $1.375 per share, which is payable on a quarterly basis. The preferred shares are not subject to mandatory redemption (except on liquidation) but are redeemable in certain circumstances. The shares are redeemable at the option of the Province at the redemption value, plus any accrued and unpaid dividends, if the Province sells a number of the common shares which it owns to the public such that the Province's holdings are reduced to less than 50% of the common shares of the Company. Hydro One may elect, without condition, to pay all or part of the redemption price by issuing additional common shares to the Province. If the Province does not exercise its redemption right, the Company would have the ability to adjust the dividend on the preferred shares to produce a yield that is 0.50% less than the then-current dividend market yield for similarly rated preferred shares. The preferred shares do not carry voting rights, except in limited circumstances, and would rank in priority over the common shares upon liquidation.

These preferred shares have conditions for their redemption that are outside the control of the Company because the Province can exercise its right to redeem in the event of change in ownership without approval of the Company's Board of Directors. Because the conditional redemption feature is outside the control of the Company, the preferred shares are classified outside of equity on the Consolidated Balance Sheets. No adjustment to the carrying value of the preferred shares has been recognized at June 30, 2015 and December 31, 2014. If it becomes probable in the future that the preferred shares will be redeemed, the redemption value would be adjusted.

Common Shares

The Company has 100,000 issued and outstanding common shares. The Company is authorized to issue an unlimited number of common shares.

Common share dividends are declared at the sole discretion of the Hydro One Board of Directors, and are recommended by management based on results of operations, maintenance of the deemed regulatory capital structure, financial conditions, cash requirements, and other relevant factors, such as industry practice and Shareholder expectations.

Earnings per Share

Basic and diluted earnings per share have been calculated on the basis of net income attributable to the Shareholder of Hydro One and the weighted average number of common shares outstanding during the year.

12. DIVIDENDS

During the three months ended June 30, 2015, preferred share dividends in the amount of $5 million (2014 – $5 million) and common share dividends in the amount of $25 million (2014 – $25 million) were declared.

During the six months ended June 30, 2015, preferred share dividends in the amount of $9 million (2014 – $9 million) and common share dividends in the amount of $50 million (2014 – $220 million) were declared.

13. NONCONTROLLING INTEREST

On December 16, 2014, the relevant Bruce to Milton Line transmission assets totalling $526 million were transferred from Hydro One Networks to B2M LP. This was financed by 60% debt ($316 million) and 40% equity ($210 million). On December 17, 2014, the Saugeen Ojibway Nation (SON) acquired a 34.2% equity interest in B2M LP for consideration of $72 million, representing the fair value of the equity interest acquired. The SON's initial investment in B2M LP consists of $50 million of Class A units and $22 million of Class B units.

The Class B units have a mandatory put option which requires that upon the occurrence of an enforcement event (i.e. an event of default such as a debt default by the SON or insolvency event), Hydro One purchase the Class B units of B2M LP for net book value on the redemption date. The noncontrolling interest relating to the Class B units is classified on the Consolidated Balance Sheet as temporary equity because the redemption feature is outside the control of the Company. The balance of the noncontrolling interest is classified within equity.

The following tables show the movements in noncontrolling interest for the six months ended June 30, 2015 and the year ended December 31, 2014:

Six months ended June 30, 2015 (millions of Canadian dollars)	**Temporary equity**	**Equity**	**Total**
Noncontrolling interest – January 1, 2015	21	49	70
Distributions to noncontrolling interest	(1)	(1)	(2)
Net income attributable to noncontrolling interest	1	2	3
Noncontrolling interest – June 30, 2015	21	50	71

Year ended December 31, 2014 (millions of Canadian dollars)	**Temporary equity**	**Equity**	**Total**
Noncontrolling interest – January 1, 2014	–	–	–
Amount contributed by noncontrolling interest	22	50	72
Net income (loss) attributable to noncontrolling interest	(1)	(1)	(2)
Noncontrolling interest – December 31, 2014	21	49	70

14. RELATED PARTY TRANSACTIONS

Hydro One is owned by the Province. The OEFC, Independent Electricity System Operator (IESO), Ontario Power Generation Inc. (OPG) and the OEB are related parties to Hydro One because they are controlled or significantly influenced by the Province. Effective January 1, 2015, the Ontario Power Authority (OPA) and IESO have merged and are now operating as IESO.

The Province

During the three and six months ended June 30, 2015, Hydro One paid dividends to the Province totalling $30 million (2014 – $30 million) and $59 million (2014 – $229 million), respectively.

IESO

During the three and six months ended June 30, 2015, Hydro One purchased power in the amount of $471 million (2014 – $568 million) and $1,262 million (2014 – $1,343 million), respectively, from the IESO-administered electricity market.

Hydro One receives revenues for transmission services from the IESO, based on OEB-approved uniform transmission rates. Transmission revenues for the three and six months ended June 30, 2015 include $363 million (2014 – $368 million) and $768 million (2014 – $776 million), respectively, related to these services.

Hydro One receives amounts for rural rate protection from the IESO. Distribution revenues for the three and six months ended June 30, 2015 include $32 million (2014 – $32 million) and $64 million (2014 – $64 million), respectively, related to this program.

Hydro One also receives revenues related to the supply of electricity to remote northern communities from the IESO. Distribution revenues for the three and six months ended June 30, 2015 include $8 million (2014 – $8 million) and $16 million (2014 – $16 million), respectively, related to these services.

The IESO (OPA prior to January 1, 2015) funds substantially all of the Company's conservation and demand management programs. The funding includes program costs, incentives, and management fees. During the three and six months ended June 30, 2015, Hydro One received $11 million (2014 – $14 million) and $23 million (2014 – $21 million), respectively, related to these programs.

OPG

During the three and six months ended June 30, 2015, Hydro One purchased power in the amount of $2 million (2014 – $4 million) and $8 million (2014 – $18 million), respectively, from OPG.

Hydro One has service level agreements with OPG. These services include field, engineering, logistics and telecommunications services. During the three and six months ended June 30, 2015, revenues related to the provision of construction and equipment maintenance services with respect to these service level agreements were $1 million (2014 – $3 million) and $3 million (2014 – $6 million), respectively, primarily for the Transmission Business. Operation, maintenance and administration costs related to the purchase of services with respect to these service level agreements were insignificant for the three months ended June 30, 2015 and 2014, and $1 million (2014 – $1 million) for the six months ended June 30, 2015.

OEFC

During the three and six months ended June 30, 2015, Hydro One made payments in lieu of corporate income taxes to the OEFC totalling $14 million (2014 – $21 million) and $32 million (2014 – $43 million), respectively.

During the three and six months ended June 30, 2015, Hydro One purchased power in the amount of $2 million (2014 – $2 million) and $4 million (2014 – $7 million), respectively, from power contracts administered by the OEFC.

During the six months ended June 30, 2015, Hydro One paid a $5 million (2014 – $5 million) annual fee to the OEFC for indemnification against adverse claims in excess of $10 million paid by the OEFC with respect to certain of Ontario Hydro's businesses transferred to Hydro One on April 1, 1999.

Payments in lieu of property taxes are paid to the OEFC.

OEB

Under the *Ontario Energy Board Act, 1998*, the OEB is required to recover all of its annual operating costs from gas and electricity distributors and transmitters. During the three and six months ended June 30, 2015, Hydro One incurred $3 million (2014 – $3 million) and $6 million (2014 – $6 million), respectively, in OEB fees.

Sales to and purchases from related parties occur at normal market prices or at a proxy for fair value based on the requirements of the OEB's Affiliate Relationships Code. Outstanding balances at period end are interest free and settled in cash.

The amounts due to and from related parties as a result of the transactions referred to above are as follows:

(millions of Canadian dollars)	**June 30, 2015**	**December 31, 2014**
Due from related parties	177	224
Due to related parties[1]	(52)	(227)

[1] Included in due to related parties at June 30, 2015 are amounts owing to the IESO in respect of power purchases of $41 million (December 31, 2014 – $214 million).

15. CONSOLIDATED STATEMENTS OF CASH FLOWS

The changes in non-cash balances related to operations consist of the following:

	Three months ended June 30		Six months ended June 30	
(millions of Canadian dollars)	**2015**	**2014**	**2015**	**2014**
Accounts receivable	100	76	15	(113)
Due from related parties	21	1	47	(9)
Materials and supplies	–	2	(1)	(1)
Prepaid expenses and other assets	(3)	4	(2)	(98)
Accounts payable	19	(13)	7	(15)
Accrued liabilities	(4)	47	18	44
Due to related parties	(130)	(106)	(175)	(152)
Accrued interest	(17)	(19)	(1)	1
Long-term accounts payable and other liabilities	1	(9)	(3)	(4)
Post-retirement and post-employment benefit liability	20	21	36	43
	7	4	(59)	(304)

Capital Expenditures

The following table illustrates the reconciliation between investments in property, plant and equipment and the amount presented in the Consolidated Statements of Cash Flows after factoring in capitalized depreciation and the net change in related accruals:

	Three months ended June 30		Six months ended June 30	
(millions of Canadian dollars)	**2015**	**2014**	**2015**	**2014**
Capital investments in property, plant and equipment	(425)	(373)	(765)	(665)
Capitalized depreciation and net change in accruals included in capital investments in property, plant and equipment	7	16	8	21
Capital expenditures – property, plant and equipment	(418)	(357)	(757)	(644)

The following table illustrates the reconciliation between investments in intangible assets and the amount presented in the Consolidated Statements of Cash Flows after factoring in the net change in related accruals:

	Three months ended June 30		Six months ended June 30	
(millions of Canadian dollars)	**2015**	**2014**	**2015**	**2014**
Capital investments in intangible assets	(4)	(7)	(9)	(11)
Net change in accruals included in capital investments in intangible assets	–	(3)	–	(4)
Capital expenditures – intangible assets	(4)	(10)	(9)	(15)

Supplementary Information

	Three months ended June 30		Six months ended June 30	
(millions of Canadian dollars)	**2015**	**2014**	**2015**	**2014**
Net interest paid	122	121	207	202
PILs paid	14	21	32	43

16. CONTINGENCIES

Legal Proceedings

Hydro One is involved in various lawsuits, claims and regulatory proceedings in the normal course of business. In the opinion of management, the outcome of such matters will not have a material adverse effect on the Company's consolidated financial position, results of operations or cash flows.

Transfer of Assets

The transfer orders by which the Company acquired certain of Ontario Hydro's businesses as of April 1, 1999 did not transfer title to some assets located on Reserves (as defined in the *Indian Act* (Canada)). Currently, the OEFC holds these assets. Under the terms of the transfer orders, the Company is required to manage these assets until it has obtained all consents necessary to complete the transfer of title of these assets to itself. The Company cannot predict the aggregate amount that it may have to pay, either on an annual or one-time basis, to obtain the required consents. If the Company cannot obtain the required consents, the OEFC will continue to hold these assets for an indefinite period of time. If the Company cannot reach a satisfactory settlement, it may have to relocate these assets to other locations at a cost that could be substantial or, in a limited number of cases, to abandon a line and replace it with diesel-generation facilities. The costs relating to these assets could have a material effect on the Company's results of operations if the Company is not able to recover them in future rate orders.

17. COMMITMENTS

Outsourcing Agreements

Inergi LP (Inergi), an affiliate of Capgemini Canada Inc., provides services to Hydro One, including settlements, source to pay services, pay operations services, information technology, finance and accounting services. The agreement with Inergi for these services expires in December 2019. In addition, Inergi provides customer service operations outsourcing services to Hydro One. The agreement for these services expires in February 2018.

Brookfield Johnson Controls Canada LP (Brookfield) provides services to Hydro One, including facilities management and execution of certain capital projects as deemed required by the Company. The current agreement with Brookfield expires in December 2024.

Prudential Support

Purchasers of electricity in Ontario, through the IESO, are required to provide security to mitigate the risk of their default based on their expected activity in the market. As at June 30, 2015, the Company provided prudential support to the IESO on behalf of its subsidiaries using parental guarantees of $347 million (December 31, 2014 – $330 million), and on behalf of a distributor using guarantees of $1 million (December 31, 2014 – $1 million). In addition, as at June 30, 2015, the Company has provided letters of credit in the amount of $5 million (December 31, 2014 – $8 million) to the IESO. The IESO could draw on these guarantees and/or letters of credit if these subsidiaries or distributors fail to make a payment required by a default notice issued by the IESO. The maximum potential payment is the face value of any letters of credit plus the amount of the parental guarantees.

Retirement Compensation Arrangements

Bank letters of credit have been issued to provide security for the Company's liability under the terms of a trust fund established pursuant to the supplementary pension plan for eligible employees of Hydro One. The supplementary pension plan trustee is required to draw upon these letters of credit if Hydro One is in default of its obligations under the terms of this plan. Such obligations include the requirement to provide the trustee with an annual actuarial report as well as letters of credit sufficient to secure the Company's liability under the plan, to pay benefits payable under the plan and to pay the letter of credit fee. The maximum potential payment is the face value of the letters of credit. At June 30, 2015, Hydro One had letters of credit of $126 million (December 31, 2014 – $126 million) outstanding relating to retirement compensation arrangements.

18. SEGMENTED REPORTING

Hydro One has three reportable segments:

- The Transmission Business, which comprises the core business of providing electricity transportation and connection services, is responsible for transmitting electricity throughout the Ontario electricity grid;
- The Distribution Business, which comprises the core business of delivering and selling electricity to customers; and
- Other, which includes certain corporate activities and the operations of the telecommunications business.

The designation of segments has been based on a combination of regulatory status and the nature of the products and services provided. Operating segments of the Company are determined based on information used by the chief operating decision maker in deciding how to allocate resources and evaluate the performance of each of the segments. The Company evaluates segment performance based on income before financing charges and provision for PILs from continuing operations (excluding certain allocated corporate governance costs).

The accounting policies followed by the segments are the same as those described in the summary of significant accounting policies (see Note 2 – Significant Accounting Policies). Segment information on the above basis is as follows:

Three months ended June 30, 2015 (millions of Canadian dollars)	**Transmission**	**Distribution**	**Other**	**Consolidated**
Revenues	364	1,185	14	1,563
Purchased power	–	838	–	838
Operation, maintenance and administration	98	168	16	282
Depreciation and amortization	94	94	2	190
Income (loss) before financing charges and provision for PILs	172	85	(4)	253
Capital investments	234	192	3	429

Three months ended June 30, 2014 (millions of Canadian dollars)	**Transmission**	**Distribution**	**Other**	**Consolidated**
Revenues	382	1,170	14	1,566
Purchased power	–	824	–	824
Operation, maintenance and administration	105	214	15	334
Depreciation and amortization	88	91	2	181
Income (loss) before financing charges and provision for PILs	189	41	(3)	227
Capital investments	203	175	2	380

Six months ended June 30, 2015 (millions of Canadian dollars)	**Transmission**	**Distribution**	**Other**	**Consolidated**
Revenues	770	2,574	27	3,371
Purchased power	–	1,808	–	1,808
Operation, maintenance and administration	197	334	29	560
Depreciation and amortization	188	186	3	377
Income (loss) before financing charges and provision for PILs	385	246	(5)	626
Capital investments	445	324	5	774

Six months ended June 30, 2014 (millions of Canadian dollars)	**Transmission**	**Distribution**	**Other**	**Consolidated**
Revenues	804	2,497	29	3,330
Purchased power	–	1,746	–	1,746
Operation, maintenance and administration	220	395	30	645
Depreciation and amortization	169	175	4	348
Income (loss) before financing charges and provision for PILs	415	181	(5)	591
Capital investments	376	298	2	676

Total Assets by Segment:

(millions of Canadian dollars)	**June 30, 2015**	**December 31, 2014**
Transmission	12,822	12,540
Distribution	9,888	9,805
Other	457	205
Total assets	23,167	22,550

All revenues, costs and assets, as the case may be, are earned, incurred or held in Canada.

19. SUBSEQUENT EVENTS

Dividends

On August 11, 2015, preferred share dividends in the amount of $4 million and common share dividends in the amount of $25 million were declared.

Class Action Lawsuit

On July 22, 2015, two Toronto law firms issued a joint press release announcing that a $125 million lawsuit had been commenced in the Ontario Superior Court of Justice against Hydro One and four of its subsidiaries. The claim is proposed as a class action and alleges improper billing and account management practices. The claim has not been served on Hydro One nor has it been certified as a class action.

Power Workers' Union Agreement

On April 14, 2015, Hydro One reached a tentative agreement with the Power Workers' Union (PWU) for a renewal of the collective agreement. The agreement is for a three-year term, covering April 1, 2015 to March 31, 2018, subject to certain conditions. The agreement has been ratified by the PWU and the Hydro One Board of Directors in July 2015.

HYDRO ONE INC.
MANAGEMENT'S REPORT

The Consolidated Financial Statements, Management's Discussion and Analysis (MD&A) and related financial information have been prepared by the management of Hydro One Inc. (Hydro One or the Company). Management is responsible for the integrity, consistency and reliability of all such information presented. The Consolidated Financial Statements have been prepared in accordance with United States Generally Accepted Accounting Principles and applicable securities legislation. The MD&A has been prepared in accordance with National Instrument 51-102.

The preparation of the Consolidated Financial Statements and information in the MD&A involves the use of estimates and assumptions based on management's judgment, particularly when transactions affecting the current accounting period cannot be finalized with certainty until future periods. Estimates and assumptions are based on historical experience, current conditions and various other assumptions believed to be reasonable in the circumstances, with critical analysis of the significant accounting policies followed by the Company as described in Note 2 to the Consolidated Financial Statements. The preparation of the Consolidated Financial Statements and the MD&A includes information regarding the estimated impact of future events and transactions. The MD&A also includes information regarding sources of liquidity and capital resources, operating trends, risks and uncertainties. Actual results in the future may differ materially from the present assessment of this information because future events and circumstances may not occur as expected. The Consolidated Financial Statements and MD&A have been properly prepared within reasonable limits of materiality and in light of information up to February 11, 2015.

Management is responsible for establishing and maintaining adequate internal control over financial reporting for the Company. In meeting its responsibility for the reliability of financial information, management maintains and relies on a comprehensive system of internal control and internal audit. The system of internal control includes a written corporate conduct policy; implementation of a risk management framework; effective segregation of duties and delegation of authorities; and sound and conservative accounting policies that are regularly reviewed. This structure is designed to provide reasonable assurance that assets are safeguarded and that reliable information is available on a timely basis. In addition, management has assessed the design and operating effectiveness of the Company's internal control over financial reporting in accordance with the criteria set forth in Internal Control – Integrated Framework (2013), issued by the Committee of Sponsoring Organizations of the Treadway Commission. Based on this assessment, management concluded that the Company maintained effective internal control over financial reporting as of December 31, 2014. The effectiveness of these internal controls is reported to the Audit, Finance and Pension Investment Committee of the Hydro One Board of Directors, as required.

The Consolidated Financial Statements have been audited by KPMG LLP, independent external auditors appointed by the Shareholder. The external auditors' responsibility is to express their opinion on whether the Consolidated Financial Statements are fairly presented in accordance with United States Generally Accepted Accounting Principles. The Independent Auditors' Report outlines the scope of their examination and their opinion.

The Hydro One Board of Directors, through its Audit, Finance and Pension Investment Committee, is responsible for ensuring that management fulfills its responsibilities for financial reporting and internal controls. The Audit, Finance and Pension Investment Committee of Hydro One met periodically with management, the internal auditors and the external auditors to satisfy itself that each group had properly discharged its respective responsibility and to review the Consolidated Financial Statements before recommending approval by the Board of Directors. The external auditors had direct and full access to the Audit, Finance and Pension Investment Committee, with and without the presence of management, to discuss their audit findings, if any.

The President and Chief Executive Officer and the Chief Financial Officer (Acting) have certified Hydro One's annual Consolidated Financial Statements and annual MD&A, related disclosure controls and procedures and the design and effectiveness of related internal controls over financial reporting.

On behalf of Hydro One Inc.'s management:

Carmine Marcello

HYDRO ONE INC.
INDEPENDENT AUDITORS' REPORT

To the Shareholder of Hydro One Inc.

We have audited the accompanying Consolidated Financial Statements of Hydro One Inc., which comprise the consolidated balance sheets as at December 31, 2014 and December 31, 2013, the consolidated statements of operations and comprehensive income, changes in equity and cash flows for the years then ended, and notes, comprising a summary of significant accounting policies and other explanatory information.

Management's Responsibility for the Consolidated Financial Statements

Management is responsible for the preparation and fair presentation of these Consolidated Financial Statements in accordance with United States Generally Accepted Accounting Principles, and for such internal control as management determines is necessary to enable the preparation of Consolidated Financial Statements that are free from material misstatement, whether due to fraud or error.

Auditors' Responsibility

Our responsibility is to express an opinion on these Consolidated Financial Statements based on our audits. We conducted our audits in accordance with Canadian generally accepted auditing standards. Those standards require that we comply with ethical requirements and plan and perform the audit to obtain reasonable assurance about whether the Consolidated Financial Statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the Consolidated Financial Statements. The procedures selected depend on our judgment, including the assessment of the risks of material misstatement of the Consolidated Financial Statements, whether due to fraud or error. In making those risk assessments, we consider internal control relevant to the entity's preparation and fair presentation of the Consolidated Financial Statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management, as well as evaluating the overall presentation of the Consolidated Financial Statements.

We believe that the audit evidence we have obtained in our audits is sufficient and appropriate to provide a basis for our audit opinion.

Opinion

In our opinion, the Consolidated Financial Statements present fairly, in all material respects, the consolidated financial position of Hydro One Inc. as at December 31, 2014 and December 31, 2013, and its consolidated results of operations and its consolidated cash flows for the years then ended in accordance with United States Generally Accepted Accounting Principles.

1. DESCRIPTION OF THE BUSINESS

Hydro One Inc. (Hydro One or the Company) was incorporated on December 1, 1998, under the *Business Corporations Act* (Ontario) and is wholly owned by the Province of Ontario (Province). The principal businesses of Hydro One are the transmission and distribution of electricity to customers within Ontario. The electricity rates of these businesses are regulated by the Ontario Energy Board (OEB).

2. SIGNIFICANT ACCOUNTING POLICIES

Basis of Consolidation

These Consolidated Financial Statements include the accounts of the Company and its wholly owned subsidiaries: Hydro One Networks Inc. (Hydro One Networks), Hydro One Remote Communities Inc. (Hydro One Remote Communities), Hydro One Brampton Networks Inc. (Hydro One Brampton Networks), Hydro One Telecom Inc. (Hydro One Telecom), Hydro One Lake Erie Link Management Inc., Hydro One Lake Erie Link Company Inc., Norfolk Power Inc. (Norfolk Power), and Hydro One B2M Holdings. Intercompany transactions and balances have been eliminated.

Basis of Accounting

These Consolidated Financial Statements are prepared and presented in accordance with United States (US) Generally Accepted Accounting Principles (GAAP) and in Canadian dollars.

Hydro One performed an evaluation of subsequent events through to February 11, 2015, the date these Consolidated Financial Statements were issued, to determine whether any events or transactions warranted recognition and disclosure in these Consolidated Financial Statements. See Note 25 – Subsequent Event.

Use of Management Estimates

The preparation of financial statements requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities at the date of the financial statements and the reported amounts of revenues, expenses, gains and losses during the reporting periods. Management evaluates these estimates on an ongoing basis based upon historical experience, current conditions, and assumptions believed to be reasonable at the time the assumptions are made, with any adjustments being recognized in results of operations in the period they arise. Significant estimates relate to regulatory assets and regulatory liabilities, environmental liabilities, pension benefits, post-retirement and post-employment benefits, asset retirement obligations (AROs), goodwill and asset impairments, contingencies, unbilled revenues, allowance for doubtful accounts, derivative instruments, and deferred income tax assets and liabilities. Actual results may differ significantly from these estimates, which may be impacted by future decisions made by the OEB or the Province.

Rate Setting

The Company's Transmission Business includes the separately regulated transmission businesses of Hydro One Networks and B2M Limited Partnership (B2M LP). The Company's consolidated Distribution Business includes the separately regulated distribution businesses of Hydro One Networks and the newly acquired Norfolk Power, as well as the subsidiaries Hydro One Brampton Networks and Hydro One Remote Communities.

The OEB has approved the use of US GAAP for rate setting and regulatory accounting and reporting by Hydro One Networks' transmission and distribution businesses, as well as by Hydro One Remote Communities, beginning with the year 2012. Up to the year ended December 31, 2014, Hydro One Brampton Networks used Canadian GAAP (Part V) for its distribution rate-setting purposes, and has transitioned to International Financial Reporting Standards beginning on January 1, 2015.

Transmission

In May 2012, Hydro One Networks filed a cost-of-service application with the OEB for 2013 and 2014 transmission rates. In December 2012, the OEB approved the 2013 and 2014 revenue requirement of $1,438 million and $1,528 million, respectively.

In December 2013, Hydro One Networks filed a draft Rate Order with the OEB for 2014 transmission rates. The 2014 transmission revenue requirement was increased to $1,535 million from the originally-approved revenue requirement of $1,528 million, primarily due to changes in the cost of capital parameters for 2014 released by the OEB in November 2013. On January 9, 2014, the OEB approved the draft Rate Order for 2014 transmission rates as filed.

Distribution

In June 2012, Hydro One Networks filed an Incentive Regulation Mechanism (IRM) application with the OEB for 2013 distribution rates, to be effective January 1, 2013. In December 2012, the OEB issued its final Decision, which resulted in an increase in distribution rates of approximately 1.3% in 2013, or 0.4% when considering total bill impact, for a typical residential customer consuming 800 kWh per month. In April 2013, Hydro One Networks filed an IRM application with the OEB for 2014 distribution rates, to be effective January 1, 2014. In December 2013, the OEB issued its final Decision, which resulted in an increase in distribution rates of approximately 2.4% in 2014, or 0.85% when considering total bill impact, for a typical residential customer consuming 800 kWh per month.

In August 2012, Hydro One Brampton Networks filed an IRM application with the OEB for 2013 distribution rates, to be effective January 1, 2013. In December 2012, the OEB issued its final Decision, which resulted in an increase in distribution rates of approximately 0.3% in 2013, or less than 0.1% when considering total bill impact, for a typical residential customer consuming 800 kWh per month. In August 2013, Hydro One Brampton Networks filed an IRM application with the OEB for 2014 distribution rates, to be effective January 1, 2014. In December 2013, the OEB issued its final Decision, which resulted in a reduction in distribution rates of approximately 2.3% in 2014, or 0.5% when considering total bill impact, for a typical residential customer consuming 800 kWh per month.

In September 2012, Hydro One Remote Communities filed a cost-of-service application with the OEB for 2013 rates, seeking approval for a 2013 revenue requirement of $53 million. In June 2013, the OEB approved a revenue requirement of $51 million for 2013. In October 2013, Hydro One Remote Communities filed an IRM application with the OEB for 2014 rates, seeking approval for a rate increase of approximately 0.5%. In March 2014, the OEB approved an increase of approximately 1.7% to basic rates for the distribution and generation of electricity, with an effective date of May 1, 2014. The final rate increase was adjusted by the OEB's updated rate adjustment parameters and Hydro One Remote Communities' IRM stretch factor.

Regulatory Accounting

The OEB has the general power to include or exclude revenues, costs, gains or losses in the rates of a specific period, resulting in a change in the timing of accounting recognition from that which would have been applied in an unregulated company. Such change in timing involves the application of rate-regulated accounting, giving rise to the recognition of regulatory assets and liabilities. The Company's regulatory assets represent certain amounts receivable from future customers and costs that have been deferred for accounting purposes because it is probable that they will be recovered in future rates. In addition, the Company has recorded regulatory liabilities that generally represent amounts that are refundable to future customers. The Company continually assesses the likelihood of recovery of each of its regulatory assets and continues to believe that it is probable that the OEB will factor its regulatory assets and liabilities into the setting of future rates. If, at some future date, the Company judges that it is no longer probable that the OEB will include a regulatory asset or liability in setting future rates, the appropriate carrying amount will be reflected in results of operations in the period that the assessment is made.

Cash and Cash Equivalents

Cash and cash equivalents include cash and short-term investments with an original maturity of three months or less.

Revenue Recognition

Transmission revenues are collected through OEB-approved rates, which are based on an approved revenue requirement that includes a rate of return. Such revenue is recognized as electricity is transmitted and delivered to customers.

Distribution revenues are recognized on an accrual basis and include billed and unbilled revenues. Distribution revenues attributable to the delivery of electricity are based on OEB-approved distribution rates and are recognized as electricity is delivered to customers. The Company estimates monthly revenue for a period based on wholesale electricity purchases because customer meters are not generally read at the end of each month. At the end of each month, the electricity delivered to customers, but not billed, is estimated and revenue is recognized. The unbilled revenue estimate is affected by energy demand, weather, line losses and changes in the composition of customer classes.

Distribution revenue also includes an amount relating to rate protection for rural, residential and remote customers, which is received from the Independent Electricity System Operator (IESO) based on a standardized customer rate that is approved by the OEB. Current legislation provides rate protection for prescribed classes of rural, residential and remote consumers by reducing the electricity rates that would otherwise apply.

Revenues also include amounts related to sales of other services and equipment. Such revenue is recognized as services are rendered or as equipment is delivered.

Revenues are recorded net of indirect taxes.

Accounts Receivable and Allowance for Doubtful Accounts

Billed accounts receivable are recorded at the invoiced amount, net of allowance for doubtful accounts. Unbilled accounts receivable are estimated and recorded based on wholesale electricity purchases. Overdue amounts related to regulated billings bear interest at OEB-approved rates. The allowance for doubtful accounts reflects the Company's best estimate of losses on billed accounts receivable balances. The allowance is based on accounts receivable aging, historical experience and other currently available information. The Company estimates the allowance for doubtful accounts on customer receivables by applying internally developed loss rates to the outstanding receivable balances by risk segment. Risk segments represent groups of customers with similar credit quality indicators and are computed based on various attributes, including number of days receivables are past due, delinquency of balances and payment history. Loss rates applied to the accounts receivable balances are based on historical average write-offs as a percentage of accounts receivable in each risk segment. An account is considered delinquent if the final amount billed is not received within 110 days of the invoiced date. Accounts receivable are written off against the allowance when they are deemed uncollectible. The existing allowance for uncollectible accounts will continue to be affected by changes in volume, prices and economic conditions.

Noncontrolling interest

Noncontrolling interest represents the portion of equity ownership in subsidiaries that is not attributable to the Shareholder of the parent company. Noncontrolling interest is initially recorded at fair value and subsequently the amount is adjusted for the proportionate share of net income (loss) and other comprehensive income (loss) attributable to the noncontrolling interest and any dividends or distributions paid to the noncontrolling interest.

If a transaction results in the acquisition of all, or part, of a noncontrolling interest in a subsidiary, the acquisition of the noncontrolling interest is accounted for as an equity transaction. No gain or loss is recognized in consolidated net income or comprehensive income as a result of changes in the noncontrolling interest, unless a change results in the loss of control by the Company.

Corporate Income Taxes

Under the *Electricity Act, 1998*, Hydro One is required to make payments in lieu of corporate income taxes (PILs) to the Ontario Electricity Financial Corporation (OEFC). These payments are calculated in accordance with the rules for computing income and other relevant amounts contained in the *Income Tax Act* (Canada) and the *Taxation Act, 2007* (Ontario) as modified by the *Electricity Act, 1998* and related regulations.

Current and deferred income taxes are computed based on the tax rates and tax laws enacted at the balance sheet date. Tax benefits associated with income tax positions taken, or expected to be taken, in a tax return are recorded only when the "more-likely-than-not" recognition threshold is satisfied and are measured at the largest amount of benefit that has a greater than 50% likelihood of being realized upon settlement. Management evaluates each position based solely on the technical merits and facts and circumstances of the position, assuming the position will be examined by a taxing authority having full knowledge of all relevant information. Significant management judgment is required to determine recognition thresholds and the related amount of tax benefits to be recognized in the Consolidated Financial Statements. Management re-evaluates tax positions each period in which new information about recognition or measurement becomes available.

Current Income Taxes

The provision for current taxes and the assets and liabilities recognized for the current and prior periods are measured at the amounts receivable from, or payable to, the OEFC.

Deferred Income Taxes

Deferred income taxes are provided for using the liability method. Deferred income taxes are recognized based on the estimated future tax consequences attributable to temporary differences between the carrying amount of assets and liabilities in the Consolidated Financial Statements and their corresponding tax bases.

Deferred income tax liabilities are generally recognized on all taxable temporary differences. Deferred tax assets are recognized to the extent that it is more-likely-than-not that these assets will be realized from taxable income available against which deductible temporary differences can be utilized.

Deferred income taxes are calculated at the tax rates that are expected to apply in the period when the liability is settled or the asset is realized, based on the tax rates and tax laws that have been enacted at the balance sheet date. Deferred income taxes that are not included in the rate-setting process are charged or credited to the Consolidated Statements of Operations and Comprehensive Income.

If management determines that it is more-likely-than-not that some or all of a deferred income tax asset will not be realized, a valuation allowance is recorded against the deferred income tax asset to report the net balance at the amount expected to be realized. Previously unrecognized deferred income tax assets are reassessed at each balance sheet date and are recognized to the extent that it has become more-likely-than-not that the tax benefit will be realized.

The Company records regulatory assets and liabilities associated with deferred income taxes that will be included in the rate-setting process.

The Company uses the flow-through method to account for investment tax credits (ITCs) earned on eligible scientific research and experimental development expenditures, and apprenticeship job creation. Under this method, only non-refundable ITCs are recognized as a reduction to income tax expense.

Materials and Supplies

Materials and supplies represent consumables, small spare parts and construction materials held for internal construction and maintenance of property, plant and equipment. These assets are carried at average cost less any impairments recorded.

Property, Plant and Equipment

Property, plant and equipment is recorded at original cost, net of customer contributions received in aid of construction and any accumulated impairment losses. The cost of additions, including betterments and replacement asset components, is included on the Consolidated Balance Sheets as property, plant and equipment.

The original cost of property, plant and equipment includes direct materials, direct labour (including employee benefits), contracted services, attributable capitalized financing costs, asset retirement costs, and direct and indirect overheads that are related to the capital project or program. Indirect overheads include a portion of corporate costs such as finance, treasury, human resources, information technology and executive costs. Overhead costs, including corporate functions and field services costs, are capitalized on a fully allocated basis, consistent with an OEB-approved methodology.

Property, plant and equipment in service consists of transmission, distribution, communication, administration and service assets and land easements. Property, plant and equipment also includes future use assets, such as land, major components and spare parts, and capitalized project development costs associated with deferred capital projects.

Transmission

Transmission assets include assets used for the transmission of high-voltage electricity, such as transmission lines, support structures, foundations, insulators, connecting hardware and grounding systems, and assets used to step up the voltage of electricity from generating stations for transmission and to step down voltages for distribution, including transformers, circuit breakers and switches.

Distribution

Distribution assets include assets related to the distribution of low-voltage electricity, including lines, poles, switches, transformers, protective devices and metering systems.

Communication

Communication assets include the fibre optic and microwave radio system, optical ground wire, towers, telephone equipment and associated buildings.

Administration and Service

Administration and service assets include administrative buildings, personal computers, transport and work equipment, tools and other minor assets.

Easements

Easements include statutory rights of use for transmission corridors and abutting lands granted under the *Reliable Energy and Consumer Protection Act, 2002*, as well as other land access rights.

Intangible Assets

Intangible assets separately acquired or internally developed are measured on initial recognition at cost, which comprises purchased software, direct labour (including employee benefits), consulting, engineering, overheads and attributable capitalized financing charges. Following initial recognition, intangible assets are carried at cost, net of any accumulated amortization and accumulated impairment losses. The Company's intangible assets primarily represent major company-wide computer applications.

Capitalized Financing Costs

Capitalized financing costs represent interest costs attributable to the construction of property, plant and equipment or development of intangible assets. The financing cost of attributable borrowed funds is capitalized as part of the acquisition cost of such assets. The capitalized portion of financing costs is a reduction to financing charges recognized in the Consolidated Statements of Operations and Comprehensive Income. Capitalized financing costs are calculated using the Company's weighted average effective cost of debt.

Construction and Development in Progress

Construction and development in progress consists of the capitalized cost of constructed assets that are not yet complete and which have not yet been placed in service.

Depreciation and Amortization

The cost of property, plant and equipment and intangible assets is depreciated or amortized on a straight-line basis based on the estimated remaining service life of each asset category, except for transport and work equipment, which is depreciated on a declining balance basis.

The Company periodically initiates an external independent review of its property, plant and equipment and intangible asset depreciation and amortization rates, as required by the OEB. Any changes arising from OEB approval of such a review are implemented on a remaining service life basis, consistent with their inclusion in electricity rates. The last review resulted in changes to rates effective January 1, 2013. A summary of average service lives and depreciation and amortization rates for the various classes of assets is included below:

	Average Service Life	Rate	
		Range	Average
Transmission	57 years	1% – 2%	2%
Distribution	42 years	1% – 20%	2%
Communication	19 years	1% – 15%	4%
Administration and service	15 years	3% – 20%	7%

The cost of intangible assets is included primarily within the administration and service classification above. Amortization rates for computer applications software and other intangible assets range from 9% to 20%.

In accordance with group depreciation practices, the original cost of property, plant and equipment, or major components thereof, and intangible assets that are normally retired, is charged to accumulated depreciation, with no gain or loss being reflected in results of operations. Where a disposition of property, plant and equipment occurs through sale, a gain or loss is calculated based on proceeds and such gain or loss is included in depreciation expense. Depreciation expense also includes the costs incurred to remove property, plant and equipment where no ARO has been recorded.

Goodwill

Goodwill represents the cost of acquired local distribution companies that is in excess of the fair value of the net identifiable assets acquired at the acquisition date. Goodwill is not included in rate base.

Goodwill is evaluated for impairment on an annual basis, or more frequently if circumstances require. The Company performs a qualitative assessment to determine whether it is more-likely-than-not that the fair value of the applicable reporting unit is less than its carrying amount. If the Company determines, as a result of its qualitative assessment, that it is not more-likely-than-not that the fair value of the applicable reporting unit is less than its carrying amount, no further testing is required. If the Company determines, as a result of its qualitative assessment, that it is more-likely-than-not that the fair value of the applicable reporting unit is less than its carrying amount, a goodwill impairment assessment is performed using a two-step, fair value-based test. The first step compares the fair value of the applicable reporting unit to its carrying amount, including goodwill. If the carrying amount of the applicable reporting unit exceeds its fair value, a second step is performed. The second step requires an allocation of fair value to the individual assets and liabilities using purchase price allocation in order to determine the implied fair value of goodwill. If the implied fair value of goodwill is less than the carrying amount, an impairment loss is recorded as a reduction to goodwill and as a charge to results of operations.

For the year ended December 31, 2014, based on the qualitative assessment performed as at September 30, 2014, the Company has determined that it is not more-likely-than-not that the fair value of each applicable reporting unit assessed is less than its carrying amount. As a result, no further testing was performed, and the Company has concluded that goodwill was not impaired at December 31, 2014.

Long-Lived Asset Impairment

When circumstances indicate the carrying value of long-lived assets may not be recoverable, the Company evaluates whether the carrying value of such assets, excluding goodwill, has been impaired. For such long-lived assets, impairment exists when the carrying value exceeds the sum of the future estimated undiscounted cash flows expected to result from the use and eventual disposition of the asset. When alternative courses of action to recover the carrying amount of a long-lived asset are under consideration, a probability-weighted approach is used to develop estimates of future undiscounted cash flows. If the carrying value of the long-lived asset is not recoverable based on the estimated future undiscounted cash flows, an impairment loss is recorded, measured as the excess of the carrying value of the asset over its fair value. As a result, the asset's carrying value is adjusted to its estimated fair value.

Within its regulated business, the carrying costs of most of Hydro One's long-lived assets are included in rate base where they earn an OEB-approved rate of return. Asset carrying values and the related return are recovered through approved rates. As a result, such assets are only tested for impairment in the event that the OEB disallows recovery, in whole or in part, or if such a disallowance is judged to be probable.

Hydro One regularly monitors the assets of its unregulated Hydro One Telecom subsidiary for indications of impairment. Management assesses the fair value of such long-lived assets using commonly accepted techniques, and may use more than one. Techniques used to determine fair value include, but are not limited to, the use of recent third party comparable sales for reference and internally developed discounted cash flow analysis. Significant changes in market conditions, changes to the condition of an asset, or a change in management's intent to utilize the asset are generally viewed by management as triggering events to reassess the cash flows related to these long-lived assets. As at December 31, 2014, no asset impairment had been recorded for assets within either the Company's regulated or unregulated businesses.

Costs of Arranging Debt Financing

For financial liabilities classified as other than held-for-trading, the Company defers the external transaction costs related to obtaining debt financing and presents such amounts as deferred debt issuance costs on the Consolidated Balance Sheets. Deferred debt issuance costs are amortized over the contractual life of the related debt on an effective-interest basis and the amortization is included within financing charges in the Consolidated Statements of Operations and Comprehensive Income. Transaction costs for items classified as held-for-trading are expensed immediately.

Comprehensive Income

Comprehensive income is comprised of net income and other comprehensive income (OCI). Hydro One presents net income and OCI in a single continuous Consolidated Statement of Operations and Comprehensive Income.

Financial Assets and Liabilities

All financial assets and liabilities are classified into one of the following five categories: held-to-maturity; loans and receivables; held-for-trading; other liabilities; or available-for-sale. Financial assets and liabilities classified as held-for-trading are measured at fair value. All other financial assets and liabilities are measured at amortized cost, except accounts receivable and amounts due from related parties, which are measured at the lower of cost or fair value. Accounts receivable and amounts due from related parties are classified as loans and receivables. The Company considers the carrying amounts of accounts receivable and amounts due from related parties to be reasonable estimates of fair value because of the short time to maturity of these instruments. Provisions for impaired accounts receivable are recognized as adjustments to the allowance for doubtful accounts and are recognized when there is objective evidence that the Company will not be able to collect amounts according to the original terms. All financial instrument transactions are recorded at trade date.

Derivative instruments are measured at fair value. Gains and losses from fair valuation are included within financing charges in the period in which they arise. The Company determines the classification of its financial assets and liabilities at the date of initial recognition. The Company designates certain of its financial assets and liabilities to be held at fair value, when it is consistent with the Company's risk management policy disclosed in Note 13 – Fair Value of Financial Instruments and Risk Management.

Derivative Instruments and Hedge Accounting

The Company closely monitors the risks associated with changes in interest rates on its operations and, where appropriate, uses various instruments to hedge these risks. Certain of these derivative instruments qualify for hedge accounting and are designated as accounting hedges, while others either do not qualify as hedges or have not been designated as hedges (hereinafter referred to as undesignated contracts) as they are part of economic hedging relationships.

The accounting guidance for derivative instruments requires the recognition of all derivative instruments not identified as meeting the normal purchase and sale exemption as either assets or liabilities recorded at fair value on the Consolidated Balance Sheets. For derivative instruments that qualify for hedge accounting, the Company may elect to designate such derivative instruments as either cash flow hedges or fair value hedges. The Company offsets fair value amounts recognized on its Consolidated Balance Sheets related to derivative instruments executed with the same counterparty under the same master netting agreement.

For derivative instruments that qualify for hedge accounting and which are designated as cash flow hedges, the effective portion of any gain or loss, net of tax, is reported as a component of accumulated OCI (AOCI) and is reclassified to results of operations in the same period or periods during which the hedged transaction affects results of operations. Any gains or losses on the derivative instrument that represent either hedge ineffectiveness or hedge components excluded from the assessment of effectiveness are recognized in results of operations. For fair value hedges, changes in fair value of both the derivative instrument and the underlying hedged exposure are recognized in the Consolidated Statements of Operations and Comprehensive Income in the current period. The gain or loss on the derivative instrument is included in the same line item as the offsetting gain or loss on the hedged item in the Consolidated Statements of Operations and Comprehensive Income. Additionally, the Company enters into derivative agreements that are economic hedges which either do not qualify for hedge accounting or have not been designated as hedges. The changes in fair value of these undesignated derivative instruments are reflected in results of operations.

Embedded derivative instruments are separated from their host contracts and carried at fair value on the Consolidated Balance Sheets when: (a) the economic characteristics and risks of the embedded derivative are not clearly and closely related to the economic characteristics and risks of the host contract; (b) the hybrid instrument is not measured at fair value, with changes in fair value recognized in results of operations each period; and (c) the embedded derivative itself meets the definition of a derivative. The Company does not engage in derivative trading or speculative activities and had no embedded derivatives at December 31, 2014 or 2013.

Hydro One periodically develops hedging strategies taking into account risk management objectives. At the inception of a hedging relationship where the Company has elected to apply hedge accounting, Hydro One formally documents the relationship between the hedged item and the hedging instrument, the related risk management objective, the nature of the specific risk exposure being hedged, and the method for assessing the effectiveness of the hedging relationship. The Company also assesses, both at the inception of the hedge and on a quarterly basis, whether the hedging instruments are effective in offsetting changes in fair values or cash flows of the hedged items.

Employee Future Benefits

Employee future benefits provided by Hydro One include pension, post-retirement and post-employment benefits. The costs of the Company's pension, post-retirement and post-employment benefit plans are recorded over the periods during which employees render service.

The Company recognizes the funded status of its pension, post-retirement and post-employment plans on its Consolidated Balance Sheets and subsequently recognizes the changes in funded status at the end of each reporting year. Pension, post-retirement and post-employment plans are considered to be underfunded when the projected benefit obligation exceeds the fair value of the plan assets. Liabilities are recognized on the Consolidated Balance Sheets for any net underfunded projected benefit obligation. The net underfunded projected benefit obligation may be disclosed as a current liability, long-term liability, or both. The current portion is the amount by which the actuarial present value of benefits included in the benefit obligation payable in the next 12 months exceeds the fair value of plan assets. If the fair value of plan assets exceeds the projected benefit obligation of the plan, an asset is recognized equal to the net overfunded projected benefit obligation. The post-retirement and post-employment benefit plans are unfunded because there are no related plan assets.

Pension benefits

In accordance with the OEB's rate orders, pension costs are recorded on a cash basis as employer contributions are paid to the pension fund in accordance with the *Pension Benefits Act* (Ontario). Pension costs are recorded on an accrual basis for financial reporting purposes. Pension costs are actuarially determined using the projected benefit method prorated on service and are based on assumptions that reflect management's best estimate of the effect of future events, including future compensation increases. Past service costs from plan amendments and all actuarial gains and losses are amortized on a straight-line basis over the expected average remaining service period of active employees in the plan, and over the estimated remaining life expectancy of inactive employees in the plan. Pension plan assets, consisting primarily of listed equity securities as well as corporate and government debt securities, are fair valued at the end of each year.

Hydro One records a regulatory asset equal to the net underfunded projected benefit obligation for its pension plan. The regulatory asset for the net underfunded projected benefit obligation for the pension plan, in the absence of regulatory accounting, would be recognized in AOCI. A regulatory asset is recognized because management considers it to be probable that pension benefit costs will be recovered in the future through the rate-setting process. The pension regulatory assets are remeasured at the end of each year based on the current status of the pension plan.

All future pension benefit costs are attributed to labour and are either charged to results of operations or capitalized as part of the cost of property, plant and equipment and intangible assets.

Post-retirement and post-employment benefits

Post-retirement and post-employment benefits are recorded and included in rates on an accrual basis. Costs are determined by independent actuaries using the projected benefit method prorated on service and based on assumptions that reflect management's best estimates. Past service costs from plan amendments are amortized to results of operations based on the expected average remaining service period.

Hydro One records a regulatory asset equal to the incremental net unfunded projected benefit obligation for post-retirement and post-employment plans recorded at each year end based on annual actuarial reports. The regulatory asset for the incremental net unfunded projected benefit obligation for post-retirement and post-employment plans, in the absence of regulatory accounting, would be recognized in AOCI. A regulatory asset is recognized because management considers it to be probable that post-retirement and post-employment benefit costs will be recovered in the future through the rate-setting process.

For post-retirement benefits, all actuarial gains or losses are deferred using the "corridor" approach. The amount calculated above the "corridor" is amortized to results of operations on a straight-line basis over the expected average remaining service life of active employees in the plan and over the remaining life expectancy of inactive employees in the plan. The post-retirement benefit obligation is remeasured to its fair value at each year end based on an annual actuarial report, with an offset to the associated regulatory asset, to the extent of the remeasurement adjustment.

For post-employment obligations, the associated regulatory liabilities representing actuarial gains on transition to US GAAP are amortized to results of operations based on the "corridor" approach. Post transition, the actuarial gains and losses on post-employment obligations that are incurred during the year are recognized immediately to results of operations. The post-employment benefit obligation is remeasured to its fair value at each year end based on an annual actuarial report, with an offset to the associated regulatory asset, to the extent of the remeasurement adjustment.

All post-retirement and post-employment future benefit costs are attributed to labour and are either charged to results of operations or capitalized as part of the cost of property, plant and equipment and intangible assets.

Multiemployer Pension Plan

Employees of Hydro One Brampton Networks and the newly acquired Norfolk Power participate in the Ontario Municipal Employees Retirement System Fund (OMERS), a multiemployer, contributory, defined benefit public sector pension fund. OMERS provides retirement pension payments based on members' length of service and salary. Both the participating employers and members are required to make plan contributions. The OMERS plan assets are pooled together to provide benefits to all plan participants and the plan assets are not segregated by member entity. OMERS is registered with the Financial Services Commission of Ontario under Registration #0345983. At December 31, 2013, OMERS had approximately 440,000 members, with approximately 335 members being current employees of Hydro One Brampton Networks and Norfolk Power.

The OMERS plan is accounted for as a defined contribution plan by Hydro One because it is not practicable to determine the present value of the Company's obligation, the fair value of plan assets or the related current service cost applicable to Hydro One Brampton Networks and Norfolk Power employees. Hydro One recognizes its contributions to the OMERS plan as pension expense, with a portion being capitalized. The expensed amount is included in operation, maintenance and administration costs in the Consolidated Statements of Operations and Comprehensive Income.

Loss Contingencies

Hydro One is involved in certain legal and environmental matters that arise in the normal course of business. In the preparation of its Consolidated Financial Statements, management makes judgments regarding the future outcome of contingent events and records a loss for a contingency based on its best estimate when it is determined that such loss is probable and the amount of the loss can be reasonably estimated. Where the loss amount is recoverable in future rates, a regulatory asset is also recorded. When a range estimate for the probable loss exists and no amount within the range is a better estimate than any other amount, the Company records a loss at the minimum amount within the range.

Management regularly reviews current information available to determine whether recorded provisions should be adjusted and whether new provisions are required. Estimating probable losses may require analysis of multiple forecasts and scenarios that often depend on judgments about potential actions by third parties, such as federal, provincial and local courts or regulators. Contingent liabilities are often resolved over long periods of time. Amounts recorded in the Consolidated Financial Statements may differ from the actual outcome once the contingency is resolved. Such differences could have a material impact on future results of operations, financial position and cash flows of the Company.

Provisions are based upon current estimates and are subject to greater uncertainty where the projection period is lengthy. A significant upward or downward trend in the number of claims filed, the nature of the alleged injuries, and the average cost of resolving each claim could change the estimated provision, as could any substantial adverse or favourable verdict at trial. A federal or provincial legislative outcome or structured settlement could also change the estimated liability. Legal fees are expensed as incurred.

Environmental Liabilities

Environmental liabilities are recorded in respect of past contamination when it is determined that future environmental remediation expenditures are probable under existing statute or regulation and the amount of the future expenditures can be reasonably estimated. Hydro One records a liability for the estimated future expenditures associated with the contaminated land assessment and remediation (LAR) and for the phase-out and destruction of polychlorinated biphenyl (PCB)-contaminated mineral oil removed from electrical equipment, based on the present value of these estimated future expenditures. The Company determines the present value with a discount rate equal to its credit-adjusted risk-free interest rate on financial instruments with comparable maturities to the pattern of future environmental expenditures. As the Company anticipates that the future expenditures will continue to be recoverable in future rates, an offsetting regulatory asset has been recorded to reflect the future recovery of these environmental expenditures from customers. Hydro One reviews its estimates of future environmental expenditures annually, or more frequently if there are indications that circumstances have changed.

Asset Retirement Obligations

AROs are recorded for legal obligations associated with the future removal and disposal of long-lived assets. Such obligations may result from the acquisition, construction, development and/or normal use of the asset. Conditional AROs are recorded when there is a legal obligation to perform a future asset retirement activity but where the timing and/or method of settlement are conditional on a future event that may or may not be within the control of the Company. In such a case, the obligation to perform the asset retirement activity is unconditional even though uncertainty exists about the timing and/or method of settlement.

When recording an ARO, the present value of the estimated future expenditures required to complete the asset retirement activity is recorded in the period in which the obligation is incurred, if a reasonable estimate can be made. In general, the present value of the estimated future expenditures is added to the carrying amount of the associated asset and the resulting asset retirement cost is depreciated over the estimated useful life of the asset. Where an asset is no longer in service when an ARO is recorded, the asset retirement cost is recorded in results of operations.

Some of the Company's transmission and distribution assets, particularly those located on unowned easements and rights-of-way, may have AROs, conditional or otherwise. The majority of the Company's easements and rights-of-way are either of perpetual duration or are automatically renewed annually. Land rights with finite terms are generally subject to extension or renewal. As the Company expects to use the majority of its facilities in perpetuity, no ARO currently exists for these assets. If, at some future date, a particular facility is shown not to meet the perpetuity assumption, it will be reviewed to determine whether an estimable ARO exists. In such a case, an ARO would be recorded at that time.

The Company's AROs recorded to date relate to estimated future expenditures associated with the removal and disposal of asbestos-containing materials installed in some of its facilities and with the decommissioning of specific switching stations located on unowned sites.

3. NEW ACCOUNTING PRONOUNCEMENTS

Recently Adopted Accounting Pronouncements

In July 2013, the Financial Accounting Standards Board (FASB) issued Accounting Standards Update (ASU) 2013-11, Income Taxes (Topic 740): Presentation of an Unrecognized Tax Benefit When a Net Operating Loss Carryforward, a Similar Tax Loss, or a Tax Credit Carryforward Exists. This ASU provides guidance on the presentation of unrecognized tax benefits. This ASU is effective for fiscal years, and interim periods within those years, beginning after December 15, 2013, and should be applied prospectively to all unrecognized tax benefits that exist at the effective date. The adoption of this ASU did not have a significant impact on the Company's consolidated financial statements.

Recent Accounting Guidance Not Yet Adopted

In May 2014, the FASB issued ASU 2014-09, Revenue from Contracts with Customers (Topic 606). This ASU provides guidance on revenue recognition that depicts the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expects to be entitled in exchange for those goods and services. This ASU is required to be applied retrospectively and is effective for fiscal years, and interim periods within those years, beginning after December 15, 2016. The Company is currently assessing the impact of adoption of ASU 2014-09 on its consolidated financial statements.

In August 2014, the FASB issued ASU 2014-15, Presentation of Financial Statements – Going Concern (Subtopic 205-40): Disclosure of Uncertainties about an Entity's Ability to Continue as a Going Concern. This ASU provides guidance about management's responsibility to evaluate whether there is substantial doubt about an entity's ability to continue as a going concern and related disclosures. This ASU is effective for the annual period ending December 31, 2016, and for annual and interim periods thereafter. The adoption of this ASU is not anticipated to have a significant impact on the Company's consolidated financial statements.

In November 2014, the FASB issued ASU 2014-16, Derivatives and Hedging (Topic 815). This ASU provides guidance on accounting for hybrid financial instruments issued in the form of a share. This ASU is effective for fiscal years, and interim periods within those years, beginning after December 15, 2015. The Company is currently assessing the impact of adoption of ASU 2014-16 on its consolidated financial statements.

4. BUSINESS COMBINATIONS

B2M Limited Partnership

In 2012, Hydro One entered into an agreement with the Chippewas of Nawash First Nation and the Chippewas of Saugeen First Nation, collectively referred to as the Saugeen Ojibway Nation (SON), where a noncontrolling equity interest in Hydro One's new limited partnership, B2M LP, would be made available for purchase at fair value by the SON. B2M LP was formed by Hydro One in 2013 to hold most of the transmission lines and a licence to use the related land. These assets are associated with Hydro One's Bruce to Milton Transmission Reinforcement Project, an electricity transmission line (Bruce to Milton Line) in southwestern Ontario, from the Bruce Power facility in Kincardine to Hydro One's Milton Switching Station in the Town of Milton. Hydro One Networks will maintain and operate the Bruce to Milton Line in accordance with an operation and management services agreement. In November 2013, the OEB issued a Decision and Order granting B2M LP a transmission licence and granting Hydro One Networks leave to sell the relevant Bruce to Milton Line transmission assets to B2M LP.

On December 16, 2014, the relevant Bruce to Milton Line transmission assets totalling $526 million were transferred from Hydro One Networks to B2M LP. This was financed by 60% debt ($316 million) and 40% equity ($210 million). On December 17, 2014, the SON acquired a 34.2% equity interest in B2M LP for consideration of $72 million, representing the fair value of the equity interest acquired.

Part of the SON's equity interest in B2M LP is in Class B units of B2M LP that have a mandatory put option. The put option requires that upon the occurrence of an enforcement event (i.e. an event of default such as a debt default by the SON or insolvency event), the SON has the ability to require Hydro One to purchase the Class B units of B2M LP for net book value on the redemption date.

The noncontrolling interest relating to the Class B units is classified on the Consolidated Balance Sheet as temporary equity because the redemption feature is outside the control of the Company. The balance of the noncontrolling interest is classified within equity. At December 31, 2014, the total noncontrolling interest was reduced by the 2014 net loss attributable to noncontrolling interest totalling $2 million, including $1 million relating to noncontrolling interest subject to redemption.

Acquisition of Norfolk Power

On August 29, 2014, Hydro One acquired 100% of the common shares of Norfolk Power, an electricity distribution and telecom company located in southwestern Ontario. The total purchase price for Norfolk Power, net of the long-term debt assumed and adjusted for preliminary working capital and other closing adjustments, is approximately $68 million.

The following table summarizes the preliminary determination of the fair value of the assets acquired and liabilities assumed:

(millions of Canadian dollars)	
Working capital	6
Property, plant and equipment	56
Deferred income tax assets	1
Goodwill	40
Bank indebtedness	(3)
Derivative instruments	(3)
Long-term debt	(26)
Post-retirement and post-employment benefit liability	(1)
Environmental liability	(1)
Long-term accounts payable and other liabilities	(1)
	68

The determination of the fair values of assets acquired and liabilities assumed has been based upon management's estimates and certain assumptions with respect to the fair values of the assets acquired and liabilities assumed. The purchase agreement provides for final purchase price adjustments based on agreed working capital and other balances at the acquisition date which have not yet been finalized. The Company will continue to review information and perform further analysis prior to finalizing the total purchase price and therefore the actual total purchase price and the consequent impact on goodwill may differ from the amounts above.

Goodwill of approximately $40 million arising from the Norfolk Power acquisition consists largely of the synergies and economies of scale expected from combining the operations of Hydro One and Norfolk Power. All of the goodwill was assigned to Hydro One's Distribution Business segment. None of the goodwill recognized is expected to be deductible for income tax purposes.

Norfolk Power contributed revenues of $18 million and net income of less than $1 million to the Company's consolidated financial results for the year ended December 31, 2014.

All costs related to the acquisition have been expensed through the Consolidated Statements of Operations and Comprehensive Income. The disclosure of Norfolk Power's pro forma information is immaterial to the Company's consolidated financial results for the year ended December 31, 2014.

Woodstock Hydro Purchase Agreement

On May 21, 2014, Hydro One reached an agreement with the City of Woodstock to acquire 100% of the common shares of Woodstock Hydro Holdings Inc. (Woodstock Hydro), an electricity distribution company located in southwestern Ontario. The acquisition is pending a regulatory decision from the OEB. The purchase price for Woodstock Hydro will be approximately $29 million, subject to final closing adjustments. The transaction is anticipated to be completed in 2015. In anticipation of the Woodstock Hydro acquisition, the Company made a refundable deposit totalling $2 million, which is recorded in prepaid expenses and other assets on the Consolidated Balance Sheet.

Haldimand Hydro Purchase Agreement

On June 10, 2014, Hydro One reached an agreement with Haldimand County to acquire 100% of the common shares of Haldimand County Utilities Inc. (Haldimand Hydro), an electricity distribution and telecom company located in southwestern Ontario. The acquisition is pending a regulatory decision from the OEB. The purchase price for Haldimand Hydro will be approximately $65 million, subject to final closing adjustments. The transaction is anticipated to be completed in 2015. In anticipation of the Haldimand Hydro acquisition, the Company made a refundable deposit totalling $3 million, which is recorded in prepaid expenses and other assets on the Consolidated Balance Sheet.

5. DEPRECIATION AND AMORTIZATION

Year ended December 31 (millions of Canadian dollars)	**2014**	**2013**
Depreciation of property, plant and equipment	565	533
Amortization of intangible assets	53	48
Asset removal costs	81	79
Amortization of regulatory assets	23	16
	722	676

6. FINANCING CHARGES

Year ended December 31 (millions of Canadian dollars)	**2014**	**2013**
Interest on long-term debt	432	416
Other	12	9
Less: Interest capitalized on construction and development in progress	(49)	(51)
Gain on interest-rate swap agreements	(10)	(11)
Interest earned on investments	(6)	(3)
	379	360

7. PROVISION FOR PAYMENTS IN LIEU OF CORPORATE INCOME TAXES

The provision for PILs differs from the amount that would have been recorded using the combined Canadian federal and Ontario statutory income tax rate. The reconciliation between the statutory and the effective tax rates is provided as follows:

Year ended December 31 (millions of Canadian dollars)	**2014**	**2013**
Income before provision for PILs	836	912
Canadian federal and Ontario statutory income tax rate	26.50%	26.50%
Provision for PILs at statutory rate	222	242
Increase (decrease) resulting from:		
Net temporary differences included in amounts charged to customers:		
Capital cost allowance in excess of depreciation and amortization	(72)	(72)
Pension contributions in excess of pension expense	(24)	(23)
Overheads capitalized for accounting but deducted for tax purposes	(15)	(14)
Interest capitalized for accounting but deducted for tax purposes	(13)	(13)
Environmental expenditures	(5)	(4)
Prior year's adjustments	(4)	(8)
Non-refundable investment tax credits	(3)	(4)
Post-retirement and post-employment benefit expense in excess of cash payments	3	4
Other	(1)	(1)
Net temporary differences	(134)	(135)
Net permanent differences	1	2
Total provision for PILs	89	109

The major components of income tax expense are as follows:

Year ended December 31 (millions of Canadian dollars)	**2014**	**2013**
Current provision for PILs	79	111
Deferred provision (recovery) for PILs	10	(2)
Total provision for PILs	89	109
Effective income tax rate	10.63%	11.98%

The current provision for PILs is remitted to, or received from, the OEFC. At December 31, 2014, $39 million due from the OEFC was included in due from related parties on the Consolidated Balance Sheet (2013 – $29 million).

At December 31, 2014, the total provision for PILs includes deferred provision for PILs of $10 million (2013 – deferred recovery of $2 million) that is not included in the rate-setting process, using the liability method of accounting. Deferred PILs balances expected to be included in the rate-setting process are offset by regulatory assets and liabilities to reflect the anticipated recovery or disposition of these balances within future electricity rates.

Deferred Income Tax Assets and Liabilities

Deferred income tax assets and liabilities arise from differences between the carrying amounts and tax basis of the Company's assets and liabilities. At December 31, 2014 and 2013, deferred income tax assets and liabilities consisted of the following:

December 31 (millions of Canadian dollars)	**2014**	**2013**
Deferred income tax assets		
Post-retirement and post-employment benefits expense in excess of cash payments	8	7
Environmental expenditures	4	5
Depreciation and amortization in excess of capital cost allowance	(4)	–
Other	(1)	(1)
Total deferred income tax assets	7	11
Less: current portion	–	–
	7	11

December 31 (millions of Canadian dollars)	**2014**	**2013**
Deferred income tax liabilities		
Capital cost allowance in excess of depreciation and amortization	(1,713)	(1,556)
Regulatory amounts that are not recognized for tax purposes	(140)	(144)
Partnership interest	(38)	–
Goodwill	(21)	(20)
Post-retirement and post-employment benefits expense in excess of cash payments	559	542
Environmental expenditures	59	66
Other	–	1
Total deferred income tax liabilities	(1,294)	(1,111)
Less: current portion	19	18
	(1,313)	(1,129)

During 2014 and 2013, there were no changes in the rate applicable to future taxes.

8. ACCOUNTS RECEIVABLE

December 31 (millions of Canadian dollars)	**2014**	**2013**
Accounts receivable – billed	496	268
Accounts receivable – unbilled	586	691
Accounts receivable, gross	1,082	959
Allowance for doubtful accounts	(66)	(36)
Accounts receivable, net	1,016	923

The following table shows the movements in the allowance for doubtful accounts for the years ended December 31, 2014 and 2013:

Year ended December 31 (millions of Canadian dollars)	**2014**	**2013**
Allowance for doubtful accounts – January 1	(36)	(23)
Write-offs	24	24
Additions to allowance for doubtful accounts	(54)	(37)
Allowance for doubtful accounts – December 31	(66)	(36)

9. PROPERTY, PLANT AND EQUIPMENT

December 31, 2014 (millions of Canadian dollars)	Property, Plant and Equipment	Accumulated Depreciation	Construction in Progress	Total
Transmission	13,209	4,416	626	9,419
Distribution	9,076	3,225	320	6,171
Communication	1,100	615	56	541
Administration and Service	1,502	793	23	732
Easements	623	85	–	538
	25,510	9,134	1,025	17,401

December 31, 2013 (millions of Canadian dollars)	Property, Plant and Equipment	Accumulated Depreciation	Construction in Progress	Total
Transmission	12,413	4,215	671	8,869
Distribution	8,498	3,046	316	5,768
Communication	1,060	560	53	553
Administration and Service	1,380	716	38	702
Easements	617	78	–	539
	23,968	8,615	1,078	16,431

Financing charges capitalized on property, plant and equipment under construction were $48 million in 2014 (2013 – $48 million).

10. INTANGIBLE ASSETS

December 31, 2014 (millions of Canadian dollars)	Intangible Assets	Accumulated Amortization	Development in Progress	Total
Computer applications software	573	303	3	273
Other	5	2	–	3
	578	305	3	276

December 31, 2013 (millions of Canadian dollars)	Intangible Assets	Accumulated Amortization	Development in Progress	Total
Computer applications software	557	249	3	311
Other	5	3	–	2
	562	252	3	313

Financing charges capitalized on intangible assets under development were $1 million in 2014 (2013 – $3 million). The estimated annual amortization expense for intangible assets is as follows: 2015 – $53 million; 2016 – $53 million; 2017 – $53 million; 2018 – $45 million; and 2019 – $31 million.

11. REGULATORY ASSETS AND LIABILITIES

Regulatory assets and liabilities arise as a result of the rate-setting process. Hydro One has recorded the following regulatory assets and liabilities:

December 31 (millions of Canadian dollars)	**2014**	**2013**
Regulatory assets:		
Deferred income tax regulatory asset	1,327	1,145
Pension benefit regulatory asset	1,236	845
Post-retirement and post-employment benefits	273	308
Environmental	239	266
Pension cost variance	90	80
DSC exemption	16	7
OEB cost assessment differential	12	9
Retail settlement variance accounts	11	–
Long-term project development costs	–	5
Other	27	18
Total regulatory assets	3,231	2,683
Less: current portion	31	47
	3,200	2,636
Regulatory liabilities:		
Rider 11	83	55
External revenue variance	54	81
CDM deferral variance account	25	–
Deferred income tax regulatory liability	21	19
PST savings deferral	19	17
Hydro One Brampton Networks rider	2	8
Retail settlement variance accounts	–	35
Rider 9	–	19
Other	11	14
Total regulatory liabilities	215	248
Less: current portion	47	85
	168	163

Deferred Income Tax Regulatory Asset and Liability

Deferred income taxes are recognized on temporary differences between the carrying amount of assets and liabilities in the financial statements and the corresponding tax bases used in the computation of taxable profit. The Company has recognized regulatory assets and liabilities that correspond to deferred income taxes that flow through the rate-setting process. In the absence of rate-regulated accounting, the Company's provision for PILs would have been recognized using the liability method and there would be no regulatory accounts established for taxes to be recovered through future rates. As a result, the 2014 provision for PILs would have been higher by approximately $132 million (2013 – $139 million).

Pension Benefit Regulatory Asset

The Company recognizes the net unfunded status of pension obligations on the Consolidated Balance Sheets with an offset to the associated regulatory asset. A regulatory asset is recognized because management considers it to be probable that pension benefit costs will be recovered in the future through the rate-setting process. The pension benefit obligation is remeasured to its fair value at each year end based on an annual actuarial report, with an offset to the associated regulatory asset, to the extent of the remeasurement adjustment. In the absence of rate-regulated accounting, 2014 OCI would have been lower by $391 million (2013 – higher by $670 million).

Post-Retirement and Post-Employment Benefits

The Company recognizes the net unfunded status of post-retirement and post-employment obligations on the Consolidated Balance Sheets with an incremental offset to the associated regulatory assets. A regulatory asset is recognized because management considers it to be probable that post-retirement and post-employment benefit costs will be recovered in the future through the rate-setting process. The post-retirement and post-employment benefit obligation is remeasured to its fair value at each year end based on an annual actuarial report, with an offset to the associated regulatory asset, to the extent of the remeasurement adjustment. In the absence of rate-regulated accounting, 2014 OCI would have been higher by $35 million (2013 – $12 million).

Environmental

Hydro One records a liability for the estimated future expenditures required to remediate environmental contamination. Because such expenditures are expected to be recoverable in future rates, the Company has recorded an equivalent amount as a regulatory asset. In 2014, the environmental regulatory asset decreased by $33 million (2013 – $3 million) to reflect related changes in the Company's PCB liability, and increased by $13 million (2013 – $26 million) due to changes in the LAR liability. The environmental regulatory asset is amortized to results of operations based on the pattern of actual expenditures incurred and charged to environmental liabilities. The OEB has the discretion to examine and assess the prudency and the timing of recovery of all of Hydro One's actual environmental expenditures. In the absence of rate-regulated accounting, 2014 operation, maintenance and administration expenses would have been lower by $20 million (2013 – higher by $23 million). In addition, 2014 amortization expense would have been lower by $18 million (2013 – $16 million), and 2014 financing charges would have been higher by $11 million (2013 – $10 million).

Pension Cost Variance

A pension cost variance account was established for Hydro One Networks' transmission and distribution businesses to track the difference between the actual pension expenses incurred and estimated pension costs approved by the OEB. The balance in this regulatory account reflects the excess of pension costs paid as compared to OEB-approved amounts. In the absence of rate-regulated accounting, 2014 revenue would have been lower by $10 million (2013 – $19 million).

DSC Exemption

In June 2010, Hydro One Networks filed an application with the OEB regarding the OEB's new cost responsibility rules contained in the OEB's October 2009 Notice of Amendment to the Distribution System Code (DSC), with respect to the connection of certain renewable generators that were already connected or that had received a connection impact assessment prior to October 21, 2009. The application sought approval to record and defer the unanticipated costs incurred by Hydro One Networks that resulted from the connection of certain renewable generation facilities. The OEB ruled that identified specific expenditures can be recorded in a deferral account subject to the OEB's review until the next Hydro One Networks' distribution cost-of-service application. This program effectively ended at the end of 2014 with no new principal to be recorded in 2015.

OEB Cost Assessment Differential

In April 2010, the OEB issued its Decision regarding Hydro One Networks' distribution rate application for 2010 and 2011. As part of this decision, the OEB also approved the distribution-related OEB Cost Assessment Differential Account to record the difference between the amounts approved in rates and actual expenditures with respect to the OEB's cost assessments. This continued for 2012-2014 until the next Hydro One Networks' distribution cost-of-service application, which was submitted in 2014. This program effectively ended at the end of 2014 with no new activity to be recorded in 2015.

Retail Settlement Variance Accounts (RSVAs)

Hydro One has deferred certain retail settlement variance amounts under the provisions of Article 490 of the OEB's Accounting Procedures Handbook. In December 2012, the OEB approved the disposition of the total RSVA balance accumulated from January 2010 to December 2011, including accrued interest, to be disposed over a 24-month period from January 1, 2013 to December 31, 2014. At December 31, 2014, the RSVA was in a net asset position due to a change in global adjustment.

Long-Term Project Development Costs

In May 2009, the OEB approved the creation of a deferral account to record Hydro One Networks' costs of preliminary work to advance certain transmission projects identified in the Company's 2009 and 2010 transmission rate applications. In March 2010, the OEB issued a decision amending the scope of the account to include the 20 major transmission projects identified in the September 2009 request from the Ministry of Energy and Infrastructure. In December 2012, the OEB approved the recovery of the December 31, 2012 balance, including accrued interest, to be recovered over a one-year period from January 1, 2014 to December 31, 2014.

Rider 11

In April 2010, the OEB requested the establishment of deferral accounts which capture the difference between the revenue recorded on the basis of Green Energy Plan expenditures incurred and the actual recoveries received. Rider 11 includes amounts previously included as Rider 8.

External Revenue Variance

In May 2009, the OEB approved forecasted amounts related to export service revenue, external revenue from secondary land use, and external revenue from station maintenance and engineering and construction work. In November 2012, the OEB again approved forecasted amounts related to these revenue categories and extended the scope to encompass all other external revenues. The external revenue variance account balance reflects the excess of actual external revenues compared to the OEB-approved forecasted amounts.

CDM Deferral Variance Account

As part of Hydro One Networks' application for 2013 and 2014 transmission rates, Hydro One agreed to establish a new regulatory deferral variance account to track the impact of actual Conservation and Demand Management (CDM) and demand response results on the load forecast compared to the estimated load forecast included in the revenue requirement. The balance in the CDM deferral variance account relates to the actual 2013 CDM compared to the amounts included in 2013 revenue requirement. The OEB rate order specifically states that the Ontario Power Authority (OPA) data used to calculate the difference between forecasted and actual savings will be provided one year in arrears, and as a result, no amount should be recorded in advance of notification from the OPA of actual results. This notification from the OPA typically occurs in September of each year.

PST Savings Deferral Account

The provincial sales tax (PST) and goods and services tax (GST) were harmonized in July 2010. Unlike the GST, the PST was included in operation, maintenance and administration expenses or capital expenditures for past revenue requirements approved during a full cost-of-service hearing. Under the harmonized sales tax (HST) regime, the HST included in operation, maintenance and administration expenses or capital expenditures is not a cost ultimately borne by the Company and as such, a refund of the prior PST element in the approved revenue requirement is applicable, and calculations for tracking and refund were requested by the OEB. For Hydro One Networks' transmission revenue requirement, PST was included between July 1, 2010 and December 31, 2010 and recorded in a deferral account, per direction from the OEB. For Hydro One Networks' distribution revenue requirement, PST was included between July 1, 2010 and December 31, 2014 and recorded in a deferral account, per direction from the OEB.

Hydro One Brampton Networks Rider

In December 2013, the OEB issued a decision for Hydro One Brampton Networks' 2014 distribution rates. Included in the OEB's decision was the approval of certain deferral account balances, primarily RSVAs. The OEB ordered that the approved balances be aggregated into a single regulatory account and disposed of through a rate rider over a two-year period from January 1, 2014 to December 31, 2015.

Rider 9

In December 2012, as part of Hydro One Networks' 2013 IRM distribution rate application, the OEB approved for disposition certain distribution-related deferral account balances, including RSVA amounts and balances of Rider 2 and Rider 3, accumulated up to December 2011, including accrued interest, to be disposed over a 24-month period from January 1, 2013 to December 31, 2014.

12. DEBT AND CREDIT AGREEMENTS

Short-Term Notes

Hydro One meets its short-term liquidity requirements in part through the issuance of commercial paper under its Commercial Paper Program which has a maximum authorized amount of $1,000 million. These short-term notes are denominated in Canadian dollars with varying maturities not exceeding 365 days. Hydro One had no commercial paper borrowings outstanding as at December 31, 2014 and 2013.

Hydro One has a $1,500 million committed and unused revolving standby credit facility with a syndicate of banks, maturing in June 2019. If used, interest on the facility would apply based on Canadian benchmark rates. This credit facility is unsecured and supports the Company's Commercial Paper Program. The Company may use the credit facility for general corporate purposes, including meeting short-term funding requirements. The obligation of each lender to make any credit extension to the Company under its credit facility is subject to various conditions including, among other things, that no event of default has occurred or would result from such credit extension.

Long-Term Debt

The Company issues notes for long-term financing under its Medium-Term Note (MTN) Program. The maximum authorized principal amount of notes issuable under this program is $3,000 million. At December 31, 2014, $1,187 million remained available for issuance until October 2015.

The following table presents the outstanding long-term debt at December 31, 2014 and 2013:

December 31 (millions of Canadian dollars)	**2014**	**2013**
3.13% Series 19 notes due 2014[1]	–	750
2.95% Series 21 notes due 2015[1]	500	500
Floating-rate Series 22 notes due 2015[2]	50	50
4.64% Series 10 notes due 2016	450	450
Floating-rate Series 27 notes due 2016[2]	50	50
5.18% Series 13 notes due 2017	600	600
2.78% Series 28 notes due 2018	750	750
Floating-rate Series 31 notes due 2019[2]	228	–
4.40% Series 20 notes due 2020	300	300
3.20% Series 25 notes due 2022	600	600
7.35% Debentures due 2030	400	400
6.93% Series 2 notes due 2032	500	500
6.35% Series 4 notes due 2034	385	385
5.36% Series 9 notes due 2036	600	600
4.89% Series 12 notes due 2037	400	400
6.03% Series 17 notes due 2039	300	300
5.49% Series 18 notes due 2040	500	500
4.39% Series 23 notes due 2041	300	300
6.59% Series 5 notes due 2043	315	315
4.59% Series 29 notes due 2043	435	435
4.17% Series 32 notes due 2044	350	–
5.00% Series 11 notes due 2046	325	325
4.00% Series 24 notes due 2051	225	225
3.79% Series 26 notes due 2062	310	310
4.29% Series 30 notes due 2064	50	–
	8,923	9,045
Add: Unrealized mark-to-market loss[1]	2	12
Less: Long-term debt payable within one year	(552)	(756)
Long-term debt	8,373	8,301

[1] The unrealized mark-to-market loss relates to $250 million of the Series 21 notes due 2015 (2013 – $500 million of the Series 19 notes due 2014, and $250 million of the Series 21 notes due 2015). The unrealized mark-to-market loss is offset by a $2 million (2013 – $12 million) unrealized mark-to-market gain on the related fixed-to-floating interest-rate swap agreements, which are accounted for as fair value hedges. See Note 13 – Fair Value of Financial Instruments and Risk Management for details of fair value hedges.

[2] The interest rates of the floating-rate notes are referenced to the 3-month Canadian dollar bankers' acceptance rate, plus a margin.

In 2014, Hydro One issued $628 million (2013 – $1,185 million) of long-term debt under the MTN Program, and repaid the $750 million MTN Series 19 notes (2013 – repaid $600 million MTN Series 15 notes). In addition, the Company repaid long-term debt totalling $26 million assumed on the Norfolk Power acquisition.

The long-term debt is unsecured and denominated in Canadian dollars. The long-term debt is summarized by the number of years to maturity in Note 13 – Fair Value of Financial Instruments and Risk Management.

13. FAIR VALUE OF FINANCIAL INSTRUMENTS AND RISK MANAGEMENT

Fair value is considered to be the exchange price in an orderly transaction between market participants to sell an asset or transfer a liability at the measurement date. The fair value definition focuses on an exit price, which is the price that would be received in the sale of an asset or the amount that would be paid to transfer a liability.

Hydro One classifies its fair value measurements based on the following hierarchy, as prescribed by the accounting guidance for fair value, which prioritizes the inputs to valuation techniques used to measure fair value into three levels:

Level 1 inputs are unadjusted quoted prices in active markets for identical assets or liabilities that Hydro One has the ability to access. An active market for the asset or liability is one in which transactions for the asset or liability occur with sufficient frequency and volume to provide ongoing pricing information.

Level 2 inputs are those other than quoted market prices that are observable, either directly or indirectly, for an asset or liability. Level 2 inputs include, but are not limited to, quoted prices for similar assets or liabilities in an active market, quoted prices for identical or similar assets or liabilities in markets that are not active and inputs other than quoted market prices that are observable for the asset or liability, such as interest-rate curves and yield curves observable at commonly quoted intervals, volatilities, credit risk and default rates. A Level 2 measurement cannot have more than an insignificant portion of the valuation based on unobservable inputs.

Level 3 inputs are any fair value measurements that include unobservable inputs for the asset or liability for more than an insignificant portion of the valuation. A Level 3 measurement may be based primarily on Level 2 inputs.

Non-Derivative Financial Assets and Liabilities

At December 31, 2014 and 2013, the Company's carrying amounts of accounts receivable, due from related parties, cash and cash equivalents, bank indebtedness, accounts payable, and due to related parties are representative of fair value because of the short-term nature of these instruments.

Fair Value Measurements of Long-Term Debt

The fair values and carrying values of the Company's long-term debt at December 31, 2014 and 2013 are as follows:

December 31 (millions of Canadian dollars)	2014 Carrying Value	2014 Fair Value	2013 Carrying Value	2013 Fair Value
Long-term debt				
$500 million of MTN Series 19 notes[1]	–	–	506	506
$250 million of MTN Series 21 notes[1]	252	252	256	256
Other notes and debentures[2]	8,673	10,159	8,295	9,018
	8,925	10,411	9,057	9,780

[1] The fair value of $500 million of the MTN Series 19 notes and of $250 million of the MTN Series 21 notes subject to hedging is primarily based on changes in the present value of future cash flows due to a change in the yield in the swap market for the related swap (hedged risk).

[2] The fair value of other notes and debentures, and the portions of the MTN Series 19 notes and the MTN Series 21 notes that are not subject to hedging, represents the market value of the notes and debentures and is based on unadjusted period-end market prices for the same or similar debt of the same remaining maturities.

Fair Value Measurements of Derivative Instruments

At December 31, 2014, the Company had interest-rate swaps totalling $250 million (2013 – $750 million) that were used to convert fixed-rate debt to floating-rate debt. These swaps are classified as fair value hedges. The Company's fair value hedge exposure was equal to about 3% (2013 – 8%) of its total long-term debt of $8,925 million (2013 – $9,057 million). At December 31, 2014, the Company had the following interest-rate swaps designated as fair value hedges:

(a) two $125 million fixed-to-floating interest-rate swap agreements to convert $250 million of the $500 million MTN Series 21 notes maturing September 11, 2015 into three-month variable-rate debt.

At December 31, 2014, the Company also had interest-rate swaps with a total notional value of $409 million (2013 – $900 million) classified as undesignated contracts. The undesignated contracts consist of the following interest-rate swaps:

(b) a $150 million floating-to-fixed interest-rate swap agreement that locks in the floating rate the Company pays on a portion of the above fixed-to-floating interest-rate swaps from December 11, 2014 to September 11, 2015;
(c) a $50 million floating-to-fixed interest-rate swap agreement that locks in the floating rate the Company pays on the $50 million floating-rate MTN Series 22 notes from January 24, 2014 to January 24, 2015;

(d) a $137 million floating-to-fixed interest-rate swap agreement that locks in the floating rate the Company pays on the $228 million floating-rate MTN Series 31 notes from December 22, 2014 to December 21, 2015;

(e) a $30 million floating-to-fixed interest-rate swap agreement that locks in the floating rate the Company pays on the $50 million floating-rate MTN Series 27 notes from March 3, 2015 to December 3, 2015;

(f) a $30 million floating-to-fixed interest-rate swap agreement that locks in the floating rate the Company pays on the $50 million floating-rate MTN Series 22 notes from January 26, 2015 to July 24, 2015; and

(g) three interest-rate swaps with a total notional value of $12 million that were assumed as part of the Norfolk Power acquisition. These swaps consist of $8 million and $2 million floating-to-fixed interest-rate swap agreements maturing on September 20, 2029, and a $2 million floating-to-fixed interest-rate swap agreement maturing on September 20, 2019.

Fair Value Hierarchy

The fair value hierarchy of financial assets and liabilities at December 31, 2014 and 2013 is as follows:

December 31, 2014 (millions of Canadian dollars)	Carrying Value	Fair Value	Level 1	Level 2	Level 3
Assets:					
Cash and cash equivalents	100	100	100	–	–
Derivative instruments					
Fair value hedges – interest-rate swaps	2	2	–	2	–
	102	102	100	2	–
Liabilities:					
Bank indebtedness	2	2	2	–	–
Derivative instruments					
Undesignated contracts – interest-rate swaps	3	3	–	3	–
Long-term debt	8,925	10,411	–	10,411	–
	8,930	10,416	2	10,414	–

December 31, 2013 (millions of Canadian dollars)	Carrying Value	Fair Value	Level 1	Level 2	Level 3
Assets:					
Cash and cash equivalents	565	565	565	–	–
Investment	251	251	–	251	–
Derivative instruments					
Fair value hedges – interest-rate swaps	12	12	–	12	–
	828	828	565	263	–
Liabilities:					
Bank indebtedness	31	31	31	–	–
Long-term debt	9,057	9,780	–	9,780	–
	9,088	9,811	31	9,780	–

Cash and cash equivalents include cash and short-term investments. At December 31, 2014, short-term investments consisted of bankers' acceptances and money market funds totalling $nil (2013 – $515 million). The carrying values are representative of fair value because of the short-term nature of these instruments.

The investment at December 31, 2013 represented the Province of Ontario Floating-Rate Notes that matured in November 2014. The fair value of the investment was determined using inputs other than quoted prices that are observable for the asset, with unrecognized gains or losses recognized in financing charges. The Company obtained quotes from an independent third party for the fair value of the investment, who uses the market price of similar securities adjusted for changes in observable inputs such as maturity dates and interest rates.

The fair value of the derivative instruments is determined using inputs other than quoted prices that are observable for these assets. The fair value is primarily based on the present value of future cash flows using a swap yield curve to determine the assumptions for interest rates.

The fair value of the hedged portion of the long-term debt is primarily based on the present value of future cash flows using a swap yield curve to determine the assumption for interest rates. The fair value of the unhedged portion of the long-term debt is based on unadjusted period-end market prices for the same or similar debt of the same remaining maturities.

There were no significant transfers between any of the fair value levels during the years ended December 31, 2014 and 2013.

Risk Management

Exposure to market risk, credit risk and liquidity risk arises in the normal course of the Company's business.

Market Risk

Market risk refers primarily to the risk of loss that results from changes in commodity prices, foreign exchange rates and interest rates. The Company does not have commodity risk. The Company does have foreign exchange risk as it enters into agreements to purchase materials and equipment associated with capital programs and projects that are settled in foreign currencies. This foreign exchange risk is not material, although the Company could in the future decide to issue foreign currency-denominated debt which would be hedged back to Canadian dollars consistent with its risk management policy. Hydro One is exposed to fluctuations in interest rates as the regulated rate of return for the Company's Transmission and Distribution Businesses is derived using a formulaic approach that is based on the forecast for long-term Government of Canada bond yields and the spread in 30-year "A"-rated Canadian utility bonds over the 30-year benchmark Government of Canada bond yield. The Company estimates that a 1% decrease in the forecasted long-term Government of Canada bond yield or the "A"-rated Canadian utility spread used in determining the Company's rate of return would reduce the Transmission Business' 2014 annual results of operations by approximately $20 million (2013 – $19 million) and Hydro One Networks' distribution business' 2014 annual results of operations by approximately $10 million (2013 – $10 million).

The Company uses a combination of fixed and variable-rate debt to manage the mix of its debt portfolio. The Company also uses derivative financial instruments to manage interest-rate risk. The Company utilizes interest-rate swaps, which are typically designated as fair value hedges, as a means to manage its interest rate exposure to achieve a lower cost of debt. In addition, the Company may utilize interest-rate derivative instruments to lock in interest-rate levels in anticipation of future financing. Hydro One may also enter into derivative agreements such as forward-starting pay fixed-interest-rate swap agreements to hedge against the effect of future interest-rate movements on long-term fixed-rate borrowing requirements. Such arrangements are typically designated as cash flow hedges. No cash flow hedge agreements were in existence as at December 31, 2014 or 2013.

A hypothetical 10% increase in the interest rates associated with variable-rate debt would not have resulted in a significant decrease in Hydro One's results of operations for the years ended December 31, 2014 or 2013.

Fair Value Hedges

For derivative instruments that are designated and qualify as fair value hedges, the gain or loss on the derivative as well as the offsetting loss or gain on the hedged item attributable to the hedged risk are recognized in the Consolidated Statements of

Operations and Comprehensive Income. The net unrealized loss (gain) on the hedged debt and the related interest-rate swaps for the years ended December 31, 2014 and 2013 are included in financing charges as follows:

Year ended December 31 (millions of Canadian dollars)	**2014**	**2013**
Unrealized loss (gain) on hedged debt	(3)	(8)
Unrealized loss (gain) on fair value interest-rate swaps	3	8
Net unrealized loss (gain)	–	–

At December 31, 2014, Hydro One had $250 million (2013 – $750 million) of notional amounts of fair value hedges outstanding related to interest-rate swaps, with assets at fair value of $2 million (2013 – $12 million). During the years ended December 31, 2014 and 2013, there was no significant impact on the results of operations as a result of any ineffectiveness attributable to fair value hedges.

Credit Risk

Financial assets create a risk that a counterparty will fail to discharge an obligation, causing a financial loss. At December 31, 2014 and 2013, there were no significant concentrations of credit risk with respect to any class of financial assets. The Company's revenue is earned from a broad base of customers. As a result, Hydro One did not earn a significant amount of revenue from any single customer. At December 31, 2014 and 2013, there was no significant accounts receivable balance due from any single customer.

At December 31, 2014, the Company's provision for bad debts was $66 million (2013 – $36 million). Adjustments and write-offs were determined on the basis of a review of overdue accounts, taking into consideration historical experience. At December 31, 2014, approximately 6% of the Company's net accounts receivable were aged more than 60 days (2013 – 4%).

Hydro One manages its counterparty credit risk through various techniques including: entering into transactions with highly-rated counterparties; limiting total exposure levels with individual counterparties consistent with the Company's Board-approved Credit Risk Policy; entering into master agreements which enable net settlement and the contractual right of offset; and monitoring the financial condition of counterparties. In addition to payment netting language in master agreements, the Company establishes credit limits, margining thresholds and collateral requirements for each counterparty. Counterparty credit limits are based on an internal credit review that considers a variety of factors, including the results of a scoring model, leverage, liquidity, profitability, credit ratings and risk management capabilities. The determination of credit exposure for a particular counterparty is the sum of current exposure plus the potential future exposure with that counterparty. The current exposure is calculated as the sum of the principal value of money market exposures and the market value of all contracts that have a positive mark-to-market position on the measurement date. The Company would offset the positive market values against negative values with the same counterparty only where permitted by the existence of a legal netting agreement such as an International Swap Dealers Association master agreement. The potential future exposure represents a safety margin to protect against future fluctuations of interest rates, currencies, equities, and commodities. It is calculated based on factors developed by the Bank of International Settlements, following extensive historical analysis of random fluctuations of interest rates and currencies. To the extent that a counterparty's margining thresholds are exceeded, the counterparty is required to post collateral with the Company as specified in each agreement. The Company monitors current and forward credit exposure to counterparties both on an individual and an aggregate basis. The Company's credit risk for accounts receivable is limited to the carrying amounts on the Consolidated Balance Sheets.

Derivative financial instruments result in exposure to credit risk since there is a risk of counterparty default. The credit exposure of derivative contracts, before collateral, is represented by the fair value of contracts at the reporting date. At December 31, 2014, the counterparty credit risk exposure on the fair value of these interest-rate swap contracts was $3 million (2013 – $14 million). At December 31, 2014, Hydro One's credit exposure for all derivative instruments, and applicable payables and receivables, had a credit rating of investment grade, with five financial institutions as the counterparties. The credit exposure of three of the five counterparties accounted for more than 10% of the total credit exposure of derivative contracts.

Liquidity Risk

Liquidity risk refers to the Company's ability to meet its financial obligations as they come due. Hydro One meets its short-term liquidity requirements using cash and cash equivalents on hand, funds from operations, the issuance of commercial paper, and the revolving standby credit facility of $1,500 million. The short-term liquidity under the Commercial Paper Program, and anticipated levels of funds from operations should be sufficient to fund normal operating requirements.

At December 31, 2014, accounts payable and accrued liabilities in the amount of $784 million (2013 – $789 million) were expected to be settled in cash at their carrying amounts within the next 12 months.

At December 31, 2014, Hydro One had issued long-term debt in the principal amount of $8,923 million (2013 – $9,045 million). Principal repayments, interest payments and related weighted average interest rates are summarized by the number of years to maturity in the following table:

Years to Maturity	**Long-term Debt Principal Repayments** *(millions of Canadian dollars)*	**Interest Payments** *(millions of Canadian dollars)*	**Weighted Average Interest Rate** *(%)*
1 year	550	419	2.8
2 years	500	393	4.3
3 years	600	381	5.2
4 years	750	350	2.8
5 years	228	327	1.6
	2,628	1,870	3.5
6 – 10 years	900	1,522	3.6
Over 10 years	5,395	4,373	5.4
	8,923	7,765	4.7

14. CAPITAL MANAGEMENT

The Company's objectives with respect to its capital structure are to maintain effective access to capital on a long-term basis at reasonable rates, and to deliver appropriate financial returns. In order to ensure ongoing effective access to capital, the Company targets to maintain an "A" category long-term credit rating.

The Company considers its capital structure to consist of Shareholder's equity, preferred shares, long-term debt, and cash and cash equivalents. At December 31, 2014 and 2013, the Company's capital structure was as follows:

December 31 (millions of Canadian dollars)	**2014**	**2013**
Long-term debt payable within one year	552	756
Less: cash and cash equivalents	100	565
	452	191
Long-term debt	8,373	8,301
Preferred shares	323	323
Common shares	3,314	3,314
Retained earnings	4,249	3,787
	7,563	7,101
Total capital	16,711	15,916

The Company has customary covenants typically associated with long-term debt. Among other things, Hydro One's long-term debt and credit facility covenants limit the permissible debt to 75% of the Company's total capitalization, limit the ability to sell assets and impose a negative pledge provision, subject to customary exceptions. At December 31, 2014 and 2013, Hydro One was in compliance with all of these covenants and limitations.

15. PENSION AND POST-RETIREMENT AND POST-EMPLOYMENT BENEFITS

Hydro One has a defined benefit pension plan, a supplementary pension plan, and post-retirement and post-employment benefit plans. The defined benefit pension plan (Pension Plan) is contributory and covers all regular employees of Hydro One and its subsidiaries, except employees of Hydro One Brampton Networks and Norfolk Power. Employees of Hydro One Brampton Networks and Norfolk Power participate in the OMERS plan. The supplementary pension plan provides members of the Pension Plan with benefits that would have been earned and payable under the Pension Plan but for the limitations imposed by the *Income Tax Act* (Canada). The supplementary pension plan obligation is included with other post-retirement and post-employment benefit obligations on the Consolidated Balance Sheets.

The OMERS Plan

Hydro One contributions to the OMERS plan for the year ended December 31, 2014 were $2 million (2013 – $2 million). Company contributions payable at December 31, 2014 and included in accrued liabilities on the Consolidated Balance Sheets were less than $1 million (2013 – less than $1 million). Hydro One contributions do not represent more than 5% of total contributions to the OMERS plan, as indicated in OMERS' most recently available annual report for the year ended December 31, 2013.

At December 31, 2013, the OMERS plan was 88.2% funded, with an unfunded liability of $8,641 million. This unfunded liability could result in future payments by participating employers and members. Hydro One future contributions could be increased substantially if other entities withdraw from the plan.

Pension Plan, Post-Retirement and Post-Employment Plans

The Pension Plan provides benefits based on highest three-year average pensionable earnings. For new management employees who commenced employment on or after January 1, 2004, and for new Society of Energy Professionals-represented staff hired after November 17, 2005, benefits are based on highest five-year average pensionable earnings. After retirement, pensions are indexed to inflation.

Company and employee contributions to the Pension Plan are based on actuarial valuations performed at least every three years. Annual Pension Plan contributions for 2014 of $174 million (2013 – $160 million) were based on an actuarial valuation effective December 31, 2013 (2013 – effective December 31, 2011) and the expected level of pensionable earnings. Estimated annual Pension Plan contributions for 2015 and 2016 are approximately $174 million and $175 million, respectively, based on the actuarial valuation as at December 31, 2013 and projected levels of pensionable earnings. Future minimum contributions beyond 2016 will be based on an actuarial valuation effective no later than December 31, 2016. Contributions are payable one month in arrears. All of the contributions are expected to be in the form of cash.

Hydro One recognizes the overfunded or underfunded status of the Pension Plan, and post-retirement and post-employment benefit plans (Plans) as an asset or liability on its Consolidated Balance Sheets, with offsetting regulatory assets and liabilities as appropriate. The underfunded benefit obligations for the Plans, in the absence of regulatory accounting, would be recognized in AOCI. The impact of changes in assumptions used to measure pension, post-retirement and post-employment benefit obligations is generally recognized over the expected average remaining service period of the employees. The measurement date for the Plans is December 31.

	Pension Benefits		Post-Retirement and Post-Employment Benefits	
Year ended December 31 (millions of Canadian dollars)	**2014**	**2013**	**2014**	**2013**
Change in projected benefit obligation				
Projected benefit obligation, beginning of year	6,576	6,507	1,531	1,459
Current service cost	145	170	41	40
Interest cost	312	278	73	63
Reciprocal transfers	–	1	–	–
Benefits paid	(319)	(317)	(45)	(44)
Net actuarial loss (gain)	821	(63)	(18)	13
Projected benefit obligation, end of year	7,535	6,576	1,582	1,531
Change in plan assets				
Fair value of plan assets, beginning of year	5,731	4,992	–	–
Actual return on plan assets	703	887	–	–
Reciprocal transfers	–	1	–	–
Benefits paid	(319)	(317)	–	–
Employer contributions	174	160	–	–
Employee contributions	35	30	–	–
Administrative expenses	(25)	(22)	–	–
Fair value of plan assets, end of year	6,299	5,731	–	–
Unfunded status	1,236	845	1,582	1,531

Hydro One presents its benefit obligations and plan assets net on its Consolidated Balance Sheets within the following line items:

	Pension Benefits		Post-Retirement and Post-Employment Benefits	
December 31 (millions of Canadian dollars)	**2014**	**2013**	**2014**	**2013**
Accrued liabilities	–	–	49	43
Pension benefit liability	1,236	845	–	–
Post-retirement and post-employment benefit liability	–	–	1,533	1,488
Unfunded status	1,236	845	1,582	1,531

The funded or unfunded status of the pension, post-retirement and post-employment benefit plans refers to the difference between the fair value of plan assets and the projected benefit obligations for the Plans. The funded/unfunded status changes over time due to several factors, including contribution levels, assumed discount rates and actual returns on plan assets.

The following table provides the projected benefit obligation (PBO), accumulated benefit obligation (ABO) and fair value of plan assets for the Pension Plan:

December 31 (millions of Canadian dollars)	**2014**	**2013**
PBO	7,535	6,576
ABO	6,887	5,998
Fair value of plan assets	6,299	5,731

On an ABO basis, the Pension Plan was funded at 91% at December 31, 2014 (2013 – 96%). On a PBO basis, the Pension Plan was funded at 84% at December 31, 2014 (2013 – 87%). The ABO differs from the PBO in that the ABO includes no assumption about future compensation levels.

Components of Net Periodic Benefit Costs

The following table provides the components of the net periodic benefit costs for the years ended December 31, 2014 and 2013 for the Pension Plan:

Year ended December 31 (millions of Canadian dollars)	**2014**	**2013**
Current service cost, net of employee contributions	110	141
Interest cost	312	278
Expected return on plan assets, net of expenses	(369)	(309)
Actuarial loss amortization	103	175
Prior service cost amortization	2	2
Net periodic benefit costs	158	287
Charged to results of operations[1]	81	72

[1] The Company follows the cash basis of accounting consistent with the inclusion of pension costs in OEB-approved rates. During the year ended December 31, 2014, pension costs of $174 million (2013 – $160 million) were attributed to labour, of which $81 million (2013 – $72 million) was charged to operations, and $93 million (2013 – $88 million) was capitalized as part of the cost of property, plant and equipment and intangible assets.

The following table provides the components of the net periodic benefit costs for the years ended December 31, 2014 and 2013 for the post-retirement and post-employment benefit plans:

Year ended December 31 (millions of Canadian dollars)	**2014**	**2013**
Current service cost, net of employee contributions	41	40
Interest cost	73	63
Actuarial loss amortization	18	27
Prior service cost amortization	2	3
Net periodic benefit costs	134	133
Charged to results of operations	62	58

Assumptions

The measurement of the obligations of the Plans and the costs of providing benefits under the Plans involves various factors, including the development of valuation assumptions and accounting policy elections. When developing the required assumptions, the Company considers historical information as well as future expectations. The measurement of benefit obligations and costs is impacted by several assumptions including the discount rate applied to benefit obligations, the long-term expected rate of return on plan assets, Hydro One's expected level of contributions to the Plans, the incidence of mortality, the expected remaining service period of plan participants, the level of compensation and rate of compensation increases, employee age, length of service, and the anticipated rate of increase of health care costs, among other factors. The impact of changes in assumptions used to measure the obligations of the Plans is generally recognized over the expected average remaining service period of the plan participants. In selecting the expected rate of return on plan assets, Hydro One considers historical economic indicators that impact asset returns, as well as expectations regarding future long-term capital market performance, weighted by target asset class allocations. In general, equity securities, real estate and private equity investments are forecasted to have higher returns than fixed-income securities.

The following weighted average assumptions were used to determine the benefit obligations at December 31, 2014 and 2013:

	Pension Benefits		Post-Retirement and Post-Employment Benefits	
Year ended December 31	**2014**	**2013**	**2014**	**2013**
Significant assumptions:				
Weighted average discount rate	4.00%	4.75%	4.00%	4.75%
Rate of compensation scale escalation (without merit)	2.50%	2.50%	2.50%	2.50%
Rate of cost of living increase	2.00%	2.00%	2.00%	2.00%
Rate of increase in health care cost trends[1]	–	–	4.36%	4.39%

[1] 6.52% per annum in 2015, grading down to 4.36% per annum in and after 2031 (2013 – 6.81% in 2014, grading down to 4.39% per annum in and after 2031)

The following weighted average assumptions were used to determine the net periodic benefit costs for the years ended December 31, 2014 and 2013. Assumptions used to determine current year-end benefit obligations are the assumptions used to estimate the subsequent year's net periodic benefit costs.

Year ended December 31	**2014**	**2013**
Pension Benefits:		
Weighted average expected rate of return on plan assets	6.50%	6.25%
Weighted average discount rate	4.75%	4.25%
Rate of compensation scale escalation (without merit)	2.50%	2.50%
Rate of cost of living increase	2.00%	2.00%
Average remaining service life of employees *(years)*	11	11
Post-Retirement and Post-Employment Benefits:		
Weighted average discount rate	4.75%	4.25%
Rate of compensation scale escalation (without merit)	2.50%	2.50%
Rate of cost of living increase	2.00%	2.00%
Average remaining service life of employees *(years)*	12	12
Rate of increase in health care cost trends[1]	4.39%	4.39%

[1] 6.81% per annum in 2014, grading down to 4.39% per annum in and after 2031 (2013 – 6.91% in 2013, grading down to 4.39% per annum in and after 2031)

The discount rate used to determine the current year pension obligation and the subsequent year's net periodic benefit costs is based on a yield curve approach. Under the yield curve approach, expected future benefit payments for each plan are discounted by a rate on a third party bond yield curve corresponding to each duration. The yield curve is based on "AA" long-term corporate bonds. A single discount rate is calculated that would yield the same present value as the sum of the discounted cash flows.

The effect of a 1% change in health care cost trends on the projected benefit obligation for the post-retirement and post-employment benefits at December 31, 2014 and 2013 is as follows:

December 31 (millions of Canadian dollars)	**2014**	**2013**
Projected benefit obligation:		
Effect of a 1% increase in health care cost trends	248	258
Effect of a 1% decrease in health care cost trends	(193)	(200)

The effect of a 1% change in health care cost trends on the service cost and interest cost for the post-retirement and post-employment benefits for the years ended December 31, 2014 and 2013 is as follows:

Year ended December 31 (millions of Canadian dollars)	**2014**	**2013**
Service cost and interest cost:		
Effect of a 1% increase in health care cost trends	23	21
Effect of a 1% decrease in health care cost trends	(17)	(16)

The following approximate life expectancies were used in the mortality assumptions to determine the projected benefit obligations for the pension and post-retirement and post-employment plans at December 31, 2014 and 2013:

December 31, 2014				**December 31, 2013**			
Life expectancy at 65 for a member currently at				**Life expectancy at 65 for a member currently at**			
Age 65		**Age 45**		**Age 65**		**Age 45**	
Male	Female	Male	Female	Male	Female	Male	Female
23	25	24	26	23	25	24	26

Estimated Future Benefit Payments

At December 31, 2014, estimated future benefit payments to the participants of the Plans were:

(millions of Canadian dollars)	Pension Benefits	Post-Retirement and Post-Employment Benefits
2015	305	50
2016	316	52
2017	328	54
2018	339	56
2019	350	59
2020 through to 2024	1,889	332
Total estimated future benefit payments through to 2024	3,527	603

Components of Regulatory Assets

A portion of actuarial gains and losses and prior service costs is recorded within regulatory assets on Hydro One's Consolidated Balance Sheets to reflect the expected regulatory inclusion of these amounts in future rates, which would otherwise be recorded in OCI. The following table provides the actuarial gains and losses and prior service costs recorded within regulatory assets:

Year ended December 31 (millions of Canadian dollars)	**2014**	**2013**
Pension Benefits:		
Actuarial loss (gain) for the year	511	(619)
Actuarial loss amortization	(103)	(175)
Prior service cost amortization	(2)	(2)
	406	(796)
Post-Retirement and Post-Employment Benefits:		
Actuarial loss (gain) for the year	(18)	13
Actuarial loss amortization	(18)	(27)
Prior service cost amortization	(2)	(3)
	(38)	(17)

The following table provides the components of regulatory assets that have not been recognized as components of net periodic benefit costs for the years ended December 31, 2014 and 2013:

Year ended December 31 (millions of Canadian dollars)	**2014**	**2013**
Pension Benefits:		
Prior service cost	2	3
Actuarial loss	1,234	842
	1,236	845
Post-Retirement and Post-Employment Benefits:		
Prior service cost	–	2
Actuarial loss	273	306
	273	308

The following table provides the components of regulatory assets at December 31 that are expected to be amortized as components of net periodic benefit costs in the following year:

	Pension Benefits		Post-Retirement and Post-Employment Benefits	
December 31 (millions of Canadian dollars)	**2014**	**2013**	**2014**	**2013**
Prior service cost	2	2	–	2
Actuarial loss	119	103	10	15
	121	105	10	17

Pension Plan Assets

Investment Strategy

On a regular basis, Hydro One evaluates its investment strategy to ensure that Pension Plan assets will be sufficient to pay Pension Plan benefits when due. As part of this ongoing evaluation, Hydro One may make changes to its targeted asset allocation and investment strategy. The Pension Plan is managed at a net asset level. The main objective of the Pension Plan is to sustain a certain level of net assets in order to meet the pension obligations of the Company. The Pension Plan fulfills its primary objective by adhering to specific investment policies outlined in its Summary of Investment Policies and Procedures (SIPP), which is reviewed and approved by the Audit, Finance and Pension Investment Committee of Hydro One's Board of Directors. The Company manages net assets by engaging knowledgeable external investment managers who are charged with the responsibility of investing existing funds and new funds (current year's employee and employer contributions) in accordance with the approved SIPP. The performance of the managers is monitored through a governance structure. Increases in net assets are a direct result of investment income generated by investments held by the Pension Plan and contributions to the Pension Plan by eligible employees and by the Company. The main use of net assets is for benefit payments to eligible Pension Plan members.

Pension Plan Asset Mix

At December 31, 2014, the Pension Plan target asset allocations and weighted average asset allocations were as follows:

	Target Allocation (%)	Pension Plan Assets (%)
Equity securities	60.0	60.9
Debt securities	35.0	35.9
Other[1]	5.0	3.2
	100.0	100.0

[1] Other investments include real estate and infrastructure investments.

At December 31, 2014, the Pension Plan held no Hydro One corporate bonds (2013 – $15 million) and $340 million of debt securities of the Province (2013 – $217 million).

Concentrations of Credit Risk

Hydro One evaluated its Pension Plan's asset portfolio for the existence of significant concentrations of credit risk as at December 31, 2014 and 2013. Concentrations that were evaluated include, but are not limited to, investment concentrations in a single entity, concentrations in a type of industry, and concentrations in individual funds. At December 31, 2014 and 2013, there were no significant concentrations (defined as greater than 10% of plan assets) of risk in the Pension Plan's assets.

The Pension Plan manages its counterparty credit risk with respect to bonds by investing in investment-grade and government bonds and with respect to derivative instruments by transacting only with financial institutions rated at least "A+" by Standard and Poor's Rating Services Inc., DBRS Limited, and Fitch Ratings Inc., and "A1" by Moody's Investors Service Inc., and also by utilizing exposure limits to each counterparty and ensuring that exposure is diversified across counterparties. The risk of default on transactions in listed securities is considered minimal, as the trade will fail if either party to the transaction does not meet its obligation.

Fair Value Measurements

The following tables present the Pension Plan assets measured and recorded at fair value on a recurring basis and their level within the fair value hierarchy at December 31, 2014 and 2013:

December 31, 2014 (millions of Canadian dollars)	**Level 1**	**Level 2**	**Level 3**	**Total**
Pooled funds	–	18	142	160
Cash and cash equivalents	166	–	–	166
Short-term securities	–	176	–	176
Real estate	–	–	2	2
Corporate shares – Canadian	1,008	–	–	1,008
Corporate shares – Foreign	2,766	–	–	2,766
Bonds and debentures – Canadian	–	1,799	–	1,799
Bonds and debentures – Foreign	–	211	–	211
Total fair value of plan assets[1]	3,940	2,204	144	6,288

[1] At December 31, 2014, the total fair value of Pension Plan assets excludes $18 million of interest and dividends receivable, and $7 million relating to accruals for pension administration expense.

December 31, 2013 (millions of Canadian dollars)	**Level 1**	**Level 2**	**Level 3**	**Total**
Pooled funds	1	16	117	134
Cash and cash equivalents	150	–	–	150
Short-term securities	–	180	–	180
Real estate	–	–	2	2
Corporate shares – Canadian	943	–	–	943
Corporate shares – Foreign	2,708	–	–	2,708
Bonds and debentures – Canadian	–	1,416	–	1,416
Bonds and debentures – Foreign	–	186	–	186
Total fair value of plan assets[1]	3,802	1,798	119	5,719

[1] At December 31, 2013, the total fair value of Pension Plan assets excludes $19 million of interest and dividends receivable, and $7 million relating to accruals for pension administration expense.

See Note 13 – Fair Value of Financial Instruments and Risk Management for a description of levels within the fair value hierarchy.

Changes in the Fair Value of Financial Instruments Classified in Level 3

The following table summarizes the changes in fair value of financial instruments classified in Level 3 for the years ended December 31, 2014 and 2013. The Pension Plan classifies financial instruments as Level 3 when the fair value is measured based on at least one significant input that is not observable in the markets or due to lack of liquidity in certain markets. The gains and losses presented in the table below may include changes in fair value based on both observable and unobservable inputs.

Year ended December 31 (millions of Canadian dollars)	**2014**	**2013**
Fair value, beginning of year	119	106
Realized and unrealized gains	30	23
Purchases	23	–
Sales and disbursements	(28)	(10)
Fair value, end of year	144	119

There were no significant transfers between any of the fair value levels during the years ended December 31, 2014 and 2013.

The Company performs sensitivity analysis for fair value measurements classified in Level 3, substituting the unobservable inputs with one or more reasonably possible alternative assumptions. These sensitivity analyses resulted in negligible changes in the fair value of financial instruments classified in this level.

Valuation Techniques Used to Determine Fair Value

Pooled Funds

The pooled fund category mainly consists of private equity and infrastructure investments. Private equity investments represent private equity funds that invest in operating companies that are not publicly traded on a stock exchange. Investment strategies in private equity include limited partnerships in businesses that are characterized by high internal growth and operational efficiencies, venture capital, leveraged buyouts and special situations such as distressed investments. Infrastructure investments represent infrastructure funds that invest in real assets which are not publicly traded on a stock exchange. Investment strategies in infrastructure include limited partnerships in core infrastructure assets focusing on assets that generate stable, long-term cash flows and deliver incremental returns relative to conventional fixed-income investments. Private equity and infrastructure valuations are reported by the fund manager and are based on the valuation of the underlying investments which includes inputs such as cost, operating results, discounted future cash flows and market-based comparable data. Since these valuation inputs are not highly observable, private equity and infrastructure investments have been categorized as Level 3 within pooled funds.

Cash Equivalents

Demand cash deposits held with banks and cash held by the investment managers are considered cash equivalents and are included in the fair value measurements hierarchy as Level 1.

Short-Term Securities

Short-term securities are valued at cost plus accrued interest, which approximates fair value due to their short-term nature. Short-term securities have been categorized as Level 2.

Real Estate

Real estate investments represent private equity investments in holding companies that invest in real estate properties. The investments in the holding companies are valued using net asset values reported by the fund manager. Real estate investments are categorized as Level 3.

Corporate Shares

Corporate shares are valued based on quoted prices in active markets and are categorized as Level 1. Investments denominated in foreign currencies are translated into Canadian currency at year-end rates of exchange.

Bonds and Debentures

Bonds and debentures are presented at published closing trade quotations, and are categorized as Level 2.

16. ENVIRONMENTAL LIABILITIES

The following tables show the movements in environmental liabilities for the years ended December 31, 2014 and 2013:

Year ended December 31, 2014 (millions of Canadian dollars)	**PCB**	**LAR**	**Total**
Environmental liabilities, January 1	201	65	266
Interest accretion	9	2	11
Expenditures	(5)	(13)	(18)
Revaluation adjustment	(33)	13	(20)
Environmental liabilities, December 31	172	67	239
Less: current portion	8	10	18
	164	57	221

Year ended December 31, 2013 (millions of Canadian dollars)	**PCB**	**LAR**	**Total**
Environmental liabilities, January 1	197	52	249
Interest accretion	9	1	10
Expenditures	(2)	(14)	(16)
Revaluation adjustment	(3)	26	23
Environmental liabilities, December 31	201	65	266
Less: current portion	15	12	27
	186	53	239

The following tables show the reconciliation between the undiscounted basis of the environmental liabilities and the amount recognized on the Consolidated Balance Sheets after factoring in the discount rate:

December 31, 2014 (millions of Canadian dollars)	**PCB**	**LAR**	**Total**
Undiscounted environmental liabilities	195	70	265
Less: discounting accumulated liabilities to present value	23	3	26
Discounted environmental liabilities	172	67	239

December 31, 2013 (millions of Canadian dollars)	**PCB**	**LAR**	**Total**
Undiscounted environmental liabilities	237	68	305
Less: discounting accumulated liabilities to present value	36	3	39
Discounted environmental liabilities	201	65	266

At December 31, 2014, the estimated future environmental expenditures were as follows:

(millions of Canadian dollars)	
2015	18
2016	37
2017	36
2018	35
2019	33
Thereafter	106
	265

At December 31, 2014, of the total estimated future environmental expenditures, \$195 million relates to PCBs (2013 – \$237 million) and \$70 million relates to LAR (2013 – \$68 million).

Hydro One records a liability for the estimated future expenditures for the contaminated LAR and for the phase-out and destruction of PCB-contaminated mineral oil removed from electrical equipment when it is determined that future environmental remediation expenditures are probable under existing statute or regulation and the amount of the future expenditures can be reasonably estimated.

There are uncertainties in estimating future environmental costs due to potential external events such as changes in legislation or regulations, and advances in remediation technologies. In determining the amounts to be recorded as environmental liabilities, the Company estimates the current cost of completing required work and makes assumptions as to when the future expenditures will actually be incurred, in order to generate future cash flow information. A long-term inflation rate assumption of approximately 2% has been used to express these current cost estimates as estimated future expenditures. Future expenditures have been discounted using factors ranging from approximately 2.3% to 6.3%, depending on the appropriate rate for the period when expenditures are expected to be incurred. All factors used in estimating the Company's environmental liabilities represent management's best estimates of the present value of costs required to meet existing legislation or regulations. However, it is reasonably possible that numbers or volumes of contaminated assets, cost estimates to perform work, inflation assumptions and the assumed pattern of annual cash flows may differ significantly from the Company's current assumptions. In addition, with respect to the PCB environmental liability, the availability of critical resources such as skilled labour and replacement assets and the ability to take maintenance outages in critical facilities may influence the timing of expenditures.

PCBs

The Environment Canada regulations, enacted under the *Canadian Environmental Protection Act,* 1999, govern the management, storage and disposal of PCBs based on certain criteria, including type of equipment, in-use status, and PCB-contamination thresholds. Under current regulations, Hydro One's PCBs have to be disposed of by the end of 2025, with the exception of specifically exempted equipment. Contaminated equipment will generally be replaced, or will be decontaminated by removing PCB-contaminated insulating oil and retro filling with replacement oil that contains PCBs in concentrations of less than 2 ppm.

The Company's best estimate of the total estimated future expenditures to comply with current PCB regulations is $195 million. These expenditures are expected to be incurred over the period from 2015 to 2025. As a result of its annual review of environmental liabilities, the Company recorded a revaluation adjustment in 2014 to reduce the PCB environmental liability by $33 million (2013 – $3 million).

LAR

The Company's best estimate of the total estimated future expenditures to complete its LAR program is $70 million. These expenditures are expected to be incurred over the period from 2015 to 2023. As a result of its annual review of environmental liabilities, the Company recorded a revaluation adjustment in 2014 to increase the LAR environmental liability by $13 million (2013 – $26 million).

17. ASSET RETIREMENT OBLIGATIONS

Hydro One records a liability for the estimated future expenditures for the removal and disposal of asbestos-containing materials installed in some of its facilities and for the decommissioning of specific switching stations located on unowned sites. AROs, which represent legal obligations associated with the retirement of certain tangible long-lived assets, are computed as the present value of the projected expenditures for the future retirement of specific assets and are recognized in the period in which the liability is incurred, if a reasonable estimate of fair value can be made. If the asset remains in service at the recognition date, the present value of the liability is added to the carrying amount of the associated asset in the period the liability is incurred and this additional carrying amount is depreciated over the remaining life of the asset. If an ARO is recorded in respect of an out-of-service asset, the asset retirement cost is charged to results of operations. Subsequent to the initial recognition, the liability is adjusted for any revisions to the estimated future cash flows associated with the ARO, which can occur due to a number of factors including, but not limited to, cost escalation, changes in technology applicable to the assets to be retired, changes in legislation or regulations, as well as for accretion of the liability due to the passage of time until the obligation is settled. Depreciation expense is adjusted prospectively for any increases or decreases to the carrying amount of the associated asset.

In determining the amounts to be recorded as AROs, the Company estimates the current fair value for completing required work and makes assumptions as to when the future expenditures will actually be incurred, in order to generate future cash flow information. A long-term inflation assumption of approximately 2% has been used to express these current cost estimates as estimated future expenditures. Future expenditures have been discounted using factors ranging from approximately 3.0% to 5.0%, depending on the appropriate rate for the period when expenditures are expected to be incurred. All factors used in estimating the Company's AROs represent management's best estimates of the cost required to meet existing legislation or regulations. However, it is reasonably possible that numbers or volumes of contaminated assets, cost estimates to perform work, inflation assumptions and the assumed pattern of annual cash flows may differ significantly from the Company's current assumptions. AROs are reviewed annually or more frequently if significant changes in regulations or other relevant factors occur. Estimate changes are accounted for prospectively.

At December 31, 2014, Hydro One had recorded AROs of $9 million (2013 – $14 million), consisting of $8 million (2013 – $7 million) related to the estimated future expenditures associated with the removal and disposal of asbestos-containing materials installed in some of its facilities, as well as $1 million (2013 – $7 million) related to the future decommissioning and removal of two switching stations. The amount of interest recorded is nominal.

18. SHARE CAPITAL

Preferred Shares

The Company has 12,920,000 issued and outstanding 5.5% cumulative preferred shares with a redemption value of $25 per share or $323 million total value. The Company is authorized to issue an unlimited number of preferred shares.

The Company's preferred shares are entitled to an annual cumulative dividend of $18 million, or $1.375 per share, which is payable on a quarterly basis. The preferred shares are not subject to mandatory redemption (except on liquidation) but are redeemable in certain circumstances. The shares are redeemable at the option of the Province at the redemption value, plus any accrued and unpaid dividends, if the Province sells a number of the common shares which it owns to the public such that the Province's holdings are reduced to less than 50% of the common shares of the Company. Hydro One may elect, without condition, to pay all or part of the redemption price by issuing additional common shares to the Province. If the Province does not exercise its redemption right, the Company would have the ability to adjust the dividend on the preferred shares to produce a yield that is 0.50% less than the then-current dividend market yield for similarly rated preferred shares. The preferred shares do not carry voting rights, except in limited circumstances, and would rank in priority over the common shares upon liquidation.

These preferred shares have conditions for their redemption that are outside the control of the Company because the Province can exercise its right to redeem in the event of change in ownership without approval of the Company's Board of Directors. Because the conditional redemption feature is outside the control of the Company, the preferred shares are classified outside of equity on the Consolidated Balance Sheets. Management believes that it is not probable that the preferred shares will become redeemable. No adjustment to the carrying value of the preferred shares has been recognized at December 31, 2014. If it becomes probable in the future that the preferred shares will be redeemed, the redemption value would be adjusted.

Common Shares

The Company has 100,000 issued and outstanding common shares. The Company is authorized to issue an unlimited number of common shares.

Common share dividends are declared at the sole discretion of the Hydro One Board of Directors, and are recommended by management based on results of operations, maintenance of the deemed regulatory capital structure, financial conditions, cash requirements, and other relevant factors, such as industry practice and Shareholder expectations.

Earnings per Share

Basic and diluted earnings per share have been calculated on the basis of net income attributable to the Shareholder of Hydro One and the weighted average number of common shares outstanding during the year.

19. DIVIDENDS

In 2014, preferred share dividends in the amount of $18 million (2013 – $18 million) and common share dividends in the amount of $269 million (2013 – $200 million) were declared.

20. RELATED PARTY TRANSACTIONS

Hydro One is owned by the Province. The OEFC, IESO, OPA, Ontario Power Generation Inc. (OPG) and the OEB are related parties to Hydro One because they are controlled or significantly influenced by the Province.

The Province

During 2014, Hydro One paid dividends to the Province totalling $287 million (2013 – $218 million).

In November 2014, the Company redeemed the $250 million Province of Ontario Floating-Rate Notes held as a long-term investment. These notes were originally purchased in January 2010 with a maturity date of November 19, 2014.

IESO

In 2014, Hydro One purchased power in the amount of $2,601 million (2013 – $2,477 million) from the IESO-administered electricity market.

Hydro One receives revenues for transmission services from the IESO, based on OEB-approved uniform transmission rates. Transmission revenues for 2014 include $1,556 million (2013 – $1,509 million) related to these services.

Hydro One receives amounts for rural rate protection from the IESO. Distribution revenues for 2014 include $127 million (2013 – $127 million) related to this program.

Hydro One also receives revenues related to the supply of electricity to remote northern communities from the IESO. Distribution revenues for 2014 include $32 million (2013 – $33 million) related to these services.

OPA

The OPA funds substantially all of the Company's conservation and demand management programs. The funding includes program costs, incentives, and management fees. In 2014, Hydro One received $33 million (2013 – $34 million) from the OPA related to these programs.

OPG

In 2014, Hydro One purchased power in the amount of $23 million (2013 – $15 million) from OPG.

Hydro One has service level agreements with OPG. These services include field, engineering, logistics and telecommunications services. In 2014, revenues related to the provision of construction and equipment maintenance services with respect to these service level agreements were $12 million (2013 – $9 million), primarily for the Transmission Business. Operation, maintenance and administration costs in 2014 related to the purchase of services with respect to these service level agreements were $1 million (2013 – $1 million).

OEFC

In 2014, Hydro One made payments in lieu of corporate income taxes to the OEFC totalling $86 million (2013 – $138 million).

In 2014, Hydro One purchased power in the amount of $9 million (2013 – $8 million) from power contracts administered by the OEFC.

Hydro One pays a $5 million annual fee to the OEFC for indemnification against adverse claims in excess of $10 million paid by the OEFC with respect to certain of Ontario Hydro's businesses transferred to Hydro One on April 1, 1999.

PILs and payments in lieu of property taxes are paid to the OEFC.

OEB

Under the *Ontario Energy Board Act, 1998*, the OEB is required to recover all of its annual operating costs from gas and electricity distributors and transmitters. In 2014, Hydro One incurred $12 million (2013 – $12 million) in OEB fees.

Sales to and purchases from related parties occur at normal market prices or at a proxy for fair value based on the requirements of the OEB's Affiliate Relationships Code. Outstanding balances at period end are interest free and settled in cash.

The amounts due to and from related parties as a result of the transactions referred to above are as follows:

December 31 (millions of Canadian dollars)	**2014**	**2013**
Due from related parties	224	197
Due to related parties[1]	(227)	(230)
Investment	–	251

[1] Included in due to related parties at December 31, 2014 are amounts owing to the IESO in respect of power purchases of $214 million (2013 – $217 million).

21. CONSOLIDATED STATEMENTS OF CASH FLOWS

The changes in non-cash balances related to operations consist of the following:

Year ended December 31 (millions of Canadian dollars)	**2014**	**2013**
Accounts receivable	(93)	(78)
Due from related parties	(27)	(43)
Prepaid expenses and other assets	(13)	(5)
Accounts payable	39	13
Accrued liabilities	(35)	71
Due to related parties	(3)	(31)
Accrued interest	–	5
Long-term accounts payable and other liabilities	(3)	(5)
Post-retirement and post-employment benefit liability	80	84
	(55)	11

Capital Expenditures

The following table illustrates the reconciliation between investments in property, plant and equipment and the amount presented in the Consolidated Statements of Cash Flows after factoring in capitalized depreciation and the net change in related accruals:

Year ended December 31 (millions of Canadian dollars)	**2014**	**2013**
Capital investments in property, plant and equipment	(1,511)	(1,312)
Capitalized depreciation and net change in accruals included in capital investments in property, plant and equipment	30	4
Capital expenditures – property, plant and equipment	(1,481)	(1,308)

The following table illustrates the reconciliation between investments in intangible assets and the amount presented in the Consolidated Statements of Cash Flows after factoring in the net change in related accruals:

Year ended December 31 (millions of Canadian dollars)	**2014**	**2013**
Capital investments in intangible assets	(19)	(82)
Net change in accruals included in capital investments in intangible assets	(4)	3
Capital expenditures – intangible assets	(23)	(79)

Supplementary Information

Year ended December 31 (millions of Canadian dollars)	**2014**	**2013**
Net interest paid	412	395
PILs	86	138

22. CONTINGENCIES

Legal Proceedings

Hydro One is involved in various lawsuits, claims and regulatory proceedings in the normal course of business. In the opinion of management, the outcome of such matters will not have a material adverse effect on the Company's consolidated financial position, results of operations or cash flows.

Transfer of Assets

The transfer orders by which the Company acquired certain of Ontario Hydro's businesses as of April 1, 1999 did not transfer title to some assets located on Reserves (as defined in the *Indian Act* (Canada)). Currently, the OEFC holds these assets. Under the terms of the transfer orders, the Company is required to manage these assets until it has obtained all consents necessary to complete the transfer of title of these assets to itself. The Company cannot predict the aggregate amount that it may have to pay, either on an annual or one-time basis, to obtain the required consents. In 2014, the Company paid approximately $1 million (2013 – $2 million) in respect of these consents. If the Company cannot obtain the required consents, the OEFC will continue to hold these assets for an indefinite period of time. If the Company cannot reach a satisfactory settlement, it may have to relocate these assets to other locations at a cost that could be substantial or, in a limited number of cases, to abandon a line and replace it with diesel-generation facilities. The costs relating to these assets could have a material adverse effect on the Company's results of operations if the Company is not able to recover them in future rate orders.

23. COMMITMENTS

Outsourcing Agreements

The current agreement with Inergi LP (Inergi), an affiliate of Capgemini Canada Inc., expires on February 28, 2015. On November 28, 2014, Hydro One entered into an agreement with Inergi (Inergi Agreement), the service provider selected through a competitive procurement process which began in 2013, for second-generation back office and IT outsourcing services for a term of 58 months, commencing March 1, 2015 to December 31, 2019. Under the agreement, Inergi will provide Hydro One with settlements, source to pay services, pay operations services, information technology and finance and accounting services. Coincident with the conclusion of negotiations on the Inergi Agreement, Hydro One reached agreement with Inergi for the provision of second-generation customer service operations outsourcing services for a fixed period of three years beginning March 1, 2015 to February 28, 2018.

In September 2014, Hydro One entered into an agreement with Brookfield Johnson Controls Canada LP (Brookfield) for facilities management services for a term of ten years, from January 1, 2015 to December 31, 2024, with the option to renew for an additional term of three years. Under the agreement, Brookfield will provide us with facilities management and execution of certain capital projects as deemed required by the Company. The Brookfield Agreement has a value of up to approximately $658 million over the ten-year term of the agreement, including the facilities management portion of the contract, plus a variable amount of capital work depending on the needs that may arise as determined by the Company, with no minimum capital work guarantee. The agreement also includes a fixed management fee of approximately $2 million for each year of the term.

At December 31, 2014, the annual commitments under the outsourcing agreements were as follows: 2015 – $179 million; 2016 – $146 million; 2017 – $145 million; 2018 – $113 million; 2019 – $105 million; and thereafter – $13 million.

Prudential Support

Purchasers of electricity in Ontario, through the IESO, are required to provide security to mitigate the risk of their default based on their expected activity in the market. As at December 31, 2014, the Company provided prudential support to the IESO on behalf of its subsidiaries using parental guarantees of $330 million (2013 – $325 million), and on behalf of two distributors using guarantees of $1 million (2013 – $1 million). In addition, as at December 31, 2014, the Company has provided letters of credit in the amount of $8 million (2013 – $21 million) to the IESO. The IESO could draw on these guarantees and/or letters of credit if these subsidiaries or distributors fail to make a payment required by a default notice issued by the IESO. The maximum potential payment is the face value of any letters of credit plus the amount of the parental guarantees.

Retirement Compensation Arrangements

Bank letters of credit have been issued to provide security for the Company's liability under the terms of a trust fund established pursuant to the supplementary pension plan for eligible employees of Hydro One. The supplementary pension plan trustee is required to draw upon these letters of credit if Hydro One is in default of its obligations under the terms of this plan. Such obligations include the requirement to provide the trustee with an annual actuarial report as well as letters of credit sufficient to secure the Company's liability under the plan, to pay benefits payable under the plan and to pay the letter of credit fee. The maximum potential payment is the face value of the letters of credit. At December 31, 2014, Hydro One had letters of credit of $126 million (2013 – $127 million) outstanding relating to retirement compensation arrangements.

Operating Leases

Hydro One is committed as lessee to irrevocable operating lease contracts for buildings used in administrative and service-related functions and storing telecommunications equipment. These leases have a typical term of between three and five years, but several leases have lesser or greater terms to address special circumstances and/or opportunities. Renewal options, which are generally prevalent in most leases, have similar terms of three to five years. All leases include a clause to enable upward revision of the rental charge on an annual basis or on renewal according to prevailing market conditions or pre-established rents. There are no restrictions placed upon Hydro One by entering into these leases. Hydro One Networks and Hydro One Telecom are the principal entities concerned.

During the year ended December 31, 2014, the Company made lease payments totalling $11 million (2013 – $11 million). At December 31, 2014, the future minimum lease payments under non-cancellable operating leases were as follows: 2015 – $7 million; 2016 – $10 million; 2017 – $9 million; 2018 – $7 million; 2019 – $3 million; and thereafter – $9 million.

24. SEGMENTED REPORTING

Hydro One has three reportable segments:

- The Transmission Business, which comprises the core business of providing electricity transportation and connection services, is responsible for transmitting electricity throughout the Ontario electricity grid;
- The Distribution Business, which comprises the core business of delivering and selling electricity to customers; and
- Other, which includes certain corporate activities and the operations of the telecommunications business.

The designation of segments has been based on a combination of regulatory status and the nature of the products and services provided. Operating segments of the Company are determined based on information used by the chief operating decision maker in deciding how to allocate resources and evaluate the performance of each of the segments. The Company evaluates segment performance based on income before financing charges and provision for PILs from continuing operations (excluding certain allocated corporate governance costs).

The accounting policies followed by the segments are the same as those described in the summary of significant accounting policies (see Note 2 – Significant Accounting Policies). Segment information on the above basis is as follows:

Year ended December 31, 2014 (millions of Canadian dollars)	**Transmission**	**Distribution**	**Other**	**Consolidated**
Revenues	1,588	4,903	57	6,548
Purchased power	–	3,419	–	3,419
Operation, maintenance and administration	394	742	56	1,192
Depreciation and amortization	346	367	9	722
Income (loss) before financing charges and provision for PILs	848	375	(8)	1,215
Capital investments	845	680	5	1,530

Year ended December 31, 2013 (millions of Canadian dollars)	**Transmission**	**Distribution**	**Other**	**Consolidated**
Revenues	1,529	4,484	61	6,074
Purchased power	–	3,020	–	3,020
Operation, maintenance and administration	375	672	59	1,106
Depreciation and amortization	327	340	9	676
Income (loss) before financing charges and provision for PILs	827	452	(7)	1,272
Capital investments	714	673	7	1,394

Total Assets by Segment:

December 31 (millions of Canadian dollars)	**2014**	**2013**
Transmission	12,540	11,846
Distribution	9,805	8,805
Other	205	974
Total assets	22,550	21,625

All revenues, costs and assets, as the case may be, are earned, incurred or held in Canada.

25. SUBSEQUENT EVENT

On February 11, 2015, preferred share dividends in the amount of $4 million and common share dividends in the amount of $25 million were declared.

HYDRO ONE INC.
MANAGEMENT'S REPORT

The Consolidated Financial Statements, Management's Discussion and Analysis (MD&A) and related financial information have been prepared by the management of Hydro One Inc. (Hydro One or the Company). Management is responsible for the integrity, consistency and reliability of all such information presented. The Consolidated Financial Statements have been prepared in accordance with United States Generally Accepted Accounting Principles and applicable securities legislation. The MD&A has been prepared in accordance with National Instrument 51-102, Part 5.

The preparation of the Consolidated Financial Statements and information in the MD&A involves the use of estimates and assumptions based on management's judgement, particularly when transactions affecting the current accounting period cannot be finalized with certainty until future periods. Estimates and assumptions are based on historical experience, current conditions and various other assumptions believed to be reasonable in the circumstances, with critical analysis of the significant accounting policies followed by the Company as described in Note 2 to the Consolidated Financial Statements. The preparation of the Consolidated Financial Statements and the MD&A includes information regarding the estimated impact of future events and transactions. The MD&A also includes information regarding sources of liquidity and capital resources, operating trends, risks and uncertainties. Actual results in the future may differ materially from the present assessment of this information because future events and circumstances may not occur as expected. The Consolidated Financial Statements and MD&A have been properly prepared within reasonable limits of materiality and in light of information up to February 13, 2014.

Management is responsible for establishing and maintaining adequate internal control over financial reporting for the Company. In meeting its responsibility for the reliability of financial information, management maintains and relies on a comprehensive system of internal control and internal audit. The system of internal control includes a written corporate conduct policy; implementation of a risk management framework; effective segregation of duties and delegation of authorities; and sound and conservative accounting policies that are regularly reviewed. This structure is designed to provide reasonable assurance that assets are safeguarded and that reliable information is available on a timely basis. In addition, management has assessed the design and operating effectiveness of the Company's internal control over financial reporting in accordance with the criteria set forth in Internal Control – Integrated Framework (1992), issued by the Committee of Sponsoring Organizations of the Treadway Commission. Based on this assessment, management concluded that the Company maintained effective internal control over financial reporting as of December 31, 2013. The effectiveness of these internal controls and findings is reported to the Audit and Finance Committee of the Hydro One Board of Directors, as required.

The Consolidated Financial Statements have been examined by KPMG LLP, independent external auditors appointed by the Shareholder. The external auditors' responsibility is to express their opinion on whether the Consolidated Financial Statements are fairly presented in accordance with United States Generally Accepted Accounting Principles. The Independent Auditors' Report outlines the scope of their examination and their opinion.

The Hydro One Board of Directors, through its Audit and Finance Committee, is responsible for ensuring that management fulfills its responsibilities for financial reporting and internal controls. The Audit and Finance Committee of Hydro One met periodically with management, the internal auditors and the external auditors to satisfy itself that each group had properly discharged its respective responsibility and to review the Consolidated Financial Statements before recommending approval by the Board of Directors. The external auditors had irect and full access to the Audit and Finance Committee, with and without the presence of management, to discuss their audit findings.

The President and Chief Executive Officer and the Chief Administration Officer and Chief Financial Officer have certified Hydro One's annual Consolidated Financial Statements and annual MD&A, related disclosure controls and procedures and the design and effectiveness of related internal controls over financial reporting.

On behalf of Hydro One Inc.'s management:

Carmine Marcello
President and Chief Executive Officer

Sandy Struthers
Chief Administration Officer and Chief Financial Officer

HYDRO ONE INC.
INDEPENDENT AUDITORS' REPORT

To the Shareholder of Hydro One Inc.

We have audited the accompanying Consolidated Financial Statements of Hydro One Inc., which comprise the consolidated balance sheets as at December 31, 2013 and December 31, 2012, the consolidated statements of operations and comprehensive income, changes in shareholder's equity and cash flows for the years then ended, and notes, comprising a summary of significant accounting policies and other explanatory information.

Management's Responsibility for the Consolidated Financial Statements

Management is responsible for the preparation and fair presentation of these Consolidated Financial Statements in accordance with United States Generally Accepted Accounting Principles, and for such internal control as management determines is necessary to enable the preparation of Consolidated Financial Statements that are free from material misstatement, whether due to fraud or error.

Auditors' Responsibility

Our responsibility is to express an opinion on these Consolidated Financial Statements based on our audits. We conducted our audits in accordance with Canadian generally accepted auditing standards. Those standards require that we comply with ethical requirements and plan and perform the audit to obtain reasonable assurance about whether the Consolidated Financial Statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the Consolidated Financial Statements. The procedures selected depend on our judgement, including the assessment of the risks of material misstatement of the Consolidated Financial Statements, whether due to fraud or error. In making those risk assessments, we consider internal control relevant to the entity's preparation and fair presentation of the Consolidated Financial Statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management, as well as evaluating the overall presentation of the Consolidated Financial Statements.

We believe that the audit evidence we have obtained in our audits is sufficient and appropriate to provide a basis for our audit opinion.

Opinion

In our opinion, the Consolidated Financial Statements present fairly, in all material respects, the consolidated financial position of Hydro One Inc. as at December 31, 2013 and December 31, 2012, and its consolidated results of operations and its consolidated cash flows for the years then ended in accordance with United States Generally Accepted Accounting Principles.

HYDRO ONE INC.
CONSOLIDATED BALANCE SHEETS (continued)
At December 31, 2013 and 2012

December 31 (millions of Canadian dollars, except number of shares)	**2013**	**2012**
Liabilities		
Current liabilities:		
Bank indebtedness *(Note 13)*	31	42
Accounts payable	62	140
Accrued liabilities *(Notes 7, 15, 16)*	733	578
Due to related parties *(Note 20)*	230	261
Accrued interest	100	95
Regulatory liabilities *(Note 11)*	85	40
Long-term debt payable within one year (includes $506 measured at fair value; 2012 – $0) *(Notes 12, 13)*	756	600
	1,997	1,756
Long-term debt (includes $256 measured at fair value; 2012 – $769) *(Notes 12, 13)*	8,301	7,879
Other long-term liabilities:		
Post-retirement and post-employment benefit liability *(Note 15)*	1,488	1,416
Deferred income tax liabilities *(Note 7)*	1,129	944
Pension benefit liability *(Note 15)*	845	1,515
Environmental liabilities *(Note 16)*	239	227
Regulatory liabilities *(Note 11)*	163	181
Net unamortized debt premiums	20	23
Asset retirement obligations *(Note 17)*	14	15
Long-term accounts payable and other liabilities	14	25
	3,912	4,346
Total liabilities	14,210	13,981
Contingencies and commitments (Notes 22, 23)		
Preferred shares (authorized: unlimited; issued: 12,920,000) *(Notes 18, 19)*	323	323
Shareholder's equity		
Common shares (authorized: unlimited; issued: 100,000) *(Notes 18, 19)*	3,314	3,314
Retained earnings	3,787	3,202
Accumulated other comprehensive loss	(9)	(9)
Total shareholder's equity	7,092	6,507
Total liabilities, preferred shares and shareholder's equity	21,625	20,811

1. DESCRIPTION OF THE BUSINESS

Hydro One Inc. (Hydro One or the Company) was incorporated on December 1, 1998, under the *Business Corporations Act* (Ontario) and is wholly owned by the Province of Ontario (Province). The principal businesses of Hydro One are the transmission and distribution of electricity to customers within Ontario. The electricity rates of these businesses are regulated by the Ontario Energy Board (OEB).

2. SIGNIFICANT ACCOUNTING POLICIES

Basis of Consolidation

These Consolidated Financial Statements include the accounts of the Company and its wholly owned subsidiaries: Hydro One Networks Inc. (Hydro One Networks), Hydro One Remote Communities Inc. (Hydro One Remote Communities), Hydro One Brampton Networks Inc. (Hydro One Brampton Networks), Hydro One Telecom Inc. (Hydro One Telecom), Hydro One Lake Erie Link Management Inc., and Hydro One Lake Erie Link Company Inc.

Intercompany transactions and balances have been eliminated.

Basis of Accounting

These Consolidated Financial Statements are prepared and presented in accordance with United States (US) Generally Accepted Accounting Principles (GAAP) and in Canadian dollars. Certain comparative figures have been reclassified to conform to the presentation of these Consolidated Financial Statements (see Note 21 – Consolidated Statements of Cash Flows). In the opinion of management, these Consolidated Financial Statements include all adjustments that are necessary to fairly state the financial position and results of operations of Hydro One as at, and for the year ended December 31, 2013.

Hydro One performed an evaluation of subsequent events through to February 13, 2014, the date these Consolidated Financial Statements were issued, to determine whether any events or transactions warranted recognition and disclosure in these Consolidated Financial Statements. See Note 25 – Subsequent Event.

Use of Management Estimates

The preparation of financial statements requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities at the date of the financial statements and the reported amounts of revenues, expenses, gains and losses during the reporting periods. Management evaluates these estimates on an ongoing basis based upon: historical experience; current conditions; and assumptions believed to be reasonable at the time the assumptions are made with any adjustments being recognized in results of operations in the period they arise. Significant estimates relate to regulatory assets and regulatory liabilities, environmental liabilities, pension benefits, post-retirement and post-employment benefits, asset retirement obligations (AROs), goodwill and asset impairments, contingencies, unbilled revenues, allowance for doubtful accounts, derivative instruments, and deferred income tax assets and liabilities. Actual results may differ significantly from these estimates, which may be impacted by future decisions made by the OEB or the Province.

Rate Setting

The Company's Transmission Business includes the separately regulated transmission business of Hydro One Networks. The Company's consolidated Distribution Business includes Hydro One Brampton Networks, Hydro One Remote Communities, as well as the separately regulated distribution business of Hydro One Networks.

The OEB has approved the use of US GAAP for rate setting and regulatory accounting and reporting by Hydro One Networks' transmission and distribution businesses, as well as by Hydro One Remote Communities, beginning with the year 2012. Hydro One Brampton Networks currently uses Canadian GAAP for its distribution rate-setting purposes.

Transmission

In May 2010, Hydro One Networks filed a cost-of-service application with the OEB for 2012 transmission rates. The OEB approved a revenue requirement of $1,418 million for 2012, along with new 2012 uniform transmission rates, with an effective date of January 1, 2012. In May 2012, Hydro One Networks filed a cost-of-service application with the OEB for 2013 transmission rates, seeking approval for a 2013 revenue requirement of $1,465 million. In December 2012, the OEB approved a revenue requirement of $1,438 million for 2013. The reduced approved revenue requirement included reductions to proposed operation, maintenance and administration costs, and capital expenditures.

Distribution

In 2010, the OEB approved a revised 2011 revenue requirement of $1,218 million and 2011 distribution rates. Hydro One Networks elected to retain the same distribution rates for 2012 as approved by the OEB for the 2011 rate year. In June 2012, Hydro One Networks filed an Incentive Regulation Mechanism (IRM) application with the OEB for 2013 distribution rates. In December 2012, the OEB approved an increase in average distribution rates of approximately 1.3%, with an effective date of January 1, 2013.

In September 2011, Hydro One Brampton Networks filed an IRM application with the OEB for 2012 distribution rates. In January 2012, the OEB approved a reduction in distribution rates of approximately 13.2%, with an effective date of January 1, 2012. These rate reductions were primarily due to OEB-approved adjustments to depreciation rates. In August 2012, Hydro One Brampton Networks filed an IRM application with the OEB for 2013 distribution rates. In December 2012, the OEB approved an increase in average distribution rates of approximately 0.3%, with an effective date of January 1, 2013.

In November 2011, Hydro One Remote Communities filed an IRM application with the OEB for 2012 rates. In March 2012, the OEB approved an increase of approximately 1.1% to basic rates for the distribution and generation of electricity, with an effective date of May 1, 2012. In September 2012, Hydro One Remote Communities filed a cost-of-service application with the OEB for 2013 rates, seeking approval for a 2013 revenue requirement of $53 million. In June 2013, the OEB approved a revenue requirement of $51 million for 2013.

Regulatory Accounting

The OEB has the general power to include or exclude revenues, costs, gains or losses in the rates of a specific period, resulting in a change in the timing of accounting recognition from that which would have been applied in an unregulated company. Such change in timing involves the application of rate-regulated accounting, giving rise to the recognition of regulatory assets and liabilities. The Company's regulatory assets represent certain amounts receivable from future customers and costs that have been deferred for accounting purposes because it is probable that they will be recovered in future rates. In addition, the Company has recorded regulatory liabilities that generally represent amounts that are refundable to future customers. The Company continually assesses the likelihood of recovery of each of its regulatory assets and continues to believe that it is probable that the OEB will factor its regulatory assets and liabilities into the setting of future rates. If, at some future date, the Company judges that it is no longer probable that the OEB will include a regulatory asset or liability in setting future rates, the appropriate carrying amount will be reflected in results of operations in the period that the assessment is made.

Cash and Cash Equivalents

Cash and cash equivalents include cash and short-term investments with an original maturity of three months or less.

Revenue Recognition

Transmission revenues are collected through OEB-approved rates, which are based on an approved revenue requirement that includes a rate of return. Such revenue is recognized as electricity is transmitted and delivered to customers.

Distribution revenues are recognized on an accrual basis and include billed and unbilled revenues. Distribution revenues attributable to the delivery of electricity are based on OEB-approved distribution rates and are recognized as electricity is delivered to customers. The Company estimates monthly revenue for a period based on wholesale electricity purchases because customer meters are not generally read at the end of each month. At the end of each month, the electricity delivered to customers, but not billed, is estimated and revenue is recognized. The unbilled revenue estimate is affected by energy demand, weather, line losses and changes in the composition of customer classes.

Distribution revenue also includes an amount relating to rate protection for rural, residential and remote customers, which is received from the Independent Electricity System Operator (IESO) based on a standardized customer rate that is approved by the OEB. Current legislation provides rate protection for prescribed classes of rural, residential and remote consumers by reducing the electricity rates that would otherwise apply.

Revenues also include amounts related to sales of other services and equipment. Such revenue is recognized as services are rendered or as equipment is delivered.

Revenues are recorded net of indirect taxes.

Accounts Receivable and Allowance for Doubtful Accounts

Billed accounts receivable are recorded at the invoiced amount, net of allowance for doubtful accounts. Unbilled accounts receivable are estimated and recorded based on wholesale electricity purchases. Overdue amounts related to regulated billings bear interest at OEB-approved rates. The allowance for doubtful accounts reflects the Company's best estimate of losses on billed accounts receivable balances. The allowance is based on accounts receivable aging, historical experience and other currently available information. The Company estimates the allowance for doubtful accounts on customer receivables by applying internally developed loss rates to the outstanding receivable balances by risk segment. Risk segments represent groups of customers with similar credit quality indicators and are computed based on various attributes, including number of days receivables are past due, delinquency of balances and payment history. Loss rates applied to the accounts receivable balances are based on historical average write-offs as a percentage of accounts receivable in each risk segment. An account is considered delinquent if the amount billed is not received within 110 days of the invoiced date. Accounts receivable are written off against the allowance when they are deemed uncollectible. The existing allowance for uncollectible accounts will continue to be affected by changes in volume, prices and economic conditions.

Corporate Income Taxes

Under the *Electricity Act, 1998*, Hydro One is required to make payments in lieu of corporate income taxes (PILs) to the Ontario Electricity Financial Corporation (OEFC). These payments are calculated in accordance with the rules for computing income and other relevant amounts contained in the *Income Tax Act* (Canada) and the *Taxation Act, 2007* (Ontario) as modified by the *Electricity Act, 1998* and related regulations.

Current and deferred income taxes are computed based on the tax rates and tax laws enacted at the balance sheet date. Tax benefits associated with income tax positions taken, or expected to be taken, in a tax return are recorded only when the "more-likely-than-not" recognition threshold is satisfied and are measured at the largest amount of benefit that has a greater than 50% likelihood of being realized upon settlement. Management evaluates each position based solely on the technical merits and facts and circumstances of the position, assuming the position will be examined by a taxing authority having full knowledge of all relevant information. Significant management judgement is required to determine recognition thresholds and the related amount of tax benefits to be recognized in the Consolidated Financial Statements. Management re-evaluates tax positions each period in which new information about recognition or measurement becomes available.

Current Income Taxes

The provision for current taxes and the assets and liabilities recognized for the current and prior periods are measured at the amounts receivable from, or payable to, the OEFC.

Deferred Income Taxes

Deferred income taxes are provided for using the liability method. Deferred income taxes are recognized based on the estimated future tax consequences attributable to temporary differences between the carrying amount of assets and liabilities in the Consolidated Financial Statements and their corresponding tax bases.

Deferred income tax liabilities are generally recognized on all taxable temporary differences. Deferred tax assets are recognized to the extent that it is more-likely-than-not that these assets will be realized from taxable income available against which deductible temporary differences can be utilized.

Deferred income taxes are calculated at the tax rates that are expected to apply in the period when the liability is settled or the asset is realized, based on the tax rates and tax laws that have been enacted at the balance sheet date. Deferred income taxes that are not included in the rate-setting process are charged or credited to the Consolidated Statements of Operations and Comprehensive Income.

If management determines that it is more-likely-than-not that some or all of a deferred income tax asset will not be realized, a valuation allowance is recorded against the tax asset to report the net balance at the amount expected to be realized. Previously unrecognized deferred income tax assets are reassessed at each balance sheet date and are recognized to the extent that it has become more-likely-than-not that the tax benefit will be realized.

The Company records regulatory assets and liabilities associated with deferred income taxes that will be included in the rate-setting process.

The Company uses the flow-through method to account for investment tax credits (ITCs) earned on eligible scientific research and experimental development expenditures, and apprenticeship job creation. Under this method, only non-refundable ITCs are recognized as a reduction to income tax expense.

Materials and Supplies

Materials and supplies represent consumables, small spare parts and construction materials held for internal construction and maintenance of property, plant and equipment. These assets are carried at average cost less any impairments recorded.

Property, Plant and Equipment

Property, plant and equipment is recorded at original cost, net of customer contributions received in aid of construction and any accumulated impairment losses. The cost of additions, including betterments and replacement asset components, is included on the Consolidated Balance Sheets as property, plant and equipment.

The original cost of property, plant and equipment includes direct materials, direct labour (including employee benefits), contracted services, attributable capitalized financing costs, asset retirement costs, and direct and indirect overheads that are related to the capital project or program. Indirect overheads include a portion of corporate costs such as finance, treasury, human resources, information technology and executive costs. Overhead costs, including corporate functions and field services costs, are capitalized on a fully allocated basis, consistent with an OEB-approved methodology.

Property, plant and equipment in service consists of transmission, distribution, communication, administration and service assets and land easements. Property, plant and equipment also includes future use assets, such as land, major components and spare parts, and capitalized project development costs associated with deferred capital projects.

Transmission

Transmission assets include assets used for the transmission of high-voltage electricity, such as transmission lines, support structures, foundations, insulators, connecting hardware and grounding systems, and assets used to step up the voltage of electricity from generating stations for transmission and to step down voltages for distribution, including transformers, circuit breakers and switches.

Distribution

Distribution assets include assets related to the distribution of low-voltage electricity, including lines, poles, switches, transformers, protective devices and metering systems.

Communication

Communication assets include the fibre-optic and microwave radio system, optical ground wire, towers, telephone equipment and associated buildings.

Administration and Service

Administration and service assets include administrative buildings, personal computers, transport and work equipment, tools and other minor assets.

Easements

Easements include statutory rights of use for transmission corridors and abutting lands granted under the *Reliable Energy and Consumer Protection Act, 2002*, as well as other land access rights.

Intangible Assets

Intangible assets separately acquired or internally developed are measured on initial recognition at cost, which comprises purchased software, direct labour (including employee benefits), consulting, engineering, overheads and attributable capitalized financing charges. Following initial recognition, intangible assets are carried at cost, net of any accumulated amortization and accumulated impairment losses. The Company's intangible assets primarily represent major administrative computer applications.

Capitalized Financing Costs

Capitalized financing costs represent interest costs attributable to the construction of property, plant and equipment or development of intangible assets. The financing cost of attributable borrowed funds is capitalized as part of the acquisition cost of such assets. The capitalized portion of financing costs is a reduction to financing charges recognized in the Consolidated Statements of Operations and Comprehensive Income. Capitalized financing costs are calculated using the Company's weighted average effective cost of debt.

Construction and Development in Progress

Construction and development in progress consists of the capitalized cost of constructed assets that are not yet complete and which have not yet been placed in service.

Depreciation and Amortization

The cost of property, plant and equipment and intangible assets is depreciated or amortized on a straight-line basis based on the estimated remaining service life of each asset category, except for transport and work equipment, which is depreciated on a declining balance basis.

The Company periodically initiates an external independent review of its property, plant and equipment and intangible asset depreciation and amortization rates, as required by the OEB. Any changes arising from OEB approval of such a review are implemented on a remaining service life basis, consistent with their inclusion in electricity rates. The last review resulted in changes to rates effective January 1, 2013. A summary of average service lives and depreciation and amortization rates for the various classes of assets is included below:

	Average Service Life	Rate (%) Range	Rate (%) Average
Transmission	57 years	1% – 2%	2%
Distribution	42 years	1% – 20%	2%
Communication	19 years	1% – 15%	5%
Administration and service	15 years	3% – 20%	6%

The cost of intangible assets is included primarily within the administration and service classification above. Amortization rates for computer applications software and other intangible assets range from 9% to 10%.

In accordance with group depreciation practices, the original cost of property, plant and equipment, or major components thereof, and intangible assets that are normally retired, is charged to accumulated depreciation, with no gain or loss being reflected in results of operations. Where a disposition of property, plant and equipment occurs through sale, a gain or loss is calculated based on proceeds and such gain or loss is included in depreciation expense. Depreciation expense also includes the costs incurred to remove property, plant and equipment where no ARO has been recorded.

Goodwill

Goodwill represents the cost of acquired local distribution companies that is in excess of the fair value of the net identifiable assets acquired at the acquisition date. Goodwill is not included in rate base.

Goodwill is evaluated for impairment on an annual basis, or more frequently if circumstances require. The Company performs a qualitative assessment to determine whether it is more-likely-than-not that the fair value of the applicable reporting unit is less than its carrying amount. If the Company determines, as a result of its qualitative assessment, that it is not more-likely-than-not that the fair value of the applicable reporting unit is less than its carrying amount, no further testing is required. If the Company determines, as a result of its qualitative assessment, that it is more-likely-than-not that the fair value of the applicable reporting unit is less than its carrying amount, a goodwill impairment assessment is performed using a two-step, fair value-based test. The first step compares the fair value of the applicable reporting unit to its carrying amount, including goodwill. If the carrying amount of the applicable reporting unit exceeds its fair value, a second step is performed. The second step requires an allocation of fair value to the individual assets and liabilities using purchase price allocation in order to determine the implied fair value of goodwill. If the implied fair value of goodwill is less than the carrying amount, an impairment loss is recorded as a reduction to goodwill and as a charge to results of operations.

For the year ended December 31, 2013, based on the qualitative assessment performed as at September 30, 2013, the Company has determined that it is not more-likely-than-not that the fair value of each applicable reporting unit assessed is less than its carrying amount. As a result, no further testing was performed, and the Company has concluded that goodwill was not impaired at December 31, 2013.

Long-Lived Asset Impairment

When circumstances indicate the carrying value of long-lived assets may not be recoverable, the Company evaluates whether the carrying value of such assets, excluding goodwill, has been impaired. For such long-lived assets, impairment exists when the carrying value exceeds the sum of the future estimated undiscounted cash flows expected to result from the use and eventual disposition of the asset. When alternative courses of action to recover the carrying amount of a long-lived asset are under consideration, a probability-weighted approach is used to develop estimates of future undiscounted cash flows. If the carrying value of the long-lived asset is not recoverable based on the estimated future undiscounted cash flows, an impairment loss is recorded, measured as the excess of the carrying value of the asset over its fair value. As a result, the asset's carrying value is adjusted to its estimated fair value.

Within its regulated business, the carrying costs of most of Hydro One's long-lived assets are included in rate base where they earn an OEB-approved rate of return. Asset carrying values and the related return are recovered through approved rates. As a result, such assets are only tested for impairment in the event that the OEB disallows recovery, in whole or in part, or if such a disallowance is judged to be probable.

Hydro One regularly monitors the assets of its unregulated Hydro One Telecom subsidiary for indications of impairment. Management assesses the fair value of such long-lived assets using commonly accepted techniques, and may use more than one. Techniques used to determine fair value include, but are not limited to, the use of recent third party comparable sales for reference and internally developed discounted cash flow analysis. Significant changes in market conditions, changes to the condition of an asset, or a change in management's intent to utilize the asset are generally viewed by management as triggering events to reassess the cash flows related to these long-lived assets. As at December 31, 2013, no asset impairment had been recorded for assets within either the Company's regulated or unregulated businesses.

Costs of Arranging Debt Financing

For financial liabilities classified as other than held-for-trading, the Company defers the external transaction costs related to obtaining debt financing and presents such amounts as deferred debt costs on the Consolidated Balance Sheets. Deferred debt costs are amortized over the contractual life of the related debt on an effective-interest basis and the amortization is included within financing charges in the Consolidated Statements of Operations and Comprehensive Income. Transaction costs for items classified as held-for-trading are expensed immediately.

Comprehensive Income

Comprehensive income is comprised of net income and other comprehensive income (OCI). OCI includes the amortization of net unamortized hedging losses on the Company's discontinued cash flow hedges, and the change in fair value on the existing cash flow hedges to the extent that the hedge is effective. The Company amortizes its unamortized hedging losses on discontinued cash flow hedges to financing charges using the effective-interest method over the term of the allocated hedged debt. Hydro One presents net income and OCI in a single continuous Consolidated Statement of Operations and Comprehensive Income.

Financial Assets and Liabilities

All financial assets and liabilities are classified into one of the following five categories: held-to-maturity; loans and receivables; held-for-trading; other liabilities; or available-for-sale. Financial assets and liabilities classified as held-for-trading are measured at fair value. All other financial assets and liabilities are measured at amortized cost, except accounts receivable and amounts due from related parties, which are measured at the lower of cost or fair value. Accounts receivable and amounts due from related parties are classified as loans and receivables. The Company considers the carrying amounts of accounts receivable and amounts due from related parties to be reasonable estimates of fair value because of the short time to maturity of these instruments. Provisions for impaired accounts receivable are recognized as adjustments to the allowance for doubtful accounts and are recognized when there is objective evidence that the Company will not be able to collect amounts according to the original terms.

Derivative instruments are measured at fair value. Gains and losses from fair valuation are included within financing charges in the period in which they arise. The Company determines the classification of its financial assets and liabilities at the date of initial recognition. The Company designates certain of its financial assets and liabilities to be held at fair value, when it is consistent with the Company's risk management policy disclosed in Note 13 – Fair Value of Financial Instruments and Risk Management.

The Company's investment in Province of Ontario Floating-Rate Notes, which is held as an alternate form of liquidity to supplement the bank credit facilities, is classified as held-for-trading and is measured at fair value.

All financial instrument transactions are recorded at trade date.

Derivative Instruments and Hedge Accounting

The Company closely monitors the risks associated with changes in interest rates on its operations and, where appropriate, uses various instruments to hedge these risks. Certain of these derivative instruments qualify for hedge accounting and are designated as accounting hedges, while others either do not qualify as hedges or have not been designated as hedges (hereinafter referred to as undesignated contracts) as they are part of economic hedging relationships.

The accounting guidance for derivative instruments requires the recognition of all derivative instruments not identified as meeting the normal purchase and sale exemption as either assets or liabilities recorded at fair value on the Consolidated Balance Sheets. For derivative instruments that qualify for hedge accounting, the Company may elect to designate such derivative instruments as either cash flow hedges or fair value hedges. The Company offsets fair value amounts recognized in its Consolidated Balance Sheets related to derivative instruments executed with the same counterparty under the same master netting agreement.

For derivative instruments that qualify for hedge accounting and which are designated as cash flow hedges, the effective portion of any gain or loss, net of tax, is reported as a component of accumulated OCI (AOCI) and is reclassified to results of operations in the same period or periods during which the hedged transaction affects results of operations. Any gains or losses on the derivative instrument that represent either hedge ineffectiveness or hedge components excluded from the assessment of effectiveness are recognized in results of operations. For fair value hedges, changes in fair value of both the derivative instrument and the underlying hedged exposure are recognized in the Consolidated Statement of Operations and Comprehensive Income in the current period. The gain or loss on the derivative instrument is included in the same line item as the offsetting gain or loss on the hedged item in the Consolidated Statements of Operations and Comprehensive Income. Additionally, the Company enters into derivative agreements that are economic hedges that either do not qualify for hedge accounting or have not been designated as hedges. The changes in fair value of these undesignated derivative instruments are reflected in results of operations.

Embedded derivative instruments are separated from their host contracts and carried at fair value on the Consolidated Balance Sheets when: (a) the economic characteristics and risks of the embedded derivative are not clearly and closely related to the economic characteristics and risks of the host contract; (b) the hybrid instrument is not measured at fair value, with changes in fair value recognized in results of operations each period; and (c) the embedded derivative itself meets the definition of a derivative. The Company does not engage in derivative trading or speculative activities and had no embedded derivatives at December 31, 2013 or 2012.

Hydro One periodically develops hedging strategies taking into account risk management objectives. At the inception of a hedging relationship where the Company has elected to apply hedge accounting, Hydro One formally documents the relationship between the hedged item and the hedging instrument, the related risk management objective, the nature of the specific risk exposure being hedged, and the method for assessing the effectiveness of the hedging relationship. The Company also assesses, both at the inception of the hedge and on a quarterly basis, whether the hedging instruments are effective in offsetting changes in fair values or cash flows of the hedged items.

Employee Future Benefits

Employee future benefits provided by Hydro One include pension, post-retirement and post-employment benefits. The costs of the Company's pension, post-retirement and post-employment benefit plans are recorded over the periods during which employees render service.

The Company recognizes the funded status of its pension, post-retirement and post-employment plans on its Consolidated Balance Sheets and subsequently recognizes the changes in funded status at the end of each reporting year. Pension, post-retirement and post-employment plans are considered to be underfunded when the projected benefit obligation exceeds the fair value of the plan assets. Liabilities are recognized on the Consolidated Balance Sheets for any net underfunded projected benefit obligation. The net underfunded projected benefit obligation may be disclosed as a current liability, long-term liability, or both. The current portion is the amount by which the actuarial present value of benefits included in the benefit obligation payable in the next 12 months exceeds the fair value of plan assets. If the fair value of plan assets exceeds the projected benefit obligation of the plan, an asset is recognized equal to the net overfunded projected benefit obligation. The net asset for an overfunded plan is classified as a long-term asset on the Consolidated Balance Sheets. The post-retirement and post-employment benefit plans are unfunded because there are no related plan assets.

Pension benefits

In accordance with the OEB's rate orders, pension costs are recorded on a cash basis as employer contributions are paid to the pension fund in accordance with the *Pension Benefits Act* (Ontario). Pension costs are recorded on an accrual basis for financial reporting purposes. Pension costs are actuarially determined using the projected benefit method prorated on service and are based on assumptions that reflect management's best estimate of the effect of future events, including future compensation increases. Past service costs from plan amendments and all actuarial gains and losses are amortized on a straight-line basis over the expected average remaining service period of active employees in the plan, and over the estimated remaining life expectancy of inactive employees in the plan. Pension plan assets, consisting primarily of listed equity securities as well as corporate and government debt securities, are fair valued at the end of each year.

Hydro One records a regulatory asset equal to the net underfunded projected benefit obligation for its pension plan. The regulatory asset for the net underfunded projected benefit obligation for the pension plan, in the absence of regulatory accounting, would be recognized in AOCI. A regulatory asset is recognized because management considers it to be probable that pension benefit costs will be recovered in the future through the rate-setting process. The pension regulatory assets are remeasured at the end of each year based on the current status of the pension plan.

All future pension benefit costs are attributed to labour and are either charged to results of operations or capitalized as part of the cost of property, plant and equipment and intangible assets.

Post-retirement and post-employment benefits

Post-retirement and post-employment benefits are recorded and included in rates on an accrual basis. Costs are determined by independent actuaries using the projected benefit method prorated on service and based on assumptions that reflect management's best estimates. Past service costs from plan amendments are amortized to results of operations based on the expected average remaining service period.

Hydro One records a regulatory asset equal to the incremental net unfunded projected benefit obligation for post-retirement and post-employment plans recorded at each year end based on annual actuarial reports. The regulatory asset for the incremental net unfunded projected benefit obligation for post-retirement and post-employment plans, in the absence of regulatory accounting, would be recognized in AOCI. A regulatory asset is recognized because management considers it to be probable that post-retirement and post-employment benefit costs will be recovered in the future through the rate-setting process.

For post-retirement benefits, all actuarial gains or losses are deferred using the "corridor" approach. The amount calculated above the "corridor" is amortized to results of operations on a straight-line basis over the expected average remaining service life of active employees in the plan and over the remaining life expectancy of inactive employees in the plan. The post-retirement benefit obligation is remeasured to its fair value at each year end based on an annual actuarial report, with an offset to the associated regulatory asset, to the extent of the remeasurement adjustment.

For post-employment obligations, the associated regulatory liabilities representing actuarial gains on transition to US GAAP are amortized to results of operations based on the "corridor" approach. Post transition, the actuarial gains and losses on post-employment obligations that are incurred during the year are recognized immediately to results of operations. The post-employment benefit obligation is remeasured to its fair value at each year end based on an annual actuarial report, with an offset to the associated regulatory asset, to the extent of the remeasurement adjustment.

All post-retirement and post-employment future benefit costs are attributed to labour and are either charged to results of operations or capitalized as part of the cost of property, plant and equipment and intangible assets.

Multiemployer Pension Plan

Employees of Hydro One Brampton Networks participate in the Ontario Municipal Employees Retirement System Fund (OMERS), a multiemployer, contributory, defined benefit public sector pension fund. OMERS provides retirement pension payments based on members' length of service and salary. Both participating employers and members are required to make plan contributions. The OMERS plan assets are pooled together to provide benefits to all plan participants and the plan assets are not segregated by member entity. OMERS is registered with the Financial Services Commission of Ontario under Registration #0345983. At December 31, 2012, OMERS had approximately 429,000 members, with approximately 283 members being current employees of Hydro One Brampton Networks.

The OMERS plan is accounted for as a defined contribution plan by Hydro One because it is not practicable to determine the present value of the Company's obligation, the fair value of plan assets or the related current service cost applicable to Hydro One Brampton Networks' employees. Hydro One recognizes its contributions to the OMERS plan as pension expense, with a portion being capitalized. The expensed amount is included in operation, maintenance and administration costs in the Consolidated Statements of Operations and Comprehensive Income.

Loss Contingencies

Hydro One is involved in certain legal and environmental matters that arise in the normal course of business. In the preparation of its Consolidated Financial Statements, management makes judgements regarding the future outcome of contingent events and records a loss for a contingency based on its best estimate when it is determined that such loss is probable and the amount of the loss can be reasonably estimated. Where the loss amount is recoverable in future rates, a regulatory asset is also recorded. When a range estimate for the probable loss exists and no amount within the range is a better estimate than any other amount, the Company records a loss at the minimum amount within the range.

Management regularly reviews current information available to determine whether recorded provisions should be adjusted and whether new provisions are required. Estimating probable losses may require analysis of multiple forecasts and scenarios that often depend on judgements about potential actions by third parties, such as federal, provincial and local courts or regulators. Contingent liabilities are often resolved over long periods of time. Amounts recorded in the Consolidated Financial Statements may differ from the actual outcome once the contingency is resolved. Such differences could have a material impact on future results of operations, financial position and cash flows of the Company.

Provisions are based upon current estimates and are subject to greater uncertainty where the projection period is lengthy. A significant upward or downward trend in the number of claims filed, the nature of the alleged injuries, and the average cost of resolving each claim could change the estimated provision, as could any substantial adverse or favourable verdict at trial. A federal or provincial legislative outcome or structured settlement could also change the estimated liability. Legal fees are expensed as incurred.

Environmental Liabilities

Environmental liabilities are recorded in respect of past contamination when it is determined that future environmental remediation expenditures are probable under existing statute or regulation and the amount of the future expenditures can be reasonably estimated. Hydro One records a liability for the estimated future expenditures associated with the contaminated land assessment and remediation (LAR) and for the phase-out and destruction of polychlorinated biphenyl (PCB)-contaminated mineral oil removed from electrical equipment, based on the present value of these estimated future expenditures. The Company determines the present value with a discount rate equal to its credit-adjusted risk-free interest rate on financial instruments with comparable maturities to the pattern of future environmental expenditures. As the Company anticipates that the future expenditures will continue to be recoverable in future rates, an offsetting regulatory asset has been recorded to reflect the future recovery of these environmental expenditures from customers. Hydro One reviews its estimates of future environmental expenditures annually, or more frequently if there are indications that circumstances have changed.

Asset Retirement Obligations

AROs are recorded for legal obligations associated with the future removal and disposal of long-lived assets. Such obligations may result from the acquisition, construction, development and/or normal use of the asset. Conditional AROs are recorded when there is a legal obligation to perform a future asset retirement activity but where the timing and/or method of settlement are conditional on a future event that may or may not be within the control of the Company. In such a case, the obligation to perform the asset retirement activity is unconditional even though uncertainty exists about the timing and/or method of settlement.

When recording an ARO, the present value of the estimated future expenditures required to complete the asset retirement activity is recorded in the period in which the obligation is incurred, if a reasonable estimate can be made. In general, the present value of the estimated future expenditures is added to the carrying amount of the associated asset and the resulting asset retirement cost is depreciated over the estimated useful life of the asset. Where an asset is no longer in service when an ARO is recorded, the asset retirement cost is recorded in results of operations.

Some of the Company's transmission and distribution assets, particularly those located on unowned easements and rights-of-way, may have AROs, conditional or otherwise. The majority of the Company's easements and rights-of-way are either of perpetual duration or are automatically renewed annually. Land rights with finite terms are generally subject to extension or renewal. As the Company expects to use the majority of its facilities in perpetuity, no ARO currently exists for these assets.

If, at some future date, a particular facility is shown not to meet the perpetuity assumption, it will be reviewed to determine whether an estimable ARO exists. In such a case, an ARO would be recorded at that time.

The Company's AROs recorded to date relate to estimated future expenditures associated with the removal and disposal of asbestos-containing materials installed in some of its facilities and with the decommissioning of specific switching stations located on unowned sites.

3. NEW ACCOUNTING PRONOUNCEMENTS

Recently Adopted Accounting Pronouncements

In December 2011, the Financial Accounting Standards Board (FASB) issued Accounting Standards Update (ASU) 2011-11, Balance Sheet (Topic 210): Disclosures about Offsetting Assets and Liabilities. This ASU requires an entity to disclose both gross and net information about financial instruments and transactions eligible for offset on the Consolidated Balance Sheets as well as financial instruments and transactions executed under a master netting or similar arrangement. The ASU was issued to enable users of financial statements to understand the effects or potential effects of those arrangements on an entity's financial position. This ASU was required to be applied retrospectively and was effective for fiscal years, and interim periods within those years, beginning on or after January 1, 2013. The adoption of this ASU did not have an impact on the Company's Consolidated Financial Statements.

In February 2013, the FASB issued ASU 2013-02, Comprehensive Income (Topic 220): Reporting of Amounts Reclassified Out of Accumulated Other Comprehensive Income. This ASU requires an entity to provide information about the amounts reclassified out of accumulated other comprehensive income by component. In addition, an entity is required to present, either on the face of the statement where net income is presented or in the notes, significant amounts reclassified out of accumulated other comprehensive income by the respective line items of net income, but only if the amount reclassified is required under US GAAP to be reclassified to net income in its entirety in the same reporting period. For other amounts that are not required under US GAAP to be reclassified in their entirety to net income, an entity is required to cross-reference to other disclosures required under US GAAP that provide additional detail about those amounts. This ASU was required to be applied prospectively and was effective for fiscal years, and interim periods within those years, beginning after December 15, 2012. The adoption of this ASU did not have a significant impact on the Company's Consolidated Financial Statements.

Recent Accounting Guidance Not Yet Adopted

In July 2013, the FASB issued ASU 2013-11, Income Taxes (Topic 740): Presentation of an Unrecognized Tax Benefit When a Net Operating Loss Carryforward, a Similar Tax Loss, or a Tax Credit Carryforward Exists. This ASU provides guidance on the presentation of unrecognized tax benefits. This ASU is effective for fiscal years, and interim periods within those years, beginning after December 15, 2013, and should be applied prospectively to all unrecognized tax benefits that exist at the effective date. Retrospective application is permitted. The adoption of this ASU is not anticipated to have a significant impact on the Company's Consolidated Financial Statements.

4. BUSINESS ACQUISITION

Norfolk Power Purchase Agreement

On April 2, 2013, Hydro One reached an agreement with The Corporation of Norfolk County to acquire 100% of the common shares of Norfolk Power Inc. (Norfolk Power), an electricity distribution and telecom company located in southwestern Ontario. The acquisition is pending a regulatory decision from the OEB. The purchase price for Norfolk Power will be approximately $93 million, subject to final closing adjustments. The transaction is anticipated to be completed in 2014. In anticipation of the Norfolk Power acquisition, the Company made a refundable deposit totaling $5 million, which was recorded in other current assets on the interim Consolidated Balance Sheet.

5. DEPRECIATION AND AMORTIZATION

Year ended December 31 (millions of Canadian dollars)	**2013**	**2012**
Depreciation of property, plant and equipment	533	522
Amortization of intangible assets	48	48
Asset removal costs	79	70
Amortization of regulatory assets	16	19
	676	659

6. FINANCING CHARGES

Year ended December 31 (millions of Canadian dollars)	**2013**	**2012**
Interest on long-term debt	416	421
Other	9	12
Less: Interest capitalized on construction and development in progress	(51)	(59)
Gain on interest-rate swap agreements	(11)	(12)
Interest earned on investments	(3)	(4)
	360	358

7. PROVISION FOR PAYMENTS IN LIEU OF CORPORATE INCOME TAXES

The provision for PILs differs from the amount that would have been recorded using the combined Canadian federal and Ontario statutory income tax rate. The reconciliation between the statutory and the effective tax rates is provided as follows:

Year ended December 31 (millions of Canadian dollars)	**2013**	**2012**
Income before provision for PILs	912	866
Canadian federal and Ontario statutory income tax rate	26.50%	26.50%
Provision for PILs at statutory rate	242	230
Increase (decrease) resulting from:		
Net temporary differences included in amounts charged to customers:		
Capital cost allowance in excess of depreciation and amortization	(72)	(42)
Pension contributions in excess of pension expense	(23)	(23)
Interest capitalized for accounting but deducted for tax purposes	(13)	(15)
Overheads capitalized for accounting but deducted for tax purposes	(14)	(14)
Prior year's adjustments	(8)	(2)
Non-refundable investment tax credits	(4)	(8)
Environmental expenditures	(4)	(5)
Post-retirement and post-employment benefit expense in excess of cash payments	4	–
Other	(1)	(1)
Net temporary differences	(135)	(110)
Net permanent differences	2	1
Total provision for PILs	109	121

The major components of income tax expense are as follows:

Year ended December 31 (millions of Canadian dollars)	**2013**	**2012**
Current provision for PILs	111	130
Deferred recovery of PILs	(2)	(9)
Total provision for PILs	109	121
Effective income tax rate	11.98%	13.96%

The current provision for PILs is remitted to, or received from, the Ontario Electricity Financial Corporation (OEFC). At December 31, 2013, $29 million due from the OEFC was included in due from related parties on the Consolidated Balance Sheet (December 31, 2012 – $10 million included in due to related parties).

The total provision for PILs includes deferred recovery of PILs of $2 million (2012 – $9 million) that is not included in the rate-setting process, using the liability method of accounting. Deferred PILs balances expected to be included in the rate-setting process are offset by regulatory assets and liabilities to reflect the anticipated recovery or disposition of these balances within future electricity rates.

Deferred Income Tax Assets and Liabilities

Deferred income tax assets and liabilities arise from differences between the carrying amounts and tax bases of the Company's assets and liabilities. At December 31, 2013 and 2012, deferred income tax assets and liabilities consisted of the following:

December 31 (millions of Canadian dollars)	**2013**	**2012**
Deferred income tax assets		
Post-retirement and post-employment benefits expense in excess of cash payments	7	7
Environmental expenditures	5	4
Depreciation and amortization in excess of capital cost allowance	–	3
Other	(1)	–
Total deferred income tax assets	11	14
Less: current portion	–	–
	11	14

December 31 (millions of Canadian dollars)	**2013**	**2012**
Deferred income tax liabilities		
Capital cost allowance in excess of depreciation and amortization	(1,556)	(1,344)
Post-retirement and post-employment benefits expense in excess of cash payments	542	519
Environmental expenditures	66	62
Regulatory amounts that are not recognized for tax purposes	(144)	(147)
Goodwill	(20)	(19)
Other	1	3
Total deferred income tax liabilities	(1,111)	(926)
Less: current portion	18	18
	(1,129)	(944)

During 2013, there was no change in the rate applicable to future taxes (2012 – a change in rate applicable to future rates generated a $60 million increase).

8. ACCOUNTS RECEIVABLE

December 31 (millions of Canadian dollars)	2013	2012
Accounts receivable – billed	268	224
Accounts receivable – unbilled	691	644
Accounts receivable, gross	959	868
Allowance for doubtful accounts	(36)	(23)
Accounts receivable, net	923	845

The following table shows the movements in the allowance for doubtful accounts for the years ended December 31, 2013 and 2012:

Year ended December 31 (millions of Canadian dollars)	2013	2012
Allowance for doubtful accounts – January 1	(23)	(18)
Write-offs	24	17
Additions to allowance for doubtful accounts	(37)	(22)
Allowance for doubtful accounts – December 31	(36)	(23)

9. PROPERTY, PLANT AND EQUIPMENT

December 31, 2013 (millions of Canadian dollars)	Property, Plant and Equipment	Accumulated Depreciation	Construction in Progress	Total
Transmission	12,413	4,215	671	8,869
Distribution	8,498	3,046	316	5,768
Communication	1,060	560	53	553
Administration and Service	1,380	716	38	702
Easements	617	78	–	539
	23,968	8,615	1,078	16,431

December 31, 2012 (millions of Canadian dollars)	Property, Plant and Equipment	Accumulated Depreciation	Construction in Progress	Total
Transmission	11,840	3,990	641	8,491
Distribution	8,005	2,879	234	5,360
Communication	1,024	516	57	565
Administration and Service	1,314	668	123	769
Easements	614	92	–	522
	22,797	8,145	1,055	15,707

Financing charges capitalized on property, plant and equipment under construction were $48 million in 2013 (2012 – $56 million).

10. INTANGIBLE ASSETS

December 31, 2013 (millions of Canadian dollars)	Intangible Assets	Accumulated Amortization	Development in Progress	Total
Computer applications software	557	249	3	311
Other	5	3	–	2
	562	252	3	313

December 31, 2012 (millions of Canadian dollars)	Intangible Assets	Accumulated Amortization	Development in Progress	Total
Computer applications software	451	301	116	266
Other	5	4	–	1
	456	305	116	267

Financing charges capitalized on intangible assets under development were $3 million in 2013 (2012 – $3 million). The estimated annual amortization expense for intangible assets is as follows: 2014 – $52 million; 2015 – $52 million; 2016 – $52 million; 2017 – $52 million; and 2018 – $44 million.

11. REGULATORY ASSETS AND LIABILITIES

Regulatory assets and liabilities arise as a result of the rate-setting process. Hydro One has recorded the following regulatory assets and liabilities:

December 31 (millions of Canadian dollars)	**2013**	**2012**
Regulatory assets:		
Deferred income tax regulatory asset	1,145	954
Pension benefit regulatory asset	845	1,515
Post-retirement and post-employment benefits	308	320
Environmental	266	249
Pension cost variance	80	61
OEB cost assessment differential	9	6
DSC exemption	7	2
Long-term project development costs	5	5
Rider 2	–	10
Other	18	5
Total regulatory assets	2,683	3,127
Less: current portion	47	29
	2,636	3,098
Regulatory liabilities:		
External revenue variance	81	61
Rider 8	55	45
Retail settlement variance accounts	35	54
Deferred income tax regulatory liability	19	16
Rider 9	19	–
PST savings deferral	17	13
Hydro One Brampton Networks rider	8	–
Rider 3	–	9
Rural and remote rate protection variance	–	6
Other	14	17
Total regulatory liabilities	248	221
Less: current portion	85	40
	163	181

Deferred Income Tax Regulatory Asset and Liability

Deferred income taxes are recognized on temporary differences between the carrying amount of assets and liabilities in the financial statements and the corresponding tax bases used in the computation of taxable profit. The Company has recognized regulatory assets and liabilities that correspond to deferred income taxes that flow through the rate-setting process. In the absence of rate-regulated accounting, the Company's provision for PILs would have been recognized using the liability method and there would be no regulatory accounts established for taxes to be recovered through future rates. As a result, the 2013 provision for PILs would have been higher by approximately $139 million (2012 – $136 million).

Pension Benefit Regulatory Asset

The Company recognizes the net unfunded status of pension obligations on the Consolidated Balance Sheets with an offset to the associated regulatory asset. A regulatory asset is recognized because management considers it to be probable that pension benefit costs will be recovered in the future through the rate-setting process. The pension benefit obligation is remeasured to its fair value at each year end based on an annual actuarial report, with an offset to the associated regulatory asset, to the extent of the remeasurement adjustment. In the absence of rate-regulated accounting, 2013 OCI would have been higher by $670 million (2012 – lower by $736 million).

Post-Retirement and Post-Employment Benefits

The Company recognizes the net unfunded status of post-retirement and post-employment obligations on the Consolidated Balance Sheets with an incremental offset to the associated regulatory assets. A regulatory asset is recognized because management considers it to be probable that post-retirement and post-employment benefit costs will be recovered in the future through the rate-setting process. The post-retirement and post-employment benefit obligation is remeasured to its fair value at each year end based on an annual actuarial report, with an offset to the associated regulatory asset, to the extent of the remeasurement adjustment. In the absence of rate-regulated accounting, 2013 OCI would have been higher by $12 million (2012 – lower by $197 million).

Environmental

Hydro One records a liability for the estimated future expenditures required to remediate environmental contamination. Because such expenditures are expected to be recoverable in future rates, the Company has recorded an equivalent amount as a regulatory asset. In 2013, the environmental regulatory asset decreased by $3 million (2012 – $3 million) to reflect related changes in the Company's PCB liability, and increased by $26 million (2012 – $2 million) due to changes in the LAR liability. The environmental regulatory asset is amortized to results of operations based on the pattern of actual expenditures incurred and charged to environmental liabilities. The OEB has the discretion to examine and assess the prudency and the timing of recovery of all of Hydro One's actual environmental expenditures. In the absence of rate-regulated accounting, 2013 operation, maintenance and administration expenses would have been higher by $23 million (2012 – lower by $1 million). In addition, 2013 amortization expense would have been lower by $16 million (2012 – $18 million), and 2013 financing charges would have been higher by $10 million (2012 – $11 million).

Pension Cost Variance

A pension cost variance account was established for Hydro One Networks' transmission and distribution businesses to track the difference between the actual pension expense incurred and estimated pension costs approved by the OEB. The balance in this regulatory account reflects the excess of pension costs paid as compared to OEB-approved amounts. In the absence of rate-regulated accounting, 2013 revenue would have been lower by $19 million (2012 – $18 million).

OEB Cost Assessment Differential

In April 2010, the OEB announced its decision regarding the Company's rate application in respect of Hydro One Networks' distribution business for 2010 and 2011. As part of this decision, the OEB also approved the distribution-related OEB Cost Assessment Differential Account to record the difference between the amounts approved in rates and actual expenditures with respect to the OEB's cost assessments.

DSC Exemption

In June 2010, Hydro One Networks filed an application with the OEB regarding the OEB's new cost responsibility rules contained in the OEB's October 2009 Notice of Amendment to the Distribution System Code (DSC), with respect to the connection of certain renewable generators that were already connected or that had received a connection impact assessment prior to October 21, 2009. The application sought approval to record and defer the unanticipated costs incurred by Hydro One

Networks that resulted from the connection of certain renewable generation facilities. The OEB ruled that expenditures for identified specific expenditures can be recorded in a deferral account, subject to the OEB's review at a future date.

Long-Term Project Development Costs

In May 2009, the OEB approved the creation of a deferral account to record Hydro One Networks' costs of preliminary work to advance certain transmission projects identified in the Company's 2009 and 2010 transmission rate applications. In March 2010, the OEB issued a decision amending the scope of the account to include the 20 major transmission projects identified in the September 2009 request from the Ministry of Energy and Infrastructure. In December 2012, the OEB approved the recovery of the December 31, 2012 balance, including accrued interest, to be recovered over a one-year period from January 1, 2014 to December 31, 2014.

Rider 2

In April 2006, the OEB approved Hydro One Networks' distribution-related deferral account balances. The Rider 2 regulatory asset includes retail settlement and cost variance amounts and distribution low-voltage service amounts, plus accrued interest. In December 2012, as part of Hydro One Networks' 2013 IRM distribution rate application, the OEB approved the balance of the Rider 2 regulatory account for disposition as part of Rider 9, including accrued interest, to be disposed over a 24-month period from January 1, 2013 to December 31, 2014.

External Revenue Variance

In May 2009, the OEB approved forecasted amounts related to export service revenue, external revenue from secondary land use, and external revenue from station maintenance and engineering and construction work. In November 2012, the OEB again approved forecasted amounts related to these revenue categories and extended the scope to encompass all other external revenues. The external revenue variance account balance reflects the excess of actual external revenues compared to the OEB-approved forecasted amounts.

Rider 8

In April 2010, the OEB requested the establishment of deferral accounts which capture the difference between the revenue recorded on the basis of Green Energy Plan expenditures incurred and the actual recoveries received.

Retail Settlement Variance Accounts (RSVAs)

Hydro One has deferred certain retail settlement variance amounts under the provisions of Article 490 of the OEB's Accounting Procedures Handbook. In December 2012, the OEB approved the disposition of the total RSVA balance accumulated from January 2010 to December 2011, including accrued interest, to be disposed over a 24-month period from January 1, 2013 to December 31, 2014. Hydro One has continued to accumulate a net liability in its RSVAs since December 31, 2011.

Rider 9

In December 2012, as part of Hydro One Networks' 2013 IRM distribution rate application, the OEB approved for disposition certain distribution-related deferral account balances, including RSVA amounts and balances of Rider 2 and Rider 3, accumulated up to December 2011, including accrued interest, to be disposed over a 24-month period from January 1, 2013 to December 31, 2014.

PST Savings Deferral Account

The provincial sales tax (PST) and goods and services tax (GST) were harmonized in July 2010. Unlike the GST, the PST was included in operation, maintenance and administrative expenses or capital expenditures for past revenue requirements approved during a full cost-of-service hearing. Under the harmonized sales tax (HST) regime, the HST included in operation, maintenance and administration expenses or capital expenditures is not a cost ultimately borne by the Company and as such, a refund of the prior PST element in the approved revenue requirement is applicable, and calculations for tracking and refund were requested by the OEB. For Hydro One Networks' transmission revenue requirement, PST was included between July 1, 2010 and December 31, 2010 and recorded in a deferral account, per direction from the OEB. For Hydro One Networks' distribution revenue requirement, PST was included between July 1, 2010 and December 31, 2013 and recorded in a deferral account, per direction from the OEB.

Hydro One Brampton Networks Rider

In December 2013, the OEB issued a decision for Hydro One Brampton Networks' 2014 distribution rates. Included in the OEB's decision was the approval of certain deferral account balances, primarily RSVAs. The OEB ordered that the approved balances be aggregated into a single regulatory account and disposed of through a rate rider over a two-year period from January 1, 2014 to December 31, 2015.

Rider 3

In December 2008, the OEB approved certain distribution-related deferral account balances, including RSVA amounts, deferred tax changes, OEB costs and smart meters. The OEB approved the disposition of the Rider 3 balance accumulated up to April 2008, including accrued interest, to be disposed over a 27-month period from February 1, 2009 to April 30, 2011. In December 2012, as part of Hydro One Networks' 2013 IRM distribution rate application, the OEB approved the balance of Rider 2 for disposition as part of Rider 9.

Rural and Remote Rate Protection Variance (RRRP)

Hydro One receives rural rate protection amounts from the IESO. A portion of these amounts is provided to retail customers of Hydro One Networks who are eligible for rate protection. The OEB has approved a mechanism to collect the RRRP through the Wholesale Market Service Charge. Variances between the amounts remitted by the IESO to Hydro One and the fixed entitlements defined in the regulation, and subsequent OEB utility rate decisions, are tracked by the Company in the RRRP variance account. At December 31, 2013, the RRRP variance account had a $2 million debit balance, which is included in Other regulatory assets.

12. DEBT AND CREDIT AGREEMENTS

Short-Term Notes

Hydro One meets its short-term liquidity requirements in part through the issuance of commercial paper under its Commercial Paper Program which has a maximum authorized amount of $1,000 million. These short-term notes are denominated in Canadian dollars with varying maturities not exceeding 365 days. Hydro One had no commercial paper borrowings outstanding as at December 31, 2013 and 2012.

Hydro One has a $1,500 million committed and unused revolving standby credit facility with a syndicate of banks, maturing in June 2018. If used, interest on the facility would apply based on Canadian benchmark rates. This credit facility is unsecured and supports the Company's Commercial Paper Program. The Company may use the credit facility for general corporate purposes, including meeting short-term funding requirements. The obligation of each lender to make any credit extension to the Company under its credit facility is subject to various conditions including, among other things, that no event of default has occurred or would result from such credit extension.

Long-Term Debt

The Company issues notes for long-term financing under its Medium-Term Note (MTN) Program. The maximum authorized principal amount of notes issuable under this program is $3,000 million. At December 31, 2013, $1,815 million remained available for issuance until October 2015.

The following table presents the outstanding long-term debt at December 31, 2013 and 2012:

December 31 (millions of Canadian dollars)	**2013**	**2012**
5.00% Series 15 notes due 2013	–	600
3.13% Series 19 notes due 2014[1]	750	750
2.95% Series 21 notes due 2015[1]	500	500
Floating-rate Series 22 notes due 2015[2]	50	50
4.64% Series 10 notes due 2016	450	450
Floating-rate Series 27 notes due 2016[2]	50	50
5.18% Series 13 notes due 2017	600	600
2.78% Series 28 notes due 2018	750	–
4.40% Series 20 notes due 2020	300	300
3.20% Series 25 notes due 2022	600	600
7.35% Debentures due 2030	400	400
6.93% Series 2 notes due 2032	500	500
6.35% Series 4 notes due 2034	385	385
5.36% Series 9 notes due 2036	600	600
4.89% Series 12 notes due 2037	400	400
6.03% Series 17 notes due 2039	300	300
5.49% Series 18 notes due 2040	500	500
4.39% Series 23 notes due 2041	300	300
6.59% Series 5 notes due 2043	315	315
4.59% Series 29 notes due 2043	435	–
5.00% Series 11 notes due 2046	325	325
4.00% Series 24 notes due 2051	225	225
3.79% Series 26 notes due 2062	310	310
	9,045	8,460
Add: Unrealized marked-to-market loss[1]	12	19
Less: Long-term debt payable within one year	(756)	(600)
Long-term debt	8,301	7,879

[1] The unrealized marked-to-market loss relates to $500 million of the Series 19 notes due 2014, and $250 million of the Series 21 notes due 2015. The unrealized marked-to-market loss is offset by a $12 million (2012 – $19 million) unrealized marked-to-market gain on the related fixed-to-floating interest-rate swap agreements, which are accounted for as fair value hedges. See Note 13 – Fair Value of Financial Instruments and Risk Management for details of fair value hedges.

[2] The interest rates of the floating-rate notes are referenced to the 3-month Canadian dollar bankers' acceptance rate, plus a margin.

In 2013, Hydro One issued $1,185 million (2012 – $1,085 million) of long-term debt under the MTN Program, and repaid the $600 million MTN Series 15 notes (2012 – redeemed $600 million MTN Series 3 notes).

The long-term debt is unsecured and denominated in Canadian dollars. The long-term debt is summarized by the number of years to maturity in Note 13 – Fair Value of Financial Instruments and Risk Management.

13. FAIR VALUE OF FINANCIAL INSTRUMENTS AND RISK MANAGEMENT

Fair value is considered to be the exchange price in an orderly transaction between market participants to sell an asset or transfer a liability at the measurement date. The fair value definition focuses on an exit price, which is the price that would be received in the sale of an asset or the amount that would be paid to transfer a liability.

Hydro One classifies its fair value measurements based on the following hierarchy, as prescribed by the accounting guidance for fair value, which prioritizes the inputs to valuation techniques used to measure fair value into three levels:

Level 1 inputs are unadjusted quoted prices in active markets for identical assets or liabilities that Hydro One has the ability to access. An active market for the asset or liability is one in which transactions for the asset or liability occur with sufficient frequency and volume to provide ongoing pricing information.

Level 2 inputs are those other than quoted market prices that are observable, either directly or indirectly, for an asset or liability. Level 2 inputs include, but are not limited to, quoted prices for similar assets or liabilities in an active market, quoted prices for identical or similar assets or liabilities in markets that are not active and inputs other than quoted market prices that are observable for the asset or liability, such as interest rate curves and yield curves observable at commonly quoted intervals, volatilities, credit risk and default rates. A Level 2 measurement cannot have more than an insignificant portion of the valuation based on unobservable inputs.

Level 3 inputs are any fair value measurements that include unobservable inputs for the asset or liability for more than an insignificant portion of the valuation. A Level 3 measurement may be based primarily on Level 2 inputs.

Non-Derivative Financial Assets and Liabilities

At December 31, 2013 and 2012, the Company's carrying amounts of accounts receivable, due from related parties, cash and cash equivalents, bank indebtedness, accounts payable, and due to related parties are representative of fair value because of the short-term nature of these instruments.

Fair Value Measurements of Long-Term Debt

The fair values and carrying values of the Company's long-term debt at December 31, 2013 and 2012 are as follows:

December 31 (millions of Canadian dollars)	2013 Carrying Value	2013 Fair Value	2012 Carrying Value	2012 Fair Value
Long-term debt				
$500 million of MTN Series 19 notes[1]	506	506	512	512
$250 million of MTN Series 21 notes[2]	256	256	257	257
Other notes and debentures[3]	8,295	9,018	7,710	9,188
	9,057	9,780	8,479	9,957

[1] The fair value of $500 million of the MTN Series 19 notes subject to hedging is primarily based on changes in the present value of future cash flows due to a change in the yield in the swap market for the related swap (hedged risk).

[2] The fair value of $250 million of the MTN Series 21 notes subject to hedging is primarily based on changes in the present value of future cash flows due to a change in the yield in the swap market for the related swap (hedged risk).

[3] The fair value of other notes and debentures, and the portions of the MTN Series 19 notes and the MTN Series 21 notes that are not subject to hedging, represents the market value of the notes and debentures and is based on unadjusted period-end market prices for the same or similar debt of the same remaining maturities.

Fair Value Measurements of Derivative Instruments

At December 31, 2013, the Company had interest-rate swaps totaling $750 million (2012 – $750 million) that were used to convert fixed-rate debt to floating-rate debt. These swaps are classified as fair value hedges. The Company's fair value hedge exposure was equal to about 8% (2012 – 9%) of its total long-term debt of $9,057 million (2012 – $8,479 million). At December 31, 2013, the Company had the following interest-rate swaps designated as fair value hedges:

(a) two $250 million fixed-to-floating interest-rate swap agreements to convert $500 million of the $750 million MTN Series 19 notes maturing November 19, 2014 into three-month variable rate debt; and

(b) two $125 million fixed-to-floating interest-rate swap agreements to convert $250 million of the $500 million MTN Series 21 notes maturing September 11, 2015 into three-month variable rate debt.

At December 31, 2013, the Company also had interest-rate swaps with a total notional value of $900 million (2012 – $900 million) classified as undesignated contracts. The undesignated contracts consist of the following interest-rate swaps:

(c) three $250 million floating-to-fixed interest-rate swap agreements that lock in the floating rate the Company pays on a portion of the above fixed-to-floating interest-rate swaps from December 11, 2013 to December 11, 2014, from February 19, 2013 to February 19, 2014, and from February 19, 2014 to November 19, 2014;

(d) two $50 million floating-to-fixed interest-rate swap agreements that lock in the floating rate the Company pays on the $50 million floating-rate MTN Series 22 notes from January 24, 2013 to January 24, 2014, and from January 24, 2014 to January 24, 2015; and

(e) a $50 million floating-to-fixed interest-rate swap agreement that locks in the floating rate the Company pays on the $50 million floating-rate MTN Series 27 notes from December 3, 2013 to December 3, 2014.

Fair Value Hierarchy

The fair value hierarchy of financial assets and liabilities at December 31, 2013 and 2012 is as follows:

December 31, 2013 (millions of Canadian dollars)	Carrying Value	Fair Value	Level 1	Level 2	Level 3
Assets:					
Cash and cash equivalents	565	565	565	–	–
Investment	251	251	–	251	–
Derivative instruments					
Fair value hedges – interest-rate swaps	12	12	–	12	–
	828	828	565	263	–
Liabilities:					
Bank indebtedness	31	31	31	–	–
Long-term debt	9,057	9,780	–	9,780	–
	9,088	9,811	31	9,780	–

December 31, 2012 (millions of Canadian dollars)	Carrying Value	Fair Value	Level 1	Level 2	Level 3
Assets:					
Cash and cash equivalents	195	195	195	–	–
Investment	251	251	–	251	–
Derivative instruments					
Fair value hedges – interest-rate swaps	19	19	–	19	–
	465	465	195	270	–
Liabilities:					
Bank indebtedness	42	42	42	–	–
Long-term debt	8,479	9,957	–	9,957	–
	8,521	9,999	42	9,957	–

Cash and cash equivalents include cash and short-term investments. At December 31, 2013, short-term investments consisted of bankers' acceptances and money market funds totaling $515 million (2012 – $195 million). The carrying values are representative of fair value because of the short-term nature of these instruments.

The investment represents the Province of Ontario Floating-Rate Notes maturing in November 2014. The fair value of the investment is determined using inputs other than quoted prices that are observable for the asset, with unrecognized gains or losses recognized in financing charges. The Company obtains quotes from an independent third party for the fair value of the investment, who uses the market price of similar securities adjusted for changes in observable inputs such as maturity dates and interest rates.

The fair value of the derivative instruments is determined using inputs other than quoted prices that are observable for these assets. The fair value is primarily based on the present value of future cash flows using a swap yield curve to determine the assumptions for interest rates.

The fair value of the hedged portion of the long-term debt is primarily based on the present value of future cash flows using a swap yield curve to determine the assumption for interest rates. The fair value of the unhedged portion of the long-term debt is based on unadjusted period-end market prices for the same or similar debt of the same remaining maturities.

There were no significant transfers between any of the fair value levels during the years ended December 31, 2013 and 2012.

Risk Management

Exposure to market risk, credit risk and liquidity risk arises in the normal course of the Company's business.

Market Risk

Market risk refers primarily to the risk of loss that results from changes in commodity prices, foreign exchange rates and interest rates. The Company does not have commodity risk. The Company does have foreign exchange risk as it enters into agreements to purchase materials and equipment associated with capital programs and projects that are settled in foreign currencies. This foreign exchange risk is not material, although the Company could in the future decide to issue foreign currency-denominated debt which would be hedged back to Canadian dollars consistent with its risk management policy. Hydro One is exposed to fluctuations in interest rates as the regulated rate of return for the Company's Transmission and Distribution Businesses is derived using a formulaic approach that is based on the forecast for long-term Government of Canada bond yields and the spread in 30-year "A"-rated Canadian utility bonds over the 30-year benchmark Government of Canada bond yield. The Company estimates that a 1% decrease in the forecasted long-term Government of Canada bond yield or the "A"-rated Canadian utility spread used in determining the Company's rate of return would reduce the Transmission Business' annual results of operations by approximately $19 million (2012 – $18 million) and Hydro One Networks' distribution business' annual results of operations by approximately $10 million (2012 – $10 million).

The Company uses a combination of fixed and variable-rate debt to manage the mix of its debt portfolio. The Company also uses derivative financial instruments to manage interest-rate risk. The Company utilizes interest-rate swaps, which are typically designated as fair value hedges, as a means to manage its interest rate exposure to achieve a lower cost of debt. In addition, the Company may utilize interest-rate derivative instruments to lock in interest rate levels in anticipation of future financing. Hydro One may also enter into derivative agreements such as forward-starting pay fixed-interest-rate swap agreements to hedge against the effect of future interest rate movements on long-term fixed-rate borrowing requirements. Such arrangements are typically designated as cash flow hedges. No cash flow hedge agreements were in existence as at December 31, 2013 or 2012.

A hypothetical 10% increase in the interest rates associated with variable-rate debt would not have resulted in a significant decrease in Hydro One's results of operations for the years ended December 31, 2013 or 2012.

Fair Value Hedges

For derivative instruments that are designated and qualify as fair value hedges, the gain or loss on the derivative as well as the offsetting loss or gain on the hedged item attributable to the hedged risk are recognized in the Consolidated Statements of Operations and Comprehensive Income. The net unrealized loss (gain) on the hedged debt and the related interest-rate swaps for the years ended December 31, 2013 and 2012 are included in financing charges as follows:

Year ended December 31 (millions of Canadian dollars)	**2013**	**2012**
Unrealized loss (gain) on hedged debt	(8)	(14)
Unrealized loss (gain) on fair value interest-rate swaps	8	14
Net unrealized loss (gain)	–	–

At December 31, 2013, Hydro One had $750 million (2012 – $750 million) of notional amounts of fair value hedges outstanding related to interest-rate swaps, with assets at fair value of $12 million (2012 – $19 million). During the years ended December 31, 2013 and 2012, there was no significant impact on the results of operations as a result of any ineffectiveness attributable to fair value hedges.

Credit Risk

Financial assets create a risk that a counterparty will fail to discharge an obligation, causing a financial loss. At December 31, 2013 and 2012, there were no significant concentrations of credit risk with respect to any class of financial assets. The Company's revenue is earned from a broad base of customers. As a result, Hydro One did not earn a significant amount of revenue from any single customer. At December 31, 2013 and 2012, there was no significant accounts receivable balance due from any single customer.

At December 31, 2013, the Company's provision for bad debts was $36 million (2012 – $23 million). Adjustments and write-offs were determined on the basis of a review of overdue accounts, taking into consideration historical experience. At December 31, 2013, approximately 4% of the Company's net accounts receivable were aged more than 60 days (2012 – 3%).

Hydro One manages its counterparty credit risk through various techniques including: entering into transactions with highly-rated counterparties; limiting total exposure levels with individual counterparties consistent with the Company's Board-approved Credit Risk Policy; entering into master agreements which enable net settlement and the contractual right of offset; and monitoring the financial condition of counterparties. In addition to payment netting language in master agreements, the Company establishes credit limits, margining thresholds and collateral requirements for each counterparty. Counterparty credit limits are based on an internal credit review that considers a variety of factors, including the results of a scoring model, leverage, liquidity, profitability, credit ratings and risk management capabilities. The determination of credit exposure for a particular counterparty is the sum of current exposure plus the potential future exposure with that counterparty. The current exposure is calculated as the sum of the principal value of money market exposures and the market value of all contracts that have a positive marked-to-market position on the measurement date. The Company would offset the positive market values against negative values with the same counterparty only where permitted by the existence of a legal netting agreement such as an International Swap Dealers Association master agreement. The potential future exposure represents a safety margin to protect against future fluctuations of interest rates, currencies, equities, and commodities. It is calculated based on factors developed by the Bank of International Settlements, following extensive historical analysis of random fluctuations of interest rates and currencies. To the extent that a counterparty's margining thresholds are exceeded, the counterparty is required to post collateral with the Company as specified in each agreement. The Company monitors current and forward credit exposure to counterparties both on an individual and an aggregate basis. The Company's credit risk for accounts receivable is limited to the carrying amounts on the Consolidated Balance Sheets.

Derivative financial instruments result in exposure to credit risk since there is a risk of counterparty default. The credit exposure of derivative contracts, before collateral, is represented by the fair value of contracts at the reporting date. At December 31, 2013, the counterparty credit risk exposure on the fair value of these interest-rate swap contracts was $14 million (2012 – $22 million). At December 31, 2013, Hydro One's credit exposure for all derivative instruments, and applicable payables and receivables, had a credit rating of investment grade, with four financial institutions as the counterparties. The credit exposure of three of the four counterparties accounted for more than 10% of the total credit exposure of derivative contracts.

Liquidity Risk

Liquidity risk refers to the Company's ability to meet its financial obligations as they come due. Hydro One meets its short-term liquidity requirements using cash and cash equivalents on hand, funds from operations, the issuance of commercial paper, the revolving standby credit facility of $1,500 million, and by holding Province of Ontario Floating-Rate Notes. The short-term liquidity under the Commercial Paper Program, the holding of Province of Ontario Floating-Rate Notes and anticipated levels of funds from operations should be sufficient to fund normal operating requirements.

At December 31, 2013, accounts payable and accrued liabilities in the amount of $795 million (2012 – $722 million) were expected to be settled in cash at their carrying amounts within the next 12 months.

At December 31, 2013, Hydro One had issued long-term debt in the principal amount of $9,045 million (2012 – $8,460 million). Principal outstanding, interest payments and related weighted average interest rates are summarized by the number of years to maturity in the following table:

Years to Maturity	**Principal Outstanding on Long-term Debt** *(millions of Canadian dollars)*	**Interest Payments** *(millions of Canadian dollars)*	**Weighted Average Interest Rate** *(%)*
1 year	750	422	3.1
2 years	550	398	2.8
3 years	500	372	4.3
4 years	600	361	5.2
5 years	750	330	2.8
	3,150	1,883	3.6
6 – 10 years	900	1,470	3.6
Over 10 years	4,995	4,281	5.5
	9,045	7,634	4.7

14. CAPITAL MANAGEMENT

The Company's objectives with respect to its capital structure are to maintain effective access to capital on a long-term basis at reasonable rates, and to deliver appropriate financial returns. In order to ensure ongoing effective access to capital, the Company targets to maintain an "A" category long-term credit rating.

The Company considers its capital structure to consist of shareholder's equity, preferred shares, long-term debt, and cash and cash equivalents. At December 31, 2013 and 2012, the Company's capital structure was as follows:

December 31 (millions of Canadian dollars)	**2013**	**2012**
Long-term debt payable within one year	756	600
Less: cash and cash equivalents	565	195
	191	405
Long-term debt	8,301	7,879
Preferred shares	323	323
Common shares	3,314	3,314
Retained earnings	3,787	3,202
	7,101	6,516
Total capital	15,916	15,123

The Company has customary covenants typically associated with long-term debt. Among other things, Hydro One's long-term debt and credit facility covenants limit the permissible debt to 75% of the Company's total capitalization, limit the ability to sell assets and impose a negative pledge provision, subject to customary exceptions. At December 31, 2013 and 2012, Hydro One was in compliance with all of these covenants and limitations.

15. PENSION AND POST-RETIREMENT AND POST-EMPLOYMENT BENEFITS

Hydro One has a defined benefit pension plan, a supplementary pension plan, and post-retirement and post-employment benefit plans. The defined benefit pension plan (Pension Plan) is contributory and covers all regular employees of Hydro One and its subsidiaries, except Hydro One Brampton Networks. Employees of Hydro One Brampton Networks participate in the OMERS plan, a multiemployer public sector pension fund. The supplementary pension plan provides members of the

Pension Plan with benefits that would have been earned and payable under the Pension Plan but for the limitations imposed by the *Income Tax Act* (Canada). The supplementary pension plan obligation is included with other post-retirement and post-employment benefit obligations on the Consolidated Balance Sheets.

The OMERS Plan

Hydro One contributions to the OMERS plan for the year ended December 31, 2013 were $2 million (2012 – $2 million). Company contributions payable at December 31, 2013 and included in accrued liabilities on the Consolidated Balance Sheets were $0.2 million (2012 – $0.2 million). Hydro One contributions do not represent more than 5% of total contributions to the OMERS plan, as indicated in OMERS's most recently available annual report for the year ended December 31, 2012.

At December 31, 2012, the OMERS plan was 85.6% funded, with an unfunded liability of $9,924 million. This unfunded liability will likely result in future payments by participating employers and members. Hydro One future contributions could be increased substantially if other entities withdraw from the plan.

Pension Plan, Post-Retirement and Post-Employment Plans

The Pension Plan provides benefits based on highest three-year average pensionable earnings. For new management employees who commenced employment on or after January 1, 2004, and for new Society of Energy Professionals-represented staff hired after November 17, 2005, benefits are based on highest five-year average pensionable earnings. After retirement, pensions are indexed to inflation.

Company and employee contributions to the Pension Plan are based on actuarial valuations performed at least every three years. Annual Pension Plan contributions for 2013 of $160 million (2012 – $163 million) were based on an actuarial valuation effective December 31, 2011 and the level of 2013 pensionable earnings. Estimated annual Pension Plan contributions for 2014 are approximately $160 million, based on the December 31, 2011 valuation and the projected level of pensionable earnings.

Hydro One recognizes the overfunded or underfunded status of the Pension Plan, and post-retirement and post-employment benefit plans (Plans) as an asset or liability on its Consolidated Balance Sheets, with offsetting regulatory assets and liabilities as appropriate. The underfunded benefit obligations for the Plans, in the absence of regulatory accounting, would be recognized in AOCI. The impact of changes in assumptions used to measure pension, post-retirement and post-employment benefit obligations is generally recognized over the expected average remaining service period of the employees. The measurement date for the Plans is December 31.

	Pension Benefits		Post-Retirement and Post-Employment Benefits	
Year ended December 31 (millions of Canadian dollars)	**2013**	**2012**	**2013**	**2012**
Change in projected benefit obligation				
Projected benefit obligation, beginning of year	6,507	5,461	1,459	1,206
Current service cost	170	123	40	29
Interest cost	278	285	63	63
Reciprocal transfers	1	1	–	–
Benefits paid	(317)	(291)	(44)	(42)
Net actuarial loss (gain)	(63)	928	13	203
Projected benefit obligation, end of year	6,576	6,507	1,531	1,459
Change in plan assets				
Fair value of plan assets, beginning of year	4,992	4,682	–	–
Actual return on plan assets	887	425	–	–
Reciprocal transfers	1	1	–	–
Benefits paid	(317)	(291)	–	–
Employer contributions	160	163	–	–
Employee contributions	30	27	–	–
Administrative expenses	(22)	(15)	–	–
Fair value of plan assets, end of year	5,731	4,992	–	–
Unfunded status	845	1,515	1,531	1,459

Hydro One presents its benefit obligations and plan assets net on its Consolidated Balance Sheets within the following line items:

	Pension Benefits		Post-Retirement and Post-Employment Benefits	
December 31 (millions of Canadian dollars)	**2013**	**2012**	**2013**	**2012**
Accrued liabilities	–	–	43	43
Pension benefit liability	845	1,515	–	–
Post-retirement and post-employment benefit liability	–	–	1,488	1,416
Unfunded status	845	1,515	1,531	1,459

The funded or unfunded status of the pension, post-retirement and post-employment benefit plans refers to the difference between the fair value of plan assets and the projected benefit obligations for the Plans. The funded/unfunded status changes over time due to several factors, including contribution levels, assumed discount rates and actual returns on plan assets.

The following table provides the projected benefit obligation (PBO), accumulated benefit obligation (ABO) and fair value of plan assets for the Pension Plan:

December 31 (millions of Canadian dollars)	**2013**	**2012**
PBO	6,576	6,507
ABO	5,998	6,074
Fair value of plan assets	5,731	4,992

On an ABO basis, the Pension Plan was funded at 96% at December 31, 2013 (2012 – 82%). On a PBO basis, the Pension Plan was funded at 87% at December 31, 2013 (2012 – 77%). The ABO differs from the PBO in that the ABO includes no assumption about future compensation levels.

Components of Net Periodic Benefit Costs

The following table provides the components of the net periodic benefit costs for the years ended December 31, 2013 and 2012 for the Pension Plan:

Year ended December 31 (millions of Canadian dollars)	**2013**	**2012**
Current service cost, net of employee contributions	141	96
Interest cost	278	285
Expected return on plan assets, net of expenses	(309)	(289)
Actuarial loss amortization	175	112
Prior service cost amortization	2	3
Net periodic benefit costs	287	207
Charged to results of operations[1]	72	76

[1] The Company follows the cash basis of accounting consistent with the inclusion of pension costs in OEB-approved rates. During the year ended December 31, 2013, pension costs of $160 million (2012 – $163 million) were attributed to labour, of which $72 million (2012 – $76 million) was charged to operations, and $88 million (2012 – $87 million) was capitalized as part of the cost of property, plant and equipment and intangible assets.

The following table provides the components of the net periodic benefit costs for the years ended December 31, 2013 and 2012 for the post-retirement and post-employment plans:

Year ended December 31 (millions of Canadian dollars)	**2013**	**2012**
Current service cost, net of employee contributions	40	30
Interest cost	63	63
Actuarial loss amortization	27	8
Prior service cost amortization	3	3
Net periodic benefit costs	133	104
Charged to results of operations	58	48

Assumptions

The measurement of the obligations of the Plans and the costs of providing benefits under the Plans involves various factors, including the development of valuation assumptions and accounting policy elections. When developing the required assumptions, the Company considers historical information as well as future expectations. The measurement of benefit obligations and costs is impacted by several assumptions including the discount rate applied to benefit obligations, the long-term expected rate of return on plan assets, Hydro One's expected level of contributions to the Plans, the incidence of mortality, the expected remaining service period of plan participants, the level of compensation and rate of compensation increases, employee age, length of service, and the anticipated rate of increase of health care costs, among other factors. The impact of changes in assumptions used to measure the obligations of the Plans is generally recognized over the expected average remaining service period of the plan participants. In selecting the expected rate of return on plan assets, Hydro One considers historical economic indicators (including inflation and GDP growth) that impact asset returns, as well as expectations regarding future long-term capital market performance, weighted by target asset class allocations. In general, equity securities, real estate and private equity investments are forecasted to have higher returns than fixed income securities.

The following weighted average assumptions were used to determine the benefit obligations at December 31, 2013 and 2012:

Year ended December 31	Pension Benefits 2013	Pension Benefits 2012	Post-Retirement and Post-Employment Benefits 2013	Post-Retirement and Post-Employment Benefits 2012
Significant assumptions:				
Weighted average discount rate	4.75%	4.25%	4.75%	4.25%
Rate of compensation scale escalation (without merit)	2.50%	2.50%	2.50%	2.50%
Rate of cost of living increase	2.00%	2.00%	2.00%	2.00%
Rate of increase in health care cost trends[1]	–	–	4.39%	4.39%

[1] 6.81% per annum in 2014, grading down to 4.39% per annum in and after 2031 (2012 – 6.91% in 2013, grading down to 4.39% per annum in and after 2031)

The following weighted average assumptions were used to determine the net periodic benefit costs for the years ended December 31, 2013 and 2012. Assumptions used to determine current year-end benefit obligations are the assumptions used to estimate the subsequent year's net periodic benefit costs.

Year ended December 31	2013	2012
Pension Benefits:		
Weighted average expected rate of return on plan assets	6.25%	6.25%
Weighted average discount rate	4.25%	5.25%
Rate of compensation scale escalation (without merit)	2.50%	2.50%
Rate of cost of living increase	2.00%	2.00%
Average remaining service life of employees *(years)*	11	11
Post-retirement and Post-Employment Benefits:		
Weighted average discount rate	4.25%	5.25%
Rate of compensation scale escalation (without merit)	2.50%	2.50%
Rate of cost of living increase	2.00%	2.00%
Average remaining service life of employees *(years)*	11	11
Rate of increase in health care cost trends[1]	4.39%	4.41%

[1] 6.91% per annum in 2013, grading down to 4.39% per annum in and after 2031 (2012 – 7.03% in 2012, grading down to 4.41% per annum in and after 2031)

The discount rate used to determine the current year pension obligation and the subsequent year's net periodic benefit costs is based on a yield curve approach. Under the yield curve approach, expected future benefit payments for each plan are discounted by a rate on a third party bond yield curve corresponding to each duration. The yield curve is based on AA long-term corporate bonds. A single discount rate is calculated that would yield the same present value as the sum of the discounted cash flows.

The effect of 1% change in health care cost trends on the projected benefit obligation for the post-retirement and post-employment benefits at December 31, 2013 and 2012 is as follows:

December 31 (millions of Canadian dollars)	2013	2012
Projected benefit obligation:		
Effect of 1% increase in health care cost trends	258	246
Effect of 1% decrease in health care cost trends	(200)	(191)

The effect of 1% change in health care cost trends on the service cost and interest cost for the post-retirement and post-employment benefits for the years ended December 31, 2013 and 2012 is as follows:

Year ended December 31 (millions of Canadian dollars)	**2013**	**2012**
Service cost and interest cost:		
Effect of 1% increase in health care cost trends	21	17
Effect of 1% decrease in health care cost trends	(16)	(13)

The following approximate life expectancies were used in the mortality assumptions to determine the projected benefit obligations for the pension and post-retirement and post-employment plans at December 31, 2013 and 2012:

December 31, 2013				**December 31, 2012**			
Life expectancy at 65 for a member currently at				**Life expectancy at 65 for a member currently at**			
Age 65		**Age 45**		**Age 65**		**Age 45**	
Male	Female	Male	Female	Male	Female	Male	Female
23	25	24	26	20	22	21	23

Estimated Future Benefit Payments

At December 31, 2013, estimated future benefit payments by the Company to Plan participants were:

(millions of Canadian dollars)	Pension Benefits	Post-Retirement and Post-Employment Benefits
2014	310	54
2015	319	57
2016	327	59
2017	335	62
2018	343	65
2019 through to 2023	1,698	370
Total estimated future benefit payments through to 2023	3,332	667

Components of Regulatory Assets

A portion of actuarial gains and losses and prior service costs is recorded within regulatory assets on Hydro One's Consolidated Balance Sheets to reflect the expected regulatory inclusion of these amounts in future rates, which would otherwise be recorded in OCI. The following table provides the actuarial gains and losses and prior service costs recorded within regulatory assets:

Year ended December 31 (millions of Canadian dollars)	**2013**	**2012**
Pension Benefits:		
Actuarial loss (gain) for the year	(619)	807
Actuarial loss amortization	(175)	(112)
Prior service cost amortization	(2)	(3)
	(796)	692
Post-Retirement and Post-Employment Benefits:		
Actuarial loss for the year	13	203
Actuarial loss amortization	(27)	(8)
Prior service cost amortization	(3)	(3)
	(17)	192

The following table provides the components of regulatory assets that have not been recognized as components of net periodic benefit costs for the years ended December 31, 2013 and 2012:

Year ended December 31 (millions of Canadian dollars)	**2013**	**2012**
Pension Benefits:		
Prior service cost	3	5
Actuarial loss	842	1,510
	845	1,515
Post-Retirement and Post-Employment Benefits:		
Prior service cost	2	5
Actuarial loss	306	315
	308	320

The following table provides the components of regulatory assets at December 31 that are expected to be amortized as components of net periodic benefit costs in the following year:

	Pension Benefits		Post-Retirement and Post-Employment Benefits	
December 31 (millions of Canadian dollars)	**2013**	**2012**	**2013**	**2012**
Prior service cost	2	2	2	3
Actuarial loss	103	175	15	17
	105	177	17	20

Pension Plan Assets

Investment Strategy

On a regular basis, Hydro One evaluates its investment strategy to ensure that plan assets will be sufficient to pay Pension Plan benefits when due. As part of this ongoing evaluation, Hydro One may make changes to its targeted asset allocation and investment strategy. The Pension Plan is managed at a net asset level. The main objective of the Pension Plan is to sustain a certain level of net assets in order to meet the pension obligations of the Company. The Pension Plan fulfills its primary objective by adhering to specific investment policies outlined in its Summary of Investment Policies and Procedures (SIPP), which is reviewed and approved by the Investment-Pension Committee of Hydro One's Board of Directors. The Company manages net assets by engaging knowledgeable external investment managers who are charged with the responsibility of investing existing funds and new funds (current year's employee and employer contributions) in accordance with the approved SIPP. The performance of the managers is monitored through a governance structure. Increases in net assets are a direct result of investment income generated by investments held by the Pension Plan and contributions to the Pension Plan by eligible employees and by the Company. The main use of net assets is for benefit payments to eligible Pension Plan members.

Pension Plan Asset Mix

At December 31, 2013, the Pension Plan target asset allocations and weighted average asset allocations were as follows:

	Target Allocation (%)	Pension Plan Assets (%)
Equity securities	60.0	67.8
Debt securities	35.0	32.2
Other [1]	5.0	0.0
	100.0	100.0

[1] Other investments include real estate and infrastructure investments.

At December 31, 2013, the Pension Plan held $15 million of Hydro One corporate bonds (2012 – $20 million) and $217 million of debt securities of the Province (2012 – $243 million).

Concentrations of Credit Risk

Hydro One evaluated its Pension Plan's asset portfolio for the existence of significant concentrations of credit risk as at December 31, 2013 and 2012. Concentrations that were evaluated include, but are not limited to, investment concentrations in a single entity, concentrations in a type of industry, and concentrations in individual funds. At December 31, 2013 and 2012, there were no significant concentrations (defined as greater than 10% of plan assets) of risk in the Pension Plan's assets.

The Pension Plan manages its counterparty credit risk with respect to bonds by investing in investment-grade and government bonds and with respect to derivative instruments by transacting only with financial institutions rated at least "A+" by Standard and Poor's, Dominion Bond Rating Service, and Fitch Ratings, and "A1" by Moody's Investors Service Inc., and also by utilizing exposure limits to each counterparty and ensuring that exposure is diversified across counterparties. The risk of default on transactions in listed securities is considered minimal, as the trade will fail if either party to the transaction does not meet its obligation.

Fair Value Measurements

The following tables present the Pension Plan assets measured and recorded at fair value on a recurring basis and their level within the fair value hierarchy at December 31, 2013 and 2012:

December 31, 2013 (millions of Canadian dollars)	**Level 1**	**Level 2**	**Level 3**	**Total**
Pooled funds	1	16	117	134
Cash and cash equivalents	150	–	–	150
Short-term securities	–	180	–	180
Real estate	–	–	2	2
Corporate shares – Canadian	943	–	–	943
Corporate shares – Foreign	2,708	–	–	2,708
Bonds and debentures – Canadian	–	1,416	–	1,416
Bonds and debentures – Foreign	–	186	–	186
Total fair value of plan assets[1]	3,802	1,798	119	5,719

[1] At December 31, 2013, the total fair value of Pension Plan assets excludes $19 million of interest and dividends receivable, and $7 million relating to accruals for pension administration expense.

December 31, 2012 (millions of Canadian dollars)	**Level 1**	**Level 2**	**Level 3**	**Total**
Pooled funds	2	15	104	121
Cash and cash equivalents	125	–	–	125
Short-term securities	–	100	–	100
Real estate	–	–	2	2
Corporate shares – Canadian	920	–	–	920
Corporate shares – Foreign	2,077	–	–	2,077
Bonds and debentures – Canadian	–	1,643	–	1,643
Total fair value of plan assets[1]	3,124	1,758	106	4,988

[1] At December 31, 2012, the total fair value of Pension Plan assets excludes $16 million of interest and dividends receivable, $4 million relating to accruals for pending sales transactions, and $8 million relating to accruals for pension administration expense.

See Note 13 – Fair Value of Financial Instruments and Risk Management for a description of levels within the fair value hierarchy.

Changes in the Fair Value of Financial Instruments Classified in Level 3

The following table summarizes the changes in fair value of financial instruments classified in Level 3 for the years ended December 31, 2013 and 2012. The Pension Plan classifies financial instruments as Level 3 when the fair value is measured based on at least one significant input that is not observable in the markets or due to lack of liquidity in certain markets. The gains and losses presented in the table below may include changes in fair value based on both observable and unobservable inputs.

Year ended December 31 (millions of Canadian dollars)	**2013**	**2012**
Fair value, beginning of year	106	167
Realized and unrealized gains	23	5
Purchases	–	6
Sales and disbursements	(10)	(72)
Fair value, end of year	119	106

There have been no material transfers into or out of Level 3 of the fair value hierarchy.

The Company performs sensitivity analysis for fair value measurements classified in Level 3, substituting the unobservable inputs with one or more reasonably possible alternative assumptions. These sensitivity analyses resulted in negligible changes in the fair value of financial instruments classified in this level.

Valuation Techniques Used to Determine Fair Value

Pooled Funds

The pooled fund category mainly consists of private equity investments. Private equity investments represent private equity funds that invest in operating companies that are not publicly traded on a stock exchange. Investment strategies in private equity include limited partnerships in businesses that are characterized by high internal growth and operational efficiencies, venture capital, leveraged buyouts and special situations such as distressed investments. Private equity valuations are reported by the fund manager and are based on the valuation of the underlying investments which includes inputs such as cost, operating results, discounted future cash flows and market-based comparable data. Since these valuation inputs are not highly observable, private equity investments have been categorized as Level 3 within pooled funds.

Cash Equivalents

Demand cash deposits held with banks and cash held by the investment managers are considered cash equivalents and are included in the fair value measurements hierarchy as Level 1.

Short-Term Securities

Short-term securities are valued at cost plus accrued interest, which approximates fair value due to their short-term nature. Short-term securities have been categorized as Level 2.

Real Estate

Real estate investments represent private equity investments in holding companies that invest in real estate properties. The investments in the holding companies are valued using net asset values reported by the fund manager. Real estate investments are categorized as Level 3.

Corporate Shares

Corporate shares are valued based on quoted prices in active markets and are categorized as Level 1. Investments denominated in foreign currencies are translated into Canadian currency at year-end rates of exchange.

Bonds and Debentures

Bonds and debentures are presented at published closing trade quotations, and are categorized as Level 2.

16. ENVIRONMENTAL LIABILITIES

The following tables show the movements in environmental liabilities for the years ended December 31, 2013 and 2012:

Year ended December 31, 2013 (millions of Canadian dollars)	PCB	LAR	Total
Environmental liabilities, January 1	197	52	249
Interest accretion	9	1	10
Expenditures	(2)	(14)	(16)
Revaluation adjustment	(3)	26	23
Environmental liabilities, December 31	201	65	266
Less: current portion	15	12	27
	186	53	239

Year ended December 31, 2012 (millions of Canadian dollars)	PCB	LAR	Total
Environmental liabilities, January 1	199	58	257
Interest accretion	9	2	11
Expenditures	(8)	(10)	(18)
Revaluation adjustment	(3)	2	(1)
Environmental liabilities, December 31	197	52	249
Less: current portion	13	9	22
	184	43	227

The following tables show the reconciliation between the undiscounted basis of the environmental liabilities and the amount recognized on the Consolidated Balance Sheets after factoring in the discount rate:

December 31, 2013 (millions of Canadian dollars)	PCB	LAR	Total
Undiscounted environmental liabilities	237	68	305
Less: discounting accumulated liabilities to present value	36	3	39
Discounted environmental liabilities	201	65	266

December 31, 2012 (millions of Canadian dollars)	PCB	LAR	Total
Undiscounted environmental liabilities	233	54	287
Less: discounting accumulated liabilities to present value	36	2	38
Discounted environmental liabilities	197	52	249

At December 31, 2013, the estimated future environmental expenditures were as follows:

(millions of Canadian dollars)	
2014	27
2015	28
2016	35
2017	23
2018	22
Thereafter	170
	305

At December 31, 2013, of the total estimated future environmental expenditures, $237 million relates to PCBs (2012 – $233 million) and $68 million relates to LAR (2012 – $54 million).

Hydro One records a liability for the estimated future expenditures for the contaminated LAR and for the phase-out and destruction of PCB-contaminated mineral oil removed from electrical equipment. There are uncertainties in estimating future environmental costs due to potential external events such as changes in legislation or regulations, and advances in remediation technologies. In determining the amounts to be recorded as environmental liabilities, the Company estimates the current cost of completing required work and makes assumptions as to when the future expenditures will actually be incurred, in order to generate future cash flow information. A long-term inflation rate assumption of approximately 2% has been used to express these current cost estimates as estimated future expenditures. Future expenditures have been discounted using factors ranging from approximately 3.3% to 6.3%, depending on the appropriate rate for the period when expenditures are expected to be incurred. All factors used in estimating the Company's environmental liabilities represent management's best estimates of the present value of costs required to meet existing legislation or regulations. However, it is reasonably possible that numbers or volumes of contaminated assets, cost estimates to perform work, inflation assumptions and the assumed pattern of annual cash flows may differ significantly from the Company's current assumptions. In addition, with respect to the PCB environmental liability, the availability of critical resources such as skilled labour and replacement assets and the ability to take maintenance outages in critical facilities may influence the timing of expenditures. Environmental liabilities are reviewed annually or more frequently if significant changes in regulations or other relevant factors occur. Estimate changes are accounted for prospectively. The Company records a regulatory asset reflecting the expectation that future environmental costs will be recoverable in rates.

PCBs

In September 2008, Environment Canada published regulations governing the management, storage and disposal of PCBs, enacted under the *Canadian Environmental Protection Act, 1999*. The regulations impose timelines for disposal of PCBs based on certain criteria, including type of equipment, in-use status, and PCB-contamination thresholds. Under these regulations and Hydro One's approved end-of-use extension, PCBs in concentrations of 500 parts per million (ppm) or more have to be disposed of by the end of 2014, with the exception of specifically exempted equipment, and PCBs in concentrations greater than 50 ppm and less than 500 ppm, or greater than 50 ppm for pole-top transformers, pole-top auxiliary electrical equipment and light ballasts, must be disposed of by the end of 2025. Management judges that the Company currently has very few PCB-contaminated assets in excess of 500 ppm. Contaminated equipment will generally be replaced, or will be decontaminated by removing PCB-contaminated insulating oil and retro filling with replacement oil that contains PCBs in concentrations of less than 2 ppm.

The Company's best estimate of the total estimated future expenditures to comply with current PCB regulations is $237 million. These expenditures are expected to be incurred over the period from 2014 to 2025. As a result of its annual review of environmental liabilities, the Company recorded a revaluation adjustment in 2013 to reduce the PCB environmental liability by $3 million (2012 – $3 million).

LAR

The Company's best estimate of the total estimated future expenditures to complete its LAR program is $68 million. These expenditures are expected to be incurred over the period from 2014 to 2022. As a result of its annual review of environmental liabilities, the Company recorded a revaluation adjustment in 2013 to increase the LAR environmental liability by $26 million (2012 – $2 million).

17. ASSET RETIREMENT OBLIGATIONS

Hydro One records a liability for the estimated future expenditures for the removal and disposal of asbestos-containing materials installed in some of its facilities and for the decommissioning of specific switching stations located on unowned sites. AROs, which represent legal obligations associated with the retirement of certain tangible long-lived assets, are computed as the present value of the projected expenditures for the future retirement of specific assets and are recognized in the period in which the liability is incurred, if a reasonable estimate of fair value can be made. If the asset remains in service at the recognition date, the present value of the liability is added to the carrying amount of the associated asset in the period the liability is incurred and this additional carrying amount is depreciated over the remaining life of the asset. If an ARO is recorded in respect of an out-of-service asset, the asset retirement cost is charged to results of operations. Subsequent to the initial recognition, the liability is adjusted for any revisions to the estimated future cash flows associated with the ARO, which can occur due to a number of factors including, but not limited to, cost escalation, changes in technology applicable to the assets to be retired, changes in legislation or regulations, as well as for accretion of the liability due to the passage of time until the obligation is settled. Depreciation expense is adjusted prospectively for any increases or decreases to the carrying amount of the associated asset.

In determining the amounts to be recorded as AROs, the Company estimates the current fair value for completing required work and makes assumptions as to when the future expenditures will actually be incurred, in order to generate future cash flow information. A long-term inflation assumption of approximately 2% has been used to express these current cost estimates as estimated future expenditures. Future expenditures have been discounted using factors ranging from approximately 3.0% to 5.0%, depending on the appropriate rate for the period when expenditures are expected to be incurred. All factors used in estimating the Company's AROs represent management's best estimates of the cost required to meet existing legislation or regulations. However, it is reasonably possible that numbers or volumes of contaminated assets, cost estimates to perform work, inflation assumptions and the assumed pattern of annual cash flows may differ significantly from the Company's current assumptions. AROs are reviewed annually or more frequently if significant changes in regulations or other relevant factors occur. Estimate changes are accounted for prospectively.

At December 31, 2013, Hydro One had recorded AROs of $14 million (2012 – $15 million), consisting of $7 million (2012 – $7 million) related to the estimated future expenditures associated with the removal and disposal of asbestos-containing materials installed in some of its facilities, as well as $7 million (2012 – $8 million) related to the future decommissioning and removal of two switching stations. The amount of interest recorded is nominal and there have been no significant expenditures associated with these obligations in 2013.

18. SHARE CAPITAL

Preferred Shares

The Company has 12,920,000 issued and outstanding 5.5% cumulative preferred shares with a redemption value of $25 per share or $323 million total value. The Company is authorized to issue an unlimited number of preferred shares.

The Company's preferred shares are entitled to an annual cumulative dividend of $18 million, or $1.375 per share, which is payable on a quarterly basis. The preferred shares are not subject to mandatory redemption (except on liquidation) but are redeemable in certain circumstances. The shares are redeemable at the option of the Province at the redemption value, plus any accrued and unpaid dividends, if the Province sells a number of the common shares which it owns to the public such that the Province's holdings are reduced to less than 50% of the common shares of the Company. Hydro One may elect, without condition, to pay all or part of the redemption price by issuing additional common shares to the Province. If the Province does not exercise its redemption right, the Company would have the ability to adjust the dividend on the preferred shares to produce a yield that is 0.50% less than the then-current dividend market yield for similarly rated preferred shares. The preferred shares do not carry voting rights, except in limited circumstances, and would rank in priority over the common shares upon liquidation.

These preferred shares have conditions for their redemption that are outside the control of the Company because the Province can exercise its right to redeem in the event of change in ownership without approval of the Company's Board of Directors. Because the conditional redemption feature is outside the control of the Company, the preferred shares are classified outside of Shareholder's Equity on the Consolidated Balance Sheets. Management believes that it is not probable that the preferred shares will become redeemable. No adjustment to the carrying value of the preferred shares has been recognized at December 31, 2013. If it becomes probable in the future that the preferred shares will be redeemed, the redemption value would be adjusted.

Common Shares

The Company has 100,000 issued and outstanding common shares. The Company is authorized to issue an unlimited number of common shares.

Common share dividends are declared at the sole discretion of the Hydro One Board of Directors, and are recommended by management based on results of operations, maintenance of the deemed regulatory capital structure, financial conditions, cash requirements, and other relevant factors, such as industry practice and shareholder expectations.

Earnings per Share

Earnings per share is calculated as net income for the year, after cumulative preferred dividends, divided by the weighted average number of common shares outstanding during the year.

19. DIVIDENDS

In 2013, preferred share dividends in the amount of $18 million (2012 – $18 million) and common share dividends in the amount of $200 million (2012 – $352 million) were declared.

20. RELATED PARTY TRANSACTIONS

Hydro One is owned by the Province. The OEFC, IESO, Ontario Power Authority (OPA), Ontario Power Generation Inc. (OPG) and the OEB are related parties to Hydro One because they are controlled or significantly influenced by the Province.

Hydro One receives revenues for transmission services from the IESO, based on OEB-approved uniform transmission rates. Transmission revenues include $1,509 million (2012 – $1,474 million) related to these services. Hydro One receives amounts for rural rate protection from the IESO. Distribution revenues include $127 million (2012 – $127 million) related to this program. Hydro One also receives revenues related to the supply of electricity to remote northern communities from the IESO. Distribution revenues include $33 million (2012 – $28 million) related to these services.

In 2013, Hydro One purchased power in the amount of $2,477 million (2012 – $2,392 million) from the IESO-administered electricity market; $15 million (2012 – $10 million) from OPG; and $8 million (2012 – $7 million) from power contracts administered by the OEFC.

Under the *Ontario Energy Board Act, 1998*, the OEB is required to recover all of its annual operating costs from gas and electricity distributors and transmitters. In 2013, Hydro One incurred $12 million (2012 – $11 million) in OEB fees.

Hydro One has service level agreements with OPG. These services include field, engineering, logistics and telecommunications services. In 2013, revenues related to the provision of construction and equipment maintenance services with respect to these service level agreements were $9 million (2012 – $10 million), primarily for the Transmission Business. Operation, maintenance and administration costs related to the purchase of services with respect to these service level agreements were $1 million in 2013 (2012 – $2 million).

The OPA funds substantially all of the Company's conservation and demand management programs. The funding includes program costs, incentives, and management fees. In 2013, Hydro One received $34 million (2012 – $39 million) from the OPA related to these programs.

Hydro One pays a $5 million annual fee to the OEFC for indemnification against adverse claims in excess of $10 million paid by the OEFC with respect to certain of Ontario Hydro's businesses transferred to Hydro One on April 1, 1999.

PILs and payments in lieu of property taxes are paid to the OEFC, and dividends are paid to the Province.

Sales to and purchases from related parties occur at normal market prices or at a proxy for fair value based on the requirements of the OEB's Affiliate Relationships Code. Outstanding balances at period end are interest free and settled in cash.

At December 31, 2013, the Company held $250 million in Province of Ontario Floating-Rate Notes with a fair value of $251 million (2012 – $251 million).

The amounts due to and from related parties as a result of the transactions referred to above are as follows:

December 31 (millions of Canadian dollars)	2013	2012
Due from related parties	197	154
Due to related parties[1]	(230)	(261)
Investment	251	251

[1] Included in due to related parties at December 31, 2013 are amounts owing to the IESO in respect of power purchases of $217 million (2012 – $199 million).

21. CONSOLIDATED STATEMENTS OF CASH FLOWS

The changes in non-cash balances related to operations consist of the following:

Year ended December 31 (millions of Canadian dollars)	2013	2012
Accounts receivable	(78)	(30)
Due from related parties	(43)	2
Materials and supplies	–	2
Other assets	(5)	(4)
Accounts payable	(60)	(5)
Accrued liabilities	150	10
Due to related parties	(31)	(85)
Accrued interest	5	10
Long-term accounts payable and other liabilities	(11)	13
Post-retirement and post-employment benefit liability	84	56
	11	(31)

Capital Expenditures

The following table illustrates the reconciliation between investments in property, plant and equipment and the amount presented in the Consolidated Statements of Cash Flows after factoring in the net change in related accruals:

Year ended December 31 (millions of Canadian dollars)	2013	2012
Capital investments in property, plant and equipment	(1,312)	(1,363)
Net change in accruals included in capital investments in property, plant and equipment	(21)	(10)
Capital expenditures – property, plant and equipment	(1,333)	(1,373)

The following table illustrates the reconciliation between investments in intangible assets and the amount presented in the Consolidated Statements of Cash Flows after factoring in the net change in related accruals:

Year ended December 31 (millions of Canadian dollars)	2013	2012
Capital investments in intangible assets	(82)	(91)
Net change in accruals included in capital investments in intangible assets	3	1
Capital expenditures – intangible assets	(79)	(90)

Supplementary Information

Year ended December 31 (millions of Canadian dollars)	2013	2012
Net interest paid	395	411
PILs	138	197

22. CONTINGENCIES

Legal Proceedings

Hydro One is involved in various lawsuits, claims and regulatory proceedings in the normal course of business. In the opinion of management, the outcome of such matters will not have a material adverse effect on the Company's consolidated financial position, results of operations or cash flows.

Transfer of Assets

The transfer orders by which the Company acquired certain of Ontario Hydro's businesses as of April 1, 1999 did not transfer title to some assets located on Reserves (as defined in the *Indian Act* (Canada)). Currently, the OEFC holds these assets. Under the terms of the transfer orders, the Company is required to manage these assets until it has obtained all consents necessary to complete the transfer of title of these assets to itself. The Company cannot predict the aggregate amount that it may have to pay, either on an annual or one-time basis, to obtain the required consents. In 2013, the Company paid approximately $2 million (2012 – $1 million) in respect of these consents. If the Company cannot obtain the required consents, the OEFC will continue to hold these assets for an indefinite period of time. If the Company cannot reach a satisfactory settlement, it may have to relocate these assets to other locations at a cost that could be substantial or, in a limited number of cases, to abandon a line and replace it with diesel-generation facilities. The costs relating to these assets could have a material adverse effect on the Company's results of operations if the Company is not able to recover them in future rate orders.

23. COMMITMENTS

Agreement with Inergi LP (Inergi)

In 2002, Inergi, an affiliate of Capgemini Canada Inc., began providing services to Hydro One, including business processing and information technology outsourcing services, as well as core system support related primarily to SAP implementation and optimization. The current agreement with Inergi will expire in February 2015.

At December 31, 2013, the annual commitments under the Inergi agreement are as follows: 2014 – $130 million; 2015 – $22 million; 2016 and thereafter – nil.

Prudential Support

Purchasers of electricity in Ontario, through the IESO, are required to provide security to mitigate the risk of their default based on their expected activity in the market. As at December 31, 2013, the Company provided prudential support to the IESO on behalf of Hydro One Networks and Hydro One Brampton Networks using parental guarantees of $325 million (2012 – $325 million), and on behalf of two distributors using guarantees of $1 million (2012 – $1 million). In addition, as at December 31, 2013, the Company has provided letters of credit in the amount of $21 million (2012 – $22 million) to the IESO. The IESO could draw on these guarantees and/or letters of credit if these subsidiaries or distributors fail to make a payment required by a default notice issued by the IESO. The maximum potential payment is the face value of any letters of credit plus the amount of the parental guarantees.

Retirement Compensation Arrangements

Bank letters of credit have been issued to provide security for the Company's liability under the terms of a trust fund established pursuant to the supplementary pension plan for eligible employees of Hydro One. The supplementary pension plan trustee is required to draw upon these letters of credit if Hydro One is in default of its obligations under the terms of this plan. Such obligations include the requirement to provide the trustee with an annual actuarial report as well as letters of credit sufficient to secure the Company's liability under the plan, to pay benefits payable under the plan and to pay the letter of credit fee. The maximum potential payment is the face value of the letters of credit. At December 31, 2013, Hydro One had letters of credit of $127 million (2012 – $127 million) outstanding relating to retirement compensation arrangements.

Operating Leases

Hydro One is committed as lessee to irrevocable operating lease contracts for buildings used in administrative and service-related functions and storing telecommunications equipment. These leases have an average life of between one and five years with renewal options for periods ranging from one to 10 years included in some of the contracts. All leases include a clause to enable upward revision of the rental charge on an annual basis or on renewal according to prevailing market conditions. There are no restrictions placed upon Hydro One by entering into these leases. Hydro One Networks and Hydro One Telecom are the principal entities concerned.

At December 31, the future minimum lease payments under non-cancellable operating leases were as follows:

December 31 (millions of Canadian dollars)	**2013**	**2012**
Within one year	11	10
After one year but not more than five years	28	29
More than five years	9	14
	48	53

During the year ended December 31, 2013, the Company made lease payments totaling $11 million (2012 – $9 million).

24. SEGMENTED REPORTING

Hydro One has three reportable segments:

- The Transmission Business, which comprises the core business of providing electricity transportation and connection services, is responsible for transmitting electricity throughout the Ontario electricity grid;
- The Distribution Business, which comprises the core business of delivering and selling electricity to customers; and
- Other, the operations of which primarily consist of those of the telecommunications business.

The designation of segments has been based on a combination of regulatory status and the nature of the products and services provided. Operating segments of the Company are determined based on information used by the chief operating decision maker in deciding how to allocate resources and evaluate the performance of each of the segments. The Company evaluates segment performance based on income before financing charges and provision for PILs from continuing operations (excluding certain allocated corporate governance costs).

The accounting policies followed by the segments are the same as those described in the summary of significant accounting policies (see Note 2 – Significant Accounting Policies). Segment information on the above basis is as follows:

Year ended December 31, 2013 (millions of Canadian dollars)	**Transmission**	**Distribution**	**Other**	**Consolidated**
Revenues	1,529	4,484	61	6,074
Purchased power	–	3,020	–	3,020
Operation, maintenance and administration	375	672	59	1,106
Depreciation and amortization	327	340	9	676
Income (loss) before financing charges and provision for PILs	827	452	(7)	1,272
Financing charges				360
Income before provision for PILs				912
Capital investments	714	673	7	1,394

Year ended December 31, 2012 (millions of Canadian dollars)	**Transmission**	**Distribution**	**Other**	**Consolidated**
Revenues	1,482	4,184	62	5,728
Purchased power	–	2,774	–	2,774
Operation, maintenance and administration	402	608	61	1,071
Depreciation and amortization	320	329	10	659
Income (loss) before financing charges and provision for PILs	760	473	(9)	1,224
Financing charges				358
Income before provision for PILs				866
Capital investments	776	671	7	1,454

Total Assets by Segment:

December 31 (millions of Canadian dollars)	**2013**	**2012**
Total assets		
Transmission	11,846	11,586
Distribution	8,805	8,621
Other	974	604
	21,625	20,811

All revenues, costs and assets, as the case may be, are earned, incurred or held in Canada.

25. SUBSEQUENT EVENT

On January 29, 2014, Hydro One issued $50 million notes under its MTN Program, with a maturity date of January 29, 2064 and a coupon rate of 4.29%.

HYDRO ONE INC.

NOTES TO THE UNAUDITED PRO FORMA CONDENSED CONSOLIDATED FINANCIAL STATEMENTS

1. BASIS OF PRESENTATION

These unaudited pro forma condensed consolidated financial statements of Hydro One Inc. have been prepared for illustrative purposes only by management for inclusion in the prospectus (the "**Prospectus**") of Hydro One Limited dated October 28, 2015 relating to the proposed secondary offering (the "**Offering**") by the Province of Ontario (the "**Province**") of common shares of Hydro One Limited. Prior to the completion of the Offering, Hydro One Inc. will repurchase or redeem the preferred shares of Hydro One Inc. currently held by the Province in exchange for common shares, and Hydro One Limited will acquire all of the issued and outstanding common shares of Hydro One Inc. in return for common shares and preferred shares of Hydro One Limited. References herein to "**Hydro One**" refer to Hydro One Inc. and its consolidated subsidiaries, but do not include or refer to Hydro One Limited.

These unaudited pro forma condensed consolidated financial statements of Hydro One Inc. are presented to reflect the expected impact of the transactions described in note 2 as if those transactions occurred as at June 30, 2015 with respect of the unaudited pro forma condensed consolidated balance sheet as at June 30, 2015, and as if these transactions occurred on January 1, 2014 with respect of the unaudited pro forma condensed consolidated statements of operations for the six month period ended June 30, 2015 and for the year ended December 31, 2014. These transactions relate to the following events:

- the payment by Hydro One Inc. and certain of its subsidiaries of the Departure Tax (as defined in note 2A);
- the recognition by Hydro One Inc. of a deferred income tax asset as a consequence of leaving the PILs (as defined in note 2A) regime and entering the corporate tax regime;
- the recapitalization of Hydro One Networks Inc.; and
- the transfer of all of the issued and outstanding shares of Hydro One Brampton Networks Inc. (**Hydro One Brampton**) by Hydro One Inc. to a company wholly-owned by the Province.

These unaudited pro forma condensed consolidated financial statements have been prepared based on the historical unaudited consolidated interim financial statements of Hydro One Inc. as at and for the six month period ended June 30, 2015 and the audited consolidated financial statements of Hydro One Inc. for the year ended December 31, 2014, together with the notes accompanying such financial statements, included elsewhere in the Prospectus. As such, this unaudited pro forma condensed consolidated balance sheet and these unaudited pro forma condensed consolidated statements of operations and comprehensive income should be read in conjunction with the Hydro One Inc. consolidated financial statements.

The Hydro One Inc. historical consolidated financial statements have been adjusted in the unaudited pro forma condensed consolidated financial statements to give effect to events that are (i) directly attributable to the pro forma events, (ii) factually supportable, and (iii) with respect to the statement of operations, expected to have a continuing impact on the combined company. These unaudited pro forma condensed consolidated financial statements do not reflect any non-recurring charges directly related to the pro forma events that may be incurred upon completion of the transactions.

The unaudited pro forma condensed consolidated financial statements are presented solely for informational purposes and are not necessarily indicative of the results that would have occurred had the transactions been completed at the dates indicated, nor are they necessarily indicative of future operating results or the financial position of Hydro One Inc. or Hydro One Limited.

2. PRO FORMA ASSUMPTIONS AND ADJUSTMENTS

A. In connection with the Offering, Hydro One's exemption from tax under the *Income Tax Act* (Canada) and the *Taxation Act, 2007* (Ontario) will cease to apply. Under the *Income Tax Act* (Canada) and the *Taxation Act, 2007* (Ontario), Hydro One will be deemed to have disposed of its assets immediately before it loses its tax exempt status for proceeds equal to the fair market value of those assets at that time. Hydro One will be liable to make a payment in lieu of tax ("**PILs**") under the *Electricity Act, 1998* (Ontario) (the "**Electricity Act**") in respect of the income and capital gains, calculated by reference to the *Income Tax Act* (Canada), that arise as a result of this deemed disposition. The amount payable is generally referred to as "**Departure Tax**". In the context of a public offering of shares, and with the consent of the Minister of Finance, Hydro One will be authorized to pay to the Ontario Electricity Financial Corporation an amount that, in the Minister's opinion, reasonably approximates the amount of the Departure Tax that would be payable by Hydro One in respect of the deemed disposition of its assets. Hydro One has received a letter from the Minister of Finance confirming that the total amount of the Departure Tax payable by Hydro One, together with Hydro One Limited, is $2.6 billion.

B. To enable Hydro One Inc. to make the Departure Tax payment, Hydro One Limited will subscribe for 2.6 billion additional common shares of Hydro One Inc. for $2,600 million. Hydro One Inc. will use the proceeds of this share subscription to pay its portion of the Departure Tax payable and will use the remaining proceeds to subscribe for additional shares of certain subsidiaries of Hydro One Inc. in order to allow those subsidiaries to pay their respective portions of the Departure Tax payable. The $2,600 million adjustment reflects the proceeds of this subscription.

C. The following additional adjustments result from Hydro One leaving the PILs regime and entering the corporate tax regime:

(i) Reversal of $1,355 million of an existing deferred income tax liability for taxable temporary differences that were attributable to differences between the carrying amount of assets and liabilities and their corresponding lower tax basis prior to leaving the PILs regime and entering the corporate tax regime.

(ii) Establishment of a deferred income tax asset of $1,245 million for deductible temporary differences that are attributable to differences between the excess of tax basis over the corresponding carrying amount of assets and liabilities upon Hydro One leaving the PILs regime and entering the corporate tax regime.

This calculation of the deferred tax asset adjustment has been based on an estimated fair market value of Hydro One's net assets of approximately $13,522 million, which was the same estimated fair market value used for the purposes of determining the departure tax amount of $2.6 billion referred to in note 2A. The actual fair market value of Hydro One's net assets will be determined following pricing of this offering. The departure tax payable by Hydro One has been fixed at $2.6 billion, and will not be adjusted based on the fair market value of Hydro One's net assets as finally determined. The Company estimates that a $1,000 million increase or decrease in the fair market value of Hydro One's net assets would result in a corresponding increase or decrease in the deferred tax asset, and therefore net income, of approximately $200 million. See "Summary Consolidated Financial Information" and "Selected Consolidated Financial Information".

(iii) Additional cash PILs estimated at $200 million resulting from Hydro One Inc. being unable to claim Capital Cost Allowance ("**CCA**") in the year of deemed disposition of assets with a corresponding increase in deferred income tax assets that reflects the ability to claim that CCA in a future tax year.

(iv) Reduction in cash PILs of $77 million and $60 million for the year ended December 31, 2014 and six month period ended June 30, 2015, respectively. This is offset by the release of a deferred income tax asset of $77 million and $60 million for the year ended December 31, 2014 and six month period ended June 30, 2015, respectively.

(v) Payment of Corporate Minimum Tax of $21 million and $11 million for the year ended December 31, 2014 and six month period ended June 30, 2015, respectively. This is offset by a deferred tax benefit of $21 million and $11 million for the year ended December 31, 2014 and six month period ended June 30, 2015, respectively.

(vi) The reduction in cash PILs in note 2C(iv) and pro forma payment of Corporate Minimum Tax in note 2C(v) result in a net pro forma reduction in cash tax for the year ended December 31, 2014 of $56 million and for the six month period ended June 30, 2015 of $49 million, for a total reduction in cash tax of $105 million for the period from January 1, 2014 to June 30, 2015 as outlined in the following table:

	Six month period ended June 30, 2015	**Year ended December 31, 2014**
	(millions of Canadian dollars)	
Reduction in Cash PILs	60	77
Pro forma corporate minimum tax	(11)	(21)
Total	49	56

D. The $800 million adjustment represents the amount borrowed by Hydro One Inc. either through the issuance of commercial paper, borrowings under its existing committed revolving standby credit facility, or borrowings under a new revolving term credit facility to be entered into by Hydro One Inc. prior to the closing of the Offering (the "**New Debt**").

E. The $800 million adjustment represents the proposed $800 million dividend or return of capital paid by Hydro One Inc. to the Province.

F. The adjustments of $24 million and $12 million for the year ended December 31, 2014 and six month period ended June 30, 2015, respectively, represent the interest paid under the terms of the New Debt described in note 2D.

G. The adjustment of $6 million and $3 million for the year ended December 31, 2014 and six month period ended June 30, 2015, respectively, reflects the tax impact of the interest paid under the terms of the New Debt described in note 2D.

H. The adjustment of $323 million reflects the purchase or redemption for cancellation by Hydro One Inc. of all of the issued and outstanding preferred shares of Hydro One Inc. held by the Province in exchange for the issuance of common shares of Hydro One Inc. to the Province.

I. The adjustment represents the subscription by Hydro One Inc. for common shares of Hydro One Brampton for an aggregate subscription price of approximately $50 million.

J. The following are the adjustments made to the unaudited pro forma condensed consolidated financial statements in relation to the transaction involving Hydro One Brampton:

(i) The adjustments reflect the carve out of Hydro One Brampton financial information as a result of the transfer of all of the issued and outstanding shares of Hydro One Brampton as a dividend-in-kind paid by Hydro One Inc. to a company wholly-owned by the Province, as directed by the Province.

(ii) The adjustment reflects the transfer of a note receivable owing from Hydro One Brampton in the aggregate principal amount of $193 million to a company wholly-owned by the Province as a return of capital, as directed by the Province.

(iii) For the purposes of the pro forma condensed consolidated balance sheet, the adjustment of $24 million reflects payment of capital gains tax due to the transfer of the note receivable of $193 million as described in note 2J(ii) as well as transfer of all of the issued and outstanding shares of Hydro One Brampton as described in note 2J(i). For the purposes of the pro forma condensed consolidated statement of operations for the year ended December 31, 2014, the adjustment of $7 million reflects the tax expense of the difference between the carrying value of the Hydro One Brampton investment over its tax basis. The balance of $17 million, which is the tax effect of the difference between tax basis and the fair value of note receivable and the tax effect of the difference between the carrying value and the fair value of the Hydro One Brampton investment, is recorded in equity.

3. PRO FORMA SHARES OUTSTANDING

The average number of shares used in the computation of pro forma basic and diluted earnings per share has been determined as follows:

Opening weighted average shares outstanding of Hydro One Inc.	100,000
Common shares issued in connection with preferred share redemption (note 2H)	2,706
Common shares issued in connection with $2,600 million subscription by Hydro One Limited (note 2B)	42,797
Pro forma weighted average shares of Hydro One Inc.	145,503

APPENDIX A
BOARD MANDATE

The board of directors (the "**Board**") of Hydro One Limited (including its subsidiaries, the "**Company**") is elected by the shareholders and is responsible for overseeing the business and affairs of the Company. The Board seeks to discharge such responsibility by reviewing, discussing and approving the Company's strategic planning and organizational structure and supervising management, all with a view to preserving and enhancing the business of the Company and its underlying value.

Responsibilities

While the Board maintains oversight of the Company's operations, it delegates to the Chief Executive Officer and senior management of the Company the responsibility for day-to-day management of the Company. The Board discharges its oversight responsibilities both directly and through its committees, the Audit Committee, the Nominating, Corporate Governance, Public Policy & Regulatory Committee, the Human Resources Committee and the Health, Safety, Environment, and First Nations & Métis Committee. In addition to these regular committees, the Board may appoint *ad hoc* committees periodically to address specific matters.

The Board's primary roles are overseeing both corporate performance and the quality, depth and continuity of management required to meet the Company's strategic objectives. Other principal duties include:

Culture of Integrity

1. supporting a corporate culture of integrity and responsible stewardship.
2. satisfying itself, to the extent feasible, as to the integrity of the Chief Executive Officer and other executive officers, and that such individuals promote a culture of integrity throughout the Company.

Capital and Financial Structure

3. approving the capital and financial structure of the Company.
4. approving the declaration and payment of dividends.

Strategic Planning

5. overseeing and reviewing, questioning and approving the mission and vision of the Company as well as its strategy, objectives and goals, taking into account the opportunities available to the Company, the potential risks it faces, and the Company's risk appetite.
6. reviewing, providing input on, and approving the budget and business, financial and strategic plans proposed by management to enable the Company to reach its objectives and goals.
7. adopting processes for monitoring the Company's performance and progress toward its strategic and operational goals.

Risk Management

8. overseeing the Company's enterprise risk management system for effectively identifying, monitoring and managing the risks it faces with a view to achieving a proper balance between the risks incurred and potential returns and the long term sustainability of the Company.
9. approving policies and procedures designed to ensure that the Company operates responsibly and in compliance with applicable laws and regulations.

Appointment and Oversight of Management

10. approving the appointment of, and if necessary removing and replacing, the Chief Executive Officer, approving his or her compensation and approving succession plans for the Chief Executive Officer.
11. overseeing the process for appointment, removal and replacement of all other executive officers, their compensation and the succession planning processes of the Company.

12. delegating to senior management the authority for expenditures and transactions, subject to specified limits beyond which Board approval would be required.

Corporate Governance

13. approving the Company's approach to corporate governance, having regard to the Governance Agreement between the Company and the Province of Ontario (as amended, revised or replaced from time to time, the "Governance Agreement"), including the Board's mandate, committee mandates, committee appointments, corporate governance guidelines, position descriptions for the Board Chair and of the committee chairs and director compensation and protection.

14. overseeing structures and procedures to enable the Board to exercise independent judgement.

15. overseeing succession-planning for the Board, orientation and educational opportunities for directors and the regular assessment of the effectiveness of the Board as a whole, each committee, the Board Chair, each Committee Chair, and each individual director.

16. delegating to Board committees oversight of specific matters, but except for the authority of the Nominating, Corporate Governance, Public Policy & Regulatory Committee over the management and oversight of the director nomination process pursuant to the Governance Agreement, otherwise retaining ultimate responsibility for those delegated matters

17. enforcing Board policy respecting confidentiality of the Company's proprietary information and Board deliberations.

Communications and Reporting

18. monitoring and supporting investor relations activities and reporting annually to shareholders on the Board's exercise of its oversight responsibilities for the preceding year.

19. reviewing communications plans for shareholders, employees, customers, financial analysts, governments and regulatory authorities, the media and other stakeholders, as well as processes to ensure the timely, accurate and complete disclosure of developments that have a significant and material impact on the Company.

20. overseeing the accurate disclosure and reporting of the financial performance of the Company to shareholders, other security holders and regulators on a timely and regular basis;

21. assessing the Company's stakeholder engagement policies and practices including systems to accommodate feedback from shareholders and other stakeholders.

APPENDIX B
AUDIT COMMITTEE MANDATE

Purpose

The Audit Committee (the "**Committee**") is a committee appointed by the board of directors (the "**Board**") of Hydro One Limited (including its subsidiaries, the "**Company**"). The Committee is established to fulfill applicable public company obligations and to assist the Board in fulfilling its oversight responsibilities with respect to financial reporting including responsibility to oversee:

(a) the independence, qualification and appointment of external auditors;

(b) the integrity of the Company's financial statements and financial reporting process, including the audit process and the Company's internal control over financial reporting, disclosure controls and procedures and compliance with other related legal and regulatory requirements;

(c) the performance of the Company's financial finance function, internal auditors and external auditors; and

(d) the auditing, accounting and financial reporting process.

The function of the Committee is oversight. It is not the duty or responsibility of the Committee or its members: (a) to plan or conduct audits; (b) to determine that the Company's financial statements are complete and accurate and are in accordance with generally accepted accounting principles; or (c) to conduct other types of auditing or accounting reviews or similar procedures or investigations. The Committee, its Chair and its members with accounting or finance expertise are members of the Board, appointed to the Committee to provide broad oversight of the financial, risk and control related activities of the Company, and are specifically not accountable or responsible for the day to day operation or performance of such activities.

Procedures

1. **Number of Members** – The members of the Committee shall be appointed by the Board. The Committee will be composed of not less than three (3) Board members.

2. **Independence** – The Committee shall be constituted at all times of directors who are "independent" (a) within the meaning of all Canadian securities laws and stock exchange requirements, each as in effect and applicable to Hydro One Inc. from time to time; and (b) of the Province of Ontario within the meaning of the Governance Agreement between the Company and the Province of Ontario (as amended, revised or replaced from time to time, the "**Governance Agreement**").

3. **Financial Literacy** – Each member shall be "financially literate" within the meaning of other applicable requirements or guidelines for audit committee service under securities laws or the rules of any applicable stock exchange, including NI 52-110. At least one member will otherwise qualify as an "audit committee financial expert" as defined by applicable rules of the Securities and Exchange Commission.

4. **Cross-Appointment** – No member may serve on the audit committee of more than two other public companies, unless the Board determined that this simultaneous service would not impair the ability of the member to serve effectively on the Committee.

5. **Appointment and Replacement of Committee Members** – Any member of the Committee may be removed or replaced at any time by the Board and shall automatically cease to be a member of the Committee upon ceasing to be a director. The Board shall fill any vacancy if the membership of the Committee is less than three directors. Whenever there is a vacancy on the Committee, the remaining members may exercise all its power as long as a quorum remains in office. Subject to the foregoing, the members of the Committee shall be appointed by the Board annually and each member of the Committee shall remain on the Committee until his or her successor shall be duly appointed and qualified or his or her earlier resignation or removal.

6. **Committee Chair** – Unless a Committee Chair is designated by the full Board, the members of the Committee may designate a Chair by majority vote of the full Committee. The Committee Chair shall be responsible for leadership of the Committee and reporting to the Board. If the Committee Chair is not present at any meeting of the Committee, one of the other members of the Committee who is present shall be chosen by the Committee to preside at the meeting. The Committee Chair shall also appoint a secretary who need not be a director.

7. **Conflicts of Interest** – If a Committee member faces a potential or actual conflict of interest relating to a matter before the Committee, other than matters relating to the compensation of directors, that member shall be responsible for alerting the Committee Chair. If the Committee Chair faces a potential or actual conflict of interest, the Committee Chair shall advise the Board Chair. If the Committee Chair, or the Board Chair, as the case may be, concurs that a potential or actual conflict of interest exists, the member faced with such conflict shall disclose to the Committee the member's interest and shall not be present for or participate in any discussion or other consideration of the matter and shall not vote on the matter.

8. **Meetings** – The Committee shall meet regularly and as often as it deems necessary to perform the duties and discharge its responsibilities as described herein in a timely manner, but not less than four (4) times a year. The Committee shall maintain written minutes of its meetings, which will be filed with the meeting minutes of the Board.

9. **Separate Private Meetings** – The Committee shall meet regularly, but no less than quarterly, with the Chief Financial Officer, the head of the internal audit function (if other than the Chief Financial Officer) and the external auditors in separate private sessions to discuss any matters that the Committee or any of these groups believes should be discussed privately and such persons shall have access to the Committee to bring forward matters requiring its attention. The Committee shall also meet at each meeting of the Committee without management or non-independent directors present, unless otherwise determined by the Committee Chair.

10. **Professional Assistance** – The Committee may require the external auditors to perform such supplemental reviews or audits as the Committee may deem desirable and may retain such special legal, accounting, financial or other consultants as the Committee may determine to be necessary to carry out the Committee's duties, in each case at the Company's expense and inform the Chair of the Nominating and Corporate Governance Committee of any such retainer. The Company's external auditors will have direct access to the Committee at their own initiative.

11. **Reliance** – Absent actual knowledge to the contrary (which shall be promptly reported to the Board), each member of the Committee shall be entitled to rely on: (a) the integrity of those persons or organizations within and outside the Company from which it receives information; (b) the accuracy of the financial and other information provided to the Committee by such persons or organizations; and (c) representations made by management and the external auditors as to any information technology, internal audit and other permissible non-audit services provided by the external auditors to the Company and its subsidiaries.

12. **Reporting to the Board** – The Committee will report through the Committee Chair to the Board following meetings of the Committee on matters considered by the Committee, its activities and compliance with this Mandate.

Responsibilities

The principal responsibilities of the Committee are:

Selection and Oversight of the External Auditors

1. approve the terms of engagement and, if the shareholders authorize the Board to do so, the compensation to be paid by the Company to the external auditors with respect to the conduct of the annual audit. The external auditors are ultimately accountable to the Committee and the Board as the representatives of the shareholders of the Company and shall report directly to the Committee and the Committee shall so instruct the external auditors.

2. evaluate the quality of service, independence, objectivity, professional skepticism and performance of the external auditors and make recommendations to the Board on the reappointment or appointment of the external auditors of the Company to be proposed for shareholder approval and shall have authority to terminate the external auditors. If a change in external auditors is proposed by the Committee or management of the Company, the Committee shall review the reasons for the change and any other significant issues related to the change, including the response of the incumbent external auditors, and enquire on the qualifications of the proposed external auditors before making its recommendation to the Board.

3. review and approve policies and procedures for the pre-approval of services to be rendered by the external auditors. All permissible non-audit services to be provided to the Company or any of its affiliates by the external

auditors or any of their affiliates that are not covered by pre-approval policies and procedures approved by the Committee shall be subject to pre-approval by the Committee. The Committee shall have the sole discretion regarding the prohibition of the external auditor providing certain non-audit services to the Company and its affiliates. The Committee shall also review and approve disclosures with respect to permissible non-audit services.

4. review the independence and professional skepticism of the external auditors and make recommendations to the Board on appropriate actions to be taken which the Committee deems necessary to protect and enhance the independence of the external auditors. In connection with such review, the Committee shall:

   (a) actively engage in a dialogue with the external auditors about all relationships or services that may impact the objectivity and independence of the external auditors, including whether there are any disputes, restrictions or limitations placed on their work;

   (b) obtain from external auditors at least annually, a formal written statement delineating all relationships between the Company and the external auditors and their affiliates;

   (c) ensure the rotation of the lead (and concurring) audit partner having primary responsibility for the audit and the audit partner responsible for reviewing the audit as required by applicable law or professional practice; and

   (d) consider the auditor independence standards promulgated by applicable auditing regulatory and professional bodies.

5. review and approve policies for the hiring by the Company of employees or former employees of the external auditors.

6. require the external auditors to provide to the Committee, and review and discuss with the external auditors, all notices and reports which the external auditors are required to provide to the Committee or the Board under rules, policies or practices of professional or regulatory bodies applicable to the external auditors, and any other reports which the Committee may require. Such reports shall include:

   (a) a description of the external auditors' internal quality-control procedures, any material issues respecting the external auditors raised by the most recent internal quality-control review, peer review or review body with auditing oversight responsibility over the external auditors, or by any inquiry or investigation by governmental or professional authorities, within the preceding five years, respecting one or more independent audits carried out by the external auditors, and any steps taken to deal with any such issues; and

   (b) a report describing: (i) the proposed audit plan and approach, (ii) all critical accounting policies and practices to be used by the Company; (iii) all alternative treatments of financial information within generally accepted accounting principles related to material items that have been discussed with management, ramifications of the use of such alternative disclosures and treatments, and the treatment preferred by the external auditors; and (iv) other material written communication between the external auditors and management, such as any management letter or schedule of unadjusted differences.

7. meet periodically with the external auditors to discuss their audit plan for the year, progress of their activities, any significant findings stemming from the external audit, any changes required in the planned scope of their audit plan, whether there are any disputes or any restrictions or limitations on the external auditors.

8. review the experience and qualifications of the audit team and review the performance of the external auditors, including assessing their effectiveness and quality of service, annually and, every five (5) years, perform a comprehensive review of the performance of the external auditors over multiple years to provide further insight on the audit firm, its independence and application of professional standards.

Appointment and Oversight of Internal Auditors

9. review and approve the appointment, terms of engagement, compensation, replacement or dismissal of the internal auditors. When the internal audit function is performed by employees of the Company, the Committee may delegate responsibility for approving the employment, terms of employment, compensation and termination of employees engaged in such function other than the head of the Company's internal audit function.

10. meet periodically with the internal auditors to discuss their audit plan for the year, progress of their activities, any significant findings stemming from internal audits, any changes required in the planned scope of their audit plan and whether there are any disputes, restrictions or limitations on internal audit.

11. review summaries of the significant reports to management prepared by the internal auditors, or the actual reports if requested by the Committee, and management's responses to such reports.

12. communicate with, as it deems necessary, the internal auditors with respect to their reports and recommendations, the extent to which prior recommendations have been implemented and any other matters that the internal auditor brings to the attention of the Committee. The head of the internal audit function shall have unrestricted access to the Committee.

13. evaluate, annually or more frequently as it deems necessary, the internal audit function, including its activities, organizational structure, independence and the qualifications, effectiveness and adequacy of the function.

Oversight and Review of Accounting Principles and Practices

14. review and discuss with management, the external auditors and the internal auditors (together and separately as it deems necessary), among other items and matters:

    (a) the quality, appropriateness and acceptability of the Company's accounting principles, practices and policies used in its financial reporting, its consistency from period to period, changes in the Company's accounting principles or practices and the application of particular accounting principles and disclosure practices by management to new transactions or events;

    (b) all significant financial reporting issues and judgments made in connection with the preparation of the financial statements, including the effects of alternative methods within generally accepted accounting principles on the financial statements and any "second opinions" sought by management from an external auditor with respect to the accounting treatment of a particular item;

    (c) any material change to the Company's auditing and accounting principles and practices as recommended by management, the external auditors or the internal auditors or which may result from proposed changes to applicable generally accepted accounting principles;

    (d) the extent to which any changes or improvements in accounting or financial practices, as approved by the Committee, have been implemented;

    (e) any reserves, accruals, provisions or estimates that may have a material effect upon the financial statements of the Company;

    (f) the use of any "pro forma" or "adjusted" information which is not in accordance with generally accepted accounting principles;

    (g) the effect of regulatory and accounting initiatives on the Company's financial statements and other financial disclosures; and

    (h) legal matters, claims and contingencies that could have a significant impact on the Company's financial statements.

15. review and resolve disagreements between management and the external auditors regarding financial reporting or the application of any accounting principles or practices.

Oversight and Monitoring of Internal Controls

16. exercise oversight of, review and discuss with management, the external auditors and the internal auditors (together and separately, as it deems necessary:

    (a) the adequacy and effectiveness of the Company's internal control over financial reporting and disclosure controls and procedures designed to ensure compliance with applicable laws and regulations;

    (b) any significant deficiencies or material weaknesses in internal control over financial reporting or disclosure controls and procedures, and the status of any plans for their remediation;

    (c) the adequacy of the Company's internal controls and any related significant findings and recommendations of the external auditors and internal auditors together with management's responses thereto; and

    (d) management's compliance with the Company's processes, procedures and internal controls.

Oversight and Monitoring of the Company's Financial Reporting and Disclosures

17. review with the external auditors and management and recommend to the Board for approval the audited annual financial statements and unaudited interim financial statements, and the notes and Managements' Discussion and Analysis accompanying all such financial statements, the Company's annual report and any other disclosure documents or regulatory filings containing or accompanying financial information of the Company, prior to the release of any summary of the financial results or the filing of such reports with applicable regulators.

18. discuss earnings press releases prior to their distribution, as well as financial information and earnings guidance prior to public disclosure, it being understood that such discussions may, in the discretion of the Committee, be done generally (i.e., by discussing the types of information to be disclosed and the type of presentation to be made) and that the Committee need not discuss in advance each earnings release or each instance in which the Company gives earning guidance.

19. review with management the Company's disclosure controls and procedures and material changes to the design of the Company's disclosure controls and procedures.

20. receive and review the financial statements and other financial information of material subsidiaries of the Company and any auditor recommendations concerning such subsidiaries.

21. meet with management to review the adequacy of the process and systems in place for ensuring the reliability of public disclosure documents that contain audited and unaudited financial information.

Oversight of Finance Matters

22. periodically review matters pertaining to the Company's material policies and practices respecting cash management and material financing strategies or policies or proposed financing arrangements and objectives of the Company.

23. periodically review the Company's major financial risk exposures (including foreign exchange and interest rate) and management's initiatives to control such exposures, including the use of financial derivatives and hedging activities.

24. review and discuss with management all material off-balance sheet transactions, arrangements, obligations (including contingent obligations), leases and other relationships of the Company with unconsolidated entities or other persons, that may have a material current or future effect on financial condition, changes in financial condition, results of operations, liquidity, capital resources, capital reserves, or significant components of revenues or expenses.

25. review and discuss with management any equity investments, acquisitions and divestitures that may have a material current or future effect on financial condition, changes in financial condition, results of operations, liquidity, capital resources, capital reserves, or significant components of revenues or expenses.

26. review and discuss with management the Company's effective tax rate, adequacy of tax reserves, tax payments and reporting of any pending tax audits or assessments, and material tax policies and tax planning initiatives.

27. review the organizational structure of the finance function and satisfy itself as to the qualifications, effectiveness and adequacy of the function.

28. review the work plan and progress on implementation of major information technology system changes and satisfy itself as to the adequacy of the information system infrastructure.

Regulatory Matters

29. review the financial impact to the Company of electrical regulatory initiatives.

30. review the financial implications of Company initiatives which may have a material impact on transmission and distribution rate filing applications.

Code of Business Conduct and Whistleblower Policy

31. review and recommend to the Board for approval any changes to the Code of Business Conduct for employees, officers and directors of the Company.

32. review and approve changes to the whistleblower policy or other procedures for: (a) the receipt, retention, and treatment of complaints received by the Company regarding accounting, internal accounting controls, or auditing matters; and (b) the confidential, anonymous submission by employees of the Company of concerns regarding questionable accounting or auditing matters.

33. oversee management's monitoring of, compliance with the Company's Code of Business Conduct and the Whistleblower Policy.

Enterprise Risk Management

34. review the Enterprise Risk Management framework for the Company and assess the adequacy and completeness of the process for identifying and assessing the key risks facing the Company.

35. meet with the head of the Enterprise Risk Management function at least semiannually.

36. ensure that primary oversight responsibility for each of the key risks identified in the Enterprise Risk Management framework is assigned to the Board or one of its Committees.

Additional Responsibilities

37. review the Company's privacy and data security risk exposures and measures taken to protect the security and integrity of its management information systems and Company and customer data.

38. review and approve in advance any proposed related-party transactions and required disclosures of such in accordance with applicable securities laws and regulations and consistent with the Company's related party transaction policy, and report to the Board on any approved transactions.

39. review on an annual basis reports on the expense accounts of the Chief Executive Officer and his or her direct reports.

40. undertake on behalf of the Board such other initiatives as may be necessary or desirable to assist the Board in fulfilling its oversight responsibilities with respect to financial reporting and perform such other functions as required by law, stock exchange rules or the Company's constating documents.

41. review annually the adequacy of this Mandate and ensure that it is disclosed in compliance with applicable securities laws and stock exchange rules and posted on the Company's website.

hydro One

HYDRO ONE LIMITED

$8,000,000,000

Common Shares
Preferred Shares
Debt Securities
Subscription Receipts
Warrants
Units

Hydro One Limited may from time to time issue, offer and sell, as applicable, the following securities of Hydro One Limited under this short form base shelf prospectus (the "**Prospectus**"): (i) common shares ("**Common Shares**"); (ii) preferred shares, issuable in one or more series (collectively, "**Preferred Shares**"); (iii) debentures, notes or other evidence of indebtedness of any kind, nature or description (collectively, "**Debt Securities**"); (iv) subscription receipts ("**Subscription Receipts**"); (v) warrants ("**Warrants**") and (vi) units ("**Units**"). The Common Shares, Preferred Shares, Debt Securities, Subscription Receipts, Warrants and Units (collectively, the "**Securities**") offered hereby may be offered or sold separately or together, in separate series, in amounts, at prices and on terms to be determined based on market conditions at the time of sale and set forth in one or more prospectus supplements to the Prospectus (each, a "**Prospectus Supplement**" and together, the "**Prospectus Supplements**"). Her Majesty the Queen in Right of Ontario and/or her designee (the "**Province**" or the "**Selling Shareholder**") may also offer and sell Common Shares and Preferred Shares under this Prospectus. See "Selling Shareholder".

The aggregate initial offering price of Securities (or the Canadian dollar equivalent thereof if the Securities are denominated in any other currency or currency unit) that may be sold pursuant to this Prospectus during the 25-month period that this Prospectus, including any amendments hereto, remains effective is limited to $8,000,000,000.

All information permitted under applicable laws to be omitted from this Prospectus will be contained in one or more Prospectus Supplements that will be delivered to purchasers together with this Prospectus. Each Prospectus Supplement will be incorporated by reference into this Prospectus for the purposes of securities legislation as of the date of such Prospectus Supplement and only for the purposes of the distribution of the Securities to which such Prospectus Supplement pertains.

The outstanding Common Shares are listed and admitted for trading on the Toronto Stock Exchange ("**TSX**") under the symbol "H". On March 29, 2016, the last trading day prior to the date of this Prospectus, the closing price of the Common Shares on the TSX was $23.69 per Common Share. Unless otherwise specified in the applicable Prospectus Supplement, Securities other than Common Shares will not be listed on any securities exchange. **There is no market through which the Securities, other than the Common Shares, may be sold, and purchasers may not be able to resell such Securities purchased under this Prospectus and any applicable Prospectus Supplement. This may affect the pricing of such Securities in the secondary market, the transparency and availability of trading prices, the liquidity of the Securities and the extent of issuer regulation. See "Plan of Distribution".** Unless otherwise indicated in the Prospectus Supplement relating to an offering of Securities, the particular offering of Securities will be subject to approval of certain legal matters on behalf of Hydro One Limited by Osler, Hoskin & Harcourt LLP.

Investing in the Securities involves significant risks. Under securities laws in certain jurisdictions, the statutory remedies of rescission or damages where this Prospectus contains a misrepresentation are not available against the Province, as selling shareholder. The commencement of actions and enforcement of remedies against the Province may also be subject to limitations. The Province will not provide any guarantee in respect of the Securities. Prospective investors should carefully read and consider the risk factors described or referenced under the heading "Risk Factors" in this Prospectus, contained in any of the documents incorporated by reference herein, and in any applicable Prospectus Supplement, before purchasing Securities.

Purchasers are advised that it may not be possible for investors to enforce judgments obtained in Canada against any person or company that is incorporated, continued or otherwise organized under the laws of a foreign jurisdiction or resides outside of Canada, even if the party has appointed an agent for service of process. See "Agent for Service of Process in Canada."

The specific terms of the Securities in respect of which this Prospectus is being delivered will be set forth in an accompanying Prospectus Supplement and may include, where applicable: (i) in the case of Common Shares, the person(s) offering the shares (Hydro One Limited and/or the Selling Shareholder), the number of Common Shares offered and the offering price; (ii) in the case of Preferred Shares, the person(s) offering the shares (Hydro One Limited and/or the Selling Shareholder), the series, the number of Preferred Shares offered, the offering price, the dividend rate, the dividend payment dates, any terms for redemption at the option of Hydro One Limited or at the option of the holder, any exchange or conversion terms and any other specific terms that are material to the series of Preferred Shares; (iii) in the case of Debt Securities, the designation of the particular series, the aggregate principal amount of Debt Securities being offered, the offering price and any other material terms and conditions of the Debt Securities; (iv) in the case of Subscription Receipts, the number of Subscription Receipts being offered, the offering price, the conditions and procedures for exchange of the Subscription Receipts for other Securities of Hydro One Limited and any other material terms and conditions of the Subscription Receipts; (v) in the case of Warrants, the designation, number and terms of the other Securities purchasable upon exercise of the Warrants, any procedures that will result in the adjustment of these numbers, the exercise price, dates and periods of exercise and any other material terms and conditions of the Warrants; and (vi) in the case of Units, the designation of the Units and of the Securities comprising the Units and any other material terms and conditions of the Units.

Hydro One Limited reserves the right to include in a Prospectus Supplement specific variable terms pertaining to the Securities that are not within the descriptions set forth in this Prospectus.

Prospective investors should be aware that the acquisition of the Securities described herein may have tax consequences. This Prospectus does not, and any applicable Prospectus Supplement may not fully, describe these tax consequences. Prospective investors should read the tax discussion in any applicable Prospectus Supplement, but note that such discussion may be only a general summary that does not cover all tax matters

that may be of importance to a prospective investor. Each prospective investor is urged to consult its own tax advisors about the tax consequences relating to the purchase, ownership and disposition of the Securities in light of the investor's own circumstances.

No underwriter or agent has been involved in the preparation of this Prospectus or has performed any review of the contents of this Prospectus.

This Prospectus constitutes a public offering of Securities in only those jurisdictions where they may be lawfully offered for sale and therein only by persons permitted to sell the Securities. Hydro One Limited and the Selling Shareholder may offer and sell Securities to, or through, underwriters and also may offer and sell certain Securities directly to other purchasers or through agents. See "Plan of Distribution".

A Prospectus Supplement relating to a particular offering of Securities will identify the person(s) offering the Securities, as applicable, each underwriter or agent, as the case may be, engaged by Hydro One Limited and/or the Selling Shareholder in connection with the offering and sale of the Securities, and will set forth the terms of the offering of the Securities, including the public offering price of such Securities (or the manner of determination thereof if offered on a non-fixed price basis), the proceeds to, and the portion of expenses borne by, Hydro One Limited and/or the Selling Shareholder, as applicable, from such sale, any underwriting discounts or commissions and any discounts or concessions allowed, re-allowed or paid by any underwriter to other dealers and other material terms of the plan of distribution.

In connection with any offering of the Securities (unless otherwise specified in a Prospectus Supplement), the underwriters or agents may over-allot or effect transactions which stabilize, maintain or otherwise affect the market price of the Securities offered at levels other than those which might otherwise prevail on the open market. These transactions may be commenced, interrupted or discontinued at any time. See "Hydro One Limited has a long term credit rating of A (stable) from Standard & Poor's Rating Services ("**S&P**"), although it has not obtained a credit rating in respect of any of the Securities. An issuer rating from S&P is a forward-looking opinion about an obligor's overall creditworthiness. This opinion focuses on the obligor's capacity and willingness to meet its financial commitments as they come due but it does not apply to any specific financial obligation. An obligor with a long term credit rating of 'A' has strong capacity to meet its financial commitments but is somewhat more susceptible to the adverse effects of changes in circumstances and economic conditions than obligors in higher-rated categories.

The rating above is not a recommendation to purchase, sell or hold any of the Securities and does not comment on the market price or suitability of any of the Securities for a particular investor. There can be no assurance that the rating will remain in effect for any given period of time or that the rating will not be revised or withdrawn entirely by S&P at any time in the future. Hydro One Limited has made, and anticipates making, payments to S&P pursuant to agreements entered into with S&P in respect of the rating assigned to Hydro One Limited and expects to make payments to S&P in the future to the extent it obtains a rating specific to any of the Securities.

Plan of Distribution".

The head and registered office of Hydro One Limited is located at 483 Bay Street, South Tower, 8th Floor, Toronto, Ontario, M5G 2P5.

ABOUT THIS PROSPECTUS

In this Prospectus and in any Prospectus Supplement, unless otherwise noted or the context otherwise requires, references to "**Hydro One**" or the "**Company**" refer to Hydro One Limited and its subsidiaries taken together as a whole. References to "**Hydro One Inc.**" refer only to Hydro One Inc. and references to "**Hydro One Limited**" refer only to Hydro One Limited. In addition, "**Ontario**" or the "**province**" in lower case type refers to the Province of Ontario as a geographical area.

All references in this Prospectus to "**dollars**" and "**$**" are to Canadian dollars, unless otherwise expressly stated. Unless otherwise expressly stated therein, the financial information of Hydro One Limited contained in the documents incorporated by reference herein are presented in Canadian dollars. Hydro One Limited prepares and presents its financial statements in accordance with U.S. GAAP. Unless otherwise indicated, all financial information included and incorporated by reference in this Prospectus or included in any Prospectus Supplement is determined using U.S. GAAP. "**U.S. GAAP**" means generally accepted accounting principles in the United States.

For prospective purchasers outside Canada, Hydro One Limited has not done anything that would permit this offering or possession or distribution of this Prospectus or any Prospectus Supplement in any jurisdiction where action for that purpose is required, other than in Canada. Prospective purchasers are required to inform themselves about, and to observe any restrictions relating to, this offering and the possession or distribution of this Prospectus or any Prospectus Supplement.

This Prospectus includes or the documents incorporated by reference herein include a summary of certain material agreements of Hydro One Limited. The summary descriptions are not complete and are qualified by reference to the terms of the material agreements, which have been filed with the Canadian securities regulatory authorities and are available on SEDAR under Hydro One Limited's profile at www.sedar.com. Investors are encouraged to read the full text of such material agreements.

Hydro One Limited is responsible for the information contained in or incorporated by reference in this Prospectus or any applicable Prospectus Supplement. Hydro One Limited has not authorized anyone to provide you with different or additional information. Investors should only rely on the information contained in this Prospectus or any Prospectus Supplement and in the documents incorporated by reference herein and therein and investors are not entitled to rely on parts of such information to the exclusion of others. Hydro One Limited is not making an offer of these Securities in any jurisdiction where the offer is not permitted by law. You should not assume that the information contained in or incorporated by reference in this Prospectus or any applicable Prospectus Supplement is accurate as of any date other than the date of the applicable document.

CAUTIONARY NOTE REGARDING FORWARD-LOOKING STATEMENTS

This Prospectus, including the documents incorporated by reference herein, contains "forward-looking information" within the meaning of applicable Canadian securities laws that is based on current expectations, estimates, forecasts and projections about Hydro One's business and the industry in which Hydro One operates and includes beliefs and assumptions made by management. Such information includes, but is not limited to, statements about the Company's business, the intentions of the Province with respect to future sales of Common Shares and statements concerning the content of future Prospectus Supplements. Additional forward-looking information is identified in the various documents incorporated by reference in this Prospectus. Words such as "aim", "could", "would", "expect", "anticipate", "intend", "attempt", "may", "plan", "will", "believe", "seek", "estimate", "goal", "target" and variations of such words and similar expression are intended to identify such forward-looking information. The forward-looking information contained or incorporated by reference in this Prospectus, are not guarantees of future performance and involve assumptions and risks and uncertainties that are difficult to predict. In particular, this forward-looking information is based on a variety of factors and assumptions including, but not limited to: no unforeseen changes in the legislative and operating framework for Ontario's electricity market; favourable decisions from the Ontario Energy Board and other regulatory bodies concerning outstanding and future rate and other applications; no unexpected delays in obtaining required approvals; no unforeseen changes in rate orders or rate setting methodologies for the Company's distribution and transmission businesses; no unfavourable changes in environmental regulation; the continued use and availability of U.S. GAAP; a stable regulatory environment; and no significant event occurring outside the ordinary course of business. These assumptions are based on information currently available to the Company including information obtained by the Company from third-party sources. Actual outcomes and results may differ materially from what is expressed, implied or forecasted in this forward-looking information. While the Company does not know what impact any of these differences may have, the Company's business, results of operations and financial conditions may be materially adversely affected if any such differences occur. Factors that could cause actual results or outcomes to differ materially from the results expressed or implied by forward-looking information are discussed in more detail under "Risk Factors" in this Prospectus or in any Prospectus Supplement, under "Risk Factors" in Hydro One Limited's most recent annual information form and under "Risk Management and Risk Factors" in Hydro One Limited's most recent annual management's discussion and analysis of financial results. You should carefully consider these and other factors and not place undue reliance on forward-looking information.

Hydro One Limited does not undertake or assume any obligation to update or revise any forward-looking information for any reason, except as required by applicable securities laws.

DOCUMENTS INCORPORATED BY REFERENCE

The following documents, filed by Hydro One Limited with the securities commissions or similar authorities in each of the provinces and territories of Canada, and as amended from time to time, are specifically incorporated by reference into, and form an integral part of, this Prospectus:

(a) Hydro One Limited's annual information form dated March 22, 2016 for the year ended December 31, 2015;

(b) Hydro One Limited's audited consolidated annual financial statements for the years ended December 31, 2015 and December 31, 2014, together with the notes thereto and the independent auditors' reports thereon dated February 11, 2016 (the "**2015 Annual Financial Statements**");

(c) Hydro One Limited's management's discussion and analysis in respect of the 2015 Annual Financial Statements;

(d) Hydro One Limited's business acquisition report dated January 14, 2016 relating to the acquisition by Hydro One Limited on October 31, 2015 of all of the issued and outstanding shares of Hydro One Inc.; and

(e) the following sections of the supplemented PREP prospectus of Hydro One Limited dated October 29, 2015 (the "**HOL Prospectus**") in respect of Hydro One Limited's initial public offering by way of a secondary offering of Common Shares by the Province:

  (i) disclosure under "Meaning of Certain References" at page 1 of the HOL Prospectus;

  (ii) disclosure under the subheadings "Directors and Executive Officers – Biographical Information" (but only in respect of the biographies of the directors and not the executive officers) at pages 125 to 129 of the HOL Prospectus;

  (iii) disclosure under the subheadings "Independence of the Board of Directors", "Directors' Board Memberships in Other Reporting Issuers", "Board Mandate", "Position Descriptions", "Orientation and Continuing Education", "Ethical Business Conduct", "Nomination of Directors", "Majority Voting Policy", "Board Renewal", "Diversity" and "Committees of the Board" at pages 130 to 136 of the HOL Prospectus, but excluding the disclosure under the subheadings "Audit Committee" and "External Auditor Service Fees" at pages 134 to 135 of the HOL Prospectus;

  (iv) disclosure under "Executive Compensation" at pages 136 to 153 of the HOL Prospectus;

  (v) disclosure under "Directors' Compensation" at pages 153 to 154 of the HOL Prospectus;

  (vi) disclosure under "Share Grant Plans" at pages 154 to 155 of the HOL Prospectus;

(vii) disclosure under “Glossary” at pages 178 to 182 of the HOL Prospectus;

(viii) Appendix A – Board Mandate at pages A-1 to A-2 of the HOL Prospectus; and

(ix) any other disclosures in the HOL Prospectus specifically referred to in the disclosures made in items (i) through (viii) above, in each case to the extent relevant.

(collectively, the “**Included Sections**”).

The Included Sections have been incorporated by reference into, and form a part of, this Prospectus because they contain certain information regarding the board of directors and management of Hydro One Limited, including executive and director compensation, and a description of Hydro One Limited’s corporate governance practices. In respect of certain references in the Included Sections to actions that will be taken by Hydro One Limited in the future, some of these actions have been taken and some remain to be taken. Hydro One Limited has determined there is no material information in the HOL Prospectus relating to Hydro One Limited or the Securities that has not been incorporated by reference into this Prospectus. Upon a management information circular relating to the annual meeting of shareholders of Hydro One Limited to be held on May 31, 2016 being filed by Hydro One Limited with and, where required, accepted by, the applicable securities commissions or similar authorities in Canada during the term of this Prospectus, the Included Sections shall be deemed no longer to be incorporated by reference into this Prospectus for purposes of future offers and sales of Securities hereunder.

Any document of the type referred to above, any annual information form, annual or quarterly financial statements, annual or quarterly management’s discussion and analysis, management information circular, material change report (excluding confidential material change reports), business acquisition report or other disclosure document required to be incorporated by reference into a prospectus filed under National Instrument 44-101- *Short Form Prospectus Distributions* filed by Hydro One Limited with the securities commissions or similar authorities in Canada after the date of this Prospectus and prior to 25 months from the date hereof shall be deemed to be incorporated by reference into this Prospectus.

Upon a new annual information form and the related annual audited consolidated financial statements and accompanying management’s discussion and analysis being filed by Hydro One Limited with and, where required, accepted by, the applicable securities commissions or similar authorities in Canada during the term of this Prospectus, the previous annual information form, the previous annual audited consolidated financial statements and accompanying management’s discussion and analysis and all interim financial statements and accompanying management’s discussion and analysis, and all material change reports and business acquisition reports filed by Hydro One Limited prior to the commencement of the then current fiscal year, shall be deemed no longer to be incorporated into this Prospectus for purposes of future offers and sales of Securities hereunder. Upon an interim financial statement and accompanying management’s discussion and analysis being filed by Hydro One Limited with and, where required, accepted by, the applicable securities commissions or similar authorities in Canada during the currency of this Prospectus, all interim financial statements and accompanying management’s discussion and analysis filed prior to the new interim financial statements shall be deemed no longer to be incorporated into this Prospectus for purposes of future offers and sales of Securities hereunder. Upon a new management information circular relating to an annual meeting of shareholders of Hydro One Limited being filed by Hydro One Limited with and, where required, accepted by, the applicable securities commissions or similar authorities in Canada during the term of this Prospectus, the management information circular for the preceding annual meeting of shareholders of Hydro One Limited (if any) shall be deemed no longer to be incorporated by reference into this Prospectus for purposes of future offers and sales of Securities hereunder.

Certain marketing materials (as that term is defined in applicable securities legislation in Canada) may be used in connection with a distribution of Securities under this Prospectus and any applicable Prospectus Supplement. Any “template version” of any “marketing materials” (as those terms are defined in National Instrument 41-101 – *General Prospectus Requirements*) pertaining to a distribution of Securities, and filed by Hydro One Limited after the date of the applicable Prospectus Supplement for the offering and before termination of the distribution of such Securities, will be deemed to be incorporated by reference in such Prospectus Supplement for the purposes of the distribution of Securities to which the Prospectus Supplement pertains.

A Prospectus Supplement containing the specific terms of any offering of Securities will be delivered to purchasers of such Securities together with this Prospectus and will be deemed to be incorporated by reference in this Prospectus as of the date of the Prospectus Supplement solely for the purposes of the offering of Securities thereunder.

Any statement contained in a document incorporated or deemed to be incorporated by reference herein shall be deemed to be modified or superseded, for the purposes of this Prospectus, to the extent that a statement contained herein, or in any other subsequently filed document that also is, or is deemed to be, incorporated by reference herein, modifies or supersedes that statement. The modifying or superseding statement need not state that it has modified or superseded a prior statement or include any other information set forth in the document that it modifies or supersedes. The making of a modifying or superseding statement shall not be deemed an admission for any purposes that the modified or superseded statement, when made, constituted a misrepresentation, an untrue statement of a material fact or an omission to state a material fact that was required to be stated or that was necessary to make a statement not misleading in light of the circumstances in which it was made. Any statement so modified or superseded shall not constitute a part of this Prospectus, except as so modified or superseded.

THE COMPANY

Hydro One Limited was incorporated on August 31, 2015 under the *Business Corporations Act* (Ontario) (the "**OBCA**"). On October 31, 2015, Hydro One Limited acquired all of the issued and outstanding shares of Hydro One Inc. from the Province in exchange for the issuance of Common Shares and Series 1 Preferred Shares to the Province.

Hydro One is the largest electricity transmission and distribution company in Ontario. Through its wholly-owned subsidiary, Hydro One Inc., Hydro One owns and operates substantially all of Ontario's electricity transmission network, and an approximately 123,000 circuit km low-voltage distribution network.

Hydro One has three business segments: (i) transmission; (ii) distribution; and (iii) other business.

Hydro One's transmission business consists of owning, operating and maintaining its transmission system, which accounts for 96% of Ontario's transmission capacity based on the revenues approved by the Ontario Energy Board. This includes Hydro One's 66% interest in B2M Limited Partnership, a limited partnership between Hydro One and the Saugeen Ojibway Nation in respect of the Bruce-to-Milton transmission line. Hydro One's transmission business is a rate-regulated business that earns revenues mainly from charging transmission rates that must be approved by the Ontario Energy Board. Hydro One's transmission business accounted for approximately 50% of the Company's total assets as at December 31, 2015, and approximately 50% of its total revenues, net of purchased power, in 2015. All of Hydro One's transmission business is carried out by its wholly-owned subsidiary Hydro One Inc., through its wholly-owned subsidiary Hydro One Networks Inc., except for the portion of its business held through B2M Limited Partnership, which Hydro One controls.

Hydro One's distribution business consists of owning, operating and maintaining its distribution system, which Hydro One, through Hydro One Inc., owns primarily through its wholly-owned subsidiary, Hydro One Networks Inc., the largest local distribution company in Ontario. Hydro One's distribution system is also the largest in Ontario, and principally serves rural communities. Hydro One's distribution business is a rate-regulated business that earns revenues mainly by charging distribution rates that must be approved by the Ontario Energy Board. Hydro One's distribution business accounted for approximately 38% of its total assets as at December 31, 2015 and approximately 48% of its total revenues, net of purchased power, in 2015.

Hydro One's other business segment consists of Hydro One's telecommunications business and certain corporate activities. The telecommunications business provides telecommunications support for Hydro One's transmission and distribution businesses and also offers communications and IT solutions to organizations with broadband network requirements. Hydro One's other business segment is not rate-regulated. The other business segment, which in addition to the telecommunications business also includes a deferred tax asset, accounted for approximately 12% of Hydro One's total assets as at December 31, 2015 and approximately 2% of its total revenues, net of purchased power, in 2015.

The address of the head and registered office of Hydro One is 483 Bay Street, South Tower, 8th Floor, Toronto, Ontario, M5G 2P5.

RECENT DEVELOPMENTS

On February 24, 2016, Hydro One Inc. completed an offering of $1,350,000,000 aggregate principal amount of medium term notes for net proceeds to Hydro One Inc. of $1,343,740,000. The offering consisted of $500,000,000 aggregate principal amount of 1.84% medium term notes (Series 34) due 2021, $500,000,000 aggregate principal amount of 2.77% medium term notes (Series 35) due 2026 and $350,000,000 aggregate principal amount of 3.91% medium term notes (Series 36) due 2046. Hydro One Inc. intends to use the net proceeds from the sale of the notes to repay maturing debt and for general corporate purposes. To date, Hydro One Inc. has used a portion of the net proceeds as noted under "Consolidated Capitalization".

RISK FACTORS

Prospective investors in a particular offering of Securities should carefully consider the risks presented in this Prospectus, as well as the information and risk factors contained in the Prospectus Supplement relating to that offering and any and all other information incorporated by reference in this Prospectus. Discussions of certain risks affecting Hydro One Limited are generally provided and described in, among other documents, Hydro One Limited's annual and interim disclosure documents filed from time to time, which are incorporated by reference into this Prospectus and include Hydro One Limited's annual information form and annual management's discussion and analysis. In particular, see "Risk Factors" in Hydro One Limited's latest annual information form and "Risk Management and Risk Factors" in Hydro One Limited's interim or annual management's discussion and analysis, as the case may be. If any event arising from these or any other risks occurs, the Company's business, prospects, financial condition, results of operations or cash flows could be materially adversely affected.

To the extent the Selling Shareholder is offering and selling Common Shares or Preferred Shares pursuant to this Prospectus, the following additional risk factor will be relevant.

Potential Difficulties in Enforcing Civil Liabilities Against the Province

Under the securities legislation of Ontario and Newfoundland and Labrador, the statutory remedies of rescission or damages where the Prospectus or any amendment (including any Prospectus Supplement) contains a misrepresentation are not available against the Province. It is also possible, based on prior court decisions, that a claim against the Province based on these statutory remedies would have to be brought in the Ontario courts, rather than in the courts of the purchaser's province or territory of residence. If the claim was brought in the Ontario courts, and Ontario law was applied in respect of the claim, the statutory remedies would not be available against the Province. Alternatively, if a purchaser of common shares were to successfully assert a statutory misrepresentation claim against the Province in a jurisdiction other than Ontario, the resulting judgment may not be enforceable in Ontario for reasons which include that an Ontario court could conclude that it would be contrary to Ontario public policy to do so. Nonetheless, recourse may continue to be available against Hydro One Limited and any other parties that may be liable for any such misrepresentation.

To the extent any particular offering of Securities is made to investors not resident in Canada, the following additional risk factor will be relevant.

Potential Difficulties in Enforcing Civil Liabilities Outside Canada

Hydro One Limited is incorporated under the laws of Ontario, Canada and substantially all of the Company's assets are located in Canada. Substantially all of the directors and officers of Hydro One Limited, and some experts named in this prospectus reside or are located in Canada, and their assets are located in Canada. As a result, it may be difficult for non-Canadian or other investors to effect service of process outside of Canada against Hydro One Limited the directors and officers of Hydro One Limited or these experts or to sue Hydro One Limited or those others in the United States or other courts. If a lawsuit were successful, it may be difficult to collect any money awarded.

In addition, to the extent any offering pursuant to this Prospectus is also made in the United States, in relation to potential claims by United States investors, the *United States Foreign Sovereign Immunities Act of 1976* (the "**FSIA**") provides that, subject to existing international agreements to which the United States was a party at the time of the enactment of the FSIA, a foreign state or any agency or instrumentality of a foreign state is immune from U.S. federal and state court jurisdiction unless a specific exception to the immunity applies. One such exception applies to claims arising out of "commercial activity" by a foreign state or its agency or instrumentality. However, it is not certain that a court would consider any acts or omissions by Hydro One Limited, Hydro One Inc. or the Province in connection with an offering pursuant to this Prospectus or otherwise to be "commercial activities" under the FSIA. Absent an applicable exception from immunity under the FSIA, any attempt to assert a claim against Hydro One Limited, Hydro One Inc. or the Province alleging a violation of the U.S. securities laws resulting from an alleged material misstatement in or material omission from this Prospectus, or any other act or omission in connection with an offering pursuant to this Prospectus, may be barred. Further, absent an applicable exception from immunity under the FSIA, any attempt to assert a claim against Hydro One Limited, Hydro One Inc. or the Province or any of their respective agents or employees alleging any other complaint, including as a result of any future action by the Province as a shareholder of Hydro One Limited, may also be barred. In addition, even if a U.S. judgment could be obtained in such an action, the results of such judgment may not be enforceable in Ontario.

CONSOLIDATED CAPITALIZATION

There have been no material changes in Hydro One Limited's share and loan capital, on a consolidated basis, since the date of the 2015 Annual Financial Statements, other than as noted below.

On February 24, 2016, Hydro One Inc. incurred $1,350,000,000 aggregate principal amount in additional indebtedness as a result of the completion of the offering of medium term notes described under "Recent Developments". To date, Hydro One Inc. has used a portion of the net proceeds of that offering to repay the $450,000,000 aggregate principal amount of 4.64% medium term notes (Series 10) which matured on March 3, 2016. In addition, Hydro One Inc. has used a portion of the net proceeds of that offering, together with cash on hand, to repay approximately $537,000,000 in commercial paper since December 31, 2015.

USE OF PROCEEDS

Unless otherwise indicated in the applicable Prospectus Supplement, Hydro One Limited intends to use the net proceeds received by it from the sale of Securities for working capital requirements or for other general corporate purposes which may include the repayment or refinancing of debt, funding acquisitions, funding capital expenditures or for other working capital needs. More detailed information regarding the use of proceeds from the sale of Securities will be described in the applicable Prospectus Supplement. Hydro One Limited may, from time to time, issue Securities otherwise than through the offering of Securities pursuant to this Prospectus.

Hydro One Limited will not receive any proceeds from any sale of Common Shares or Preferred Shares by the Selling Shareholder.

EARNINGS COVERAGE RATIO

Earnings coverage ratios will be provided as required in the applicable Prospectus Supplement(s) with respect to any offering and sale of Preferred Shares or Debt Securities pursuant to this Prospectus.

CREDIT RATINGS

Hydro One Limited has a long term credit rating of A (stable) from Standard & Poor's Rating Services ("**S&P**"), although it has not obtained a credit rating in respect of any of the Securities. An issuer rating from S&P is a forward-looking opinion about an obligor's overall creditworthiness. This opinion focuses on the obligor's capacity and willingness to meet its financial commitments as they come due but it does not apply to any specific financial obligation. An obligor with a long term credit rating of 'A' has strong capacity to meet its financial commitments but is somewhat more susceptible to the adverse effects of changes in circumstances and economic conditions than obligors in higher-rated categories.

The rating above is not a recommendation to purchase, sell or hold any of the Securities and does not comment on the market price or suitability of any of the Securities for a particular investor. There can be no assurance that the rating will remain in effect for any given period of time or that the rating will not be revised or withdrawn entirely by S&P at any time in the future. Hydro One Limited has made, and anticipates making, payments to S&P pursuant to agreements entered into with S&P in respect of the rating assigned to Hydro One Limited and expects to make payments to S&P in the future to the extent it obtains a rating specific to any of the Securities.

PLAN OF DISTRIBUTION

The Securities offered hereby may be sold (i) to, or through, underwriters; (ii) directly to one or more purchasers; or (iii) through agents. The Securities may be sold at fixed prices or non-fixed prices, such as prices determined by reference to the prevailing price of the Securities in a specified market, at market prices prevailing at the time of sale or at prices to be negotiated with purchasers, which prices may vary as between purchasers and during the period of distribution of the Securities.

A Prospectus Supplement relating to a particular offering of Securities will identify the person(s) offering the Securities, as applicable, each underwriter or agent, as the case may be, engaged by Hydro One Limited and/or the Selling Shareholder in connection with the offering and sale of the Securities, and will set forth the terms of the offering of the Securities, including the public offering price of such Securities (or the manner of determination thereof if offered on a non-fixed price basis), the proceeds to, and the portion of expenses borne by, Hydro One Limited and/or the Selling Shareholder, as applicable, from such sale, any underwriting discounts or commissions and any discounts or concessions allowed, re-allowed or paid by any underwriter to other dealers and other material terms of the plan of distribution.

If underwriters purchase Securities as principal, the Securities will be acquired by the underwriters for their own account and may be resold from time to time in one or more transactions, including negotiated transactions, at a fixed public offering price or at varying prices determined at the time of sale. The obligations of the underwriters to purchase such Securities will be subject to certain conditions precedent, and the underwriters will be obligated to purchase all of the Securities offered pursuant to any Prospectus Supplement if any of such Securities are purchased. Any public offering price and any discounts or concessions allowed, re-allowed or paid to dealers may be changed from time to time.

The Securities may also be sold (i) directly by Hydro One Limited and/or, in the case of Common Shares and Preferred Shares, the Selling Shareholder at such prices and upon such terms as agreed to by Hydro One Limited and/or the Selling Shareholder, as applicable, and one or more purchasers; or (ii) through agents designated by Hydro One Limited and/or the Selling Shareholder from time to time. Any agent involved in the offering and sale of the Securities in respect of which this Prospectus is delivered will be named, and any commissions payable by Hydro One Limited and/or the Selling Shareholder, as applicable, to such agent will be set forth, in the applicable Prospectus Supplement. Unless otherwise indicated in a Prospectus Supplement, any agent is acting on a best efforts basis for the period of its appointment.

Underwriters, dealers and agents who participate in the distribution of the Securities may be entitled under agreements to be entered into with Hydro One Limited and/or the Selling Shareholder to indemnification by Hydro One Limited and/or the Selling Shareholder, as applicable, against certain liabilities, including liabilities under securities legislation, or to contribution with respect to payments which such underwriters, dealers or agents may be required to make in respect thereof. Those underwriters, dealers and agents may be customers of, engage in transactions with or perform services for us or our subsidiaries in the ordinary course of business.

The Securities have not been and will not be registered under the United States Securities Act of 1933, as amended (the "**U.S. Securities Act**"), or the securities laws of any state of the United States. Accordingly, the Securities may not be offered, sold or delivered, directly or indirectly, within the United States (as defined in Regulation S ("**Regulation S**") under the U.S. Securities Act) (the "**United States**") or to, or for the account or benefit of, any U.S. persons (as defined in Regulation S) except to persons who are "qualified institutional buyers" in reliance on Rule 144A under the U.S. Securities Act ("**Rule 144A**") or in accordance with another exemption from registration, and each underwriter or agent will agree that it will not offer, sell or deliver the Securities within the United States or to any U.S. persons, except in accordance with Rule 144A or another exemption from registration under the U.S. Securities Act. In addition, with respect to an offering of Securities sold outside the United States in compliance with Regulation S, until 40 days after the commencement of such offering of Securities, an offer or sale of such Securities within the United States or to any U.S. persons by a dealer (whether or not participating in the offering) may violate the registration requirements of the U.S. Securities Act unless the dealer makes the offer or sale in accordance with Rule 144A or another exemption from the registration requirements of the U.S. Securities Act.

The Securities may also be sold internationally as permitted pursuant to private placement exemptions under local securities laws.

Each issue by Hydro One Limited of Preferred Shares, Debt Securities, Subscription Receipts, Warrants and Units will be a new issue of securities with no established trading market. In addition, there is currently no trading market for the Series 1 Preferred Shares and Series 2 Preferred Shares. Unless otherwise specified in a Prospectus Supplement relating to an offering of Preferred Shares, Debt Securities, Subscription Receipts, Warrants and Units (whether by Hydro One Limited or in the case of Preferred Shares, the Selling Shareholder), such Securities will not be listed on any securities or stock exchange. Any underwriters, dealers or agents to or through whom such Securities are sold may make a market in such Securities, but they will not be obligated to do so and may discontinue any market making at any time without notice. No assurance can be given that a trading market in any such Securities will develop or as to the liquidity of any trading market for such Securities.

In connection with any offering of the Securities (unless otherwise specified in a Prospectus Supplement), the underwriters or agents may over-allot or effect transactions which stabilize, maintain or otherwise affect the market price of the Securities offered at levels other than those which might otherwise prevail on the open market. These transactions may be commenced, interrupted or discontinued at any time.

SELLING SHAREHOLDER

General

The Province is the principal shareholder of Hydro One Limited. As of March 29, 2016, the Province beneficially owned or exercised control over (i) 500,103,660 Common Shares, representing approximately 84% of the issued and outstanding Common Shares; and (ii) 16,720,000 Series 1 Preferred Shares, representing 100% of the issued and outstanding Preferred Shares. Such Common Shares and Series 1 Preferred Shares are owned both of record and beneficially by the Province. See "**Prior Sales**" for information on the Common Shares and Series 1 Preferred Shares acquired by the Province preceding the date of this Prospectus.

The terms under which the Common Shares and/or Preferred Shares will be offered by the Selling Shareholder will be described in the applicable Prospectus Supplement. The Prospectus Supplement concerning any offering of the Common Shares and/or Preferred Shares by the Selling Shareholder will include, without limitation, where applicable: (i) the name(s) of the Selling Shareholder; (ii) the number of Common Shares and/or Preferred Shares, as applicable, owned, controlled or directed by the Selling Shareholder; (iii) the number of Common Shares and/or Preferred Shares, as applicable, being distributed for the account of the Selling Shareholder; (iv) the number of Common Shares and/or Preferred Shares, as applicable, to be owned, controlled or directed by the Selling Shareholder after the distribution and the percentage that number or amount represents out of the total number of outstanding Common Shares and/or Preferred Shares, as applicable; (v) whether the Common Shares and/or Preferred Shares, as applicable, are owned by the Selling Shareholder both of record and beneficially, of record only or beneficially only; (vi) if the Selling Shareholder purchased any of the Common Shares and/or Preferred Shares, as applicable, held by it in the 24 months preceding the date of the applicable Prospectus Supplement, the date or dates the Selling Shareholder acquired the Common Shares and/or Preferred Shares, as applicable; and (vii) if the Selling Shareholder acquired the Common Shares and/or Preferred Shares, as applicable, held by it in the 12 months preceding the date of the applicable Prospectus Supplement, the cost thereof to the Selling Shareholder in the aggregate and on a per security basis.

During the 25 months that this Prospectus remains valid, the Selling Shareholder may offer and sell Common Shares and/or Preferred Shares pursuant to this Prospectus. The Selling Shareholder may also sell Common Shares and/or Preferred Shares other than pursuant to this Prospectus under available exemptions from the prospectus requirements of Canadian securities legislation. The Selling Shareholder may sell none, some or all of the Common Shares and/or Preferred Shares qualified for distribution by it pursuant to this Prospectus. Hydro One Limited cannot predict when or in what amounts the Selling Shareholder may sell any of the Common Shares and/or Preferred Shares qualified for distribution by this Prospectus.

The Province has indicated that it intends to sell Common Shares over time, until it holds approximately 40% of Hydro One Limited. The *Electricity Act, 1998* (Ontario) (the "**Electricity Act**") restricts the Province from selling securities of Hydro One Limited carrying a voting right either under all circumstances or under some circumstances that have occurred and are continuing ("**Voting Securities**") (including Common Shares of Hydro One Limited) if it would own less than 40% of the outstanding number of Voting Securities of that class or series after the sale. If as a result of the issuance of additional Voting Securities by Hydro One Limited, the Province owns less than 40% of the outstanding number of Voting Securities of any class or series, the Province must, subject to the approval of the Lieutenant Governor in Council and the necessary appropriations from the Legislature, take steps to acquire as many Voting Securities of that class or series as are necessary to increase the Province's ownership to not less than 40% of the outstanding number of Voting Securities of that class or series. The manner in which, and the time by which, the Province must acquire these additional Voting Securities will be determined by the Lieutenant Governor in Council.

The Province has been granted pre-emptive rights by Hydro One Limited to assist it in meeting its ownership requirements under the Electricity Act as described in the documents incorporated by reference in this Prospectus.

In connection with the completion of the initial public offering of Hydro One Limited, on November 5, 2015, Hydro One and the Province entered into (i) a governance agreement (the "**Governance Agreement**") to address the Province's role in the governance of Hydro One Limited, and (ii) a registration rights agreement (the "**Registration Rights Agreement**") to provide the Province with the right to require Hydro One Limited to facilitate future secondary offerings of Common Shares or Preferred Shares owned or controlled by the Province.

The material terms of the Governance Agreement are summarized in the documents incorporated by reference in this Prospectus and the material terms of the Registration Rights Agreement are summarized below. A copy of each of the Governance Agreement and the Registration Rights Agreement has been filed on SEDAR and is available under Hydro One Limited's profile at www.sedar.com. The discussion in this Prospectus and in the documents incorporated by reference in this Prospectus concerning the Governance Agreement and the Registration Rights Agreement is not complete, and is qualified in its entirety to the text of the Governance Agreement and the Registration Rights Agreement, each of which should be referred to.

Registration Rights Agreement

Pursuant to the Registration Rights Agreement, Hydro One Limited has granted the Province certain demand registration rights providing that, from time to time while the Province is a "control person" of Hydro One Limited within the meaning of applicable Canadian securities laws, the Province can require Hydro One Limited to file, at the expense of the Province (except for internal expenses of Hydro One Limited or other expenses that Hydro One Limited would have incurred even in the absence of such a request), and subject to certain exceptions, one or more prospectuses and take other procedural steps as may be reasonably necessary to facilitate a secondary offering in Canada of all or any portion of the Common Shares or Preferred Shares held by the Province.

If Hydro One Limited proposes to undertake a Canadian public offering by prospectus, the Province is entitled, while it is a "control person" of Hydro One Limited within the meaning of applicable Canadian securities laws, to include Common Shares or Preferred Shares owned by it as part of that offering, provided that the underwriters may reduce the number of Common Shares or Preferred Shares proposed to be sold if in their reasonable judgment all of the Common Shares or Preferred Shares proposed to be offered by Hydro One Limited and the Province may not be sold in an orderly manner within a price range reasonably acceptable to Hydro One Limited. In that case, the Common Shares or Preferred Shares to be sold will be allocated pro rata between Hydro One Limited and the Province based on their relative proportionate number of Common Shares or Preferred Shares requested to be included in the offering. Hydro One Limited and the Province will share the expenses of the offering (except for internal expenses of Hydro One Limited) in proportion to the gross proceeds they each receive from the offering.

Hydro One Limited has also agreed to use commercially reasonable efforts to assist the Province, at the Province's expense, in any sale by it of Common Shares or Preferred Shares of Hydro One Limited pursuant to an exemption from the prospectus requirements, in the preparation of an offering memorandum and other documentation and by facilitating due diligence by the prospective buyer.

Hydro One Limited and the Province have also agreed to enter into customary agreements, including "lock-up" agreements, on customary market terms in connection with such transactions. Hydro One Limited also agreed to certain indemnification and contribution covenants in favour of the Province and any underwriters involved in such transactions.

Under the Registration Rights Agreement, the Province can designate any "public entity" (as defined in the *Financial Administration Act* (Ontario)) that beneficially owns or exercises control or direction over Common Shares or Preferred Shares as being entitled to the rights and benefits of the Province under the Registration Rights Agreement. References in this Prospectus to "Selling Shareholder" shall mean to refer to any such entity designated by the Province from time to time.

DESCRIPTION OF SHARE CAPITAL

The following is a summary of the material attributes and characteristics of Hydro One Limited's authorized share capital, including the Common Shares and Preferred Shares that may be offered and sold from time to time under this Prospectus. The following summary is not complete and is subject to, and qualified in its entirety by reference to, the terms and provisions of Hydro One Limited's articles, as they may be amended from time to time, which are available under Hydro One Limited's profile on SEDAR at www.sedar.com.

Hydro One Limited's authorized share capital consists of an unlimited number of Common Shares and an unlimited number of Preferred Shares, issuable in series, of which 595,000,000 Common Shares, 16,720,000 Series 1 Preferred Shares and no Series 2 Preferred Shares are issued and outstanding as of the date of this Prospectus.

Common Shares

Holders of Common Shares are entitled to receive notice of and to attend all meetings of shareholders, except meetings at which only the holders of another class or series of shares are entitled to vote separately as a class or series, and holders of Common Shares are entitled to one vote per share at all such meetings of shareholders. Hydro One Limited's Common Shares are not redeemable or retractable. Subject to the rights, privileges, restrictions and conditions attaching to any other class or series of shares, including the Series 1 Preferred Shares and Series 2 Preferred Shares, holders of Common Shares are entitled to receive dividends if, as, and when declared by the board of directors (the "**Board**") of Hydro One Limited. Subject to the rights, privileges, restrictions and conditions attaching to any other class or series of shares, including the Series 1 Preferred Shares and Series 2 Preferred Shares, holders of Common Shares are also entitled to receive the remaining assets of Hydro One Limited upon its liquidation, dissolution or winding-up or other distribution of Hydro One Limited's assets for the purposes of winding-up its affairs.

Voting Securities, which include the Common Shares, are subject to share ownership restrictions under the Electricity Act. The share ownership restrictions provide that no person or company (or combination of persons or companies acting jointly or in concert), other than the Province or an underwriter who holds Voting Securities solely for the purposes of distributing them to purchasers who comply with the share ownership restrictions, may beneficially own or exercise control or direction over more than 10% of any class or series of Voting Securities of Hydro One Limited. The articles of Hydro One Limited provide for comprehensive enforcement mechanisms that are applicable in the event of a contravention of the share ownership requirements.

Preferred Shares

Hydro One Limited may from time to time issue Preferred Shares in one or more series. Prior to issuing shares in a series, the Board is required to fix the number of shares in the series and determine the designation, rights, privileges, restrictions and conditions attaching to that series of Preferred Shares.

Subject to the OBCA, holders of Preferred Shares or a series thereof are not entitled to receive notice of, to attend or to vote at any meeting of the shareholders of Hydro One Limited except that votes may be granted to a series of Preferred Shares when dividends have not been paid on any one or more series as determined by the applicable series provisions. Each series of Preferred Shares ranks on parity with every other series of Preferred Shares with respect to dividends and the distribution of assets and return of capital in the event of the liquidation, dissolution or winding up of Hydro One Limited. The Preferred Shares are entitled to a preference over the Common Shares and any other shares ranking junior to the preferred shares with respect to payment of dividends and the distribution of assets and return of capital in the event of the liquidation, dissolution or winding up of Hydro One Limited.

As of the date of this Prospectus, Hydro One Limited has authorized for issuance two series of Preferred Shares: (i) the Series 1 Preferred Shares and (ii) the Series 2 Preferred Shares, of which 16,720,000 Series 1 Preferred Shares and no Series 2 Preferred Shares are issued and outstanding as of the date of this Prospectus. The material terms of the Series 1 Preferred Shares and the Series 2 Preferred Shares are summarized below. With respect to any offering of Series 1 Preferred Shares and/or Series 2 Preferred Shares, any amendments to the terms described herein, and the offering price of such Series 1 Preferred Shares and/or Series 2 Preferred Shares, together with any other terms then material to the offering of Series 1 Preferred Shares and/or Series 2 Preferred Shares will be described in the Prospectus Supplement filed in respect of the offering of such Series 1 Preferred Shares and/or Series 2 Preferred Shares.

The particular terms and provisions of any other series of Preferred Shares offered pursuant to any Prospectus Supplement, and the extent to which the general terms and provisions described below may apply to them, will be described in the Prospectus Supplement filed in respect of the offering of such series of Preferred Shares. This description may include, without limitation and as applicable: (i) the offering price of the series of Preferred Shares; (ii) the title, designation and number of shares of the series of Preferred Shares; (iii) the dividend rate or method of calculation, the payment dates for dividends and whether dividends will be cumulative or noncumulative, and, if cumulative, the dates from which dividends will begin to accumulate; (iv) any conversion or exchange features or rights; (v) whether the series of Preferred Shares will be subject to redemption and the redemption price and other terms and conditions relative to the redemption rights; (vi) any sinking fund provisions; (vii) the circumstances in which the series of Preferred Shares will have voting rights, if any; (vii) any other rights, privileges, restrictions and conditions attaching to the series of Preferred Shares; and (viii) any other specific terms that are material to such series of Preferred Shares.

Series 1 Preferred Shares and Series 2 Preferred Shares

The following is a summary of the material terms of the Series 1 Preferred Shares and Series 2 Preferred Shares.

For the period commencing from October 31, 2015 and ending on and including November 19, 2020, the holders of Series 1 Preferred Shares will be entitled to receive fixed cumulative preferential dividends of $1.0625 per share per year, if and when declared by the Board, payable quarterly on the 20th day of November, February, May and August in each year. The dividend rate will reset on November 20, 2020 and every five years thereafter at a rate equal to the sum of the then five-year Government of Canada bond yield and 3.53%. The Series 1 Preferred Shares will not be redeemable by Hydro One Limited prior to November 20, 2020, but will be redeemable by Hydro One Limited on November 20, 2020 and on November 20 every fifth year thereafter at a redemption price equal to $25.00 for each Series 1 Preferred Share redeemed, plus any accrued or unpaid dividends.

The holders of Series 1 Preferred Shares will have the right, at their option, on November 20, 2020 and on November 20 every fifth year thereafter, to convert all or any of their Series 1 Preferred Shares into Series 2 Preferred Shares on a one-for-one basis, subject to certain restrictions on conversion.

The holders of Series 2 Preferred Shares will be entitled to receive quarterly floating rate cumulative dividends, if and when declared by the Board, at a rate equal to the sum of the then three-month Government of Canada treasury bill rate and 3.53% as reset quarterly. The Series 2 Preferred Shares will be redeemable by Hydro One Limited at a redemption price equal to $25.00 for each Series 2 Preferred Share redeemed if redeemed on November 20, 2025 or on November 20 every fifth year thereafter or $25.50 for each Series 2 Preferred Share redeemed if redeemed on any other date after November 20, 2020, in each case plus any accrued or unpaid dividends. The holders of Series 2 Preferred Shares will have the right, at their option, on November 20, 2025 and on November 20 every fifth year thereafter, to convert all or any of their Series 2 Preferred Shares into Series 1 Preferred Shares on a one-for-one basis, subject to certain restrictions on conversion.

In the event of the liquidation, dissolution or winding-up of Hydro One Limited, or any other distribution of assets of Hydro One Limited for the purpose of winding-up its affairs, the holders of Series 1 Preferred Shares and Series 2 Preferred Shares will be entitled to receive $25.00 for each Series 1 Preferred Share and each Series 2 Preferred Share held by them, plus any unpaid dividends, before any amounts are paid or any assets of Hydro One Limited are distributed to holders of Common Shares and any shares ranking junior to the Series 1 Preferred Shares and Series 2 Preferred Shares. After payment of those amounts, the holders of Series 1 Preferred shares and Series 2 Preferred shares will not be entitled to share in any further distribution of the property or assets of Hydro One Limited.

Except as required by the OBCA, neither the holders of Series 1 Preferred Shares nor the holders of Series 2 Preferred Shares shall be entitled to receive notice of, or to attend meetings of shareholders of Hydro One Limited and shall not be entitled to vote at any such meeting, unless Hydro One Limited fails for eight quarters, whether or not consecutive, to pay in full the dividends payable on the Series 1 Preferred Shares or Series 2 Preferred Shares, as applicable, whereupon the holders of Series 1 Preferred Shares and Series 2 Preferred Shares, as applicable, shall become entitled to receive notice of and attend all meetings of shareholders, except class meetings of any other class of shares, and shall have one vote for each Series 1 Preferred Share or Series 2 Preferred Share held at such meetings, as applicable.

DESCRIPTION OF DEBT SECURITIES

The following sets forth certain general terms and provisions of the Debt Securities. The particular terms and provisions of Debt Securities offered pursuant to any Prospectus Supplement, and the extent to which the general terms and provisions described below may apply to them, will be described in the Prospectus Supplement filed in respect of such Debt Securities.

The Debt Securities will be issued under one or more indentures or supplements thereto (as applicable, the "**Indenture**") between Hydro One Limited and a trustee. The statements made hereunder relating to the Indenture and the Debt Securities to be issued thereunder are summaries of certain anticipated provisions thereof and do not purport to be complete and are subject to, and are qualified in their entirety by reference to, all provisions of the Indenture.

The Debt Securities will be direct obligations of Hydro One Limited and may be guaranteed by some or all subsidiaries of Hydro One Limited. The Debt Securities will be senior or subordinated indebtedness of Hydro One Limited and may be secured or unsecured. Unless otherwise provided in the applicable Prospectus Supplement, a series of Debt Securities may be reopened for the issuance of additional Debt Securities of such series.

The particular terms of each issue of Debt Securities will be described in the related Prospectus Supplement. Such description will identify the trustee under the Indenture pursuant to which the Debt Securities are to be issued, and will include, where applicable:

- the designation and aggregate principal amount of the Debt Securities;
- any limit on the aggregate principal amount of the Debt Securities;
- the authorized denominations of the Debt Securities;
- the currency or currency units for which the Debt Securities may be purchased and the currency or currency units in which the principal and any interest is payable (in either case, if other than Canadian dollars);
- the price at which the Debt Securities will be issued or whether the Debt Securities will be issued on a non-fixed price basis;
- the date or dates on which the Debt Securities will mature;
- the rate or rates per annum (which may be fixed or variable) at which the Debt Securities will bear interest (if any), or the method of determination of such rates (if any);
- the dates on which any such interest will be payable and the record dates for such payments;
- whether the Debt Securities will be subject to redemption or call, and, if so, the terms of such redemption or call provisions;

- whether the Debt Securities will be subject to any sinking fund provisions;
- the ranking of the Debt Securities relative to the other debt of Hydro One Limited and the terms of the subordination of any subordinated Debt Securities;
- whether or not the Debt Securities will be secured or unsecured, and the terms of any security provided;
- whether the Debt Securities are convertible or exchangeable into other Securities and the terms of conversion or exchange;
- any terms relating to the modification, amendment or waiver of any terms of such Debt Securities or the applicable Indenture;
- covenants relating to the payment of principal and interest on the Debt Securities and other covenants applicable to such Debt Securities;
- the events of default applicable to the Debt Securities;
- whether or not the Debt Securities will be guaranteed by some or all of the subsidiaries of Hydro One Limited, and the terms of any such guarantees; and
- any other material terms and conditions of the Debt Securities.

Debt Securities may, at the option of Hydro One Limited, be issued in fully registered form, in "book-entry only" form or they may be uncertificated, which will be set forth in the applicable Prospectus Supplement along with a description of the applicable ownership (including beneficial ownership), transfer and exchange provisions.

Debt Securities may be offered separately or together with other Securities under this Prospectus and may be convertible or exchangeable into other Securities under this Prospectus.

DESCRIPTION OF SUBSCRIPTION RECEIPTS

The following sets forth the general terms of the Subscription Receipts. The particular terms and provisions of Subscription Receipts offered pursuant to any Prospectus Supplement, and the extent to which the general terms and provisions described below may apply to them, will be described in the Prospectus Supplement filed in respect of such offering of Subscription Receipts. Subscription Receipts may be offered separately or together with other Securities. The Subscription Receipts will be issued under one or more subscription receipt agreements that will be entered into by Hydro One Limited and an escrow or other agent at the time of issuance of the Subscription Receipts.

Subscription Receipts will entitle the holder thereof to receive other Securities (typically Common Shares), for no additional consideration, upon the completion of a particular transaction or event, typically an acquisition of the assets or securities of another entity by the Company. The subscription proceeds from an offering of Subscription Receipts will be held in escrow by an escrow or other agent pending the completion of the transaction or the termination time (the time at which the escrow terminates regardless of whether the transaction or event has occurred). Holders of Subscription Receipts will receive other Securities upon the completion of the particular transaction or event or, if the transaction or event does not occur by the termination time, a return of the subscription funds for their Subscription Receipts together with any interest or other income earned thereon. Subscription Receipts may be offered independently or together with other Securities.

Holders of Subscription Receipts are not shareholders of Hydro One Limited. The particular terms and provisions of Subscription Receipts offered by this Prospectus will be described in the Prospectus Supplement filed in respect of the offering of such Subscription Receipts. This description may include, without limitation and as applicable: (i) the number of Subscription Receipts offered; (ii) the price at which the Subscription Receipts will be offered; (iii) the terms, conditions and procedures pursuant to which the holders of Subscription Receipts will become entitled to receive other Securities; (iv) the number of other Securities that may be obtained pursuant to each Subscription

Receipt; (v) the designation and terms of any other Securities with which the Subscription Receipts will be offered, if any, and the number of Subscription Receipts that will be offered with each such Security; (vi) the terms relating to the holding and release of the gross proceeds from the sale of the Subscription Receipts plus any interest and income earned thereon; (vii) the material income tax consequences of owning, holding and disposing of the Subscription Receipts; and (viii) any other material terms and conditions of the Subscription Receipts including, without limitation, transferability and adjustment terms and whether the Subscription Receipts will be listed on a securities exchange.

DESCRIPTION OF WARRANTS

The following sets forth the general terms and conditions of the Warrants. The particular terms and provisions of Warrants offered pursuant to any Prospectus Supplement, and the extent to which the general terms and provisions described below may apply to them, will be described in the Prospectus Supplement filed in respect of such offering of Warrants. The Warrants either will be issued under a warrant indenture or agreement that will be entered into by Hydro One Limited and a trustee or warrant agent at the time of issuance of the Warrants or will be represented by warrant certificates issued by Hydro One Limited.

Warrants will entitle the holder thereof to receive other Securities (typically Common Shares or Preferred Shares) upon the exercise thereof and payment of the applicable exercise price. A Warrant is typically exercisable for a specific period of time at the end of which time it will expire and cease to be exercisable. Warrants may be offered independently or together with other Securities and may be attached to, or separate from, any such offered Securities.

Holders of Warrants are not shareholders of Hydro One Limited. The particular terms and provisions of Warrants offered by this Prospectus will be described in the Prospectus Supplement filed in respect of the offering of such Warrants. This description may include, without limitation and as applicable: (i) the title or designation of the Warrants; (ii) the number of Warrants offered and the offering price thereof; (iii) the number of other Securities purchasable upon exercise of the Warrants and the procedures for exercise; (iv) the exercise price of the Warrants; (v) the dates or periods during which the Warrants are exercisable and when they expire; (vi) the designation and terms of any other Securities with which the Warrants will be offered, if any, and the number of Warrants that will be offered with each such Security; (vii) the material income tax consequences of owning, holding and disposing of the Warrants; and (viii) any other material terms and conditions of the Warrants including, without limitation, transferability and adjustment terms and whether the Warrants will be listed on a securities exchange.

DESCRIPTION OF UNITS

The following sets for the general terms and conditions of the Units. The particular terms and provisions of the Units offered by any Prospectus Supplement, and the extent to which the general terms and provisions described below may apply to them, will be described in the Prospectus Supplement filed in respect of such offering of Units. Units are securities consisting of one or more of the other Securities described in this Prospectus offered together as a "Unit". A Unit is typically issued such that the holder thereof is also the holder of each Security included in the Unit. Thus, the holder of a Unit will have the rights and obligations of a holder of each Security comprising the Unit. The unit agreement under which a Unit is issued may provide that the Securities comprising the Unit may not be held or transferred separately at any time or at any time before a specified date.

The particular terms and provisions of Units offered by this Prospectus will be described in the Prospectus Supplement filed in respect of the offering of such Units. This description may include, without limitation and as applicable: (i) the designation and terms of the Units and of the Securities comprising the Units, including whether and under what circumstances those Securities may be held or transferred separately; (ii) any provisions for the issuance, payment, settlement, transfer or exchange of the Units or of the Securities comprising the Units; (iii) whether the Units will be issued in fully registered or global form; and (iv) any other material terms and conditions of the Units.

PRIOR SALES

On August 31, 2015, in connection with the incorporation of Hydro One Limited, Hydro One Limited issued 100,000 Common Shares to the Province at a subscription price of $1.00 per share for an aggregate subscription price of $100,000.

On October 31, 2015, Hydro One Limited issued Common Shares and 16,720,000 Series 1 preferred shares to the Province as consideration for the acquisition of all of the issued and outstanding shares of Hydro One Inc. by Hydro One Limited from the Province.

Prior to the closing of its initial public offering, Hydro One Limited established two share grant plans, one for the benefit of certain members of the Power Workers' Union (the "**PWU Share Grant Plan**") and one for the benefit of certain members of The Society of Energy Professionals (the "**Society Share Grant Plan**"). Both plans provide for the issuance of Common Shares from treasury to certain eligible members of such unions over a number of years, such number of Common Shares to be determined by reference to a portion of each eligible member's salary and $20.50, the offering price of the Common Shares in the initial public offering. The maximum number of Common Shares issuable under the PWU Share Grant Plan is 3,981,763 Common Shares and the maximum number of Common Shares issuable under the Society Share Grant Plan is 1,434,686 Common Shares. On November 2, 2015 rights to receive such Common Shares were granted to participants under both plans. For details of the share grant plans and the grants made, see Note 21 to the 2015 Annual Financial Statements.

On November 4, 2015, the Province subscribed for an additional 2,600,000,000 Common Shares at a subscription price of $1.00 per share for an aggregate subscription price of $2,600,000,000 in connection with the funding of the departure tax payable as a consequence of the initial public offering of Hydro One Limited.

The outstanding Common Shares were consolidated on November 4, 2015 such that 595,000,000 Common Shares were issued and outstanding immediately prior to the closing of the initial public offering.

On November 5, 2015, Hydro One Limited completed its initial public offering by way of a secondary offering of 81,100,000 common shares by the Province at a price of $20.50 per share for aggregate gross proceeds to the Province of $1,662,550,000. On November 12, 2015, the underwriters in the initial public offering exercised their option to purchase an additional 8,150,000 Common Shares from the Province at a price of $20.50 per share for additional aggregate gross proceeds to the Province of $167,075,000. Hydro One Limited did not receive any proceeds from the initial public offering.

Following the closing of the initial public offering, on November 5, 2015, the Province sold 3,756,097 Common Shares to two trusts established for the benefit of the Power Workers' Union at a price per share of $20.50. Following closing of the initial public offering, on November 5, 2015 and November 17, 2015, the Province sold an aggregate of 1,890,243 Common Shares to two trusts established for the benefit of The Society of Energy Professionals, in each case at a price per share of $20.50.

TRADING PRICE AND VOLUME

The Common Shares are listed on the TSX and commenced trading under the symbol "H" on November 5, 2015. The following table sets forth the reported high and low sales prices and the trading volumes for the Common Shares as reported by the TSX for each month beginning with the partial month from November 5, 2015, being the date of the closing of Hydro One Limited's initial public offering:

Period	High ($)	Low ($)	Volume
November 5, 2015 to November 30, 2015…………	23.15	21.01	31,005,159
December 2015 ……………………………………	22.95	21.53	7,060,538
January 2016 ………………………………………	22.60	21.85	3,929,776
February 2016 ……………………………………...	23.31	21.90	4,489,699
March 1, 2016 to March 29, 2016……..………	24.25	23.15	6,961,843

CERTAIN INCOME TAX CONSIDERATIONS

The applicable Prospectus Supplement may describe certain Canadian federal income tax considerations generally applicable to investors of purchasing, holding and disposing of the Securities offered thereunder.

STATUTORY RIGHTS OF WITHDRAWAL AND RESCISSION

Securities legislation in certain of the provinces and territories of Canada provides purchasers with the right to withdraw from an agreement to purchase Securities. This right may be exercised within two business days after receipt or deemed receipt of a prospectus and any amendment, irrespective of the determination at a later date of the purchase price of the Securities distributed if offered on a non-fixed price basis. In several of the provinces and territories, securities legislation further provides a purchaser with remedies for rescission or, in some jurisdictions, revisions of the price or damages if the prospectus and any amendment contains a misrepresentation or is not delivered to the purchaser, provided that such remedies for rescission, revisions of the price or damages are exercised by the purchaser within the time limit prescribed by the securities legislation of the purchaser's province or territory. The purchaser should refer to any applicable provisions of the securities legislation of the purchaser's province or territory for the particulars of these rights or consult with a legal advisor.

In an offering of convertible, exchangeable or exercisable Securities, investors are cautioned that the statutory right of action for damages for a misrepresentation contained in the Prospectus is limited, in certain provincial and territorial securities legislation, to the price at which the convertible, exchangeable or exercisable securities are offered to the public under this Prospectus. This means that, under the securities legislation of certain provinces and territories of Canada, if the purchaser pays additional amounts upon the conversion, exchange or exercise of the Security, those amounts may not be recoverable under the statutory right of action for damages that applies in those provinces or territories. The purchaser should refer to any applicable provisions of the securities legislation of the purchaser's province or territory for the particulars of these rights or consult with a legal advisor.

Original purchasers of convertible, exchangeable or exercisable Securities under this Prospectus will have a contractual right of rescission against Hydro One Limited in respect of the conversion, exchange or exercise of such Securities, as the case may be. This contractual right of rescission will entitle such original purchasers to receive the amount paid upon conversion, exchange or exercise, upon surrender of the underlying Securities gained thereby, in the event that this Prospectus (as supplemented or amended) contains a misrepresentation, provided that: (i) the conversion, exchange or exercise takes place within 180 days of the date of the purchase of the convertible, exchangeable or exercisable Security under this Prospectus; and (ii) the right of rescission is exercised within 180 days of the date of the purchase of the convertible, exchangeable or exercisable Security under this Prospectus. This contractual right of rescission will be consistent with the statutory right of rescission described under section 130 of the *Securities Act* (Ontario), and is in addition to any other right or remedy available to original purchasers under section 130 of the *Securities Act* (Ontario) or otherwise at law. The purchaser should refer to any applicable provisions of the securities legislation of the purchaser's province or territory for the particulars of these rights or consult with a legal advisor.

To the extent the Selling Shareholder is offering and selling Common Shares or Preferred Shares pursuant to this Prospectus, certain remedies, including statutory rights for rescission or damages, may not be available against the Province. See "Risk Factors — Potential Difficulties in Enforcing Civil Liabilities Against the Province". The purchaser should refer to any applicable provisions of the securities legislation of the purchaser's province or territory for the particulars of these rights or consult with a legal advisor.

EXEMPTIONS

On August 27, 2015, Hydro One Inc. obtained a decision from the Ontario Securities Commission, as principal regulator, on behalf of itself and the securities regulatory authorities in each of the other provinces and territories of Canada, exempting Hydro One Limited from the requirements in section 3.2 of National Instrument 52-107 – *Acceptable Accounting Principles and Auditing Standards* which requires financial statements to be prepared in accordance with and disclosed in compliance with International Financial Reporting Standards. The decision granting the exemption permits Hydro One Limited to prepare and present its financial statements required to be filed with the securities regulatory authorities in each of the provinces and territories of Canada (including financial statements included in any prospectus of Hydro One Limited) in accordance with U.S. GAAP until the earliest to occur of the following:

(a) January 1, 2019;

(b) if Hydro One Limited ceases to have activities subject to rate regulation, the first day of Hydro One Limited's financial year commencing after its ceases to have such activities subject to rate regulation; and

(c) the effective date prescribed by the International Accounting Standards Board for the mandatory application of a standard within International Financial Reporting Standards specific to entities with activities subject to rate regulation.

The exemption was requested: (i) due to continuing uncertainty of accounting treatment and lack of a specific mandatory standard for entities with activities subject to rate regulation under International Financial Reporting Standards; (ii) because U.S. GAAP provides a more suitable set of accounting principles for entities with activities subject to rate regulation and is more consistent with those prescribed by the Ontario Energy Board in its Accounting Procedures Handbook for Electric Distribution Utilities; and (iii) to ensure consistency with and comparability to the financial statements of Hydro One Inc. which reports in U.S. GAAP, as well as Hydro One Limited's industry peers that currently report in U.S. GAAP.

AGENT FOR SERVICE OF PROCESS IN CANADA

Kathryn Jackson, a director of Hydro One Limited, resides outside of Canada. Ms. Jackson has appointed Hydro One Limited as agent for service of process at 483 Bay Street, 8th Floor, South Tower, Toronto, Ontario, M5G 2P5. Purchasers are advised that it may not be possible for investors to enforce judgments obtained in Canada against any person who resides outside of Canada, even if the party has appointed an agent for service of process.

LEGAL MATTERS

Unless otherwise indicated in the Prospectus Supplement relating to an offering of Securities, the particular offering of Securities will be subject to approval of certain legal matters on behalf of Hydro One Limited by Osler, Hoskin & Harcourt LLP. As of the date of this Prospectus, the partners and associates of Osler, Hoskin & Harcourt LLP, as a group, beneficially owned, directly or indirectly, less than 1% of outstanding securities of any class issued by Hydro One Limited. In addition, certain legal matters in connection with any offering of Securities will be passed upon for any underwriters, agents or the Selling Shareholder, as applicable, by counsel to be designated at the time of the offering.

AUDITORS, TRANSFER AGENT AND REGISTRAR

KPMG LLP, Chartered Professional Accountants, located at 333 Bay Street, Suite 4600, Bay Adelaide Centre, Toronto, Ontario, M5H 2S5, is the auditor of Hydro One Limited and has confirmed that it is independent of Hydro One Limited within the meaning of the relevant rules and related interpretations prescribed by the relevant professional bodies in Canada and any applicable legislation or regulation.

Computershare Trust Company of Canada at its principal office in Toronto, Ontario is the transfer agent and registrar for the Common Shares.

PROMOTERS

Hydro One Inc. has taken the initiative in founding and organizing Hydro One Limited and may therefore be considered a promoter of Hydro One Limited for the purposes of applicable securities legislation. In connection with a series of pre-closing transactions completed in connection with the initial public offering of Hydro One Limited, on October 31, 2015, Hydro One Limited acquired all of the issued and outstanding common shares of Hydro One Inc. from the Province in exchange for the issuance to the Province of 16,720,000 Series 1 Preferred Shares and 12,197,500,000 Common Shares. For further details concerning the relationship between Hydro One Limited and Hydro One Inc., see the documents incorporated by reference in this Prospectus.

Although the Province executed a certificate page as a promoter of Hydro One Limited for purposes of Hydro One Limited's initial public offering, as a result of the entering into of the Governance Agreement and completion of the initial public offering, Hydro One Limited no longer believes the Province is a promoter of Hydro One Limited. For further details concerning the Province's relationship with Hydro One Limited, please see "Selling Shareholder" and "Prior Sales" above and the documents incorporated by reference in this Prospectus.

CERTIFICATE OF HYDRO ONE LIMITED AND HYDRO ONE INC.

Dated: March 30, 2016

This short form prospectus, together with the documents incorporated in this prospectus by reference, will, as of the date of the last supplement to this prospectus relating to the securities offered by this prospectus and the supplement(s), constitute full, true and plain disclosure of all material facts relating to the securities offered by this short form prospectus and the supplement(s) as required by the securities legislation of each of the provinces and territories of Canada.

Secondary Offering **August 1, 2017**

SHORT FORM PROSPECTUS

HYDRO ONE LIMITED

$1,400,000,000
4.00% Convertible Unsecured Subordinated Debentures represented by Instalment Receipts

The 4.00% convertible unsecured subordinated debentures (the "Debentures") of Hydro One Limited ("Hydro One Limited", or the "Corporation") offered hereby (the "Offering") will be sold by 2587264 Ontario Inc. (the "Selling Debentureholder"), a direct wholly-owned subsidiary of Hydro One Limited, on an instalment basis at a price of $1,000 per Debenture. See "Details of the Offering – The Selling Debentureholder". Prior to full payment, beneficial ownership of the Debentures will be represented by instalment receipts (the "Instalment Receipts"). The first instalment of $333 is payable on the closing of the Offering. The final instalment of $667 is payable following notification to holders of Instalment Receipts (the "Final Instalment Notice") that: (i) the Corporation has received all regulatory and governmental approvals required to finalize the direct or indirect acquisition (the "Merger") by Olympus Holding Corp. ("US Parent"), an indirect, wholly-owned subsidiary of the Corporation, of Avista Corporation, an investor-owned, regulated utility company whose common stock is listed on the New York Stock Exchange ("NYSE"); and (ii) US Parent and Avista Corporation have fulfilled or waived all other outstanding conditions precedent to closing the Merger, other than those which by their nature cannot be satisfied until the closing of the Merger (collectively, the "Approval Conditions"), in each case as set out in the agreement and plan of merger dated as of July 19, 2017 among Hydro One Limited, US Parent, Olympus Corp. ("Merger Sub"), a direct wholly-owned subsidiary of US Parent and, at the effective time of the closing of the Merger, will be collectively owned by US Parent and one or more direct or indirect wholly-owned subsidiaries of the Corporation, and Avista Corporation (the "Merger Agreement"). See "The Merger" and "The Merger Agreement". The Final Instalment Notice will set a date for payment of the final instalment (the "Final Instalment Date"), which shall not be less than 15 days nor more than 90 days following the date of such notice. **If a holder of an Instalment Receipt does not pay the final instalment on or before the Final Instalment Date, the Debenture represented by such Instalment Receipt may, at the option of the Selling Debentureholder, upon compliance with applicable law and the terms of the Instalment Receipt Agreement (as defined under "Details of the Offering – Instalment Receipts"), be forfeited to the Selling Debentureholder in full satisfaction of the holder's obligations or such**

Debentures may be sold and the holder will remain liable for any deficiency in the proceeds of such sale. See "Details of the Offering".

The holders of Debentures will be entitled to interest at an annual rate of 4.00% per $1,000 principal amount of Debentures, payable quarterly in arrears in equal instalments (other than the first interest payment and, depending on the Final Instalment Date, the final interest payment) on the last day of, December, March, June and September of each year (or the prior business day if the last day falls on a weekend or holiday) to and including the Final Instalment Date. The first interest payment will be made on December 29, 2017 in the amount of $15.78082 per $1,000 principal amount of Debentures and will include interest payable from and including the closing of the Offering, which is expected to take place on or about August 9, 2017 (the "Closing Date"). Subsequently, quarterly interest payments will be made in the amount of $10.00 per $1,000 principal amount of Debentures. **On the day following the Final Instalment Date, the interest rate payable on the Debentures will fall to an annual rate of 0% and interest will cease to accrue on the Debentures.** Based on a first instalment of $333 per $1,000 principal amount of Debentures, the effective annual yield to and including the Final Instalment Date is 12.0%, and the effective annual yield thereafter is 0%.

If the Final Instalment Date occurs on a day that is prior to the first anniversary of the Closing Date, holders of Debentures who have paid the final instalment on or before the Final Instalment Date will be entitled to receive, on the business day following the Final Instalment Date, in addition to the payment of accrued and unpaid interest to and including the Final Instalment Date, an amount equal to the interest that would have accrued from the day following the Final Instalment Date to and including the first anniversary of the Closing Date had the Debentures remained outstanding and continued to accrue interest until and including such date (the "Make-Whole Payment"). No Make-Whole Payment will be payable if the Final Instalment Date occurs on or after the first anniversary of the Closing Date.

Conversion Privilege

At the option of the holder of Debentures and provided that payment of the final instalment has been made, each Debenture will be convertible into common shares of Hydro One Limited ("Common Shares") at any time on or after the Final Instalment Date, but prior to the earlier of the date that the Corporation redeems the Debentures or the Maturity Date (as defined in this Prospectus). The conversion price will be $21.40 per Common Share (the "Conversion Price"), being a conversion rate of 46.7290 Common Shares per $1,000 principal amount of Debentures, subject to adjustment in certain events. **A holder of Debentures who does not exercise its conversion privilege concurrently with the payment of the final instalment in order to convert its Debentures to Common Shares on the Final Instalment Date will hold a Debenture that pays 0% interest and may be redeemed by the Corporation in whole or in part on any trading day following the Final Instalment Date at a price equal to its principal amount plus any unpaid interest which accrued prior to and including the Final Instalment Date. See "Details of the Offering".**

Prior to the Final Instalment Date, the Debentures may not be redeemed by the Corporation, except that the Debentures will be redeemed by the Corporation at a price equal to their principal amount plus accrued and unpaid interest (without any Make-Whole Payment) following the earlier of: (i) notification to holders that the Approval Conditions will not be satisfied; (ii) termination of the Merger Agreement in accordance with its terms; and (iii) May 1, 2019, if the Final Instalment Notice has not been given on or before April 30, 2019. Upon any such redemption, the Corporation will pay for each Debenture: (i) $333 plus accrued and unpaid interest to the holder of the Instalment Receipt; and (ii) $667 to the Selling Debentureholder on behalf of the holder of the Instalment Receipt in satisfaction of the final instalment. Under the terms of the Instalment Receipt Agreement, Hydro One Limited has agreed that until such time as the Debentures have been redeemed in accordance with the foregoing or the Final Instalment Date has occurred, the Corporation will at all times hold short-term interest bearing U.S. dollar securities with investment grade counterparties, maintain readily available capacity under the Operating Credit Facility (as defined in this Prospectus) or the revolving credit facilities of its subsidiaries, or have cash on hand together with such available capacity, in an amount at least equal to the net proceeds of the first instalment paid on the closing of the Offering and the exercise of the Over-Allotment Option (as defined in this Prospectus), if applicable. See "Details of the Offering — Debentures — Redemption". After the Final Instalment Date, any Debentures not converted to Common Shares may be redeemed at the option of the Corporation at a price equal to their principal amount plus any unpaid interest which accrued prior to and including the Final Instalment Date. See "Details of the Offering – Debentures – Redemption".

On September 30, 2027 (the "Maturity Date"), the Corporation will repay the principal amount of any Debentures not converted and remaining outstanding, in cash, provided that the Corporation may, at its option and without prior notice, satisfy the obligation to pay the principal amount of such Debentures on maturity by delivery of that number of freely tradable Common Shares obtained by dividing the aggregate principal amount of the Debentures then outstanding by 95% of the weighted average trading price of the Common Shares on the Toronto Stock Exchange (the "TSX") for the 20 consecutive trading days ending five trading days preceding the Maturity Date (the "Market Price").

Price: $1,000 per Debenture to yield 4.00% per annum

(each Debenture is convertible into Common Shares at a Conversion Price of $21.40 per Common Share)

	Price to the Public	Underwriters' Fee(1)	Net Proceeds(2)
Per Debenture			
First Instalment	$ 333.00	$ 17.50	$ 315.50
Final Instalment	$ 667.00	$ 17.50	$ 649.50
Total Per Debenture	$ 1,000.00	$ 35.00	$ 965.00
Total(3)	$ 1,400,000,000	$ 49,000,000	$ 1,351,000,000

(1) The Underwriters' fee will be paid by the Corporation and is equal to 3.50% of the gross proceeds of the sale of the Debentures. One-half of the Underwriters' fee is payable on the Closing Date and the remaining one-half is payable on the Final Instalment Date.

(2) Net proceeds are calulated before deducting the expenses of the Offering, estimated at $1,500,000, which will be paid by Hydro One Limited and the Selling Debentureholder.

(3) The Selling Debentureholder has granted to the Underwriters (as defined in this Prospectus) an option (the "Over-Allotment Option") to purchase additional Debentures represented by Instalment Receipts equal to up to 10% of the aggregate principal amount of Debentures represented by Instalment Receipts sold on the Closing Date, at a price of $1,000 per Debenture payable on an instalment basis and on the same terms and conditions of the Offering to cover over-allotments, if any, and for market stabilization purposes. The Over-Allotment Option is exercisable in whole or in part at the Underwriters' sole discretion and without obligation, on or prior to the 30th day following the closing of the Offering. If the Over-Allotment Option is exercised in full, the total "Price to the Public", "Underwriters' Fee" and "Net Proceeds" will be $1,540,000,000, $53,900,000 and $1,486,100,000, respectively. This Prospectus qualifies the grant of the Over-Allotment Option and the sale of Debentures represented by Instalment Receipts pursuant to this Prospectus on the exercise of such option. A purchaser who acquires Debentures represented by Instalment Receipts forming part of the Underwriters' over-allocation position acquires those securities under this Prospectus, regardless of whether the position is ultimately filled through the exercise of the Over-Allotment Option or secondary market purchases. Unless otherwise indicated, the disclosure in this Prospectus assumes that the Over-Allotment Option has not been exercised. See "Plan of Distribution".

Underwriters' Position	Maximum Size or Number of Securities Held	Exercise Period	Exercise Price
Over-Allotment Option	Option to purchase up to $140,000,000 aggregate principal amount of Debentures (on an instalment basis)	At any time within 30 days following the closing of the Offering	$1,000 per Debenture payable on an instalment basis of which $333 is payable on the closing of the Over-Allotment Option and $667 is payable on or before the Final Instalment Date

There is currently no market through which the Debentures represented by Instalment Receipts may be sold and purchasers may not be able to resell securities purchased under this Prospectus. This may affect the pricing of the securities in the secondary market, the transparency and availability of trading prices, the liquidity of the securities and the extent of issuer regulation. See "Risk Factors".

This Prospectus qualifies for distribution the Debentures represented by the Instalment Receipts. Hydro One Limited has received conditional approval of the TSX to list the Instalment Receipts (representing the Debentures) and the Common Shares issuable on the conversion of the Debentures on the TSX. Listing will be subject to the Corporation fulfilling all of the requirements of the TSX. **The Corporation has no current intention to list the Debentures for trading on any exchange as it currently anticipates all Debentures will be converted to Common Shares on the Final Instalment Date.** The Corporation's outstanding Common Shares are listed on the TSX under the symbol "H", and, once listed, the Instalment Receipts will trade on the TSX under the symbol "H.IR". On July 19, 2017, the last trading day prior to the announcement of the Merger and the Offering, the closing price of the Common Shares on the TSX was $22.53.

The Debentures will be sold by the Selling Debentureholder on an instalment basis for a total of $1,000 per Debenture as described in this Prospectus, which price and other terms of the Offering were determined by negotiation between the Corporation, the Selling Debentureholder and the Underwriters. **After a reasonable effort has been made to sell all of the Debentures represented by Instalment Receipts at the price specified above, the Underwriters may subsequently reduce the selling price to investors from time to time in order to sell any of the Debentures represented by Instalment Receipts remaining unsold. Any such reduction will not affect the proceeds received by the Selling Debentureholder. See "Plan of Distribution".**

An investment in the Debentures represented by Instalment Receipts, and the Common Shares issuable upon the conversion of Debentures, involves certain risks that should be considered by a prospective purchaser. See "Risk Factors – Risk Factors Relating to the Debentures", "Risk Factors – Risk Factors Relating to the Instalment Receipts" and "Special Note Regarding Forward-Looking Statements".

Each of RBC Dominion Securities Inc., CIBC World Markets Inc., BMO Nesbitt Burns Inc., National Bank Financial Inc., Scotia Capital Inc., TD Securities Inc., Barclays Capital Canada Inc., Credit Suisse Securities (Canada), Inc., Canaccord Genuity Corp., Desjardins Securities Inc., Laurentian Bank Securities Inc., Raymond James Ltd., Industrial Alliance Securities Inc. and Wells Fargo Securities Canada, Ltd. (collectively, the "Underwriters") are underwriters of the Offering. The Underwriters, as principals, conditionally offer the Debentures represented by Instalment Receipts, subject to prior sale, if, as and when issued by the Corporation and sold and delivered by the Selling Debentureholder to, and accepted by, the Underwriters in accordance with the terms and conditions contained in the Underwriting Agreement (as defined in this Prospectus) referred to under "Plan of Distribution" and subject to the approval of certain legal matters on behalf of the Corporation and the Selling Debentureholder by Osler, Hoskin & Harcourt LLP and on behalf of the Underwriters by Blake, Cassels & Graydon LLP. Subject to applicable laws, the Underwriters may, in connection with the Offering, effect transactions which stabilize or maintain the market price of the Instalment Receipts representing the Debentures or the Common Shares at levels above those which may prevail on the open market. Such transactions, if commenced, may be discontinued at any time. See "Plan of Distribution".

RBC Dominion Securities Inc., CIBC World Market Inc., BMO Nesbitt Burns Inc., National Bank Financial Inc., Scotia Capital Inc. and TD Securities Inc. are subsidiaries or affiliates of lenders that have made a $250 million operating credit facility (the "Operating Credit Facility") available to Hydro One Limited. In addition, RBC Dominion Securities Inc., CIBC World Markets Inc., BMO Nesbitt Burns Inc., National Bank Financial Inc., Scotia Capital Inc., TD Securities Inc., Desjardins Securities Inc. and Laurentian Bank Securities Inc. are subsidiaries or affiliates of lenders that have made a $2.3 billion unsecured revolving credit facility available to Hydro One Inc., a wholly-owned subsidiary of Hydro One Limited. **Consequently, the Corporation and/or the Selling Debentureholder may be considered a "connected issuer" of these Underwriters within the meaning of applicable securities legislation. See "Relationship between Hydro One Limited, the Selling Debentureholder and Certain Underwriters"**.

Subscriptions for the Debentures represented by Instalment Receipts will be received subject to rejection or allotment in whole or in part and the right is reserved to close the subscription books at any time without notice. It is expected that the Closing Date will take place on or about August 9, 2017, or such other date as may be agreed upon by the Corporation, the Selling Debentureholder and the Underwriters, but not later than August 23, 2017. The

Debentures represented by Instalment Receipts offered hereby are to be taken up by the Underwriters, if at all, on or before a date not later than 42 days after the date of the receipt for the final short form prospectus relating to the Offering.

A book-entry only certificate representing the Instalment Receipts (representing the Debentures) distributed hereunder will be issued in registered form only to CDS Clearing and Depository Services Inc. ("CDS") or its nominee and will be deposited with CDS on the Closing Date. Subject to compliance with the provisions of the Instalment Receipt Agreement, as soon as practicable on or after the Final Instalment Date provided that payment of the final instalment has been made, the global certificate representing the Instalment Receipts will be cancelled and the global certificate representing the Debentures distributed hereunder, pledged to the Selling Debentureholder and held by Computershare Trust Company of Canada, as security agent, will be discharged and released and one or more new global certificates representing the Debentures will be delivered to CDS and registered in the name of CDS or its nominee (as adjusted for Debentures that have been converted into Common Shares on the Final Instalment Date). The Corporation understands that a purchaser of Debentures represented by Instalment Receipts will receive only a customer confirmation from the registered dealer (who is a participant in CDS) from or through whom the Debentures represented by Instalment Receipts are purchased. Except as otherwise stated herein, neither the holders of Instalment Receipts representing Debentures nor the holders of Debentures on or following the Final Instalment Date will be entitled to receive physical certificates representing their ownership thereof, as applicable. See "Details of the Offering".

In this Prospectus, unless otherwise specified or the context otherwise requires, all dollar amounts are expressed in Canadian dollars.

Kathryn Jackson, a director of Hydro One Limited, resides outside of Canada. Ms. Jackson has appointed Hydro One Limited as her agent for service of process. Purchasers are advised that it may not be possible for investors to enforce judgments obtained in Canada against any person who resides outside of Canada, even if the party has appointed an agent for service of process. See "Enforceability of Certain Civil Liabilities".

The registered and head office of the Corporation is located at 483 Bay Street, South Tower, 8th Floor, Toronto, Ontario, M5G 2P5.

SPECIAL NOTE REGARDING FORWARD-LOOKING STATEMENTS

Please refer to the "Glossary of Terms" beginning on page 88 of this short form prospectus (the "Prospectus") for a list of defined terms used herein.

This Prospectus, including the documents incorporated herein by reference, contains forward-looking information within the meaning of applicable securities laws which reflects management's current expectations regarding: (i) the future growth, results of operations, performance, business prospects and opportunities of Hydro One; (ii) the timing and completion of the contemplated Merger; (iii) the benefits and the impact of the Merger and the Offering on the financial position of the Corporation; and (iv) the future performance, business prospects and opportunities of Avista Corp. These expectations may not be appropriate for other purposes. All forward-looking information is given pursuant to the "safe harbour" provisions of applicable Canadian securities legislation. The words "anticipates", "believes", "budget", "could", "estimates", "expects", "forecasts", "intends", "may", "might", "plans", "projects", "schedule", "should", "will", "would" and similar expressions are often intended to identify forward-looking information, although not all forward-looking information contains these identifying words. The forward-looking information reflects management's current beliefs, expectations and intentions and is based on information currently available to the Corporation's management.

The forward-looking information in this Prospectus, including the documents incorporated herein by reference, includes, but is not limited to, statements regarding: Hydro One's business; Hydro One's transmission and distribution rate applications, and resulting rates and impacts; expected impacts of changes to the electricity industry; Hydro One's maturing debt and standby credit facilities; expectations regarding the Corporation's financing activities; credit ratings; ongoing and planned projects and/or initiatives, including expected results and timing; expected future capital expenditures, the nature and timing of these expenditures, including the Hydro One's plans for sustaining and development capital expenditures for its distribution and transmission systems; expectations regarding allowed ROE; the ability of Hydro One to recover expenditures in future rates; the Ontario Energy Board; future pension contributions, the pension plan and valuations; expectations regarding the ability to negotiate collective agreements consistent with rate orders and to maintain stable outsourcing arrangements; expectations related to work force demographics; expectations regarding taxes; occupational rights; expectations related to load growth; the regional planning process; expectation related to Hydro One's CDM requirements and targets; Hydro One's customer focus and related initiatives; Hydro One's relationships with First Nations and Métis communities; expectations related to the effect of interest rates; environmental matters and Hydro One's expected future environmental expenditures; Hydro One's reputation; cyber and data security; Hydro One's relationship with the Province; future sales of shares of Hydro One Limited; acquisitions, including the Merger and the Corporation's acquisition of Orillia Power; expectations regarding the governance agreement and other agreements with the Province; the intentions of the Province with respect to future sales of Common Shares; and legal proceedings in which Hydro One is currently involved.

The forward-looking information contained herein pertaining to the Merger and the financing thereof and the future performance, business prospects and opportunities of Avista Corp. includes, but is not limited to, statements regarding: strength of credit metrics; the expectation that the Merger will increase Hydro One's consolidated rate base and total customers; the expectation that the Merger will be accretive to Hydro One Limited's earnings per Common Share; the impact of the Merger on the Corporation's total assets, net income, growth, access to equity and debt capital markets, credit profile, economies of scale and ability to deploy capital; opportunities for costs savings and efficiency gains; the stability of the Corporation's net income and overall quality of cash flows; the expectation that Hydro One will benefit from diversification of regulatory jurisdictions; the expectations regarding rate base growth; expectations regarding the economic outlook in Washington and in the U.S. generally; the complementary management teams and corporate cultures of Hydro One and Avista Corp.; Avista Corp's labour relations; expectations regarding the nature, timing and costs of capital spending of Hydro One and Avista Corp.; the locations of the combined operations after completion of the Merger; the expectations with respect to the impact of costs and compliance as a result of new and existing laws, regulations and guidelines, including, but not limited to, environmental matters; the impact of legal proceedings; the financing of the Merger, including, but not limited to, the use of the net proceeds of the Offering, the impact of the Offering, the timing and closing of the Merger, the conversion of the Debentures into Common Shares, the issuance of Common Shares and the impact of changes to Hydro One's long-term debt on the capital structure of Hydro One; the listing of securities on and approval of the TSX; the timing of payment of each of the first instalment and the final instalment payments; the plan of distribution pursuant to the Underwriting Agreement; the risk factors relating to the Merger, the post-Merger combined business and operations of Hydro One and Avista Corp., the Instalment Receipts, the Debentures and the Common Shares; the Corporation's intention to declare and pay dividends and targeted dividend payout ratio; and market stabilization activities by the Underwriters.

The forecasts and projections that make up the forward-looking information included in this Prospectus are based on assumptions which include, but are not limited to: the timing and completion of the Merger; the receipt of Avista Shareholder Approval, the required regulatory approvals relating to the Merger and other conditions precedent to closing the Merger; the payment to the Selling Debentureholder of the aggregate amount of the final instalment; the conversion of all of the Debentures distributed pursuant to this Prospectus into Common Shares on the Final Instalment Date; the realization by Hydro One of the anticipated benefits of the Merger, including the expectation that the Merger will be accretive to Hydro One Limited's earnings per Common Share; the impact of the Merger on Hydro One's total assets, net income, growth, access to equity and debt capital markets, credit profile, economies of scale and ability to deploy capital; that Hydro One and Avista Corp. have complementary management teams and corporate cultures and that this will support a smooth combination of the two companies; the accuracy of the *pro forma* combined financial information, which does not purport to be indicative of the financial information that will result from the operations of Hydro One on a consolidated basis following the closing of the Merger and the completion of the Offering; relatively stable currency exchange rates between Canadian and U.S. dollars; the ability of Hydro One to successfully integrate the business and operations of Avista Corp. into the Hydro One group of companies; opportunities for cost savings and efficiency gains will arise; the ability of Hydro One to retain key personnel of Avista Corp., and the value of such key employees; the ability of Hydro One to satisfy its liabilities and meet its debt service obligations following completion of the Merger; the aggregate amount of the Merger-Related Expenses; the ability to maintain dividend payout ratios; the accuracy and completeness of Avista Corp.'s public and other disclosure reflected in this Prospectus; the absence of undisclosed liabilities of Avista Corp.; no unforeseen changes in the legislative and operating framework for Ontario's electricity market and the electricity and natural gas markets in which Avista Corp. operates; favourable decisions from the Ontario Energy Board and other regulatory bodies concerning outstanding and future rate and other applications; no unexpected delays in obtaining the required approvals; no unforeseen changes in rate orders or rate setting methodologies for any of Hydro One's or Avista Corp.'s rate-regulated businesses; no unfavourable changes in environmental regulation; continued use of U.S. GAAP; a stable regulatory environment; and no significant event occurring outside the ordinary course of business.

The forward-looking information is subject to risks, uncertainties and other factors that could cause actual results to differ materially from historical results or results anticipated by the forward-looking information. Factors which could cause results or events to differ from current expectations include, but are not limited to: inability to complete the Offering; inability to complete the Merger; an increase in the cash purchase price of the Merger; uncertainty regarding the length of time required to complete the Merger; failure to obtain Avista Shareholder Approval; the required shareholder, governmental or regulatory approvals may delay the proposed Merger or impose conditions; the effect and timing of changes in laws or in governmental regulations; disruption from the proposed Merger making it more difficult to maintain relationships with customers, employees, regulators or suppliers; the diversion of management time and attention on the Merger; the financing necessary to fund the Merger may not be obtained or may be more difficult and costly to obtain than anticipated; the ability to maintain an investment grade credit rating; the anticipated benefits of the Merger may not materialize or may not occur within the time periods anticipated by the Corporation; impact of significant demands placed on the Corporation as a result of the Merger; lack of control by the Corporation of Avista Corp. prior to the closing of the Merger; impact of the Merger-Related Expenses or increases in the Merger-Related Expenses; potential that the Corporation Termination Fee may need to be paid in certain circumstances; accuracy and completeness of Avista Corp.'s publicly disclosed information; increased indebtedness of Hydro One after the closing of the Merger; historical and *pro forma* combined financial information may not be representative of future performance; potential undisclosed liabilities of Avista Corp.; inability to retain key personnel of Avista Corp. following the Merger; indebtedness of Avista Corp.; risks relating to the Instalment Receipts, the Debentures and the Common Shares; risks associated with the Province's share ownership of Hydro One Limited and other relationships with the Province, including potential conflicts of interest that may arise between Hydro One, the Province and related parties; regulatory risks and risks relating to Hydro One's revenues, including risks relating to rate orders, actual performance against forecasts and capital expenditures; the risk that Hydro One may be unable to comply with regulatory and legislative requirements or that Hydro One may incur additional costs for compliance that are not recoverable through rates; the risk of exposure of Hydro One's facilities to the effects of severe weather conditions, natural disasters or other unexpected occurrences for which the Hydro One is uninsured or for which Hydro One could be subject to claims for damage; public opposition to and delays or denials of the requisite approvals and accommodations for Hydro One's planned projects; the risk that Hydro One may incur significant costs associated with transferring assets located on reserves; the risks associated with information system security and with maintaining a complex information technology system infrastructure; the risks related to Hydro One's work force demographic and its potential inability to attract and retain qualified personnel; the risk of labour disputes and inability to negotiate appropriate collective agreements on acceptable terms consistent with Hydro One's rate decisions; the risk that Hydro One is not able to arrange sufficient cost-effective financing to repay maturing debt and to fund capital expenditures; risks associated with fluctuations in interest rates and failure to manage exposure to credit risk; the risk that Hydro One may not be able to execute plans for capital projects necessary to maintain the performance of Hydro One's assets or to carry out projects in a timely manner; the risk of non-compliance with environmental regulations or failure to mitigate significant health and safety risks and inability to recover environmental expenditures in rate applications; the risk that assumptions that form the basis of Hydro One's recorded environmental liabilities and related regulatory assets may change; the risk of not being able to recover Hydro One's pension expenditures in future rates and uncertainty regarding the future regulatory treatment of pension, other post-employment benefits and post-retirement benefits costs; the potential that Hydro One may incur significant expenses to replace functions currently outsourced if agreements are terminated or expire before a new service provider is selected; the risks associated with economic uncertainty and financial market volatility; the inability to prepare financial statements using U.S. GAAP; and the impact of the ownership by the Province of lands underlying Hydro One's transmission system.

All forward-looking information in this Prospectus and in the documents incorporated herein by reference is qualified in its entirety by the above cautionary statements and, except as required by law, the Corporation undertakes no obligation to revise or update any forward-looking information as a result of new information, future events or otherwise.

DOCUMENTS INCORPORATED BY REFERENCE

The disclosure documents of the Corporation listed below and filed with the appropriate securities commissions or similar regulatory authorities in each of the provinces and territories of Canada are specifically incorporated by reference into and form an integral part of this Prospectus:

(i) Hydro One Limited's annual information form dated March 27, 2017 for the year ended December 31, 2016 (the "**AIF**");

(ii) Hydro One Limited's audited consolidated financial statements as at and for the years ended December 31, 2016 and December 31, 2015, together with the notes thereto and the independent auditors' report thereon dated February 9, 2017 (the "**2016 Annual Financial Statements**");

(iii) Hydro One Limited's management's discussion and analysis in respect of the 2016 Annual Financial Statements (the "**Annual MD&A"**);

(iv) Hydro One Limited's unaudited condensed interim consolidated financial statements for the three months ended March 31, 2017 and 2016, together with the notes thereto (the "**Interim Financial Statements**");

(v) Hydro One Limited's management's discussion and Analysis in respect of the Interim Financial Statements (the "**Interim MD&A**");

(vi) Hydro One Limited's management information circular dated March 23, 2017 prepared in connection with Hydro One Limited's annual meeting of shareholders held on May 4, 2017;

(vii) the template version of the term sheet dated July 19, 2017 and the template version of the investor presentation dated July 19, 2017 (a copy of which is attached as Appendix A to this Prospectus), each filed on SEDAR in connection with the Offering (collectively, the "**Marketing Materials**"); and

(viii) the material change report dated July 20, 2017 announcing the Merger and the Offering.

Any documents of the type referred to above (other than confidential material change reports), any document filed by Hydro One Limited that specifically states that such document is incorporated by reference into this Prospectus and any other documents required under applicable securities laws to be incorporated by reference into this Prospectus, if filed by Hydro One Limited with the provincial securities commissions or similar authorities in Canada after the date of this Prospectus and prior to the termination of the Offering, shall be deemed to be incorporated by reference into this Prospectus.

Any statement contained in a document incorporated or deemed to be incorporated by reference in this Prospectus shall be deemed to be modified or superseded for purposes of this Prospectus to the extent that a statement contained herein, or in any other subsequently filed document which also is incorporated or is deemed to be incorporated herein by reference, modifies or supersedes such statement. The modifying or superseding statement need not state that it has modified or superseded a prior statement or include any other information set forth in the document that it modifies or supersedes. The making of a modifying or superseding statement will not be deemed to be an admission for any purpose that the modified or superseded statement, when made, constituted a misrepresentation, an untrue statement of a material fact or an omission to state a material fact that is required to be stated or that is necessary to make a statement not misleading in light of the circumstances in which it was made. Any statement so modified or superseded shall not be deemed, except as so modified or superseded, to constitute a part of this Prospectus.

Copies of the documents incorporated herein by reference may be obtained on request without charge from the Corporate Secretary of the Corporation at 483 Bay Street, South Tower, 8th Floor, Toronto, Ontario, M5G 2P5, telephone (416) 345-6044, and are also available electronically at www.sedar.com. The information contained on, or accessible through, any of these websites is not incorporated by reference into this Prospectus and is not, and should not be considered to be, a part of this Prospectus, unless it is explicitly so incorporated.

MARKETING MATERIALS

The Marketing Materials (including the Investor Presentation) are not part of this Prospectus to the extent that the contents of the Marketing Materials have been modified or superseded by a statement contained elsewhere in this Prospectus. Any template version of "marketing materials" (as defined in National Instrument 41-101 – *General Prospectus Requirements*) filed after the date of this Prospectus and before the termination of the distribution under the Offering (including any amendments to, or an amended version of, the Marketing Materials) are deemed to be incorporated into this Prospectus. The template version of the investor presentation dated July 19, 2017, with the cautionary legend required by Section 7.6(5) of National Instrument 44-101 – Short Form Prospectus Distributions removed (the "**Investor Presentation**"), is attached as Appendix A to this Prospectus.

ELIGIBILITY FOR INVESTMENT

In the opinion of Osler, Hoskin & Harcourt LLP, counsel to Hydro One Limited and the Selling Debentureholder, and Blake, Cassels & Graydon LLP, counsel to the Underwriters, provided that, on the date hereof, Hydro One Limited is a "public corporation" for the purposes of the Tax Act or the Common Shares are listed on a "designated stock exchange" for the purposes of the Tax Act (which currently includes the TSX), the Debentures represented by Instalment Receipts and the Common Shares issuable on the conversion or maturity of the Debentures, if issued on the date hereof, would be qualified investments under the Tax Act as of the date hereof for a trust governed by an RRSP, a RRIF, an RESP, a DPSP, an RDSP or a TFSA (collectively, "**Exempt Plans**"), except, in the case of the Debentures, a DPSP to which Hydro One Limited, or an employer that does not deal at arm's length with Hydro One Limited, has made a contribution. Holders or annuitants of Exempt Plans should have regard to any restrictions (including restrictions on pledging plan assets) that may be included in the provisions of their particular Exempt Plan.

Notwithstanding the foregoing, if the Debentures or the Common Shares are a "prohibited investment" (as defined in the Tax Act) for a trust governed by a TFSA, RRSP or RRIF, the holder or annuitant thereof, as the case may be, will be subject to a penalty tax as set out in the Tax Act. The Debentures and Common Shares will not be a prohibited investment for a TFSA, RRSP or RRIF provided the holder or annuitant of such Exempt Plan, as the case may be, (i) deals at arm's length with Hydro One Limited, for purposes of the Tax Act and (ii) does not have a "significant interest" (as defined in the prohibited investment rules in the Tax Act) in Hydro One Limited. In addition, Common Shares will not be a "prohibited investment" if the Common Shares are "excluded property" (as defined in the Tax Act for this purpose) for trusts governed by a TFSA, RRSP and RRIF. Based on certain Proposed Amendments (as defined herein) announced on March 22, 2017, it is proposed that the prohibited investment rules described above (including the rules relating to "excluded property") will be extended to cover trusts governed by RDSPs and RESPs.

A holder, annuitant or subscriber, as the case may be, should consult her own tax advisor with respect to whether the Instalment Receipts, Debentures or Common Shares would be a prohibited investment and whether the Instalment Receipts, Debentures or Common Shares otherwise comply with any restrictions that may apply to a particular Exempt Plan (including restrictions on the pledging of plan assets).

PRESENTATION OF FINANCIAL INFORMATION

The financial statements of the Corporation included in this Prospectus are reported in Canadian dollars and have been prepared in accordance with U.S. GAAP. All financial information of Avista Corp. included in this Prospectus (other than *pro forma* financial statements) as at or for the periods ended December 31, 2016 and 2015 is reported in U.S. dollars and has been derived from audited historical financial statements of Avista Corporation that were prepared in accordance with U.S. GAAP. All financial information of Avista Corp. included in this Prospectus (other than *pro forma* financial statements) as at or for the periods ended March 31, 2017 and 2016 is reported in U.S. dollars and has been derived from unaudited historical financial statements of Avista Corporation that were prepared in accordance with U.S. GAAP. The assets and liabilities of Avista Corp. shown in the unaudited *pro forma* consolidated balance sheet of the Corporation as at March 31, 2017 are reported in Canadian dollars and reflect the U.S. dollar-to-Canadian dollar period-end closing exchange rate. The revenues and expenses of Avista Corp. shown in the unaudited *pro forma* consolidated statements of operations of the Corporation for the three month period ended March 31, 2017 and for the year ended December 31, 2016 are reported in Canadian dollars and reflect the average U.S. dollar-to-Canadian dollar exchange rates for such periods. Financial information in this Prospectus that has been derived from the unaudited *pro forma* consolidated financial statements has been translated to Canadian dollars on the same basis. Certain tables in this Prospectus may not add due to rounding.

Certain financial measures of Hydro One and Avista Corp. are used in this Prospectus that do not have standardized meanings under U.S. GAAP and may not be comparable to similar measures presented by other entities. Such non-U.S. GAAP measures are calculated by adjusting certain U.S. GAAP measures for specific items that Hydro One Limited and Avista Corporation believe are significant, but not reflective of the underlying operations of the Corporation.

Funds from Operations and Adjusted FFO

Funds from Operations ("**FFO**") is defined as net cash from operating activities, adjusted for (i) changes in non-cash balances related to operations, (ii) dividends paid on preferred shares, and (iii) distributions to non-controlling interest.

Adjusted FFO is defined as FFO, adjusted for the impact of the deferred income tax asset that resulted as a consequence of leaving the payment in lieu of corporate income taxes ("**PILs**") regime (the "**PILs Regime**") and entering the regular Canadian federal and Ontario income tax regime (the "**Federal Tax Regime**").

Management believes that FFO and Adjusted FFO are helpful as supplemental measures of the Corporation's operating cash flows as they exclude timing-related fluctuations in non-cash operating working capital and cash flows not attributable to common shareholders, and, in the case of Adjusted FFO, the impact of the IPO-related deferred income tax asset. As such, these measures provide consistent measures of the cash generating performance of the Corporation's assets.

Adjusted Net Cash from Operating Activities

Adjusted net cash from operating activities is defined as net cash from operating activities, adjusted for the impact of the deferred income tax asset that resulted as a consequence of leaving the PILs Regime and entering the Federal Tax Regime. Management believes that this measure is helpful as a supplemental measure of the Corporation's net cash from operating activities as it excludes the impact of the IPO-related deferred income tax asset. As such, adjusted net cash from operating activities provides a consistent measure of the Corporation's cash from operating activities compared to prior periods.

Adjusted Earnings Per Share

The basic and diluted Adjusted EPS has been calculated by management on a supplementary basis which assumes that the total number of Common Shares outstanding was 595,000,000 in each of the periods presented. Adjusted EPS has been used internally by management subsequent to the IPO of the Corporation's Common Shares in November 2015 to assess the Corporation's performance and is considered useful because it eliminates the impact of a different and non-comparable number of shares outstanding and held by the Province prior to the IPO. EPS is considered an important measure and management believes that presenting it consistently for all periods based on the number of outstanding shares on, and subsequent to, the IPO provided users with a comparative basis to evaluate the operations of the Corporation.

Additional information regarding non-U.S. GAAP measures used by Hydro One Limited can be found in the Interim MD&A and the Annual MD&A.

Electric Gross Margin and Natural Gas Gross Margin

The description in the Prospectus relating to Avista Utilities uses electric gross margin and natural gas gross margin, both of which are non-U.S. GAAP financial measures. The presentation of electric gross margin and natural gas gross margin is intended to supplement an understanding of operating performance. Avista Utilities uses these measures to determine whether the appropriate amount of revenue is being collected from customers to allow for the recovery of energy resource costs and operating costs, as well as to analyze how changes in loads (due to weather, economic or other conditions), rates, supply costs and other factors impact Avista Utilities' results of operations. In addition, Avista Utilities presents electric and natural gas gross margin separately for Avista Utilities since each business has different cost sources, cost recovery mechanisms and jurisdictions, such that separate analysis is beneficial. These measures are not intended to replace income from operations as determined in accordance with U.S. GAAP as an indicator of operating performance.

CAUTION REGARDING UNAUDITED PRO FORMA CONSOLIDATED FINANCIAL STATEMENTS

This Prospectus contains the unaudited *pro forma* consolidated balance sheet of the Corporation as at March 31, 2017 and consolidated statements of earnings of the Corporation for the three month period ended March 31, 2017 and for the year ended December 31, 2016, giving effect to: (i) the Offering, assuming no exercise of the Over-Allotment Option; (ii) the issuance of Common Shares upon the conversion of the Debentures (assuming no Make-Whole Payment); (iii) the proposed issuance by Hydro One Limited of U.S. dollar denominated debt to finance the Merger; and (iv) the completion of the Merger. Such unaudited *pro forma* consolidated financial statements have been prepared using certain of the Corporation's and Avista Corporation's respective financial statements as more particularly described in the notes to such unaudited *pro forma* consolidated financial statements. In preparing such unaudited *pro forma* consolidated financial statements, Hydro One Limited has had limited access to the non-public books and records of Avista Corp. and makes no representation or warranty as to the accuracy or completeness of such information provided by Avista Corp., including the financial statements of Avista Corporation that were used to prepare the unaudited *pro forma* consolidated financial statements. Such unaudited *pro forma* consolidated financial statements are not intended to be indicative of the results that would actually have occurred, or the results expected in future periods, had the events reflected therein occurred on the dates indicated. Actual amounts recorded upon the finalization of the purchase price allocation under the Merger may differ from such unaudited *pro forma* consolidated financial statements. At the date of preparation of the *pro forma* financial statements, the fair values of Avista Corp.'s identifiable assets and liabilities to be assumed and the full impact of applying acquisition accounting have not been fully determined. After reflecting the *pro forma* adjustments made in the *pro forma* financial statements, the excess of the purchase price consideration of the adjusted book values of Avista Corp.'s net assets has been presented as goodwill offset by an adjustment to eliminate Avista Corp.'s historical goodwill.

Since the unaudited *pro forma* consolidated financial statements have been developed to retroactively show the effect of a transaction that has or is expected to occur at a later date (even though this was accomplished by following generally accepted practice using assumptions that are considered to be reasonable), there are limitations inherent in the very nature of *pro forma* data. The data contained in the unaudited *pro forma* consolidated financial statements represents only a simulation of the potential impact of the Merger. Undue reliance should not be placed on such unaudited *pro forma* consolidated financial statements. See "Special Note Regarding Forward-Looking Statements" and "Risk Factors".

CURRENCY

In this Prospectus, unless otherwise specified or the context otherwise requires, all dollar amounts are expressed in Canadian dollars. References to "dollars", "$" or "Cdn$" are to lawful currency of Canada. References to "U.S. dollars" or "US$" are to lawful currency of the United States of America.

The following table sets forth, for each of the periods indicated, the noon exchange rate, the average noon exchange rate and the high and low noon exchange rates of one U.S. dollar in exchange for Canadian dollars as reported by the Bank of Canada.

	Year ended December 31,			Three months ended March 31,	
	2016	2015	2014	2017	2016
High	1.4589	1.3990	1.1643	1.3505	1.4589
Low	1.2544	1.1728	1.0614	1.3004	1.2962
Average	1.3248	1.2787	1.1045	1.3238	1.3732
Period End	1.3427	1.3840	1.1601	1.3322	1.2971

As of July 31, 2017, the daily average rate of exchange as reported by the Bank of Canada was US$1.00 = Cdn$1.2485.

DEFINED TERMS

For an explanation of certain terms and abbreviations used in, and conversions applicable to, this Prospectus, reference is made to the "Glossary of Terms" beginning on page 88 of this Prospectus.

Unless otherwise indicated by the context, references to "Hydro One" refers to Hydro One Limited and its subsidiaries taken together as a whole. References to "Hydro One Inc." refer only to Hydro One Inc. and references to "Hydro One Limited" or the "Corporation" refer only to Hydro One Limited.

Unless otherwise indicated by the context, "Avista Corp." means Avista Corporation and its subsidiaries. References to individual subsidiaries of Avista Corp. refer to that subsidiary company and its respective subsidiaries and references to "Avista Corporation" refer only to Avista Corporation.

THIRD PARTY SOURCES AND INDUSTRY DATA

This Prospectus contains information from publicly available third party sources as well as industry data prepared by the Corporation's management on the basis of its knowledge of the electricity industry in which Hydro One operates (including management's estimates and assumptions relating to the industry based on that knowledge). Management's knowledge of the electricity industry has been developed through its experience and participation in the industry. Management believes that its industry data is accurate and that its estimates and assumptions are reasonable, but there can be no assurance as to the accuracy or completeness of this data. Third-party sources generally state that the information contained therein has been obtained from sources believed to be reliable, but there can be no assurance as to the accuracy or completeness of included information. Although management believes it to be reliable, none of Hydro One Limited, Hydro One Inc., the Selling Debentureholder or the Underwriters have independently verified any of the data from third-party sources referred to in this Prospectus or analyzed or verified the underlying studies or surveys relied upon or referred to by such sources, or ascertained the underlying economic assumptions relied upon or referred to by such sources.

PROSPECTUS SUMMARY

The following information is a summary only and is to be read in conjunction with, and is qualified in its entirety by, the more detailed information and financial data and statements appearing elsewhere in this Prospectus and in the documents incorporated herein by reference.

HYDRO ONE LIMITED

Hydro One is the largest electricity transmission and distribution company in Ontario. Through its wholly-owned subsidiary, Hydro One Inc., Hydro One owns and operates substantially all of Ontario's electricity transmission network with over 30,000 circuit km of high-voltage transmission lines, and an approximately 123,000 circuit km low-voltage distribution network.

Hydro One has three business segments: (i) transmission; (ii) distribution; and (iii) other business.

Hydro One's transmission business consists of owning, operating and maintaining its transmission system, which accounts for approximately 98% of Ontario's transmission capacity based on the revenues approved by the Ontario Energy Board. This includes Hydro One's 66% interest in B2M Limited Partnership, a limited partnership between Hydro One and the Saugeen Ojibway Nation in respect of the Bruce-to-Milton transmission line. Hydro One's transmission business is a rate-regulated business that earns revenues mainly from charging transmission rates that must be approved by the Ontario Energy Board. Hydro One's transmission business accounted for approximately 51% of the Corporation's total assets as at December 31, 2016, and approximately 51% of its total revenues, net of purchased power, in 2016. All of Hydro One's transmission business is carried out by its wholly-owned subsidiary Hydro One Inc., through its wholly-owned subsidiary Hydro One Networks Inc. and through other wholly-owned subsidiaries of Hydro One Inc. that own and control Hydro One Sault Ste. Marie LP, as well as the portion of Hydro One's transmission business held through B2M Limited Partnership, which Hydro One controls.

Hydro One's distribution business consists of owning, operating and maintaining its distribution system, which Hydro One, through Hydro One Inc., owns primarily through its wholly-owned subsidiary, Hydro One Networks Inc., the largest local distribution company in Ontario. Hydro One's distribution system is also the largest in Ontario, and principally serves rural communities. Hydro One's distribution business is a rate-regulated business that earns revenues mainly by charging distribution rates that are subject to approval by the Ontario Energy Board. Hydro One's distribution business accounted for approximately 37% of its total assets as at December 31, 2016 and approximately 47% of its total revenues, net of purchased power, in 2016.

Hydro One's other business segment consists principally of Hydro One's telecommunications business, as well as certain corporate activities. The telecommunications business provides telecommunications support for Hydro One's transmission and distribution businesses. The telecommunications business also offers communications and IT solutions to organizations with broadband network requirements. Hydro One's other business segment is not rate-regulated. The other business segment, which in addition to the telecommunications business also includes a deferred tax asset, accounted for approximately 12% of Hydro One's total assets as at December 31, 2016 and approximately 2% of its total revenues, net of purchased power, in 2016.

THE MERGER

Merger Overview

On July 19, 2017, Hydro One Limited, US Parent and Merger Sub entered into the Merger Agreement with Avista Corporation which provides for, among other things, the direct or indirect acquisition by US Parent of Avista Corporation. The aggregate purchase price for the Merger is approximately US$5.3 billion, comprised of an equity purchase price of US$3.4 billion and the assumption of approximately US$1.9 billion of debt. The Merger is subject to receipt of Avista Shareholder Approval and certain regulatory and governmental approvals, including the expiration or termination of any applicable waiting period under the HSR Act, clearance of the Merger by CFIUS, the approval by each of IPUC, MPSC, OPUC, RCA, WUTC, FERC and the FCC, and the satisfaction of other customary closing conditions. The closing of the Merger is currently expected to occur in the second half of 2018.

Based on *pro forma* financial information as at March 31, 2017, following the Merger, Hydro One's total assets will increase from approximately $25.4 billion to approximately $34.9 billion.

Following completion of the Merger, Avista Corporation will maintain its existing corporate headquarters in Spokane and will continue to operate as a standalone utility in Washington, Oregon, Idaho, Montana and Alaska. Its management team will remain in place and it will operate with a board of directors that includes directors representing the interests of the Pacific Northwest and the communities it serves.

Avista Corp. Overview

Avista Corporation, incorporated in the territory of Washington in 1889, is primarily an electric and natural gas utility with certain other business ventures. As of December 31, 2016, Avista Corp. employed 1,742 people in its Pacific Northwest utility operations (Avista Utilities) and 240 people in its subsidiary businesses (including in its Juneau, Alaska utility operations). Avista Corporation's corporate headquarters are in Spokane, Washington, the second-largest city in Washington. Spokane serves as the business, transportation, medical, industrial and cultural hub of the Inland Northwest region (eastern Washington and northern Idaho). Regional services include government and higher education, medical services, retail trade and finance. Through its subsidiary AEL&P, Avista Corporation also provides electric utility services in Juneau, Alaska. Avista Corporation is an operating public utility with its common stock listed on the NYSE under the ticker symbol "AVA".

As of March 31, 2017, Avista Corporation had two reportable business segments as follows:

- **Avista Utilities** – an operating division of Avista Corporation (not a subsidiary) that comprises its regulated utility operations in the Pacific Northwest. Avista Utilities generates, transmits and distributes electricity and distributes natural gas, serving electric and natural gas customers in eastern Washington and northern Idaho and natural gas customers in parts of Oregon. It also supplies electricity to a small number of customers in Montana, most of whom are its employees who operate its Noxon Rapids generating facility. Avista Utilities also engages in wholesale purchases and sales of electricity and natural gas as an integral part of energy resource management and its load-serving obligation. As of March 31, 2017, Avista Utilities supplied retail electric service to approximately 379,000 customers and retail natural gas service to approximately 342,000 customers across its service territory. Avista Utilities' service territory covers 30,000 square miles with a population of 1.6 million.

- **AEL&P** - a utility providing electric services in Juneau, Alaska that is a wholly-owned subsidiary and the primary operating subsidiary of AERC. Avista Corporation acquired AERC on July 1, 2014, and as of that date, AERC became a wholly-owned subsidiary of Avista Corporation. As of March 31, 2017, AEL&P served approximately 17,000 customers. Its primary customers include city, state and federal governmental entities located in Juneau, as well as a mine located in the Juneau area. Most of AEL&P's customers are served on a firm basis while certain of its customers, including its largest customer, are served on an interruptible sales basis. AEL&P maintains separate rate tariffs for each of its customer classes, as well as seasonal rates.

Avista Corporation has other businesses, including sheet metal fabrication, venture fund investments, real estate investments, a company that explores markets that could be served with LNG, as well as certain other investments of Avista Capital, which is a direct, wholly owned subsidiary of Avista Corporation. These activities do not represent a reportable business segment and are conducted by various direct and indirect subsidiaries of Avista Corporation, including AM&D, doing business as METALfx.

Merger Highlights

Scale Reinforces Competitive Positioning and Improved Financial Flexibility

As a result of the Merger, Hydro One's enterprise value will increase by over 25% (on a *pro forma* basis), making the combined entity one of North America's largest regulated utilities and a leader in regulated transmission as well as electricity and natural gas local distribution businesses. Post-Merger, on a *pro forma* basis as at March 31, 2017, Hydro One Limited's total assets would increase from approximately $25.4 billion to approximately $34.9 billion and Hydro One Limited's net income for the twelve months ended December 31, 2016 would increase from approximately $746 million to approximately $836 million. Management believes that the Merger will enhance

Hydro One's competitive positioning and provide Hydro One with opportunities for cost savings and non-headcount efficiency gains through enhanced innovation, shared IT systems and increased supply chain purchasing power.

Diversification of Business Segments into Growing Natural Gas Local Distribution Companies and Regulated Primarily Clean Power Generation

The Merger represents entry into complementary and synergistic regulatory assets and adds diversification for Hydro One across multiple geographies, economies, regulators and businesses. Management believes that Avista Corp.'s assets provide an opportunity to expand and diversify Hydro One's footprint to new regulatory jurisdictions (Washington, Idaho, Oregon, Montana and Alaska) with higher ROEs, favourable capital structures and growing economies, all of which will enhance Hydro One's stability and strategic positioning. Following the Merger, Hydro One's operations will have *pro forma* total assets of approximately $34.9 billion (calculated as of March 31, 2017), operate regulated utilities across the Province of Ontario and five U.S. states and serve more than 2 million retail and industrial customers.

Accretive to Earnings

Management expects the Merger will be accretive to Hydro One's earnings per Common Share in the first full year following closing of the Merger. The Merger is expected to provide additional support to Hydro One's growing dividend, and its 70 per cent to 80 per cent targeted dividend payout ratio is expected to remain unchanged upon completion of the Merger.

Experienced Management Teams and Shared Cultures and Values

Hydro One's management believes that Hydro One and Avista Corp. have experienced management teams who share a common heritage with over 230 years of collective operational experience rooted in similar cultures and values. Both Hydro One and Avista Corp. take very seriously their responsibility to be good corporate citizens and community partners and share a common interest in preserving and increasing the philanthropy and economic development in the communities they serve. Additionally, both Hydro One and Avista Corp. share a strong commitment to safety, respect for the environment and the importance of engaging stakeholders in operations. Hydro One's management believes that this cultural fit will allow for a low risk transition and an increased ability to quickly find and implement areas of mutual benefit for the combined entity that do not compromise either company's values. Moreover, Hydro One believes it will benefit from Avista Corp's management team which consists of well-respected industry leaders who have consistently delivered shareholder value.

Innovation and Knowledge Transfer

Avista Corp. is a proven utility sector innovation leader, with a strong track record of progressive investments in sophisticated technologies and energy management solutions that address customers' increasing expectations. See page A-17 of the Investor Presentation attached as Appendix A to this Prospectus. Hydro One's management believes that sharing best practices in innovation and research and development will increase the ability for both Hydro One and Avista Corp. to effectively accelerate the deployment of new technology, to the benefit of the electricity system and its customers.

FINANCING THE MERGER

The cash purchase price of the Merger and the Merger-Related Expenses will be financed at the closing of the Merger with a combination of some or all of the following: (i) net proceeds of the first instalment (to the extent available) and final instalment under the Offering; (ii) net proceeds of any subsequent bond or other debt offerings; (iii) amounts drawn under the existing $250 million operating credit facility of Hydro One Limited (the "**Operating Credit Facility**"); and (iv) existing cash on hand and other sources available to the Corporation.

Prior to the closing of the Merger, Hydro One Limited intends to use the net proceeds of the first instalment under the Offering, which are expected to be $441,700,000 (assuming no exercise of the Over-Allotment Option), to repay borrowings under the Operating Credit Facility or its subsidiaries' existing revolving credit facilities or other existing indebtedness (such indebtedness having been incurred for general corporate purposes), or for other general corporate purposes, including investing in short-term interest bearing U.S. dollar securities with investment grade counterparties and in Hydro One Limited's wholly-owned subsidiaries. In the event that the net proceeds of the first instalment under the Offering are used to reduce outstanding indebtedness, or for other general corporate purposes, Hydro One Limited will maintain readily available capacity on its revolving credit facilities (on a consolidated basis), or have cash on hand together with such available capacity, in an amount at least equal to the net proceeds of the first instalment under the Offering. Upon the closing of the Merger, Hydro One Limited intends to use the net proceeds of the final instalment under the Offering, which are expected to be $909,300,000 (assuming no exercise of the Over-Allotment Option), to finance, directly or indirectly, together with the net proceeds of the first instalment under the Offering to the extent available, part of the purchase price payable for the Merger and for other Merger-Related Expenses.

Hydro One Limited currently intends to fund the remainder of the purchase price for the Merger with a combination of bond or other debt financings, denominated principally in U.S. dollars in order to provide a significant natural currency hedge, drawdowns on the Operating Credit Facility and cash on hand.

Hydro One Limited's overall financing plan in respect of the Merger is structured and targeted to maintain Hydro One Limited's and Avista Corporation's strong investment grade status.

See "Risk Factors" for a discussion of certain risks relating to the financing of the Merger.

THE OFFERING

Issuer:	Hydro One Limited
Selling Debentureholder:	2587264 Ontario Inc., a direct wholly-owned subsidiary of Hydro One Limited. See “Details of the Offering – The Selling Debentureholder”.
Offering:	4.00% convertible unsecured subordinated debentures, due September 30, 2027, represented by Instalment Receipts and convertible into Common Shares at a Conversion Price of $21.40 per Common Share.
Amount:	$1,400,000,000 ($1,540,000,000 if the Over-Allotment Option is exercised in full) payable on an instalment basis.
Price:	$1,000 per Debenture represented by an Instalment Receipt, of which the first instalment of $333 is payable on the Closing Date and the final instalment of $667 is payable on or before the Final Instalment Date.
Closing Date:	On or about August 9, 2017, or such other date as may be agreed upon by the Corporation, the Selling Debentureholder and the Underwriters, but not later than August 23, 2017.
Over-Allotment Option:	The Underwriters shall have the option, exercisable in whole or in part at any time on or prior to the 30th day following the Closing Date to purchase additional Debentures represented by Instalment Receipts equal to up to 10% of the aggregate principal amount of Debentures represented by Instalment Receipts issued at the Closing Date to cover over-allotments, if any, and for market stabilization purposes. See “Plan of Distribution”.
Use of Proceeds:	The net proceeds from the Offering (including both the first instalment and final instalment) will be, in the aggregate, $1,349,500,000 determined after deducting the Underwriters’ fee and the estimated expenses of the Offering. In the event that the Over-Allotment Option is exercised in full, the net proceeds will be, in the aggregate, $1,484,600,000. Prior to the closing of the Merger, Hydro One Limited intends to use the net proceeds of the first instalment under the Offering, which are expected to be $441,700,000 (assuming no exercise of the Over-Allotment Option), to repay borrowings under the Operating Credit Facility or its subsidiaries’ existing revolving credit facilities or other existing indebtedness (such indebtedness having been incurred for general corporate purposes), or for other general corporate purposes, including investing in short-term interest bearing U.S. dollar securities with investment grade counterparties and in Hydro One Limited’s wholly-owned subsidiaries. In the event that the net proceeds of the first instalment under the Offering are used to reduce outstanding indebtedness or for other general corporate purposes, Hydro One Limited will maintain readily available capacity on its revolving credit facilities (on a consolidated basis), or have cash on hand together with such available capacity, in an amount at least equal to the net proceeds of the first instalment under the Offering. Upon the closing of the Merger, Hydro One Limited intends to use the net proceeds of the final instalment under the Offering, which are expected to be $909,300,000 (assuming no exercise of the Over-Allotment Option), to finance, directly or indirectly, together with the net proceeds of the first instalment under the Offering to the extent available, part of the purchase price payable for the Merger and for other Merger-Related Expenses. See “Use of Proceeds”.

Listing: Conditional approval of the TSX has been received to list the Instalment Receipts (representing the Debentures) and the Common Shares to be issued upon conversion or maturity of the Debentures on the TSX. **The Debentures will not be listed.** The Common Shares are currently listed on the TSX under the symbol "H", and, once listed, the Instalment Receipts will trade on the TSX under the symbol "H.IR".

Interest: Annual rate of 4.00% per $1,000 principal amount of Debentures will be payable quarterly in arrears in equal instalments (other than the first interest payment and, depending on the Final Instalment Date, the final interest payment) on the last day of December, March, June and September of each year (or the prior business day if the last day falls on a weekend or holiday) to and including the Final Instalment Date. The first interest payment in the amount of $15.78082 per $1,000 principal amount of Debentures will be made on December 29, 2017 and will include interest payable from and including the Closing Date. Subsequently, quarterly interest payments will be made in the amount of $10.00 per $1,000 principal amount of Debentures.

Based on a first instalment of $333 per $1,000 principal amount of Debentures, the effective yield per annum to and including the Final Instalment Date is 12.00%.

If the Final Instalment Date is prior to the first anniversary of the Closing Date, holders of Debentures who have paid the final instalment on or before the Final Instalment Date will be entitled to receive, on the business day following the Final Instalment Date, in addition to the payment of accrued and unpaid interest to and including the Final Instalment Date, an amount equal to the interest that would have accrued from the day following the Final Instalment Date to and including the first anniversary of the Closing Date had the Debentures remained outstanding and continued to accrue interest until and including such date (which is referred to in this Prospectus as the "**Make-Whole Payment**"). No Make-Whole Payment will be payable if the Final Instalment Date occurs on or after the first anniversary of the Closing Date.

No interest shall accrue on the Debentures following the Final Instalment Date.

See "Details of the Offering – Debentures".

Conversion: At the option of the holder and provided that payment of the final instalment has been made, each Debenture will be convertible into Common Shares at any time on or after the Final Instalment Date, but prior to the earlier of the date that the Corporation redeems the Debentures or the Maturity Date.

The Conversion Price will be $21.40 per Common Share, being a conversion rate of 46.7290 Common Shares per $1,000 principal amount of Debentures, subject to adjustment in certain events.

A holder of Debentures who does not exercise its conversion privilege concurrently with the payment of the final instalment no later than the Final Instalment Date will hold a Debenture that pays 0% interest and may be redeemed by the Corporation in whole or in part on any trading day following the Final Instalment Date at a price equal to its principal amount plus any unpaid interest which accrued prior to and including the Final Instalment Date. No fractional Common Shares will be issued on any conversion, but in lieu thereof, the Corporation will satisfy such fractional interest by a cash payment equal to the fractional interest multiplied by the Conversion Price provided, however, the Corporation shall not be required to make any payment of less than $10.00.

See "Details of the Offering – Debentures – Conversion Right".

Instalment Payment Arrangements:	The price of $1,000 per $1,000 principal amount of Debentures is payable on an instalment basis. Prior to full payment, beneficial ownership of the Debentures will be represented by Instalment Receipts. The first instalment of $333 per $1,000 principal amount of Debentures is payable on the Closing Date. The final instalment of $667 per $1,000 principal amount of Debentures is payable by the holders of Instalment Receipts on or before the Final Instalment Date. The Final Instalment Notice will set the Final Instalment Date, which shall not be less than 15 days nor more than 90 days following the date of such notice. The Final Instalment Notice shall not be provided to holders until the Approval Conditions have been satisfied. The Final Instalment Date may occur up to 90 days following April 30, 2019. See "Details of the Offering". Each Debenture represented by an Instalment Receipt will be pledged to the Selling Debentureholder to secure the obligation of the holder of the Instalment Receipt to pay the final instalment in respect of such Debenture. **If a holder of an Instalment Receipt does not pay the final instalment on or before the Final Instalment Date, the Debentures evidenced by such Instalment Receipt may, at the option of the Selling Debentureholder, upon compliance with applicable law and the terms of the Instalment Receipt Agreement governing the Instalment Receipts, be forfeited to the Selling Debentureholder in full satisfaction of the holder's obligations or such Debentures may be sold and the holder of the Instalment Receipt shall remain liable for any deficiency if the proceeds of such sale are insufficient to cover the amount of the final instalment and the costs of such sale (such costs of sale not to exceed $25 per Debenture). See "Details of the Offering – Instalment Receipts".**
Rights of Instalment Receipt Holders:	Holders of Instalment Receipts will be entitled, in the manner set forth in the Instalment Receipt Agreement described herein, to fully receive payments of accrued interest and to exercise the rights of ownership attached to the Debentures represented by such Instalment Receipts unless they fail to pay the final instalment on or before the Final Instalment Date. See "Details of the Offering – Instalment Receipts – Rights and Privileges".

Redemption: Prior to the Final Instalment Date, the Debentures may not be redeemed by the Corporation, except that the Debentures will be redeemed by the Corporation at a price equal to their principal amount plus accrued and unpaid interest (without any Make-Whole Payment) following the earlier of: (i) notification to holders that the Approval Conditions will not be satisfied; (ii) termination of the Merger Agreement in accordance with its terms; and (iii) May 1, 2019 if notice of the Final Instalment Date has not been given to holders of Instalment Receipts on or before April 30, 2019. Upon any such redemption, the Corporation will pay for each Debenture: (i) \$333 plus accrued and unpaid interest to the holder of the Instalment Receipt; and (ii) \$667 to the Selling Debentureholder on behalf of the holder of the Instalment Receipt in satisfaction of the final instalment.

Until such time as the Debentures have been redeemed or the Final Instalment Date has occurred, the Corporation will at all times hold short-term interest bearing U.S. dollar securities with investment grade counterparties, maintain readily available capacity under the Operating Credit Facility or the revolving credit facilities of its subsidiaries, or have cash on hand together with such available capacity, in an amount at least equal to the net proceeds of the first instalment paid on the closing of the Offering and the exercise of the Over-Allotment Option, if applicable.

In addition, after the Final Instalment Date, any Debentures not converted may be redeemed by the Corporation at a price equal to their principal amount plus any unpaid interest, which accrued prior to and including the Final Instalment Date.

See “Details of the Offering – Debentures – Redemption”.

Maturity Date: September 30, 2027.

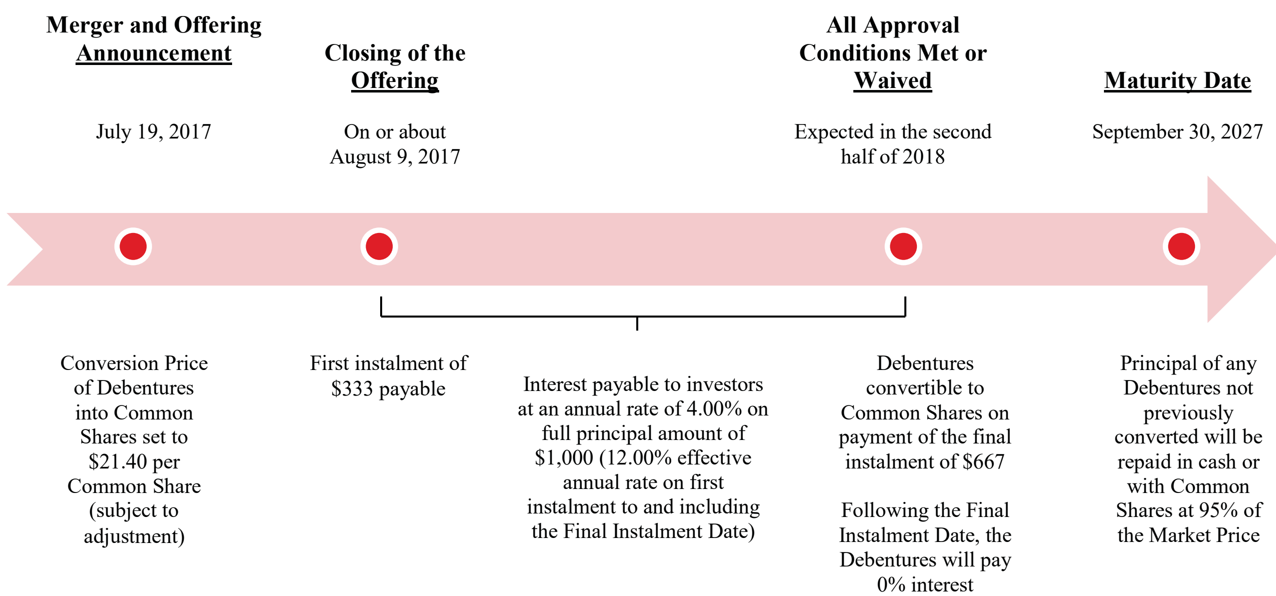
Payment upon Maturity: On the Maturity Date, the Corporation will repay the principal amount of any Debentures not converted and remaining outstanding, in cash, provided that the Corporation may, at its option and without prior notice, satisfy the obligation to pay the principal amount of such Debentures on maturity by delivery of that number of freely tradable Common Shares obtained by dividing the aggregate principal amount of the Debentures then outstanding by 95% of the Market Price. See “Details of the Offering – Debentures – Payment Upon Maturity”.

Subordination: The Debentures will be direct unsecured obligations of Hydro One Limited. Payment of the principal of, interest on, any Make-Whole Payments and other amounts owing in respect of each Debenture will (i) be subordinated in right of payment to all present and future Senior Indebtedness of Hydro One Limited and (ii) rank pari passu with each other Debenture of the same series (regardless of their actual date or terms of issue) and, subject to statutory preferred exceptions, with all other present and future subordinated and unsecured indebtedness of Hydro One Limited. The trust indenture pursuant to which the Debentures will be issued does not limit the ability of the Corporation to incur additional indebtedness, including indebtedness that ranks senior to the Debentures, or from mortgaging, pledging, charging, hypothecating, granting a security interest in or otherwise encumbering any or all of its properties to secure any indebtedness. See “Details of the Offering – Debentures – Subordination”.

Ownership Restriction: The *Electricity Act, 1998* (Ontario) precludes any person or company (or combination of persons or companies acting jointly or in concert), other than the Province, from beneficially owning, or exercising control or direction over, more than 10% of the Common Shares. **A potential purchaser of Debentures represented by Instalment Receipts should not subscribe for a number of such Debentures in this Offering that would, upon conversion of such Debentures into Common Shares, cause such purchaser to violate this prohibition.**

Risk Factors: An investment in the Debentures represented by Instalment Receipts and the Common Shares issuable upon conversion thereof involves certain risks which should be carefully considered by prospective investors, including risks in respect of the Merger, the Instalment Receipts, the Debentures, the Common Shares and the post-Merger business and operations of Hydro One and Avista Corp. See “Risk Factors”.

SUMMARY OF IMPORTANT DATES



HYDRO ONE LIMITED

Overview

Hydro One is the largest electricity transmission and distribution company in Ontario. Through its wholly-owned subsidiary, Hydro One Inc., Hydro One owns and operates substantially all of Ontario's electricity transmission network with over 30,000 circuit km of high-voltage transmission lines, and an approximately 123,000 circuit km low-voltage distribution network.

Hydro One has three business segments: (i) transmission; (ii) distribution; and (iii) other business.

Hydro One's transmission business consists of owning, operating and maintaining its transmission system, which accounts for approximately 98% of Ontario's transmission capacity based on the revenues approved by the Ontario Energy Board. This includes Hydro One's 66% interest in B2M Limited Partnership, a limited partnership between Hydro One and the Saugeen Ojibway Nation in respect of the Bruce-to-Milton transmission line. Hydro One's transmission business is a rate-regulated business that earns revenues mainly from charging transmission rates that must be approved by the Ontario Energy Board. Hydro One's transmission business accounted for approximately 51% of the Corporation's total assets as at December 31, 2016, and approximately 51% of its total revenues, net of purchased power, in 2016. All of Hydro One's transmission business is carried out by its wholly-owned subsidiary Hydro One Inc., through its wholly-owned subsidiary Hydro One Networks Inc. and through other wholly-owned subsidiaries of Hydro One Inc. that own and control Hydro One Sault Ste. Marie LP, as well as the portion of Hydro One's transmission business held through B2M Limited Partnership, which Hydro One controls.

Hydro One's distribution business consists of owning, operating and maintaining its distribution system, which Hydro One, through Hydro One Inc., owns primarily through its wholly-owned subsidiary, Hydro One Networks Inc., the largest local distribution company in Ontario. Hydro One's distribution system is also the largest in Ontario, and principally serves rural communities. Hydro One's distribution business is a rate-regulated business that earns revenues mainly by charging distribution rates that are subject to approval by the Ontario Energy Board. Hydro One's distribution business accounted for approximately 37% of its total assets as at December 31, 2016 and approximately 47% of its total revenues, net of purchased power, in 2016.

Hydro One's other business segment consists principally of Hydro One's telecommunications business, as well as certain corporate activities. The telecommunications business provides telecommunications support for Hydro One's transmission and distribution businesses. The telecommunications business also offers communications and IT solutions to organizations with broadband network requirements. Hydro One's other business segment is not rate-regulated. The other business segment, which in addition to the telecommunications business also includes a deferred tax asset, accounted for approximately 12% of Hydro One's total assets as at December 31, 2016 and approximately 2% of its total revenues, net of purchased power, in 2016.

Hydro One Limited was incorporated on August 31, 2015 under the OBCA. On October 31, 2015, Hydro One Limited acquired all of the issued and outstanding shares of Hydro One Inc. from the Province in exchange for the issuance of Common Shares and Series 1 Preferred Shares to the Province.

The address of the head and registered office of Hydro One is 483 Bay Street, South Tower, 8th Floor, Toronto, Ontario, M5G 2P5.

See the section entitled "Business of Hydro One" in the AIF for further details relating to the Corporation's business.

RECENT DEVELOPMENTS

Credit Rating Reviews

Hydro One

On July 19, 2017, S&P revised its outlook on Hydro One Limited and Hydro One Inc. to negative from stable while affirming the existing ratings, including its 'A' long-term corporate credit rating on both Hydro One

Limited and Hydro One Inc. S&P indicated that the negative outlook on Hydro One Limited reflects its view that the Merger signals a shift in Hydro One Limited's business strategy, which will align the company with its global peers removing the historical rationale for a one-notch rating uplift, and the execution and financing risk inherent in any large acquisition.

On July 19, 2017, DBRS issued a press release commenting on the Merger. DBRS' comments reflect DBRS' view that should the Merger be financed as contemplated in the announcement, it will have no impact on Hydro One Inc.'s credit profile.

On July 19, 2017, Moody's affirmed the ratings of Hydro One Inc.'s (i) senior unsecured regular bonds (A3); (ii) senior unsecured medium-term note program ((P)A3); and (iii) senior unsecured commercial paper (P-2), and changed the outlook to negative from stable. Moody's indicated that the negative outlook on Hydro One Inc. reflects its view that the Merger will reduce the probability of extraordinary support from the Province.

Avista Corporation

On July 19, 2017, S&P affirmed its ratings, including the 'BBB' issuer credit rating, on Avista Corporation and revised the outlook to positive from stable. The positive outlook reflects S&P's view of the potential for higher ratings on Avista Corporation if the Merger is completed as proposed based on its view that Avista Corporation will be an important member of the Hydro One group, highly unlikely to be sold and integral to overall group strategy and operations.

On July 19, 2017, Moody's affirmed the ratings of Avista Corporation's (i) issuer rating (Baa1); (ii) multiple seniority medium-term note program ((P)A2); (iii) senior secured medium-term notes (A2); (iv) senior secured first mortgage bonds (A2); (v) senior secured medium-term note program ((P)A2); and (vi) senior unsecured medium-term note program ((P)Baa1) and kept the outlook at stable. Moody's indicated that the stable rating outlook on Avista Corporation reflects its view that the Merger will not materially affect the credit quality of Avista Corporation.

Outlook

Milder weather in the first half of 2017 and a lower approved ROE for both Hydro One's transmission and distribution businesses have negatively impacted results of operations relative to the same period in 2016. A delay in approval of Hydro One's 2017-2018 transmission rates filing has also impacted revenues, however Hydro One anticipates a decision in the near term. Hydro One anticipates the revised rates will be effective from January 1, 2017 and as a result would book the increased revenue up to the date of decision at that time.

Chief Financial Officer Accepted New Role

On May 19, 2017, Michael Vels, former Chief Financial Officer of Hydro One, left Hydro One to assume the position of Executive Vice President and Chief Financial Officer of Empire Company Limited and its wholly-owned subsidiary Sobeys Inc.

THE MERGER

Merger Overview

On July 19, 2017, Hydro One Limited, US Parent and Merger Sub entered into the Merger Agreement with Avista Corporation which provides for, among other things, the direct or indirect acquisition by US Parent of Avista Corporation. The aggregate purchase price for the Merger is approximately US$5.3 billion, comprised of an equity purchase price of US$3.4 billion and the assumption of approximately US$1.9 billion of debt. The Merger is subject to receipt of Avista Shareholder Approval and certain regulatory and governmental approvals, including the expiration or termination of any applicable waiting period under the HSR Act, clearance of the Merger by CFIUS, the approval by each of IPUC, MPSC, OPUC, RCA, WUTC, FERC and the FCC, and the satisfaction of other customary closing conditions. The closing of the Merger is currently expected to occur in the second half of 2018.

Based on *pro forma* financial information as at March 31, 2017, following the Merger, Hydro One's total assets will increase from approximately $25.4 billion to approximately $34.9 billion.

Following completion of the Merger, Avista Corporation will maintain its existing corporate headquarters in Spokane and will continue to operate as a standalone utility in Washington, Oregon, Idaho, Montana and Alaska. Its management team will remain in place and it will operate with a board of directors that includes directors representing the interests of the Pacific Northwest and the communities it serves.

Merger Highlights

Scale Reinforces Competitive Positioning and Improved Financial Flexibility

As a result of the Merger, Hydro One's enterprise value will increase by over 25% on a *pro forma* basis, making the combined entity one of North America's largest regulated utilities and a leader in regulated transmission as well as electricity and natural gas local distribution businesses. Post-Merger, on a *pro forma* basis as at March 31, 2017, Hydro One Limited's total assets would increase from approximately $25.4 billion to approximately $34.9 billion and Hydro One Limited's net income for the twelve months ended December 31, 2016 would increase from approximately $746 million to approximately $836 million. Management believes that the Merger will enhance Hydro One's competitive positioning and provide Hydro One with opportunities for cost savings and non-headcount efficiency gains through enhanced innovation, shared IT systems and increased supply chain purchasing power.

Diversification of Business Segments into Growing Natural Gas Local Distribution Companies and Regulated Primarily Clean Power Generation

The Merger represents entry into complementary and synergistic regulatory assets and adds diversification for Hydro One across multiple geographies, economies, regulators and businesses. Management believes that Avista Corp.'s assets provide an opportunity to expand and diversify Hydro One's footprint to new regulatory jurisdictions (Washington, Idaho, Oregon, Montana and Alaska) with higher ROEs, favourable capital structures and growing economies, all of which will enhance Hydro One's stability and strategic positioning. Following the Merger, Hydro One's operations will have *pro forma* total assets of approximately $34.9 billion (calculated as of March 31, 2017), operate regulated utilities across the Province of Ontario and five U.S. states and serve more than 2 million retail and industrial customers.

Accretive to Earnings

Management expects the Merger will be accretive to Hydro One's earnings per Common Share in the first full year following closing of the Merger. The Merger is expected to provide additional support to Hydro One's growing dividend, and its 70 per cent to 80 per cent targeted dividend payout ratio is expected to remain unchanged upon completion of the Merger.

Experienced Management Teams and Shared Cultures and Values

Hydro One's management believes that Hydro One and Avista Corp. have experienced management teams who share a common heritage with over 230 years of collective operational experience rooted in similar cultures and values. Both Hydro One and Avista Corp. take very seriously their responsibility to be good corporate citizens and community partners and share a common interest in preserving and increasing the philanthropy and economic development in the communities they serve. Additionally, both Hydro One and Avista Corp. share a strong commitment to safety, respect for the environment and the importance of engaging stakeholders in operations. Hydro One's management believes that this cultural fit will allow for a low risk transition and an increased ability to quickly find and implement areas of mutual benefit for the combined entity that do not compromise either company's values. Moreover, Hydro One believes it will benefit from Avista Corp's management team which consists of well-respected industry leaders who have consistently delivered shareholder value.

Innovation and Knowledge Transfer

Avista Corp. is a proven utility sector innovation leader, with a strong track record of progressive investments in sophisticated technologies and energy management solutions that address customers' increasing expectations. See page A-17 of the Investor Presentation attached as Appendix A to this Prospectus. Hydro One's management believes that sharing best practices in innovation and research and development will increase the ability for both Hydro One and Avista Corp. to effectively accelerate the deployment of new technology, to the benefit of the electricity system and its customers.

For additional information on the Merger, its expected benefits, its expected timing to completion and its strategic rationale, see pages A-6, A-7, A-11 and A-13 to A-19 of the Investor Presentation attached as Appendix A to this Prospectus.

THE ACQUIRED BUSINESS

Avista Corp.

Avista Corporation, incorporated in the territory of Washington in 1889, is primarily an electric and natural gas utility with certain other business ventures. As of December 31, 2016, Avista Corp. employed 1,742 people in its Pacific Northwest utility operations (Avista Utilities) and 240 people in its subsidiary businesses (including in its Juneau, Alaska utility operations). Avista Corporation's corporate headquarters are in Spokane, Washington, the second-largest city in Washington. Spokane serves as the business, transportation, medical, industrial and cultural hub of the Inland Northwest region (eastern Washington and northern Idaho). Regional services include government and higher education, medical services, retail trade and finance. Through its subsidiary AEL&P, Avista Corporation also provides electric utility services in Juneau, Alaska. Avista Corporation is an operating public utility with its common stock listed on the NYSE under the ticker symbol "AVA".

As of March 31, 2017, Avista Corporation had two reportable business segments as follows:

- **Avista Utilities** – an operating division of Avista Corporation (not a subsidiary) that comprises its regulated utility operations in the Pacific Northwest. Avista Utilities generates, transmits and distributes electricity and distributes natural gas, serving electric and natural gas customers in eastern Washington and northern Idaho and natural gas customers in parts of Oregon. It also supplies electricity to a small number of customers in Montana, most of whom are its employees who operate its Noxon Rapids generating facility. Avista Utilities also engages in wholesale purchases and sales of electricity and natural gas as an integral part of energy resource management and its load-serving obligation.

- **AEL&P** - a utility providing electric services in Juneau, Alaska that is a wholly-owned subsidiary and the primary operating subsidiary of AERC. Avista Corporation acquired AERC on July 1, 2014, and as of that date, AERC became a wholly-owned subsidiary of Avista Corporation.

Avista Corporation has other businesses, including sheet metal fabrication, venture fund investments, real estate investments, a company that explores markets that could be served with LNG, as well as certain other investments of Avista Capital, which is a direct, wholly owned subsidiary of Avista Corporation. These activities do not represent a reportable business segment and are conducted by various direct and indirect subsidiaries of Avista Corporation, including AM&D, doing business as METALfx.

Avista Utilities

As of March 31, 2017, Avista Utilities supplied retail electric service to approximately 379,000 customers and retail natural gas service to approximately 342,000 customers across its service territory. Avista Utilities' service territory covers 30,000 square miles with a population of 1.6 million.

Electric Resources

Hydroelectric Resources

Avista Utilities owns and operates six hydroelectric projects on the Spokane River and two hydroelectric projects on the Clark Fork River. Hydroelectric generation is typically Avista Utilities lowest cost source per MWh of electric energy and the availability of hydroelectric generation has a significant effect on total power supply costs. Under normal streamflow and operating conditions, Avista Utilities estimates that it would be able to meet approximately one-half of its total average electric requirements (both retail and long-term wholesale) with the combination of its hydroelectric generation and long-term hydroelectric purchase contracts with certain PUDs in the state of Washington. Avista Utilities estimate of normal annual hydroelectric generation for 2017 (including resources purchased under long-term hydroelectric contracts with certain PUDs) is 538 average MW (or 4.7 million MWhs).

Thermal Resources

Avista Utilities owns the following thermal generating resources:

- the combined cycle CT natural gas-fired Coyote Springs 2 located near Boardman, Oregon, a 15 percent interest in a twin-unit, coal-fired boiler generating facility, Colstrip 3 & 4, located in southeastern Montana,

- a wood waste-fired boiler generating facility known as the Kettle Falls Generating Station ("**Kettle Falls GS**") in northeastern Washington,

- a two-unit natural gas-fired CT generating facility, located in northeastern Spokane ("**Northeast CT**"),

- a two-unit natural gas-fired CT generating facility in northern Idaho ("**Rathdrum CT**"), and

- two small natural gas-fired generating facilities ("**Boulder Park GS**" and "**Kettle Falls CT**").

Coyote Springs 2, which is operated by Portland General Electric Company, is supplied with natural gas under a combination of term contracts and spot market purchases, including transportation agreements with bilateral renewal rights.

Colstrip, which is operated by Talen Energy LLC, is supplied with fuel from adjacent coal reserves under coal supply and transportation agreements in effect through 2019. During 2016, Talen Energy LLC provided notice to the Colstrip owners that it no longer plans to operate units 3 & 4 after May 2018. The Colstrip owners are searching for a replacement operator for units 3 & 4.

The primary fuel for the Kettle Falls GS is wood waste generated as a by-product and delivered by trucks from forest industry operations within 100 miles of the plant. A combination of long-term contracts and spot purchases has provided, and is expected to meet, fuel requirements for the Kettle Falls GS.

The Northeast CT, Rathdrum CT, Boulder Park GS and Kettle Falls CT generating units are primarily used to meet peaking electric requirements. Avista Utilities also operate these facilities when marginal costs are below prevailing wholesale electric prices. These generating facilities have access to natural gas supplies that are adequate to meet their respective operating needs.

Avista Utilities has the exclusive rights to all the capacity of the Lancaster Plant, a 270 MW natural gas-fired combined cycle combustion turbine plant located in northern Idaho, owned by an unrelated third-party. All of the output from the Lancaster Plant is contracted to Avista Utilities through 2026 under a PPA. Under the terms of the PPA, Avista Utilities makes the dispatch decisions, provides all natural gas fuel and receives all of the electric energy output from the Lancaster Plant; as such, Avista Utilities considers this plant to be part of its baseload resources.

Wind Resources

Avista Utilities has the exclusive rights to all the capacity of Palouse Wind, a wind generation project developed, owned and managed by an unrelated third-party and located in Whitman County, Washington. Avista Utilities has a PPA that expires in 2042 and allows it to acquire all of the power and renewable attributes produced by the project at a fixed price per MWh with a fixed escalation of the price over the term of the agreement. The project has a nameplate capacity of 105 MW. Generation from Palouse Wind was 349,771 MWhs in 2016, 293,563 MWhs in 2015 and 335,291 MWhs in 2014. Avista Utilities has an annual option to purchase the wind project beginning in December 2022. The purchase price per the PPA is a fixed price per KW of in-service capacity with a fixed decline in the price per KW over the remaining 20-year term of the agreement. Under the terms of the PPA, Avista Utilities does not have any input into the day-to-day operation of the project, including maintenance decisions. All such rights are held by the owner.

Other Purchases, Exchanges and Sales

In addition to the resources described above, Avista Utilities purchases and sells power under various long-term contracts, and also enters into short-term purchases and sales. Further, pursuant to PURPA, as amended, Avista Utilities is required to purchase generation from qualifying facilities. This includes, among other resources, hydroelectric projects, cogeneration projects and wind generation projects at rates approved by the WUTC and the IPUC.

Hydroelectric Licenses

Avista Corp. is a licensee under the FPA as administered by the FERC, which includes regulation of hydroelectric generation resources. Excluding Little Falls, its other seven hydroelectric plants are regulated by the FERC through two project licenses. The licensed projects are subject to the provisions of Part I of the FPA. These provisions include payment for headwater benefits, condemnation of licensed projects upon payment of just compensation, and take-over by the federal government of such projects after the expiration of the license upon payment of the lesser of "net investment" or "fair value" of the project, in either case, plus severance damages. In the unlikely event that a take-over occurs, it could lead to either the decommissioning of the hydroelectric project or offering the project to another party (likely through sale and transfer of the license).

Cabinet Gorge and Noxon Rapids are under one 45-year FERC license issued in March 2001.

Five of Avista Corp.'s six hydroelectric projects on the Spokane River (Long Lake, Nine Mile, Upper Falls, Monroe Street and Post Falls) are under one 50-year FERC license issued in June 2009 and are referred to collectively as the Spokane River Project. The sixth, Little Falls, is operated under separate Congressional authority and is not licensed by the FERC.

Natural Gas Operations

Avista Utilities provides natural gas distribution services to retail customers in parts of eastern Washington, northern Idaho, and northeastern and southwestern Oregon.

Natural Gas Supply

Avista Utilities purchases all of its natural gas in wholesale markets. Avista Utilities is connected to multiple supply basins in the western United States and Canada through firm capacity transportation rights on six different pipeline networks. Access to this diverse portfolio of natural gas resources allows it to make natural gas procurement decisions that benefit its natural gas customers. These interstate pipeline transportation rights provide the capacity to serve approximately 25 percent of peak natural gas customer demands from domestic sources and 75 percent from Canadian sourced supply. Natural gas prices in the Pacific Northwest are affected by global energy markets, as well as supply and demand factors in other regions of the United States and Canada. Future prices and delivery constraints may cause Avista Utilities resource mix to vary.

Natural Gas Storage

Avista Utilities owns a one-third interest in Jackson Prairie. Jackson Prairie has a total peak day deliverability of 12 million therms, with a total working natural gas capacity of 256 million therms. As an owner, Avista Utilities' share is one-third of the peak day deliverability and total working capacity. Avista Utilities also contracts for additional storage capacity and delivery at Jackson Prairie from Northwest Pipeline for a portion of their one-third share of the storage project.

Avista Utilities optimizes its natural gas storage capacity throughout the year by executing transactions that capture favourable market price spreads. Natural gas buyers identify opportunities to purchase lower cost natural gas in the immediate term to inject into storage, and then sell the gas in a forward market to be withdrawn at a later time. The reverse of this type of transaction also occurs. These transactions lock in incremental value for customers. Jackson Prairie is also used as a variable peaking resource, and to protect from extreme daily price volatility during cold weather or other events affecting the market.

Alaska Electric Light and Power Company

AEL&P is the primary operating subsidiary of AERC. AEL&P is the sole utility providing electrical energy in Juneau, Alaska. Juneau is a geographically isolated community with no electric interconnections with the transmission facilities of other utilities and no pipeline access to natural gas or other fuels. Juneau's economy is primarily driven by government activities, tourism, commercial fishing, and mining, as well as activities as the commercial hub of southeast Alaska.

AEL&P owns and operates electric generation, transmission and distribution facilities located in Juneau. AEL&P operates five hydroelectric generation facilities with 102.7 MW of hydroelectric generation capacity as of December 31, 2016. AEL&P owns four of these generation facilities (totaling 24.5 MW of capacity) and has a PPA for the output of the Snettisham hydroelectric project (totaling 78.2 MW of capacity).

The Snettisham hydroelectric project is owned by the AIDEA, a public corporation of the State of Alaska. AEL&P has a PPA and operating and maintenance agreement with the AIDEA to operate and maintain the facility. This PPA is a take-or-pay obligation expiring in December 2038, to purchase all of the output of the project.

For accounting purposes, this PPA is treated as a capital lease and as of March 31, 2017 and December 31, 2016, the capital lease obligation was US$61.6 million and US$62.2 million, respectively. Snettisham Electric Company, a non-operating subsidiary of AERC, has the option to purchase the Snettisham project at any time for a price equal to the principal amount of the bonds outstanding at that time.

As of December 31, 2016, AEL&P also had 107.5 MW of diesel generating capacity from four facilities to provide back-up service to firm customers when necessary.

As of March 31, 2017, AEL&P served approximately 17,000 customers. Its primary customers include city, state and federal governmental entities located in Juneau, as well as a mine located in the Juneau area. Most of AEL&P's customers are served on a firm basis while certain of its customers, including its largest customer, are served on an interruptible sales basis. AEL&P maintains separate rate tariffs for each of its customer classes, as well as seasonal rates.

AEL&P's operations are subject to regulation by the RCA with respect to rates, standard of service, facilities, accounting and certain other matters, but not with respect to the issuance of securities. Rate adjustments for AEL&P's customers require approval by the RCA pursuant to RCA regulations. AEL&P filed an electric general rate case during 2016.

AEL&P is also subject to the jurisdiction of the FERC concerning the permits and licenses necessary to operate certain of its hydroelectric facilities. One of these licenses (for the Salmon Creek and Annex Creek hydroelectric projects) expires in 2018, but AEL&P plans to extend this license. Since AEL&P has no electric interconnection with other utilities and makes no wholesale sales, it is not subject to general FERC jurisdiction, other than the reporting and other requirements of the Public Utility Holding Company Act of 2005 as an Avista Corporation subsidiary.

The Snettisham hydroelectric project is subject to regulation by the State of Alaska with respect to dam safety and certain aspects of its operations. In addition, AEL&P is subject to regulation with respect to air and water quality, land use and other environmental matters under both federal and state laws.

Other Businesses

As of March 31, 2017, Avista Corporation's other businesses had assets of approximately US$58.4 million (excluding intracompany amounts) compared to assets of US$55.3 million as of December 31, 2016. Avista Corporation's other businesses are described below.

Avista Capital

- Salix is a wholly-owned subsidiary of Avista Capital that explores markets that could be served with LNG.

- Equity investments are primarily in an emerging technology venture capital fund.

Avista Development

- Equity investments are primarily in emerging technology venture capital funds and companies, including an investment in a technology company that delivers scalable smart grid solutions to global partners and customers, and a predictive data science company.

- Real estate consists primarily of mixed use commercial and retail office space.

- Notes receivable and other assets are primarily long-term notes receivable made to a company focused on spurring economic development throughout the State of Washington.

- AM&D doing business as METALfx performs custom sheet metal fabrication of electronic enclosures, parts and systems for the computer, construction, telecom, renewable energy and medical industries. The asset balance above excludes an intercompany loan from METALfx to Avista Corporation. The loan balance was US$4.3 million as of March 31, 2017 and US$4.0 million as of December 31, 2016.

Alaska companies

- Includes AERC and AJT Mining, which is a wholly-owned subsidiary of AERC and is an inactive mining company holding certain properties.

Over time as opportunities arise, Avista Corp. disposes of investments and phases out operations that do not fit with its overall corporate strategy. However, Avista Corp. may invest incremental funds to protect its existing investments and invest in new businesses that it believes fit in with its overall corporate strategy.

Results of Operations

Avista Corporation

The following table presents net income (loss) attributable to Avista Corporation for each of its business segments (and the other businesses) for the three months ended March 31, 2017 and years ended December 31, 2016 and December 31, 2015 (U.S. dollars in thousands):

Period	**Three Months ended March 31, 2017**	**Year ended December 31, 2016**	**Year ended December 31, 2015**
Avista Utilities	$58,439	$132,490	$113,360
AEL&P	$ 3,853	$7,968	$6,641
Ecova – Discontinued operations			$5,147
Other	$(176)	$(3,230)	$(1,921)
Net income	$62,116	$137,228	$123,227

Avista Utilities

Three months ended March 31, 2017 compared to the three months ended March 31, 2016

The following table presents Avista Utilities' operating revenues, resource costs and resulting gross margin for the three months ended March 31, 2017 and three months ended March 31, 2016 (U.S. dollars in thousands):

	Electric		Natural Gas		Intracompany		Total	
	2017	2016	2017	2016	2017	2016	2017	2016

Alaska Electric Light and Power Company

Three months ended March 31, 2017 compared to the three months ended March 31, 2016

Net income for AEL&P was US$3.9 million for the three months ended March 31, 2017 compared to US$3.0 million for the three months ended March 31, 2016.

The increase in earnings was primarily due to an increase in gross margin, partially offset by an increase in operating expenses and a decrease in equity-related AFUDC due to the construction of an additional back-up generation plant in 2016.

The increase in gross margin was primarily related to an interim general rate increase, effective in November 2016, and an increase in electric heating loads due to weather that was colder than the prior year and colder than normal. This was partially offset by an increase in resource costs primarily due to purchased power expense and deferred power supply expenses.

While the cold weather did have some effect on AEL&P revenues during 2017, AEL&P has a relatively stable load profile as it does not have a large population of customers in its service territory with electric heating and cooling requirements; therefore, its revenues are not as sensitive to weather fluctuations as Avista Utilities. However, AEL&P does have higher winter rates for its customers during the peak period of November through May of each year, which drives higher revenues during those periods.

Year end 2016 compared to year end 2015

Net income for AEL&P was US$8.0 million for the year ended December 31, 2016, compared to US$6.6 million for 2015. The increase in earnings for 2016 was primarily due to an increase in gross margin and an increase in equity-related AFUDC (increased earnings) due to the construction of an additional back-up generation plant which was completed during the fourth quarter of 2016.

The increase in gross margin was primarily related to a decrease in costs associated with the Snettisham hydroelectric project (due to a refinancing transaction during the second half of 2015 which lowered interest costs under the take-or-pay power purchase agreement), as well as an interim rate increase effective in November 2016. These were partially offset by a slight decrease in sales volumes to commercial and government customers and an increase in other resource costs.

AEL&P has a relatively stable load profile as it does not have a large population of customers in its service territory with electric heating and cooling requirements; therefore, its revenues are not as sensitive to weather fluctuations as Avista Utilities. However, AEL&P does have higher winter rates for its customers during the peak period of November through May of each year, which drives higher revenues during those periods.

For further information on the financial condition and results of Avista Corp., reference is made to the audited comparative consolidated financial statements of Avista Corporation as at December 31, 2016 and 2015, including the consolidated balance sheets and the related consolidated statements of income, common stockholders' equity and cash flows, for each of the years ended December 31, 2016 and 2015, and the unaudited interim comparative consolidated financial statements of Avista Corporation for the three months ended March 31, 2017, each of which is included in this Prospectus.

Properties

Avista Utilities

Generation Properties

Substantially all of Avista Utilities' properties are subject to the lien of Avista Corporation's mortgage indenture.

Avista Corp.'s utility electric properties, located in the states of Washington, Idaho, Montana and Oregon, include the following:

	No. of Units	Nameplate Rating (MW)(1)	Present Capability (MW)(2)
Hydroelectric Generating Stations (River)			
Washington:			
Long Lake (Spokane)	4	70.0	88.0
Little Falls (Spokane)	4	32.0	35.6
Nine Mile (Spokane)(3)	4	36.8	29.0
Upper Falls (Spokane)	1	10.0	10.2
Monroe Street (Spokane)	1	14.8	15.0
Idaho:			
Cabinet Gorge (Clark Fork)(4)	4	265.0	273.0
Post Falls (Spokane)	6	14.8	15.4
Montana:			
Noxon Rapids (Clark Fork)	5	487.8	562.4
Total Hydroelectric		931.2	1,028.6
Thermal Generating Stations (cycle, fuel source)			
Washington:			
Kettle Falls GS (combined-cycle, wood waste)(5)	1	50.7	53.5
Kettle Falls CT (combined-cycle, natural gas)(5)	1	7.2	6.9
Northeast CT (simple-cycle, natural gas)	2	61.8	64.8
Boulder Park GS (simple-cycle, natural gas)	6	24.6	24.6
Idaho:			
Rathdrum CT (simple-cycle, natural gas)	2	166.5	166.5
Montana:			
Colstrip Units 3 & 4 (simple-cycle, coal)(6)	2	233.4	222.0
Oregon:			
Coyote Springs 2 (combined-cycle, natural gas)	1	295.0	295.0
Total Thermal		839.2	833.3
Total Generation Properties		1,770.4	1,861.9

(1) Nameplate rating, also referred to as "installed capacity," is the manufacturer's assigned power capability under specified conditions.

(2) Present capability is the maximum capacity of the plant under standard test conditions without exceeding specified limits of temperature, stress and environmental conditions. Information is provided as of December 31, 2016.

(3) The project to replace Units 1 and 2 was completed during 2016. The present capability shown is the maximum plant generation Avista Utilities have seen given the water they have had available, because they have not yet had peak water conditions since Units 1 and 2 went into service. As conditions change, Avista Utilities will test plant capability and revise this number accordingly.

(4) For Cabinet Gorge, Avista Utilities has water rights permitting generation up to 265 MW. However, if natural stream flows will allow for generation above Avista Utilities' water rights, Avista Utilities is able to generate above its water rights. If natural stream flows only allow for generation at or below 265 MW, Avista Utilities is limited to generation of 265 MW. The present capability disclosed above represents the capability based on maximum stream flow conditions when Avista Utilities has been allowed to generate above its water rights.

(5) These generating stations can operate as separate single-cycle plants or combined-cycle with the natural gas plant providing exhaust heat to the wood boiler to increase efficiency.

(6) Jointly owned; data refers to Avista Utilities' 15 percent interest.

Electric Distribution and Transmission Plant

Avista Utilities owns and operates approximately 19,000 miles of primary and secondary electric distribution lines providing service to retail customers. Avista Utilities has an electric transmission system of 685 miles of 230 KV line and 1,565 miles of 115 KV line. Avista Utilities also owns an 11 percent interest in approximately 500 miles of a 500 KV line between Colstrip, Montana and Townsend, Montana. Its transmission and distribution systems also include numerous substations with transformers, switches, monitoring and metering devices, and other equipment.

The 230 KV lines are the backbone of Avista Utilities' transmission grid and are used to transmit power from generation resources, including Noxon Rapids, Cabinet Gorge and the Mid-Columbia hydroelectric projects, to the major load centers in Avista Utilities service area, as well as to transfer power between points of interconnection with adjoining electric transmission systems. These lines interconnect at various locations with the BPA, Grant County PUD, PacifiCorp, NorthWestern Energy and Idaho Power Company and serve as points of delivery for power from generating facilities outside of Avista Utilities service area, including Colstrip, Coyote Springs 2 and the Lancaster Plant.

These lines also provide a means for Avista Utilities to optimize resources by entering into short-term purchases and sales of power with entities within and outside of the Pacific Northwest.

The 115 KV lines provide for transmission of energy and the integration of smaller generation facilities with Avista Utilities service-area load centers, including the Spokane River hydroelectric projects, the Kettle Falls projects, Rathdrum CT, Boulder Park GS and the Northeast CT. These lines interconnect with the BPA, Chelan County PUD, the Grand Coulee Project Hydroelectric Authority, Grant County PUD, NorthWestern Energy, PacifiCorp and Pend Oreille County PUD. Both the 115 KV and 230 KV interconnections with the BPA are used to transfer energy to facilitate service to each other's customers that are connected through the other's transmission system. Avista Utilities holds a long-term transmission agreement with the BPA that allows them to serve their native load customers that are connected through the BPA's transmission system.

Natural Gas Plant

Avista Utilities has natural gas distribution mains of approximately 3,400 miles in Washington, 2,000 miles in Idaho and 2,300 miles in Oregon. It has natural gas transmission mains of approximately 75 miles in Washington and 50 miles in Oregon. Its natural gas system includes numerous regulator stations, service distribution lines, monitoring and metering devices, and other equipment.

Avista Utilities owns a one-third interest in Jackson Prairie.

Alaska Electric Light and Power Company

Generation Properties

Substantially all of AEL&P's utility properties are subject to the lien of the AEL&P mortgage indenture.

AEL&P's utility electric properties, located in Alaska include the following:

	No. of Units	Nameplate Rating (MW)(1)	Present Capability (MW)(2)
Hydroelectric Generating Stations			
Snettisham(3)	3	78.2	78.2
Lake Dorothy	1	14.3	14.3
Salmon Creek	1	8.4	5.0
Annex Creek	2	4.1	3.6
Gold Creek	3	1.6	1.6
Total Hydroelectric		106.6	102.7
Diesel Generating Stations			
Lemon Creek	11	61.4	51.8
Auke Bay	3	28.4	25.2
Gold Creek	5	8.2	7.0
Industrial Blvd. Plant	1	23.5	23.5
Total Diesel		121.5	107.5
Total Generation Properties		228.1	210.2

(1) Nameplate rating, also referred to as "installed capacity," is the manufacturer's assigned power capability under specified conditions.

(2) Present capability is the maximum capacity of the plant under standard test conditions without exceeding specified limits of temperature, stress and environmental conditions. Information is provided as of December 31, 2016.

(3) AEL&P does not own this generating facility but has a PPA under which it has the right to purchase, and the obligation to pay for (whether or not energy is received), all of the capacity and energy of this facility.

In addition to the generation properties above, AEL&P owns approximately 61 miles of transmission lines, which are primarily comprised of 69 KV line, and approximately 184 miles of distribution lines.

Legal Proceedings

In the course of its business, Avista Corp. becomes involved in various claims, controversies, disputes and other contingent matters. Some of these claims, controversies, disputes and other contingent matters involve litigation or other contested proceedings. For all such matters, Avista Corp. intends to vigorously protect and defend its interests and pursue its rights. However, no assurance can be given as to the ultimate outcome of any particular matter because litigation and other contested proceedings are inherently subject to numerous uncertainties. For matters that affect Avista Utilities' or AEL&P's operations, Avista Corp. intends to seek, to the extent appropriate, recovery of incurred costs through the ratemaking process.

California Refund Proceeding

In February 2016, APX, a market maker in the California Refund Proceedings in whose markets Avista Energy participated in the summer of 2000, asserted that Avista Energy and its other customer/participants may be responsible for a share of the disgorgement penalty APX may be found to owe to the California Parties. The penalty arises as a result of the FERC finding that APX committed violations in the California market in the summer of 2000. APX is making these assertions despite Avista Energy having been dismissed in FERC Opinion No. 536 from the on-going administrative proceeding at the FERC regarding potential wrongdoing in the California markets in the summer of 2000. APX has identified Avista Energy's share of APX's exposure to be as much as US$16.0 million even though no wrongdoing allegations are specifically attributable to Avista Energy. Avista Energy believes its 2014 settlement with the California Parties insulates it from any such liability and that as a dismissed party it cannot be drawn back into the litigation. Avista Energy intends to vigorously dispute APX's assertions of indirect liability, but cannot at this time predict the eventual outcome.

Cabinet Gorge Total Dissolved Gas Abatement Plan

Dissolved atmospheric gas levels ("**Total Dissolved Gas**" or "**TDG**") in the Clark Fork River exceed state of Idaho and federal water quality numeric standards downstream of Cabinet Gorge particularly during periods when excess river flows must be diverted over the spillway. Under the terms of the CFSA as incorporated in Avista Corp.'s FERC license for the Clark Fork Project, Avista Corp. has worked in consultation with agencies, tribes and other stakeholders to address this issue. Under the terms of a gas supersaturation mitigation plan, Avista Corp. is reducing TDG by constructing spill crest modifications on spill gates at the dam, and Avista Corp. expects to continue spill crest modifications over the next several years, in ongoing consultation with key stakeholders. Avista Corp. cannot at this time predict the outcome or estimate a range of costs associated with this contingency; however, Avista Corp. will continue to seek recovery, through the ratemaking process, of all operating and capitalized costs related to this issue.

Fish Passage at Cabinet Gorge and Noxon Rapids

In 1999, the USFWS listed bull trout as threatened under the *Endangered Species Act*. In 2010, the USFWS issued a revised designation of critical habitat for bull trout, which includes the lower Clark Fork River. The USFWS issued a final recovery plan in October 2015.

The CFSA describes programs intended to help restore bull trout populations in the project area. Using the concept of adaptive management and working closely with the USFWS, Avista Corp. evaluated the feasibility of fish passage at Cabinet Gorge and Noxon Rapids. The results of these studies led, in part, to the decision to move forward with development of permanent facilities, among other bull trout enhancement efforts. Parties to the CFSA are working to resolve several issues. Avista Corp. believes its ongoing efforts through the CFSA continue to effectively address issues related to bull trout. Avista Corp. cannot at this time predict the outcome or estimate a range of costs associated with this contingency; however, Avista Corp. will continue to seek recovery, through the ratemaking process, of all operating and capitalized costs related to fish passage at Cabinet Gorge and Noxon Rapids.

Other Contingencies

In the normal course of business, Avista Corp. has various other legal claims and contingent matters outstanding. Avista Corp. believes that any ultimate liability arising from these actions will not have a material impact on its financial condition, results of operations or cash flows.

Environmental Issues and Contingencies

Avista Corp. is subject to environmental regulation by federal, state and local authorities. The generation, transmission, distribution, service and storage facilities in which they have ownership interests are designed and operated in compliance with applicable environmental laws. Furthermore, Avista Corp. conducts periodic reviews and audits of pertinent facilities and operations to ensure compliance and to respond to or anticipate emerging environmental issues. Avista Corporation's board of directors has established a committee to oversee environmental issues.

Avista Corp. monitors legislative and regulatory developments at all levels of government for environmental issues, particularly those with the potential to impact the operation and productivity of their generating plants and other assets.

Environmental laws and regulations may:

- increase the operating costs of generating plants;
- increase the lead time and capital costs for the construction of new generating plants;
- require modification of its existing generating plants;
- require existing generating plant operations to be curtailed or shut down;
- reduce the amount of energy available from its generating plants;
- restrict the types of generating plants that can be built or contracted with;

- require construction of specific types of generation plants at higher cost; and
- increase costs of distributing natural gas.

Compliance with environmental laws and regulations could result in increases to capital expenditures and operating expenses. Avista Corp. intends to seek recovery of any such costs through the ratemaking process.

Clean Air Act

Avista Corp. must comply with the requirements under the CAA in operating its thermal generating plants. The CAA currently requires a Title V operating permit for Colstrip (expires in 2017), Coyote Springs 2 (expires in 2018), the Kettle Falls GS (application has been made for a new permit), and the Rathdrum CT (application has been made for a new permit). Boulder Park GS, Northeast CT, and other activities only require minor source operating or registration permits based on their limited operation and emissions. The Title V operating permits are renewed every five years and updated to include newly applicable CAA requirements. Avista Corp. actively monitors legislative, regulatory and program developments within the CAA that may impact its facilities.

On March 6, 2013, the Sierra Club and Montana Environmental Information Center, filed a Complaint ("**Complaint**") in the United States District Court for the District of Montana, Billings Division, against the owners of Colstrip. The Complaint alleged certain violations of the CAA. On July 12, 2016, all of the parties to this action filed a Consent Decree with the Court settling all claims contained in the Complaint.

Hazardous Air Pollutants

The EPA regulates HAPs from a published list of industrial sources referred to as "source categories" which must meet control technology requirements if they emit one or more of the pollutants in significant quantities. In 2012, the EPA finalized the MATS for the coal and oil-fired source category. At the time of issuance in 2012, Avista Corp. examined the existing emission control systems of Colstrip Units 3 & 4, the only units in which Avista Corp. are a minority owner, and concluded that the existing emission control systems should be sufficient to meet mercury limits. For the remaining portion of the rule that utilized Particulate Matter as a surrogate for air toxics (including metals and acid gases), the Colstrip owners reviewed recent stack testing data and expected that no additional emission control systems would be needed for Units 3 & 4 MATS compliance.

Regional Haze Program

The EPA set a national goal of eliminating man-made visibility degradation in Class I areas by the year 2064. States are expected to take actions to make "reasonable progress" through 10-year plans, including application of BART requirements. BART is a retrofit program applied to large emission sources, including electric generating units built between 1962 and 1977. In the case where a State opts out of implementing the Regional Haze program, the EPA may act directly. On September 18, 2012, the EPA finalized the Regional Haze federal implementation plan ("**FIP**") for Montana. The FIP includes both emission limitations and pollution controls for Colstrip Units 1 & 2. Colstrip Units 3 & 4, the only units of which Avista Corp. are a minority owner, are not currently affected, but will be evaluated for Reasonable Progress at the next review period. Avista Corp. does not anticipate any material impacts on Units 3 & 4 at this time.

Coal Ash Management/Disposal

On April 17, 2015, the EPA published a final rule regarding CCRs, also termed coal combustion byproducts or coal ash in the Federal Register, and this rule became effective on October 15, 2015. Colstrip, of which Avista Corp. is a 15 percent owner of Units 3 & 4, produces this byproduct. The rule establishes technical requirements for CCR landfills and surface impoundments under Subtitle D of the *Resource Conservation and Recovery Act*, the primary law in the United States for regulating solid waste. Avista Corp., in conjunction with the other owners, are developing a multi-year compliance plan to strategically address the new CCR requirements and existing state obligations while maintaining operational stability. During 2015, the operator of Colstrip provided an initial cost estimate of the expected retirement costs associated with complying with the new CCR rule and based on the initial assessments, Avista Corp. recorded an increase to its asset retirement obligations of US$12.5 million with a corresponding increase in the cost basis of the utility plant. During 2016, due to additional information and updated estimates, Avista Corp. increased the ARO to US$13.6 million (including accretion of US$0.7 million).

In addition to an increase to Avista Corp.'s ARO, it is expected that there will be significant compliance costs at Colstrip in the future, both operating and capital costs, due to a series of incremental infrastructure improvements which are separate from the ARO.

The actual asset retirement costs and future compliance costs related to the CCR rule requirements may vary substantially from the estimates used to record the increased ARO due to uncertainty about the compliance strategies that will be used and the preliminary nature of available data used to estimate costs, such as the quantity of coal ash present at certain sites and the volume of fill that will be needed to cap and cover certain impoundments. Avista Corp. will coordinate with the plant operators and continue to gather additional data in future periods to make decisions about compliance strategies and the timing of closure activities. As additional information becomes available, Avista Corp. will update the ARO and future nonretirement compliance costs for these changes in estimates, which could be material. Avista Corp. expects to seek recovery of any increased costs related to complying with the new rule through customer rates.

Climate Change

Concerns about long-term global climate changes could have a significant effect on Avista Corp.'s business. Avista Corp.'s operations could also be affected by changes in laws and regulations intended to mitigate the risk of, or alter global climate changes, including restrictions on the operation of their power generation resources and obligations imposed on the sale of natural gas. Changing temperatures and precipitation, including snowpack conditions, affect the availability and timing of streamflows, which impact hydroelectric generation. Extreme weather events could increase service interruptions, outages and maintenance costs. Changing temperatures could also increase or decrease customer demand.

Avista Corp.'s Climate Policy Council (an interdisciplinary team of management and other employees):

- facilitates internal and external communications regarding climate change issues,
- analyzes policy effects, anticipates opportunities and evaluates strategies for Avista Corp., and
- develops recommendations on climate related policy positions and action plans.

Climate Change - Federal Regulatory Actions

The EPA released the final rules for the Clean Power Plan ("**Final CPP**") and the Carbon Pollution Standards ("**Final CPS**") on August 3, 2015. The Final CPP and the Final CPS are both intended to reduce the CO2 emissions from certain coal-fired and natural gas electric generating units ("**EGUs**"). These rules were published in the Federal Register on October 23, 2015 and were immediately challenged via lawsuits by other parties.

In a separate but related rulemaking, the EPA finalized CO2 new source performance standards ("**NSPS**") for new, modified and reconstructed fossil fuel-fired EGUs under CAA section 111(b). These EGUs fall into the same two categories of sources regulated by the Final CPP: steam generating units (also known as "**utility boilers and IGCC units**"), which primarily burn coal, and stationary combustion turbines, which primarily burn natural gas.

The promulgated and proposed greenhouse gas rulemakings mentioned above have been legally challenged in multiple venues. On February 9, 2016, the U.S. Supreme Court granted a request for stay, halting implementation of the CPP. On March 28, 2017, the Department of Justice has filed a motion with the U.S. Court of Appeals for the District of Columbia Circuit ("**D.C. Circuit**") requesting that the Court hold the cases challenging the CPP in abeyance while the EPA reviews the final rules applicable to existing, as well as to new, modified, and reconstructed electric generating units pursuant to an Executive Order issued by President Trump. The Executive Order also instructed the EPA to review the CPP rule. On April 28, 2017 the D.C. Circuit issued orders to hold the litigation regarding the Clean Air Act §111(d) Clean Power Plan and the §111(b) New Source Performance Standards for power plants in abeyance for a period of 60 days with status reports due from EPA every 30 days. The D.C. Circuit ordered the parties to file supplemental briefs by May 15, 2017 on whether the rules should be remanded to EPA, rather than having the case held in abeyance. Given this development and related ongoing legal challenges, Avista Corp. cannot fully predict the outcome or estimate the extent to which its facilities may be impacted by these regulations at this time. Avista Corp. intends to seek recovery of any costs related to compliance with these requirements through the ratemaking process.

Climate Change - State Legislation and State Regulatory Activities

The states of Washington and Oregon have adopted non-binding targets to reduce GHG emissions. Both states enacted their targets with an expectation of reaching the targets through a combination of renewable energy standards, and assorted "complementary policies," but no specific reductions are mandated.

Washington and Oregon apply a GHG emissions performance standard to electric generation facilities used to serve retail loads in their jurisdictions. The emissions performance standard prevents utilities from constructing or purchasing generation facilities, or entering into power purchase agreements of five years or longer duration to purchase energy produced by plants, that in any case, have emission levels higher than 1,100 pounds of GHG per MWh. Commerce initiated a process to adopt a lower emissions performance standard in 2012; any new standard will be applicable until at least 2017. Commerce published a supplemental notice of proposed rulemaking on January 16, 2013 with a new emissions performance standard of 970 pounds of GHG per MWh. Avista Corp. will engage in the next process to revise the emissions performance standard, which should occur in 2017.

Washington

Energy Independence Act

The EIA in Washington requires electric utilities with over 25,000 customers to acquire qualified renewable energy resources and/or renewable energy credits equal to 15 percent of the utility's total retail load in Washington in 2020. I-937 also requires these utilities to meet biennial energy conservation targets beginning in 2012. The renewable energy standard increased from three percent in 2012 to nine percent in 2016. Failure to comply with renewable energy and efficiency standards could result in penalties of US$50 per MWh or greater assessed against a utility for each MWh it is deficient in meeting a standard. Avista Corp. has met, and will continue to meet, the requirements of EIA through a variety of renewable energy generating means, including, but not limited to, some combination of hydro upgrades, wind, biomass and renewable energy credits. In 2012, EIA was amended in such a way that Avista Utilities' Kettle Falls GS and certain other biomass energy facilities, which commenced operation before March 31, 1999, are considered resources that may be used to meet the renewable energy standards.

Clean Air Rule

In September 2016, Ecology adopted the CAR to cap and reduce GHG emissions across the State of Washington in pursuit of the State's GHG goals, which were enacted in 2008 by the Legislature. The CAR applies to sources of annual GHG emissions in excess of 100,000 tons for the first compliance period of 2017 through 2019; this threshold incrementally decreases to 70,000 metric tons beginning in 2035. The rule affects stationary sources and transportation fuel suppliers, as well as natural gas distribution companies. Ecology has identified approximately 30 entities that would be regulated under the CAR. Parties covered by the regulation must reduce emissions by 1.7 percent annually until 2035. Compliance can be demonstrated by achieving emission reductions and/or surrendering ERUs, which are generated by parties that achieve reductions greater than required by the rule. ERUs can also take the form of renewable energy credits from renewable resources located in Washington, carbon emission offsets, and allowances acquired from an organized cap and trade market, such as that operating in California. In addition to the CAR's applicability to their burning of fuel as an electric utility, the CAR applies to Avista Corp.as a natural gas distribution company, for the emissions associated with the use of the natural gas Avista Corp. provides its customers who are not already covered under the regulation.

In September 2016, the Petitioners jointly filed an action in the U.S. District Court for the Eastern District of Washington challenging Ecology's recently promulgated CAR. The four companies also filed litigation in Thurston County Superior Court.

Petitioners believe that the reduction of GHG emissions is a matter that needs to be addressed, but the CAR is not the solution. Each utility represented in this case provided feedback and public comment to improve the rule, but ideas put forward were not incorporated in the final rule. They are asking the U.S District Court and the Thurston County Superior Court to find that the CAR is invalid.

In their State claim, Petitioners assert that:

- Ecology lacks statutory authority to regulate natural gas utilities because the CAR holds them responsible for the indirect emissions of their customers;

- Ecology does not have the authority to create an emission reduction trading program (“**ERUs**”);
- Ecology failed to comply with the requirements of the *State Environmental Policy Act*; and
- the CAR is arbitrary and capricious.

Petitioners' federal claim asserts that the CAR violates the dormant Commerce Clause of the U.S. Constitution by discriminating against interstate commerce, regulating extraterritorially and unduly burdening interstate commerce by restricting the use of ERU’s (allowances) generated from outside the State of Washington for compliance purposes. The case in U.S. District Court has been tolled while the state court case proceeds, with oral arguments scheduled for the spring of 2017.

Initiative I-732

An Initiative to the Legislature (“**I-732**”) to impose a carbon tax on fossil-fueled generation and natural gas distribution, as well as on transportation fuels, was submitted to the Legislature in January 2016. The Legislature failed to act upon the measure and I-732 was referred to the November 2016 General Election ballot, where it failed to gain enough votes for enactment.

Colstrip 3 & 4 Considerations

On February 6, 2014, the WUTC issued a letter finding that PSE’s 2013 Electric Integrated Resource Plan meets the requirements of the Revised Code of Washington and the Washington Administrative Code. In its letter, however, the WUTC expressed concern regarding the continued operation of the Colstrip plant as a resource to serve retail customers. Although the WUTC recognized that the results of the analyses presented by PSE “differed significantly between Colstrip Units 1 & 2 and Units 3 & 4,” the WUTC did not limit its concerns solely to Colstrip Units 1 & 2. The WUTC recommended that PSE “consult with WUTC staff to consider a Colstrip Proceeding to determine the prudency of any new investment in Colstrip before it is made or, alternatively, a closure or partial-closure plan.” As part of the Sierra Club litigation that was settled in 2016, Units 1 & 2 are scheduled to close by July 2022. As a 15 percent owner of Colstrip Units 3 & 4, Avista Corp. cannot estimate the effect of such proceeding, should it occur, on the future ownership, operation and operating costs of our share of Colstrip Units 3 & 4. Our remaining investment in Colstrip Units 3 & 4 as of December 31, 2016 was US$131.0 million.

In Oregon, legislation was enacted in 2016 which requires Portland General Electric and PacifiCorp to remove coal-fired generation from their Oregon rate base by 2030. This legislation does not directly relate to Avista Corp. because Avista Corp. is not an electric utility in Oregon. However, because these two utilities, along with Avista Corp., hold minority interests in Colstrip, the legislation could indirectly impact Avista Corp., though specific impacts cannot be identified at this time. While the legislation requires Portland General Electric and PacifiCorp to eliminate Colstrip from their rates, they would be permitted to sell the output of their shares of Colstrip into the wholesale market or, as is the case with PacifiCorp, reallocate the plant to other states. Avista Corp. cannot predict the eventual outcome of actions arising from this legislation at this time or estimate the effect thereof on Avista Corp.; however, Avista Corp. will continue to seek recovery, through the ratemaking process, of all operating and capitalized costs related to our generation assets.

Threatened and Endangered Species and Wildlife

A number of species of fish in the Northwest are listed as threatened or endangered under the ESA. Efforts to protect these and other species have not significantly impacted generation levels at any of our hydroelectric facilities, nor operations of our thermal plants or electrical distribution and transmission system. Avista Corp. is implementing fish protection measures at its hydroelectric project on the Clark Fork River under a 45-year FERC operating license for Cabinet Gorge and Noxon Rapids (issued March 2001) that incorporates a comprehensive settlement agreement. The restoration of native salmonid fish, including bull trout, is a key part of the agreement. The result is a collaborative native salmonid restoration program with the U.S. Fish and Wildlife Service, Native American tribes and the states of Idaho and Montana on the lower Clark Fork River, consistent with requirements of the FERC license. The U.S. Fish & Wildlife Service issued an updated Critical Habitat Designation for bull trout in 2010 that includes the lower Clark Fork River, as well as portions of the Coeur d'Alene basin within the Spokane River Project area, and issued a final Bull Trout Recovery Plan under the ESA. Issues related to these activities are expected to be resolved through the ongoing collaborative effort of our Clark Fork and Spokane River FERC licenses.

Various statutory authorities, including the *Migratory Bird Treaty Act*, have established penalties for the unauthorized take of migratory birds. Because Avista Corp. operates facilities that can pose risks to a variety of such birds, they have developed and follow an avian protection plan.

Avista Corp. is also aware of other threatened and endangered species and issues related to them that could be impacted by their operations and they make every effort to comply with all laws and regulations relating to these threatened and endangered species. Avista Corp. expects all costs associated with these compliance efforts to be recovered through the future ratemaking process.

Regulation and Regulatory Matters

General

As a public utility, Avista Corp. is subject to regulation by state utility commissions for prices, accounting, the issuance of securities and other matters. The retail electric and natural gas operations are subject to the jurisdiction of the WUTC, IPUC, OPUC and MPSC. Approval of the issuance of securities is not required from the MPSC. Avista Corp. is also subject to the jurisdiction of the FERC for licensing of hydroelectric generation resources, and for electric transmission services and wholesale sales.

Since Avista Corp. is a "holding company" (in addition to being itself an operating utility), it is also subject to the jurisdiction of the FERC under the *Public Utility Holding Company Act of 2005*, which imposes certain reporting and other requirements. Avista Corporation, and all of its subsidiaries (whether or not engaged in any energy related business), are required to maintain books, accounts and other records in accordance with the FERC regulations and to make them available to the FERC and the state utility commissions. In addition, upon the request of any jurisdictional state utility commission, or of Avista Corp., the FERC would have the authority to review assignment of costs of non-power goods and administrative services among Avista Corp. The FERC has the authority generally to require that rates subject to its jurisdiction be just and reasonable and in this context would continue to be able to, among other things, review transactions of any affiliated company.

Avista Corp.'s rates for retail electric and natural gas services (other than specially negotiated retail rates for industrial or large commercial customers, which are subject to regulatory review and approval) are generally determined on a "cost of service" basis.

Rates are designed to provide an opportunity for Avista Corp. to recover allowable operating expenses and earn a return of and a reasonable return on "rate base." Rate base is generally determined by reference to the original cost (net of accumulated depreciation) of utility plant in service, subject to various adjustments for deferred income taxes and other items. Over time, rate base is increased by additions to utility plant in service and reduced by depreciation and retirement of utility plant and write-offs as authorized by the utility commissions. Avista Corp.'s operating expenses and rate base are allocated or directly assigned to five regulatory jurisdictions: electric in Washington and Idaho, and natural gas in Washington, Idaho and Oregon. In general, requests for new retail rates are made on the basis of revenues, operating expenses and net investment for a test year that ended prior to the date of the request, subject to possible adjustments, which differ among the various jurisdictions, designed to reflect the expected revenues, operating expenses and net investment during the period new retail rates will be in effect. The retail rates approved by the state commissions in a rate proceeding may not provide sufficient revenues to provide recovery of costs and a reasonable return on investment for a number of reasons, including, but not limited to, unexpected changes in revenues, expenses and investment following the time new retail rates are requested in the rate proceeding, the denial by the commission of recovery, or timely recovery, of certain expenses or investment and the limitation by the commission of the authorized return on investment.

Avista Corp.'s rates for wholesale electric and natural gas transmission services are based on either "cost of service" principles or market-based rates as set forth by the FERC.

Avista Utilities – Washington General Rate Cases

2015 General Rate Cases

In January 2016, Avista Utilities received an order ("**Order 05**") that concluded its electric and natural gas general rate cases that were originally filed with the WUTC in February 2015. New electric and natural gas rates were effective on January 11, 2016. The WUTC-approved rates were designed to provide a 1.6 percent, or US$8.1 million decrease in electric base revenue, and a 7.4 percent, or US$10.8 million increase in natural gas base revenue. The WUTC also approved an ROR on rate base of 7.29 percent, with a common equity ratio of 48.5 percent and a

9.5 percent ROE. On January 19, 2016, the ICNU and the PC filed a Joint Motion for Clarification with the WUTC. On February 19, 2016, the WUTC issued an order ("**Order 06**") denying the motions and affirming Order 05, including an US$8.1 million decrease in electric base revenue. On March 18, 2016, PC filed in Thurston County Superior Court a Petition for Judicial Review of the WUTC's Order 05 and Order 06 described above that concluded Avista Utilities' 2015 electric and natural gas general rate cases. The new rates established by Order 05 will continue in effect while the Petition for Judicial Review is being considered. Avista Utilities believes the WUTC's Order 05 and Order 06 finalizing the electric and natural gas general rate cases provide a reasonable end result for all parties. If the outcome of the judicial review were to result in an electric rate reduction greater than the decrease ordered by the WUTC, it may not provide us with a reasonable opportunity to earn the rate of return authorized by the WUTC.

2016 General Rate Cases

On December 15, 2016, the WUTC issued an order related to Avista Utilities' Washington electric and natural gas general rate cases that were originally filed with the WUTC in February 2016. The WUTC order denied Avista Utilities' proposed electric and natural gas rate increase requests of US$38.6 million and US$4.4 million, respectively. On December 23, 2016 Avista Utilities filed a Petition for Reconsideration or, in the alternative, Rehearing ("**Petition**") with the WUTC related to its 2016 general rate cases. On February 27, 2017, Avista Utilities received an order from the WUTC denying our Petition and confirming its previous order in the case.

Avista Utilities determined that an appeal of the WUTC's decision to the courts would involve a significant amount of uncertainty regarding the level of success of such an appeal, as well as the timing of any value that might come following a process that would take between one and two years. Avista Utilities believes greater long-term value can be achieved through focusing on the 2017 general rate cases rather than through appealing the recent decision in the courts.

2017 General Rate Cases

On May 26, 2017, Avista Utilities filed two requests with the WUTC to recover costs related to power supply as well as infrastructure, system maintenance, and technology.

The two filings are summarized as follows:

Power Cost Rate Adjustment

The first filing is an electric only power cost rate adjustment that would update and reset power supply costs, effective September 1, 2017. Avista Utilities requested an overall increase in billed electric rates of 2.9 percent (designed to increase annual electric revenues by US$15.0 million). The key drivers behind this request are related to the expiration of a capacity sales agreement with another utility and an increase in the price of natural gas to fuel our generating plants. Any new rates resulting from the power cost rate adjustment would expire upon the conclusion of the electric general rate case (discussed in further detail below), if approved. Avista Utilities expects the WUTC to address the power cost rate adjustment by August 10, 2017, in which they will either approve or deny the request or indicate additional steps that may be necessary.

General Rate Requests

The second request relates to electric and natural gas general rate cases. Avista Utilities filed three-year rate plans for electric and natural gas and have requested the following for each year (U.S. dollars in millions):

	Electric		Natural Gas	
Effective Date	Proposed Revenue Increase	Proposed Base Rate Increase	Proposed Revenue Increase	Proposed Base Rate Increase
May 1, 2018 (1)	$ 61.4	12.5%	$ 8.3	9.3%
May 1, 2019 (2)	$ 14.0	2.5%	$ 4.2	4.4%
May 1, 2020 (2)	$ 14.4	2.5%	$ 4.4	4.4%

(1) The US$61.4 million electric revenue increase includes the US$15.0 million power cost rate adjustment discussed above.

(2) As a part of the electric rate plan, Avista Utilities has proposed to update power supply costs through a Power Supply Update, the effects of which would also go into effect on May 1, 2019 and May 1, 2020. The requested revenue increases for 2019 and 2020 do not include any power supply adjustments.

Avista Utilities request is based on a proposed ROR of 7.76 percent with a common equity ratio of 50.0 percent and a 9.9 percent ROE. As a part of the three-year rate plan, if approved, Avista Utilities would not file another general rate case until June 1, 2020, with new rates effective no earlier than May 1, 2021. The WUTC has up to 11 months to review the general rate case filings and issue a decision.

Idaho General Rate Cases

2016 General Rate Cases

In December 2016, the IPUC approved a settlement agreement between Avista Utilities and other parties in their electric general rate case, concluding the Idaho electric general rate case originally filed in May 2016. New rates took effect on January 1, 2017 under the settlement agreement. Avista Utilities did not file a natural gas general rate case in 2016. The settlement agreement increased annual electric base rates by 2.6 percent (designed to increase annual electric revenues by US$6.3 million). The settlement revenue increase is based on a ROR of 7.58 percent with a common equity ratio of 50 percent and a 9.5 percent ROE.

2017 General Rate Cases

On June 9, 2017, Avista Utilities filed electric and natural gas general rate requests with the IPUC to recover increased power supply costs and capital investments made since the last determination of Avista Utilities' rate base in the 2016 Idaho general rate case. Avista Utilities filed two-year rate plans for electric and natural gas and have requested the following for each year (U.S. dollars in millions):

	Electric		Natural Gas	
Effective Date	Proposed Revenue Increase	Proposed Base Rate Increase	Proposed Revenue Increase	Proposed Base Rate Increase
January 1, 2018	$ 18.6	7.5%	$ 3.5	8.8%
January 1, 2019 (1)	$ 9.9	3.7%	$ 2.1	5.0%

(1) Avista Utilities is not proposing to update base power supply costs for year two of the rate plan, but rather have any differences flow through the PCA mechanism.

Avista Utilities' requests are based on a proposed ROR of 7.81 percent with a common equity ratio of 50.0 percent and a 9.9 percent ROE. As a part of the two-year rate plan, if approved, Avista Utilities would not file a new general rate case for a new rate plan to be effective prior to January 1, 2020. The IPUC has up to nine months to review the general rate case filings and issue a decision.

Oregon General Rate Cases

2015 General Rate Case

On February 29, 2016, the OPUC issued a preliminary order (and a final order on March 15, 2016) concluding Avista Utilities' natural gas general rate case, which was originally filed with OPUC in May 2015. The OPUC order approved rates designed to increase overall billed natural gas rates by 4.9 percent (designed to increase annual natural gas revenues by US$4.5 million). New rates went into effect on March 1, 2016. The final OPUC order incorporated two partial settlement agreements which were entered into during November 2015 and January 2016.

2016 General Rate Case

On May 17, 2017, Avista Utilities reached a settlement agreement with all parties involved in its natural gas general rate case and the settlement agreement was filed with the OPUC. If the settlement agreement is approved by the OPUC, new rates would take effect on October 1, 2017.

The settlement proposes that, effective October 1, 2017, Avista Utilities would receive an increase in rates designed to increase annual base revenues by 5.9 percent or US$3.5 million. In addition, the order denied the recovery of certain utility plant expenditures, which resulted in a disallowance and write-off of approximately US$0.8 million in the second quarter of 2017.

The proposed settlement agreement reflects a 7.35 ROR with a common equity ratio of 50 percent and a 9.4 percent ROE.

Alaska Electric Light and Power Company

Alaska General Rate Case

In September 2016, AEL&P filed an electric general rate case with the RCA. AEL&P was granted a refundable interim base rate increase of 3.86 percent (designed to increase electric revenues by US$1.3 million), which took effect in November 2016. AEL&P has also requested a permanent base rate increase of an additional 4.24 percent (designed to increase electric revenues by US$1.5 million), which, if approved, could take effect in February 2018. This represents a combined total rate increase of 8.1 percent (designed to increase electric revenues by US$2.8 million).

The RCA must rule on permanent rate increase requests within 450 days (approximately 15 months) from the date of filing, unless otherwise extended by consent of the parties. The statutory timeline for the AEL&P general rate case, with the consent of the parties, has been extended to February 8, 2018.

Avista Utilities

Purchased Gas Adjustments

PGAs are designed to pass through changes in natural gas costs to Avista Utilities' customers with no change in gross margin (operating revenues less resource costs) or net income. In Oregon, Avista Utilities absorbs (cost or benefit) 10 percent of the difference between actual and projected natural gas costs included in retail rates for supply that is not hedged. Total net deferred natural gas costs among all jurisdictions were a liability of US$31.0 million as of March 31, 2017 and a liability of US$30.8 million as of December 31, 2016, and these deferred natural gas costs balances represent amounts due to customers.

Power Cost Deferrals and Recovery Mechanisms

The ERM is an accounting method used to track certain differences between Avista Utilities' actual power supply costs, net of wholesale sales and sales of fuel, and the amount included in base retail rates for our Washington customers. Total net deferred power costs under the ERM were a liability of US$21.6 million as of March 31, 2017 compared to a liability of US$21.3 million as of December 31, 2016, and these deferred power cost balances represent amounts due to customers.

The difference in net power supply costs under the ERM primarily results from changes in:

- short-term wholesale market prices and sales and purchase volumes,
- the level and availability of hydroelectric generation,
- the level and availability of thermal generation (including changes in fuel prices), and
- retail loads.

Under the ERM, Avista Utilities absorbs the cost or receives the benefit from the initial amount of power supply costs in excess of or below the level in retail rates, which is referred to as the deadband. The annual (calendar year) deadband amount is US$4.0 million.

Decoupling and Earnings Sharing Mechanisms

Decoupling is a mechanism designed to sever the link between a utility's revenues and consumers' energy usage. In each of Avista Utilities' jurisdictions, each month Avista Utilities' electric and natural gas revenues are adjusted so as to be based on the number of customers in certain customer rate classes, rather than kilowatt hour and therm sales. The difference between revenues based on the number of customers and revenues based on actual usage is deferred and either surcharged or rebated to customers beginning in the following year.

Washington Decoupling and Earnings Sharing

In Washington, the WUTC approved Avista Utilities' decoupling mechanisms for electric and natural gas for a five-year period beginning January 1, 2015. Electric and natural gas decoupling surcharge rate adjustments to customers are limited to 3 percent on an annual basis, with any remaining surcharge balance carried forward for recovery in a future period. There is no limit on the level of rebate rate adjustments.

The decoupling mechanisms each include an after-the-fact earnings test. At the end of each calendar year, separate electric and natural gas earnings calculations are made for the prior calendar year. These earnings tests reflect actual decoupled revenues, normalized power supply costs and other normalizing adjustments.

- If Avista Utilities has a decoupling rebate balance for the prior year and earns in excess of the authorized ROR (7.32 percent for 2015 and 7.29 percent for 2016), the rebate to customers would be increased by 50 percent of the earnings in excess of the authorized ROR.

- If Avista Utilities has a decoupling rebate balance for the prior year and its earnings are equal to or less than the authorized ROR, only the base amount of the rebate to customers would be made.

- If Avista Utilities has a decoupling surcharge balance for the prior year and earns in excess of the authorized ROR, the surcharge to customers would be reduced by 50 percent of the earnings in excess of the authorized ROR (or eliminated). If 50 percent of the earnings in excess of the authorized ROR exceeds the decoupling surcharge balance, the dollar amount that exceeds the surcharge balance would create a rebate balance for customers.

- If Avista Utilities has a decoupling surcharge balance for the prior year and its earnings are equal to or less than the authorized ROR, the base amount of the surcharge to customers would be made.

Idaho FCA and Earnings Sharing Mechanisms

In Idaho, the IPUC approved the implementation of FCAs for electric and natural gas (similar in operation and effect to the Washington decoupling mechanisms) for an initial term of three years, beginning January 1, 2016.

For the period 2013 through 2015, Avista Corp. had an after-the-fact earnings test, such that if Avista Corp., on a consolidated basis for electric and natural gas operations in Idaho, earned more than a 9.8 percent ROE, it would be required to share with customers 50 percent of any earnings above the 9.8 percent. There was no provision for a surcharge to customers if its ROE was less than 9.8 percent. This after-the-fact earnings test was discontinued as part of the settlement of Avista Corp.'s 2015 Idaho electric and natural gas general rates cases.

Oregon Decoupling Mechanism

In February 2016, the OPUC approved the implementation of a decoupling mechanism for natural gas, similar to the Washington and Idaho mechanisms described above. The decoupling mechanism became effective on March 1, 2016. There will be an opportunity for interested parties to review the mechanism and recommend changes, if any, by September 2019. An earnings review is conducted on an annual basis, which is filed by Avista Corp. with the OPUC on or before June 1 of each year for the prior calendar year. In the annual earnings review, if Avista Corp. earns more than 100 basis points above its allowed return on equity, one-third of the earnings above the 100 basis points would be deferred and later returned to customers.

Liquidity, Capital Resources and Financing Activities

Avista Corporation's consolidated operating cash flows are primarily derived from the operations of Avista Utilities. The primary source of operating cash flows for Avista Utilities is revenues from sales of electricity and natural gas. Significant uses of cash flows from Avista Utilities include the purchase of power, fuel and natural gas, and payment of other operating expenses, taxes and interest, with any excess being available for other corporate uses such as capital expenditures and dividends.

Committed Lines of Credit

Avista Corporation has a committed line of credit with various financial institutions in the total amount of US$400.0 million. Avista Corporation exercised a two-year option in May 2016 to extend the maturity of the credit facility agreement to April 2021. As of March 31, 2017, there were US$105.0 million of cash borrowings and US$42.1 million in letters of credit outstanding (which were primarily issued as collateral for Avista Corporation's energy commodity and interest rate swap derivatives), leaving US$252.9 million of available liquidity under this line of credit.

The Avista Corporation credit facility contains customary covenants and default provisions, including a covenant which does not permit its ratio of "consolidated total debt" to "consolidated total capitalization" to be greater than 65 percent at any time. As of March 31, 2017, Avista Corporation is in compliance with this covenant with a ratio of 52.2 percent.

AEL&P has a US$25.0 million committed line of credit that expires in November 2019. As of March 31, 2017, there were no borrowings or letters of credit outstanding under this committed line of credit.

The AEL&P credit facility contains customary covenants and default provisions including a covenant which does not permit the ratio of "consolidated total debt at AEL&P" to "consolidated total capitalization at AEL&P," (including the impact of the Snettisham obligation) to be greater than 67.5 percent at any time. As of March 31, 2017, AEL&P was in compliance with this covenant with a ratio of 54.6 percent.

Competition

Avista Corp.'s utility electric and natural gas distribution business has historically been recognized as a natural monopoly. In each regulatory jurisdiction, its rates for retail electric and natural gas services (other than specially negotiated retail rates for industrial or large commercial customers, which are subject to regulatory review and approval) are generally determined on a "cost of service" basis. Rates are designed to provide, after recovery of allowable operating expenses and capital investments, an opportunity for it to earn a reasonable return on investment as allowed by its regulators.

In retail markets, Avista Corp. compete with various rural electric cooperatives and public utility districts in and adjacent to its service territories in the provision of service to new electric customers. Alternative energy technologies, including customer-sited solar, wind or geothermal generation, may also compete with it for sales to existing customers. While the risk is currently small in its service territory given the small numbers of customers utilizing these technologies, advances in power generation, energy efficiency, energy storage and other alternative energy technologies could lead to more wide-spread usage of these technologies, thereby reducing customer demand for the energy supplied by Avista Corp. This reduction in usage and demand would reduce Avista Corp.'s revenue and negatively impact its financial condition including possibly leading to its inability to fully recover its investments in generation, transmission and distribution assets. Similarly, Avista Corp.'s natural gas distribution operations compete with other energy sources including heating oil, propane and other fuels.

Certain natural gas customers could bypass Avista Corp.'s natural gas system, reducing both revenues and recovery of fixed costs. To reduce the potential for such bypass, Avista Corp. prices its natural gas services, including transportation contracts, competitively and have varying degrees of flexibility to price transportation and delivery rates by means of individual contracts. These individual contracts are subject to state regulatory review and approval. Avista Corp. has long-term transportation contracts with several of its largest industrial customers under which the customer acquires its own commodity while using Avista Corp.'s infrastructure for delivery. Such contracts reduce the risk of these customers bypassing Avista Corp.'s system in the foreseeable future and minimizes the impact on its earnings.

Also, non-utility businesses are developing new technologies and services to help energy consumers manage energy in new ways that may improve productivity and could alter demand for the energy Avista Corp. sells.

In wholesale markets, competition for available electric supply is influenced by the:

- localized and system-wide demand for energy,

- type, capacity, location and availability of generation resources, and
- variety and circumstances of market participants.

These wholesale markets are regulated by the FERC, which requires electric utilities to:

- transmit power and energy to or for wholesale purchasers and sellers,
- enlarge or construct additional transmission capacity for the purpose of providing these services, and
- transparently price and offer transmission services without favor to any party, including the merchant functions of the utility.

Participants in the wholesale energy markets include:

- other utilities,
- federal power marketing agencies,
- energy marketing and trading companies,
- independent power producers,
- financial institutions, and
- commodity brokers.

Credit Ratings

Avista Corporation's corporate credit ratings and the ratings for its securities are as follows:

Period	S&P(1)	Moody's(2)
Corporate/Issuer rating	BBB	Baa1
Senior secured debt	A-	A2
Senior unsecured debt	BBB	Baa1

(1) S&P's lowest "investment grade" credit rating is BBB-.
(2) Moody's lowest "investment grade" credit rating is Baa3.

A security rating is not a recommendation to buy, sell or hold securities. Each rating is subject to revision or withdrawal at any time by the assigning rating organization. Each security rating agency has its own methodology for assigning ratings, and, accordingly, each rating should be considered independently of all other ratings.

See "Recent Developments".

For additional information on Avista Corp. see pages A-9 and A-10 of the Investor Presentation attached as Appendix A to this Prospectus.

THE MERGER AGREEMENT

Set forth below is a description of the material terms of the Merger Agreement. The description is a summary only and is qualified in its entirety by the full text of the Merger Agreement. A copy of the Merger Agreement has been filed on the Corporation's SEDAR profile at www.sedar.com. This summary is not intended to be, and should not be relied upon as disclosure of any facts and circumstances relating to Hydro One or Avista Corp. All capitalized terms used herein without definition will have the meanings assigned to them in the Merger Agreement, a copy of which will is available on the Corporation's SEDAR profile at www.sedar.com.

The Merger

On July 19, 2017, the Corporation, US Parent, Merger Sub and Avista Corporation entered into the Merger Agreement. Upon the terms and subject to the conditions set forth in the Merger Agreement, which has been approved by the board of directors of both Avista Corporation and Hydro One Limited, at the effective time upon the closing of the Merger, Merger Sub will merge with and into Avista Corporation with Avista Corporation continuing as the surviving corporation. US Parent is an indirect, wholly owned subsidiary of the Corporation, and Merger Sub is a direct, wholly-owned subsidiary of US Parent and, at the effective time of the closing of the Merger, will be collectively owned by US Parent and one or more direct or indirect wholly owned subsidiaries of the Corporation.

The Merger Consideration

Pursuant to the Merger Agreement, upon the closing of the Merger, each issued and outstanding share of common stock, no par value, of Avista Corporation (other than shares held by shareholders exercising their dissenter's rights and shares owned by the Corporation, US Parent or Merger Sub or their respective subsidiaries to be cancelled in the Merger) will be converted automatically into the right to receive US$53.00 in cash, without interest (the "**Merger Consideration**"). The aggregate amount of Merger Consideration to be paid, including with respect to the outstanding restricted stock units (the "**RSUs**") and performance awards granted under Avista Corporation's stock incentive plans, is approximately US$3.4 billion in cash. Shareholders exercising their dissenter's rights and shares owned by the Corporation, US Parent or Merger Sub or their respective subsidiaries to be cancelled in the Merger will not be entitled to receive the Merger Consideration.

Treatment of Performance Awards and RSUs

Upon the closing of the Merger, each outstanding performance award will be cancelled and converted into the right to receive a lump sum cash payment equal to the product of (i) the Merger Consideration multiplied by (ii)(A) for any outstanding performance award for which the performance period has ended as of immediately prior to the effective time of the Merger, (1) in the case of a share-settled performance award, the number of shares of Avista Corporation common stock that would be delivered to the holder of such performance award, or (2) in the case of a cash-settled performance award, the number of shares of Avista Corporation common stock that would be deemed deliverable to the holder for purposes of calculating the cash payment due under such performance award, in each case, based on the achievement of the applicable performance goals, as reasonably determined by the board of directors of Avista Corporation (or a committee thereof) prior to the effective time of the Merger, and assuming the satisfaction of all other applicable conditions, and (B) for any outstanding performance award for which the performance period has not ended as of immediately prior to the effective time of the Merger, (1) in the case of a share-settled performance award, the number of shares of Avista Corporation common stock subject to such performance award, or (2) in the case of a cash-settled performance award, the number of shares of Avista Corporation common stock that would be deemed deliverable to the holder for purposes of calculating the cash payment due thereunder, in each case, based on deemed satisfaction of the applicable performance goals at the target level, and in each case, assuming the satisfaction of all other applicable conditions. Upon the closing of the Merger, all accrued but unpaid dividends with respect to performance awards will become fully vested and be paid in connection with the Merger.

Upon the closing of the Merger, each outstanding RSU which by its terms would vest before the calendar year or in the calendar year in which the Merger occurs will be cancelled and converted into the right to receive a lump-sum cash payment equal to the product of (i) the number of shares of Avista Corporation common stock subject to the cancelled RSU and (ii) the Merger Consideration. Upon the closing of the Merger, all accrued but unpaid dividends with respect to cancelled RSUs will become fully vested and be paid in connection with the Merger.

Upon the closing of the Merger, each outstanding RSU which by its terms would vest in any calendar year following the calendar year in which the Merger occurs will be converted into a restricted stock unit award issued under the Corporation's equity-based long-term incentive compensation plan, on the same terms and conditions as were applicable under the RSU immediately prior to the effective time of the Merger, with respect to a number of shares of common stock of the Corporation determined by multiplying (i) the number of shares of Avista Corporation common stock subject to the RSU by (ii) a fraction, the numerator of which is the Merger Consideration and the denominator of which is the closing price per share of common stock of the Corporation on the TSX on the closing date of the Merger, converted into U.S. dollars using the reported Bank of Canada noon spot exchange rate on the closing date of the Merger (or as reported by such other authoritative source mutually accepted by Avista Corporation and the Corporation), rounded up to the nearest whole share, and each such converted RSU will not be accelerated except as provided in the related RSU agreement. Upon the closing of the Merger, the Corporation will assume all obligations of Avista Corporation with respect to the Avista Corporation stock plans and each outstanding converted RSU and the original related grant agreements. The converted RSUs will be settled in shares of common stock of the Corporation or cash, as determined by the Corporation.

All amounts payable pursuant to the Merger Agreement are subject to reduction for applicable tax withholdings.

Representations and Warranties

Under the Merger Agreement, the Corporation, US Parent, Merger Sub and Avista Corporation have made various customary representations and warranties.

Avista Corporation's representations and warranties relate to, among other things: organization, standing and corporate power of Avista Corporation and its subsidiaries; capitalization; authority and non-contravention; governmental approvals; Avista Corporation SEC reports and financial statements and undisclosed liabilities; absence of certain changes; legal proceedings; compliance with applicable laws and permits; tax matters; employee benefits matters; environmental matters; intellectual property; real property; material contracts; labour and employment matters; opinion of financial advisor; brokers and other advisors; and Avista Shareholder Approval.

The representations and warranties of the Corporation, US Parent and Merger Sub relate to, among other things: organization, standing and corporate power; authority and non-contravention; governmental approvals; brokers and other advisors; ownership and operations of Merger Sub; sufficient funds; share ownership; legal proceedings; and non-reliance.

Covenants

Avista Corporation, the Corporation, US Parent and Merger Sub have made covenants regarding the conduct of the parties to the Merger Agreement during the period between the signing of the Merger Agreement and the closing of the Merger, at the closing of the Merger and after the closing of the Merger.

Except as set forth in the confidential disclosure schedules to the Merger Agreement, or otherwise contemplated or permitted by the Merger Agreement or as required by applicable law, or with the prior written consent of the Corporation (not to be unreasonably withheld, delayed or conditioned), (a) Avista Corporation has agreed, among other things, from the date of the Merger Agreement until the closing of the Merger to, and to cause each of its subsidiaries to, use its commercially reasonable efforts to conduct its business in all material respects in the ordinary course of business and to preserve intact its present lines of business, maintain its rights and franchises and preserve satisfactory relationships with governmental authorities, employees, customers and suppliers, and (b) Avista Corporation will not, and will not permit any of its subsidiaries to: (i) issue any shares of its capital stock, or any securities or rights convertible into shares of its capital stock except for (A) the issuance of any shares of Avista Corporation common stock in settlements of RSUs and performance awards or (B) the issuance of such number of shares of Avista Corporation capital stock as is equal to an equivalent value of up to US$150,000,000 in net proceeds in the aggregate through the end of 2018, as disclosed in the related confidential disclosure schedules to the Merger Agreement; (ii) redeem, repurchase or otherwise acquire any of its capital stock, except in connection with withholding shares of Avista Corporation common stock to satisfy tax obligations with respect to RSUs and performance awards or acquisitions in connection with the forfeiture of RSUs and performance awards; (iii) declare any dividend on, or make any other distribution in respect of, any shares of capital stock other than (A) dividends paid by any subsidiary of Avista Corporation to Avista Corporation or a wholly owned subsidiary of Avista Corporation, (B) quarterly cash dividends with respect to the Avista Corporation common stock not to exceed the current annual per share dividend rate by more than US$0.06 per year, consistent with Avista Corporation's current dividend practice or (C) a "stub period" dividend to holders of record of Avista Corporation common stock as of immediately prior to the effective time of the Merger; (iv) incur any indebtedness in excess of US$250,000,000 in the aggregate, except to replace existing indebtedness, pursuant to any existing contract relating to indebtedness or among Avista Corporation and any of its wholly-owned subsidiaries or among any of such wholly owned subsidiaries; (v) dispose of any of its properties or assets except (A) dispositions as to which the sales price is not in excess of US$25,000,000 in the aggregate in any calendar year, (B) pursuant to a material contract in effect as of the date of the Merger Agreement, (C) dispositions of inventory or equipment that are no longer used or useful or (D) transfers among Avista Corporation and its wholly-owned subsidiaries; (vi) make capital expenditures, except for an aggregate amount of capital expenditures in any calendar year equal to the aggregate amount budgeted in Avista Corporation's current long term plan that was made available to the Corporation prior to the date of the Merger Agreement (plus a 10% variance), excluding any acquisition expenditures permitted pursuant to item (vii) below; (vii) make any acquisition (including by merger) of capital stock or assets of any other person for consideration in excess of US$25,000,000 in the aggregate in any calendar year (not including certain capital expenditures); (viii) (A) increase the compensation or benefits of any of its directors, executive officers or employees (except in the ordinary course of business), (B) grant to any director or employee of Avista Corporation or any of its subsidiaries any increase in change-in-control, severance, retention or termination pay, or enter into or amend any change-in-control, severance, retention or termination agreement or (C) take any action to accelerate the time of vesting, funding or payment of any compensation or benefits under any Avista Corporation benefit plan, except, in each case, (X) as required pursuant to applicable law, (Y) pursuant to the terms of Avista Corporation benefit plans or collective bargaining agreements, or (Z) in the ordinary course of business consistent with past practice; (ix) establish, adopt, amend or terminate any company benefit plan except (A) as required by law or (B) for routine, immaterial or ministerial amendments; (x) make any material change to its methods of accounting, except as required by U.S. GAAP, Regulation S-X of the Exchange Act, a governmental authority or by applicable law; (xi) amend Avista Corporation's organizational documents or the organizational documents of any of its subsidiaries; (xii) adopt a plan or agreement of complete or partial liquidation or dissolution; (xiii) enter into, modify, or amend in any material respect or terminate or waive any material right under any material contracts of Avista Corp. except in the ordinary course of business or a termination without material penalty to Avista Corporation or any of its subsidiaries; (xiv) waive, settle or compromise any material claim except (A) with respect to the payment of monetary damages, a payment not exceeding US$2,000,000 in the aggregate during any twelve-month period or (B) with respect to any nonmonetary terms, would not reasonably be expected to be material and adverse to Avista Corporation and its subsidiaries; (xv) make or change any material tax election, any material method of tax accounting, amend any material tax return or settle any material tax liability; (xvi) permit any material insurance policy to terminate or lapse without replacing such policy with substantially similar coverage; (xvii) enter into any derivative transactions other than in the ordinary course of business and in a manner consistent with and in compliance with hedging polices or materially change any of its energy price or interest rate risk management guidelines; (xviii) enter into any material new line of business; (xix) take any action that would reasonably be expected to materially impede, interfere with or delay the consummation by Avista Corporation of the Merger and the related transactions contemplated by the Merger Agreement; or (xx) agree in writing to do any of the foregoing.

Under the Merger Agreement, the Corporation, US Parent and Merger Sub agreed that they will not take any action that would reasonably be expected to prevent or materially impede the consummation by the Corporation, US Parent or Merger Sub of the Merger and the related transactions contemplated by the Merger Agreement.

Between the date of the Merger Agreement and the closing of the Merger, Avista Corporation is required to continue to make regulatory filings in the ordinary course of business consistent with past practice and is permitted to respond to regulatory filings made by other parties in which Avista Corporation or any of its subsidiaries is an interested party and take other actions contemplated by the state or federal filings or submissions made in connection with regulatory filings in the ordinary course of business. Avista Corporation is required to keep the Corporation promptly informed of any material communications or meetings with any governmental authority with respect to rate cases, consult with and give the Corporation a reasonable opportunity to comment on material written communications or submissions to governmental authorities, and provide the Corporation a reasonable opportunity to participate in any related material meeting or communication. The Corporation has the right to approve (not to be unreasonably withheld, conditioned or delayed) any settlement of any rate case and rate case filing if it would reasonably be expected to result in an outcome that would be materially adverse to Avista Corporation or any of its subsidiaries after the closing of the Merger, taking into account the requests made by Avista Corp. in such rate case and the resolution of similar recent rate cases by Avista Corp.

Moreover, Avista Corporation has agreed to prepare and file with the SEC a preliminary proxy statement as promptly as reasonably practicable, but in any event within sixty days after the signing of the Merger Agreement, and the Corporation has agreed to cooperate in such preparation and filing.

Under the Merger Agreement, Avista Corporation, the Corporation, US Parent and Merger Sub are required to use reasonable best efforts to cause the Merger to be consummated as soon as practicable, make any required governmental submissions and filings and obtain all required governmental and regulatory approvals. In furtherance of the foregoing, the Corporation, US Parent and Merger Sub agreed to take all necessary steps to eliminate impediments to obtaining required regulatory approvals, except that neither the Corporation nor any of its affiliates is required to accept any term or condition in connection with obtaining the required regulatory approvals that would have or be reasonably likely to constitute a Burdensome Condition (as defined below). In the course of obtaining required regulatory approvals, Avista Corporation is not permitted to offer or agree to any concessions with regulators that would reasonably be expected to be material and adverse to the Corporation's ability to obtain required regulatory approvals on substantially the terms the Corporation reasonably expects unless Avista Corporation is so directed by the Corporation.

The Corporation has agreed that, for a period of six years after the Merger, it will cause to be maintained in effect policies of directors' and officers' liability insurance and fiduciary liability insurance no less favorable than the existing coverage, subject to a limit on the aggregate annual premiums payable of not more than 300% of the current premiums paid by Avista Corporation. In lieu of maintaining the foregoing coverage, Avista Corporation may purchase a "tail" insurance policy for a period of not less than six years, subject to the same aggregate cost limitation.

In addition, for a period of three years after the closing of the Merger, the Corporation will cause to be provided to each individual employed by Avista Corporation or its subsidiaries immediately prior to the closing of the Merger, cash compensation (including bonus and long-term incentive compensation opportunities) and employee benefits that are no less favourable than those provided to such employee, in the aggregate, immediately prior to the closing of the Merger. With respect to employees of Avista Corp. covered by a collective bargaining agreement, the Corporation will cause to be provided to such employees' terms and conditions of employment as required by the applicable collective bargaining agreement. Effective upon the closing of the Merger, the Corporation is required to cause Avista Corporation to implement a pre-agreed executive retention program.

Between the date of the Merger Agreement until the closing of the Merger, subject to certain limitations, Avista Corporation is required to use its commercially reasonable efforts to cooperate with the Corporation and its affiliates in connection with any financing transaction undertaken by the Corporation in connection with the Merger.

The Merger Agreement includes a series of governance and operational commitments and limitations, with respect to Avista Corporation that the Corporation intends to implement from and after the consummation of the Merger. From and after the closing of the Merger, the Corporation intends that the board of directors of Avista Corporation (the "**Subsidiary Board**") will consist of nine members in total, determined as follows: (i) two directors designated by the sole shareholder of Avista Corporation, who are executives of the Corporation or any of its subsidiaries, (ii) three directors who are not officers, employees or directors (other than an independent director of Avista Corporation) of the Corporation or any of its affiliates and who are residents of the Pacific Northwest region, to be designated by the sole shareholder of Avista Corporation, (iii) three directors who, as of immediately prior to the effective time of the Merger, were members of the board of directors of Avista Corporation, including the chairman of Avista Corporation's board of directors (if such person is different from the chief executive officer of Avista Corporation), and (iv) the chief executive officer of Avista Corporation. The initial chairman of the board of directors of Avista Corporation following the closing of the Merger will be the chief executive officer of Avista Corporation as of the time immediately prior to the effective time of the Merger for a one-year term. In addition, these provisions permit the Corporation to promptly remove and replace its designees to the Subsidiary Board, require prior notice of matters to discussed at meetings of the Subsidiary Board and require that a quorum of the Subsidiary Board includes at least one member who is an executive of the Corporation and at least an equal number of members designated by the Corporation as other members of the board.

Furthermore, following the closing of the Merger, commitments with respect to certain operational, governance and related matters will be required to be administered by the Subsidiary Board, subject to the approval of the sole shareholder of Avista Corporation, which will be a wholly owned, indirect subsidiary of the Corporation, with respect to specified matters. The matters to be administered by the Subsidiary Board include, among others, social commitments, decisions with respect to maintaining existing levels of charitable giving and economic development investment, maintaining Avista Corporation's brand, and maintaining the location of Avista Corporation's headquarters in Spokane, Washington, maintaining service and reliability standards, negotiations with labour unions, maintenance of existing employee compensation and benefits practices, retention of the existing executive management team and the composition of the Subsidiary Board as described above. The approval of the sole shareholder of Avista Corporation will be required, however, for decisions with respect to fundamental operational, governance and organizational matters, including, among others, entering into a merger or other business combination transaction, materially changing the nature of the business of Avista Corporation or any of its subsidiaries, winding up or dissolving Avista Corporation or any of its subsidiaries, declaring or paying dividends, changing the number of directors on the board of directors, changing employee compensation in a manner that is inconsistent with current market standards and practices, hiring or dismissing the chief executive officer and amending the organizational documents of Avista Corporation or any of its subsidiaries.

Closing Conditions

The Merger Agreement provides that the obligation of each of the Corporation, US Parent, Merger Sub and Avista Corporation to consummate the Merger is subject to the satisfaction or waiver of the following conditions:

(i) the Merger Agreement shall have been approved by the affirmative vote of the holders of a majority of the outstanding shares of Avista Corporation common stock entitled to vote at a duly convened meeting of Avista Corporation's shareholders ("**Avista Shareholder Approval**");

(ii) the governmental and regulatory consents and approvals specified in the Merger Agreement required to be obtained by the Corporation, US Parent, Merger Sub and Avista Corporation pursuant to the Merger shall have been obtained prior to the closing of the Merger, including: (A) clearance of the Merger by CFIUS and the expiration or termination of any applicable waiting period under the HSR Act and (B) the approval of the Merger by each of the IPUC, MPSC, OPUC, RCA, WUTC, the FERC and the FCC, and the required regulatory approvals and consents shall have become Final Orders; and

(iii) no law or judgment shall be in effect that prevent, prohibits or makes illegal the consummation of the Merger.

In addition, the Merger Agreement provides that the obligation of the Corporation, US Parent and Merger Sub to consummate the Merger is subject to the satisfaction or waiver of the following conditions:

(i) (A) the representations and warranties of Avista Corporation (except for the representations and warranties pertaining to capital structure and authority) shall be true and correct (without giving effect to any limitation as to "materiality" or "Avista Material Adverse Effect"), except where the failure to be true and correct has not had or would not reasonably be expected to have an Avista Material Adverse Effect; (B) the representations and warranties of Avista Corporation pertaining to capital structure shall be true and correct except where the failure of any such representation or warranty to be true and correct would be de minimis; and (C) the representations and warranties of Avista Corporation pertaining to authority and shareholder approval shall be true and correct in all material respects, in each case, as of the closing of the Merger as though made at and as of the closing of the Merger (except to the extent that such representation and warranty is expressly made as of a specified date, in which case such representation and warranty shall be true and correct as of such specific date);

(ii) Avista Corporation must have complied with all of its covenants in all material respects;

(iii) the Corporation shall have received a certificate signed by an executive officer of Avista Corporation certifying the satisfaction by Avista Corporation of the conditions set forth in items (i) and (ii) above;

(iv) no Avista Material Adverse Effect has occurred; and

(v) the Final Orders do not impose or require any obligations that would, individually or in the aggregate, constitute a Burdensome Condition.

The Merger Agreement also provides that the obligation of Avista Corporation to consummate the Merger is subject to the satisfaction or waiver of the following conditions:

(i) the representations and warranties of the Corporation, US Parent and Merger Sub shall be true and correct (without giving effect to any limitation as to "materiality" or "Corporation Material Adverse Effect"), as of the closing of the Merger with the same effect as though made on and as of the closing of the Merger (except to the extent that such representation and warranty is expressly made as of a specified date, in which case such representation and warranty shall be true and correct as of such specific date), except as would not cause a Corporation Material Adverse Effect;

(ii) the Corporation, US Parent and Merger Sub must have complied with all of their respective covenants in all material respects; and

(iii) Avista Corporation shall have received a certificate signed by an executive officer of the Corporation certifying the satisfaction by the Corporation and Merger Sub of the conditions set forth in items (i) and (ii) above.

No Solicitation; Avista Corporation's Board of Directors Recommendation

Pursuant to the terms of the Merger Agreement, Avista Corporation will, and will cause its subsidiaries and its and their respective directors, officers, employees and professional (including financial) advisors, attorneys, accountants, consultants or other representatives (acting in such capacity) ("**Representatives**") to, immediately terminate any ongoing negotiations with any person with respect to any Takeover Proposal. From and after the signing of the Merger Agreement, Avista Corporation will not and will cause its subsidiaries and Representatives not to, directly or indirectly, (i) solicit, initiate or knowingly encourage or facilitate any Takeover Proposal or (ii) enter into or participate in any discussions or negotiations with any person or furnish any nonpublic information to or cooperate with any person with respect to a Takeover Proposal. Notwithstanding the foregoing, Avista Corporation may, in response to an unsolicited Takeover Proposal made after the signing of the Merger Agreement and prior to the receipt of the Avista Shareholder Approval and that the board of directors of Avista Corporation determines in good faith could lead to a Superior Proposal, furnish information and participate in discussions with the persons making that Takeover Proposal. Avista Corporation must notify the Corporation promptly in writing of the receipt of the Takeover Proposal, its material terms and conditions, and the identity of the person making the Takeover Proposal.

Except as otherwise provided in the Merger Agreement, neither the Avista Corporation board of directors nor any committee thereof shall (i)(A) withdraw, change, qualify, withhold or modify in a manner adverse to the Corporation, or publicly propose to withdraw, change, qualify, withhold or modify in a manner adverse to the Corporation, its recommendation that Avista Corporation's shareholders approve the Merger Agreement, (B) adopt, approve or recommend, or publicly propose to adopt, approve or recommend, any Takeover Proposal, (C) fail to include its recommendation that Avista Corporation's shareholders approve the Merger Agreement in the proxy statement sent to its shareholders relating to the shareholder meeting to be held to vote on approval of the Merger Agreement or (D) in the event a tender offer that constitutes a Takeover Proposal subject to Regulation 14D under the Exchange Act is commenced, fail to recommend against such Takeover Proposal in any solicitation or recommendation statement made on Schedule 14D-9 within ten (10) business days after the Corporation so requests reaffirmation in writing (provided that the Corporation shall be entitled to make such a written request for reaffirmation only once for each Takeover Proposal and once for each material amendment to such Takeover Proposal) (any action described in this clause (i) being referred to herein as an "**Adverse Recommendation Change**") or (ii) cause or permit Avista Corporation or any of its affiliates to execute or enter into, any letter of intent, memorandum of understanding, agreement in principle, agreement or commitment constituting, or that would reasonably be expected to lead to a Takeover Proposal.

At any time prior to obtaining the Avista Shareholder Approval, the Avista Corporation board of directors may make an Adverse Recommendation Change if (i) Avista Corporation has received a Superior Proposal that does not result from a breach of the Merger Agreement, or (ii) any circumstance, development, change, event, occurrence or effect that (A) is unknown to or by Avista Corporation's board of directors as of the date of the Merger Agreement (or if known, the magnitude or material consequences of which are not known by Avista Corporation's board of directors as of the date of the Merger Agreement) and (B) becomes known to or by Avista Corporation's board of directors prior to obtaining the Avista Shareholder Approval (an "**Avista Intervening Event**"); provided, however, that neither a Takeover Proposal nor any consequence thereof shall constitute an Avista Intervening Event, in each case, if Avista Corporation's board of directors determines in good faith, after consultation with outside counsel, that the failure to make an Adverse Recommendation Change would reasonably be expected to be inconsistent with its fiduciary duties, and, provided that Avista Corporation's board of directors complies with the following requirements: (1) the Avista Corporation board of directors has provided prior written notice to the Corporation that it is prepared to change its board recommendation at least four business days prior to taking such action; (2) during the four business day period, the parties negotiate in good faith regarding any revisions to the Merger Agreement the other party proposes to make; and (3) at the end of the four business day period and taking into account any revisions of the Merger Agreement committed to in writing by the other party, the Avista Corporation board of directors determines in good faith (after consultation with outside legal counsel and a financial advisor) that the failure to make an adverse board recommendation change would be inconsistent with its fiduciary duties.

Termination

The Merger Agreement may be terminated at any time prior to the closing of the Merger, by mutual written consent of Avista Corporation or the Corporation.

Additionally, the Merger Agreement may be terminated by either Avista Corporation or the Corporation at any time prior to the closing of the Merger, if:

(i) the closing of the Merger has not occurred by the End Date; provided that if, prior to the End Date, all of the conditions to the closing of the Merger have been satisfied or waived, as applicable, or shall then be capable of being satisfied (except for the conditions relating to receipt of the required governmental and regulatory consents and approvals, the absence of any law or judgment in effect that prevents or prohibits the closing of the Merger or makes the closing of the Merger illegal or the absence of a Burdensome Condition), either Avista Corporation or the Corporation may extend the End Date to a date that is not later than six months after the End Date; provided, further that neither Avista Corporation or the Corporation may terminate the Merger Agreement if it (or, in the case of the Corporation, US Parent or Merger Sub) is in breach of the Merger Agreement and such breach has primarily caused the failure to satisfy the conditions to the obligations of the terminating party to consummate the Merger prior to the End Date or the failure of the closing of the Merger to have occurred by the End Date.

If either Avista Corporation or the Corporation terminates the Merger Agreement pursuant to the above clause (i) and, at the time of such termination:

(1) the governmental and regulatory consents and approvals required to be obtained by the Corporation, US Parent, Merger Sub and Avista Corporation have not been obtained, or any law or judgment is in effect that prevents or prohibits the consummation of the Merger or makes the consummation of the Merger illegal (but only if the applicable law or judgment giving rise to such termination arises in connection with the required governmental and regulatory consents and approvals), and at the time of such termination, the Avista Shareholder Approval has been obtained and the other closing conditions for the benefit of the Corporation (other than the receipt of the Avista Corporation officer's certificate and the absence of a Burdensome Condition) have been satisfied or waived (except for any conditions that have not been satisfied as a result of a breach of the Merger Agreement by the Corporation, US Parent or Merger Sub of its respective obligations), the Corporation will pay or cause to be paid to Avista Corporation a fee of US$103,000,000 (the "**Corporation Termination Fee**") in cash; or

(2) a Takeover Proposal was publicly disclosed or made to Avista Corporation and not publicly withdrawn prior to the date of termination and within twelve months of such termination, Avista Corporation enters into an agreement with respect to a competing transaction or consummates a Takeover Proposal, Avista Corporation will pay or cause to be paid to the Corporation a fee of US$103,000,000 (the "**Avista Termination Fee**") in cash.

(ii) any law or judgment (each, a "**Restraint**") is in effect that prevents, makes illegal or prohibits the consummation of the Merger, and, in the case of any judgment, shall have become final and non-appealable; provided, however that the right to terminate the Merger Agreement pursuant to this clause shall not be available to Avista Corporation or the Corporation if the issuance of such a final, non-appealable Restraint was primarily due to a breach by such party of any of its covenants or agreements under the Merger Agreement, including any failure to obtain the governmental and regulatory consents and approvals. If Avista Corporation or the Corporation terminates the Merger Agreement pursuant to this clause (but only if the applicable Restraint giving rise to such termination arises in connection with the governmental and regulatory consents and approvals), and at the time of any such termination, the Avista Shareholder Approval has been obtained and the other conditions of the closing for the benefit of the Corporation (other than the receipt of the Avista Corporation officer's certificate and the absence of a Burdensome Condition) have been satisfied or waived (except for any conditions that have not been satisfied as a result of a breach of the Merger Agreement by the Corporation, US Parent or Merger Sub of its respective obligations), the Corporation will pay or cause to be paid to Avista Corporation the Corporation Termination Fee in cash; or

(iii) the Avista Shareholder Approval is not obtained at a duly convened meeting of Avista Corporation's shareholders (the "**Avista Shareholders Meeting**") (including any adjournments or postponements thereof). If either Avista Corporation or the Corporation terminates the Merger Agreement pursuant to this clause and (A) a Takeover Proposal was publicly disclosed or made to Avista Corporation and not publicly withdrawn prior to the date of the Avista Shareholders Meeting and (B) within twelve months of such termination, Avista Corporation enters into an agreement with respect to a competing transaction or consummates a Takeover Proposal, Avista Corporation will pay or cause to be paid to the Corporation the Avista Termination Fee in cash.

Moreover, the Merger Agreement may be terminated by Avista Corporation if:

(i) the Corporation, US Parent or Merger Sub has breached or failed to perform any of its respective representations, warranties, covenants or agreements set forth in the Merger Agreement, which breach or failure to perform (A) would give rise to the failure of one of the closing conditions for the benefit of Avista Corporation and (B) cannot be cured by the Corporation, US Parent or Merger Sub by the End Date or, if capable of being cured, has not have cured within 30 days following receipt of written notice from Avista Corporation stating Avista Corporation's intention to terminate the Merger Agreement pursuant to this clause and the basis for such termination; provided that Avista Corporation will not have the right to terminate the Merger Agreement pursuant to this clause if Avista Corporation is then in material breach of the Merger Agreement. If Avista Corporation terminates the Merger Agreement pursuant to this clause because of a failure by the Corporation, US Parent or Merger Sub to comply with their obligations with respect to obtaining the governmental and regulatory consents and approvals; provided that, at the time of any such termination, the Avista Shareholder Approval has been obtained and the other conditions of the closing for the benefit of the Corporation (other than the receipt of the Avista Corporation officer's certificate and the absence of a Burdensome Condition) have been satisfied or waived (except for any such conditions that have not been satisfied as a result of a breach of the Merger Agreement by the Corporation, US Parent or Merger Sub of its respective obligations), the Corporation will pay or cause to be paid to Avista Corporation the Corporation Termination Fee in cash; or

(ii) prior to the receipt of the Avista Shareholder Approval, the board of directors of Avista Corporation (or a duly authorized committee thereof) has effected an Adverse Recommendation Change with respect to a Superior Proposal and has approved, and substantially concurrently with such termination, has entered into an agreement with respect to a competing transaction with respect to such Superior Proposal; provided that such termination will not be effective and Avista Corporation will not enter into any such an agreement with respect to a competing transaction, unless Avista Corporation has paid the Avista Termination Fee to the Corporation or causes the Avista Termination Fee to be paid to the Corporation substantially concurrently with such termination. If Avista Corporation terminates the Merger Agreement pursuant to this clause, Avista Corporation will pay or cause to be paid, to the Corporation the Avista Termination Fee.

Furthermore, the Merger Agreement may be terminated by the Corporation if:

(i) the board of directors of Avista Corporation (or a duly authorized committee thereof) has effected an Adverse Recommendation Change; provided that the Corporation will not have the right to such termination if the Avista Shareholder Approval has been obtained. If the Corporation terminates the Merger Agreement pursuant to this clause, Avista Corporation will pay or cause to be paid the Avista Termination Fee; or

(ii) Avista Corporation has breached or failed to perform any of its representations, warranties, covenants or agreements set forth in the Merger Agreement, which breach or failure to perform (A) would give rise to the failure of a condition to certain closing conditions for the benefit of the Corporation, US Parent or Merger Sub, respectively, and (B) cannot be cured by Avista Corporation by the End Date or, if capable of being cured, has not been cured within 30 days following receipt of written notice from the Corporation stating the Corporation's intention to terminate the Merger Agreement pursuant to this clause and the basis for such termination; provided that the Corporation will not have the right to such termination if the Corporation, US Parent or Merger Sub is then in material breach of the Merger Agreement. If the Corporation terminates the Merger Agreement pursuant to this clause (solely with respect to a breach or failure to perform a covenant), a Takeover Proposal was publicly disclosed or made to Avista Corporation and not publicly withdrawn prior to the date of termination and within twelve months of such termination, Avista Corporation enters into an agreement with respect to a competing transaction or consummates a Takeover Proposal, Avista Corporation will pay or cause to be paid to the Corporation the Avista Termination Fee.

Payment of Fees and Effect on Termination

Neither Avista Corporation nor the Corporation shall be required to pay the Avista Termination Fee or the Corporation Termination Fee, respectively, on more than one occasion.

Moreover, Avista Corporation, on the one hand, and the Corporation, US Sub and Merger Sub, on the other hand, agree that payment of the Avista Termination Fee and the Corporation Termination Fee, as applicable, shall not constitute a penalty, but rather will constitute liquidated damages. If Avista Corporation fails to pay the Avista Termination Fee and the Corporation, in order to obtain such payment, commences a claim that results in a judgment against Avista Corporation, Avista Corporation will pay to the Corporation, in addition to the Avista Termination Fee, the Corporation's costs and expenses (including reasonable attorneys' fees) in connection with such claim, along with interest from the date such payment was required until the date of payment. If the Corporation fails to pay the Corporation Termination Fee and Avista Corporation, in order to obtain such payment, commences a claim that results in a judgment against the Corporation, the Corporation will pay to Avista Corporation, in addition to the Corporation Termination Fee, Avista Corporation's costs and expenses (including reasonable attorneys' fees) in connection with such claim, along with interest from the date such payment was required until the date of payment.

Furthermore, upon payment by Avista Corporation of the Avista Termination Fee to the Corporation, including any costs pursuant to the above paragraph, Avista Corporation will have no further liability to the Corporation, US Parent or Merger Sub. Upon payment by the Corporation of the Corporation Termination Fee to Avista Corporation, including any costs pursuant to the above paragraph, the Corporation, US Parent and Merger Sub will have no further liability to Avista Corporation.

FINANCING THE MERGER

The cash purchase price of the Merger and the Merger-Related Expenses will be financed at the closing of the Merger with a combination of some or all of the following: (i) net proceeds of the first instalment (to the extent available) and the final instalment under the Offering; (ii) net proceeds of any subsequent bond or other debt offerings; (iii) amounts drawn under the Operating Credit Facility; and; (iv) existing cash on hand and other sources available to the Corporation.

Prior to the closing of the Merger, Hydro One Limited intends to use the net proceeds of the first instalment under the Offering, which are expected to be $441,700,000 (assuming no exercise of the Over-Allotment Option), to repay borrowings under the Operating Credit Facility or its subsidiaries' existing revolving credit facilities or other existing indebtedness (such indebtedness having been incurred for general corporate purposes), or for other general corporate purposes, including investing in short-term interest bearing U.S. dollar securities with investment grade counterparties and in Hydro One Limited's wholly-owned subsidiaries. In the event that the net proceeds of the first instalment under the Offering are used to reduce outstanding indebtedness or for other general corporate purposes, Hydro One Limited will maintain readily available capacity on its revolving credit facilities (on a consolidated basis), or have cash on hand together with such available capacity, in an amount at least equal to the net proceeds of the first instalment under the Offering. Upon the closing of the Merger, Hydro One Limited intends to use the net proceeds of the final instalment under the Offering, which are expected to be $909,300,000 (assuming no exercise of the Over-Allotment Option), to finance, directly or indirectly, together with the net proceeds of the first instalment under the Offering to the extent available, part of the purchase price payable for the Merger and for other Merger-Related Expenses.

Hydro One Limited currently intends to fund the remainder of the purchase price for the Merger with a combination of bond or other debt financings, denominated principally in U.S. dollars in order to provide a significant natural currency hedge, drawdowns on the Operating Credit Facility and cash on hand.

Hydro One Limited's overall financing plan in respect of the Merger is structured and targeted to maintain Hydro One Limited's and Avista Corporation's strong investment grade status. For additional information on the proposed financing plan for the Merger, see page A-8 of the Investor Presentation attached as Appendix A to this Prospectus.

See "Risk Factors" for a discussion of certain risks relating to the financing of the Merger.

CAPITALIZATION

Upon completion of the Offering, the closing of the Merger and assuming the payment of the final instalment and the conversion of all of the Debentures into Common Shares (based on the conversion price of $21.40 per Common Share), the Corporation will have, on a *pro forma* basis, an aggregate of approximately 660,420,561 Common Shares outstanding (assuming no exercise of the Over-Allotment Option and based on the 595,000,000 Common Shares issued and outstanding on March 31, 2017), or approximately 666,962,617 Common Shares if the Over-Allotment Option is exercised in full and based on the 595,000,000 Common Shares issued and outstanding on March 31, 2017.

The following table sets out the consolidated capitalization of the Corporation as at March 31, 2017 and on a *pro forma* basis, as of such date after giving effect to (i) the net proceeds of the Offering (including the payment of both the first instalment and final instalment), assuming no exercise of the Over-Allotment Option and determined after deducting the Underwriters' fee and estimated expenses of the Offering on an after-tax basis, (ii) the anticipated net proceeds of subsequent U.S. dollar bond or other debt offerings to fund the balance of the purchase price, (iii) the Merger, including the assumption of approximately US$1.9 billion of Avista Corporation's consolidated debt, (iv) the conversion of the Debentures into Common Shares and (v) the changes in Common Shares and long-term debt from April 1, 2017 up to and including July 31, 2017. See "Changes in Share and Loan Capital Structure" and "Financing the Merger". The financial information set out below has been compiled based on financial statements prepared in accordance with U.S. GAAP. See "Index to Financial Statements" and in particular, the *pro forma* financial statements beginning on page F-94 of this Prospectus.

	As at March 31, 2017 (unaudited)	***Pro forma* as at March 31, 2017 (unaudited)**(1)
	(in millions of $ dollars)	
Total Debt(2)	11,133	17,098
Shareholders' equity		
Securities offered hereby	-	1,351(5)

Common Shares[3]	5,623	5,623
Series 1 Preferred Shares	418	418
Additional contributed surplus	40	40
Accumulated other comprehensive loss	(7)	(7)
Retained earnings	3,992	3,798
Total capitalization	21,199	28,321

(1) After giving effect to (i) the net proceeds of the Offering (including the payment of both the first instalment and final instalment), assuming no exercise of the Over-Allotment Option and determined after deducting the Underwriters' fee and estimated expenses of the Offering on an after-tax basis, (ii) the anticipated net proceeds of subsequent U.S. dollar bond or other debt offerings to fund the balance of the purchase price, (iii) the Merger, including the assumption of approximately US$1.9 billion of Avista Corporation's consolidated debt, and (iv) the conversion of the Debentures into Common Shares. See "Changes in Share and Loan Capital Structure", "Financing the Merger" and "Index to Financial Statements".

(2) Includes long-term debt (including the current portion and short-term borrowings).

(3) Does not include the Common Shares issuable upon the conversion of the Debentures, which are included as "Securities offered hereby".

(4) Excludes non-controlling interests.

(5) Excluding approximately $13 million in deferred tax.

EARNINGS COVERAGE RATIOS

The Corporation's interest requirements on all of its outstanding debt securities after giving effect to the issue of the Debentures distributed hereunder (assuming no exercise of the Over-Allotment Option and the issuance of such Debentures at the beginning of such period) amounted to $449 million and $456 million for the 12 months ended December 31, 2016 and the 12 months ended March 31, 2017, respectively. The Corporation's earnings before interest and income tax for the 12 months ended December 31, 2016 and 12 months ended March 31, 2017 were $1.278 billion and $1.237 billion, respectively, which is 2.8 times and 2.7 times, respectively, the Corporation's aggregate interest requirements for the periods.

The earnings coverage ratios of the Corporation calculated on a *pro forma* basis after giving effect to the Merger (including the assumption of approximately US$1.9 billion of Avista Corporation's consolidated debt), the conversion of the Debentures into Common Shares (assuming no exercise of the Over-Allotment Option), and the anticipated net proceeds of subsequent U.S. dollar bond or other debt offerings to fund the balance of the purchase price (in each case as if they had occurred at the beginning of such period), are calculated as follows: (i) the Corporation's interest requirements on all of its outstanding debt securities amounted to $639 million and $167 million for each of the 12 months ended December 31, 2016 and the three months ended March 31, 2017, respectively; and (ii) the Corporation's earnings before interest and income tax for the 12 months ended December 31, 2016 and three months ended March 31, 2017 were $1.674 billion and $460 million, respectively, which is 2.6 times and 2.8 times, respectively, the Corporation's aggregate interest requirements for the periods.

CHANGES IN SHARE AND LOAN CAPITAL STRUCTURE

There have been no material changes in Hydro One Limited's share and loan capital, on a consolidated basis, since the date of the Interim Financial Statements. As a result of the Offering, after giving effect to the assumed conversion of the Debentures into Common Shares, shareholders' equity in the Corporation will increase by approximately $1.351 billion (assuming no exercise of the Over-Allotment Option).

PRIOR SALES

The following table sets out the issuance of Common Shares and securities convertible into or exchangeable for Common Shares that occurred in the 12-month period before the date of this Prospectus:

Date of Issue	Securities[(1)(2)]	Price per Security	Number of Common Shares Issuable or Issued, as applicable
August 15, 2016	RSUs	$25.49	1,690
August 15, 2016	PSUs	$25.49	3,140
September 1, 2016	RSUs	$26.19	17,180
September 1, 2016	PSUs	$26.19	17,180
September 7, 2016	RSUs	$26.49	16,990
September 7, 2016	PSUs	$26.49	16,990
September 9, 2016	RSUs[(3)]	$25.98	45,130
September 9, 2016	PSUs	$25.98	45,130
September 12, 2016	RSUs	$25.75	20,830
September 12, 2016	PSUs	$25.75	20,830
November 14, 2016	RSUs	$22.65	8,030
November 14, 2016	PSUs	$22.65	8,030
March 31, 2017	RSUs	$24.25	218,950
March 31, 2017	PSUs	$24.25	267,450
April 1, 2017	Common Shares[(4)]	$20.50	371,611
May 31, 2017	Common Shares[(5)]	$25.98	13,714
July 21, 2017	Common Shares[(6)]	$24.31	1,274

Notes:

(1) Except as noted in footnote (3) below, each RSU granted in 2016 and 2017 vests in full on December 31, 2018 and December 31, 2019, respectively, assuming the individual has remained employed by Hydro One Limited or its subsidiaries through such date. Each vested RSU entitles the holder thereof to one Common Share. RSUs also earn dividend equivalents as dividends are paid on the Common Shares. Price per security represents the grant date price of the RSUs.

(2) Each PSU granted in 2016 and 2017 vests on December 31, 2018 and December 31, 2019, respectively, subject to achieving certain performance thresholds for the three-year average earnings per share for the period from (i) January 1, 2016 to December 31, 2018, in the case of 2016 grants and (ii) January 1, 2017 to December 31, 2019, in the case of 2017 grants, and provided further that the dividend rate is not decreased during the period. In the event the dividend rate is decreased during the period, no PSUs will vest regardless of whether the performance thresholds are met. In respect of the performance thresholds, below a certain performance threshold, no PSUs will vest. At the target performance threshold (assuming the dividend rate is not reduced during the period), the PSUs vest at the target level of 100% and will entitle the holder thereof to one Common Share for each PSU granted. At or above the maximum performance threshold (assuming the dividend rate is not reduced during the period), the PSUs vest at the maximum level of 200% and will entitle the holder thereof to two Common Shares for each PSU granted. Between performance thresholds (assuming the dividend rate is not reduced during the period), PSUs will vest on an interpolated basis. PSUs also earn dividend equivalents as dividends are paid on the Common Shares. The number of Common Shares issuable pursuant to the PSUs assumes the PSUs vest at 100% of their target. Price per security represents the grant date price of the PSUs.

(3) 13,470 of these RSUs vest on May 31, 2018. 13,470 of these RSUs vested on May 31, 2017 and 13,714 Common Shares (including related accrued dividend equivalents) were issued on that date. See footnote (5).

(4) Upon terms and conditions previously agreed to, Hydro One Limited issued these Common Shares to eligible employees at the initial public offering price of the Common Shares in accordance with the provisions of the PWU Share Grant Plan.

(5) A total of 13,714 Common Shares were issued from treasury on the vesting of 13,470 RSUs and 244 related accrued dividend equivalents on May 31, 2017. See footnote (3). Price per security represents the grant date price of the RSUs.

(6) A total of 1,274 Common Shares were issued from treasury on July 21, 2017 from the vesting of 610 RSUs (and 27 related accrued dividend equivalents) and 610 PSUs (and 27 related accrued dividend equivalents) granted on March 31, 2016 arising from the death of the holder of the RSUs and PSUs. Price per security represents the grant date price of the RSUs and PSUs.

TRADING PRICES AND VOLUMES

The outstanding Common Shares are traded on the TSX under the trading symbol "H". The following table sets forth the high and low price for, and the volume of trading in, the Common Shares for the periods indicated, based on information obtained from the TSX.

	Price ($)		
Month	**High**	**Low**	**Trading Volume**
2016			
August	26.48	25.10	7,138,631
September	26.54	25.36	7,031,417
October	26.02	24.02	6,765,511
November	24.58	22.06	11,932,522
December	23.65	22.59	9,719,103
2017			
January	24.49	23.49	8,368,116
February	24.17	23.22	8,477,586
March	24.28	23.04	11,764,543
April	24.66	23.84	6,292,356
May	24.15	22.63	42,296,289
June	23.98	22.73	19,011,705
July	23.25	21.32	17,158,684

DESCRIPTION OF COMMON SHARES

Hydro One Limited's authorized share capital consists of an unlimited number of Common Shares and an unlimited number of preferred shares, issuable in series, of which 595,386,599 Common Shares, 16,720,000 Series 1 preferred shares and no Series 2 preferred shares are issued and outstanding as of the date of this Prospectus.

Holders of Common Shares are entitled to receive notice of and to attend all meetings of shareholders, except meetings at which only the holders of another class or series of shares are entitled to vote separately as a class or series, and holders of Common Shares are entitled to one vote per share at all such meetings of shareholders. Hydro One Limited's Common Shares are not redeemable or retractable. Subject to the rights, privileges, restrictions and conditions attaching to any other class or series of shares, including the Series 1 Preferred Shares and Series 2 Preferred Shares, holders of Common Shares are entitled to receive dividends if, as, and when declared by the Board of Directors. Subject to the rights, privileges, restrictions and conditions attaching to any other class or series of shares, including the Series 1 Preferred Shares and Series 2 Preferred Shares, holders of Common Shares are also entitled to receive the remaining assets of Hydro One Limited upon its liquidation, dissolution or winding-up or other distribution of Hydro One Limited's assets for the purposes of winding-up its affairs.

Voting securities of Hydro One Limited, which include the Common Shares, are subject to share ownership restrictions under the *Electricity Act, 1998* (Ontario). The share ownership restrictions provide that no person or company (or combination of persons or companies acting jointly or in concert), other than the Province or an underwriter who holds voting securities of Hydro One Limited solely for the purposes of distributing them to purchasers who comply with the share ownership restrictions, may beneficially own or exercise control or direction over more than 10% of any class or series of voting securities of Hydro One Limited. The articles of Hydro One Limited provide for comprehensive enforcement mechanisms that are applicable in the event of a contravention of the share ownership requirements. **A potential purchaser of Debentures represented by Instalment Receipts should not subscribe for a number of such Debentures in this Offering that would, upon conversion of such Debentures into Common Shares, cause such purchaser to violate this prohibition.**

DETAILS OF THE OFFERING

The Offering consists of $1,400,000,000 aggregate principal amount of Debentures represented by Instalment Receipts at a price of $1,000 per Debenture, which are being sold by the Selling Debentureholder on an instalment basis. The first instalment of $333 per $1,000 principal amount of Debentures is payable on the Closing Date. The final instalment of $667 per $1,000 principal amount of Debentures is payable following notification to holders of Instalment Receipts (the "**Final Instalment Notice**") that the Corporation has received all regulatory and government approvals required to finalize the Merger and Hydro One Limited, US Parent, Merger Sub and Avista Corporation have fulfilled or waived all other outstanding conditions precedent to closing the Merger, other than those which by their nature cannot be satisfied until the closing of the Merger, in each case as set out in the Merger Agreement (collectively, the "**Approval Conditions**"). See "The Merger Agreement". The Final Instalment Notice, which must be given by no later than April 30, 2019, will establish a date for payment of the final instalment (the "**Final Instalment Date**"), which shall not be less than 15 days nor more than 90 days following the date of such notice. Payment of the final instalment in full must be received by the Custodian (as defined in this Prospectus) by no later than 3:30 p.m. (Toronto time) on the Final Instalment Date. Holders should make arrangements with the securities broker, trust company or other financial institution through which they hold Instalment Receipts to pay the final instalment sufficiently in advance of the Final Instalment Date to ensure that such payment is received by the Custodian prior to this deadline.

The Selling Debentureholder

The Selling Debentureholder is a direct wholly-owned subsidiary of Hydro One Limited organized under the OBCA. The Selling Debentureholder will acquire (both of record and beneficially) the Debentures offered pursuant to this Prospectus from Hydro One Limited for the purpose of participating in the Offering.

If the Over-Allotment Option is exercised by the Underwriters, the Selling Debentureholder will acquire the Debentures purchased in the Over-Allotment Option from Hydro One Limited and will sell them to the Underwriters on the terms and conditions set out in the Underwriting Agreement.

Waiver of Pre-Emptive Right by Province

The Province waived its pre-emptive right to participate in the Offering under the Governance Agreement. In consideration of granting the waiver, the Corporation agreed that until July 19, 2018: (i) the Corporation shall not issue Common Shares pursuant to the Corporation's equity compensation plans and any dividend reinvestment plan in an aggregate number that exceeds 1% of the Common Shares outstanding as of July 19, 2017; and (ii) the Corporation shall not issue voting securities (or securities convertible into voting securities) pursuant to any acquisition transaction without complying with the pre-emptive right provisions of the Governance Agreement.

Instalment Receipts

The following is a summary of the material attributes and characteristics of the Instalment Receipts representing Debentures and the rights and obligations of holders thereof. This summary does not purport to be complete and is subject to, and is qualified in its entirety by, the terms of the instalment receipt and pledge agreement (the "**Instalment Receipt Agreement**"), to be dated as of the Closing Date, among the Corporation, the Selling Debentureholder, the Underwriters and Computershare Trust Company of Canada in its capacity as custodian and security agent (the "**Custodian**"). Copies of the Instalment Receipt Agreement will be available for inspection at the principal offices of the Custodian in Toronto, Ontario. A prospective purchaser of Debentures represented by Instalment Receipts should carefully review the Instalment Receipt Agreement, a copy of which will also be available on the Corporation's SEDAR profile at www.sedar.com on or about the Closing Date.

Holders of Instalment Receipts will be bound by the terms of the Instalment Receipt Agreement. The Instalment Receipt Agreement will provide that legal title to the Debentures offered hereby will be held by the Custodian following payment of the first instalment and until the Final Instalment Date, provided that legal title will be retained if the final instalment has not been fully paid to the Custodian for the benefit of the Selling Debentureholder on or before the Final Instalment Date (and in no case later than 3:30 p.m. (Toronto time) on the Final Instalment Date). The Debentures offered hereby will be pledged to the Selling Debentureholder by the Underwriters (for and on behalf of the purchasers of Debentures represented by Instalment Receipts under the Offering) at the closing of the Offering and the physical certificate or certificates representing the Debentures will be held in the possession of the Custodian, as security agent, on behalf of the Selling Debentureholder, subject to the terms of the Instalment Receipt Agreement.

Prior to payment of the final instalment, beneficial ownership of Debentures will be represented by Instalment Receipts. An Instalment Receipt will evidence, among other things, (i) the fact that the first instalment has been paid in respect of the Debenture represented thereby and (ii) the right of a holder thereof, subject to compliance with the provisions of the Instalment Receipt Agreement, (x) to have the pledge of the Debentures released following the Final Instalment Date provided that payment in full of the final instalment with respect to such Debentures has been received by the Custodian on or prior to such date or (y) if the Debentures are redeemed by the Corporation prior to payment of the final instalment, to receive (after the Custodian pays the final instalment to the Selling Debentureholder on behalf of the holder) $333 per underlying Debenture plus accrued and unpaid interest on such Debenture up to but excluding the redemption date. A holder of an Instalment Receipt will be deemed to have assumed the obligation to pay the final instalment on or before the Final Instalment Date and to have acquired beneficial ownership of the Debenture represented by the Instalment Receipt, subject to the pledge of such Debenture which secures such obligations subject to the terms of the Instalment Receipt Agreement. Subject to the terms of the Instalment Receipt Agreement, a holder of an Instalment Receipt will be further deemed to agree that the foregoing pledge will remain in effect and be binding and effective notwithstanding any transfer of or other dealings with the Instalment Receipt and the rights evidenced or arising thereby.

The Corporation shall as soon as practicable following satisfaction of the Approval Conditions (but no later than April 30, 2019) cause a Final Instalment Notice to be given to holders of Debentures represented by Instalment Receipts (i) confirming that all Approval Conditions have been fulfilled to the satisfaction of the Corporation, (ii) setting the Final Instalment Date (which shall not be less than 15 days nor more than 90 days following the date that such notice is first given) and (iii) advising holders of their ability to exercise the conversion privilege with respect to Debentures represented by their Instalment Receipts concurrently with the payment of the final instalment. See "Details of the Offering – Debentures – Conversion Right". The Selling Debentureholder shall also cause to be issued a press release containing particulars of the Final Instalment Notice. Payment of the final instalment is required regardless of whether a holder receives the Final Instalment Notice, directly or indirectly. The Final Instalment Date may occur up to 90 days following April 30, 2019.

A holder of an Instalment Receipt will be entitled to make payment, in accordance with the provisions of the Instalment Receipt Agreement, of the final instalment at any time following receipt of the Final Instalment Notice and prior to 3:30 p.m. (Toronto time) on the Final Instalment Date. **A holder of Instalment Receipts that fails to pay the final instalment in full by 3:30 p.m. (Toronto time) on the Final Instalment Date (a "Defaulting Holder") will have no further right to pay the final instalment and all rights and privileges of the Defaulting Holder described below under "– Rights and Privileges" shall immediately cease (unless otherwise waived by the Selling Debentureholder).**

Subject to compliance with the provisions of the Instalment Receipt Agreement and timely payment of the final instalment, the Custodian will, as soon as practicable on or after the Final Instalment Date, discharge and release the pledge of the Debentures represented by such Instalment Receipts. At that time, the Debentures (or the Common Shares into which the Debentures may be converted) will be held through the facilities of CDS, and the holder will receive only a customer confirmation of purchase of the Debentures (or, if the conversion privilege is exercised, the underlying Common Shares) from the holder's CDS Participant.

The Instalment Receipts representing the Debentures will be issued in "book-entry only" form and must be purchased or transferred through a CDS Participant. The Corporation will cause a global certificate or certificates representing any newly issued Instalment Receipts to be delivered to, and registered in the name of, CDS or its nominee. All rights and obligations of holders of Instalment Receipts must be exercised or performed through, and all notices, payments or other property to which such holders are entitled or obligated will be made or delivered by the holder holding such Instalment Receipts through CDS or the CDS Participants in accordance with the rules and procedures applicable to CDS and such CDS Participants. Each person who acquires Instalment Receipts will only receive a customer confirmation of purchase from the CDS Participant from or through which the Instalment Receipts representing the Debentures are acquired in accordance with the practices and procedures of that registered dealer. The practices of CDS Participants may vary, but generally customer confirmations are issued promptly after execution of a customer order. CDS is responsible for establishing and maintaining book-entry accounts for its CDS Participants having interests in Instalment Receipts. See "– Book-Entry Only System". Because payment of the final instalment will be made by holders of Instalment Receipts through CDS and CDS Participants, it is strongly advised that holders make arrangements with the securities broker, trust company or other financial institution through which they hold Instalment Receipts to pay their final instalment sufficiently in advance of the Final Instalment Date to ensure that such payment is received by the Custodian by no later than 3:30 p.m. (Toronto time) on the Final Instalment Date.

Transfer of Instalment Receipts

The TSX has conditionally approved the listing of the Instalment Receipts on the facilities of the TSX, subject to the fulfillment of all of the requirements of the TSX. Once listed, it is anticipated that holders will be able to transfer Instalment Receipts through the facilities of the TSX until the close of trading on the trading day immediately preceding the Final Instalment Date, following which Instalment Receipts will stop trading on the TSX. Upon a transfer of an Instalment Receipt, the transferee will acquire the transferor's rights, subject to the pledge of the Debentures in favour of the Selling Debentureholder, and become subject to the obligations of a holder of Instalment Receipts under the Instalment Receipt Agreement, including the assumption by the transferee of the obligation to pay the final instalment on or before the Final Instalment Date. No transfer of an Instalment Receipt after the Final Instalment Date will be accepted (except where an intermediary holds Instalment Receipts on behalf of a non-registered holder and such non-registered holder has failed to pay the final instalment when due, or with the express consent of the Selling Debentureholder).

Liability of Instalment Receipt Holders

Pursuant to the Instalment Receipt Agreement, the Underwriters will pledge (for and on behalf of the purchasers of Debentures represented by Instalment Receipts under the Offering) the Debentures purchased on an instalment basis to secure payment of the final instalment. If payment of the final instalment is not duly received by the Custodian from a holder of Instalment Receipts when due, the Instalment Receipt Agreement will provide that (except as set out below) any Debenture then remaining pledged under the Instalment Receipt Agreement may, at the option of the Selling Debentureholder, subject to complying with applicable law, be forfeited to the Selling Debentureholder in full satisfaction of the obligations of such holder of Instalment Receipts secured thereby. The Instalment Receipt Agreement will further provide that the Selling Debentureholder may, alternatively, direct the Custodian to sell the Debentures in respect of which payment of the final instalment was not duly received, in accordance with the requirements of applicable law and of the Instalment Receipt Agreement, and remit to the Defaulting Holder of Instalment Receipts its pro rata portion of the proceeds of sale after deducting therefrom the amount of the remaining unpaid final instalment, the amount of any applicable withholding taxes and the Defaulting Holder's pro rata portion of the costs of sale (such costs not to exceed $25 per $1,000 principal amount of Debentures). The Instalment Receipt Agreement will provide that the foregoing shall not limit any other remedies available to the Selling Debentureholder against such Defaulting Holder of the Instalment Receipt in the event proceeds of such sale are insufficient to cover the amount of the final instalment and the costs of sale and accordingly, such holder shall in such circumstances remain liable to the Selling Debentureholder for any such deficiency.

Rights and Privileges

Under the Instalment Receipt Agreement, holders of Instalment Receipts will have the same rights and privileges, and will be subject to the same limitations, as holders of Debentures pursuant to the Indenture (as defined in this Prospectus). In particular, holders of Instalment Receipts will be entitled under arrangements through the Custodian, in the manner set forth in the Instalment Receipt Agreement, to (i) receive interest on the Debentures represented by Instalment Receipts up to and including the Final Instalment Date, after which the interest rate payable on the Debentures will fall to an annual rate of 0% and interest will cease to accrue on the Debentures, (ii) receive the Make-Whole Payment in respect of the Debentures represented thereby if the Final Instalment Date occurs prior to the first anniversary of the Closing Date and provided that a holder of Debentures represented by Instalment Receipts has paid the final instalment on or prior to the Final Instalment Date and (iii) exercise the votes attached to the Debentures represented by such Instalment Receipts. In the event that the Corporation issues (including on liquidation, dissolution or winding-up) to the holders of Debentures any securities, or options, rights or warrants to purchase any securities, or any securities convertible into or exchangeable for securities, or other property or assets of like nature, the Custodian will, as promptly as commercially reasonable sell such securities, options, rights, warrants, evidences of indebtedness, property or assets and remit pro rata to the holders of Instalment Receipts, the proceeds of sale net of the Custodian's costs of disposition, subject to withholding tax requirements.

Redemption of Debentures and Cancellation of Instalment Receipts

In the event that Debentures are required to be redeemed by the Corporation prior to the Final Instalment Date, the Corporation shall, in respect of each Instalment Receipt outstanding on the date of such redemption, pay (or cause to be paid) to the Selling Debentureholder, on behalf of the holder of an Instalment Receipt, an amount equal to the final instalment and pay the balance plus any accrued and unpaid interest to the holder. Payment of such redemption price will be made on the date that the Debentures are redeemed by the Corporation.

Modification

Apart from changes which do not adversely affect in any material respect the holders of Instalment Receipts as a group (which may be made without the consent of such holders), the Instalment Receipt Agreement may not be amended without the affirmative vote of the holders of Instalment Receipts entitled to not less than two-thirds of the principal amount of Debentures represented by Instalment Receipts which are represented and voted at a meeting duly called for the purpose or rendered by instruments in writing signed by the holders of Instalment Receipts representing not less than two-thirds of the principal amount of the Debentures.

General

The Custodian may require holders of Instalment Receipts from time to time to furnish such information and documents as may be necessary or appropriate to comply with any fiscal or other laws or regulations relating to the Debentures or to rights and obligations represented by Instalment Receipts. The Custodian shall not be responsible for any taxes, duties, governmental charges or expenses which are or may become payable in respect of the Debentures or Instalment Receipts. In this regard, the Custodian shall be entitled to deduct or withhold from any payment or other distribution required or contemplated by the Instalment Receipt Agreement the appropriate amount of money or property, or to require holders of Instalment Receipts to make any required payments, and to withhold delivery of certificates representing the Debentures until satisfactory provision for payment is made, in respect of any non-resident Canadian withholding taxes or other taxes, duties, governmental charges or expenses required by applicable law to be withheld or paid.

Holders of Instalment Receipts will not be liable for charges and expenses of the Custodian except for any taxes, duties, governmental charges or expenses which may be payable as described above.

Book-Entry Only System

Registration of interests in and transfers of Instalment Receipts will be made only through the book-entry only system of CDS (the "**Book-Entry Only System**"). Instalment Receipts must be purchased, transferred and surrendered through a CDS Participant. Upon purchase of any Instalment Receipts representing Debentures, the Corporation understands that the holder of Instalment Receipts will receive only a customer confirmation from the registered dealer which is a CDS Participant and from or through which the Instalment Receipts are purchased. References in this Prospectus to a holder of Instalment Receipts mean, unless the context otherwise requires, the owner of the beneficial interest in such Instalment Receipts.

The ability of a beneficial owner of Instalment Receipts to pledge such Instalment Receipts or otherwise take action with respect to such beneficial holder's interest in such Instalment Receipts (other than through a CDS Participant) may be limited due to the lack of a physical certificate.

The Selling Debentureholder has the option to terminate registration of the Instalment Receipts through the Book-Entry Only System in which case certificates for the Instalment Receipts in fully registered form would be issued to holders of such Instalment Receipts.

Debentures

The following is a summary of the material attributes and characteristics of the Debentures. This summary does not purport to be complete and is subject to, and is qualified in its entirety by, the terms of the trust indenture (the "**Indenture**") to be dated on or about the Closing Date between the Corporation, as issuer, and Computershare Trust Company of Canada, as trustee (in such capacity, the "**Trustee**"). A prospective purchaser of Debentures represented by Instalment Receipts should carefully review the Indenture, a copy of which will be available on the Corporation's SEDAR profile at www.sedar.com on or about the Closing Date.

The Debentures will be issued to the Selling Debentureholder on the Closing Date as the initial series under the Indenture and in the aggregate principal amount of $1,400,000,000. In the event that the Over-Allotment Option is exercised, Hydro One Limited will issue additional Debentures of the same series under the Indenture.

The Debentures will be dated as of the Closing Date and will mature on the Maturity Date. The Debentures are issuable in denominations of $1,000 and integral multiples thereof and will bear interest at an annual rate of 4.00% per $1,000 principal amount of Debentures and will be payable quarterly in arrears in equal instalments (other than the first interest payment and, depending on the Final Instalment Date, the final interest payment) on the last day of December, March, June and September of each year (or the prior business day if the last day falls on a weekend or holiday) to and including the Final Instalment Date. The first interest payment in the amount of $15.78082 per $1,000 principal amount of Debentures will be made on December 29, 2017 and will include interest payable from and including the date of issue. Subsequently, quarterly interest payments will be made in the amount of $10.00 per $1,000 principal amount of Debentures. A final interest payment will be made on the Final Instalment Date, will be equal to the unpaid interest accrued from the date of the last quarterly interest payment to and including the Final Instalment Date and will be computed on the basis of a 365-day year and the number of days elapsed in the period. On the day following the Final Instalment Date, the interest rate payable on the Debentures will fall to an annual rate of 0% and interest will cease to accrue on the Debentures. Based on a first instalment of $333 per $1,000 principal amount of Debenture and assuming the Final Instalment Date occurs on or after the first anniversary of the Closing Date, the effective annual yield to and including the Final Instalment Date will be 12.0%, and the effective yield thereafter will be 0%.

If the Final Instalment Date occurs on a day that is prior to the first anniversary of the Closing Date, holders of Debentures who have paid the final instalment on or before the Final Instalment Date will be entitled to receive, on the business day following the Final Instalment Date, in addition to the payment of accrued and unpaid interest to and including the Final Instalment Date, the Make-Whole Payment, being an amount equal to the interest that would have accrued from the day following the Final Instalment Date to and including the first anniversary of the Closing Date had the Debentures remained outstanding and continued to accrue interest until and including such date. No Make-Whole Payment will be payable if the Final Instalment Date occurs on or after the first anniversary of the Closing Date. No Make-Whole Payment will be made in the event that the Corporation redeems the Debentures.

The Debentures will be direct obligations of Hydro One Limited and will not be secured by any mortgage, pledge, hypothec or other charge and will be subordinated to other liabilities of the Corporation as described below under "– Subordination". The Indenture does not restrict the Corporation from incurring additional indebtedness for borrowed money or from mortgaging, pledging or charging its properties to secure any indebtedness.

Payment Upon Maturity

On the Maturity Date, the Corporation will repay the principal amount of any Debentures not converted into Common Shares and remaining outstanding, in cash, provided that the Corporation may, at its option and without prior notice, satisfy the obligation to pay all or a portion of the principal amount of such Debentures on maturity by delivery of that number of freely tradable Common Shares obtained by dividing the aggregate principal amount of the Debentures then outstanding by 95% of the Market Price.

Conversion Right

At the option of the holder and provided that payment of the final instalment has been made, each Debenture will be convertible into Common Shares on or at any time on or after the Final Instalment Date, but prior to the earlier of the date that the Corporation redeems the Debentures or the Maturity Date. The Conversion Price will be $21.40 per Common Share, being a conversion rate of 46.7290 Common Shares per $1,000 principal amount of Debentures, subject to adjustment in certain events. No adjustment will be made for cash dividends on Common Shares issuable upon conversion or for accrued and unpaid interest, which will be paid by the Corporation in cash. A holder of Debentures who does not exercise its conversion privilege concurrently with the payment of the final instalment will hold a Debenture that pays 0% interest and may be redeemed by the Corporation in whole or in part on any trading day following the Final Instalment Date at a price equal to its principal amount plus any unpaid interest which accrued prior to and including the Final Instalment Date. The Corporation reserves the right to not issue Common Shares to a holder upon conversion of the Debentures in the event the Corporation reasonably determines that issuing such Common Shares to such holder would result in such holder breaching the share ownership restrictions under the *Electricity Act, 1998* (Ontario) or be prohibited by the Corporation's articles.

Subject to the provisions thereof, the Indenture will provide for the adjustment of the Conversion Price in certain events including: (a) the distribution of Common Shares or securities convertible into Common Shares to holders of its Common Shares by way of stock dividend or otherwise, other than an issue of Common Shares to holders of outstanding Common Shares who have elected to receive dividends in stock in lieu of receiving cash dividends paid in the ordinary course; (b) the subdivision or consolidation of the outstanding Common Shares; (c) the issuance of rights or warrants to all holders of Common Shares entitling them to acquire Common Shares or other securities convertible into Common Shares at less than the Conversion Price; (d) the distribution to all holders of Common Shares of any securities or assets (other than cash dividends and dividends in Common Shares); or (e) if an issuer bid or exchange offer is made by the Corporation for its Common Shares. There will be no adjustment of the Conversion Price in respect of any event described herein if, with the prior regulatory approval and the approval of the TSX, the holders of the Debentures are allowed to participate as though they had converted their Debentures prior to such transaction. The Corporation will not be required to make adjustments in the Conversion Price unless the effect of such adjustment would change the Conversion Price by at least 1%, provided that any adjustment of less than 1% will be carried forward and taken into account in connection with any subsequent adjustment.

No fractional Common Shares will be issued on any conversion but in lieu thereof, the Corporation will satisfy such fractional interest by a cash payment equal to the Conversion Price of such fractional interest, provided that the Corporation shall not be required to make any cash payment of less than $10.00.

Redemption

Prior to the Final Instalment Date, the Debentures may not be redeemed by the Corporation, except that the Debentures will be redeemed by the Corporation at a price equal to their principal amount plus accrued and unpaid interest (without any Make-Whole Payment) following the earlier of: (i) notification to holders that the Approval Conditions will not be satisfied; (ii) termination of the Merger Agreement in accordance with its terms; and (iii) May 1, 2019, if the Final Instalment Notice has not been given on or before April 30, 2019. Upon any such redemption, the redemption proceeds will be paid by the Corporation to the Custodian on behalf of the holders. The Custodian will pay the following for each $1,000 principal amount of Debentures: (i) $333 plus accrued and unpaid interest to the holder of the Instalment Receipt; and (ii) $667 to the Selling Debentureholder on behalf of the holder of the Instalment Receipt in satisfaction of the final instalment. Under the terms of the Instalment Receipt Agreement, Hydro One Limited has agreed that until such time as the Debentures have been redeemed or the Final Instalment Date has occurred, the Corporation will at all times hold short-term interest bearing U.S. dollar securities with investment grade counterparties, maintain readily available capacity under the Operating Credit Facility or the revolving credit facilities of its subsidiaries, or have cash on hand together with such available capacity, in an amount at least equal to the net proceeds of the first instalment paid on the closing of the Offering and the exercise of the Over-Allotment Option, if applicable.

In addition, after the Final Instalment Date, any Debentures not converted to Common Shares may be redeemed by the Corporation at a price equal to their principal amount plus any unpaid interest which accrued prior to the Final Instalment Date.

Subordination

The Debentures will be direct unsecured obligations of Hydro One Limited. Payment of the principal of, interest on, the Make-Whole Payment, if any, and other amounts owing in respect of each Debenture will be subordinated in right of payment to any present or future senior unsubordinated indebtedness or obligation of the Corporation, whether or not contingent, for (i) moneys borrowed or raised by whatever means (including, without limitation, by means of commercial paper, bankers acceptances, debt instruments and any liability represented by bonds, debentures, notes or similar instruments), (ii) reimbursement obligations with respect to letters of credit; (iii) payment and guarantee obligations under or with respect to swap contracts, (iv) capital leases, (v) cash management obligations, (vi) the deferred purchase price of assets or services and (vii) any trade debts in effect at any time and from time to time (collectively, the "**Senior Indebtedness**"). Payment of the principal of, interest on, the Make-Whole Payment, if any, and other amounts owing in respect of each Debenture will rank pari passu with each other Debenture issued under the Indenture regardless of their actual date or terms of issue, and with all other present and future unsecured and subordinated indebtedness of Hydro One Limited, except as prescribed by law.

The Indenture does not limit the ability of the Corporation to incur additional indebtedness, including indebtedness that ranks senior to the Debentures or from mortgaging, pledging, charging, hypothecating, granting a security interest in or otherwise encumbering any or all of its properties to secure any indebtedness. The Indenture provides that the Corporation shall not make any payment, and the holders of Debentures shall not be entitled to demand, accelerate, institute proceedings for the collection of, or receive any payment or benefit (including, without limitation, by set-off, combination of accounts or realization of security or otherwise in any manner whatsoever) on account of indebtedness represented by the Debentures (i) in a manner inconsistent with the terms (as they exist on the date of issue) of the Debentures; (ii) unless all payments of interest then due or payable on all Senior Indebtedness for borrowed money have been made; (iii) at any time when any amount is in arrears under any Senior Indebtedness or an event of default has occurred under Senior Indebtedness, and such a default or event of default is continuing, unless and until such Senior Indebtedness has been paid and satisfied in full or such default or event of default shall have been cured or waived in writing in accordance with the provisions of such Senior Indebtedness; or (iv) if the making of any such payment or the taking of any such action would create, including by the lapse of time or giving of notice, a default or an event of default under any Senior Indebtedness unless and until such Senior Indebtedness has been satisfied in full or the making of any such payment or taking of any such action would no longer create, including by lapse of time or giving of notice, a default or an event of default under any Senior Indebtedness.

In addition, the Trustee on behalf of the holders of Debentures may, at the request of the Corporation, enter into contractual subordination agreements with certain lenders of the Corporation with terms to the foregoing effect.

Events of Default

The Indenture will include the following events of default:

(a) failure to pay any principal or premium, if any, on the Debentures, when the same becomes due and payable whether on maturity, redemption, acceleration or otherwise, which default continues for a period of five business days;

(b) failure to pay any interest or Make-Whole Payment, if any, on the Debentures, which default continues for 45 days after the date when due;

(c) failure to deliver when due all cash and Common Shares deliverable upon conversion of the Debentures, which failure continues for 45 days;

(d) the Corporation's failure to perform or observe any other material term, covenant or agreement contained in the Debentures or contained in the Indenture for a period of 60 days after receipt of notice of default specifying such failure;

(e) default by the Corporation or any "material subsidiary" (as defined in the Indenture), with respect to any indebtedness (excluding amounts due to the holders of Debentures), where the aggregate principal amount of such indebtedness exceeds an amount equal to the greater of 2% of the consolidated net worth of the Corporation or $100,000,000 at such time and (i) if the default is a payment default, such default continues to exist for a period exceeding 60 days; provided that if the payment obligation to which the default relates is accelerated, then the default shall constitute an event of default immediately following such acceleration, and (ii) if the default is not a payment default, then as a result of the default and the passing of any applicable cure period, the maturity of the obligation is accelerated; provided that, in each case, if the default is cured prior to acceleration of the Debentures, then the event of default shall be deemed to have been cured; and

(f) certain events of bankruptcy, insolvency or reorganization affecting the Corporation.

If an event of default (other than the events listed in (f)) occurs and is continuing, either the Trustee or the holders of at least 25% in aggregate principal amount of the Debentures then outstanding may declare (by notice to the Corporation and the Trustee) the principal of the Debentures and any accrued and unpaid interest, if any, through the date of such declaration to be immediately due and payable. In the case of certain events of bankruptcy or insolvency, the principal amount of the Debentures together with any accrued but unpaid interest, if any, through the occurrence of such event shall automatically become and be immediately due and payable.

Modification

The rights of the holders of the Debentures may be modified. For that purpose, among others, the Indenture will contain certain provisions which will make binding on all holders of Debentures resolutions passed at meetings of the holders of Debentures by votes cast thereat by holders of not less than two-thirds of the principal amount of the Debentures, or rendered by instruments in writing signed by the holders of not less than two-thirds of the principal amount of the Debentures then outstanding.

Certification and the Book-Entry Only System

Registration of interests in and transfers of Debentures represented by Instalment Receipts will be made only through the Book-Entry Only System. Debentures represented by Instalment Receipts must be purchased, transferred and surrendered through a CDS Participant. From the Closing Date to the Final Instalment Date, the Debentures will be issued in certificated and fully registered form in the name of Computershare Trust Company of Canada, in its capacity as security agent under the Instalment Receipt Agreement. Promptly following 3:30 p.m. (Toronto time) on the Final Instalment Date, provided due payment of the final instalment has been made in accordance with the terms of the Instalment Receipt Agreement, the Selling Debentureholder will cause the Custodian to deliver to CDS (i) a global certificate representing those Debentures not converted to Common Shares by exercise of the conversion right and (ii) Common Shares issued upon conversion of Debentures, in each case, to be registered in the name of CDS or its nominee. The Debentures will be represented by one or more global certificates. Thereafter, registration of interests in and transfers of the Debentures will be made only through the depository service of CDS and transfers of Common Shares will be effected electronically through the non-certificated inventory system administered by CDS.

Upon purchase of any Debentures through the Book-Entry Only System, the Corporation understands that the holder of Debentures will receive only a customer confirmation from the registered dealer which is a CDS Participant and from or through which the Debentures are purchased. References in this Prospectus to a holder of Debentures mean, unless the context otherwise requires, the owner of the beneficial interest in such Debentures.

The Corporation will have the option to terminate registration of the Debentures through the Book-Entry Only System, in which case certificates for the Debentures in fully registered form would be issued to holders of such Debentures.

USE OF PROCEEDS

The net proceeds from the Offering (including both the first instalment and final instalment) will be, in the aggregate, $1,349,500,000 determined after deducting the Underwriters' fee and the estimated expenses of the Offering. In the event that the Over-Allotment Option is exercised in full, the net proceeds will be, in the aggregate, $1,484,600,000.

Prior to the closing of the Merger, Hydro One Limited intends to use the net proceeds of the first instalment under the Offering, which are expected to be $441,700,000 (assuming no exercise of the Over-Allotment Option), to repay borrowings under the Operating Credit Facility or its subsidiaries' existing revolving credit facilities or other existing indebtedness (such indebtedness having been incurred for general corporate purposes), or for other general corporate purposes, including investing in short-term interest bearing U.S. dollar securities with investment grade counterparties and in Hydro One Limited's wholly-owned subsidiaries. In the event that the net proceeds of the first instalment under the Offering are used to reduce outstanding indebtedness or for other general corporate purposes, Hydro One Limited will maintain readily available capacity on its revolving credit facilities (on a consolidated basis), or have cash on hand together with such available capacity, in an amount at least equal to the net proceeds of the first instalment under the Offering. Upon the closing of the Merger, Hydro One Limited intends to use the net proceeds of the final instalment under the Offering, which are expected to be $909,300,000 (assuming no exercise of the Over-Allotment Option), to finance, directly or indirectly, together with the net proceeds of the first instalment under the Offering to the extent available, part of the purchase price payable for the Merger and for other Merger-Related Expenses. See "Relationship between Hydro One Limited, the Selling Debentureholder and Certain Underwriters" and "Financing the Merger".

PLAN OF DISTRIBUTION

Pursuant to an underwriting agreement dated July 25, 2017 (the "**Underwriting Agreement**") among Hydro One Limited, the Selling Debentureholder and the Underwriters, the Selling Debentureholder has agreed to sell, and the Underwriters have agreed to purchase, as principals, on the Closing Date, all but not less than all of the Debentures offered hereby on an instalment basis at a price of $1,000 per $1,000 principal amount of Debentures (the "**Offering Price**"). The Offering Price is payable in cash to the Selling Debentureholder on delivery as follows: the first instalment of $333 per $1,000 principal amount of Debenture is payable on the Closing Date against delivery; and the final instalment of $667 per $1,000 principal amount of Debenture is payable by the holders of Instalment Receipts on or before the Final Instalment Date. See "Details of the Offering".

The obligations of the Underwriters under the Underwriting Agreement are several and not joint or joint and several and may be terminated by them on the basis of certain stated events. Under the Underwriting Agreement, the obligations of any Underwriter may be terminated in their discretion if, at or prior to the Closing Date: (i) there should occur, be announced or be discovered any material change or any change in a material fact in relation to Hydro One Limited which, in the opinion of any of the Underwriters, acting reasonably, is expected to result in the purchasers of a material number of Debentures exercising their right under applicable Canadian securities laws to withdraw from their purchase of Debentures or would be expected to have a significant adverse effect on the market price or value of the Debentures, the Instalment Receipts, the Common Shares issuable upon conversion of the Debentures or any other securities of Hydro One Limited; (ii) there should develop, occur or come into effect or existence any event, action, state, condition or major financial occurrence of national or international consequence or there shall have occurred any outbreak or escalation of hostilities, declaration by Canada or the United States of a national emergency or war, or other calamity or crisis, in either case, which, in the opinion of any Underwriter, acting reasonably, seriously adversely affects, or involves, or will seriously adversely affect, or involve, the financial markets of the business, operations or affairs of Hydro One; (iii) any inquiry, action, suit, investigation or other proceeding (collectively, a "**Proceeding**"), whether formal or informal, is instituted, announced or threatened (other than Proceedings existing as of the date of the Underwriting Agreement and other Proceedings in connection therewith or related thereto), or any order is made by any federal, provincial, state, municipal or other governmental authority, which, in the opinion of any Underwriter, acting reasonably, operates to prevent or restrict the sale, purchase, distribution or trading of the Debentures or Instalment Receipts; (iv) any order to cease or suspend trading in Hydro One Limited's securities or Instalment Receipts or to prohibit or restrict the distribution of the Debentures, the Common Shares issuable upon conversion of the Debentures or Instalment Receipts is made, or proceedings are announced, commenced or threatened for the making of any such order, by any of the Canadian Securities Regulators or the TSX and has not been rescinded, revoked or withdrawn; (v) there is announced any change or proposed change in law, regulation or policy or the interpretation or administration thereof, if, in the opinion of any Underwriter, acting reasonably, such change, announcement, or proposal materially adversely affects, or may materially adversely affect, the trading of the Debentures, Instalment Receipts, Common Shares issuable upon conversion of the Debentures or the trading of any other securities of Hydro One Limited; or (vi) termination of the Merger Agreement occurs prior to 8:00 a.m. (Toronto time) on the Closing Date.

The Underwriters are obligated to take up and pay for all of the Debentures represented by Instalment Receipts offered hereby (other than the Debentures represented by Instalment Receipts issuable on exercise of the Over-Allotment Option) if any of those Debentures represented by Instalment Receipts are purchased under the Underwriting Agreement. The Debentures represented by Instalment Receipts offered hereby are to be taken up by the Underwriters, if at all, on or before a date not later than 42 days after the date of the receipt for the final short form prospectus relating to the Offering.

The Selling Debentureholder has granted to the Underwriters the Over-Allotment Option, which is exercisable in whole or in part at any time prior to the 30th day following the Closing Date and pursuant to which the Underwriters may purchase additional Debentures represented by Instalment Receipts equal to up to 10% of the aggregate principal amount of Debentures represented by Instalment Receipts sold in the Offering on the same terms as set forth above, to cover over-allotments, if any. This Prospectus qualifies the grant of the Over-Allotment Option and the issuance of Debentures represented by Instalment Receipts on the exercise of the Over-Allotment Option. A purchaser who acquires Debentures represented by Instalment Receipts forming part of the Underwriters' over-allocation position acquires those Debentures represented by Instalment Receipts under this Prospectus, regardless of whether the over-allocation position is ultimately filled through the exercise of the Over-Allotment Option or secondary market purchases.

The Underwriting Agreement provides that the Underwriters will be paid a fee by Hydro One Limited equal to 3.5% of the gross proceeds of the sale of the Debentures ($35.00 per Debenture) in consideration for their services in connection with the Offering. One-half of the fee is payable on the Closing Date and the remaining one-half is payable on the Final Instalment Date. Accordingly, upon payment of the final instalment and assuming the final instalment payment is made for all outstanding Instalment Receipts and that the Over-Allotment Option is not exercised, the total price to the public will be $1,400,000,000, the Underwriters' fee will be $49,000,000 and the net proceeds will be approximately $1,349,500,000, after deducting the expenses of the Offering estimated at $1,500,000. After the Underwriters have made reasonable efforts to sell all the Debentures represented by Instalment Receipts at the Offering Price, the Offering Price may be decreased and may be further changed from time to time to an amount not greater than that set out on the cover page, and the compensation realized by the Underwriters will be decreased by the amount that the aggregate price paid by purchasers for the Debentures represented by Instalment Receipts is less than the gross proceeds paid by the Underwriters to the Selling Debentureholder. The Offering Price and other terms of the Offering were determined by negotiation between the Corporation, the Selling Debentureholder and the Underwriters.

There is currently no market through which the Debentures represented by Instalment Receipts may be sold and purchasers may not be able to resell securities purchased under this Prospectus. This may affect the pricing of the Securities in the secondary market, the transparency and availability of trading prices, the liquidity of the Securities and the extent of issuer regulation. The TSX has conditionally approved the listing of the Instalment Receipts (representing the Debentures) and the Common Shares issuable on the conversion of the Debentures on the TSX. Listing will be subject to the Corporation fulfilling all of the requirements of the TSX. The Corporation has no current intention to list the Debentures for trading on any exchange, as it currently anticipates all Debentures will be converted to Common Shares on the Final Instalment Date.

Once listed, the Instalment Receipts (representing the Debentures) will be quoted and traded on the TSX in the same manner as other debentures listed on the TSX, with all bids and offers for and trades of Instalment Receipts reflecting only the partly paid capital portion of the Debentures and not accrued interest. Accrued interest will be reflected in the settlement amount and in the confirmations generated by the CDS Participant from or through whom the trade was executed. Bid, offer and trading prices for the Instalment Receipts listed on the TSX will be expressed as a percentage of the $1,000 principal amount of a fully paid Debenture (and not as a percentage of the $333 first instalment already paid). In accordance with TSX trading rules, the Instalment Receipts will be quoted based on

$100 principal amounts and all trades in Instalment Receipts will be made in multiples of $1,000. A board lot of Instalment Receipts is represented by one Instalment Receipt, the underlying value of which is $1,000 principal amount of a fully paid Debenture.

Pursuant to rules and policy statements of certain Canadian securities regulators, the Underwriters may not, at any time during the period ending on the date the selling process for the Debentures represented by Instalment Receipts ends and all stabilization arrangements relating to the Debentures represented by Instalment Receipts are terminated, bid for or purchase Instalment Receipts, Debentures or Common Shares. The foregoing restrictions are subject to certain exceptions including: (i) a bid for or purchase made through the facilities of the TSX, in accordance with the Universal Market Integrity Rules of the Investment Industry Regulatory Organization of Canada; (ii) a bid or purchase on behalf of a client, other than certain prescribed clients, provided that the client's order was not solicited by the Underwriter, or if the client's order was solicited, the solicitation occurred before the commencement of a prescribed restricted period; and (iii) a bid or purchase to cover a short position entered into prior to the commencement of a prescribed restricted period. The Underwriters may engage in market stabilization or market balancing activities on the TSX where the bid for or purchase of the Instalment Receipts, Debentures or Common Shares is for the purpose of maintaining a fair and orderly market in the Instalment Receipts, Debentures or Common Shares, subject to price limitations applicable to such bids or purchases. Such transactions, if commenced, may be discontinued at any time.

The securities offered pursuant to this Prospectus may not be offered or sold in the United States. The Debentures, the Instalment Receipts representing the Debentures, and the Common Shares into which the Debentures may be converted have not been, and will not be, registered under the United States Securities Act of 1933, as amended (the "**1933 Act**") or any state securities laws and, may not be offered, or delivered, directly or indirectly, or sold in the United States. The Underwriters have agreed that they will not sell the Debentures represented by Instalment Receipts within the United States. When used in this section, the term "United States" has the meaning ascribed to it in Regulation S under the 1933 Act.

Lock-up Arrangements

Pursuant to the Underwriting Agreement, each of Hydro One Limited and the Selling Debentureholder has agreed that, during the period beginning on the Closing Date and ending on the date that is 90 days following the Closing Date, each of Hydro One Limited and the Selling Debentureholder will not, directly or indirectly, without the prior written consent of RBC Dominion Securities Inc., CIBC World Markets Inc. and BMO Nesbitt Burns Inc., issue, sell, offer, grant any option, warrant or other right to purchase or agree to issue or sell, or otherwise lend, transfer, assign, pledge or dispose of (including without limitation by making any short sale, engaging in any hedging, monetization or derivative transaction or entering into any swap or other arrangement that transfers to another, in whole or in part, any of the economic consequences of ownership of Common Shares or other securities of Hydro One Limited or securities convertible into, exchangeable for, or otherwise exercisable into Common Shares or other securities of Hydro One Limited, whether or not cash settled), in a public offering or by way of private placement or otherwise, any equity securities of Hydro One Limited or other securities convertible into, exchangeable for, or otherwise exercisable into Common Shares or other equity securities of Hydro One Limited, or agree to do any of the foregoing or publicly announce any intention to do any of the foregoing, other than: (i) the Debentures sold to the Underwriters pursuant to this Prospectus; (ii) Common Shares purchased or delivered under Hydro One Limited's dividend reinvestment plan; or (iii) securities granted, issued or delivered in the ordinary course of business under Hydro One Limited's security-based compensation arrangements, or employee share ownership plans, or pursuant to the conversion, exchange or exercise of any securities so granted, issued or delivered.

RELATIONSHIP BETWEEN HYDRO ONE LIMITED, THE SELLING DEBENTUREHOLDER AND CERTAIN UNDERWRITERS

RBC Dominion Securities Inc., CIBC World Market Inc., BMO Nesbitt Burns Inc., National Bank Financial Inc., Scotia Capital Inc. and TD Securities Inc. are subsidiaries or affiliates of lenders that have made the Operating Credit Facility available to Hydro One Limited. In addition, RBC Dominion Securities Inc., CIBC World Markets Inc., BMO Nesbitt Burns Inc., National Bank Financial Inc., Scotia Capital Inc., TD Securities Inc., Desjardins Securities Inc. and Laurentian Bank Securities Inc. are subsidiaries or affiliates of lenders that have made a $2.3 billion unsecured revolving credit facility available to Hydro One Inc. (the "**Revolving Credit Facility**"). **Consequently, the Corporation and/or the Selling Debentureholder may be considered a "connected issuer" of these Underwriters within the meaning of applicable securities legislation.**

None of these Underwriters will receive any direct benefit from the Offering other than the Underwriters' Fees relating to the Offering. The decision to distribute the Debentures hereunder and the determination of the terms of the Offering were made through negotiation between the Corporation, the Selling Debentureholder and the Underwriters. As of the date of this Prospectus, there was no outstanding indebtedness under the Operating Credit Facility or the Revolving Credit Facility. Neither Hydro One Limited nor Hydro One Inc. is in default of its obligations to the lenders under the Operating Credit Facility or the Revolving Credit Facility, as applicable, and the lenders have not waived any breach of such credit facilities since their execution. Indebtedness under the Operating Credit Facility and the Revolving Credit Facility is unsecured.

CERTAIN CANADIAN FEDERAL INCOME TAX CONSIDERATIONS

In the opinion of Osler, Hoskin & Harcourt LLP, counsel to Hydro One Limited and the Selling Debentureholder, and Blake, Cassels & Graydon LLP, counsel to the Underwriters, (collectively, "**Counsel**") the following summary describes the principal Canadian federal income tax considerations generally applicable to a holder who acquires Debentures represented by Instalment Receipts as beneficial owner pursuant to this Offering and who, for the purposes of the application of the Tax Act and at all relevant times: (i) is resident, or is deemed to be resident, in Canada; (ii) holds the Debentures and will hold any Common Shares received on the conversion or maturity of the Debentures (collectively, the "**Securities**") as capital property; (iii) deals at arm's length with Hydro One Limited, the Selling Debentureholder and the Underwriters; and (iv) is not affiliated with Hydro One Limited, the Selling Debentureholder and the Underwriters (a "**Holder**"). Generally, the Securities will be capital property to a Holder provided the Holder does not acquire or hold the Securities in the course of carrying on a business or as part of an adventure or concern in the nature of trade. Certain holders who might not otherwise be considered to hold their Securities as capital property may, in certain circumstances, be entitled to have the Securities, and all other "Canadian securities" (as defined in the Tax Act) owned by such holders in the taxation year of the election and all subsequent taxation years, deemed to be capital property by making the irrevocable election permitted by subsection 39(4) of the Tax Act. Holders are advised to consult their personal tax advisors to determine whether such an election is available and desirable in their particular circumstances.

This summary is not applicable to a purchaser: (i) that is a "financial institution", as defined in the Tax Act for the purposes of the mark-to-market rules; (ii) that is a "specified financial institution" as defined in the Tax Act; (iii) an interest which would be a "tax shelter investment" as defined in the Tax Act; (iv) that reports its "Canadian tax results", as defined in the Tax Act, in a currency other than Canadian currency; (v) that enters into a "derivative forward agreement", as defined in the Tax Act, in respect of the Debentures or Common Shares; or (vi) that is a corporation resident in Canada and that is or becomes, or does not deal at arm's length for purposes of the Tax Act with a corporation resident in Canada that is or becomes, as part of a transaction or event or series of transactions or events that includes the acquisition of Securities, controlled by a non-resident corporation for purposes of the foreign affiliate dumping rules in section 212.3 of the Tax Act. Any such purchaser should consult its own tax advisor with respect to an investment in the Securities.

This summary is based upon the provisions of the Tax Act in force as of the date hereof, all specific proposals to amend the Tax Act that have been publicly announced prior to the date hereof (the "**Proposed Amendments**") and Counsel's understanding of the current published administrative practices of the Canada Revenue Agency. This summary assumes that the Proposed Amendments will be enacted in the form proposed; however, no assurance can be given that the Proposed Amendments will be enacted in the form proposed, if at all. This summary does not take into account the discussion paper seeking input on possible approaches to address certain perceived tax advantages of investing passively through a private corporation released, for consultation, by the Minister of Finance (Canada) on July 18, 2017. See, in this regard, "Risk Factors – Risk Factors Relating to the Debentures – Change of Tax Law". This summary is not exhaustive of all possible Canadian federal income tax considerations and, except for the Proposed Amendments, does not take into account any changes in the law, whether by legislative, governmental or judicial action, nor does it take into account any other federal or any provincial, territorial or foreign tax considerations, which may differ from those discussed herein.

This summary is of a general nature only and is not intended to be, nor should it be construed to be, legal or tax advice to any particular Holder, and no representations with respect to the income tax consequences to any Holder are made. Consequently, prospective Holders should consult their own tax advisors for advice with respect to the tax consequences to them of acquiring Securities pursuant to this Offering, having regard to their particular circumstances. This summary does not address any tax considerations applicable to persons other than Holders and such persons should consult their own tax advisors regarding the consequences of acquiring, holding and disposing of Securities under the Tax Act and the laws of any jurisdiction in which they may be subject to tax.

Taxation of Interest on Debentures

A Holder of Debentures represented by Instalment Receipts that is a corporation, partnership, unit trust or any trust of which a corporation or a partnership is a beneficiary will be required to include in computing its income for a taxation year any interest on the Debentures that accrues, or is deemed to accrue, to such Holder to the end of the particular taxation year or that has become receivable by or is received by the Holder before the end of that taxation year, including on a conversion, redemption or repayment at maturity, except to the extent that such interest was included in computing the Holder's income for a preceding taxation year.

Any other Holder, including an individual, will be required to include in computing income for a taxation year all interest on the Debentures that is received or receivable by the Holder in that taxation year (depending upon the method regularly followed by the Holder in computing income), including on a conversion, redemption or repayment at maturity, except to the extent that the interest was included in the Holder's income for a preceding taxation year.

Any Make-Whole Payment will be deemed to be interest received by the Holder at the time of such Make-Whole Payment and will be required to be included in the Holder's income as described above, to the extent that such Make-Whole Payment can reasonably be considered to relate to, and does not exceed the value at the time of such Make-Whole Payment of, the interest that would have been paid or payable on the Debenture for a taxation year ending after the time of such Make-Whole Payment had the Final Instalment Date not occurred on a day that is prior to the first anniversary of the Closing Date.

Exercise of Conversion Privilege

Generally, a Holder who converts a Debenture into Common Shares pursuant to the conversion privilege will be deemed not to have disposed of the Debenture (except for purposes of the deduction for interest included in income but not received as discussed below under "– Disposition of Debentures"). Accordingly, a Holder who converts a Debenture into Common Shares will not be considered to realize a capital gain (or capital loss) on such conversion. Under the current administrative practice of the Canada Revenue Agency, a Holder who, upon conversion of a Debenture, receives cash not in excess of $200 in lieu of a fraction of a Common Share may either treat this amount as proceeds of disposition of a portion of the Debenture, thereby realizing a capital gain (or capital loss), or reduce the adjusted cost base of the Common Shares that the Holder receives on the conversion by the amount of the cash received.

The aggregate cost to a Holder of Common Shares acquired on the conversion of a Debenture will generally be equal to the Holder's adjusted cost base of the Debenture immediately before the conversion, subject to any reduction in respect of cash received in lieu of fractional common shares, as described above. For the purposes of determining the adjusted cost base to a Holder of Common Shares at any time, the cost of such Common Shares will be averaged with the adjusted cost base of any other Common Shares owned by the Holder as capital property at the time.

Disposition of Debentures

A disposition or deemed disposition of a Debenture by a Holder, including upon redemption or at maturity but not including the conversion of a Debenture into Common Shares pursuant to the Holder's right of conversion as described above, will generally result in the Holder realizing a capital gain (or a capital loss) equal to the amount by which the proceeds of disposition (adjusted as described below) are greater (or less) than the aggregate of the Holder's adjusted cost base thereof and any reasonable costs of disposition. Such capital gain (or capital loss) will be subject to the tax treatment described below under "– Taxation of Capital Gains and Capital Losses". In this regard, the cost to a Holder of a Debenture represented by an Instalment Receipt will include all amounts paid or payable by the Holder for such Debenture, including the amount of the final instalment, whether paid or unpaid. The proceeds of disposition to a Holder who disposes of a Debenture represented by an Instalment Receipt will include the amount of any unpaid final instalment.

Upon a disposition or deemed disposition, other than upon redemption or at maturity, interest accrued on the Debenture to the date of disposition will be included in computing the Holder's income for the year of disposition, except to the extent that it was included in computing the Holder's income for that or a preceding taxation year, and will be excluded from the Holder's proceeds of disposition of the Debenture. Where a Holder has disposed of a Debenture for consideration equal to its fair market value, the Holder will be entitled to deduct in computing income for the year of disposition any amount that has been included in the Holder's income as interest in respect of such Debenture for that year or any preceding taxation year to the extent such amount exceeds the amount received or receivable by the Holder in respect thereof. A conversion of a Debenture into Common Shares is a disposition for purposes of this rule.

If Hydro One Limited pays the principal amount of the Debentures upon maturity by issuing Common Shares to the Holder, the Holder's proceeds of disposition of the Debenture will be equal to the fair market value, at the time of disposition of the Debenture, of the Common Shares and any other consideration so received. The Holder's aggregate cost of the Common Shares so received will be equal to the fair market value of such Common Shares. For the purposes of determining the adjusted cost base to a Holder of the Common Shares at any time, the cost of such Common Shares will be averaged with the adjusted cost base of any other Common Shares owned by the Holder as capital property at that time.

Where a Debenture represented by an Instalment Receipt is forfeited to the Selling Debentureholder or is sold by the Custodian as a consequence of the Holder's failure to pay the final instalment, the Holder may be subject to special rules in the Tax Act relating to the seizure by a seller of property previously sold or the settlement or forgiveness of debt. Holders should consult their own tax advisors with respect to these special rules.

Dividends on Common Shares

A Holder will be required to include in computing its income for a taxation year any dividends received (or deemed to be received) on the Common Shares. In the case of a Holder that is an individual (other than certain trusts), such dividends will be subject to the gross-up and dividend tax credit rules applicable to taxable dividends received from "taxable Canadian corporations" (as defined in the Tax Act), including the enhanced gross-up and dividend tax credit applicable to any dividends designated by Hydro One Limited as an "eligible dividend" (as defined in the Tax Act) in accordance with the provisions of the Tax Act.

A dividend received (or deemed to be received) on the Common Shares by a Holder that is a corporation will generally be deductible in computing the corporation's taxable income. In certain circumstances, however, a dividend received (or deemed to be received) by a Holder that is a corporation will be deemed to be a capital gain or proceeds of disposition. Holders that are corporations should consult their own tax advisors having regard to their own circumstances.

A Holder that is a "private corporation", as defined in the Tax Act, or any other corporation controlled, whether because of a beneficial interest in one or more trusts or otherwise, by or for the benefit of an individual (other than a trust) or a related group of individuals (other than trusts), will generally be liable to pay a refundable tax under Part IV of the Tax Act on dividends received (or deemed to be received) on the Common Shares to the extent such dividends are deductible in computing the Holder's taxable income for the taxation year.

Disposition of Common Shares

Generally, on a disposition or deemed disposition of a Common Share, a Holder will realize a capital gain (or capital loss) equal to the amount, if any, by which the proceeds of disposition, net of any reasonable costs of disposition, exceed (or are less than) the adjusted cost base to the Holder of the Common Share immediately before the disposition or deemed disposition. Such capital gain (or capital loss) will be subject to the tax treatment described below under "– Taxation of Capital Gains and Capital Losses".

Taxation of Capital Gains and Capital Losses

Generally, a Holder is required to include in computing its income for a taxation year one-half of the amount of any capital gain (a "taxable capital gain") realized in the year. Subject to and in accordance with the provisions of the Tax Act, a Holder is required to deduct one-half of the amount of any capital loss (an "allowable capital loss") realized in a taxation year from taxable capital gains realized by the Holder in the year and allowable capital losses in excess of taxable capital gains for the year may be carried back and deducted in any of the three preceding taxation years or carried forward and deducted in any subsequent taxation year against net taxable capital gains realized in such years. The amount of any capital loss realized by a Holder that is a corporation on the disposition of a Common Share may be reduced by the amount of dividends received or deemed to be received by it on such Common Share to the extent and under the circumstances prescribed by the Tax Act. Similar rules may apply where a Common Share is owned by a partnership or trust of which a corporation, trust or partnership is a member or beneficiary. Such Holders should consult their own tax advisors.

RISK FACTORS

An investment in: (i) the Debentures represented by Instalment Receipts pending payment of the final instalment; (ii) the Debentures following payment of the final instalment; and (iii) the Common Shares issuable upon the conversion of the Debentures, is speculative due to various factors and involves certain risks. A prospective purchaser of Debentures should carefully consider the risk factors and other risks relating to Hydro One's business as described in Hydro One Limited's documents incorporated by reference in this Prospectus, including under:

(i) the heading "Risk Management and Risk Factors" at pages 16 to 23 in the Annual MD&A; and

(ii) the heading "Forward-Looking Statements and Information" at pages 10 to 11 in the Interim MD&A.

In addition, a prospective purchaser of Debentures should carefully consider the risk factors described in this section which relate to the Merger, the Instalment Receipts, the Debentures and the post-Merger business and operations of Hydro One and Avista Corp., as well as the other information contained in this Prospectus (including the documents incorporated herein by reference).

If any of the identified risks were to materialize, it could have a materially adverse effect on the Corporation's future results of operations, business, prospects or financial condition, and could cause actual events to differ materially from those described in forward-looking statements. Additional risks and uncertainties not currently known to the Corporation, or which the Corporation currently deems to be immaterial, may also have an adverse effect on Hydro One and/or its future results of operations, business, prospects or financial condition.

Risk Factors Relating to the Merger

Hydro One Limited may fail to complete the Merger

The closing of the Merger is subject to the normal commercial risks that the Merger will not close on the terms negotiated (including with respect to the consideration to be paid in respect of the common stock of Avista Corporation) or at all. The completion of the Merger is subject to receipt of Avista Shareholder Approval and satisfaction of the other Approval Conditions, including certain regulatory and governmental approvals, including the expiration or termination of any applicable waiting period under the HSR Act, clearance of the Merger by CFIUS, the approval by each of IPUC, MPSC, OPUC, RCA, WUTC, FERC and the FCC and the satisfaction or waiver of certain closing conditions contained in the Merger Agreement. The failure to obtain the required approvals or satisfy or waive the conditions contained in the Merger Agreement may result in the termination of the Merger Agreement. There is no assurance that such closing conditions will be satisfied or waived. Accordingly, there can be no assurance that Hydro One Limited will complete the Merger in the timeframe or on the basis described herein, if at all. The termination of the Merger Agreement may have a negative effect on the price of the Instalment Receipts, the Debentures and the Common Shares and will result in the redemption of the Debentures. If the closing of the Merger does not take place as contemplated, the Corporation could suffer adverse consequences, including the loss of investor confidence, and may incur significant costs or losses, including an obligation to pay or cause to be paid to Avista Corporation the Corporation Termination Fee. See "The Merger Agreement – Termination".

The purchase price could increase

Avista Corporation is a public company and its directors owe fiduciary duties to Avista Corporation shareholders, which may require them to consider competing offers to purchase the common stock of Avista Corporation as alternatives to the Merger. The Merger Agreement preserves the ability of the directors of Avista Corp. to accept an alternative or competing offer in certain circumstances if such offer constitutes a Superior Proposal. If a Superior Proposal to acquire Avista Corporation is made, and if the Superior Proposal results in Avista

Corporation's board of directors making an Adverse Recommendation Change, Avista Corporation is required to negotiate in good faith with Hydro One Limited regarding any revisions to the Merger Agreement, which could result in an increase to the purchase price of the Merger or changes to other terms and conditions of the Merger. See "The Merger Agreement".

Length of time required to complete the Merger is unknown

As described above under "– Hydro One Limited may fail to complete the Merger", the closing of the Merger is subject to the receipt of required Avista Shareholder Approval and certain regulatory approvals and the satisfaction of other closing conditions contained in the Merger Agreement. There is no certainty, nor can Hydro One Limited provide any assurance, as to when these conditions will be satisfied, if at all. A substantial delay in obtaining regulatory approvals or the imposition of unfavourable terms and/or conditions in such approvals could have a material adverse effect on the Corporation's ability to complete the Merger and on Hydro One's or Avista Corp.'s business, financial condition or results of operations. In addition, in the event that such regulatory agencies imposed unfavorable terms and/or conditions on Hydro One Limited or Avista Corporation (including the requirement to sell or divest of certain assets or limitations on the future conduct of the combined entities), the Corporation could still be required to complete the transaction on the terms set forth in the Merger Agreement. Hydro One Limited intends to complete the Merger as soon as practicable after obtaining the required Avista Shareholder Approval and regulatory approvals and satisfying the other required closing conditions. See "The Merger Agreement – Closing Conditions".

Foreign exchange risk

The cash consideration for the Merger is required to be paid in U.S. dollars, while funds raised in the Offering, which will constitute a significant portion of the funds ultimately used to finance the Merger, are denominated in Canadian dollars. See "Use of Proceeds". As a result, increases in the value of the U.S. dollar versus the Canadian dollar prior to payment of the final instalment will increase the purchase price translated in Canadian dollars and thereby reduce the proportion of the purchase price for the Merger ultimately obtained by Hydro One Limited under the Offering, which could cause a failure to realize the anticipated benefits of the Merger.

In addition, the operations of Avista Corp. are conducted in U.S. dollars. Following the Merger, the consolidated net earnings and cash flows of Hydro One will be impacted to a much greater extent by movements in the U.S. dollar relative to the Canadian dollar. In particular, decreases in the value of the U.S. dollar versus the Canadian dollar following the Merger could negatively impact the Corporation's net earnings as reported in Canadian dollars, which could cause a failure to realize the anticipated benefits of the Merger.

Additional demands will be placed on Hydro One as a result of the Merger

As a result of the pursuit and completion of the Merger, additional demands will be placed on the Corporation's managerial, operational and financial personnel and systems. No assurance can be given that the Corporation's systems, procedures and controls will be adequate to support the expansion of the Corporation's operations resulting from the Merger. The Corporation's future operating results will be affected by the ability of its officers and key employees to manage changing business conditions and to maintain its operational and financial controls and reporting systems.

Sources of funding that would be used to fund the Merger may not be available

Hydro One Limited intends to finance the cash purchase price of the Merger and the Merger-Related Expenses at the closing of the Merger with a combination of some or all of the following: (i) net proceeds of the first instalment (to the extent available) and final instalment under the Offering; (ii) net proceeds of any subsequent bond or other debt offerings; (iii) amounts drawn under the Operating Credit Facility; and (iv) existing cash on hand and other sources available to the Corporation.

There is no guarantee that adequate sources of funding will be available to Hydro One Limited or its affiliates at the desired time or at all, or on cost-efficient terms. The inability to obtain adequate sources of funding to fund the Merger may result in Hydro One Limited being unable to complete the Merger or may negatively impact Hydro One Limited, including its ability to finance the Merger. In addition, any movement in interest rates that could affect the underlying cost of any financing may affect the expected accretion of the Merger.

Hydro One does not currently control Avista Corp.

Although the Merger Agreement contains covenants on the part of Avista Corporation regarding the operation of its business prior to closing the Merger, Hydro One will not control Avista Corp. until completion of the Merger and Avista Corp.'s business and results of operations may be adversely affected by events that are outside of the Corporation's control during the intervening period. Historic and current performance of Avista Corp.'s business and operations may not be indicative of results in future periods. The future performance of Avista Corp. may be influenced by, among other factors, weather, economic conditions, increased environmental or other regulation, turmoil or disruption in financial markets, unfavourable regulatory decisions, rising interest rates, changes or uncertainty in government policy, energy commodity price changes and operational risks, including unplanned outages and other factors beyond the Corporation's control. As a result of any one or more of these factors, among others, the operations and financial performance of Avista Corp. may be negatively affected which may adversely affect the future financial results of Hydro One. See "– Risk Factors Relating to the Post-Merger Business and Operations of Hydro One and Avista Corp.".

Hydro One Limited expects to incur significant Merger-Related Expenses

Hydro One Limited expects to incur a number of costs associated with completing the Merger. The substantial majority of these costs will be non-recurring expenses resulting from the Merger and will consist of transaction costs related to the Merger, including costs relating to the financing of the Merger and obtaining regulatory approval. Additional unanticipated costs may be incurred.

Information relating to Avista Corp. in this Prospectus has been obtained from Avista Corporation or its public disclosure record

All information relating to Avista Corporation or its affiliates contained in this Prospectus has been obtained from Avista Corporation or taken from Avista Corporation's public disclosure record. Although the Corporation has conducted what it believes to be a prudent and thorough level of investigation in connection with the Merger and the disclosure relating to Avista Corp. contained in this Prospectus, an unavoidable level of risk remains regarding the accuracy and completeness of such information. While Hydro One has no reason to believe the information obtained from Avista Corporation or taken from the public disclosure record is misleading, untrue or incomplete, Hydro One cannot assure the accuracy or completeness of such information nor can Hydro One compel Avista Corporation to disclose events which may have occurred or may affect the completeness or accuracy of such information but which are unknown to Hydro One.

Risk Factors Relating to the Post-Merger Business and Operations of Hydro One and Avista Corp.

Hydro One will substantially increase its amount of indebtedness following the Merger

After giving effect to the Merger, Hydro One will have a significant amount of debt, including approximately US$1.9 billion of debt of Avista Corp. assumed by Hydro One as a result of the Merger. As of March 31, 2017, on a *pro forma* basis after giving effect to the Merger, but assuming conversion of all Debentures to Common Shares (assuming no exercise of the Over-Allotment Option), details of which are included in the capitalization table provided herein, Hydro One would have had approximately $17.098 billion of total indebtedness outstanding. See "Capitalization". Hydro One will substantially increase its amount of indebtedness following the Merger and such increased indebtedness may adversely affect Hydro One's cash flow and ability to operate its business.

The Offering could result in a downgrade of Hydro One's credit ratings

The change in the capital structure of Hydro One Limited as a result of the Merger and the Offering could cause credit rating agencies which rate the outstanding debt obligations of Hydro One Limited and Hydro One Inc. to re-evaluate and potentially downgrade their current credit ratings, which could increase the Corporation's borrowing costs.

Hydro One Limited's historical and pro forma combined financial information may not be representative of the results of the Corporation following the Merger

The *pro forma* combined financial information included in this Prospectus has been prepared using the consolidated historical financial statements of Hydro One Limited and the consolidated historical financial statements of Avista Corporation and does not purport to be indicative of the financial information that will result from the operations of Hydro One Limited on a consolidated basis following the Merger. In addition, the *pro forma* financial information included in this Prospectus is based in part on certain assumptions regarding the Merger that Hydro One currently believes are reasonable. Hydro One makes no assurances that its current assumptions will prove to be accurate over time. Accordingly, the historical and *pro forma* financial information included in this Prospectus does not necessarily represent the Corporation's results of operations and financial condition had Hydro One and Avista Corp. operated as a combined entity during the periods presented, or of the Corporation's consolidated results of operations and financial condition in the future. Additionally, the actual amount assigned to the fair values of the identifiable assets and liabilities acquired will result in changes to earnings in periods subsequent to the Merger, and those changes could be material.

In preparing the *pro forma* financial information contained in this Prospectus, Hydro One Limited has given effect to, among other items, the Offering, the completion of the Merger and the assumption of Avista Corp.'s outstanding indebtedness. Hydro One Limited has also assumed that the Debentures will be converted into Common Shares on or immediately following the Final Instalment Date. While management believes that the estimates and assumptions underlying the *pro forma* financial information are reasonable, such assumptions and estimates may be materially different than the Corporation's actual experience following completion of the Merger. See also "– Risk Factors Relating to the Merger" and "Presentation of Financial Information". See the notes to the *pro forma* financial statements of Hydro One Limited in this Prospectus.

Potential undisclosed liabilities associated with the Merger

In connection with the Merger, there may be liabilities of Avista Corp. that the Corporation failed to discover or was unable to quantify in the due diligence which it conducted prior to the execution of the Merger Agreement. The discovery or quantification of any material liabilities of Avista Corp. could have a material adverse effect on Hydro One's business, financial condition, results of operations or future prospects.

The Corporation will not be obligated to close the Merger if (i) there are inaccuracies in the representations and warranties made by Avista Corporation in the Merger Agreement as to its liabilities which would reasonably be expected to have an Avista Material Adverse Effect, (ii) if any Final Orders impose or require any obligations that would, individually or in the aggregate, constitute a Burdensome Condition or (iii) if any Avista Material Adverse Effect has occurred, subject to certain prescribed exceptions, as described in further detail under "The Merger Agreement – Closing Conditions".

Following the closing of the Merger, Avista Corporation will have become an indirect wholly-owned subsidiary of the Corporation and the full merger consideration under the Merger Agreement will have been paid, and the Corporation will have no further recourse (against Avista Corporation, its shareholders or any other persons) and will fully bear the risk for any inaccuracies in the information, representations or warranties provided by Avista Corporation in the Merger Agreement and any material liabilities of Avista Corp.

Hydro One may be unable to successfully realize the anticipated benefits of the Merger

Hydro One believes that the Merger will provide benefits to the Corporation. See "The Merger – Merger Highlights". However, there is a risk that some or all of the expected benefits of the Merger may fail to materialize, or may not occur within the time periods anticipated by the Corporation. The realization of such benefits may be affected by a number of factors, many of which are beyond the control of the Corporation. The past financial performance of the Corporation or Avista Corporation may not be indicative of its future financial performance. In addition, any regulatory approvals required in connection with the Merger may include terms which could have an adverse effect on the Corporation's financial performance, including reduced revenues or investment recovery, increased competition or costs, or adverse alterations to the rate structure. Failure to realize the anticipated benefits of the Merger may impact the financial performance of the Corporation and the price of its Common Shares.

Reputational and Public Opinion Risk

Reputation risk is the risk of a negative impact to Hydro One's business, operations or financial condition that could result from a deterioration of Hydro One's reputation. Hydro One's reputation could be negatively impacted by changes in public opinion (including as a result of the Merger), attitudes towards the Corporation's privatization, failure to deliver on its customer promises and other external forces. Adverse reputational events or political actions could have negative impacts on Hydro One's business and prospects including, but not limited to, delays or denials of requisite approvals and accommodations for Hydro One's planned projects, escalated costs, legal or regulatory action, and damage to stakeholder relationships.

Hydro One may not be successful in retaining the services of key personnel of Avista Corp. following the Merger

Hydro One currently intends to retain key personnel of Avista Corp. following the completion of the Merger to continue to manage and operate Avista Corp. as a separate operating company. Hydro One will compete with other potential employers for employees, and it may not be successful in keeping the services of the executives and other employees of Avista Corp. that it needs to realize the anticipated benefits of the Merger. Hydro One's failure to retain key personnel to remain as part of the management team of Avista Corp. in the period following the Merger could have a material adverse effect on the business and operations of Avista Corp. and Hydro One on a consolidated basis.

Hydro One is subject to risks associated with its results of operations and financing risks

Management of Hydro One believes, based on its current expectations as to the Corporation's future performance (which reflects, among other things, the completion of the Merger), that the cash flow from its operations and funds available to it under the Operating Credit Facility and the revolving credit facilities of the subsidiaries of Hydro One Limited and its ability to access capital markets will be adequate to enable the Corporation to finance its operations, execute its business strategy and maintain an adequate level of liquidity. However, expected revenue and the costs of planned capital expenditures are only estimates. Moreover, actual cash flows from operations are dependent on regulatory, market and other conditions that are beyond the control of the Corporation. As such, no assurance can be given that management's expectations as to future performance will be realized. In addition, management's expectations as to the Corporation's future performance reflect the current state of its information about Avista Corp. and its operations and there can be no assurance that such information is correct and complete in all material respects.

Hydro One's degree of leverage could have adverse consequences for Hydro One, particularly if a significant portion of the Debentures are not converted into Common Shares by the holders thereof. The significant increase in the degree of Hydro One's leverage in connection with the Merger could, among other things, limit Hydro One's ability to obtain additional financing for working capital, investment in subsidiaries, capital expenditures, debt service requirements, acquisitions and general corporate or other purposes; restrict Hydro One's flexibility and discretion to operate its business; limit Hydro One Limited's ability to declare dividends on its Common Shares; require Hydro One to dedicate a portion of cash flows from operations to the payment of interest on its existing indebtedness, in which case such cash flows will not be available for other purposes; cause ratings agencies to re-evaluate or downgrade Hydro One's existing credit ratings; expose Hydro One to increased interest expense on borrowings at variable rates; limit Hydro One's ability to adjust to changing market conditions; place Hydro One at a competitive disadvantage compared to its competitors that have less debt; make Hydro One vulnerable to any downturn in general economic conditions; and render Hydro One unable to make expenditures that are important to its future growth strategies.

Hydro One will need to refinance or reimburse amounts outstanding under Hydro One's existing consolidated indebtedness over time. There can be no assurance that any indebtedness of Hydro One will be refinanced or that additional financing on commercially reasonable terms will be obtained, if at all. In the event that such indebtedness cannot be refinanced, or if it can be refinanced on terms that are less favourable than the current terms, the ability of Hydro One Limited to declare dividends may be adversely affected.

The ability of Hydro One to meet its debt service requirements will depend on its ability to generate cash in the future, which depends on many factors, including the financial performance of Hydro One, debt service obligations, the realization of the anticipated benefits of the Merger and working capital and future capital expenditure requirements. In addition, the ability of Hydro One to borrow funds in the future to make payments on outstanding debt will depend on the satisfaction of covenants in existing credit agreements and other agreements. A failure to comply with any covenants or obligations under Hydro One's consolidated indebtedness could result in a default under one or more such instruments, which, if not cured or waived, could result in the termination of dividends and distributions by Hydro One and permit acceleration of the relevant indebtedness. If such indebtedness were to be accelerated, there can be no assurance that the assets of Hydro One would be sufficient to repay such indebtedness in full. There can also be no assurance that Hydro One will generate cash flow in amounts sufficient to pay outstanding indebtedness or to fund any other liquidity needs.

National and local economic conditions can have a significant impact on the results of operations, net income and cash flows at Avista Corp.

The business of Avista Corp. is concentrated in the State of Washington with business also conducted in Idaho, Oregon Montana and Alaska. Economic conditions in these states and in Avista Corp.'s service territories could change and if they should worsen, retail customer growth rates may stagnate or decline and customers' energy usage may further decline, adversely affecting Avista Corp.'s results of operations, net income and cash flows and those of the Corporation following the Merger.

Developments in technology could reduce demand for electricity and gas

Research and development activities are ongoing for new technologies that produce power or reduce power consumption. These technologies include renewable energy, customer-oriented generation, energy storage, energy efficiency and more energy efficient appliances and equipment. Advances in these, or other technologies, could reduce the cost of producing electricity, transporting gas or make the existing generating facilities of Avista Corp. uneconomic. In addition, advances in such technologies could reduce electrical or natural gas demand, which could negatively impact the results of operations, net income and cash flows of Avista Corp. and those of the Corporation following the Merger.

Weather (temperatures, precipitation levels, wind patterns and storms) has a significant effect on Avista Corp.'s results of operations, financial condition and cash flows

Weather impacts are described in the following subtopics:

- certain retail electricity and natural gas sales,
- the cost of natural gas supply, and
- the cost of power supply.

Certain retail electricity and natural gas sales volumes vary directly with changes in temperatures

Avista Corp. normally has its highest retail (electric and natural gas) energy sales during the winter heating season in the first and fourth quarters of the year. Avista Corp. also has high electricity demand for air conditioning during the summer (third quarter) in the Pacific Northwest. In general, warmer weather in the heating season and cooler weather in the cooling season will reduce its customers' energy demand and retail operating revenues. The revenue and earnings impact of weather fluctuations is somewhat mitigated by Avista Corp.'s decoupling mechanisms; however, Avista Corp. could experience liquidity constraints during the period between when decoupling revenue is earned and when it is subsequently collected from customers through retail rates.

The cost of natural gas supply tends to increase with higher demand during periods of cold weather

Increased costs adversely affect cash flows when Avista Corp. purchases natural gas for retail supply at prices above the amount then allowed for recovery in retail rates. Avista Corp. defers differences between actual natural gas supply costs and the amount currently recovered in retail rates and Avista Corp. is generally allowed to recover substantially all of these differences after regulatory review. However, these deferred costs require cash outflows from the time of natural gas purchases until the costs are later recovered. Inter-regional natural gas pipelines and competition for supply can allow demand-driven price volatility in other regions of North America to affect prices in Avista Corp.'s region, even though there may be less extreme weather conditions in Avista Corp.'s area.

The cost of power supply can be significantly affected by weather

Precipitation (consisting of snowpack, its water content and melting pattern plus rainfall) and other streamflow conditions (such as regional water storage operations) significantly affect hydroelectric generation capability. Variations in hydroelectric generation inversely affect Avista Corp.'s reliance on market purchases and thermal generation. To the extent that hydroelectric generation is less than normal, significantly more costly power supply resources must be acquired and the ability to realize net benefits from surplus hydroelectric wholesale sales is reduced. Wholesale prices also vary based on wind patterns as wind generation capacity is material in Avista Corp.'s region but its contribution to supply is inconsistent.

The price of power in the wholesale energy markets tends to be higher during periods of high regional demand, such as occurs with temperature extremes. Avista Corp. may need to purchase power in the wholesale market during peak price periods. The price of natural gas as fuel for natural gas-fired electric generation also tends to increase during periods of high demand which are often related to temperature extremes. Avista Corp. may need to purchase natural gas fuel in these periods of high prices to meet electric demands. The cost of power supply during peak usage periods may be higher than the retail sales price or the amount allowed in retail rates by Avista Corp.'s regulators. To the extent that power supply costs are above the amount allowed currently in retail rates, the difference is partially absorbed by Avista Corp. in current expense and it is partially deferred or shared with customers through regulatory mechanisms.

The price of power tends to be lower during periods with excess supply, such as the spring when hydroelectric conditions are usually at their maximum and various facilities are required to operate to meet environmental mandates. Oversupply can be exacerbated when intermittent resources such as wind generation are producing output that may be supported by price subsidies. In extreme situations, Avista Corp. may be required to sell excess energy at negative prices.

As a result of these combined factors, Avista Corp.'s net cost of power supply – the difference between its costs of generation and market purchases, reduced by its revenue from wholesale sales – varies significantly because of weather.

Avista Corp. relies on regular access to financial markets but cannot assure favourable or reasonable financing terms will be available when Avista Corp. needs them

Access to capital markets is critical to Avista Corp.'s operations and its capital structure

Avista Corp. has significant capital requirements that it expects to fund, in part, by accessing capital markets. As such, the state of financial markets and credit availability in the global, United States and regional economies impacts Avista Corp.'s financial condition. Avista Corp. could experience increased borrowing costs or limited access to capital on reasonable terms.

Avista Corp. accesses long-term capital markets to finance capital expenditures, repay maturing long-term debt and obtain additional working capital from time-to-time. Avista Corp.'s ability to access capital on reasonable terms is subject to numerous factors and market conditions, many of which are beyond its control. If Avista Corp. is unable to obtain capital on reasonable terms, it may limit or prohibit its ability to finance capital expenditures and repay maturing long-term debt. Avista Corp.'s liquidity needs could exceed its short-term credit availability and lead to defaults on various financing arrangements.

Performance of the financial markets could also result in significant declines in the market values of assets held by its pension plan and/or a significant increase in the pension liability (which impacts the funded status of the plan) and could increase future funding obligations and pension expense.

Avista Corp. relies on credit from financial institutions for short-term borrowings

Avista Corp. needs adequate levels of credit with financial institutions for short-term liquidity. Avista Corporation has a US$400.0 million committed line of credit that expires in April 2021. Avista Corporation's subsidiary AEL&P has a US$25.0 million committed line of credit that expires in November 2019. There is no assurance that Avista Corp. will have access to credit beyond these expiration dates. The committed line of credit agreements contain customary covenants and default provisions.

Any default on the lines of credit or other financing arrangements of Avista Corporation or any of its "significant subsidiaries," if any, could result in cross-defaults to other agreements of such entity, and/or to the line of credit or other financing arrangements of any other of such entities. Any defaults could also induce vendors and other counterparties to demand collateral. In the event of any such default, it would be difficult for Avista Corp. to obtain financing on reasonable terms to pay creditors or fund operations.

Avista Corp. hedges a portion of its interest rate risk with financial derivative instruments, which may include interest rate swap derivatives and U.S. Treasury lock agreements

If market interest rates decrease below the interest rates Avista Corp. has locked in, this will result in a liability related to its interest rate swap derivatives, which can be significant. As of March 31, 2017, Avista Corp. had a net interest rate swap derivative liability of US$53.9 million, reflecting a decline in interest rates since the time Avista Corp. entered into the agreements. Avista Corp. does not have any U.S. Treasury lock agreements outstanding as of March 31, 2017. Avista Corp. may be required to post cash or letters of credit as collateral depending on fluctuations in the fair value of the derivative instruments. Settlement of interest rate swap derivative instruments in a liability position could require a significant amount of cash, which could negatively impact Avista Corp's liquidity and short-term credit availability and increase interest expense over the term of the associated debt.

Downgrades in Avista Corporation's credit ratings could impede its ability to obtain financing, adversely affect the terms of financing and impact its ability to transact for or hedge energy resources

If Avista Corporation does not maintain its investment grade credit rating with the major credit rating agencies, it could expect increased debt service costs, limitations on its ability to access capital markets or obtain other financing on reasonable terms, and requirements to provide collateral (in the form of cash or letters of credit) to lenders and counterparties. In addition, credit rating downgrades could reduce the number of counterparties willing to do business with Avista Corp. or result in the termination of outstanding regulatory authorizations for certain financing activities.

Credit risk may be affected by industry concentration and geographic concentration

Avista Corp. has concentrations of suppliers and customers in the electric and natural gas industries including:

- electric and natural gas utilities,
- electric generators and transmission providers,
- oil and natural gas producers and pipelines,
- financial institutions including commodity clearing exchanges and related parties, and
- energy marketing and trading companies.

Avista Corp. has concentrations of credit risk related to its geographic location in the western United States and western Canada energy markets. These concentrations of counterparties and concentrations of geographic location may affect Avista Corp.'s overall exposure to credit risk because the counterparties may be similarly affected by changes in conditions.

Regulators may not grant rates that provide timely or sufficient recovery of Avista Corp.'s costs or allow a reasonable rate of return

Avista Utilities' annual operating expenses and the costs associated with incremental investments in utility assets continue to grow at a faster rate than revenue growth. Avista Corp.'s ability to recover these expenses and capital costs depends on the amount and timeliness of retail rate changes allowed by regulatory agencies. Avista Corp. expects to periodically file for rate increases with regulatory agencies to recover its expenses and capital costs and provide an opportunity to earn a reasonable rate of return. If regulators do not grant rate increases or grant substantially lower rate increases than Avista Corp. requests in the future or if recovery of deferred expenses is disallowed, it could have a negative effect on Avista Corp.'s operating revenues, net income and cash flows. During December 2016, the WUTC denied Avista Corp.'s 2016 electric and natural gas general rate requests and granted zero rate relief. Avista Corp. filed a petition for reconsideration and alternately for rehearing of its 2016 general rate cases, which was denied by the WUTC in February 2017. Avista Corp. has determined it will not appeal the WUTC's decision to the courts and as a result, Avista Corp. expects its 2017 annual earnings to decrease by US$0.20 to US$0.30 per diluted share as compared to 2016 actual results (without consideration to its 2017 Washington general rate cases that were filed in May 2017). This equates to an expected reduction of Avista Corp.'s 2017 utility return on equity of 100 to 120 basis points.

In the future, Avista Corp. and/or Hydro One may no longer meet the criteria for continued application of regulatory accounting practices for all or a portion of its regulated operations

If Avista Corp. and/or Hydro One could no longer apply regulatory accounting, it could be:

- required to write off its regulatory assets, and
- be precluded from the future deferral of costs or decoupled revenues not recovered through rates at the time such amounts are incurred, even if Avista Corp. and/or Hydro One is expected to recover these amounts from customers in the future.

Energy commodity price changes affect Avista Corp.'s cash flows and results of operations

Energy commodity prices can be volatile

Avista Corp. relies on energy markets and other counterparties for energy supply, surplus and optimization transactions and commodity price hedging. A combination of factors exposes its operations to commodity price risks, including:

- Avista Corp.'s obligation to serve its retail customers at rates set through the regulatory process - Avista Corp. cannot change retail rates to reflect current energy prices unless and until it receives regulatory approval,
- customer demand, which is beyond Avista Corp.'s control because of weather, customer choices, prevailing economic conditions and other factors,
- some of Avista Corp.'s energy supply cost is fixed by the nature of the energy-producing assets or through contractual arrangements (however, a significant portion of its energy resource costs are not fixed), and
- the potential non-performance by commodity counterparties, which could lead to replacement of the scheduled energy or natural gas at higher prices.

Because Avista Corp. must supply the amount of energy demanded by its customers and it must sell it at fixed rates and only a portion of its energy supply costs are fixed, Avista Corp. is subject to the risk of buying energy at higher prices in wholesale energy markets (and the risk of selling energy at lower prices if in a surplus position). Electricity and natural gas in wholesale markets are commodities with historically high price volatility. Changes in wholesale energy prices affect, among other things, the cash requirements to purchase electricity and natural gas for retail customers or wholesale obligations and the market value of derivative assets and liabilities.

When Avista Corp. enters into fixed price energy commodity transactions for future delivery, Avista Corp. is subject to credit terms that may require it to provide collateral to wholesale counterparties related to the difference between current prices and the agreed upon fixed prices. These collateral requirements can place significant demands on Avista Corp.'s cash flows or borrowing arrangements. Price volatility can cause collateral requirements to change quickly and significantly.

Cash flow deferrals related to energy commodities can be significant

Avista Corp. is permitted to collect from customers only amounts approved by regulatory commissions. However, Avista Corp.'s costs to provide energy service can be much higher or lower than the amounts currently billed to customers. Avista Corp. is permitted to defer income statement recognition and recovery from customers for some of these differences, which are recorded as deferred charges with the opportunity for future recovery through retail rates. These deferred costs are subject to review for prudence and potential disallowance by regulators, who have discretion as to the extent and timing of future recovery or refund to customers.

Power and natural gas costs higher than those recovered in retail rates reduce cash flows. Amounts that are not allowed for deferral or which are not approved to become part of customer rates affect Avista Corp.'s results of operations.

Even if Avista Corp.'s regulators ultimately allow Avista Corp. to recover deferred power and natural gas costs, Avista Corp.'s operating cash flows can be negatively affected until these costs are recovered from customers.

Fluctuating energy commodity prices and volumes in relation to Avista Corp.'s energy risk management process can cause volatility in its cash flows and results of operations

Avista Corp. engages in active hedging and resource optimization practices to reduce energy cost volatility and economic exposure related to commodity price fluctuations. Avista Corp. routinely enters into contracts to hedge a portion of its purchase and sale commitments for electricity and natural gas, as well as forecasted excess or deficit energy positions and inventories of natural gas. Avista Corp. uses physical energy contracts and derivative instruments, such as forwards, futures, swaps and options traded in the over-the-counter markets or on exchanges. Avista Corp. does not attempt to fully hedge its energy resource assets or its forecasted net positions for various time horizons. To the extent Avista Corp. has positions that are not hedged, or if hedging positions do not fully match the corresponding purchase or sale, fluctuating commodity prices could have a material effect on Avista Corp.'s operating revenues, resource costs, derivative assets and liabilities, and operating cash flows. In addition, actual loads and resources typically vary from forecasts, sometimes to a significant degree, which require additional transactions or dispatch decisions that impact cash flows.

The hedges Avista Corp. enters into are reviewed for prudence by Avista Corp.'s various regulators and any deferred costs (including those as a result of Avista Corp.'s hedging transactions) are subject to review for prudence and potential disallowance by regulators.

Generation plants may become obsolete

Avista Corp. relies on a variety of generation and energy commodity market sources to fulfill its obligation to serve customers and meet the demands of its counterparty agreements. There is the potential that some of Avista Corp.'s generation sources, such as coal, may become obsolete. This could result in higher commodity costs to replace the lost generation, as well as higher costs to retire the generation source before the end of its expected life.

Avista Corp. is subject to various operational and event risks

Avista Corp.'s operations are subject to operational and event risks that include:

- severe weather or natural disasters, including, but not limited to, avalanches, wind storms, wildfires, earthquakes, snow and ice storms, which can disrupt energy generation, transmission and distribution, as well as the availability and costs of materials, equipment, supplies, support services and general business operations,
- blackouts or disruptions of interconnected transmission systems (the regional power grid),
- unplanned outages at generating plants,
- fuel cost and availability, including delivery constraints,
- explosions, fires, accidents, or mechanical breakdowns that may occur while operating and maintaining its generation, transmission and distribution systems,
- damage or injuries to third parties caused by its generation, transmission and distribution systems,
- natural disasters that can disrupt energy generation, transmission and distribution, and general business operations, and
- terrorist attacks or other malicious acts that may disrupt or cause damage to Avista Corp.'s utility assets or the vendors it utilizes.

Disasters may affect the general economy, financial and capital markets, specific industries, or Avista Corp.'s ability to conduct business. As protection against operational and event risks, Avista Corp. maintains business continuity and disaster recovery plans, maintains insurance coverage against some, but not all, potential losses and seeks to negotiate indemnification arrangements with contractors for certain event risks. However, insurance or indemnification agreements may not be adequate to protect against liability, extra expenses and operating disruptions from all of the operational and event risks described above. In addition, Avista Corp. is subject to the risk that insurers and/or other parties will dispute or be unable to perform on their obligations to it.

Damage to facilities may be caused by severe weather, such as snow, ice, wind storms or avalanches. The cost to implement rapid or any repair to such facilities can be significant. Overhead electric lines are most susceptible to damage caused by severe weather.

Adverse impacts may occur at Avista Corp.'s Alaska operations that could result from an extended outage of its hydroelectric generating resources or its inability to deliver energy, due to the lack of interconnectivity to any other electrical grids and the extensive cost of replacement power (diesel)

AEL&P operates several hydroelectric power generation facilities and has diesel generating capacity from multiple facilities to provide backup service to firm customers when necessary; however, a single hydroelectric power generation facility, the Snettisham hydroelectric project, provides approximately two-thirds of AEL&P's hydroelectric power generation. Any issues that negatively affect AEL&P's ability to generate or transmit power or any decrease in the demand for the power generated by AEL&P could negatively affect Avista Corp's results of operations, financial condition and cash flows.

There have been numerous changes in legislation, related administrative rulemakings, and Executive Orders, including periodic audits of compliance with such rules, which may adversely affect Avista Corp.'s operational and financial performance

Avista Corp. expects to continue to be affected by legislation at the national, state and local level, as well as by administrative rules and requirements published by government agencies, including but not limited to the FERC, the EPA and state regulators. Avista Corp. is also subject to NERC and WECC reliability standards. The FERC, the NERC and the WECC perform periodic audits of Avista Corp. Failure to comply with the FERC, the NERC, or the WECC requirements can result in financial penalties of up to US$1 million per day per violation.

Future legislation or administrative rules could have a material adverse effect on Avista Corp.'s operations, results of operations, financial condition and cash flows.

Actions or limitations to address concerns over the long-term global and Avista Corp.'s utilities' service area climate changes may affect Avista Corp's operations and financial performance

Legislative, regulatory and advocacy efforts at the state, national and international levels concerning climate change and other environmental issues could have significant impacts on Avista Corp.'s operations. The electric and natural gas utility industries are frequently affected by proposals to curb greenhouse gas and other air emissions. Various regulatory and legislative proposals have been made to limit or further restrict byproducts of combustion, including that resulting from the use of natural gas by Avista Corp. customers. Such proposals, if adopted, could restrict the operation and raise the costs of Avista Corp.'s power generation resources as well as the distribution of natural gas to its customers.

Avista Corp. expects continuing activity in the future and will evaluate the extent to which potential changes to environmental laws and regulations may:

- increase the operating costs of generating plants,
- increase the lead time and capital costs for the construction of new generating plants,
- require modification of Avista Corp.'s existing generating plants,
- require existing generating plant operations to be curtailed or shut down,
- reduce the amount of energy available from Avista Corp.'s generating plants,
- restrict the types of generating plants that can be built or contracted with,
- require construction of specific types of generation plants at higher cost, and
- increase the cost of distributing natural gas to customers.

Avista Corp. has contingent liabilities, including certain matters related to potential environmental liabilities, and cannot predict the outcome of these matters

In the normal course of Avista Corp.'s business, it has matters that are the subject of ongoing litigation, mediation, investigation and/or negotiation. Although Avista Corp. believes that any ultimate liability arising from these actions will not have a material impact on its financial condition, results of operations or cash flows, it is possible that a significant change could occur in Avista Corp's estimates of the probability or amount of a liability being incurred. Moreover, Avista Corp. cannot predict the ultimate outcome or potential impact of any particular issue, including the extent, if any, of insurance coverage or that amounts payable by Avista Corp. may be recoverable through the ratemaking process. Avista Corp. is subject to environmental regulation by federal, state and local authorities related to its past, present and future operations.

Cyber-attacks, terrorism or other malicious acts could disrupt Avista Corp.'s businesses and have a negative impact on its results of operations and cash flows

In the course of Avista Corp.'s operations, it relies on interconnected technology systems for operation of its generating plants, electric transmission and distribution systems, natural gas distribution systems, customer billing and customer service, accounting and other administrative processes and compliance with various regulations. In addition, in the ordinary course of business, Avista Corp. collects and retains sensitive information including personal information about its customers and employees.

There are various risks associated with technology systems such as hardware or software failure, communications failure, data distortion or destruction, unauthorized access to data, misuse of proprietary or confidential data, unauthorized control through electronic means, programming mistakes and other deliberate or inadvertent human errors. In particular, cyber-attacks, terrorism or other malicious acts could damage, destroy or disrupt these systems. Additionally, the facilities and systems of clients, suppliers and third party service providers could be vulnerable to these same risks and, to the extent of interconnection to Avista Corp.'s technology, may impact Avista Corp. Any failure, unexpected, or unauthorized use of technology systems could result in the unavailability of such systems, and could result in a loss of operating revenues, an increase in operating expenses and costs to repair or replace damaged assets. Any of the above could also result in the loss or release of confidential customer and/or employee information or other proprietary data that could adversely affect Avista Corp.'s reputation and competitiveness, could result in costly litigation and negatively impact Avista Corp.'s results of operations. As these potential cyber-attacks become more common and sophisticated, Avista Corp. could be required to incur costs to strengthen its systems and respond to emerging concerns.

Terrorist attacks could also be directed at physical electric and natural gas facilities, as well as technology systems.

Avista Corp. may be adversely affected by its inability to successfully implement certain technology projects

Avista Corp. is currently planning to replace all of its electric meter infrastructure in the State of Washington with two-way communication advanced metering infrastructure ("**AMI**"). There is the risk that regulators will not allow the full recovery of new AMI. In addition, there are inherent risks associated with replacing and changing these types of systems, such as incorrect or non-functioning metering and/or delayed or inaccurate customer bills or unplanned outages, which could have a material adverse effect on Avista Corp.'s results of operations, financial condition and cash flows. Finally, there is the risk that Avista Corp. does not ultimately complete the project and will incur contract cancellation or other costs, which could be significant.

Avista Corp.'s strategic business plans, which may be affected by any or all of the foregoing, may change, including the entry into new businesses and/or the exit from existing businesses and the extent of its business development efforts where potential future business is uncertain

Avista Corp.'s strategic business plans could be affected by its result in any of the following:

- disruptive innovations in the marketplace may outpace Avista Corp.'s ability to compete or manage its risk,
- potential difficulties in integrating acquired operations and in realizing expected opportunities, diversions of management resources and losses of key employees, challenges with respect to operating new businesses and other unanticipated risks and liabilities,
- market or other conditions may adversely affect Avista Corp.'s operations or require changes to its business strategy, which could result in a non-cash goodwill impairment charge that would reduce assets and reduce Avista Corp.'s net income, and
- potential reputational risk arising from repeated general rate case filings, degradation in the quality of service, or from failed strategic investments and opportunities, which could erode customer and community satisfaction with Avista Corp.

Risk Factors Relating to the Instalment Receipts

The balance of the Instalment Receipt purchase price remains outstanding and the failure of a holder of Instalment Receipts to pay the balance of the purchase price on or before the Final Instalment Date will have adverse consequences for the holder

Each Instalment Receipt purchased in the Offering represents an obligation of the holder of such security to pay $667 per $1,000 principal amount of Debentures on or before the Final Instalment Date. If the final instalment of the purchase price is not paid when due, the Defaulting Holder will no longer be able to pay the final instalment without the consent of the Selling Debentureholder. In addition, the Defaulting Holder will no longer be able to exercise the rights described under "Details of the Offering – Instalment Receipts – Rights and Privileges" and will cease to be entitled to any repayment of principal in respect of the Debenture represented by such Instalment Receipt. In addition, if the holder of an Instalment Receipt does not pay the final instalment when due, the Debentures evidenced by such Instalment Receipt may, at the Selling Debentureholder's option, upon compliance with applicable law and the terms of the Instalment Receipt Agreement, be forfeited to the Selling Debentureholder in full satisfaction of the Defaulting Holder's obligations or such Debentures may be sold and the Defaulting Holder will remain liable for any deficiency in the proceeds of such sale. The Selling Debentureholder will have the right to and may commence legal action against Defaulting Holders who do not pay the final instalment on or before the Final Instalment Date. The commencement of any such litigation by the Selling Debentureholder may negatively affect the Corporation and the Selling Debentureholder, and could have an adverse effect on the price of the Debentures and the Common Shares.

There is currently no market through which the Instalment Receipts may be sold

There is currently no market through which the Instalment Receipts may be sold and purchasers of Debentures may not be able to resell Instalment Receipts. There can be no assurance that an active trading market will develop for the Instalment Receipts after the Offering or, if developed, that such a market will be sustained. This may affect the pricing of the Instalment Receipts in the secondary market, the transparency and availability of trading prices, the liquidity of Instalment Receipts, and the extent of issuer regulation. If an active market for the Instalment Receipts fails to develop or be sustained, the prices at which the Instalment Receipts trade may be adversely affected. Whether or not the Instalment Receipts will trade at lower prices depends on many factors, including liquidity of the Instalment Receipts, prevailing interest rates and the market for similar securities, the market price of debt securities with maturities comparable to the Debentures, the market price of the Common Shares, general economic conditions and Hydro One's financial condition, historic financial performance and future prospects.

The TSX has conditionally approved the listing of the Instalment Receipts (representing the Debentures) and the Common Shares issuable on the conversion of the Debentures on the TSX. Listing will be subject to the Corporation fulfilling all of the requirements of the TSX and there is no assurance that the TSX will approve such listing application. The Corporation has no current intention to list the Debentures for trading on the TSX or any other exchange as it currently anticipates all Debentures will be converted to Common Shares on the Final Instalment Date.

Fluctuations in trading price

An Instalment Receipt entitles the holder to unencumbered ownership of a Debenture upon payment of the final instalment on or before the Final Instalment Date. Interest rate movements will cause the value of debt instruments with a maturity comparable to the Debentures to fluctuate, and this will be reflected in the market price of the Instalment Receipts. The price volatility of the Instalment Receipts will be greater than the price volatility of debt instruments of a maturity comparable to the Debentures. This is due to the fact that the payment for the Instalment Receipts represents only 33.3% of the total principal amount payable for the underlying Debenture.

Further, the market price of the Common Shares underlying the Debentures may be volatile. This volatility may affect the ability of holders of Instalment Receipts to sell the Instalment Receipts at an advantageous price, particularly if the market price for Common Shares falls below the Conversion Price of Debentures represented by Instalment Receipts. In addition, it may result in greater volatility in the market price of the Instalment Receipts than would be expected for other debt securities or for non-convertible or non-exchangeable securities. Market price fluctuations in the Common Shares may be due to, among other things, the operating results of the Corporation failing to meet the expectations of securities analysts or investors in any quarter, downward revision in securities analysts' estimates, governmental regulatory action, market perception of the likelihood of the completion of the Merger, adverse changes in general market conditions or economic trends, acquisitions, dispositions or other material public announcements by Hydro One, along with a variety of additional factors. These broad market fluctuations may adversely affect the prices of the Instalment Receipts and the Common Shares.

Rights of holders of Instalment Receipts may change

Purchasers of Debentures will, prior to payment of the final instalment, be holders of Instalment Receipts and will be bound by the terms and conditions of the Instalment Receipt Agreement. The Instalment Receipt Agreement will provide that, pending payment of the final instalment, legal title to the Debentures offered hereby will be held by the Custodian on behalf of the Selling Debentureholder pursuant to the pledge to secure the payment of the final instalment. The terms and conditions of the Instalment Receipt Agreement may be amended in certain circumstances, including with the approval of holders of Instalment Receipts representing two-thirds of the principal amount of the Debentures represented thereby. The description of the Instalment Receipt Agreement contained in this Prospectus is qualified in its entirety by the provisions of such agreement, which should be reviewed by holders of Instalment Receipts. The Instalment Receipt Agreement will be filed by Hydro One Limited on SEDAR on or about the Closing Date.

The Right to receive unencumbered Debentures may terminate

The Corporation has the obligation to redeem the Debentures at a price equal to their principal amount plus accrued and unpaid interest (without any Make-Whole Payment) following the earlier of: (i) notification to holders that the Approval Conditions will not be satisfied; (ii) termination of the Merger Agreement in accordance with its terms; and (iii) May 1, 2019 if the Final Instalment Notice has not been given on or before April 30, 2019. See "Details of the Offering – Debentures – Redemption". Accordingly, it is possible that Instalment Receipts will be outstanding for a very limited period of time. Upon such redemption, a holder will no longer be entitled to pay the final instalment or to receive any unencumbered Debentures and will only be entitled to receive a net payment equal to the redemption price less the amount of the final instalment otherwise payable by such holder to the Selling Debentureholder plus accrued and unpaid interest thereon. Until the Approval Conditions are satisfied and the Debentures are delivered to holders of Instalment Receipts pursuant to the Instalment Receipt Agreement, such holders have the rights described under "Details of the Offering – Instalment Receipts".

While the right of holders of Instalment Receipts to receive unencumbered Debentures may terminate as a result of a redemption by the Corporation of the Debentures as described herein, the Merger could potentially still be completed by the Corporation. If the Merger is completed following the redemption of the Debentures, holders of Instalment Receipts will not receive any of the benefits which may accrue to shareholders of the Corporation following completion of the Merger.

Merger may be completed on other terms

Both before and after payment of the final instalment, the Corporation may, in its sole discretion, amend the Merger Agreement and consummate the Merger on terms that may be substantially different from those contemplated in this Prospectus. Any such change will not affect the obligation of the holder of an Instalment Receipt to pay the final instalment on or before the Final Instalment Date. See "The Merger Agreement" and "– Risk Factors Relating to the Merger – Hydro One Limited may fail to complete the Merger".

Risk Factors Relating to the Debentures

There is currently no market through which the Debentures may be sold

There is currently no market through which the Debentures may be sold and purchasers of Debentures may not be able to resell Debentures purchased under this Prospectus. The Corporation has not applied to list the Debentures for trading on the TSX, but has received conditional approval to list the Instalment Receipts (representing the Debentures) and the Common Shares issuable on the conversion of the Debentures on the TSX. Accordingly, an investor who does not exercise the conversion privilege in respect of fully paid Debentures will be holding what Hydro One Limited expects will be highly illiquid securities. There can be no assurance that an active trading market will develop for the Debentures after payment of the final instalment or, if developed, that such a market will be sustained. This may affect the pricing of the Debentures in the secondary market, the transparency and availability of trading prices, the liquidity of Debentures, and the extent of issuer regulation. If an active market for the Debentures fails to develop or be sustained, the prices at which the Debentures trade may be adversely affected. Whether or not the Debentures will trade at lower prices depends on many factors, including, among others, liquidity of the Debentures, prevailing interest rates and the market for similar securities, the market price of the Common Shares, general economic conditions and the Corporation's financial condition, historic financial performance and future prospects.

Fluctuations in trading price

After the Final Instalment Date, Debentures will stop accruing interest. Accordingly, their value will be a function of the value of the underlying Common Shares into which the Debenture is convertible. The market price of the Common Shares underlying the Debentures may be volatile. This volatility may affect the ability of holders of Debentures to sell the Debentures at an advantageous price. In addition, it may result in greater volatility in the market price of the Debentures than would be expected for other debt securities or non-convertible securities.

Market price fluctuations in the Common Shares may be due to the operating results of the Corporation failing to meet the expectations of securities analysts or investors in any quarter, downward revision in securities analysts' estimates, governmental regulatory action, market perception of the likelihood of the completion of the Merger, adverse changes in general market conditions or economic trends, acquisitions, dispositions or other material public announcements by Hydro One, along with a variety of additional factors.

Existing and prior ranking of indebtedness

On the Closing Date, the Corporation expects to have consolidated indebtedness of approximately $12.740 billion (including the Debentures, excluding the Over-Allotment Option). After giving effect to the Merger, assuming receipt of the aggregate total amount of the final instalment for each of the Debentures (excluding those issuable upon exercise of the Over-Allotment Option), conversion of all Debentures into Common Shares and the assumption of Avista Corp.'s outstanding indebtedness, management estimates that the consolidated indebtedness of the Corporation will be approximately $17.098 billion (calculated as of March 31, 2017). See "Financing of the Merger" and "Capitalization".

The Debentures will be subordinate to all Senior Indebtedness of the Corporation. See "Details of the Offering – Debentures – Subordination". Therefore, in the event of the insolvency, bankruptcy, liquidation, reorganization, dissolution or winding up of the Corporation, the assets of the Corporation would be made available to satisfy its obligations with respect to the Debentures only after it has paid all of its secured creditors and all holders of Senior Indebtedness. Accordingly, all or a substantial portion of the Corporation's assets could be unavailable to satisfy the claims of holders of the Debentures. There may be insufficient assets remaining following such payments to pay amounts due on any or all of the Debentures then outstanding. See "– Risk Factors Relating to the Post-Merger Business and Operations of Hydro One and Avista Corp.".

The Debentures will be effectively subordinated to the debt and other liabilities of Hydro One Limited's subsidiaries and to any future secured debt of Hydro One Limited

Hydro One Limited's subsidiaries will not guarantee or otherwise be responsible for the payment of principal or interest or other payments required to be made by Hydro One Limited on the Debentures. Accordingly, the Debentures will be effectively subordinated to all existing and future liabilities (including trade payables and debt) of Hydro One Limited's subsidiaries. In the event of an insolvency, bankruptcy, liquidation, reorganization or similar proceeding in respect of any of Hydro One Limited's subsidiaries, holders of the Debentures will have no right to proceed against the assets of such subsidiaries. Creditors of such subsidiaries would generally be entitled to payment in full from such assets before any assets are made available for distribution to Hydro One Limited to pay its debts and other obligations. The Debentures will also be effectively subordinated in right of payment to any future secured debt of Hydro One Limited, to the extent of the value of the assets securing such debt.

Absence of covenant protection

The Indenture does not restrict the Corporation or any of its subsidiaries from incurring additional indebtedness for borrowed money or otherwise from mortgaging, pledging or charging their properties to secure any indebtedness or other financing. The Indenture does not contain any provisions specifically intended to protect holders of the Debentures in the event of a future leveraged transaction involving the Corporation or any of its subsidiaries.

The rights of holders of Debentures may change

Holders of Debentures will be bound by the terms and conditions of the Indenture. The terms and conditions of the Indenture may be amended in certain circumstances, including with the approval of two-thirds of holders of outstanding Debentures. The description of the Indenture contained in this Prospectus is qualified in its entirety by the provisions of the Indenture, which should be reviewed by holders of Instalment Receipts and Debentures. The Indenture will be filed by Hydro One Limited on SEDAR on or about the Closing Date.

Redemption prior to maturity may prevent holders from exercising their conversion privilege

The Debentures may be redeemed, at the option of the Corporation and without the consent of holders of Debentures, subject to certain conditions, after the Final Instalment Date and prior to the Maturity Date at a redemption price equal to the principal amount thereof, plus any unpaid interest which accrued prior to the Final Instalment Date, as described under "Details of the Offering – Debentures – Redemption".

The right of holders of Debentures to receive Common Shares will terminate as a result of a redemption by the Corporation of the Debentures as described herein. If a holder of Debentures has its Debentures redeemed by the Corporation following completion of the Merger, but prior to conversion by the holder of such Debentures into Common Shares, such holder will not receive any of the benefits which may accrue to shareholders of the Corporation following completion of the Merger. In addition, the redemption price of the Debentures may be worth less than the consideration obtained on a conversion of those Debentures by the holder thereof.

Conversion of Debentures following satisfaction of the Approval Conditions can be negatively affected by the market price of the Common Shares

Subject to satisfaction of the Approval Conditions and payment of the final instalment by the holder of an Instalment Receipt on or prior to the Final Instalment Date, such holder may convert its Debentures after the Final Instalment Date but prior to the earlier of the date of redemption or the Maturity Date. The Conversion Price will be \$21.40 per Common Share, being a conversion rate of 46.7290 Common Shares per \$1,000 principal amount of Debentures, subject to adjustment in certain circumstances. See "Details of the Offering – Debentures – Conversion Right". If the market price of the Common Shares is less than the Conversion Price, the trading price of the Debentures will be negatively impacted. If the market price of the Common Shares is less than the Conversion Price on the date of conversion by a holder, such holder will receive fewer Common Shares on conversion of its Debentures than they would be able to purchase with funds equal to the principal amount of its Debentures.

Issuance of common shares upon conversion of the Debentures may be restricted if such issuance would violate the Electricity Act, 1998 (Ontario)

Voting securities of Hydro One Limited, which include the Common Shares, are subject to share ownership restrictions under the *Electricity Act, 1998* (Ontario). The share ownership restrictions provide that no person or company (or combination of persons or companies acting jointly or in concert), other than the Province or an underwriter who holds voting securities of Hydro One Limited solely for the purposes of distributing them to purchasers who comply with the share ownership restrictions, may beneficially own or exercise control or direction over more than 10% of any class or series of voting securities of Hydro One Limited. The articles of Hydro One Limited provide for comprehensive enforcement mechanisms that are applicable in the event of a contravention of the share ownership requirements. **A potential purchaser of Debentures represented by Instalment Receipts should not subscribe for a number of such Debentures in this Offering that would, upon conversion of such Debentures into Common Shares, cause such purchaser to violate this prohibition.** Under the Indenture, the Corporation has reserved the right to not issue Common Shares to a holder upon conversion of the Debentures in the event the Corporation reasonably determines that issuing such Common Shares to such holder would result in such holder breaching the share ownership restrictions under the *Electricity Act, 1998* (Ontario) or be prohibited by the Corporation's articles.

Interest on Debentures will cease to be payable prior to the Maturity Date

After giving the Final Instalment Notice, Hydro One Limited has the right, but not the obligation, to redeem any outstanding and unconverted Debentures at any time on or after the Final Instalment Date and prior to the Maturity Date, but may choose not to redeem such Debentures. Any unconverted Debentures outstanding on or after the day following the Final Instalment Date will cease to accrue interest. A holder who has not exercised its conversion privilege by such date will be holding a convertible debt security which no longer earns interest.

The likelihood that holders of the Debentures will receive payments owing to them under the terms of the Debentures will depend on the financial health of the Corporation and its creditworthiness

Although Hydro One Limited currently has an investment grade credit rating, there is no assurance the Corporation will have sufficient capital to repay the Debentures in cash on redemption or at the Maturity Date or that it will be able to raise sufficient capital on acceptable terms by the applicable redemption date or the Maturity Date to repay the outstanding Debentures. While Hydro One Limited covenants to maintain readily available capacity under its revolving credit facilities (on a consolidated basis), or have cash on hand together with such available capacity, in an amount at least equal to the net proceeds of the first instalment paid on the closing of the Offering (and on the closing of the Over-Allotment Option, if applicable), in the event of a mandatory redemption, there can be no certainty that the revolving credit facilities (on a consolidated basis), or such cash on hand, will continue to be available at the time of redemption, such that Hydro One Limited may not have sufficient funds to repay the Debentures. The risk of default in any payment obligation by Hydro One Limited may increase to the extent that there is a significant decline in the price of the Common Shares.

Debentures are unsecured obligations

The Debentures are unsecured obligations of the Corporation and are not secured by any of its assets or assets of any current or future subsidiaries of the Corporation.

Prevailing yields on similar securities

The prevailing yield on debt securities with comparable maturities will affect the market value of the Debentures. Assuming all other factors remain unchanged, the market value of the Debentures will decline as prevailing yields for similar securities rise, and will increase as prevailing yields for similar securities decline. The market value of the Debentures may also decline after the Debentures cease to accrue interest depending on the value of the underlying Common Shares.

Dilutive effects on shareholders

The issuance of Common Shares on conversion of the Debentures may have a dilutive effect on shareholders of Common Shares of Hydro One Limited and an adverse impact on the price of the Common Shares, which may also adversely impact the price of the Debentures. Potential future offerings by Hydro One Limited of Common Shares or securities convertible into or exchangeable for Common Shares would dilute purchasers acquiring securities under this Prospectus.

Investment eligibility is not guaranteed

The Corporation will endeavour to ensure that the Debentures represented by Instalment Receipts and the Common Shares continue to be qualified investments for Exempt Plans under the Tax Act, although there is no assurance that the conditions prescribed for such qualified investments will be adhered to at any particular time. The Tax Act imposes taxes in respect of the acquisition or holding of non-qualified or prohibited investments by Exempt Plans.

Income tax consequences

The income of the Corporation and its subsidiaries must be computed and is taxed in accordance with Canadian and other applicable tax laws, all of which may be changed in a manner that could adversely affect the holders of Debentures or Common Shares or the Corporation, including the latter's ability to service the Debentures or pay dividends on the Common Shares. There can be no assurance that taxation authorities will accept the tax positions adopted by the Corporation or its subsidiaries, including their determinations of the amounts of income and capital taxes and the reasonableness of inter-company transfer prices, including interest charges, which could materially adversely affect cash positions of the Corporation or its subsidiaries, and holders of Debentures and the Common Shares.

Change of Tax Law

On July 18, 2017, the Minister of Finance (Canada) released for consultation a discussion paper seeking input on possible approaches to address certain perceived tax advantages of investing passively through a private corporation. Potential alternatives for amending the current system of corporate taxation under the Tax Act are outlined in this paper, although specific proposals to amend the Tax Act are not included. Legislative proposals are expected to be released by the Minister of Finance (Canada) following such consultation. There can be no assurance that, following the enactment of any such proposals, Securities held by a Canadian corporation will not be taxed under the Tax Act in a manner that is less favourable than under the current system.

Rights with respect to the Common Shares will arise only if and when the Corporation delivers Common Shares upon conversion of a Debenture

Holders of Debentures will not be entitled to any rights with respect to the Common Shares (including, without limitation, voting rights and rights to receive any dividends or other distributions on the Common Shares), but if a holder of Debentures subsequently converts its Debentures into Common Shares, such holder will be subject to all changes affecting the Common Shares. Rights with respect to the Common Shares will arise only if and when the Corporation delivers Common Shares upon conversion of a Debenture and, to a limited extent, under the conversion rate adjustments applicable to the Debentures. For example, in the event that an amendment is proposed to the Corporation's constating documents requiring shareholder approval and the record date for determining the shareholders of record entitled to vote on the amendment occurs prior to delivery of Common Shares to a holder, such holder will not be entitled to vote on the amendment, although such holder will nevertheless be subject to any changes in the powers or rights of Common Shares that result from such amendment.

EXEMPTIONS

On August 27, 2015, Hydro One Inc. obtained a decision from the Ontario Securities Commission, as principal regulator, on behalf of itself and the securities regulatory authorities in each of the other provinces and territories of Canada, exempting Hydro One Limited from the requirements in section 3.2 of National Instrument 52-107 – *Acceptable Accounting Principles and Auditing Standards* which requires financial statements to be prepared in accordance with and disclosed in compliance with International Financial Reporting Standards. The decision granting the exemption permits Hydro One Limited to prepare and present its financial statements required to be filed with the securities regulatory authorities in each of the provinces and territories of Canada (including financial statements included in any prospectus of Hydro One Limited) in accordance with U.S. GAAP until the earliest to occur of the following:

(a) January 1, 2019;

(b) if Hydro One Limited ceases to have activities subject to rate regulation, the first day of Hydro One Limited's financial year commencing after its ceases to have such activities subject to rate regulation; and

(c) the effective date prescribed by the International Accounting Standards Board for the mandatory application of a standard within International Financial Reporting Standards specific to entities with activities subject to rate regulation.

The exemption was requested: (i) due to continuing uncertainty of accounting treatment and lack of a specific mandatory standard for entities with activities subject to rate regulation under International Financial Reporting Standards; (ii) because U.S. GAAP provides a more suitable set of accounting principles for entities with activities subject to rate regulation and is more consistent with those prescribed by the Ontario Energy Board in its Accounting Procedures Handbook for Electric Distribution Utilities; and (iii) to ensure consistency with and comparability to the financial statements of Hydro One Inc. which reports in U.S. GAAP, as well as Hydro One Limited's industry peers that currently report in U.S. GAAP.

AUDITORS

KPMG LLP, located at 333 Bay Street, Suite 4600, Bay Adelaide Centre, Toronto, Ontario, M5H 2S5, are the auditors of Hydro One Limited and have confirmed that they are independent of Hydro One Limited within the meaning of the relevant rules and related interpretations prescribed by the relevant professional bodies in Canada and any applicable legislation or regulation.

The auditors of Avista Corporation are Deloitte & Touche LLP, in Seattle, Washington. Deloitte & Touche LLP is an independent registered public accounting firm that audited Avista Corporation's consolidated financial statements as at December 31, 2016 and December 31, 2015, and for each of the three years in the period ended December 31, 2016, included in this Prospectus.

LEGAL MATTERS

Certain legal matters relating to the Offering will be passed upon on behalf of the Corporation and the Selling Debentureholder by Osler, Hoskin & Harcourt LLP and on behalf of the Underwriters by Blake, Cassels & Graydon LLP. At the date hereof, partners and associates of each of Osler, Hoskin & Harcourt LLP and Blake, Cassels & Graydon LLP own beneficially, directly or indirectly, less than 1% of any securities of the Corporation or any associate or affiliate of the Corporation.

TRANSFER AGENT AND REGISTRAR

Computershare Trust Company of Canada at its principal office in Toronto, Ontario is the transfer agent and registrar for the Common Shares.

ENFORCEABILITY OF CERTAIN CIVIL LIABILITIES

Kathryn Jackson, a director of Hydro One Limited, resides outside of Canada. Ms. Jackson has appointed Hydro One Limited as her agent for service of process at 483 Bay Street, South Tower, 8th Floor, Toronto, Ontario, M5G 2P5.

Purchasers are advised that it may not be possible for investors to enforce judgments obtained in Canada against any person who resides outside of Canada, even if the party has appointed an agent for service of process.

PURCHASERS' STATUTORY RIGHTS

Securities legislation in certain of the provinces and territories of Canada provides purchasers with the right to withdraw from an agreement to purchase securities. This right may be exercised within two business days after receipt or deemed receipt of a prospectus and any amendment. In several of the provinces and territories of Canada, securities legislation further provides a purchaser with remedies for rescission or, in some jurisdictions, revisions of the price or damages if the prospectus and any amendment contains a misrepresentation or is not delivered to the purchaser, provided that the remedies for rescission, revisions of the price or damages are exercised by the purchaser within the time limit prescribed by the securities legislation of the purchaser's province or territory. The purchaser should refer to any applicable provisions of the securities legislation of the purchaser's province or territory for the particulars of these rights or consult with a legal advisor.

Original purchasers of Debentures will have a contractual right of rescission against Hydro One Limited following the conversion of such Debentures in the event that this Prospectus or any amendment thereto contains a misrepresentation. The contractual right of rescission will entitle such original purchasers to receive from Hydro One Limited, upon surrender of the Common Shares issued upon conversion of such Debentures, the amount paid for such Debentures, provided that the right of rescission is exercised within 180 days from the date of the purchase of such Debentures under this Prospectus.

In an offering of Debentures represented by Instalment Receipts, investors are cautioned that the statutory right of action for damages for a misrepresentation contained in this Prospectus is limited, in certain provincial and territorial securities legislation, to the price at which the Debentures represented by Instalment Receipts are offered to the public under the prospectus offering. This means that, under the securities legislation of certain provinces and territories, if the purchaser pays additional amounts upon conversion of the security, those amounts may not be recoverable under the statutory right of action for damages that applies in those provinces and territories. The purchaser should refer to any applicable provisions of the securities legislation of the purchaser's province or territory for the particulars of this right of action for damages or consult with a legal adviser.

PROMOTERS

Hydro One Inc. has taken the initiative in founding and organizing Hydro One Limited and may therefore be considered a promoter of Hydro One Limited for the purposes of applicable securities legislation. In connection with a series of pre-closing transactions completed in connection with the initial public offering of Hydro One Limited, on October 31, 2015, Hydro One Limited acquired all of the issued and outstanding common shares of Hydro One Inc. from the Province in exchange for the issuance to the Province of 16,720,000 Series 1 Preferred Shares and 12,197,500,000 Common Shares. For further details concerning the relationship between Hydro One Limited and Hydro One Inc., see the documents incorporated by reference in this Prospectus.

GLOSSARY OF TERMS

In this Prospectus, unless the context otherwise requires, the following terms have the meanings set forth below.

"**1933 Act**" has the meaning ascribed thereto under the heading "Plan of Distribution".

"**2016 Annual Financial Statements**" has the meaning ascribed thereto under the heading "Documents Incorporated by Reference".

"**Adjusted EPS**" means adjusted earnings per common share.

"**Adverse Recommendation Change**" has the meaning ascribed thereto under the heading "The Merger Agreement – No Solicitation; Avista Corporation's Board of Directors Recommendation".

"**AEL&P**" means Alaska Electric Light and Power Company.

"**AERC**" means Alaska Energy and Resources Company.

"**AFUDC**" means allowance for funds used during construction and represents the cost of financing regulated construction projects and is capitalized to the cost of property, plant and equipment, where permitted by the regulator.

"**AIDEA"** means Alaska Industrial Development and Export Authority.

"**AIF**" has the meaning ascribed thereto under the heading "Documents Incorporated by Reference".

"**AM&D**" means Advanced Manufacturing and Development, doing business as METALfx.

"**AMI**" has the meaning ascribed thereto under the heading "Risk Factors – Risk Factors Relating to the Post-Merger Business and Operations of Hydro One and Avista Corp".

"**Annual MD&A**" has the meaning ascribed thereto under the heading "Documents Incorporated by Reference".

"**Approval Conditions**" has the meaning ascribed thereto under the heading "Details of the Offering".

"**ARO**" means asset retirement obligation.

"**Avista Corp.**" means Avista Corporation and its subsidiaries, and references to individual subsidiaries of Avista Corporation refer to that company and its respective subsidiaries.

"**Avista Material Adverse Effect**" means any circumstance, development, change, event, occurrence or effect that:

(a) has, individually or in the aggregate, a material adverse effect on the business, assets, properties, results of operations or financial condition of Avista Corporation and its subsidiaries taken as a whole; provided that none of the following shall constitute or be taken into account in determining whether an Avista Material Adverse Effect has occurred: (i) any circumstance, development, change, event, occurrence or effect in any of the industries or markets in which Avista Corporation or its subsidiaries operates, including electric generation, transmission or distribution or natural gas distribution or transmission industries (including, in each case, any changes in the operations thereof or with respect to system-wide changes or developments in electric generation, transmission, or distribution or natural gas distribution or transmission systems); (ii) any enactment of, change in, or change in interpretation of, any law or U.S. GAAP or governmental policy; (iii) general economic, regulatory or political conditions (or changes therein) or conditions (or changes therein) in the financial, credit or securities markets (including changes in interest or currency exchange rates) in any country or region in which Avista Corporation or any of its subsidiaries conducts business; (iv) any changes or developments in wholesale or retail electric power prices or any change in the price of natural gas or any other raw material, mineral or commodity used or sold by Avista Corporation or any of its subsidiaries or in the cost of hedges relating to such prices, any change in the price of interstate electricity or natural gas transportation services or any change in customer usage patterns or customer selection of third-party suppliers for natural gas or electricity; (v) any acts of God, natural disasters, terrorism, armed hostilities, sabotage, war or any escalation or worsening of acts of terrorism, armed hostilities or war; (vi) the announcement, pendency of or performance of the Merger and the related transactions contemplated by the Merger Agreement, including by reason of the identity of the Corporation or any communication by the Corporation regarding the plans or intentions of the Corporation with respect to the conduct of the business of Avista Corporation or its subsidiaries and including the impact of any of the foregoing on any relationships with customers, suppliers, distributors, collaboration partners, joint venture partners, employees or regulators; (vii) any action taken by Avista Corporation or any of its subsidiaries that is required or permitted by the terms of the Merger Agreement or with the consent or at the direction of the Corporation or Merger Sub (or any action not taken as a result of the failure of the Corporation to consent to any action requiring the Corporation's consent pursuant to Section 5.1 of the Merger Agreement); (viii) any change in the market price, or change in trading volume, of the capital stock of Avista Corporation (but not the underlying circumstances giving rise to such change); (ix) any failure by Avista Corporation or its subsidiaries to meet earnings estimates or financial projections or forecasts for any period, or any changes in credit ratings and any changes in any analysts recommendations or ratings with respect to Avista Corporation or any of its subsidiaries (but not the underlying circumstances giving rise to the failure if not otherwise falling within any of the exceptions set forth in clauses (i)-(viii) or (x)-(xii) above and below); (x) any change or effect arising from any rate cases directly related to Avista Corporation or its subsidiaries; (xi) any circumstance, development, change, event, occurrence or effect that results from any shutdown or suspension of operations at any third-party facilities (including with respect to electricity and power plants) from which Avista Corporation or any of its subsidiaries obtains natural gas or electricity and (xii) any pending, initiated or threatened litigation relating to the Merger, in the case of each of clauses (i) through (v), to the extent that such circumstance, development, change, event, occurrence or effect does not affect Avista Corporation and its subsidiaries, taken as a whole, in a materially disproportionate manner relative to other similarly situated participants in the business and industries in which Avista Corporation and its subsidiaries operate; or

(b) would, individually or in the aggregate, reasonably be expected to prevent or materially impede, interfere with or delay the consummation by Avista Corporation of the Merger and related transactions contemplated by the Merger Agreement.

"**Avista Intervening Event**" has the meaning ascribed thereto under the heading "The Merger Agreement – No Solicitation; Avista Corporation's Board of Directors Recommendation".

"**Avista Shareholder Approval**" has the meaning ascribed thereto under the heading "The Merger Agreement – Closing Conditions".

"**Avista Shareholders Meeting**" has the meaning ascribed thereto under the heading "The Merger Agreement – Termination".

"**Avista Termination Fee**" has the meaning ascribed thereto under the heading "The Merger Agreement – Termination".

"**Avista Utilities**" means the operating division of Avista Corporation (not a subsidiary) comprising the regulated utility operations in the Pacific Northwest.

"**BART**" means Best Available Retrofit Technology.

"**Board of Directors**" means the board of directors of Hydro One Limited.

"**Book-Entry Only System**" has the meaning ascribed thereto under the heading "Details of the Offering – Instalment Receipts – Book-Entry Only System".

"**Boulder Park GS**" has the meaning ascribed thereto under the heading "The Acquired Business – Avista Utilities".

"**BPA**" means Bonneville Power Administration.

"**Burdensome Condition**" means any undertakings, terms, conditions, liabilities, obligations, commitments or sanctions (including any Remedial Action (as defined in the Merger Agreement)) that, in the aggregate, would have or would be reasonably likely to have, a material adverse effect on the financial condition, businesses or results of operations of Avista Corporation and its subsidiaries, taken as a whole, or of the Corporation and its subsidiaries, taken as a whole and after giving effect to the Merger; provided that, for this purpose, the Corporation and its subsidiaries (including Avista Corporation and its subsidiaries) shall be deemed to be a consolidated group of entities of the size and scale of a hypothetical company that is 100% of the size and scale of Avista Corporation and its subsidiaries, taken as a whole as of immediately prior to the Effective Time (as defined in the Merger Agreement); and provided, further, that the undertakings, terms, conditions, liabilities, obligations, commitments or sanctions described in Section 1.6(a), Section 1.7 and Exhibit B of the Merger Agreement shall not constitute or be taken into account in determining whether there has been or is such a material adverse effect.

"**CAA**" means the *Clean Air Act*.

"**Cabinet Gorge**" means the Cabinet Gorge Hydroelectric Generating Project, located on the Clark Fork River in Idaho.

"**California Parties**" means, together, Pacific Gas & Electric, Southern California Edison, San Diego Gas & Electric, the California Attorney General, the California Department of Water Resources, and the California Public Utilities Commission.

"**Canadian Securities Regulators**" means the applicable securities commission or securities regulatory authority in each of the provinces and territories of Canada.

"**CAR**" means the Clean Air Rule.

"**Corporation**" means Hydro One Limited.

“**Corporation Material Adverse Effect**” means any change, circumstance, development, event, occurrence or effect that, individually or in the aggregate, has had or would reasonably be expected to have a material and adverse effect on the ability of the Corporation, US Parent or Merger Sub to consummate, or that would reasonably be expected to prevent or materially impede, interfere with or delay the consummation by the Corporation, US Parent or Merger Sub, of the Merger and the related transactions contemplated by the Merger Agreement.

“**Corporation Termination Fee**” has the meaning ascribed thereto under the heading “The Merger Agreement – Termination”.

“**Counsel**” has the meaning ascribed thereto under the heading “Certain Canadian Federal Income Tax Considerations”.

“**Coyote Springs 2**” means the natural gas-fired combined-cycle Coyote Springs 2 Generating Plant located near Boardman, Oregon.

“**CT**” means combustion turbine.

“**Custodian**” has the meaning ascribed thereto under the heading “Details of the Offering – Instalment Receipts”.

“**DBRS**” means DBRS Limited.

“**D.C. Circuit**” has the meaning ascribed thereto under the heading “The Acquired Business – Environmental Issues and Contingencies”.

“**DPSP**” means a deferred profit sharing plan as defined in the Tax Act.

“**Debentures**” means 4.00% convertible unsecured subordinated debentures of Hydro One Limited offered pursuant to this Prospectus.

“**Defaulting Holder**” has the meaning ascribed thereto under the heading “Details of the Offering – Instalment Receipts”.

“**Ecology**” means the Washington State Department of Ecology.

“**Ecova**” means Ecova, Inc., a provider of facility information and cost management services for multi-site customers and energy efficiency program management for commercial enterprises and utilities throughout North America, subsidiary of Avista Capital. Ecova was sold on June 30, 2014.

“**EGUs**” has the meaning ascribed thereto under the heading “The Acquired Business – Environmental Issues and Contingencies”.

“**EIA**” means the *Energy Independence Act*.

“**End Date**” means September 30, 2018.

“**EPA**” means the United States Environmental Protection Agency.

“**ERM**” means the Energy Recovery Mechanism, a mechanism for accounting and rate recovery of certain power supply costs accepted by the utility commission in the state of Washington.

“**ERU**” means Emission Reduction Units.

“**ESA**” means the *Federal Endangered Species Act*.

“**Exempt Plans**” has the meaning ascribed thereto under the heading “Eligibility for Investment”.

“**FCA**” means Fixed Cost Adjustment, the electric and natural gas decoupling mechanism in Idaho.

“**FCC**” means the United States Federal Communications Commission.

"**Federal Tax Regime**" has the meaning ascribed thereto under the heading "Presentation of Financial Information – Funds from Operations and Adjusted FFO".

"**FERC**" means the United States Federal Energy Regulatory Commission.

"**FFO**" has the meaning ascribed thereto under the heading "Presentation of Financial Information – Funds from Operations and Adjusted FFO".

"**Final CPP**" has the meaning ascribed thereto under the heading "The Acquired Business – Environmental Issues and Contingencies".

"**Final CPS**" has the meaning ascribed thereto under the heading "The Acquired Business – Environmental Issues and Contingencies"

"**Final Instalment Date**" has the meaning ascribed thereto under the heading "Details of the Offering".

"**Final Instalment Notice**" has the meaning ascribed thereto under the heading "Details of the Offering".

"**Final Order**" means a Judgment by the relevant Governmental Authority that (i) is not then reversed, stayed, enjoined, set aside, annulled or suspended and is in full force and effect, (ii) with respect to which, if applicable, any mandatory waiting period prescribed by law applicable to such Judgment before the Merger may be consummated has expired or been terminated, and (iii) as to which all conditions precedent to the closing of the Merger expressly set forth in such Judgment have been satisfied.

"**FIP**" has the meaning ascribed thereto under the heading "The Acquired Business – Environmental Issues and Contingencies".

"**FPA**" means the *Federal Power Act*.

"**GHG**" means greenhouse gas.

"**Governance Agreement**" means the Governance Agreement dated November 5, 2015 between Hydro One Limited and the Province.

"**HAPs**" means hazardous air pollutants.

"**Holder**" has the meaning ascribed thereto under the heading "Certain Canadian Federal Income Tax Considerations".

"**HSR Act**" means the *Hart-Scott-Rodino Antitrust Improvements Act of 1976*, as amended.

"**Hydro One**" means Hydro One Limited and its subsidiaries taken together as a whole.

"**Hydro One Limited**" means Hydro One Limited.

"**I-732**" has the meaning ascribed thereto under the heading "The Acquired Business – Environmental Issues and Contingencies".

"**ICNU**" means the Industrial Customers of Northwest Utilities.

"**Indenture**" has the meaning ascribed thereto under the heading "Details of the Offering – Debentures".

"**Instalment Receipt Agreement**" has the meaning ascribed thereto under the heading "Details of the Offering – Instalment Receipts".

"**Instalment Receipts**" means the instalment receipts representing beneficial ownership of the Debentures.

"**Interim Financial Statements**" has the meaning ascribed thereto under the heading "Documents Incorporated by Reference".

"**Interim MD&A**" has the meaning ascribed thereto under the heading "Documents Incorporated by Reference".

"**Intervening Event**" has the meaning ascribed thereto under the heading "The Merger Agreement – No Solicitation; Avista Corporation's Board of Directors Recommendation".

"**Investor Presentation**" has the meaning ascribed thereto under the heading "Marketing Materials".

"**IPO**" means the initial public offering of Hydro One Limited on November 5, 2015.

"**IPUC**" means the Idaho Public Utilities Commission.

"**IT**" means information technology.

"**Jackson Prairie**" means Jackson Prairie Natural Gas Storage Project, an underground natural gas storage field located near Chehalis, Washington.

"**Judgment**" means a judgment, injunction, order, decree, ruling, writ, assessment or arbitration award of a Governmental Authority of competent jurisdiction.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Directors and Shareholders of

Avista Corporation

Spokane, Washington

We have audited the accompanying consolidated balance sheets of Avista Corporation and subsidiaries (the "Company") as of December 31, 2016 and 2015, and the related consolidated statements of income, comprehensive income, equity and redeemable noncontrolling interests, and cash flows for each of the three years in the period ended December 31, 2016. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, such consolidated financial statements present fairly, in all material respects, the financial position of Avista Corporation and subsidiaries at December 31, 2016 and 2015, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2016, in conformity with accounting principles generally accepted in the United States of America.

NOTE 1. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Nature of Business

Avista Corp. is primarily an electric and natural gas utility with certain other business ventures. Avista Utilities is an operating division of Avista Corp., comprising the regulated utility operations in the Pacific Northwest. Avista Utilities provides electric distribution and transmission, and natural gas distribution services in parts of eastern Washington and northern Idaho. Avista Utilities also provides natural gas distribution service in parts of northeastern and southwestern Oregon. Avista Utilities has electric generating facilities in Washington, Idaho, Oregon and Montana. Avista Utilities also supplies electricity to a small number of customers in Montana, most of whom are employees who operate Avista Utilities' Noxon Rapids generating facility.

AERC is a wholly-owned subsidiary of Avista Corp. The primary subsidiary of AERC is AEL&P, which comprises Avista Corp.'s regulated utility operations in Alaska. AERC was acquired by Avista Corp. on July 1, 2014 and there are no AERC earnings included in the overall results of Avista Corp. prior to that date. See Note 4 for information regarding the acquisition of AERC.

Avista Capital, a wholly owned non-regulated subsidiary of Avista Corp., is the parent company of all of the subsidiary companies in the non-utility businesses, with the exception of AJT Mining Properties, which is a subsidiary of AERC. During the first half of 2014 and prior, Avista Capital’s subsidiaries included Ecova, which was an 80.2 percent owned subsidiary prior to its disposition on June 30, 2014. See Note 5 for information regarding the disposition of Ecova and Note 21 for business segment information.

Basis of Reporting

The consolidated financial statements include the assets, liabilities, revenues and expenses of the Company and its subsidiaries and other majority owned subsidiaries and variable interest entities for which the Company or its subsidiaries are the primary beneficiaries. Ecova's revenues and expenses are included in the Consolidated Statements of Income in discontinued operations; however, as of June 30, 2014 and for all subsequent reporting periods there are no balance sheet amounts included for Ecova. All tables throughout the Notes to Consolidated Financial Statements that present information related to the Consolidated Statements of Income were revised to include only the amounts from continuing operations. Intercompany balances were eliminated in consolidation. The accompanying consolidated financial statements include the Company’s proportionate share of utility plant and related operations resulting from its interests in jointly owned plants (see Note 7).

Use of Estimates

The preparation of the consolidated financial statements in conformity with GAAP requires management to make estimates and assumptions that affect the amounts reported for assets and liabilities and the disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Significant estimates include:

- determining the market value of energy commodity derivative assets and liabilities,
- pension and other postretirement benefit plan obligations,
- contingent liabilities,
- goodwill impairment testing,
- recoverability of regulatory assets, and
- unbilled revenues.

Changes in these estimates and assumptions are considered reasonably possible and may have a material effect on the consolidated financial statements and thus actual results could differ from the amounts reported and disclosed herein.

System of Accounts

The accounting records of the Company's utility operations are maintained in accordance with the uniform system of accounts prescribed by the FERC and adopted by the state regulatory commissions in Washington, Idaho, Montana, Oregon and Alaska.

Regulation

The Company is subject to state regulation in Washington, Idaho, Montana, Oregon and Alaska. The Company is also subject to federal regulation primarily by the FERC, as well as various other federal agencies with regulatory oversight of particular aspects of its operations.

Utility Revenues

Utility revenues related to the sale of energy are recorded when service is rendered or energy is delivered to customers. Revenues and resource costs from Avista Utilities' settled energy contracts that are "booked out" (not physically delivered) are reported on a net basis as part of utility revenues. AEL&P does not have booked out transactions. The determination of the energy sales to individual customers is based on the reading of their meters, which occurs on a systematic basis throughout the month. At the end of each calendar month, the amount of energy delivered to customers since the date of the last meter reading is estimated and the corresponding unbilled revenue is estimated and recorded. Our estimate of unbilled revenue is based on:

- the number of customers,
- current rates,
- meter reading dates,
- actual native load for electricity,
- actual throughput for natural gas, and
- electric line losses and natural gas system losses.

Any difference between actual and estimated revenue is automatically corrected in the following month when the actual meter reading and customer billing occurs.

Accounts receivable includes unbilled energy revenues of the following amounts as of December 31 (dollars in thousands):

	2016	2015
Unbilled accounts receivable	$ 72,377	$ 62,003

Other Non-Utility Revenues

Revenues from the other businesses are primarily derived from the operations of AM&D, doing business as METALfx, and are recognized when the risk of loss transfers to the customer, which occurs when products are shipped. In addition, prior to Spokane Energy's dissolution in 2015, there were revenues at Spokane Energy related to a long-term fixed rate electric capacity contract. This contract was transferred to Avista Corp. during the second quarter of 2015 and the revenues from this contract subsequent to the transfer are included in utility revenues.

Depreciation

For utility operations, depreciation expense is estimated by a method of depreciation accounting utilizing composite rates for utility plant. Such rates are designed to provide for retirements of properties at the expiration of their service lives. For utility operations, the ratio of depreciation provisions to average depreciable property was as follows for the years ended December 31:

	2016	2015	2014
Avista Utilities			
Ratio of depreciation to average depreciable property	3.11%	3.09%	2.97%
Alaska Electric Light and Power Company			
Ratio of depreciation to average depreciable property	2.39%	2.42%	2.43%

The average service lives for the following broad categories of utility plant in service are (in years):

	Avista Utilities	Alaska Electric Light and Power Company
Electric thermal/other production	41	41
Hydroelectric production	78	42
Electric transmission	57	41
Electric distribution	35	40
Natural gas distribution property	45	N/A
Other shorter-lived general plant	9	15

Taxes Other Than Income Taxes

Taxes other than income taxes include state excise taxes, city occupational and franchise taxes, real and personal property taxes and certain other taxes not based on income. These taxes are generally based on revenues or the value of property. Utility related taxes collected from customers (primarily state excise taxes and city utility taxes) are recorded as operating revenue and expense. Taxes other than income taxes consisted of the following items for the years ended December 31 (dollars in thousands):

	2016	2015	2014
Utility related taxes	$ 57,745	$ 59,173	$ 58,250
Property taxes	38,505	35,948	33,932
Other taxes	2,485	2,536	2,118
Total	$ 98,735	$ 97,657	$ 94,300

Allowance for Funds Used During Construction

AFUDC represents the cost of both the debt and equity funds used to finance utility plant additions during the construction period. As prescribed by regulatory authorities, AFUDC is capitalized as a part of the cost of utility plant. The debt component of AFUDC is credited against total interest expense in the Consolidated Statements of Income in the line item “capitalized interest.” The equity component of AFUDC is included in the Consolidated Statement of Income in the line item “other income-net.” The Company is permitted, under established regulatory rate practices, to recover the capitalized AFUDC, and a reasonable return thereon, through its inclusion in rate base and the provision for depreciation after the related utility plant is placed in service. Cash inflow related to AFUDC does not occur until the related utility plant is placed in service and included in rate base. The effective AFUDC rate was the following for the years ended December 31:

	2016	2015	2014
Avista Utilities			
Effective AFUDC rate	7.29%	7.32%	7.64%
Alaska Electric Light and Power Company			
Effective AFUDC rate	9.40%	9.31%	10.37%

Income Taxes

Deferred income tax assets represent future income tax deductions the Company expects to utilize in future tax returns to reduce taxable income. Deferred income tax liabilities represent future taxable income the Company expects to recognize in future tax returns. Deferred tax assets and liabilities arise when there are temporary differences resulting from differing treatment of items for tax and accounting purposes (such as depreciation). A deferred income tax asset or liability is determined based on the enacted tax rates that will be in effect when the temporary differences between the financial statement carrying amounts and tax basis of existing assets and liabilities are expected to be reported in the Company’s consolidated income tax returns. The deferred income tax expense for the period is equal to the net change in the deferred income tax asset and liability accounts from the beginning to the end of the period. The effect on deferred income taxes from a change in tax rates is recognized in income in the period that includes the enactment date unless a regulatory order specifies deferral of the effect of the change in tax rates over a longer period of time. The Company establishes a valuation allowance when it is more likely than not that all, or a portion, of a deferred tax asset will not be realized. Deferred income tax liabilities and regulatory assets are established for income tax benefits flowed through to customers. The Company did not incur any penalties on income tax positions in 2016, 2015 or 2014. The Company would recognize interest accrued related to income tax positions as interest expense and any penalties incurred as other operating expense.

Stock-Based Compensation

The Company currently issues three types of stock-based compensation awards - restricted shares, market-based awards and performance-based awards. Historically, these stock compensation awards have not been material to the Company's overall financial results. Compensation cost relating to share-based payment transactions is recognized in the Company’s financial statements based on the fair value of the equity or liability instruments issued and recorded over the requisite service period.

The Company recorded stock-based compensation expense (included in other operating expenses) and income tax benefits in the Consolidated Statements of Income of the following amounts for the years ended December 31 (dollars in thousands):

	2016	2015	2014
Stock-based compensation expense	$ 7,891	$ 6,914	$ 6,007
Income tax benefits (1)	4,359	2,420	2,102

(1) Income tax benefits for 2016 include $1.6 million associated with excess tax benefits on settled share-based employee payments. The excess tax benefits were recognized in the Statement of Income for 2016 due to the adoption of ASU 2016-09, effective January 1, 2016. See Note 2 for further discussion.

Restricted share awards vest in equal thirds each year over a three-year period and are payable in Avista Corp. common stock at the end of each year if the service condition is met. In addition to the service condition, the Company must meet a return on equity target in order for the Chief Executive Officer's restricted shares to vest. Restricted stock is valued at the close of market of the Company’s common stock on the grant date.

Total Shareholder Return (TSR) awards are market-based awards and Cumulative Earnings Per Share (CEPS) awards are performance awards. CEPS awards were first granted in 2014. Both types of awards vest after a period of three years and are payable in cash or Avista Corp. common stock at the end of the three-year period. The method of settlement is at the discretion of the Company and historically the Company has settled these awards through issuance of Avista Corp. common stock and intends to continue this practice. Both types of awards entitle the recipients to dividend equivalent rights, are subject to forfeiture under certain circumstances, and are subject to meeting specific market or performance conditions. Based on the level of attainment of the market or performance conditions, the amount of cash paid or common stock issued will range from 0 to 200 percent of the initial awards granted. Dividend equivalent rights are accumulated and paid out only on shares that eventually vest and have met the market and performance conditions.

For both the TSR awards and the CEPS awards, the Company accounts for them as equity awards and compensation cost for these awards is recognized over the requisite service period, provided that the requisite service period is rendered. For TSR awards, if the market condition is not met at the end of the three-year service period, there will be no change in the cumulative amount of compensation cost recognized, since the awards are still considered vested even though the market metric was not met. For CEPS awards, at the end of the three-year service period, if the internal performance metric of cumulative earnings per share is not met, all compensation cost for these awards is reversed as these awards are not considered vested.

The fair value of each TSR award is estimated on the date of grant using a statistical model that incorporates the probability of meeting the market targets based on historical returns relative to a peer group. The estimated fair value of the equity component of CEPS awards was estimated on the date of grant as the share price of Avista Corp. common stock on the date of grant, less the net present value of the estimated dividends over the three-year period.

The following table summarizes the number of grants, vested and unvested shares, earned shares (based on market metrics), and other pertinent information related to the Company's stock compensation awards for the years ended December 31:

	2016	2015	2014
Restricted Shares			
Shares granted during the year	58,610	58,302	62,075
Shares vested during the year	(52,385)	(60,379)	(52,899)
Unvested shares at end of year	109,806	106,091	112,042
Unrecognized compensation expense at end of year (in thousands)	$ 1,853	$ 1,705	$ 1,349
TSR Awards			
TSR shares granted during the year	116,435	116,435	117,550
TSR shares vested during the year	(111,665)	(171,334)	(167,584)
TSR shares earned based on market metrics	132,887	222,734	97,199
Unvested TSR shares at end of year	222,228	223,697	287,834
Unrecognized compensation expense (in thousands)	$ 3,409	$ 3,219	$ 2,833
CEPS Awards			
CEPS shares granted during the year	57,521	58,259	59,025
CEPS shares vested during the year	(55,835)	—	—
CEPS shares earned based on market metrics	90,460	—	—
Unvested CEPS shares at end of year	110,452	111,887	58,017
Unrecognized compensation expense (in thousands)	$ 1,671	$ 1,840	$ 1,577

Outstanding TSR and CEPS share awards include a dividend component that is paid in cash. This component of the share grants is accounted for as a liability award. These liability awards are revalued on a quarterly basis taking into account the number of awards outstanding, historical dividend rate, the change in the value of the Company’s common stock relative to an external benchmark (TSR awards only) and the amount of CEPS earned to date compared to estimated CEPS over the performance period (CEPS awards only). Over the life of these awards, the cumulative amount of compensation expense recognized will match the actual cash paid. As of December 31, 2016 and 2015, the Company had recognized cumulative compensation expense and a liability of $1.5 million, respectively, related to the dividend component on the outstanding and unvested share grants.

Other Income - Net

Other Income - net consisted of the following items for the years ended December 31 (dollars in thousands):

	2016	2015	2014
Interest income	$ 1,823	$ 653	$ 987
Interest on regulatory deferrals	1,308	48	220
Equity-related AFUDC	8,475	8,331	8,808
Net gain (loss) on investments	(2,152)	(637)	276
Other income	624	905	1,055
Total	$ 10,078	$ 9,300	$ 11,346

Earnings per Common Share Attributable to Avista Corporation Shareholders

Basic earnings per common share attributable to Avista Corp. shareholders is computed by dividing net income attributable to Avista Corp. shareholders by the weighted-average number of common shares outstanding for the period. Diluted earnings per common share attributable to Avista Corp. shareholders is calculated by dividing net income attributable to Avista Corp. shareholders (adjusted for the effect of potentially dilutive securities issued to noncontrolling interests by the Company's subsidiaries) by diluted weighted-average common shares outstanding during the period, including common stock equivalent shares outstanding using the treasury stock method, unless such shares are anti-dilutive. Common stock equivalent shares include shares issuable upon exercise of stock options and contingent stock awards. See Note 18 for earnings per common share calculations.

Cash and Cash Equivalents

For the purposes of the Consolidated Statements of Cash Flows, the Company considers all temporary investments with a maturity of three months or less when purchased to be cash equivalents.

Allowance for Doubtful Accounts

The Company maintains an allowance for doubtful accounts to provide for estimated and potential losses on accounts receivable. The Company determines the allowance for utility and other customer accounts receivable based on historical write-offs as compared to accounts receivable and operating revenues. Additionally, the Company establishes specific allowances for certain individual accounts. The following table presents the activity in the allowance for doubtful accounts during the years ended December 31 (dollars in thousands):

	2016	2015	2014
Allowance as of the beginning of the year	$ 4,530	$ 4,888	$ 44,309
Additions expensed during the year	6,053	5,802	5,296
Net deductions (1)	(5,557)	(6,160)	(44,717)
Allowance as of the end of the year	$ 5,026	$ 4,530	$ 4,888

(1) During 2014, the Company received $15.0 million in gross proceeds related to the settlement of its California wholesale power markets litigation. The gross proceeds effectively settled all outstanding receivables and payables at Avista Energy (which had been fully reserved against since 2001). As a result of the settlement, the Company reversed $15.0 million of the allowance, which was recorded as a reduction to non-utility other operating expenses on the Consolidated Statements of Income, and the remainder of the receivables, payables and allowance of $24.5 million were removed from the Consolidated Balance Sheets (and had no effect on net income).

Materials and Supplies, Fuel Stock and Stored Natural Gas

Inventories of materials and supplies, fuel stock and stored natural gas are recorded at average cost for our regulated operations and the lower of cost or market for our non-regulated operations and consisted of the following as of December 31 (dollars in thousands):

	2016	2015
Materials and supplies	$ 40,700	$ 37,101
Fuel stock	4,585	4,273
Stored natural gas	8,029	12,774
Total	$ 53,314	$ 54,148

Utility Plant in Service

The cost of additions to utility plant in service, including an allowance for funds used during construction and replacements of units of property and improvements, is capitalized. The cost of depreciable units of property retired plus the cost of removal less salvage is charged to accumulated depreciation.

Asset Retirement Obligations

The Company records the fair value of a liability for an ARO in the period in which it is incurred. When the liability is initially recorded, the associated costs of the ARO are capitalized as part of the carrying amount of the related long-lived asset. The liability is accreted to its present value each period and the related capitalized costs are depreciated over the useful life of the related asset. In addition, if there are changes in the estimated timing or estimated costs of the AROs, adjustments are recorded during the period new information becomes available as an increase or decrease to the liability, with the offset recorded to the related long-lived asset. Upon retirement of the asset, the Company either settles the ARO for its recorded amount or incurs a gain or loss. The Company records regulatory assets and liabilities for the difference between asset retirement costs currently recovered in rates and AROs recorded since asset retirement costs are recovered through rates charged to customers (see Note 9 for further discussion of the Company's asset retirement obligations).

The Company recovers certain asset retirement costs through rates charged to customers as a portion of its depreciation expense for which the Company has not recorded asset retirement obligations. The Company has recorded the amount of estimated retirement costs collected from customers (that do not represent legal or contractual obligations) and included them as a regulatory liability on the Consolidated Balance Sheets in the following amounts as of December 31 (dollars in thousands):

	2016	2015
Regulatory liability for utility plant retirement costs	$ 273,983	$ 261,594

Goodwill

Goodwill arising from acquisitions represents the future economic benefit arising from other assets acquired in a business combination that are not individually identified and separately recognized. The Company evaluates goodwill for impairment using a qualitative analysis (Step 0) for AEL&P and a combination of discounted cash flow models and a market approach for the other subsidiaries on at least an annual basis or more frequently if impairment indicators arise. The Company completed its annual evaluation of goodwill for potential impairment as of November 30, 2016 and determined that goodwill was not impaired at that time.

The changes in the carrying amount of goodwill are as follows (dollars in thousands):

	AEL&P	Other	Accumulated Impairment	Total
Balance as of January 1, 2015	$ 52,730	$ 12,979	$ (7,733)	$ 57,976
Adjustments	(304)	—	—	(304)
Balance as of the December 31, 2015	52,426	12,979	(7,733)	57,672
Balance as of the December 31, 2016	$ 52,426	$ 12,979	$ (7,733)	$ 57,672

Accumulated impairment losses are attributable to the other businesses. The goodwill adjustments recorded during 2015 relate to the final true-up of income taxes associated with the acquisition of AERC, which occurred on July 1, 2014. See Note 4 for information regarding this business acquisition and Note 21 regarding the Company's reportable segments.

Derivative Assets and Liabilities

Derivatives are recorded as either assets or liabilities on the Consolidated Balance Sheets measured at estimated fair value.

The UTC and the IPUC issued accounting orders authorizing Avista Corp. to offset energy commodity derivative assets or liabilities with a regulatory asset or liability. This accounting treatment is intended to defer the recognition of mark-to-market gains and losses on energy commodity transactions until the period of delivery. Realized benefits and costs result in adjustments to retail rates through PGAs, the ERM in Washington, the PCA mechanism in Idaho, and periodic general rates cases. The resulting regulatory assets have been concluded to be probable of recovery through future rates.

Substantially all forward contracts to purchase or sell power and natural gas are recorded as derivative assets or liabilities at estimated fair value with an offsetting regulatory asset or liability. Contracts that are not considered derivatives are accounted for on the accrual basis until they are settled or realized unless there is a decline in the fair value of the contract that is determined to be other-than-temporary.

For interest rate swap derivatives, Avista Corp. records all mark-to-market gains and losses in each accounting period as assets and liabilities, as well as offsetting regulatory assets and liabilities, such that there is no income statement impact. The interest rate swap derivatives are risk management tools similar to energy commodity derivatives. Upon settlement of interest rate swap derivatives, the regulatory asset or liability is amortized as a component of interest expense over the term of the associated debt. The Company records an offset of interest rate swap derivative assets and liabilities with regulatory assets and liabilities, based on the prior practice of the commissions to provide recovery through the ratemaking process.

As of December 31, 2016, the Company has multiple master netting agreements with a variety of entities that allow for cross-commodity netting of derivative agreements with the same counterparty (i.e. power derivatives can be netted with natural gas derivatives). In addition, some master netting agreements allow for the netting of commodity derivatives and interest rate swap derivatives for the same counterparty. The Company does not have any agreements which allow for cross-affiliate netting among multiple affiliated legal entities. The Company nets all derivative instruments when allowed by the agreement for presentation in the Consolidated Balance Sheets.

Fair Value Measurements

Fair value represents the price that would be received when selling an asset or paid to transfer a liability (an exit price) in an orderly transaction between market participants at the measurement date. Energy commodity derivative assets and liabilities, deferred compensation assets, as well as derivatives related to interest rate swap derivatives and foreign currency exchange derivatives, are reported at estimated fair value on the Consolidated Balance Sheets. See Note 16 for the Company’s fair value disclosures.

Regulatory Deferred Charges and Credits

The Company prepares its consolidated financial statements in accordance with regulatory accounting practices because:

- rates for regulated services are established by or subject to approval by independent third-party regulators,
- the regulated rates are designed to recover the cost of providing the regulated services, and
- in view of demand for the regulated services and the level of competition, it is reasonable to assume that rates can be charged to and collected from customers at levels that will recover costs.

Regulatory accounting practices require that certain costs and/or obligations (such as incurred power and natural gas costs not currently included in rates, but expected to be recovered or refunded in the future), are reflected as deferred charges or credits on the Consolidated Balance Sheets. These costs and/or obligations are not reflected in the Consolidated Statements of Income until the period during which matching revenues are recognized. The Company also has decoupling revenue deferrals. Decoupling revenue deferrals are recognized in the Consolidated Statements of Income during the period they occur (i.e. during the period of revenue shortfall or excess due to fluctuations in customer usage), subject to certain limitations, and a regulatory asset/liability is established which will be surcharged or rebated to customers in future periods. GAAP requires that for any alternative regulatory revenue program, like decoupling, the revenue must be expected to be collected from customers within 24 months of the deferral to qualify for recognition in the current period Consolidated Statement of Income. Any amounts included in the Company's decoupling program that are not expected to be collected from customers within 24 months are not recorded in the financial statements until the period in which revenue recognition criteria are met. This could ultimately result in decoupling revenue being recognized in a future period.

If at some point in the future the Company determines that it no longer meets the criteria for continued application of regulatory accounting practices for all or a portion of its regulated operations, the Company could be:

- required to write off its regulatory assets, and
- precluded from the future deferral of costs or decoupled revenues not recovered through rates at the time such amounts are incurred, even if the Company expected to recover these amounts from customers in the future.

See Note 20 for further details of regulatory assets and liabilities.

Unamortized Debt Expense

Unamortized debt expense includes debt issuance costs that are amortized over the life of the related debt. These costs are recorded as an offset to Long-Term Debt and Capital Leases on the Consolidated Balance Sheets.

Unamortized Debt Repurchase Costs

For the Company’s Washington regulatory jurisdiction and for any debt repurchases beginning in 2007 in all jurisdictions, premiums paid to repurchase debt are amortized over the remaining life of the original debt that was repurchased or, if new debt is issued in connection with the repurchase, these costs are amortized over the life of the new debt. In the Company’s other regulatory jurisdictions, premiums paid to repurchase debt prior to 2007 are being amortized over the average remaining maturity of outstanding debt when no new debt was issued in connection with the debt repurchase. These costs are recovered through retail rates as a component of interest expense.

Accumulated Other Comprehensive Loss

Accumulated other comprehensive loss, net of tax, consisted of the following as of December 31 (dollars in thousands):

	2016	2015
Unfunded benefit obligation for pensions and other postretirement benefit plans - net of taxes of $4,075 and $3,580, respectively	$ 7,568	$ 6,650

The following table details the reclassifications out of accumulated other comprehensive loss by component for the years ended December 31 (dollars in thousands):

	Amounts Reclassified from Accumulated Other Comprehensive Loss			
Details about Accumulated Other Comprehensive Loss Components	2016	2015	2014	Affected Line Item in Statement of Income
Realized gains on investment securities	$ —	$ —	$ (3)	(a)
Realized losses on investment securities	—	—	735	(a)
	—	—	732	Total before tax
	—	—	(272)	Tax expense (a)
	$ —	$ —	$ 460	Net of tax
Amortization of defined benefit pension items				
Amortization of net prior service cost	$ (1,171)	$ 31	$ (1,094)	(b)
Amortization of net loss	(7,602)	2,623	(83,301)	(b)
Adjustment due to effects of regulation	7,360	(749)	78,773	(b)
	(1,413)	1,905	(5,622)	Total before tax
	495	(667)	1,967	Tax benefit (expense)
	$ (918)	$ 1,238	$ (3,655)	Net of tax

(a) These amounts were included as part of net income from discontinued operations for all periods presented (see Note 5 for additional details).

(b) These accumulated other comprehensive loss components are included in the computation of net periodic pension cost (see Note 10 for additional details).

Appropriated Retained Earnings

In accordance with the hydroelectric licensing requirements of section 10(d) of the Federal Power Act (FPA), the Company maintains an appropriated retained earnings account for any earnings in excess of the specified rate of return on the Company's investment in the licenses for its various hydroelectric projects. Per section 10(d) of the FPA, the Company must maintain these excess earnings in an appropriated retained earnings account until the termination of the licensing agreements or apply them to reduce the net investment in the licenses of the hydroelectric projects at the discretion of the FERC. The Company typically calculates the earnings in excess of the specified rate of return on an annual basis, usually during the second quarter.

In addition to the hydroelectric project licenses identified above for Avista Utilities, the requirements of section 10(d) of the FPA also apply to the AEL&P licenses for Lake Dorothy and Annex Creek/Salmon Creek (combined).

The appropriated retained earnings amounts included in retained earnings were as follows as of December 31 (dollars in thousands):

	2016	2015
Appropriated retained earnings	$ 25,564	$ 21,030

Operating Leases

The Company has multiple lease arrangements involving various assets, with minimum terms ranging from 1 to 45 years. Future minimum lease payments required under operating leases having initial or remaining noncancelable lease terms in excess of one year were not material as of December 31, 2016.

Capital Leases

The Company has two capital leases, one at Avista Corp. and one at AEL&P. The capital lease at Avista Corp. expires in 2018 and is not material to the financial statements as of December 31, 2016. The capital lease at AEL&P is a PPA (treated as a lease for accounting purposes) related to the Snettisham Hydroelectric Project that expires in 2034. While the two leases are treated as capital leases for accounting purposes, for ratemaking purposes these agreements are treated as operating leases with a constant level of annual rental expense (straight line expense). Because of this regulatory treatment, any difference between the operating lease expense for ratemaking purposes and the expenses recognized under capital lease treatment (interest and depreciation of the capital lease asset) is recorded as a regulatory asset and amortized during the later years of the lease when the capital lease expense is less than the operating lease expense included in base rates. See Note 14 for further discussion of the Snettisham capital lease.

Contingencies

The Company has unresolved regulatory, legal and tax issues which have inherently uncertain outcomes. The Company accrues a loss contingency if it is probable that a liability has been incurred and the amount of the loss or impairment can be reasonably estimated. The Company also discloses losses that do not meet these conditions for accrual, if there is a reasonable possibility that a material loss may be incurred. As of December 31, 2016, the Company has not recorded any significant amounts related to unresolved contingencies. See Note 19 for further discussion of the Company's commitments and contingencies.

NOTE 2. NEW ACCOUNTING STANDARDS

ASU No. 2014-09, "”Revenue from Contracts with Customers (Topic 606)"

In May 2014, the FASB issued ASU No. 2014-09, which outlines a single comprehensive model for entities to use in accounting for revenue arising from contracts with customers and supersedes most current revenue recognition guidance, including industry-specific guidance. The core principle of the revenue model is that an entity should identify the various performance obligations in a contract, allocate the transaction price among the performance obligations and recognize revenue when (or as) the entity satisfies each performance obligation. This ASU was originally effective for periods beginning after December 15, 2016 and early adoption was not permitted. In August 2015, the FASB issued ASU No. 2015-14, "Revenue from Contracts with Customers (Topic 606): Deferral of the Effective Date," which deferred the effective date of ASU No. 2014-09 for one year, with adoption as of the original date permitted.

The Company has formed a revenue recognition standard implementation team that is working through several implementation issues described below. The Company has evaluated this standard and is planning to adopt this standard in 2018 upon its effective date. The Company is currently expecting to use a modified retrospective method of adoption, which would require a cumulative adjustment to opening retained earnings, as opposed to a full retrospective application. The Company is not far enough along in the adoption process to determine the amount, if any, of cumulative adjustment necessary.

Since the vast majority of Avista Corp.’s revenue is from rate-regulated sales of electricity and natural gas to retail customers and revenue is recognized as energy is delivered to these customers, the Company does not expect a significant change in operating revenues or net income. The Company is in the process of reviewing and analyzing certain contracts with customers (most of which are related to wholesale sales of power and natural gas), but has not yet identified any significant differences in revenue recognition between current GAAP and ASU 2014-09.

During the implementation process, the Company has identified several unresolved issues, the most significant of which are as follows based on our current assessment:

Contributions in Aid of Construction – There is the potential that CIACs could be recognized as revenue upon the adoption of ASU 2014-09. Under current GAAP, CIACs are accounted for as an offset to the cost of utility plant in service.

Utility Related Taxes Collected from Customers – There are questions on the presentation of utility related taxes collected from customers (primarily state excise taxes and city utility taxes) on a gross basis. Under current GAAP, the Company is allowed to record these utility related taxes on a gross basis in revenue when billed to customers with an offset included in taxes other than income taxes in operating expenses. The Company is evaluating whether this presentation is appropriate under ASU 2014-09 or whether they should be presented on a net basis. To qualify for gross presentation under the new guidance, the Company must perform an analysis to determine if it is the principal or the agent in regards to utility related taxes.

Collectibility - There are questions regarding the requirement that collection of a sale be probable and how, or if, utilities should consider bad debt collection mechanisms (riders, base rate adjustments, etc.) in assessing probability of collection on sales to low income customers. Within the utility industry, there is support for and against considering these recovery mechanisms when assessing collectibility of a sale. If the bad debt recovery mechanisms cannot be considered, there is the potential that certain sales to low income customers cannot be recognized as revenue until payment is received from the customers, which could result in revenues being recognized in periods other than when the energy was delivered to customers or not recognized at all.

The Company is monitoring utility industry implementation guidance as it relates to unresolved issues to determine if there will be an industry consensus regarding accounting and presentation of these items.

ASU No. 2015-02, "Consolidation (Topic 810): Amendments to the Consolidation Analysis"

In February 2015, the FASB issued ASU No. 2015-02. This ASU changes the consolidation analysis required under GAAP, including the identification of variable interest entities (VIE). The ASU also removes the deferral of the VIE analysis related to investments in certain investment funds, which results in a different consolidation evaluation for these types of investments. The Company adopted this standard effective January 1, 2016. The adoption of this standard resulted in the identification of several Avista Corp. investments in limited partnerships (or a functional equivalent) that are now considered VIEs under the new standard. Consolidation of these VIEs by Avista Corp. is not required because the Company does not have majority ownership in any of the entities, it does not have the power to direct any activities of the entities and it does not have the power to appoint executive leadership (including the board of directors). Avista Corp.'s total investment in these entities is not material and it does not have any additional commitments to these VIEs beyond the initial investment. See Note 3 for additional discussion of VIEs.

ASU No. 2016-02 "Leases (Topic 842)."

In February 2016, the FASB issued ASU No. 2016-02. This ASU introduces a new lessee model that requires most leases to be capitalized and shown on the balance sheet with corresponding lease assets and liabilities. The standard also aligns certain of the underlying principles of the new lessor model with those in Topic 606, the FASB's new revenue recognition standard. Furthermore, this ASU addresses other issues that arise under the current lease model; for example, eliminating the required use of bright-line tests in current GAAP for determining lease classification (operating leases versus capital leases). This ASU also includes enhanced disclosures surrounding leases. This ASU is effective for periods beginning on or after December 15, 2018; however, early adoption is permitted. Upon adoption, this ASU must be applied using a modified retrospective approach to the earliest period presented, which will likely require restatements of previously issued financial statements. The modified retrospective approach includes a number of optional practical expedients that entities may elect to apply. The Company evaluated this standard and determined that it will most likely not early adopt this standard before its effective date in 2019. The Company has formed a lease standard implementation team that is working through the implementation process. The most significant implementation challenge identified thus far relates to identifying a complete population of leases and potential leases under the new lease standard. Also, the Company is monitoring utility industry implementation guidance as it relates to several unresolved issues to determine if there will be an industry consensus, including whether right-of-ways are considered leases. The Company cannot, at this time, estimate the potential impact on its future financial condition, results of operations and cash flows.

ASU No. 2016-09 "”Compensation—Stock Compensation (Topic 718): Improvements to Employee Share-Based Payment Accounting."

In March 2016, the FASB issued ASU No. 2016-09. This ASU simplifies several aspects of the accounting for employee share-based payment transactions including:

- allowing excess tax benefits or tax deficiencies to be recognized as income tax benefits or expenses in the Consolidated Statements of Income rather than in Additional Paid in Capital (APIC),
- excess tax benefits no longer represent a financing cash inflow on the Consolidated Statements of Cash Flows and instead will be included as an operating activity,
- excess tax benefits and tax deficiencies will be excluded from the calculation of diluted earnings per share, whereas under current accounting guidance, these amounts must be estimated and included in the calculation,
- allowing forfeitures to be accounted for as they occur, instead of estimating forfeitures, and
- changing the statutory tax withholding requirements for share-based payments.

This ASU is effective for periods beginning after December 15, 2016 and early adoption is permitted. The Company early adopted this standard during the second quarter of 2016, with a retrospective effective date of January 1, 2016. The adoption of this standard resulted in a recognized income tax benefit of $1.6 million in 2016 associated with excess tax benefits on settled share-based employee payments. In addition, the Consolidated Statement of Cash Flows for 2016 included the excess tax benefits as an operating activity rather than as a financing activity. Periods prior to 2016 were not restated for the adoption of this accounting standard as the Company has adopted this standard on a prospective basis beginning January 1, 2016.

NOTE 3. VARIABLE INTEREST ENTITIES

Lancaster Power Purchase Agreement

The Company has a PPA for the purchase of all the output of the Lancaster Plant, a 270 MW natural gas-fired combined cycle combustion turbine plant located in Kootenai County, Idaho, owned by an unrelated third-party (Rathdrum Power LLC), through 2026.

Avista Corp. has a variable interest in the PPA. Accordingly, Avista Corp. made an evaluation of which interest holders have the power to direct the activities that most significantly impact the economic performance of the entity and which interest holders have the obligation to absorb losses or receive benefits that could be significant to the entity. Avista Corp. pays a fixed capacity and operations and maintenance payment and certain monthly variable costs under the PPA. Under the terms of the PPA, Avista Corp. makes the dispatch decisions, provides all natural gas fuel and receives all of the electric energy output from the Lancaster Plant. However, Rathdrum Power LLC (the owner) controls the daily operation of the Lancaster Plant and makes operating and maintenance decisions. Rathdrum Power LLC controls all of the rights and obligations of the Lancaster Plant after the expiration of the PPA in 2026 and Avista Corp. does not have any further obligations after the expiration. It is estimated that the plant will have 15 to 25 years of useful life after that time. Rathdrum Power LLC bears the maintenance risk of the plant and will receive the residual value of the Lancaster Plant. Avista Corp. has no debt or equity investments in the Lancaster Plant and does not provide financial support through liquidity arrangements or other commitments (other than the PPA). Based on its analysis, Avista Corp. does not consider itself to be the primary beneficiary of the Lancaster Plant. Accordingly, neither the Lancaster Plant nor Rathdrum Power LLC is included in Avista Corp.’s consolidated financial statements. The Company has a future contractual obligation of approximately $283.6 million under the PPA (representing the fixed capacity and operations and maintenance payments through 2026) and believes this would be its maximum exposure to loss. However, the Company believes that such costs will be recovered through retail rates.

Limited Partnerships and Similar Entities

The Company adopted ASU No. 2015-02 effective January 1, 2016. As a result of the adoption of this ASU, the Company evaluated all of its existing investments to determine if any entities would be considered VIEs under the new guidance and whether consolidation would be required. Under the ASU, a limited partnership or similar legal entity that is the functional equivalent of a limited partnership would be considered a VIE regardless of whether it otherwise qualifies as a voting interest entity unless a simple majority or lower threshold of the “unrelated” limited partners (i.e., parties other than the general partner, entities under common control with the general partner, and other parties acting on behalf of the general partner) have substantive kick-out rights (including liquidation rights) or participating rights.

The Company has six investments in limited partnerships (or the functional equivalent) where Avista Corp. is a limited partner investor in an investment fund where the general partner makes all of the investment and operating decisions with regards to the partnership and fund. To remove the general partner from any of the funds, approval from greater than a simple majority of the limited partners is required. As such, the limited partners do not have substantive kick-out rights and these investments are considered VIEs. Consolidation of these VIEs by Avista Corp. is not required because the Company does not have majority ownership in any of the funds, it does not have the power to direct any activities of the funds, and it does not have the power to appoint executive leadership, including the board of directors.

Avista Corp. participates in profits and losses of the investment funds based on its ownership percentage and its losses are capped at its total initial investment in the funds. For five of the six VIEs, Avista Corp. does not have any additional commitments beyond its initial investment. For the sixth VIE, Avista Corp. has up to a $25.0 million total commitment, and as of December 31, 2016, has invested $2.1 million, leaving $22.9 million remaining to be invested. In addition, the Company is not allowed to withdraw any capital contributions from the investment funds until after the funds' expiration dates and all liabilities of the funds are settled. The expiration dates range from 2017 to 2032, with one investment having no termination date (as it is perpetual). As of December 31, 2016, the Company has a total carrying amount in these investment funds of $7.0 million.

NOTE 4. BUSINESS ACQUISITIONS

Alaska Energy and Resources Company

On July 1, 2014, the Company acquired AERC, based in Juneau, Alaska, and as of that date, AERC became a wholly-owned subsidiary of Avista Corp.

The primary subsidiary of AERC is AEL&P, a regulated utility which provides electric services to approximately 17,000 customers in Juneau, Alaska. In addition to the regulated utility, AERC owns AJT Mining, which is an inactive mining company holding certain properties.

The purpose of the acquisition was to expand and diversify Avista Corp.'s energy assets and deliver long-term value to its customers, communities and investors.

In connection with the closing, Avista Corp. issued 4,501,441 new shares of common stock to the shareholders of AERC based on a contractual formula that resulted in a price of $32.46 per share, reflecting a purchase price of $170.0 million, plus acquired cash, less outstanding debt and other closing adjustments. Avista Corp. also paid $4.8 million in cash. The total fair value of all consideration transferred was $154.9 million and resulted in goodwill of $52.4 million, which is not deductible for tax purposes.

The fair value of assets acquired and liabilities assumed as of July 1, 2014 (after consideration of a working capital adjustment and income tax true-ups during the second quarter of 2015) were as follows (in thousands):

	July 1, 2014
Assets acquired:	
Current Assets:	
Cash	$ 19,704
Accounts receivable - gross totals $3,928	3,851
Materials and supplies	2,017
Other current assets	999
Total current assets	26,571
Utility Property:	
Utility plant in service	113,964
Utility property under long-term capital lease	71,007
Construction work in progress	3,440
Total utility property	188,411
Other Non-current Assets:	
Non-utility property	6,660
Electric plant held for future use	3,711
Goodwill (1)	52,426
Other deferred charges and non-current assets	5,368
Total other non-current assets	68,165
Total assets	$ 283,147
Liabilities Assumed:	
Current Liabilities:	
Accounts payable	$ 700
Current portion of long-term debt and capital lease obligations	3,773
Other current liabilities (1)	2,807
Total current liabilities	7,280
Long-term debt	37,227
Capital lease obligations	68,840
Other non-current liabilities and deferred credits (1)	14,889
Total liabilities	$ 128,236
Total net assets acquired	$ 154,911

(1) During the second quarter of 2015, the Company recorded a reduction to goodwill of approximately $0.3 million due to income tax related adjustments.

The majority of AERC's operations are subject to the rate-setting authority of the RCA and are accounted for pursuant to GAAP, including the accounting guidance for regulated operations. The rate-setting and cost recovery provisions currently in place for AERC's regulated operations provide revenues derived from costs, including a return on investment, of assets and liabilities included in rate base. Due to this regulation, the fair values of AERC's assets and liabilities subject to these rate-setting provisions were assumed to approximate their carrying values. There were not any identifiable intangible assets associated with this acquisition. The excess of the purchase consideration over the estimated fair values of the assets acquired and liabilities assumed was recognized as goodwill at the acquisition date. The goodwill reflects the value paid for the expected continued growth of a rate-regulated business located in a defined service area with a constructive regulatory environment, the attractiveness of stable, growing cash flows, as well as providing a platform for potential future growth outside of the rate-regulated electric utility in Alaska and potential additional utility investment.

The following table summarizes the supplemental pro forma information for the years ended December 31 related to the acquisition of AERC as if the acquisition had occurred on January 1, 2013 (dollars in thousands - unaudited):

	2016	2015	2014
Actual Avista Corp. revenues from continuing operations (excluding AERC)	$ 1,395,989	$ 1,439,807	$ 1,450,918
Supplemental pro forma AERC revenues (1)	46,494	44,969	46,467
Total pro forma revenues	1,442,483	1,484,776	1,497,385
Actual AERC revenues included in Avista Corp. revenues (1)	46,494	44,969	21,644
Actual Avista Corp. net income from continuing operations attributable to Avista Corp. shareholders (excluding AERC)	129,505	111,772	116,665
Actual Avista Corp. net income from discontinued operations attributable to Avista Corp. shareholders	—	5,147	72,224
Adjustment to Avista Corp.'s net income for acquisition costs (net of tax) (2)	—	22	870
Supplemental pro forma AERC net income (1)	7,723	6,308	8,806
Total pro forma net income	137,228	123,249	198,565
Actual AERC net income included in Avista Corp. net income (1)	$ 7,723	$ 6,308	$ 3,152

(1) AERC was acquired on July 1, 2014; therefore, all the revenues and net income for the second half of 2014 through 2016 are actual amounts that are included in Avista Corp.'s overall results. All revenue and net income amounts prior to July 1, 2014 are supplemental pro forma amounts and are excluded from Avista Corp.'s overall results.

(2) This adjustment is to treat all transaction costs as if they occurred on January 1, 2013 and to remove them from the periods in which they actually occurred. The transaction costs were expensed and presented in the Consolidated Statements of Income in other operating expenses within utility operating expenses. Since the start of the transaction through December 31, 2016, Avista Corp. has expensed $3.0 million (pre-tax) in total transaction fees. In addition to the amounts expensed, through December 31, 2016, Avista Corp. has included $0.4 million in fees associated with the issuance of common stock for the transaction as a reduction to common stock. These fees do not impact the supplemental pro forma information above.

NOTE 5. DISCONTINUED OPERATIONS

On June 30, 2014, Avista Capital, completed the sale of its interest in Ecova to Cofely USA Inc., an unrelated party to Avista Corp. The sales price was $335.0 million in cash, less the payment of debt and other customary closing adjustments. At the closing of the transaction on June 30, 2014, Ecova became a wholly-owned subsidiary of Cofely USA Inc. and the Company has not had and will not have any further involvement with Ecova after such date.

The purchase price of $335.0 million, as adjusted, was divided among all the security holders of Ecova pro rata based on ownership. After consideration of all escrow amounts received, the sales transaction provided cash proceeds to Avista Corp., net of debt, payment to option and minority holders, income taxes and transaction expenses, of $143.7 million, and resulted in a net gain of $74.8 million. Almost all of the net gain was recognized in 2014 with some true-ups during 2015.

Prior to the completion of the sales transaction, Ecova was a reportable business segment. The following table presents amounts that were included in discontinued operations for the years ended December 31, 2015 and 2014 (dollars in thousands):

	2015	2014
Revenues	$ —	$ 87,534
Gain on sale of Ecova (1)	777	160,612
Transaction expenses and accelerated employee benefits (2)	71	9,062
Gain on sale of Ecova, net of transaction expenses	706	151,550
Income before income taxes	706	156,025
Income tax expense (benefit) (3)	(4,441)	83,614
Net income from discontinued operations	5,147	72,411
Net income attributable to noncontrolling interests	—	(187)
Net income from discontinued operations attributable to Avista Corp. shareholders	$ 5,147	$ 72,224

(1) This represents the gross gain recorded to discontinued operations. The total gain net of taxes and transactions expenses was $74.8 million, of which $69.7 million was recognized during 2014.

(2) Avista Corp.'s portion of the total transaction expenses was $9.1 million (including amounts which were withheld from the transaction net proceeds). All transaction expenses paid on the Ecova sale (including Avista Corp.'s portion and the portion attributable to the minority interest holders of Ecova) were $11.1 million, of which $5.5 million was withheld from the net proceeds and the remainder was paid during 2014. The transaction expenses were for legal, accounting and other consulting fees, and the accelerated employee benefits related to employee stock options which were settled in accordance with the Ecova equity plan.

(3) The tax benefit during 2015 primarily resulted from the reversal of a valuation allowance against net operating losses at Ecova because the net operating losses were deemed realizable after further evaluation.

NOTE 6. DERIVATIVES AND RISK MANAGEMENT

Energy Commodity Derivatives

Avista Utilities is exposed to market risks relating to changes in electricity and natural gas commodity prices and certain other fuel prices. Market risk is, in general, the risk of fluctuation in the market price of the commodity being traded and is influenced primarily by supply and demand. Market risk includes the fluctuation in the market price of associated derivative commodity instruments. Avista Utilities utilizes derivative instruments, such as forwards, futures, swaps and options in order to manage the various risks relating to these commodity price exposures. The Company has an energy resources risk policy and control procedures to manage these risks.

As part of the Company's resource procurement and management operations in the electric business, the Company engages in an ongoing process of resource optimization, which involves the economic selection from available energy resources to serve the Company's load obligations and the use of these resources to capture available economic value. The Company transacts in wholesale markets by selling and purchasing electric capacity and energy, fuel for electric generation, and derivative contracts related to capacity, energy and fuel. Such transactions are part of the process of matching resources with load obligations and hedging the related financial risks. These transactions range from terms of intra-hour up to multiple years.

As part of its resource procurement and management of its natural gas business, the Company makes continuing projections of its natural gas loads and assesses available natural gas resources including natural gas storage availability. Natural gas resource planning typically includes peak requirements, low and average monthly requirements and delivery constraints from natural gas supply locations to the Company's distribution system. However, daily variations in natural gas demand can be significantly different than monthly demand projections. On the basis of these projections, the Company plans and executes a series of transactions to hedge a portion of its projected natural gas requirements through forward market transactions and derivative instruments. These transactions may extend as much as four natural gas operating years (November through October) into the future. Avista Corp. also leaves a significant portion of its natural gas supply requirements unhedged for purchase in short-term and spot markets.

The Company is required to plan for sufficient natural gas delivery capacity to serve its retail customers for a theoretical peak day event. The Company generally has more pipeline and storage capacity than what is needed during periods other than a peak day. The Company optimizes its natural gas resources by using market opportunities to generate economic value that helps mitigate fixed costs. Avista Utilities also optimizes its natural gas storage capacity by purchasing and storing natural gas when prices are traditionally lower, typically in the summer, and withdrawing during higher priced months, typically during the winter. However, if market conditions and prices indicate that the Company should buy or sell natural gas during other times in the year, the Company engages in optimization transactions to capture value in the marketplace. Natural gas optimization activities include, but are not limited to, wholesale market sales of surplus natural gas supplies, purchases and sales of natural gas to optimize use of pipeline and storage capacity, and participation in the transportation capacity release market.

The following table presents the underlying energy commodity derivative volumes as of December 31, 2016 that are expected to be settled in each respective year (in thousands of MWhs and mmBTUs):

	Purchases				Sales			
	Electric Derivatives		Gas Derivatives		Electric Derivatives		Gas Derivatives	
Year	Physical (1)	Financial (1)	Physical (1)	Financial (1)	Physical (1) MWh	Financial (1) MWh	Physical (1) mmBTUs	Financial (1) mmBTUs
2017	510	907	15,475	110,380	316	1,552	4,165	73,110
2018	397	—	—	52,755	286	1,244	1,360	15,113
2019	235	—	610	29,475	158	982	1,345	4,020
2020	—	—	910	2,725	—	—	1,430	—
2021	—	—	—	—	—	—	1,060	—
Thereafter	—	—	—	—	—	—	—	—

The following table presents the underlying energy commodity derivative volumes as of December 31, 2015 that were expected to be settled in each respective year (in thousands of MWhs and mmBTUs):

	Purchases				Sales			
	Electric Derivatives		Gas Derivatives		Electric Derivatives		Gas Derivatives	
Year	Physical (1)	Financial (1)	Physical (1)	Financial (1)	Physical (1) MWh	Financial (1) MWh	Physical (1) mmBTUs	Financial (1) mmBTUs
2016	407	1,954	17,252	142,693	280	2,656	3,182	112,233
2017	397	97	675	49,200	255	483	1,360	26,965
2018	397	—	—	15,118	286	—	1,360	2,738
2019	235	—	305	6,935	158	—	1,345	—
2020	—	—	455	905	—	—	1,430	—
Thereafter	—	—	—	—	—	—	1,060	—

(1) Physical transactions represent commodity transactions in which Avista Utilities will take or make delivery of either electricity or natural gas; financial transactions represent derivative instruments with delivery of cash in the amount of benefit or cost but with no physical delivery of the commodity, such as futures, swaps, options, or forward contracts.

The electric and natural gas derivative contracts above will be included in either power supply costs or natural gas supply costs during the period they are settled and will be included in the various recovery mechanisms (ERM, PCA, and PGAs), or in the general rate case process, and are expected to be collected through retail rates from customers. Any transactions that result in gains will be used to reduce retail rates charged to customers in the future.

Foreign Currency Exchange Derivatives

A significant portion of Avista Utilities' natural gas supply (including fuel for power generation) is obtained from Canadian sources. Most of those transactions are executed in U.S. dollars, which avoids foreign currency risk. A portion of Avista Utilities' short-term natural gas transactions and long-term Canadian transportation contracts are committed based on Canadian currency prices and settled within 60 days with U.S. dollars. Avista Utilities hedges a portion of the foreign currency risk by purchasing Canadian currency exchange derivatives when such commodity transactions are initiated. The foreign currency exchange derivatives and the unhedged foreign currency risk have not had a material effect on the Company's financial condition, results of operations or cash flows and these differences in cost related to currency fluctuations are included with natural gas supply costs for ratemaking.

The following table summarizes the foreign currency hedges that the Company has entered into as of December 31 (dollars in thousands):

	2016	2015
Number of contracts	21	24
Notional amount (in United States dollars)	$ 2,819	$ 1,463
Notional amount (in Canadian dollars)	3,754	2,002

Interest Rate Swap Derivatives

Avista Corp. is affected by fluctuating interest rates related to a portion of its existing debt, and future borrowing requirements. The Company hedges a portion of its interest rate risk with financial derivative instruments, which may include interest rate swap derivatives and U.S. Treasury lock agreements. These interest rate swap derivatives and U.S. Treasury lock agreements are considered economic hedges against fluctuations in future cash flows associated with anticipated debt issuances.

The following table summarizes the unsettled interest rate swap derivatives that the Company has outstanding as of the balance sheet date indicated below (dollars in thousands):

Balance Sheet Date	Number of Contracts	Notional Amount	Mandatory Cash Settlement Date
December 31, 2016	6	75,000	2017
	14	275,000	2018
	6	70,000	2019
	2	20,000	2020
	5	60,000	2022
December 31, 2015	6	115,000	2016
	3	45,000	2017
	11	245,000	2018
	2	30,000	2019
	1	20,000	2022

During the third quarter 2016, in connection with the execution of a purchase agreement for bonds that the Company issued in December 2016, the Company cash-settled seven interest rate swap derivatives (notional aggregate amount of $125.0 million) and paid a total of $54.0 million. The interest rate swap derivatives were settled in connection with the pricing of $175.0 million of Avista Corp. first mortgage bonds that were issued in December 2016 (see Note 14). Upon settlement of interest rate swap derivatives, the cash payments made or received are recorded as a regulatory asset or liability and are subsequently amortized as a component of interest expense over the life of the associated debt. The settled interest rate swap derivatives are also included as a part of the Company's cost of debt calculation for ratemaking purposes.

The fair value of outstanding interest rate swap derivatives can vary significantly from period to period depending on the total notional amount of swaps outstanding and fluctuations in market interest rates compared to the interest rates fixed by the swaps. The Company would be required to make cash payments to settle the interest rate swap derivatives if the fixed rates are higher than prevailing market rates at the date of settlement. Conversely, the Company receives cash to settle its interest rate swap derivatives when prevailing market rates at the time of settlement exceed the fixed swap rates.

Summary of Outstanding Derivative Instruments

The amounts recorded on the Consolidated Balance Sheet as of December 31, 2016 and December 31, 2015 reflect the offsetting of derivative assets and liabilities where a legal right of offset exists.

The following table presents the fair values and locations of derivative instruments recorded on the Consolidated Balance Sheet as of December 31, 2016 (in thousands):

	Fair Value			
Derivative and Balance Sheet Location	Gross Asset	Gross Liability	Collateral Netting	Net Asset (Liability) in Balance Sheet
Foreign currency exchange derivatives				
Other current liabilities	$ 5	$ (28)	$ —	$ (23)
Interest rate swap derivatives				
Other current assets	3,393	—	—	3,393
Other property and investments-net and other non-current assets	5,754	(397)	—	5,357
Other current liabilities	—	(15,756)	9,731	(6,025)
Non-current interest rate swap derivative liabilities	3,951	(57,825)	25,169	(28,705)
Energy commodity derivatives				
Other current assets	18,682	(16,787)	—	1,895
Current energy commodity derivative liabilities	16,335	(29,598)	6,228	(7,035)
Other non-current liabilities, regulatory liabilities and deferred credits	13,071	(29,990)	3,630	(13,289)
Total derivative instruments recorded on the balance sheet	$ 61,191	$ (150,381)	$ 44,758	$ (44,432)

The following table presents the fair values and locations of derivative instruments recorded on the Consolidated Balance Sheet as of December 31, 2015 (in thousands):

	Fair Value			
Derivative and Balance Sheet Location	Gross Asset	Gross Liability	Collateral Netting	Net Asset (Liability) in Balance Sheet
Foreign currency exchange derivatives				
Other current liabilities	$ 2	$ (19)	$ —	$ (17)
Interest rate swap derivatives				
Other property and investments-net and other non-current assets	23	—	—	23
Other current liabilities	118	(23,262)	3,880	(19,264)
Non-current interest rate swap derivative liabilities	1,407	(62,236)	30,150	(30,679)
Energy commodity derivatives				
Other current assets	1,236	(553)	—	683
Current energy commodity derivative liabilities	67,466	(85,409)	3,675	(14,268)
Other non-current liabilities, regulatory liabilities and deferred credits	6,613	(39,033)	10,851	(21,569)
Total derivative instruments recorded on the balance sheet	$ 76,865	$ (210,512)	$ 48,556	$ (85,091)

Exposure to Demands for Collateral

The Company's derivative contracts often require collateral (in the form of cash or letters of credit) or other credit enhancements, or reductions or terminations of a portion of the contract through cash settlement, in the event of a downgrade in the Company's credit ratings or changes in market prices. In periods of price volatility, the level of exposure can change significantly. As a result, sudden and significant demands may be made against the Company's credit facilities and cash. The Company actively monitors the exposure to possible collateral calls and takes steps to mitigate capital requirements.

The following table presents the Company's collateral outstanding related to its derivative instruments as of as of December 31 (in thousands):

	2016	2015
Energy commodity derivatives		
Cash collateral posted	$ 17,134	$ 28,716
Letters of credit outstanding	24,400	28,200
Balance sheet offsetting (cash collateral against net derivative positions)	9,858	14,526
Interest rate swap derivatives		
Cash collateral posted	34,900	34,030
Letters of credit outstanding	3,600	9,600
Balance sheet offsetting (cash collateral against net derivative positions)	34,900	34,030

Certain of the Company’s derivative instruments contain provisions that require the Company to maintain an "investment grade" credit rating from the major credit rating agencies. If the Company’s credit ratings were to fall below “investment grade,” it would be in violation of these provisions, and the counterparties to the derivative instruments could request immediate payment or demand immediate and ongoing collateralization on derivative instruments in net liability positions.

The following table presents the aggregate fair value of all derivative instruments with credit-risk-related contingent features that are in a liability position and the amount of additional collateral the Company could be required to post as of December 31 (in thousands):

	2016	2015
Energy commodity derivatives		
Liabilities with credit-risk-related contingent features	$ 1,124	$ 7,090
Additional collateral to post	1,046	6,980
Interest rate swap derivatives		
Liabilities with credit-risk-related contingent features	73,978	85,498
Additional collateral to post	21,100	18,750

NOTE 7. JOINTLY OWNED ELECTRIC FACILITIES

The Company has a 15 percent ownership interest in a twin-unit coal-fired generating facility, Colstrip, located in southeastern Montana, and provides financing for its ownership interest in the project. The Company's share of related fuel costs as well as operating expenses for plant in service are included in the corresponding accounts in the Consolidated Statements of Income. The Company's share of utility plant in service for Colstrip and accumulated depreciation (inclusive of the ARO assets and accumulated amortization) were as follows as of December 31 (dollars in thousands):

	2016	2015
Utility plant in service	$ 380,406	$ 362,199
Accumulated depreciation	(249,359)	(243,363)

See Note 9 for further discussion of AROs.

NOTE 8. PROPERTY, PLANT AND EQUIPMENT

The balances of the major classifications of property, plant and equipment are detailed in the following table as of December 31 (dollars in thousands):

	2016	2015
Avista Utilities:		
Electric production	$ 1,346,332	$ 1,217,179
Electric transmission	682,529	640,586
Electric distribution	1,525,175	1,468,157
Electric construction work-in-progress (CWIP) and other	296,912	358,846
Electric total	3,850,948	3,684,768
Natural gas underground storage	44,672	43,080
Natural gas distribution	954,298	878,982
Natural gas CWIP and other	57,601	62,024
Natural gas total	1,056,571	984,086
Common plant (including CWIP)	527,458	456,796
Total Avista Utilities	5,434,977	5,125,650
AEL&P:		
Electric production	94,839	72,292
Electric transmission	20,252	18,817
Electric distribution	20,057	19,005
Electric production held under long-term capital lease	71,007	71,007
Electric CWIP and other	7,190	16,971
Electric total	213,345	198,092
Common plant	8,651	8,133
Total AEL&P	221,996	206,225
Other (1)	30,764	25,709
Total	$ 5,687,737	$ 5,357,584

(1) Included in other property and investments-net and other non-current assets on the Consolidated Balance Sheets. Accumulated depreciation was $11.2 million as of December 31, 2016 and $10.6 million as of December 31, 2015 for the other businesses.

NOTE 9. ASSET RETIREMENT OBLIGATIONS

The Company has recorded liabilities for future AROs to:

- restore coal ash containment ponds at Colstrip,
- cap a landfill at the Kettle Falls Plant,
- remove plant and restore the land at the Coyote Springs 2 site at the termination of the land lease, and
- dispose of PCBs in certain transformers.

Due to an inability to estimate a range of settlement dates, the Company cannot estimate a liability for the:

- removal and disposal of certain transmission and distribution assets, and
- abandonment and decommissioning of certain hydroelectric generation and natural gas storage facilities.

On April 17, 2015, the EPA published a final rule regarding coal combustion residuals (CCR), also termed coal combustion byproducts or coal ash, in the Federal Register, and this rule became effective on October 15, 2015. Colstrip, of which Avista Corp. is a 15 percent owner of units 3 & 4, produces this byproduct. The rule established technical requirements for CCR landfills and surface impoundments under Subtitle D of the Resource Conservation and Recovery Act, the nation's primary law for regulating solid waste. The Company, in conjunction with the other Colstrip owners, developed a multi-year compliance plan to strategically address the CCR requirements and existing state obligations while maintaining operational stability. During 2015, the operator of Colstrip provided an initial cost estimate of the expected retirement costs associated with complying with the new CCR rule. Based on the initial assessments, Avista Corp. recorded an increase to its ARO of $12.5 million during 2015 with a corresponding increase in the cost basis of the utility plant. During 2016, due to additional information and updated estimates, the ARO increased to $13.6 million (including accretion of $0.7 million).

The actual asset retirement costs related to the CCR rule requirements may vary substantially from the estimates used to record the increased ARO due to uncertainty about the compliance strategies that will be used and the preliminary nature of available data used to estimate costs, such as the quantity of coal ash present at certain sites and the volume of fill that will be needed to cap and cover certain impoundments. Avista Corp. will coordinate with the plant operator and continue to gather additional data in future periods to make decisions about compliance strategies and the timing of closure activities. As additional information becomes available, Avista Corp. will update the ARO for these changes in estimates, which could be material. The Company expects to seek recovery of any increased costs related to complying with the new rule through customer rates.

The following table documents the changes in the Company’s asset retirement obligation during the years ended December 31 (dollars in thousands):

	2016	2015	2014
Asset retirement obligation at beginning of year	$ 15,997	$ 3,028	$ 2,859
Liabilities incurred	430	12,539	—
Liabilities settled	(1,529)	(29)	(41)
Accretion expense	617	459	210
Asset retirement obligation at end of year	$ 15,515	$ 15,997	$ 3,028

NOTE 10. PENSION PLANS AND OTHER POSTRETIREMENT BENEFIT PLANS

The pension and other postretirement benefit plans described below only relate to Avista Utilities. AEL&P (not discussed below) participates in a defined contribution multiemployer plan for its union workers and a defined contribution money purchase pension plan for its nonunion workers. METALfx (not discussed below) has a defined contribution 401(k) savings plan. None of the subsidiary retirement plans, individually or in the aggregate, are significant to Avista Corp.

Avista Utilities

The Company has a defined benefit pension plan covering the majority of all regular full-time employees at Avista Utilities that were hired prior to January 1, 2014. Individual benefits under this plan are based upon the employee’s years of service, date of hire and average compensation as specified in the plan. Non-union employees hired on or after January 1, 2014 participate in a defined contribution 401(k) plan in lieu of a defined benefit pension plan. The Company’s funding policy is to contribute at least the minimum amounts that are required to be funded under the Employee Retirement Income Security Act, but not more than the maximum amounts that are currently deductible for income tax purposes. The Company contributed $12.0 million in cash to the pension plan in 2016, $12.0 million in 2015 and $32.0 million in 2014. The Company expects to contribute $22.0 million in cash to the pension plan in 2017.

The Company also has a SERP that provides additional pension benefits to executive officers and certain key employees of the Company. The SERP is intended to provide benefits to individuals whose benefits under the defined benefit pension plan are reduced due to the application of Section 415 of the Internal Revenue Code of 1986 and the deferral of salary under deferred compensation plans. The liability and expense for this plan are included as pension benefits in the tables included in this Note.

The Company expects that benefit payments under the pension plan and the SERP will total (dollars in thousands):

	2017	2018	2019	2020	2021	Total 2022-2026
Expected benefit payments	$ 30,971	$ 32,014	$ 33,047	$ 34,545	$ 35,892	$ 196,322

The expected long-term rate of return on plan assets is based on past performance and economic forecasts for the types of investments held by the plan. In selecting a discount rate, the Company considers yield rates for highly rated corporate bond portfolios with maturities similar to that of the expected term of pension benefits.

The Company provides certain health care and life insurance benefits for eligible retired employees that were hired prior to January 1, 2014. The Company accrues the estimated cost of postretirement benefit obligations during the years that employees provide services. The liability and expense of this plan are included as other postretirement benefits. Non-union employees hired on or after January 1, 2014, will have access to the retiree medical plan upon retirement; however, Avista Corp. will no longer provide a contribution toward their medical premium.

The Company has a Health Reimbursement Arrangement (HRA) to provide employees with tax-advantaged funds to pay for allowable medical expenses upon retirement. The amount earned by the employee is fixed on the retirement date based on the employee's years of service and the ending salary. The liability and expense of the HRA are included as other postretirement benefits.

The Company provides death benefits to beneficiaries of executive officers who die during their term of office or after retirement. Under the plan, an executive officer's designated beneficiary will receive a payment equal to twice the executive officer's annual base salary at the time of death (or if death occurs after retirement, a payment equal to twice the executive officer's total annual pension benefit). The liability and expense for this plan are included as other postretirement benefits.

The Company expects that benefit payments under other postretirement benefit plans will total (dollars in thousands):

	2017	2018	2019	2020	2021	Total 2022-2026
Expected benefit payments	$ 6,991	$ 7,302	$ 7,580	$ 6,479	$ 6,675	$ 34,704

The Company expects to contribute $7.0 million to other postretirement benefit plans in 2017, representing expected benefit payments to be paid during the year excluding the Medicare Part D subsidy. The Company uses a December 31 measurement date for its pension and other postretirement benefit plans.

The following table sets forth the pension and other postretirement benefit plan disclosures as of December 31, 2016 and 2015 and the components of net periodic benefit costs for the years ended December 31, 2016, 2015 and 2014 (dollars in thousands):

	Pension Benefits		Other Post-	
	2016	2015	2016	2015
Change in benefit obligation:				
Benefit obligation as of beginning of year	$ 613,503	$ 634,674	$ 138,795	$ 127,989
Service cost	18,302	19,791	3,205	2,925
Interest cost	27,544	26,117	6,110	5,158
Actuarial (gain)/loss	39,997	(35,790)	(3,648)	12,668
Plan change	—	(228)	—	(1,000)
Cumulative adjustment to reclassify liability	—	—	(1,042)	(1,521)
Benefits paid	(32,874)	(31,061)	(6,967)	(7,424)

	Pension Benefits		Other Post-	
	2016	2015	2016	2015
Benefit obligation as of end of year	$ 666,472	$ 613,503	$ 136,453	$ 138,795
Change in plan assets:				
Fair value of plan assets as of beginning of year	$ 517,234	$ 539,311	$ 30,868	$ 31,312
Actual return on plan assets	43,212	(4,305)	2,497	(444)
Employer contributions	12,000	12,000	—	—
Benefits paid	(31,532)	(29,772)	—	—
Fair value of plan assets as of end of year	$ 540,914	$ 517,234	$ 33,365	$ 30,868
Funded status	$ (125,558)	$ (96,269)	$ (103,088)	$ (107,927)
Unrecognized net actuarial loss	178,783	162,961	81,979	92,433
Unrecognized prior service cost	23	25	(8,981)	(10,180)
Prepaid (accrued) benefit cost	53,248	66,717	(30,090)	(25,674)
Additional liability	(178,806)	(162,986)	(72,998)	(82,253)
Accrued benefit liability	$ (125,558)	$ (96,269)	$ (103,088)	$ (107,927)
Accumulated pension benefit obligation	$ 583,498	$ 542,209	—	—
Accumulated postretirement benefit obligation:				
For retirees			$ 60,670	$ 65,652
For fully eligible employees			$ 34,429	$ 34,498
For other participants			$ 41,354	$ 38,645
Included in accumulated other comprehensive loss (income) (net of tax):				
Unrecognized prior service cost	$ 15	$ 16	$ (5,854)	$ (6,617)
Unrecognized net actuarial loss	116,209	105,925	53,303	60,081
Total	116,224	105,941	47,449	53,464
Less regulatory asset	(108,903)	(99,414)	(47,202)	(53,341)
Accumulated other comprehensive loss for unfunded benefit obligation for pensions and other postretirement benefit plans	$ 7,321	$ 6,527	$ 247	$ 123

	Pension Benefits		Other Post-

Net periodic benefit cost	$ 26,812	$ 27,062	$ 14,603	$ 11,974	$ 9,988	$ 8,340

Plan Assets

The Finance Committee of the Company’s Board of Directors approves investment policies, objectives and strategies that seek an appropriate return for the pension plan and other postretirement benefit plans and reviews and approves changes to the investment and funding policies.

The Company has contracted with investment consultants who are responsible for managing/monitoring the individual investment managers. The investment managers’ performance and related individual fund performance is periodically reviewed by an internal benefits committee and by the Finance Committee to monitor compliance with investment policy objectives and strategies.

Pension plan assets are invested in mutual funds, trusts and partnerships that hold marketable debt and equity securities, real estate, absolute return and commodity funds. In seeking to obtain the desired return to fund the pension plan, the investment consultant recommends allocation percentages by asset classes. These recommendations are reviewed by the internal benefits committee, which then recommends their adoption by the Finance Committee. The Finance Committee has established target investment allocation percentages by asset classes and also investment ranges for each asset class. The target investment allocation percentages are typically the midpoint of the established range. The target investment allocation percentages by asset classes are indicated in the table below:

	2016	2015
Equity securities	37%	27%
Debt securities	45%	58%
Real estate	8%	6%
Absolute return	10%	9%

The 2016 target investment allocation percentages were revised in the fourth quarter of 2016 and the pension plan assets were subsequently reinvested during the fourth quarter of 2016 and first quarter of 2017 to move toward the new target investment allocation percentages. The target asset allocation percentages were modified to better align the asset allocations with the funded status of the pension plan. Future contributions to the plan will also be increased to improve the funded status of the plan.

The fair value of pension plan assets invested in debt and equity securities was based primarily on fair value (market prices). The fair value of investment securities traded on a national securities exchange is determined based on the reported last sales price; securities traded in the over-the-counter market are valued at the last reported bid price. Investment securities for which market prices are not readily available or for which market prices do not represent the value at the time of pricing, the investment manager estimates fair value based upon other inputs (including valuations of securities that are comparable in coupon, rating, maturity and industry). Investments in common/collective trust funds are presented at estimated fair value, which is determined based on the unit value of the fund. Unit value is determined by an independent trustee, which sponsors the fund, by dividing the fund’s net assets by its units outstanding at the valuation date. The Company's investments in common/collective trusts have redemption limitations that permit quarterly redemptions following notice requirements of 45 to 60 days. The fair values of the closely held investments and partnership interests are based upon the allocated share of the fair value of the underlying assets as well as the allocated share of the undistributed profits and losses, including realized and unrealized gains and losses. Most of the Company's investments in closely held investments and partnership interests have redemption limitations that range from bi-monthly to semi-annually following redemption notice requirements of 60 to 90 days. One investment in a partnership has a lock-up for redemption currently expiring in 2022 and is subject to extension.

The fair value of pension plan assets invested in real estate was determined by the investment manager based on three basic approaches:

- properties are externally appraised on an annual basis by independent appraisers, additional appraisals may be performed as warranted by specific asset or market conditions,
- property valuations are reviewed quarterly and adjusted as necessary, and
- loans are reflected at fair value.

The fair value of pension plan assets was determined as of December 31, 2016 and 2015.

Pension plan other postretirement plan assets whose fair values are measured using net asset value (NAV) are excluded from the fair value hierarchy and are included as reconciling items in the tables below.

The following table discloses by level within the fair value hierarchy (see Note 16 for a description of the fair value hierarchy) of the pension plan’s assets measured and reported as of December 31, 2016 at fair value (dollars in thousands):

	Level 1	Level 2	Level 3	Total
Cash equivalents	$ —	$ 10,179	$ —	$ 10,179
Fixed income securities:				
U.S. government issues	—	30,919	—	30,919
Corporate issues	—	193,563	—	193,563
International issues	—	34,145	—	34,145
Municipal issues	—	18,888	—	18,888
Mutual funds:				
U.S. equity securities	120,856	—	—	120,856
International equity securities	30,025	—	—	30,025
Absolute return (1)	6,622	—	—	6,622
Plan assets measured at NAV (not subject to hierarchy disclosure)				
Common/collective trusts:				
Real estate	—	—	—	19,779
International equity securities	—	—	—	29,140
Partnership/closely held investments:				
Absolute return (1)	—	—	—	39,077
Private equity funds (2)	—	—	—	72
Real estate	—	—	—	7,649
Total	$ 157,503	$ 287,694	$ —	$ 540,914

The following table discloses by level within the fair value hierarchy (see Note 16 for a description of the fair value hierarchy) of the pension plan’s assets measured and reported as of December 31, 2015 at fair value (dollars in thousands):

	Level 1	Level 2	Level 3	Total
Cash equivalents	$ 86	$ 10,641	$ —	$ 10,727
Fixed income securities:				
U.S. government issues	—	47,845	—	47,845
Corporate issues	—	187,308	—	187,308
International issues	—	34,458	—	34,458
Municipal issues	—	22,416	—	22,416
Mutual funds:				
U.S. equity securities	87,678	—	—	87,678
International equity securities	40,343	—	—	40,343
Absolute return (1)	13,996	—	—	13,996
Plan assets measured at NAV (not subject to hierarchy disclosure)				
Common/collective trusts:				
Real estate	—	—	—	24,147
Partnership/closely held investments:				
Absolute return (1)	—	—	—	38,302
Private equity funds (2)	—	—	—	73
Real estate	—	—	—	9,941
Total	$ 142,103	$ 302,668	$ —	$ 517,234

(1) This category invests in multiple strategies to diversify risk and reduce volatility. The strategies include: (a) event driven, relative value, convertible, and fixed income arbitrage, (b) distressed investments, (c) long/short equity and fixed income, and (d) market neutral strategies.

(2) This category includes private equity funds that invest primarily in U.S. companies.

The fair value of other postretirement plan assets invested in debt and equity securities was based primarily on market prices. The fair value of investment securities traded on a national securities exchange is determined based on the last reported sales price; securities traded in the over-the-counter market are valued at the last reported bid price. Investment securities for which market prices are not readily available are fair-valued by the investment manager based upon other inputs (including valuations of securities that are comparable in coupon, rating, maturity and industry). The target asset allocation was 60 percent equity securities and 40 percent debt securities in both 2016 and 2015.

The fair value of other postretirement plan assets was determined as of December 31, 2016 and 2015.

The following table discloses by level within the fair value hierarchy (see Note 16 for a description of the fair value hierarchy) of other postretirement plan assets measured and reported as of December 31, 2016 at fair value (dollars in thousands):

	Level 1	Level 2	Level 3	Total
Cash equivalents	$ —	$ 6	$ —	$ 6
Mutual funds:				
Balanced index fund (1)	33,359	—	—	33,359
Total	$ 33,359	$ 6	$ —	$ 33,365

(1) The balanced index fund is a single mutual fund that includes a percentage of U.S. equity securities, fixed income securities and International securities.

The following table discloses by level within the fair value hierarchy (see Note 16 for a description of the fair value hierarchy) of other postretirement plan assets measured and reported as of December 31, 2015 at fair value (dollars in thousands):

	Level 1	Level 2	Level 3	Total
Cash equivalents	$ —	$ 9	$ —	$ 9
Mutual funds:				
Fixed income securities	12,000	—	—	12,000
U.S. equity securities	13,224	—	—	13,224
International equity securities	5,635	—	—	5,635
Total	$ 30,859	$ 9	$ —	$ 30,868

Assumed health care cost trend rates have a significant effect on the amounts reported for the health care plans. A one-percentage-point increase in the assumed health care cost trend rate for each year would increase the accumulated postretirement benefit obligation as of December 31, 2016 by $8.6 million and the service and interest cost by $1.0 million. A one-percentage-point decrease in the assumed health care cost trend rate for each year would decrease the accumulated postretirement benefit obligation as of December 31, 2016 by $6.7 million and the service and interest cost by $0.7 million.

401(k) Plans and Executive Deferral Plan

Avista Utilities and METALfx have salary deferral 401(k) plans that are defined contribution plans and cover substantially all employees. Employees can make contributions to their respective accounts in the plans on a pre-tax basis up to the maximum amount permitted by law. The respective company matches a portion of the salary deferred by each participant according to the schedule in the respective plan.

Employer matching contributions were as follows for the years ended December 31 (dollars in thousands):

	2016	2015	2014
Employer 401(k) matching contributions	$ 8,710	$ 8,011	$ 6,862

The Company has an Executive Deferral Plan. This plan allows executive officers and other key employees the opportunity to defer until the earlier of their retirement, termination, disability or death, up to 75 percent of their base salary and/or up to 100 percent of their incentive payments. Deferred compensation funds are held by the Company in a Rabbi Trust.

There were deferred compensation assets included in other property and investments-net and corresponding deferred compensation liabilities included in other non-current liabilities and deferred credits on the Consolidated Balance Sheets of the following amounts as of December 31 (dollars in thousands):

	2016	2015
Deferred compensation assets and liabilities	$ 7,679	$ 8,093

NOTE 11. ACCOUNTING FOR INCOME TAXES

Income tax expense consisted of the following for the years ended December 31 (dollars in thousands):

	2016	2015	2014
Current income tax expense (benefit)	$ (46,457)	$ 12,212	$ (67,059)
Deferred income tax expense	124,543	55,237	139,299
Total income tax expense	$ 78,086	$ 67,449	$ 72,240

State income taxes do not represent a significant portion of total income tax expense on the Consolidated Statements of Income for any periods presented.

A reconciliation of federal income taxes derived from statutory federal tax rates (35 percent in 2016, 2015 and 2014) applied to income before income taxes as set forth in the accompanying Consolidated Statements of Income is as follows for the years ended December 31 (dollars in thousands):

	2016		2015		2014	
Federal income taxes at statutory rates	$ 75,391	35.0%	$ 64,967	35.0%	$ 67,237	35.0%
Increase (decrease) in tax resulting from:						
Tax effect of regulatory treatment of utility plant differences	3,297	1.5	4,358	2.3	4,008	2.1
State income tax expense	1,316	0.6	1,012	0.5	506	0.2
Settlement of prior year tax returns and adjustment of tax reserves	13	—	(992)	(0.5)	1,104	0.6
Manufacturing deduction	—	—	(1,198)	(0.6)	(169)	(0.1)
Settlement of equity awards	(1,597)	(0.7)	—	—	—	—
Other	(334)	(0.1)	(698)	(0.4)	(446)	(0.2)
Total income tax expense	$ 78,086	36.3%	$ 67,449	36.3%	$ 72,240	37.6%

Deferred income taxes reflect the net tax effects of temporary differences between the carrying amounts of assets and liabilities for financial reporting purposes and the amounts used for income tax purposes and tax credit carryforwards. The total net deferred income tax liability consisted of the following as of December 31 (dollars in thousands):

	2016	2015
Deferred income tax assets:		
Unfunded benefit obligation	$ 80,230	$ 75,716
Derivatives	31,872	47,009
Regulatory deferred tax credits	15,192	—
Tax credits	27,931	15,011
Power and natural gas deferrals	19,415	12,866
Deferred compensation	11,141	10,354
Other	29,512	29,471
Total gross deferred income tax assets	215,293	190,427
Valuation allowances for deferred tax assets	(7,946)	(2,862)
Total deferred income tax assets after valuation allowances	207,347	187,565
Deferred income tax liabilities:		
Differences between book and tax basis of utility plant	812,916	723,661
Regulatory asset on utility, property plant and equipment	37,301	36,917
Regulatory asset for pensions and other postretirement benefits	84,040	82,253
Utility energy commodity derivatives	31,871	47,010
Long-term debt and borrowing costs	31,955	14,027
Settlement with Coeur d'Alene Tribe	11,711	12,084
Other regulatory assets	30,183	11,691
Other	8,298	7,399
Total deferred income tax liabilities	1,048,275	935,042
Net long-term deferred income tax liability	$ 840,928	$ 747,477

The realization of deferred income tax assets is dependent upon the ability to generate taxable income in future periods. The Company evaluated available evidence supporting the realization of its deferred income tax assets and determined it is more likely than not that deferred income tax assets will be realized.

As of December 31, 2016, the Company had $17.1 million of state tax credit carryforwards of which it is expected $7.9 million may expire unused; the Company has reflected the net amount of $9.2 million as an asset at December 31, 2016. State tax credits expire from 2019 to 2028.

The Company and its eligible subsidiaries file consolidated federal income tax returns. The Company also files state income tax returns in certain jurisdictions, including Idaho, Oregon and Montana. Subsidiaries are charged or credited with the tax effects of their operations on a stand-alone basis. The Internal Revenue Service (IRS) has completed its examination of all tax years through 2011 and all issues were resolved related to these years. The statute of limitations for the IRS to review the 2012 tax year has expired, leaving the 2013 through 2015 tax years still open for review. The Company believes that any open tax years for federal or state income taxes will not result in adjustments that would be significant to the consolidated financial statements.

The Company had net regulatory assets related to the probable recovery of certain deferred income tax liabilities from customers through future rates as of December 31 (dollars in thousands):

	2016	2015
Regulatory assets for deferred income taxes	$ 109,853	$ 101,240
Regulatory liabilities for deferred income taxes	28,966	17,609

NOTE 12. ENERGY PURCHASE CONTRACTS

The below discussion only relates to Avista Utilities. The sole energy purchase contract at AEL&P is a PPA for the Snettisham hydroelectric project and it is accounted for as a capital lease. AEL&P does not have any other significant operating agreements or contractual obligations. See Note 14 for further discussion of the Snettisham PPA.

Avista Utilities has contracts for the purchase of fuel for thermal generation, natural gas for resale and various agreements for the purchase or exchange of electric energy with other entities. The remaining term of the contracts range from one month to twenty-five years.

Total expenses for power purchased, natural gas purchased, fuel for generation and other fuel costs, which are included in utility resource costs in the Consolidated Statements of Income, were as follows for the years ended December 31 (dollars in thousands):

	2016	2015	2014
Utility power resources	$ 402,575	$ 511,937	$ 556,915

The following table details Avista Utilities' future contractual commitments for power resources (including transmission contracts) and natural gas resources (including transportation contracts) (dollars in thousands):

	2017	2018	2019	2020	2021	Thereafter	Total
Power resources	$ 202,494	$ 187,080	$ 174,285	$ 109,878	$ 96,485	$ 775,548	$ 1,545,770
Natural gas resources	95,549	65,230	53,860	41,340	29,306	349,468	634,753
Total	$ 298,043	$ 252,310	$ 228,145	$ 151,218	$ 125,791	$ 1,125,016	$ 2,180,523

These energy purchase contracts were entered into as part of Avista Utilities' obligation to serve its retail electric and natural gas customers' energy requirements, including contracts entered into for resource optimization. As a result, these costs are recovered either through base retail rates or adjustments to retail rates as part of the power and natural gas cost deferral and recovery mechanisms.

The above future contractual commitments for power resources include fixed contractual amounts related to the Company's contracts with certain PUDs to purchase portions of the output of certain generating facilities. Although Avista Utilities has no investment in the PUD generating facilities, the fixed contracts obligate Avista Utilities to pay certain minimum amounts whether or not the facilities are operating. The cost of power obtained under the contracts, including payments made when a facility is not operating, is included in utility resource costs in the Consolidated Statements of Income. The contractual amounts included above consist of Avista Utilities' share of existing debt service cost and its proportionate share of the variable operating expenses of these projects. The minimum amounts payable under these contracts are based in part on the proportionate share of the debt service requirements of the PUD's revenue bonds for which the Company is indirectly responsible. The Company's total future debt service obligation associated with the revenue bonds outstanding at December 31, 2016 (principal and interest) was $65.2 million.

In addition, Avista Utilities has operating agreements, settlements and other contractual obligations related to its generating facilities and transmission and distribution services. The expenses associated with these agreements are reflected as other operating expenses in the Consolidated Statements of Income. The following table details future contractual commitments under these agreements (dollars in thousands):

	2017	2018	2019	2020	2021	Thereafter	Total
Contractual obligations	$ 33,922	$ 28,783	$ 32,549	$ 32,160	$ 27,019	$ 189,000	$ 343,433

NOTE 13. COMMITTED LINES OF CREDIT

Avista Corp.

Avista Corp. has a committed line of credit with various financial institutions in the total amount of $400.0 million. A two-year option was exercised by the Company in 2016 to extend the maturity of the facility agreement to April 2021.

The committed line of credit agreement contains customary covenants and default provisions. The credit agreement has a covenant which does not permit the ratio of “consolidated total debt” to “consolidated total capitalization” of Avista Corp. to be greater than 65 percent at any time. As of December 31, 2016, the Company was in compliance with this covenant.

Balances outstanding and interest rates of borrowings (excluding letters of credit) under the Company’s revolving committed lines of credit were as follows as of December 31 (dollars in thousands):

	2016	2015
Balance outstanding at end of period	$ 120,000	$ 105,000
Letters of credit outstanding at end of period	$ 34,353	$ 44,595
Average interest rate at end of period	1.50%	1.18%

As of December 31, 2016 and 2015, the borrowings outstanding under Avista Corp.'s committed line of credit were classified as short-term borrowings on the Consolidated Balance Sheet.

AEL&P

AEL&P has a committed line of credit in the amount of $25.0 million that expires in November 2019. As of December 31, 2016 and 2015, there were no borrowings or letters of credit outstanding under this committed line of credit.

The committed line of credit agreement contains customary covenants and default provisions. The credit agreement has a covenant which does not permit the ratio of “consolidated total debt at AEL&P” to “consolidated total capitalization at AEL&P,” including the impact of the Snettisham bonds to be greater than 67.5 percent at any time. As of December 31, 2016, AEL&P was in compliance with this covenant.

NOTE 14. LONG-TERM DEBT AND CAPITAL LEASES

The following details long-term debt outstanding as of December 31 (dollars in thousands):

Maturity	Description	Interest	2016	2015
Avista Corp. Secured Long-Term Debt				
2016	First Mortgage Bonds (1)	0.84%	$ —	$ 90,000
2018	First Mortgage Bonds	5.95%	250,000	250,000
2018	Secured Medium-Term Notes	7.39%-7.45%	22,500	22,500
2019	First Mortgage Bonds	5.45%	90,000	90,000
2020	First Mortgage Bonds	3.89%	52,000	52,000
2022	First Mortgage Bonds	5.13%	250,000	250,000
2023	Secured Medium-Term Notes	7.18%-7.54%	13,500	13,500
2028	Secured Medium-Term Notes	6.37%	25,000	25,000
2032	Secured Pollution Control Bonds (2)	(2)	66,700	66,700
2034	Secured Pollution Control Bonds (2)	(2)	17,000	17,000
2035	First Mortgage Bonds	6.25%	150,000	150,000
2037	First Mortgage Bonds	5.70%	150,000	150,000
2040	First Mortgage Bonds	5.55%	35,000	35,000
2041	First Mortgage Bonds	4.45%	85,000	85,000
2044	First Mortgage Bonds	4.11%	60,000	60,000
2045	First Mortgage Bonds	4.37%	100,000	100,000
2047	First Mortgage Bonds	4.23%	80,000	80,000
2051	First Mortgage Bonds (3)	3.54%	175,000	—
	Total Avista Corp. secured long-term debt		1,621,700	1,536,700
Alaska Electric Light and Power Company Secured Long-Term Debt				
2044	First Mortgage Bonds	4.54%	75,000	75,000
	Total secured long-term debt		1,696,700	1,611,700
Alaska Energy and Resources Company Unsecured Long-Term Debt				
2019	Unsecured Term Loan	3.85%	15,000	15,000
	Total secured and unsecured long-term debt		1,711,700	1,626,700
Other Long-Term Debt Components				
	Capital lease obligations		65,435	68,601
	Settled interest rate swap derivatives (4)		—	(26,515)
	Unamortized debt discount		(792)	(956)
	Unamortized long-term debt issuance costs		(10,639)	(10,852)
	Total		1,765,704	1,656,978
	Secured Pollution Control Bonds held by Avista Corporation (2)		(83,700)	(83,700)
	Current portion of long-term debt and capital leases		(3,287)	(93,167)
	Total long-term debt and capital leases		$ 1,678,717	$ 1,480,111

(1) In August 2016, Avista Corp. entered into a term loan agreement with a commercial bank in the amount of $70.0 million with a maturity date of December 30, 2016. Loans under this agreement were unsecured and had a variable annual interest rate. The Company borrowed the entire $70.0 million available under this agreement, which was used to repay a portion of the $90.0 million in first mortgage bonds that matured in August 2016. This term loan was

subsequently repaid in full in December using the proceeds from the first mortgage bonds issued in December 2016 (discussed below).

(2) In December 2010, $66.7 million and $17.0 million of the City of Forsyth, Montana Pollution Control Revenue Refunding Bonds (Avista Corporation Colstrip Project) due in 2032 and 2034, respectively, which had been held by Avista Corp. since 2008 and 2009, respectively, were refunded by new bond issues (Series 2010A and Series 2010B). The new bonds were not offered to the public and were purchased by Avista Corp. due to market conditions. The Company expects that at a later date, subject to market conditions, these bonds may be remarketed to unaffiliated investors. So long as Avista Corp. is the holder of these bonds, the bonds will not be reflected as an asset or a liability on Avista Corp.'s Consolidated Balance Sheets.

(3) In December 2016, Avista Corp. issued and sold $175.0 million of 3.54 percent first mortgage bonds due in 2051 pursuant to a bond purchase agreement with institutional investors in the private placement market. The total net proceeds from the sale of the bonds were used to repay the $70.0 million term loan discussed above and to repay a portion of the borrowings outstanding under the Company’s $400.0 million committed line of credit. In connection with the execution of the bond purchase agreement, the Company cash-settled seven interest rate swap derivatives (notional aggregate amount of $125.0 million) and paid a total of $54.0 million.

(4) Prior to December 31, 2016, settled interest rate swap derivatives were included as part of long-term debt on the Consolidated Balance Sheets because they were considered similar to a debt discount or premium. During 2016, the Company reevaluated the presentation of settled interest rate swap derivatives and determined that since they are regulatory assets and liabilities that are being recovered through the ratemaking process, the more appropriate classification is as regulatory assets and liabilities rather than as a component of long-term debt. As such, as of December 31, 2016, the Company has included unamortized settled interest rate swap derivatives of $91.9 million in regulatory assets and $12.4 million in regulatory liabilities. The Company did not reclassify any amounts as of December 31, 2015 and prior because the amounts are not material to the financial statements. The increase in settled interest rate swap derivatives during 2016 is due to the cash settlement of interest rate swap derivatives discussed in detail above. There is no impact to the Consolidated Statements of Income and the Consolidated Statements of Cash Flows for any periods as a result of the balance sheet reclassification.

The following table details future long-term debt maturities including long-term debt to affiliated trusts (see Note 15) (dollars in thousands):

	2017	2018	2019	2020	2021	Thereafter	Total
Debt maturities	$ —	$ 272,500	$ 105,000	$ 52,000	$ —	$ 1,250,047	$ 1,679,547

Substantially all of Avista Utilities' and AEL&P's owned properties are subject to the lien of their respective mortgage indentures. Under the Mortgages and Deeds of Trust (Mortgages) securing their first mortgage bonds (including secured medium-term notes), Avista Utilities and AEL&P may each issue additional first mortgage bonds under their specific mortgage in an aggregate principal amount equal to the sum of:

- 66-2/3 percent of the cost or fair value (whichever is lower) of property additions of that entity which have not previously been made the basis of any application under that entity's Mortgage, or
- an equal principal amount of retired first mortgage bonds of that entity which have not previously been made the basis of any application under that entity's Mortgage, or
- deposit of cash.

However, Avista Utilities and AEL&P may not individually issue any additional first mortgage bonds (with certain exceptions in the case of bonds issued on the basis of retired bonds) unless the particular entity issuing the bonds has “net earnings” (as defined in that entity's Mortgage) for any period of 12 consecutive calendar months out of the preceding 18 calendar months that were at least twice the annual interest requirements on all mortgage securities at the time outstanding, including the first mortgage bonds to be issued, and on all indebtedness of prior rank. As of December 31, 2016, property additions and retired bonds would have allowed, and the net earnings test would not have prohibited, the issuance of $1.2 billion in aggregate principal amount of additional first mortgage bonds at Avista Utilities and $20.8 million at AEL&P.

Snettisham Capital Lease Obligation

Included in long-term capital leases above is a power purchase agreement between AEL&P and AIDEA, an agency of the State of Alaska, under which AEL&P has a take-or-pay obligation, expiring in December 2038, to purchase all the output of the 78 MW Snettisham Hydroelectric Project. For accounting purposes, this power purchase agreement is treated as a capital lease.

The balances related to the Snettisham capital lease obligation as of December 31 were as follows (dollars in thousands):

	2016	2015
Capital lease obligation (1)	$ 62,160	$ 64,455
Capital lease asset (2)	71,007	71,007
Accumulated amortization of capital lease asset (2)	9,104	5,462

(1) The capital lease obligation amount is equal to the amount of AIDEA's revenue bonds outstanding.

(2) These amounts are included in utility plant in service on the Consolidated Balance Sheets.

Interest on the capital lease obligation and amortization of the capital lease asset are included in utility resource costs in the Consolidated Statements of Income and totaled the following amounts for the years ended December 31 (dollars in thousands):

	2016	2015
Interest on capital lease obligation	$ 3,157	$ 3,587
Amortization of capital lease asset	3,642	3,641

AIDEA issued $100.0 million of revenue bonds in 1998 to finance its acquisition of the project and the payments by AEL&P were designed to be sufficient to enable the AIDEA to pay the principal of and interest on its revenue bonds, which bore interest at rates ranging from 4.9 percent to 6.0 percent and were set to mature in January 2034.

In August 2015, AIDEA issued $65.7 million of new revenue bonds for the purpose of refunding all of the remaining outstanding revenue bonds for the Snettisham Hydroelectric Project. The new revenue bonds have interest rates ranging from 4.0 percent to 5.0 percent and mature in January 2034. The capital lease obligation on Avista Corp.'s Consolidated Balance Sheet at any given time is equal to the amount of revenue bonds outstanding at that time. AEL&P is scheduled to make its last capital lease payment to AIDEA in December 2033. The payments by AEL&P under the PPA between AEL&P and AIDEA are unconditional, notwithstanding any suspension, reduction or curtailment of the operation of the project. The bonds are payable solely out of AIDEA's receipts under the power purchase agreement. AEL&P is also obligated to operate, maintain and insure the project. The PPA did not change as a result of the refunding, other than lower capital lease payments, and the lower capital lease payments that resulted from the refunding will be passed through to AEL&P's customers. AEL&P's payments for power under the agreement are between $10.0 million and $10.5 million per year, including the capital lease principal and interest of approximately $5.5 million per year.

Snettisham Electric Company, a non-operating subsidiary of AERC, has the option to purchase the Snettisham project with certain conditions at any time for the principal amount of the bonds outstanding at that time.

While the power purchase agreement is treated as a capital lease for accounting purposes, for ratemaking purposes this agreement is treated as an operating lease with a constant level of annual rental expense (straight line expense). Because of this regulatory treatment, any difference between the operating lease expense for ratemaking purposes and the expenses recognized under capital lease treatment (interest and depreciation of the capital lease asset) is recorded as a regulatory asset and amortized during the later years of the lease when the capital lease expense is less than the operating lease expense included in base rates.

The Company evaluated this agreement to determine if it has a variable interest which must be consolidated. Based on this evaluation, AIDEA will not be consolidated under ASC 810 "Consolidation" because AIDEA is a government agency and ASC 810 has a specific scope exception which does not allow for the consolidation of government organizations.

The following table details future capital lease obligations, including interest, under the Snettisham PPA (dollars in thousands):

	2017	2018	2019	2020	2021	Thereafter	Total
Principal	$ 2,415	$ 2,535	$ 2,660	$ 2,800	$ 2,935	$ 48,815	$ 62,160
Interest	3,042	2,921	2,795	2,662	2,522	16,674	30,616
Total	$ 5,457	$ 5,456	$ 5,455	$ 5,462	$ 5,457	$ 65,489	$ 92,776

NOTE 15. LONG-TERM DEBT TO AFFILIATED TRUSTS

In 1997, the Company issued Floating Rate Junior Subordinated Deferrable Interest Debentures, Series B, with a principal amount of $51.5 million to Avista Capital II, an affiliated business trust formed by the Company. Avista Capital II issued $50.0 million of Preferred Trust Securities with a floating distribution rate of LIBOR plus 0.875 percent, calculated and reset quarterly.

The distribution rates paid were as follows during the years ended December 31:

	2016	2015	2014
Low distribution rate	1.29%	1.11%	1.10%
High distribution rate	1.81%	1.29%	1.11%
Distribution rate at the end of the year	1.81%	1.29%	1.11%

Concurrent with the issuance of the Preferred Trust Securities, Avista Capital II issued $1.5 million of Common Trust Securities to the Company. These debt securities may be redeemed at the option of Avista Capital II at any time and mature on June 1, 2037. In December 2000, the Company purchased $10.0 million of these Preferred Trust Securities.

The Company owns 100 percent of Avista Capital II and has solely and unconditionally guaranteed the payment of distributions on, and redemption price and liquidation amount for, the Preferred Trust Securities to the extent that Avista Capital II has funds available for such payments from the respective debt securities. Upon maturity or prior redemption of such debt securities, the Preferred Trust Securities will be mandatorily redeemed. The Company does not include these capital trusts in its consolidated financial statements as Avista Corp. is not the primary beneficiary. As such, the sole assets of the capital trusts are $51.5 million of junior subordinated deferrable interest debentures of Avista Corp., which are reflected on the Consolidated Balance Sheets. Interest expense to affiliated trusts in the Consolidated Statements of Income represents interest expense on these debentures.

NOTE 16. FAIR VALUE

The carrying values of cash and cash equivalents, accounts and notes receivable, accounts payable and short-term borrowings are reasonable estimates of their fair values. Long-term debt (including current portion and material capital leases) and long-term debt to affiliated trusts are reported at carrying value on the Consolidated Balance Sheets.

The fair value hierarchy prioritizes the inputs used to measure fair value. The hierarchy gives the highest priority to unadjusted quoted prices in active markets for identical assets or liabilities (Level 1 measurements) and the lowest priority to fair values derived from unobservable inputs (Level 3 measurements).

The three levels of the fair value hierarchy are defined as follows:

Level 1 – Quoted prices are available in active markets for identical assets or liabilities. Active markets are those in which transactions for the asset or liability occur with sufficient frequency and volume to provide pricing information on an ongoing basis.

Level 2 – Pricing inputs are other than quoted prices in active markets included in Level 1, but which are either directly or indirectly observable as of the reporting date. Level 2 includes those financial instruments that are valued using models or other valuation methodologies. These models are primarily industry-standard models that consider various assumptions, including quoted forward prices for commodities, time value, volatility factors, and current market and contractual prices for the underlying instruments, as well as other relevant economic measures. Substantially all of these assumptions are observable in the marketplace throughout the full term of the instrument, can be derived from observable data or are supported by observable levels at which transactions are executed in the marketplace.

Level 3 – Pricing inputs include significant inputs that are generally unobservable from objective sources. These inputs may be used with internally developed methodologies that result in management's best estimate of fair value.

Financial assets and liabilities are classified in their entirety based on the lowest level of input that is significant to the fair value measurement. The Company's assessment of the significance of a particular input to the fair value measurement requires judgment, and may affect the valuation of fair value assets and liabilities and their placement within the fair value hierarchy levels. The determination of the fair values incorporates various factors that not only include the credit standing of the counterparties involved and the impact of credit enhancements (such as cash deposits and letters of credit), but also the impact of Avista Corp.'s nonperformance risk on its liabilities.

The following table sets forth the carrying value and estimated fair value of the Company's financial instruments not reported at estimated fair value on the Consolidated Balance Sheets as of December 31 (dollars in thousands):

	2016		2015	
	Carrying	Estimated	Carrying	Estimated
Long-term debt (Level 2)	$ 951,000	$ 1,048,661	$ 951,000	$ 1,055,797
Long-term debt (Level 3)	677,000	675,251	592,000	595,018
Snettisham capital lease obligation (Level 3)	62,160	62,800	64,455	63,150
Long-term debt to affiliated trusts (Level 3)	51,547	38,660	51,547	36,083

These estimates of fair value of long-term debt and long-term debt to affiliated trusts were primarily based on available market information, which generally consists of estimated market prices from third party brokers for debt with similar risk and terms. The price ranges obtained from the third party brokers consisted of par values of 75.00 to 122.59, where a par value of 100.00 represents the carrying value recorded on the Consolidated Balance Sheets. Level 2 long-term debt represents publicly issued bonds with quoted market prices; however, due to their limited trading activity, they are classified as Level 2 because brokers must generate quotes and make estimates using comparable debt with similar risk and terms if there is no trading activity near a period end. Level 3 long-term debt consists of private placement bonds and debt to affiliated trusts, which typically have no secondary trading activity. Fair values in Level 3 are estimated based on market prices from third party brokers using secondary market quotes for debt with similar risk and terms to generate quotes for Avista Corp. bonds. Due to the unique nature of the Snettisham capital lease obligation, the estimated fair value of these items was determined based on a discounted cash flow model using available market information. Prior to December 31, 2016, the Snettisham capital lease obligation was discounted to present value using the Moody's Aaa Corporate discount rate as published by the Federal Reserve. This rate was discontinued during the fourth quarter of 2016, as such going forward, the Company is using the Morgan Markets A Ex-Fin discount rate, which is the closest approximation to the rate previously used.

The following table discloses by level within the fair value hierarchy the Company's assets and liabilities measured and reported on the Consolidated Balance Sheets as of December 31, 2016 and 2015 at fair value on a recurring basis (dollars in thousands):

	Level 1	Level 2	Level 3	Counterparty and Cash Collateral Netting (1)	Total
December 31, 2016					
Assets:

Total	$ —	$ 182,710	$ 27,802	$ (89,160)	$ 121,352

(1) The Company is permitted to net derivative assets and derivative liabilities with the same counterparty when a legally enforceable master netting agreement exists. In addition, the Company nets derivative assets and derivative liabilities against any payables and receivables for cash collateral held or placed with these same counterparties.

(2) These assets are trading securities and are included in other property and investments-net and other non-current assets on the Consolidated Balance Sheets.

The difference between the amount of derivative assets and liabilities disclosed in respective levels in the table above and the amount of derivative assets and liabilities disclosed on the Consolidated Balance Sheets is due to netting arrangements with certain counterparties. See Note 6 for additional discussion of derivative netting.

To establish fair value for energy commodity derivatives, the Company uses quoted market prices and forward price curves to estimate the fair value of utility derivative commodity instruments included in Level 2. In particular, electric derivative valuations are performed using market quotes, adjusted for periods in between quotable periods. Natural gas derivative valuations are estimated using New York Mercantile Exchange (NYMEX) pricing for similar instruments, adjusted for basin differences, using market quotes. Where observable inputs are available for substantially the full term of the contract, the derivative asset or liability is included in Level 2.

To establish fair values for interest rate swap derivatives, the Company uses forward market curves for interest rates for the term of the swaps and discounts the cash flows back to present value using an appropriate discount rate. The discount rate is calculated by third party brokers according to the terms of the swap derivatives and evaluated by the Company for reasonableness, with consideration given to the potential non-performance risk by the Company. Future cash flows of the interest rate swap derivatives are equal to the fixed interest rate in the swap compared to the floating market interest rate multiplied by the notional amount for each period.

To establish fair value for foreign currency derivatives, the Company uses forward market curves for Canadian dollars against the US dollar and multiplies the difference between the locked-in price and the market price by the notional amount of the derivative. Forward foreign currency market curves are provided by third party brokers. The Company's credit spread is factored into the locked-in price of the foreign exchange contracts.

Deferred compensation assets and liabilities represent funds held by the Company in a Rabbi Trust for an executive deferral plan. These funds consist of actively traded equity and bond funds with quoted prices in active markets. The balance disclosed in the table above excludes cash and cash equivalents of $0.4 million as of December 31, 2016 and $0.6 million as of December 31, 2015.

Level 3 Fair Value

Under the power exchange agreement the Company purchases power at a price that is based on the average operating and maintenance (O&M) charges from three surrogate nuclear power plants around the country. To estimate the fair value of this agreement the Company estimates the difference between the purchase price based on the future O&M charges and forward prices for energy. The Company compares the Level 2 brokered quotes and forward price curves described above to an internally developed forward price which is based on the average O&M charges from the three surrogate nuclear power plants for the current year. Because the nuclear power plant O&M charges are only known for one year, all forward years are estimated assuming an annual escalation. In addition to the forward price being estimated using unobservable inputs, the Company also estimates the volumes of the transactions that will take place in the future based on historical average transaction volumes per delivery year (November to April). Significant increases or decreases in any of these inputs in isolation would result in a significantly higher or lower fair value measurement. Generally, a change in the current year O&M charges for the surrogate plants is accompanied by a directionally similar change in O&M charges in future years. There is generally not a correlation between external market prices and the O&M charges used to develop the internal forward price.

For the power commodity option agreement, the Company uses the Black-Scholes-Merton valuation model to estimate the fair value, and this model includes significant inputs not observable or corroborated in the market. These inputs include: 1) the strike price (which is an internally derived price based on a combination of generation plant heat rate factors, natural gas market pricing, delivery and other O&M charges), 2) estimated delivery volumes, and 3) volatility rates. Significant increases or decreases in any of these inputs in isolation would result in a significantly higher or lower fair value measurement. Generally, changes in overall commodity market prices and volatility rates are accompanied by directionally similar changes in the strike price and volatility assumptions used in the calculation.

For the natural gas commodity exchange agreement, the Company uses the same Level 2 brokered quotes described above; however, the Company also estimates the purchase and sales volumes (within contractual limits) as well as the timing of those transactions. Changing the timing of volume estimates changes the timing of purchases and sales, impacting which brokered quote is used. Because the brokered quotes can vary significantly from period to period, the unobservable estimates of the timing and volume of transactions can have a significant impact on the calculated fair value. The Company currently estimates volumes and timing of transactions based on a most likely scenario using historical data. Historically, the timing and volume of transactions have not been highly correlated with market prices and market volatility.

The following table presents the quantitative information which was used to estimate the fair values of the Level 3 assets and liabilities above as of December 31, 2016 (dollars in thousands):

	Fair Value (Net) at December 31, 2016	Valuation Technique	Unobservable Input	Range
Power exchange agreement	$ (13,449)	Surrogate facility pricing	O&M charges	$33.59-$49.15/MWh (1)
			Escalation factor	3% - 2017 to 2019
			Transaction volumes	241,558 - 396,984 MWhs
Power option agreement	(76)	Black-Scholes-Merton	Strike price	$37.83/MWh - 2019
				$54.40/MWh - 2018
			Delivery volumes	157,517 - 285,979 MWhs
			Volatility rates	0.20 (2)
Natural gas exchange agreement	(5,885)	Internally derived weighted-average cost of gas	Forward purchase	$1.83 - $3.06/mmBTU
			Forward sales prices	$1.90 - $5.14/mmBTU
			Purchase volumes	115,000 - 310,000 mmBTUs
			Sales volumes	60,000 - 310,000 mmBTUs

(1) The average O&M charges for the delivery year beginning in November 2016 were $39.22 per MWh. For ratemaking purposes the average O&M charges to be included for recovery in retail rates vary slightly between regulatory jurisdictions. The average O&M charges for the delivery year beginning in 2016 were $44.33 for Washington and $39.22 for Idaho.

(2) The estimated volatility rate of 0.20 is compared to actual quoted volatility rates of 0.35 for 2017 to 0.26 in December 2018.

The valuation methods, significant inputs and resulting fair values described above were developed by the Company's management and are reviewed on at least a quarterly basis to ensure they provide a reasonable estimate of fair value each reporting period.

The following table presents activity for energy commodity derivative assets (liabilities) measured at fair value using significant unobservable inputs (Level 3) for the years ended December 31 (dollars in thousands):

	Natural Gas Exchange Agreement	Power Exchange Agreement	Power Option Agreement	Total
Year ended December 31, 2016:				
Balance as of January 1, 2016	$ (5,039)	$ (21,961)	$ (124)	$ (27,124)
Total gains or (losses) (realized/unrealized):				
Included in regulatory assets/liabilities (1)	259	400	48	707
Settlements	(1,105)	8,112	—	7,007
Ending balance as of December 31, 2016 (2)	$ (5,885)	$ (13,449)	$ (76)	$ (19,410)
Year ended December 31, 2015:				
Balance as of January 1, 2015	$ (35)	$ (23,299)	$ (424)	$ (23,758)
Total gains or (losses) (realized/unrealized):				
Included in regulatory assets/liabilities (1)	(6,008)	(6,198)	300	(11,906)
Settlements	1,004	7,536	—	8,540
Ending balance as of December 31, 2015 (2)	$ (5,039)	$ (21,961)	$ (124)	$ (27,124)
Year ended December 31, 2014:				
Balance as of January 1, 2014	$ (1,219)	$ (14,441)	$ (775)	$ (16,435)
Total gains or (losses) (realized/unrealized):				
Included in regulatory assets/liabilities (1)	3,873	(10,002)	351	(5,778)
Settlements	(2,689)	1,144	—	(1,545)
Ending balance as of December 31, 2014 (2)	$ (35)	$ (23,299)	$ (424)	$ (23,758)

(1) All gains and losses are included in other regulatory assets and liabilities. There were no gains and losses included in either net income or other comprehensive income during any of the periods presented in the table above.

(2) There were no purchases, issuances or transfers from other categories of any derivatives instruments during the periods presented in the table above.

NOTE 17. COMMON STOCK

The payment of dividends on common stock could be limited by:

- certain covenants applicable to preferred stock (when outstanding) contained in the Company’s Restated Articles of Incorporation, as amended (currently there are no preferred shares outstanding),
- certain covenants applicable to the Company's outstanding long-term debt and committed line of credit agreements,
- the hydroelectric licensing requirements of section 10(d) of the FPA (see Note 1), and
- certain requirements under the OPUC approval of the AERC acquisition in 2014. The OPUC's AERC acquisition order requires Avista Utilities to maintain a capital structure of no less than 40 percent common equity (inclusive of short-term debt). This limitation may be revised upon request by the Company with approval from the OPUC.

The Company declared the following dividends for the year ended December 31:

	2016	2015	2014
Dividends paid per common share	$ 1.37	$ 1.32	$ 1.27

Under the most restrictive of the dividend limitations discussed above, which are the requirements of the OPUC approval of the AERC acquisition, the amount available for dividends at December 31, 2016 was limited to $263.4 million.

The Company has 10 million authorized shares of preferred stock. The Company did not have any preferred stock outstanding as of December 31, 2016 and 2015.

Stock Repurchase Programs

During 2014 and 2015, Avista Corp.'s Board of Directors approved programs to repurchase shares of the Company's outstanding common stock. The number of shares repurchased and the total cost of repurchases are disclosed in the Consolidated Statements of Equity and Redeemable Noncontrolling Interests. The average repurchase price was $31.57 in 2014 and $32.66 in 2015. All repurchased shares reverted to the status of authorized but unissued shares.

Equity Issuances

In March 2016, the Company entered into four separate sales agency agreements under which Avista Corp.’s sales agents may offer and sell up to 3.8 million new shares of Avista Corp.'s common stock, no par value, from time to time. The sales agency agreements expire on February 29, 2020. In 2016, 1.6 million shares were issued under these agreements resulting in total net proceeds of $65.3 million, leaving 2.2 million shares remaining to be issued.

In 2016, the Company also issued $1.7 million (net of issuance costs) of common stock under the employee plans.

NOTE 18. EARNINGS PER COMMON SHARE ATTRIBUTABLE TO AVISTA CORPORATION SHAREHOLDERS

The following table presents the computation of basic and diluted earnings per common share attributable to Avista Corp. shareholders for the years ended December 31 (in thousands, except per share amounts):

	2016	2015	2014
Numerator:			
Net income from continuing operations attributable to Avista Corp. shareholders	$ 137,228	$ 118,080	$ 119,817
Net income from discontinued operations attributable to Avista Corp. shareholders	—	5,147	72,224
Subsidiary earnings adjustment for dilutive securities (discontinued operations)	—	—	5
Adjusted net income from discontinued operations attributable to Avista Corp. shareholders for computation of diluted earnings per common share	$ —	$ 5,147	$ 72,229
Denominator:			
Weighted-average number of common shares outstanding-basic	63,508	62,301	61,632
Effect of dilutive securities:			
Performance and restricted stock awards	412	407	255
Weighted-average number of common shares outstanding-diluted	63,920	62,708	61,887
Earnings per common share attributable to Avista Corp. shareholders, basic:			
Earnings per common share from continuing operations	$ 2.16	$ 1.90	$ 1.94
Earnings per common share from discontinued operations	$ —	$ 0.08	$ 1.18
Total earnings per common share attributable to Avista Corp. shareholders, basic	$ 2.16	$ 1.98	$ 3.12
Earnings per common share attributable to Avista Corp. shareholders, diluted:			
Earnings per common share from continuing operations	$ 2.15	$ 1.89	$ 1.93
Earnings per common share from discontinued operations	$ —	$ 0.08	$ 1.17
Total earnings per common share attributable to Avista Corp. shareholders, diluted	$ 2.15	$ 1.97	$ 3.10

There were no shares excluded from the calculation because they were antidilutive.

NOTE 19. COMMITMENTS AND CONTINGENCIES

In the course of its business, the Company becomes involved in various claims, controversies, disputes and other contingent matters, including the items described in this Note. Some of these claims, controversies, disputes and other contingent matters involve litigation or other contested proceedings. For all such matters, the Company intends to vigorously protect and defend its interests and pursue its rights. However, no assurance can be given as to the ultimate outcome of any particular matter because litigation and other contested proceedings are inherently subject to numerous uncertainties. For matters that affect Avista Utilities' or AEL&P's operations, the Company intends to seek, to the extent appropriate, recovery of incurred costs through the ratemaking process.

California Refund Proceeding

In February 2016, APX, a market maker in the California Refund Proceedings in whose markets Avista Energy participated in the summer of 2000, asserted that Avista Energy and its other customer/participants may be responsible for a share of the disgorgement penalty APX may be found to owe to Pacific Gas & Electric (PG&E), Southern California Edison, San Diego

Gas & Electric, the California Attorney General (AG), the California Department of Water Resources (CERS), and the California Public Utilities Commission (together, the “California Parties”). The penalty arises as a result of the FERC's finding that APX committed violations in the California market in the summer of 2000. APX is making these assertions despite Avista Energy having been dismissed in FERC Opinion No. 536 from the on-going administrative proceeding at the FERC regarding potential wrongdoing in the California markets in the summer of 2000. APX has identified Avista Energy’s share of APX’s exposure to be as much as $16.0 million even though no wrongdoing allegations are specifically attributable to Avista Energy. Avista Energy believes its settlement with the California Parties in 2014 insulates it from any such liability and that as a dismissed party it cannot be drawn back into the litigation. Avista Energy intends to vigorously dispute APX’s assertions of indirect liability, but cannot at this time predict the eventual outcome.

Pacific Northwest Refund Proceeding

In July 2001, the FERC initiated a preliminary evidentiary hearing to develop a factual record as to whether prices for spot market sales of wholesale energy in the Pacific Northwest between December 25, 2000 and June 20, 2001 were just and reasonable. In June 2003, the FERC terminated the Pacific Northwest refund proceedings, after finding that the equities do not justify the imposition of refunds. In August 2007, the Ninth Circuit found that the FERC had failed to take into account new evidence of market manipulation and that such failure was arbitrary and capricious and, accordingly, remanded the case to the FERC, stating that the FERC's findings must be reevaluated in light of the new evidence. The Ninth Circuit expressly declined to direct the FERC to grant refunds. On October 3, 2011, the FERC issued an Order on Remand and on April 5, 2013 expanded the temporal scope of the proceeding to permit parties to submit evidence on transactions during the period from January 1, 2000 through and including June 20, 2001.

On July 11, 2012 and March 28, 2013, Avista Energy and Avista Corp. filed settlements of all issues in this docket with regard to the claims made by the City of Tacoma and the California AG (on behalf of the California Department of Water Resources). The FERC approved the settlements and they are final.

The remaining direct claimant against Avista Corp. and Avista Energy in this proceeding was the City of Seattle, Washington (Seattle). An evidentiary, trial type hearing before an Administrative Law Judge (ALJ) to permit parties to present evidence of unlawful market activity was conducted in 2013.

With regard to the Seattle claims, on March 28, 2014, the Presiding ALJ issued an Initial Decision finding that: 1) Seattle failed to demonstrate that either Avista Corp. or Avista Energy engaged in unlawful market activity and also failed to identify any specific contracts at issue; 2) Seattle failed to demonstrate that contracts with either Avista Corp. or Avista Energy imposed an excessive burden on consumers or seriously harmed the public interest; and that 3) Seattle failed to demonstrate that either Avista Corp. or Avista Energy engaged in any specific violations of substantive provisions of the FPA or any filed tariffs or rate schedules. Accordingly, the ALJ denied all of Seattle’s claims under both section 206 and section 309 of the FPA. On May 22, 2015, the FERC issued its Order on Initial Decision in which it upheld the ALJ’s Initial Decision denying all of Seattle’s claims against Avista Corp. and Avista Energy. Seattle filed a Request for Rehearing of the FERC’s Order on Initial Decision which was denied on December 31, 2015. Seattle appealed the FERC’s decision to the Ninth Circuit. In October 2016, Seattle settled all of the matters with the remaining parties and withdrew its appeal at the Ninth Circuit. All the remaining parties signed the settlement agreement and a petition to dismiss the case was filed with the Ninth Circuit on October 27, 2016. There are no remaining claims outstanding under this proceeding. The settlement did not have a material adverse effect on the Company's financial condition, results of operations or cash flows.

Sierra Club and Montana Environmental Information Center Litigation

In 2013, the Sierra Club and Montana Environmental Information Center (MEIC) (collectively "Plaintiffs"), filed a Complaint in the United States District Court for the District of Montana, Billings Division, against the Owners of the Colstrip Generating Project ("Colstrip"); Avista Corp. owns a 15 percent interest in Units 3 & 4 of Colstrip. The other Colstrip co-Owners are Talen Montana, LLC (formerly PPL Montana, LLC, an indirect subsidiary of Talen Energy Corporation), Puget Sound Energy, Portland General Electric Company, NorthWestern Energy and PacifiCorp. The Complaint alleged certain violations of the Clean Air Act, including the New Source Review, Title V and opacity requirements with respect to post-January 1, 2001 Colstrip projects. The Plaintiffs requested that the Court grant injunctive and declaratory relief, order remediation of alleged environmental damages, impose civil penalties, require a beneficial environmental project in the areas affected by the alleged air pollution and require payment of Plaintiffs' costs of litigation and attorney fees.

The liability trial was scheduled to start on May 31, 2016. The parties engaged in settlement discussions with the Plaintiffs to resolve the claims raised in the litigation. On July 12, 2016, the parties filed a proposed Consent Decree with the court which contained the terms of the settlement of the matter with respect to all four units at Colstrip. The settlement does not include any monetary payments by any party, dismisses all claims against all four units, and provides for the shut-down of units 1 & 2 (which are owned solely by Talen Montana, LLC and Puget Sound Energy) no later than July, 2022. The Consent Decree was entered on September 6, 2016. The parties have petitioned the Court for costs and attorneys' fees. The Court denied the defendant's claim for fees and reduced the plaintiff's claimed fees from approximately $3.0 million to $1.6 million. On February 15, 2017 the Court issued an Order adopting this resolution in full and closing the case.

The Company does not expect that this matter will have a material adverse effect on its financial condition, results of operations or cash flows.

Cabinet Gorge Total Dissolved Gas Abatement Plan

Dissolved atmospheric gas levels (referred to as "Total Dissolved Gas" or "TDG") in the Clark Fork River exceed state of Idaho and federal water quality numeric standards downstream of Cabinet Gorge particularly during periods when excess river flows must be diverted over the spillway. Under the terms of the Clark Fork Settlement Agreement (CFSA) as incorporated in Avista Corp.'s FERC license for the Clark Fork Project, Avista Corp. has worked in consultation with agencies, tribes and other stakeholders to address this issue. Under the terms of a gas supersaturation mitigation plan, Avista is reducing TDG by constructing spill crest modifications on spill gates at the dam, and the Company expects to continue spill crest modifications over the next several years, in ongoing consultation with key stakeholders. Avista Corp. cannot at this time predict the outcome or estimate a range of costs associated with this contingency; however, the Company will continue to seek recovery, through the ratemaking process, of all operating and capitalized costs related to this issue.

Fish Passage at Cabinet Gorge and Noxon Rapids

In 1999, the United States Fish and Wildlife Service (USFWS) listed bull trout as threatened under the Endangered Species Act. In 2010, the USFWS issued a revised designation of critical habitat for bull trout, which includes the lower Clark Fork River. The USFWS issued a final recovery plan in October 2015.

The CFSA describes programs intended to help restore bull trout populations in the project area. Using the concept of adaptive management and working closely with the USFWS, the Company evaluated the feasibility of fish passage at Cabinet Gorge and Noxon Rapids. The results of these studies led, in part, to the decision to move forward with development of permanent facilities, among other bull trout enhancement efforts. Parties to the CFSA are working to resolve several issues. The Company believes its ongoing efforts through the CFSA continue to effectively address issues related to bull trout. Avista Corp. cannot at this time predict the outcome or estimate a range of costs associated with this contingency; however, the Company will continue to seek recovery, through the ratemaking process, of all operating and capitalized costs related to fish passage at Cabinet Gorge and Noxon Rapids.

Collective Bargaining Agreements

The Company's collective bargaining agreements with the IBEW represent approximately 45 percent of all of Avista Utilities' employees. A new three-year agreement with the local union in Washington and Idaho representing the majority (approximately 90 percent) of the Avista Utilities' bargaining unit employees was approved in March 2016 and expires in March 2019.

A three-year agreement in Oregon, which covers approximately 50 employees was set to expire in March 2017. A new three-year agreement has been approved by the IBEW membership that will expire in March 2020. It is still awaiting approval from the National IBEW.

A collective bargaining agreement with the local union of the IBEW in Alaska expires in March 2017. The collective bargaining agreement with the IBEW in Alaska represents approximately 50 percent of all AERC employees. The remainder of AERC's employees are non-union.

There is a risk that if collective bargaining agreements expire and new agreements are not reached in each of our jurisdictions, employees could strike. Given the magnitude of employees that are covered by collective bargaining agreements, this could result in disruptions of our operations. However, the Company believes that the possibility of this occurring is remote.

Other Contingencies

In the normal course of business, the Company has various other legal claims and contingent matters outstanding. The Company believes that any ultimate liability arising from these actions will not have a material impact on its financial condition, results of operations or cash flows. It is possible that a change could occur in the Company’s estimates of the probability or amount of a liability being incurred. Such a change, should it occur, could be significant.

The Company routinely assesses, based on studies, expert analyses and legal reviews, its contingencies, obligations and commitments for remediation of contaminated sites, including assessments of ranges and probabilities of recoveries from other responsible parties who either have or have not agreed to a settlement as well as recoveries from insurance carriers. The Company’s policy is to accrue and charge to current expense identified exposures related to environmental remediation sites based on estimates of investigation, cleanup and monitoring costs to be incurred. For matters that affect Avista Utilities’ or AEL&P's operations, the Company seeks, to the extent appropriate, recovery of incurred costs through the ratemaking process.

The Company has potential liabilities under the Endangered Species Act for species of fish, plants and wildlife that have either already been added to the endangered species list, listed as “threatened” or petitioned for listing. Thus far, measures adopted and implemented have had minimal impact on the Company. However, the Company will continue to seek recovery, through the ratemaking process, of all operating and capitalized costs related to these issues.

Under the federal licenses for its hydroelectric projects, the Company is obligated to protect its property rights, including water rights. In addition, the company holds additional non-hydro water rights. The state of Montana is examining the status of all water right claims within state boundaries through a general adjudication. Claims within the Clark Fork River basin could adversely affect the energy production of the Company’s Cabinet Gorge and Noxon Rapids hydroelectric facilities. The state of Idaho has initiated adjudication in northern Idaho, which will ultimately include the lower Clark Fork River, the Spokane River and the Coeur d’Alene basin. The Company is and will continue to be a participant in these and any other relevant adjudication processes. The complexity of such adjudications makes each unlikely to be concluded in the foreseeable future. As such, it is not possible for the Company to estimate the impact of any outcome at this time. The Company will continue to seek recovery, through the ratemaking process, of all operating and capitalized costs related to this issue.

NOTE 20. REGULATORY MATTERS

Regulatory Assets and Liabilities

The following table presents the Company's regulatory assets and liabilities as of December 31, 2016 (dollars in thousands):

	Remaining Amortization	Receiving (1) Earning	Receiving Not Earning	(2) Expected	Total 2016	Total 2015
Regulatory Assets:						
Investment in exchange power-net	2019	$ 6,533	$ —	$ —	$ 6,533	$ 8,983
Regulatory assets for deferred income tax	(3)	101,372	8,481	—	109,853	101,240
Regulatory assets for pensions and other postretirement benefit plans	(4)	—	240,114	—	240,114	235,009
Current regulatory asset for energy commodity derivatives	(5)	—	11,365	—	11,365	17,260
Unamortized debt repurchase costs	(6)	13,700	—	—	13,700	15,520
Regulatory asset for settlement with Coeur d'Alene Tribe	2059	45,265	—	—	45,265	46,576
Demand side management programs	(3)	—	15,700	—	15,700	3,168
Deferred maintenance costs	2018	—	2,672	—	2,672	4,823
Decoupling surcharge	2018	43,126	—	—	43,126	13,312
Regulatory asset for utility plant to be abandoned	(7)	19,100	—	—	19,100	—
Regulatory asset for interest rate swaps	(8)	37,912	—	123,596	161,508	83,973
Non-current regulatory asset for energy commodity derivatives	(5)	—	16,919	—	16,919	32,420
Other regulatory assets	(3)	3,633	5,755	4,585	13,973	17,348
Total regulatory assets		$ 270,641	$ 301,006	$ 128,181	$ 699,828	$ 579,632
Regulatory Liabilities:						
Natural gas deferrals	(3)	$ 30,820	$ —	$ —	$ 30,820	$ 17,880
Power deferrals	(3)	23,528	—	—	23,528	18,747
Regulatory liability for utility plant retirement costs	(9)	273,983	—	—	273,983	261,594
Income tax related liabilities	(3)	—	28,966	—	28,966	17,609
Regulatory liability for interest rate swaps	(8)	12,442	—	8,749	21,191	23
Provision for earnings sharing rebate	(3)	—	3,697	6,600	10,297	12,237
Decoupling rebate	2017	2,405	—	—	2,405	2,373
Other regulatory liabilities	(3)	2,505	3,257	—	5,762	3,420
Total regulatory liabilities		$ 345,683	$ 35,920	$ 15,349	$ 396,952	$ 333,883

(1) Earning a return includes either interest on the regulatory asset/liability or a return on the investment as a component of rate base at the allowed rate of return.

(2) Expected recovery is pending regulatory treatment including regulatory assets and liabilities with prior regulatory precedence.

(3) Remaining amortization period varies depending on timing of underlying transactions.

(4) As the Company has historically recovered and currently recovers its pension and other postretirement benefit costs related to its regulated operations in retail rates, the Company records a regulatory asset for that portion of its pension and other postretirement benefit funding deficiency.

(5) The UTC and the IPUC issued accounting orders authorizing Avista Corp. to offset energy commodity derivative assets or liabilities with a regulatory asset or liability. This accounting treatment is intended to defer the recognition of mark-to-market gains and losses on energy commodity transactions until the period of settlement, subject to approval for recovery through retail rates. Realized gains and losses, subject to regulatory approval, result in adjustments to retail rates through purchased gas cost adjustments, the ERM in Washington, the PCA mechanism in Idaho, and periodic general rates cases.

(6) For the Company's Washington jurisdiction and for any debt repurchases beginning in 2007 in all jurisdictions, premiums paid to repurchase debt are amortized over the remaining life of the original debt that was repurchased or, if new debt is issued in connection with the repurchase, these costs are amortized over the life of the new debt. In the Company's other regulatory jurisdictions, premiums paid to repurchase debt prior to 2007 are being amortized over the average remaining maturity of outstanding debt when no new debt was issued in connection with the debt repurchase. These costs are included in the Company's cost of debt calculation for ratemaking purposes and are recovered through retail rates.

(7) In March 2016, the UTC granted the Company's Petition for an Accounting Order to defer and include in a regulatory asset the undepreciated value of its existing Washington electric meters for the opportunity for later recovery. This accounting treatment is related to the Company's plan to replace approximately 253,000 of its existing electric meters with new two-way digital meters and the related software and support services through its AMI project in Washington State. Replacement of the meters is expected to begin in the second half of 2017. For ratemaking purposes, the existing electric meters won't be recorded as regulatory assets until they are physically removed from service, but for GAAP purposes, they are regulatory assets upon the commitment by management to retire the meters.

(8) For interest rate swap derivatives, each period Avista Utilities records all mark-to-market gains and losses in each accounting period as assets and liabilities and records offsetting regulatory assets and liabilities, such that there is no income statement impact. This is similar to the treatment of energy commodity derivatives described above. Upon settlement of interest rate swap derivatives, the regulatory asset or liability is amortized as a component of interest expense over the term of the associated debt and are also included as a part of the Company's cost of debt calculation for ratemaking purposes. See Note 14 regarding a reclassification of settled interest rate swap derivatives during 2016. Settled interest rate swap derivatives which have been through a general rate case proceeding are classified as earning a return in the table above, whereas all unsettled interest rate swap derivatives and settled interest rate swap derivatives which have not been included in a general rate case are classified as expected recovery.

(9) This amount is dependent upon the cost of removal of underlying utility plant assets and the life of utility plant.

Power Cost Deferrals and Recovery Mechanisms

Deferred power supply costs are recorded as a deferred charge on the Consolidated Balance Sheets for future prudence review and recovery through retail rates. The power supply costs deferred include certain differences between actual net power supply costs incurred by Avista Utilities and the costs included in base retail rates. This difference in net power supply costs primarily results from changes in:

- short-term wholesale market prices and sales and purchase volumes,
- the level and availability of hydroelectric generation,
- the level and availability of thermal generation (including changes in fuel prices), and
- retail loads.

In Washington, the ERM allows Avista Utilities to periodically increase or decrease electric rates with UTC approval to reflect changes in power supply costs. The ERM is an accounting method used to track certain differences between actual power supply costs, net of wholesale sales and sales of fuel, and the amount included in base retail rates for Washington customers. The Washington ERM calculation is subject to certain deadbands and sharing bands. For 2016, the Company recognized a pre-tax benefit of $5.1 million under the ERM in Washington compared to a benefit of $6.3 million for 2015. Total net deferred power costs under the ERM were a liability of $21.3 million as of December 31, 2016 compared to a liability of $18.0 million as of December 31, 2015, and these deferred power cost balances represent amounts due to customers.

Avista Utilities has a PCA mechanism in Idaho that allows it to modify electric rates on October 1 of each year with IPUC approval. Under the PCA mechanism, Avista Utilities defers 90 percent of the difference between certain actual net power supply expenses and the amount included in base retail rates for its Idaho customers. The October 1 rate adjustments recover or rebate power costs deferred during the preceding July-June twelve-month period. Total net power supply costs deferred under the PCA mechanism were a liability of $2.2 million as of December 31, 2016 compared to an asset of $0.2 million as of December 31, 2015.

Natural Gas Cost Deferrals and Recovery Mechanisms

Avista Utilities files a PGA in all three states it serves to adjust natural gas rates for: 1) estimated commodity and pipeline transportation costs to serve natural gas customers for the coming year, and 2) the difference between actual and estimated commodity and transportation costs for the prior year. Total net deferred natural gas costs to be refunded to customers were a liability of $30.8 million as of December 31, 2016 compared to a liability of $17.9 million as of December 31, 2015.

Decoupling and Earnings Sharing Mechanisms

Decoupling is a mechanism designed to sever the link between a utility's revenues and consumers' energy usage. In each of Avista Utilities' jurisdictions, each month Avista Utilities' electric and natural gas revenues are adjusted so as to be based on the number of customers in certain customer rate classes, rather than KWh and therm sales. The difference between revenues based on the number of customers and revenues based on actual usage is deferred and either surcharged or rebated to customers beginning in the following year.

Washington Decoupling and Earnings Sharing

In Washington, the UTC approved the Company's decoupling mechanisms for electric and natural gas for a five-year period beginning January 1, 2015. Electric and natural gas decoupling surcharge rate adjustments to customers are limited to 3 percent on an annual basis, with any remaining surcharge balance carried forward for recovery in a future period. There is no limit on the level of rebate rate adjustments.

The electric and natural gas decoupling mechanisms each include an after-the-fact earnings test. At the end of each calendar year, separate electric and natural gas earnings calculations will be made for the prior calendar year. These earnings tests will reflect actual decoupled revenues, normalized power supply costs and other normalizing adjustments. See below for a summary of cumulative balances under the decoupling and earnings sharing mechanisms.

Idaho Fixed Cost Adjustment (FCA) and Earnings Sharing Mechanisms

In Idaho, the IPUC approved the implementation of FCAs for electric and natural gas (similar in operation and effect to the Washington decoupling mechanisms) for an initial term of three years, beginning January 1, 2016.

For the period 2013 through 2015 the Company had an after-the-fact earnings test, such that if Avista Corp., on a consolidated basis for electric and natural gas operations in Idaho, earned more than a 9.8 percent ROE, the Company was required to share with customers 50 percent of any earnings above the 9.8 percent. There was no provision for a surcharge to customers if the Company's ROE was less than 9.8 percent. This after-the-fact earnings test was discontinued as part of the settlement of the Company's 2015 Idaho electric and natural gas general rates cases. See below for a summary of cumulative balances under the decoupling and earnings sharing mechanisms.

Oregon Decoupling Mechanism

In February 2016, the OPUC approved the implementation of a decoupling mechanism for natural gas, similar to the Washington and Idaho mechanisms described above. The decoupling mechanism became effective on March 1, 2016 and there will be an opportunity for interested parties to review the mechanism and recommend changes, if any, by September 2019. An earnings review is conducted on an annual basis, which is filed by the Company with the OPUC on or before June 1 of each year for the prior calendar year. In the annual earnings review, if the Company earns more than 100 basis points above its allowed return on equity, one-third of the earnings above the 100 basis points would be deferred and later returned to customers. The earnings review is separate from the decoupling mechanism and was in place prior to decoupling. See below for a summary of cumulative balances under the decoupling and earnings sharing mechanisms.

Cumulative Decoupling and Earnings Sharing Mechanism Balances

As of December 31, 2016 and December 31, 2015, the Company had the following cumulative balances outstanding related to decoupling and earnings sharing mechanisms in its various jurisdictions (dollars in thousands):

	December 31, 2016	December 31, 2015
Washington		
Decoupling surcharge	$ 30,408	$ 10,933
Provision for earnings sharing rebate	(5,113)	(3,422)
Idaho		
Decoupling surcharge	$ 8,292	n/a

NOTE 21. INFORMATION BY BUSINESS SEGMENTS

The business segment presentation reflects the basis used by the Company's management to analyze performance and determine the allocation of resources. The Company's management evaluates performance based on income (loss) from operations before income taxes as well as net income (loss) attributable to Avista Corp. shareholders. The accounting policies of the segments are the same as those described in the summary of significant accounting policies. Avista Utilities' business is managed based on the total regulated utility operation; therefore, it is considered one segment. AEL&P is a separate reportable business segment as it has separate financial reports that are reviewed in detail by the Chief Operating Decision Maker and its operations and risks are sufficiently different from Avista Utilities and the other businesses at AERC that it cannot be aggregated with any other operating segments. The Other category, which is not a reportable segment, includes other investments and operations of various subsidiaries, as well as certain other operations of Avista Capital.

The following table presents information for each of the Company's business segments (dollars in thousands):

	Avista Utilities	Alaska Electric Light and Power Company	Total Utility	Other	Intersegment Eliminations (1)	Total
For the year ended December 31, 2016:						
Operating revenues	$ 1,372,638	$ 46,276	$ 1,418,914	$ 23,569	$ —	$ 1,442,483

Capital expenditures (3)	381,174	12,251	393,425	885	—	394,310
For the year ended December 31, 2014:						
Operating revenues	$ 1,413,499	$ 21,644	$ 1,435,143	$ 39,219	$ (1,800)	$ 1,472,562
Resource costs	672,344	5,900	678,244	—	—	678,244
Other operating expenses	280,964	5,868	286,832	32,218	(1,800)	317,250
Depreciation and amortization	126,987	2,583	129,570	610	—	130,180
Income from operations	239,976	6,221	246,197	6,391	—	252,588
Interest expense (2)	73,750	1,382	75,132	1,004	(384)	75,752
Income taxes	67,634	1,816	69,450	2,790	—	72,240
Net income from continuing operations attributable to Avista Corp. shareholders	113,263	3,152	116,415	3,236	166	119,817
Capital expenditures (3)	323,931	1,585	325,516	406	—	325,922
Total Assets:						
As of December 31, 2016	$ 4,975,555	$ 273,770	$ 5,249,325	$ 60,430	$ —	$ 5,309,755
As of December 31, 2015	$ 4,601,708	$ 265,735	$ 4,867,443	$ 39,206	$ —	$ 4,906,649
As of December 31, 2014	$ 4,357,760	$ 263,070	$ 4,620,830	$ 80,141	$ —	$ 4,700,971

(1) Intersegment eliminations reported as operating revenues and resource costs represent intercompany purchases and sales of electric capacity and energy between Avista Utilities and Spokane Energy (included in other). Intersegment eliminations reported as interest expense and net income (loss) attributable to Avista Corp. shareholders represent intercompany interest.
(2) Including interest expense to affiliated trusts.
(3) The capital expenditures for the other businesses are included as other capital expenditures on the Consolidated Statements of Cash Flows. The remainder of the balance included in other capital expenditures on the Consolidated Statements of Cash Flows for 2014 are related to Ecova.

NOTE 22. SELECTED QUARTERLY FINANCIAL DATA (Unaudited)

The Company's energy operations are significantly affected by weather conditions. Consequently, there can be large variances in revenues, expenses and net income between quarters based on seasonal factors such as, but not limited to, temperatures and streamflow conditions.

A summary of quarterly operations (in thousands, except per share amounts) for 2016 and 2015 follows:

	Three Months Ended			
	March 31	June 30	September 30	December 31
2016				
Operating revenues	$ 418,173	$ 318,838	$ 303,349	$ 402,123
Operating expenses	312,088	257,247	263,755	319,590
Income from operations	$ 106,085	$ 61,591	$ 39,594	$ 82,533
Net income (1)	57,665	27,287	12,261	40,103
Net income attributable to noncontrolling interests	(16)	(33)	(27)	(12)
Net income attributable to Avista Corporation shareholders (1)	$ 57,649	$ 27,254	$ 12,234	$ 40,091
Outstanding common stock:				
weighted-average, basic	62,605	63,386	63,857	64,185
weighted-average, diluted	62,907	63,783	64,325	64,620
Earnings per common share attributable to Avista Corp. shareholders, diluted (1)	$ 0.92	$ 0.43	$ 0.19	$ 0.62

	Three Months Ended			
	March 31	June 30	September 30	December 31
2015				
Operating revenues from continuing operations	$ 446,490	$ 337,332	$ 313,649	$ 387,305
Operating expenses from continuing operations	356,915	279,972	277,737	316,938
Income from continuing operations	$ 89,575	$ 57,360	$ 35,912	$ 70,367
Net income from continuing operations	$ 46,462	$ 25,078	$ 12,754	$ 33,876
Net income from discontinued operations	—	196	289	4,662
Net income	46,462	25,274	13,043	38,538
Net income attributable to noncontrolling interests	(13)	(28)	(32)	(17)
Net income attributable to Avista Corporation shareholders	$ 46,449	$ 25,246	$ 13,011	$ 38,521
Amounts attributable to Avista Corp. shareholders:				
Net income from continuing operations attributable to Avista Corp. shareholders	$ 46,449	$ 25,050	$ 12,722	$ 33,859
Net income from discontinued operations attributable to Avista Corp. shareholders	—	196	289	4,662
Net income attributable to Avista Corp. shareholders	$ 46,449	$ 25,246	$ 13,011	$ 38,521
Outstanding common stock:				
weighted-average, basic	62,318	62,281	62,299	62,308
weighted-average, diluted	62,889	62,600	62,688	62,758
Earnings per common share attributable to Avista Corp. shareholders, diluted:				
Earnings per common share from continuing operations	$ 0.74	$ 0.40	$ 0.21	$ 0.54
Earnings per common share from discontinued operations	—	—	—	0.07
Total earnings per common share attributable to Avista Corp. shareholders, diluted	$ 0.74	$ 0.40	$ 0.21	$ 0.61

(1) The Company adopted ASU 2016-09 during the second quarter of 2016, with a retrospective effective date of January 1, 2016. The adoption of this standard resulted in a recognized income tax benefit of $1.6 million in 2016 associated with excess tax benefits on settled share-based employee payments. Because this standard was adopted in the second quarter of 2016, but has a retrospective effective date of January 1, 2016, the effects from the adoption were pushed back to the first quarter of 2016 and the results for that quarter were recast in the presentation above. In all future reports which include the first quarter of 2016, the results for that quarter will be recast to include the effects of the excess tax benefits recognized.

The accompanying condensed consolidated financial statements of Avista Corporation (Avista Corp. or the Company) for the interim periods ended March 31, 2017 and March 31, 2016 are unaudited; however, in the opinion of management, the statements reflect all adjustments necessary for a fair statement of the results for the interim periods. All such adjustments are of a normal recurring nature. The condensed consolidated financial statements have been prepared in accordance with accounting principles generally accepted in the United States of America (GAAP) for interim financial information and with the instructions to Form 10-Q and Rule 10-01 of Regulation S-X. The Condensed Consolidated Statements of Income for the interim periods are not necessarily indicative of the results to be expected for the full year. These condensed consolidated financial statements do not contain the detail or footnote disclosure concerning accounting policies and other matters which would be included in full fiscal year consolidated financial statements; therefore, they should be read in conjunction with the Company's audited consolidated financial statements included in the Company's Annual Report on Form 10-K for the year ended December 31, 2016 (2016 Form 10-K). Please refer to the section “Acronyms and Terms” in the 2016 Form 10-K for definitions of certain terms not defined herein. The acronyms and terms are an integral part of these condensed consolidated financial statements.

NOTE 1. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Nature of Business

Avista Corp. is primarily an electric and natural gas utility with certain other business ventures. Avista Utilities is an operating division of Avista Corp., comprising the regulated utility operations in the Pacific Northwest. Avista Utilities provides electric distribution and transmission, and natural gas distribution services in parts of eastern Washington and northern Idaho. Avista Utilities also provides natural gas distribution service in parts of northeastern and southwestern Oregon. Avista Utilities has electric generating facilities in Washington, Idaho, Oregon and Montana. Avista Utilities also supplies electricity to a small number of customers in Montana, most of whom are employees who operate Avista Utilities' Noxon Rapids generating facility.

Alaska Energy and Resources Company (AERC) is a wholly-owned subsidiary of Avista Corp. The primary subsidiary of AERC is Alaska Electric Light and Power Company (AEL&P), which comprises Avista Corp.'s regulated utility operations in Alaska. Avista Capital, Inc. (Avista Capital), a wholly owned non-regulated subsidiary of Avista Corp., is the parent company of all of the subsidiary companies in the non-utility businesses, with the exception of AJT Mining Properties, Inc., which is a subsidiary of AERC.

Basis of Reporting

The condensed consolidated financial statements include the assets, liabilities, revenues and expenses of the Company and its subsidiaries and other majority owned subsidiaries and variable interest entities for which the Company or its subsidiaries are the primary beneficiaries. Intercompany balances were eliminated in consolidation. The accompanying condensed consolidated financial statements include the Company’s proportionate share of utility plant and related operations resulting from its interests in jointly owned plants.

Taxes Other Than Income Taxes

Taxes other than income taxes include state excise taxes, city occupational and franchise taxes, real and personal property taxes and certain other taxes not based on income. These taxes are generally based on revenues or the value of property. Utility related taxes collected from customers (primarily state excise taxes and city utility taxes) are recorded as operating revenue and expense. Taxes other than income taxes consisted of the following items for the three months ended March 31 (dollars in thousands):

	2017	2016
Utility related taxes	$ 21,584	$ 18,365
Property taxes	10,406	10,420
Other taxes	672	600
Total	$ 32,662	$ 29,385

Materials and Supplies, Fuel Stock and Stored Natural Gas

Inventories of materials and supplies, fuel stock and stored natural gas are recorded at average cost for our regulated operations and the lower of cost or net realizable value for our non-regulated operations and consisted of the following as of March 31, 2017 and December 31, 2016 (dollars in thousands):

	March 31, 2017	December 31, 2016
Materials and supplies	$ 42,198	$ 40,700
Fuel stock	4,277	4,585
Stored natural gas	709	8,029
Total	$ 47,184	$ 53,314

Derivative Assets and Liabilities

Derivatives are recorded as either assets or liabilities on the Condensed Consolidated Balance Sheets measured at estimated fair value.

The Washington Utilities and Transportation Commission (UTC) and the Idaho Public Utilities Commission (IPUC) issued accounting orders authorizing Avista Corp. to offset energy commodity derivative assets or liabilities with a regulatory asset or liability. This accounting treatment is intended to defer the recognition of mark-to-market gains and losses on energy commodity transactions until the period of delivery. Realized benefits and costs result in adjustments to retail rates through purchased gas cost adjustments, the Energy Recovery Mechanism (ERM) in Washington, the Power Cost Adjustment (PCA) mechanism in Idaho, and periodic general rate cases. The resulting regulatory assets have been concluded to be probable of recovery through future rates.

Substantially all forward contracts to purchase or sell power and natural gas are recorded as derivative assets or liabilities at estimated fair value with an offsetting regulatory asset or liability. Contracts that are not considered derivatives are accounted for on the accrual basis until they are settled or realized unless there is a decline in the fair value of the contract that is determined to be other-than-temporary.

For interest rate swap derivatives, Avista Corp. records all mark-to-market gains and losses in each accounting period as assets and liabilities, as well as offsetting regulatory assets and liabilities, such that there is no income statement impact. The interest rate swap derivatives are risk management tools similar to energy commodity derivatives. Upon settlement of interest rate swap derivatives, the regulatory asset or liability is amortized as a component of interest expense over the term of the associated debt. The Company records an offset of interest rate swap derivative assets and liabilities with regulatory assets and liabilities, based on the prior practice of the commissions to provide recovery through the ratemaking process.

As of March 31, 2017, the Company has multiple master netting agreements with a variety of entities that allow for cross-commodity netting of derivative agreements with the same counterparty (i.e. power derivatives can be netted with natural gas derivatives). In addition, some master netting agreements allow for the netting of commodity derivatives and interest rate swap derivatives for the same counterparty. The Company does not have any agreements which allow for cross-affiliate netting among multiple affiliated legal entities. The Company nets all derivative instruments when allowed by the agreement for presentation in the Condensed Consolidated Balance Sheets.

Fair Value Measurements

Fair value represents the price that would be received when selling an asset or paid to transfer a liability (an exit price) in an orderly transaction between market participants at the measurement date. Energy commodity derivative assets and liabilities, deferred compensation assets, as well as derivatives related to interest rate swaps and foreign currency exchange contracts, are reported at estimated fair value on the Condensed Consolidated Balance Sheets. See Note 7 for the Company's fair value disclosures.

Accumulated Other Comprehensive Loss

Accumulated other comprehensive loss, net of tax, consisted of the following as of March 31, 2017 and December 31, 2016 (dollars in thousands):

	March 31, 2017	December 31, 2016
Unfunded benefit obligation for pensions and other postretirement benefit plans - net of taxes of $3,977 and $4,075, respectively	$ 7,385	$ 7,568

The following table details the reclassifications out of accumulated other comprehensive loss by component for the three months ended March 31 (dollars in thousands).

	Amounts Reclassified from Accumulated Other Comprehensive Loss		
Details about Accumulated Other Comprehensive Loss Components	2017	2016	Affected Line Item in Statement of Income
Amortization of defined benefit pension items			
Amortization of net prior service cost	$ (299)	$ (311)	(a)
Amortization of net loss	3,638	3,642	(a)
Adjustment due to effects of regulation	(3,058)	(5,223)	(a) (b)
	281	(1,892)	Total before tax
	(98)	663	Tax benefit (expense)
	$ 183	$ (1,229)	Net of tax

(a) These accumulated other comprehensive loss components are included in the computation of net periodic pension cost (see Note 4 for additional details).

(b) The adjustment for the effects of regulation during the three months ended March 31, 2016 includes approximately $2.1 million related to the reclassification of a pension regulatory asset associated with one of our jurisdictions into accumulated other comprehensive loss.

Contingencies

The Company has unresolved regulatory, legal and tax issues which have inherently uncertain outcomes. The Company accrues a loss contingency if it is probable that a liability has been incurred and the amount of the loss or impairment can be reasonably estimated. The Company also discloses loss contingencies that do not meet these conditions for accrual if there is a reasonable possibility that a material loss may be incurred. As of March 31, 2017, the Company has not recorded any significant amounts related to unresolved contingencies. See Note 10 for further discussion of the Company's commitments and contingencies.

NOTE 2. NEW ACCOUNTING STANDARDS

ASU No. 2014-09, "Revenue from Contracts with Customers (Topic 606)"

In May 2014, the FASB issued ASU No. 2014-09, which outlines a single comprehensive model for entities to use in accounting for revenue arising from contracts with customers and supersedes most current revenue recognition guidance, including industry-specific guidance. The core principle of the revenue model is that an entity should identify the various performance obligations in a contract, allocate the transaction price among the performance obligations and recognize revenue when (or as) the entity satisfies each performance obligation. This ASU is effective for periods beginning after December 15, 2017.

The Company has formed a revenue recognition standard implementation team that is working through several implementation issues described below. The Company has evaluated this standard and is planning to adopt this standard in 2018 upon its effective date. The Company is currently expecting to use a modified retrospective method of adoption, which would require a cumulative adjustment to opening retained earnings, as opposed to a full retrospective application. The Company is not far enough along in the adoption process to determine the amount of cumulative adjustment necessary.

Since the majority of Avista Corp.'s revenue is from rate-regulated sales of electricity and natural gas to retail customers and revenue is recognized as energy is delivered to these customers, the Company does not expect a significant change in operating revenues or net income. The Company is in the process of reviewing and analyzing certain contracts with customers (most of which are related to wholesale sales of power and natural gas), but has not yet identified any significant differences in revenue recognition between current GAAP and ASU No. 2014-09.

During the implementation process, the Company has identified several unresolved issues, the most significant of which are as follows based on our current assessment:

Contributions in Aid of Construction – There is the potential that contributions in aid of construction (CIAC) could be recognized as revenue upon the adoption of ASU No. 2014-09. Under current GAAP, CIACs are accounted for as an offset to the cost of utility plant in service.

Utility-Related Taxes Collected from Customers – There are questions on the presentation of utility related taxes collected from customers (primarily state excise taxes and city utility taxes) on a gross basis. Under current GAAP, the Company is allowed to record these utility related taxes on a gross basis in revenue when billed to customers with an offset included in taxes other than income taxes in operating expenses. The Company is evaluating whether this presentation is appropriate under ASU 2014-09 or whether they should be presented on a net basis.

Collectibility - There are questions regarding the requirement that collection of a sale be probable and how, or if, utilities should consider bad debt collection mechanisms (riders, base rate adjustments, etc.) in assessing probability of collection on sales to low income customers. If the bad debt recovery mechanisms cannot be considered, there is the potential that certain sales to low income customers cannot be recognized as revenue until payment is received from the customers.

The Company is monitoring utility industry implementation guidance as it relates to unresolved issues to determine if there will be an industry consensus regarding accounting and presentation of these items.

In addition to the unresolved issues described above, the Company also expects significant changes to its revenue-related footnote disclosures. The Company continues to evaluate what information would be most useful for users of the financial statements, including information already provided elsewhere in the document outside the footnote disclosures. These additional disclosures could include the disaggregation of revenues by geographic location, type of service, source of revenue or customer class. Also, the Company expects enhanced disclosures regarding its revenue recognition policies and elections.

ASU No. 2016-02 "Leases (Topic 842)."

In February 2016, the FASB issued ASU No. 2016-02. This ASU introduces a new lessee model that requires most leases to be capitalized and shown on the balance sheet with corresponding lease assets and liabilities. The standard also aligns certain of the underlying principles of the new lessor model with those in Topic 606, the FASB's new revenue recognition standard. Furthermore, this ASU addresses other issues that arise under the current lease model; for example, eliminating the required use of bright-line tests in current GAAP for determining lease classification (operating leases versus capital leases). This ASU also includes enhanced disclosures surrounding leases. This ASU is effective for periods beginning on or after December 15, 2018; however, early adoption is permitted. Upon adoption, this ASU must be applied using a modified retrospective approach to the earliest period presented, which will likely require restatements of previously issued financial statements. The modified retrospective approach includes a number of optional practical expedients that entities may elect to apply. The Company evaluated this standard and determined that it will most likely not early adopt this standard before its effective date in 2019. The Company has formed a lease standard implementation team that is working through the implementation process. The most significant implementation challenge identified thus far relates to identifying a complete population of leases and potential leases under the new lease standard. Also, the Company is monitoring utility industry implementation guidance as it relates to several unresolved issues to determine if there will be an industry consensus, including whether right-of-ways are considered leases. The Company cannot, at this time, estimate the potential impact on its future financial condition, results of operations and cash flows.

ASU No. 2016-09 "Compensation—Stock Compensation (Topic 718): Improvements to Employee Share-Based Payment Accounting."

In March 2016, the FASB issued ASU No. 2016-09. This ASU simplified several aspects of the accounting for employee share-based payment transactions including:

- allowing excess tax benefits or tax deficiencies to be recognized as income tax benefits or expenses in the Condensed Consolidated Statements of Income rather than in Additional Paid in Capital (APIC),
- excess tax benefits no longer represent a financing cash inflow on the Condensed Consolidated Statements of Cash Flows and instead will be included as an operating activity,
- requiring excess tax benefits and tax deficiencies to be excluded from the calculation of diluted earnings per share, whereas under previous accounting guidance, these amounts had to be estimated and included in the calculation,
- allowing forfeitures to be accounted for as they occur, instead of estimating forfeitures, and
- changing the statutory tax withholding requirements for share-based payments.

The Company early adopted this standard during the second quarter of 2016, with a retrospective effective date of January 1, 2016. The adoption of this standard resulted in a recognized income tax benefit of $1.6 million in 2016 associated with excess tax benefits on settled share-based employee payments. Because this standard was adopted in the second quarter of 2016, but had a retrospective effective date of January 1, 2016, the effects from the adoption were reflected in the first quarter of 2016 and the Condensed Consolidated Financial Statements for that quarter were recast from those presented when the financial statements were originally issued.

ASU No. 2017-07 "Compensation-Retirement Benefits (Topic 715): Improving the Presentation of Net Periodic Pension Cost and Net Periodic Postretirement Benefit Cost"

In March 2017, the FASB issued ASU No. 2017-07, which amends the income statement presentation of the components of net period benefit cost for an entity's defined benefit pension and other postretirement plans. Under current GAAP, net benefit cost consists of several components that reflect different aspects of an employer's financial arrangements as well as the cost of benefits earned by employees. These components are aggregated and reported net in the financial statements. ASU No. 2017-07 requires entities to (1) disaggregate the current service-cost component from the other components of net benefit cost (other components) and present it with other current compensation costs for related employees in the income statement and (2) present the other components elsewhere in the income statement and outside of income from operations.

In addition, only the service-cost component of net benefit cost is eligible for capitalization (e.g., as part of utility plant). This is a change from current practice, under which entities capitalize the aggregate net benefit cost to utility plant when applicable, in accordance with Federal Energy and Regulatory Commission (FERC) accounting guidance. Avista Corp. is a rate-regulated entity and all components of net benefit cost are currently recovered from rate payers as a component of utility plant and under the new ASU these costs will continue to be recovered from rate payers in the same manner over the depreciable lives of utility plant. As all such costs are expected to continue to be recoverable, the components that are no longer eligible to be recorded as a component of plant for GAAP will be recorded as regulatory assets.

This ASU is effective for periods beginning after December 15, 2017 and early adoption is permitted. Upon adoption, entities must use a retrospective transition method to adopt the requirement for separate presentation in the income statement and a prospective transition method to adopt the requirement to limit the capitalization of benefit costs to the service-cost component. The Company does not expect to early adopt this standard and does not expect a material impact on its future financial condition, results of operations or cash flows upon adoption of this standard.

NOTE 3. DERIVATIVES AND RISK MANAGEMENT

The disclosures below in Note 3 apply only to Avista Corp. and its operating division Avista Utilities; AERC and its primary subsidiary AEL&P do not enter into derivative instruments.

Energy Commodity Derivatives

Avista Corp. is exposed to market risks relating to changes in electricity and natural gas commodity prices and certain other fuel prices. Market risk is, in general, the risk of fluctuation in the market price of the commodity being traded and is influenced primarily by supply and demand. Market risk includes the fluctuation in the market price of associated derivative commodity instruments. Avista Corp. utilizes derivative instruments, such as forwards, futures, swap derivatives and options in order to manage the various risks relating to these commodity price exposures. Avista Corp. has an energy resources risk policy and control procedures to manage these risks.

As part of the Avista Corp.'s resource procurement and management operations in the electric business, Avista Corp. engages in an ongoing process of resource optimization, which involves the economic selection from available energy resources to serve Avista Corp.'s load obligations and the use of these resources to capture available economic value. Avista Corp. transacts in wholesale markets by selling and purchasing electric capacity and energy, fuel for electric generation, and derivative contracts related to capacity, energy and fuel. Such transactions are part of the process of matching resources with load obligations and hedging a portion of the related financial risks. These transactions range from terms of intra-hour up to multiple years.

As part of its resource procurement and management of its natural gas business, Avista Corp. makes continuing projections of its natural gas loads and assesses available natural gas resources including natural gas storage availability. Natural gas resource planning typically includes peak requirements, low and average monthly requirements and delivery constraints from natural gas supply locations to Avista Corp.'s distribution system. However, daily variations in natural gas demand can be significantly different than monthly demand projections. On the basis of these projections, Avista Corp. plans and executes a series of transactions to hedge a portion of its projected natural gas requirements through forward market transactions and derivative instruments. These transactions may extend as much as four natural gas operating years (November through October) into the future. Avista Corp. also leaves a significant portion of its natural gas supply requirements unhedged for purchase in short-term and spot markets.

Avista Corp. plans for sufficient natural gas delivery capacity to serve its retail customers for a theoretical peak day event. Avista Corp. generally has more pipeline and storage capacity than what is needed during periods other than a peak day. Avista Corp. optimizes its natural gas resources by using market opportunities to generate economic value that helps mitigate fixed costs. Avista Corp. also optimizes its natural gas storage capacity by purchasing and storing natural gas when prices are traditionally lower, typically in the summer, and withdrawing during higher priced months, typically during the winter. However, if market conditions and prices indicate that Avista Corp. should buy or sell natural gas at other times during the year, Avista Corp. engages in optimization transactions to capture value in the marketplace. Natural gas optimization activities include, but are not limited to, wholesale market sales of surplus natural gas supplies, purchases and sales of natural gas to optimize use of pipeline and storage capacity, and participation in the transportation capacity release market.

The following table presents the underlying energy commodity derivative volumes as of March 31, 2017 that are expected to be delivered in each respective year (in thousands of MWhs and mmBTUs):

	Purchases				Sales			
	Electric Derivatives		Gas Derivatives		Electric Derivatives		Gas Derivatives	
Year	Physical (1)	Financial (1)	Physical (1)	Financial (1)	Physical (1) MWH	Financial (1) MWH	Physical (1) mmBTUs	Financial (1) mmBTUs
April - December 2017	214	1,044	8,891	83,808	149	1,101	4,448	61,633
2018	397	246	—	64,415	286	1,244	1,360	33,188
2019	235	737	610	35,623	126	982	1,345	19,598
2020	—	—	910	2,725	—	—	1,430	—
2021	—	—	—	—	—	—	1,049	—
Thereafter	—	—	—	—	—	—	—	—

The following table presents the underlying energy commodity derivative volumes as of December 31, 2016 that are expected to be delivered in each respective year (in thousands of MWhs and mmBTUs):

	Purchases				Sales			
	Electric Derivatives		Gas Derivatives		Electric Derivatives		Gas Derivatives	
Year	Physical (1)	Financial (1)	Physical (1)	Financial (1)	Physical (1) MWH	Financial (1) MWH	Physical (1) mmBTUs	Financial (1) mmBTUs
2017	510	907	15,475	110,380	316	1,552	4,165	73,110
2018	397	—	—	52,755	286	1,244	1,360	15,113
2019	235	—	610	29,475	158	982	1,345	4,020
2020	—	—	910	2,725	—	—	1,430	—
2021	—	—	—	—	—	—	1,060	—
Thereafter	—	—	—	—	—	—	—	—

(1) Physical transactions represent commodity transactions in which Avista Corp. will take or make delivery of either electricity or natural gas; financial transactions represent derivative instruments with delivery of cash in the amount of the benefit or cost but with no physical delivery of the commodity, such as futures, swap derivatives, options, or forward contracts.

The electric and natural gas derivative contracts above will be included in either power supply costs or natural gas supply costs during the period they are delivered and will be included in the various recovery mechanisms (ERM, PCA, and Purchased Gas Adjustments (PGA)), or in the general rate case process, and are expected to be collected through retail rates from customers.

Foreign Currency Exchange Derivatives

A significant portion of Avista Corp.'s natural gas supply (including fuel for power generation) is obtained from Canadian sources. Most of those transactions are executed in U.S. dollars, which avoids foreign currency risk. A portion of Avista Corp.'s short-term natural gas transactions and long-term Canadian transportation contracts are committed based on Canadian currency prices and settled within 60 days with U.S. dollars. Avista Corp. hedges a portion of the foreign currency risk by purchasing Canadian currency exchange derivatives when such commodity transactions are initiated. The foreign currency exchange derivatives and the unhedged foreign currency risk have not had a material effect on Avista Corp.'s financial condition, results of operations or cash flows and these differences in cost related to currency fluctuations are included with natural gas supply costs for ratemaking.

The following table summarizes the foreign currency exchange derivatives that Avista Corp. has outstanding as of March 31, 2017 and December 31, 2016 (dollars in thousands):

	March 31, 2017	December 31, 2016
Number of contracts	24	21
Notional amount (in United States dollars)	$ 5,808	$ 2,819
Notional amount (in Canadian dollars)	7,766	3,754

Interest Rate Derivatives

Avista Corp. is affected by fluctuating interest rates related to a portion of its existing debt, and future borrowing requirements. Avista Corp. hedges a portion of its interest rate risk with financial derivative instruments, which may include interest rate swap derivatives and U.S. Treasury lock agreements. These interest rate swap derivatives and U.S. Treasury lock agreements are considered economic hedges against fluctuations in future cash flows associated with anticipated debt issuances.

The following table summarizes the unsettled interest rate swap derivatives that Avista Corp. has outstanding as of March 31, 2017 and December 31, 2016 (dollars in thousands):

Balance Sheet Date	Number of Contracts	Notional Amount	Mandatory Cash Settlement Date
March 31, 2017	6	$ 75,000	2017
	14	275,000	2018
	6	70,000	2019
	2	20,000	2020
	5	60,000	2022
December 31, 2016	6	$ 75,000	2017
	14	275,000	2018
	6	70,000	2019
	2	20,000	2020
	5	60,000	2022

The fair value of outstanding interest rate swap derivatives can vary significantly from period to period depending on the total notional amount of swap derivatives outstanding and fluctuations in market interest rates compared to the interest rates fixed by the swaps. Avista Corp. is required to make cash payments to settle the interest rate swap derivatives when the fixed rates are higher than prevailing market rates at the date of settlement. Conversely, Avista Corp. receives cash to settle its interest rate swap derivatives when prevailing market rates at the time of settlement exceed the fixed swap rates. Upon settlement of interest rate swaps, the cash payments made or received are recorded as a regulatory asset or liability and are amortized as a component of interest expense over the life of the associated debt. The settled interest rate swaps are also included as a part of the Company's cost of debt calculation for ratemaking purposes.

Summary of Outstanding Derivative Instruments

The amounts recorded on the Condensed Consolidated Balance Sheet as of March 31, 2017 and December 31, 2016 reflect the offsetting of derivative assets and liabilities where a legal right of offset exists.

The following table presents the fair values and locations of derivative instruments recorded on the Condensed Consolidated Balance Sheet as of March 31, 2017 (in thousands):

	Fair Value as of March 31, 2017			
Derivative and Balance Sheet Location	Gross Asset	Gross Liability	Collateral Netted	Net Asset (Liability)
Foreign currency exchange derivatives				
Other current assets	$ 37	$ —	$ —	$ 37
Interest rate swap derivatives				
Other current assets	3,748	—	—	3,748
Other property and investments-net and other non-current assets	6,754	(116)	—	6,638
Other current liabilities	—	(15,069)	10,100	(4,969)
Non-current interest rate swap derivative liabilities	5,078	(54,261)	26,040	(23,143)
Energy commodity derivatives				
Other current assets	604	(47)	—	557
Current energy commodity derivative liabilities	29,929	(42,136)	4,726	(7,481)
Other non-current liabilities, regulatory liabilities and deferred credits	17,422	(32,658)	2,817	(12,419)
Total derivative instruments recorded on the balance sheet	$ 63,572	$ (144,287)	$ 43,683	$ (37,032)

The following table presents the fair values and locations of derivative instruments recorded on the Condensed Consolidated Balance Sheet as of December 31, 2016 (in thousands):

	Fair Value as of December 31, 2016			
Derivative and Balance Sheet Location	Gross Asset	Gross Liability	Collateral Netted	Net Asset (Liability) on Balance Sheet
Foreign currency exchange derivatives				
Other current liabilities	$ 5	$ (28)	$ —	$ (23)
Interest rate swap derivatives				
Other current assets	3,393	—	—	3,393
Other property and investments-net and other non-current assets	5,754	(397)	—	5,357
Other current liabilities	—	(15,756)	9,731	(6,025)
Non-current interest rate swap derivative liabilities	3,951	(57,825)	25,169	(28,705)
Energy commodity derivatives				
Other current assets	18,682	(16,787)	—	1,895
Current energy commodity derivative liabilities	16,335	(29,598)	6,228	(7,035)
Other non-current liabilities, regulatory liabilities and deferred credits	13,071	(29,990)	3,630	(13,289)
Total derivative instruments recorded on the balance sheet	$ 61,191	$ (150,381)	$ 44,758	$ (44,432)

Exposure to Demands for Collateral

Avista Corp.'s derivative contracts often require collateral (in the form of cash or letters of credit) or other credit enhancements, or reductions or terminations of a portion of the contract through cash settlement. In the event of a downgrade in Avista Corp.'s credit ratings or changes in market prices, additional collateral may be required. In periods of price volatility, the level of exposure can change significantly. As a result, sudden and significant demands may be made against Avista Corp.'s credit facilities and cash. Avista Corp. actively monitors the exposure to possible collateral calls and takes steps to mitigate capital requirements.

The following table presents Avista Corp.'s collateral outstanding related to its derivative instruments as of March 31, 2017 and December 31, 2016 (in thousands):

	March 31, 2017	December 31, 2016
Energy commodity derivatives		
Cash collateral posted	$ 18,514	$ 17,134
Letters of credit outstanding	30,900	24,400
Balance sheet offsetting (cash collateral against net derivative positions)	7,543	9,858
Interest rate swap derivatives		
Cash collateral posted	36,140	34,900
Letters of credit outstanding	4,800	3,600
Balance sheet offsetting (cash collateral against net derivative positions)	36,140	34,900

Certain of Avista Corp.’s derivative instruments contain provisions that require Avista Corp. to maintain an "investment grade" credit rating from the major credit rating agencies. If Avista Corp.’s credit ratings were to fall below "investment grade," it would be in violation of these provisions, and the counterparties to the derivative instruments could request immediate payment or demand immediate and ongoing collateralization on derivative instruments in net liability positions.

The following table presents the aggregate fair value of all derivative instruments with credit-risk-related contingent features that are in a liability position and the amount of additional collateral Avista Corp. could be required to post as of March 31, 2017 and December 31, 2016 (in thousands):

	March 31, 2017	December 31, 2016
Energy commodity derivatives		
Liabilities with credit-risk-related contingent features	$ 771	$ 1,124
Additional collateral to post	771	1,046
Interest rate swap derivatives		
Liabilities with credit-risk-related contingent features	69,446	73,978
Additional collateral to post	13,310	21,100

NOTE 4. PENSION PLANS AND OTHER POSTRETIREMENT BENEFIT PLANS

Avista Utilities

Avista Utilities’ pension and other postretirement plans have not changed during the three months ended March 31, 2017. The Company’s funding policy is to contribute at least the minimum amounts that are required to be funded under the Employee Retirement Income Security Act, but not more than the maximum amounts that are currently deductible for income tax purposes. The Company contributed $7.4 million in cash to the pension plan for the three months ended March 31, 2017 and expects to contribute a total of $22.0 million in 2017. The Company contributed $12.0 million in cash to the pension plan in 2016.

The Company uses a December 31 measurement date for its defined benefit pension and other postretirement benefit plans. The following table sets forth the components of net periodic benefit costs for the three months ended March 31 (dollars in thousands):

	Pension Benefits		Other Post-retirement Benefits	
	2017	2016	2017	2016
Three months ended March 31:				
Service cost	$ 5,042	$ 4,519	$ 824	$ 779
Interest cost	6,951	6,900	1,399	1,559
Expected return on plan assets	(7,900)	(6,750)	(475)	(475)
Amortization of prior service cost	—	—	(312)	(312)
Net loss recognition	2,546	1,890	1,273	1,365
Net periodic benefit cost	$ 6,639	$ 6,559	$ 2,709	$ 2,916

Total net periodic benefit costs in the table above are recorded to the same accounts as labor expense. Labor and benefits expense is recorded to various projects based on whether the work is a capital project or an operating expense. Approximately 40 percent of all labor and benefits is capitalized to utility property and 60 percent is expensed to other operating expenses.

NOTE 5. COMMITTED LINES OF CREDIT

Avista Corp.

Avista Corp. has a committed line of credit with various financial institutions in the total amount of $400.0 million that expires in April 2021.

Borrowings outstanding and interest rates of borrowings (excluding letters of credit) under the Company’s revolving committed line of credit were as follows as of March 31, 2017 and December 31, 2016 (dollars in thousands):

	March 31, 2017	December 31, 2016
Borrowings outstanding at end of period	$ 105,000	$ 120,000
Letters of credit outstanding at end of period	$ 42,053	$ 34,353
Average interest rates at end of period	1.74%	1.50%

As of March 31, 2017 and December 31, 2016, the borrowings outstanding under Avista Corp.'s committed line of credit were classified as short-term borrowings on the Condensed Consolidated Balance Sheet.

AEL&P

AEL&P has a committed line of credit in the amount of $25.0 million that expires in November 2019. As of March 31, 2017 and December 31, 2016, there were no borrowings or letters of credit outstanding under this committed line of credit.

NOTE 6. LONG-TERM DEBT TO AFFILIATED TRUSTS

In 1997, the Company issued Floating Rate Junior Subordinated Deferrable Interest Debentures, Series B, with a principal amount of $51.5 million to Avista Capital II, an affiliated business trust formed by the Company. Avista Capital II issued $50.0 million of Preferred Trust Securities with a floating distribution rate of LIBOR plus 0.875 percent, calculated and reset quarterly.

The distribution rates paid were as follows during the three months ended March 31, 2017 and the year ended December 31, 2016:

	March 31, 2017	December 31, 2016
Low distribution rate	1.81%	1.29%
High distribution rate	1.93%	1.81%
Distribution rate at the end of the period	1.93%	1.81%

Concurrent with the issuance of the Preferred Trust Securities, Avista Capital II issued $1.5 million of Common Trust Securities to the Company. These debt securities may be redeemed at the option of Avista Capital II at any time and mature on June 1, 2037. In December 2000, the Company purchased $10.0 million of these Preferred Trust Securities.

The Company owns 100 percent of Avista Capital II and has solely and unconditionally guaranteed the payment of distributions on, and redemption price and liquidation amount for, the Preferred Trust Securities to the extent that Avista Capital II has funds available for such payments from the respective debt securities. Upon maturity or prior redemption of such debt securities, the Preferred Trust Securities will be mandatorily redeemed. The Company does not include these capital trusts in its consolidated financial statements as Avista Corp. is not the primary beneficiary. As such, the sole assets of the capital trusts are $51.5 million of junior subordinated deferrable interest debentures of Avista Corp., which are reflected on the Condensed Consolidated Balance Sheets. Interest expense to affiliated trusts in the Condensed Consolidated Statements of Income represents interest expense on these debentures.

NOTE 7. FAIR VALUE

The carrying values of cash and cash equivalents, accounts and notes receivable, accounts payable, and short-term borrowings are reasonable estimates of their fair values. Long-term debt (including current portion and material capital leases) and long-term debt to affiliated trusts are reported at carrying value on the Condensed Consolidated Balance Sheets.

The fair value hierarchy prioritizes the inputs used to measure fair value. The hierarchy gives the highest priority to unadjusted quoted prices in active markets for identical assets or liabilities (Level 1 measurement) and the lowest priority to fair values derived from unobservable inputs (Level 3 measurement).

The three levels of the fair value hierarchy are defined as follows:

Level 1 – Quoted prices are available in active markets for identical assets or liabilities. Active markets are those in which transactions for the asset or liability occur with sufficient frequency and volume to provide pricing information on an ongoing basis.

Level 2 – Pricing inputs are other than quoted prices in active markets included in Level 1, but which are either directly or indirectly observable as of the reporting date. Level 2 includes those financial instruments that are valued using models or other valuation methodologies. These models are primarily industry-standard models that consider various assumptions, including quoted forward prices for commodities, time value, volatility factors, and current market and contractual prices for the underlying instruments, as well as other relevant economic measures. Substantially all of these assumptions are observable in the marketplace throughout the full term of the instrument, can be derived from observable data or are supported by observable levels at which transactions are executed in the marketplace.

Level 3 – Pricing inputs include significant inputs that are generally unobservable from objective sources. These inputs may be used with internally developed methodologies that result in management’s best estimate of fair value.

Financial assets and liabilities are classified in their entirety based on the lowest level of input that is significant to the fair value measurement. The Company’s assessment of the significance of a particular input to the fair value measurement requires judgment, and may affect the valuation of fair value assets and liabilities and their placement within the fair value hierarchy levels. The determination of the fair values incorporates various factors that not only include the credit standing of the counterparties involved and the impact of credit enhancements (such as cash deposits and letters of credit), but also the impact of Avista Corp.'s nonperformance risk on its liabilities.

The following table sets forth the carrying value and estimated fair value of the Company's financial instruments not reported at estimated fair value on the Condensed Consolidated Balance Sheets as of March 31, 2017 and December 31, 2016 (dollars in thousands):

	March 31, 2017		December 31, 2016	
	Carrying	Estimated	Carrying	Estimated
Long-term debt (Level 2)	$ 951,000	$ 1,077,127	$ 951,000	$ 1,048,661
Long-term debt (Level 3)	677,000	690,772	677,000	675,251
Snettisham capital lease obligation (Level 3)	61,556	62,200	62,160	62,800
Long-term debt to affiliated trusts (Level 3)	51,547	38,145	51,547	38,660

These estimates of fair value of long-term debt and long-term debt to affiliated trusts were primarily based on available market information, which generally consists of estimated market prices from third party brokers for debt with similar risk and terms. The price ranges obtained from the third party brokers consisted of par values of 74.00 to 129.85, where a par value of 100.0 represents the carrying value recorded on the Condensed Consolidated Balance Sheets. Level 2 long-term debt represents publicly issued bonds with quoted market prices; however, due to their limited trading activity, they are classified as Level 2 because brokers must generate quotes and make estimates if there is no trading activity near a period end. Level 3 long-term debt consists of private placement bonds and debt to affiliated trusts, which typically have no secondary trading activity. Fair values in Level 3 are estimated based on market prices from third party brokers using secondary market quotes for debt with similar risk and terms to generate quotes for Avista Corp. bonds. Due to the unique nature of the Snettisham capital lease obligation, the estimated fair value of these items was determined based on a discounted cash flow model using available market information. The Snettisham capital lease obligation was discounted to present value using the Morgan Markets A Ex-Fin discount rate as published on March 31, 2017.

The following table discloses by level within the fair value hierarchy the Company's assets and liabilities measured and reported on the Condensed Consolidated Balance Sheets as of March 31, 2017 and December 31, 2016 at fair value on a recurring basis (dollars in thousands):

	Level 1	Level 2	Level 3	Counterparty and Cash Collateral Netting (1)	Total
March 31, 2017					
Assets:					
Energy commodity derivatives	$ —	$ 47,856	$ —	$ (47,299)	$ 557
Level 3 energy commodity derivatives:					
Natural gas exchange agreement	—	—	99	(99)	—
Foreign currency exchange derivatives	—	37	—	—	37
Interest rate swap derivatives	—	15,580	—	(5,194)	10,386
Deferred compensation assets:					
Fixed income securities (2)	1,725	—	—	—	1,725
Equity securities (2)	5,963	—	—	—	5,963
Total	$ 7,688	$ 63,473	$ 99	$ (52,592)	$ 18,668
Liabilities:					
Energy commodity derivatives	$ —	$ 55,779	$ —	$ (54,842)	$ 937
Level 3 energy commodity derivatives:

Power exchange agreement	—	—	14,419	—	14,419
Power option agreement	—	—	266	—	266
Interest rate swap derivatives	—	69,446	—	(41,334)	28,112
Total	$ —	$ 125,225	$ 19,062	$ (96,275)	$ 48,012

	Level 1	Level 2	Level 3	Counterparty and Cash Collateral Netting (1)	Total
December 31, 2016					
Assets:					
Energy commodity derivatives	$ —	$ 47,994	$ —	$ (46,099)	$ 1,895
Level 3 energy commodity derivatives:					
Natural gas exchange agreement	—	—	69	(69)	—
Power exchange agreement	—	—	25	(25)	—
Foreign currency exchange derivatives	—	5	—	(5)	—
Interest rate swap derivatives	—	13,098	—	(4,348)	8,750
Deferred compensation assets:					
Fixed income securities (2)	1,789	—	—	—	1,789
Equity securities (2)	5,481	—	—	—	5,481
Total	$ 7,270	$ 61,097	$ 94	$ (50,546)	$ 17,915
Liabilities:					
Energy commodity derivatives	$ —	$ 56,871	$ —	$ (55,957)	$ 914
Level 3 energy commodity derivatives:					
Natural gas exchange agreement	—	—	5,954	(69)	5,885
Power exchange agreement	—	—	13,474	(25)	13,449
Power option agreement	—	—	76	—	76
Foreign currency exchange derivatives	—	28	—	(5)	23
Interest rate swap derivatives	—	73,978	—	(39,248)	34,730
Total	$ —	$ 130,877	$ 19,504	$ (95,304)	$ 55,077

(1) The Company is permitted to net derivative assets and derivative liabilities with the same counterparty when a legally enforceable master netting agreement exists. In addition, the Company nets derivative assets and derivative liabilities against any payables and receivables for cash collateral held or placed with these same counterparties.

(2) These assets are trading securities and are included in other property and investments-net and other non-current assets on the Condensed Consolidated Balance Sheets.

The difference between the amount of derivative assets and liabilities disclosed in respective levels in the table above and the amount of derivative assets and liabilities disclosed on the Condensed Consolidated Balance Sheets is due to netting arrangements with certain counterparties. See Note 3 for additional discussion of derivative netting.

To establish fair value for energy commodity derivatives, the Company uses quoted market prices and forward price curves to estimate the fair value of energy commodity derivative instruments included in Level 2. In particular, electric derivative valuations are performed using market quotes, adjusted for periods in between quotable periods. Natural gas derivative valuations are estimated using New York Mercantile Exchange (NYMEX) pricing for similar instruments, adjusted for basin differences, using market quotes. Where observable inputs are available for substantially the full term of the contract, the derivative asset or liability is included in Level 2.

To establish fair values for interest rate swap derivatives, the Company uses forward market curves for interest rates for the term of the swaps and discounts the cash flows back to present value using an appropriate discount rate. The discount rate is calculated by third party brokers according to the terms of the swap derivatives and evaluated by the Company for reasonableness, with consideration given to the potential non-performance risk by the Company. Future cash flows of the interest rate swap derivatives are equal to the fixed interest rate in the swap compared to the floating market interest rate multiplied by the notional amount for each period.

To establish fair value for foreign currency derivatives, the Company uses forward market curves for Canadian dollars against the US dollar and multiplies the difference between the locked-in price and the market price by the notional amount of the derivative. Forward foreign currency market curves are provided by third party brokers. The Company's credit spread is factored into the locked-in price of the foreign exchange contracts.

Deferred compensation assets and liabilities represent funds held by the Company in a Rabbi Trust for an executive deferral plan. These funds consist of actively traded equity and bond funds with quoted prices in active markets. The balance disclosed in the table above excludes cash and cash equivalents of $0.3 million as of March 31, 2017 and $0.4 million as of December 31, 2016.

Level 3 Fair Value

Under the power exchange agreement the Company purchases power at a price that is based on the average operating and maintenance (O&M) charges from three surrogate nuclear power plants around the country. To estimate the fair value of this agreement the Company estimates the difference between the purchase price based on the future O&M charges and forward prices for energy. The Company compares the Level 2 brokered quotes and forward price curves described above to an internally developed forward price which is based on the average O&M charges from the three surrogate nuclear power plants for the current year. Because the nuclear power plant O&M charges are only known for one year, all forward years are estimated assuming an annual escalation. In addition to the forward price being estimated using unobservable inputs, the Company also estimates the volumes of the transactions that will take place in the future based on historical average transaction volumes per delivery year (November to April). Significant increases or decreases in any of these inputs in isolation would result in a significantly higher or lower fair value measurement. Generally, a change in the current year O&M charges for the surrogate plants is accompanied by a directionally similar change in O&M charges in future years. There is generally not a correlation between external market prices and the O&M charges used to develop the internal forward price.

For the power commodity option agreement, the Company uses the Black-Scholes-Merton valuation model to estimate the fair value, and this model includes significant inputs not observable or corroborated in the market. These inputs include: 1) the strike price (which is an internally derived price based on a combination of generation plant heat rate factors, natural gas market pricing, delivery and other O&M charges), 2) estimated delivery volumes, and 3) volatility rates. Significant increases or decreases in any of these inputs in isolation would result in a significantly higher or lower fair value measurement. Generally, changes in overall commodity market prices and volatility rates are accompanied by directionally similar changes in the strike price and volatility assumptions used in the calculation.

For the natural gas commodity exchange agreement, the Company uses the same Level 2 brokered quotes described above; however, the Company also estimates the purchase and sales volumes (within contractual limits) as well as the timing of those transactions. Changing the timing of volume estimates changes the timing of purchases and sales, impacting which brokered quote is used. Because the brokered quotes can vary significantly from period to period, the unobservable estimates of the timing and volume of transactions can have a significant impact on the calculated fair value. The Company currently estimates volumes and timing of transactions based on a most likely scenario using historical data. Historically, the timing and volume of transactions have not been highly correlated with market prices and market volatility.

The following table presents the quantitative information which was used to estimate the fair values of the Level 3 assets and liabilities above as of March 31, 2017 (dollars in thousands):

	Fair Value (Net) at March 31, 2017		Valuation Technique	Unobservable	Range
Power exchange agreement	$	(14,419)	Surrogate facility pricing	O&M charges	$33.59-$49.15/MWh (1)
				Escalation factor	3% - 2017 to 2019
				Transaction volumes	396,984 MWhs
Power option agreement	$	(266)	Black-Scholes-Merton	Strike price	$35.30/MWh - 2019 $50.43/MWh - 2018
				Delivery volumes	125,837 - 285,979 MWhs
				Volatility rates	0.20
Natural gas exchange agreement	$	(4,278)	Internally derived weighted average cost of gas	Forward purchase	$1.65 - $2.83/mmBTU
				Forward sales prices	$1.67 - $3.50/mmBTU
				Purchase volumes	115,000 - 310,000 mmBTUs
				Sales volumes	60,000 - 310,000 mmBTUs

(1) The average O&M charges for the delivery year beginning in November 2016 are $39.22 per MWh. For ratemaking purposes the average O&M charges to be included for recovery in retail rates vary slightly between regulatory jurisdictions. The average O&M charges for the delivery year beginning in 2016 are $44.33 for Washington and $39.22 for Idaho.

The valuation methods, significant inputs and resulting fair values described above were developed by the Company's management and are reviewed on at least a quarterly basis to ensure they provide a reasonable estimate of fair value each reporting period.

The following table presents activity for energy commodity derivative assets (liabilities) measured at fair value using significant unobservable inputs (Level 3) for the three months ended March 31 (dollars in thousands):

		Natural Gas Exchange Agreement		Power Exchange Agreement		Power Option Agreement		Total
Three months ended March 31, 2017:								
Balance as of January 1, 2017	$	(5,885)	$	(13,449)	$	(76)	$	(19,410)
Total gains or (losses) (realized/unrealized):								
Included in regulatory assets/liabilities (1)		2,012		(4,493)		(190)		(2,671)
Settlements		(405)		3,523		—		3,118
Ending balance as of March 31, 2017 (2)	$	(4,278)	$	(14,419)	$	(266)	$	(18,963)
Three months ended March 31, 2016:								
Balance as of January 1, 2016	$	(5,039)	$	(21,961)	$	(124)	$	(27,124)
Total gains or (losses) (realized/unrealized):								
Included in regulatory assets/liabilities (1)		(1,745)		(2,432)		27		(4,150)
Settlements		778		4,200		—		4,978
Ending balance as of March 31, 2016 (2)	$	(6,006)	$	(20,193)	$	(97)	$	(26,296)

(1) All gains and losses are included in other regulatory assets and liabilities. There were no gains and losses included in either net income or other comprehensive income during any of the periods presented in the table above.

(2) There were no purchases, issuances or transfers from other categories of any derivatives instruments during the periods presented in the table above.

NOTE 8. COMMON STOCK

In March 2016, the Company entered into four separate sales agency agreements under which Avista Corp.'s sales agents may offer and sell up to 3.8 million new shares of Avista Corp.'s common stock, no par value, from time to time. The sales agency agreements expire on February 29, 2020. As of March 31, 2017, 1.6 million shares have been issued under these agreements, leaving 2.2 million shares remaining to be issued. No shares were issued under these agreements in the three months ended March 31, 2017.

In the three months ended March 31, 2017, Avista Corp. issued 0.2 million shares of common stock, most of which were under employee incentive plans, which have zero proceeds. The Company also issued a small number of shares under the 401K employee investment plan for total net proceeds of $0.3 million.

NOTE 9. EARNINGS PER COMMON SHARE ATTRIBUTABLE TO AVISTA CORP. SHAREHOLDERS

The following table presents the computation of basic and diluted earnings per common share attributable to Avista Corp. shareholders for the three months ended March 31 (in thousands, except per share amounts):

	2017	2016
Numerator:		
Net income attributable to Avista Corp. shareholders	$ 62,116	$ 57,649
Denominator:		
Weighted-average number of common shares outstanding-basic	64,362	62,605
Effect of dilutive securities:		
Performance and restricted stock awards	107	302
Weighted-average number of common shares outstanding-diluted	64,469	62,907
Earnings per common share attributable to Avista Corp. shareholders:		
Basic	$ 0.97	$ 0.92
Diluted	$ 0.96	$ 0.92

There were no shares excluded from the calculation because they were antidilutive.

NOTE 10. COMMITMENTS AND CONTINGENCIES

In the course of its business, the Company becomes involved in various claims, controversies, disputes and other contingent matters, including the items described in this Note. Some of these claims, controversies, disputes and other contingent matters involve litigation or other contested proceedings. For all such matters, the Company intends to vigorously protect and defend its interests and pursue its rights. However, no assurance can be given as to the ultimate outcome of any particular matter because litigation and other contested proceedings are inherently subject to numerous uncertainties. For matters that affect Avista Utilities' or AEL&P's operations, the Company intends to seek, to the extent appropriate, recovery of incurred costs through the ratemaking process.

California Refund Proceeding

In February 2016, APX, a market maker in the California Refund Proceedings in whose markets Avista Energy participated in the summer of 2000, asserted that Avista Energy and its other customer/participants may be responsible for a share of the disgorgement penalty APX may be found to owe to the California Parties (as defined in the 2016 Form 10-K). The penalty arises as a result of the Federal Energy and Regulatory Commission's (FERC) finding that APX committed violations in the California market in the summer of 2000. APX is making these assertions despite Avista Energy having been dismissed in

FERC Opinion No. 536 from the on-going administrative proceeding at the FERC regarding potential wrongdoing in the California markets in the summer of 2000. APX has identified Avista Energy’s share of APX’s exposure to be as much as $16.0 million even though no wrongdoing allegations are specifically attributable to Avista Energy. Avista Energy believes its 2014 settlement with the California Parties insulates it from any such liability and that as a dismissed party it cannot be drawn back into the litigation. Avista Energy intends to vigorously dispute APX’s assertions of indirect liability, but cannot at this time predict the eventual outcome.

Cabinet Gorge Total Dissolved Gas Abatement Plan

Dissolved atmospheric gas levels (referred to as "Total Dissolved Gas" or "TDG") in the Clark Fork River exceed state of Idaho and federal water quality numeric standards downstream of Cabinet Gorge particularly during periods when excess river flows must be diverted over the spillway. Under the terms of the Clark Fork Settlement Agreement (CFSA) as incorporated in Avista Corp.’s FERC license for the Clark Fork Project, Avista Corp. has worked in consultation with agencies, tribes and other stakeholders to address this issue. Under the terms of a gas supersaturation mitigation plan, Avista is reducing TDG by constructing spill crest modifications on spill gates at the dam, and the Company expects to continue spill crest modifications over the next several years, in ongoing consultation with key stakeholders. Avista Corp. cannot at this time predict the outcome or estimate a range of costs associated with this contingency; however, the Company will continue to seek recovery, through the ratemaking process, of all operating and capitalized costs related to this issue.

Fish Passage at Cabinet Gorge and Noxon Rapids

In 1999, the United States Fish and Wildlife Service (USFWS) listed bull trout as threatened under the Endangered Species Act. In 2010, the USFWS issued a revised designation of critical habitat for bull trout, which includes the lower Clark Fork River. The USFWS issued a final recovery plan in October 2015.

The CFSA describes programs intended to help restore bull trout populations in the project area. Using the concept of adaptive management and working closely with the USFWS, the Company evaluated the feasibility of fish passage at Cabinet Gorge and Noxon Rapids. The results of these studies led, in part, to the decision to move forward with development of permanent facilities, among other bull trout enhancement efforts. Parties to the CFSA are working to resolve several issues. The Company believes its ongoing efforts through the CFSA continue to effectively address issues related to bull trout. Avista Corp. cannot at this time predict the outcome or estimate a range of costs associated with this contingency; however, the Company will continue to seek recovery, through the ratemaking process, of all operating and capitalized costs related to fish passage at Cabinet Gorge and Noxon Rapids.

Other Contingencies

In the normal course of business, the Company has various other legal claims and contingent matters outstanding. The Company believes that any ultimate liability arising from these actions will not have a material impact on its financial condition, results of operations or cash flows. It is possible that a change could occur in the Company’s estimates of the probability or amount of a liability being incurred. Such a change, should it occur, could be significant. See "Note 19 of the Notes to Consolidated Financial Statements" in the 2016 Form 10-K for additional discussion regarding other contingencies

NOTE 11. INFORMATION BY BUSINESS SEGMENTS

The business segment presentation reflects the basis used by the Company's management to analyze performance and determine the allocation of resources. The Company's management evaluates performance based on income (loss) from operations before income taxes as well as net income (loss) attributable to Avista Corp. shareholders. The accounting policies of the segments are the same as those described in the summary of significant accounting policies. Avista Utilities' business is managed based on the total regulated utility operation; therefore, it is considered one segment. AEL&P is a separate reportable business segment as it has separate financial reports that are reviewed in detail by the Chief Operating Decision Maker and its operations and risks are sufficiently different from Avista Utilities and the other businesses at AERC that it cannot be aggregated with any other operating segments. The Other category, which is not a reportable segment, includes other investments and operations of various subsidiaries, as well as certain other operations of Avista Capital.

The following table presents information for each of the Company’s business segments (dollars in thousands):

	Avista Utilities	Alaska Electric Light and Power Company	Total Utility	Other	Intersegment Eliminations	Total
For the three months ended March 31, 2017:						
Operating revenues	$ 415,381	$ 15,156	$ 430,537	$ 5,933	$ —	$ 436,470
Resource costs	162,613	2,973	165,586	—	—	165,586
Other operating expenses	71,712	2,772	74,484	6,179	—	80,663
Depreciation and amortization	40,538	1,447	41,985	188	—	42,173
Income (loss) from operations	108,635	7,185	115,820	(434)	—	115,386
Interest expense (2)	22,683	894	23,577	167	(14)	23,730
Income taxes	31,017	2,463	33,480	(136)	—	33,344
Net income (loss) attributable to Avista Corp. shareholders	58,439	3,853	62,292	(176)	—	62,116
Capital expenditures (3)	85,403	1,360	86,763	35	—	86,798
For the three months ended March 31, 2016:						
Operating revenues	$ 400,147	$ 12,646	$ 412,793	$ 5,380	$ —	$ 418,173
Resource costs	159,078	2,641	161,719	—	—	161,719
Other operating expenses	73,256	2,523	75,779	5,825	—	81,604
Depreciation and amortization	37,866	1,326	39,192	188	—	39,380
Income (loss) from operations	101,245	5,473	106,718	(633)	—	106,085
Interest expense (2)	20,418	895	21,313	161	(63)	21,411
Income taxes	28,672	1,895	30,567	(222)	—	30,345
Net income (loss) attributable to Avista Corp. shareholders	54,987	2,961	57,948	(299)	—	57,649
Capital expenditures (3)	84,435	4,443	88,878	119	—	88,997
Total Assets:						
As of March 31, 2017:	$ 5,003,014	$ 276,495	$ 5,279,509	$ 60,850	$ —	$ 5,340,359
As of December 31, 2016:	$ 4,975,555	$ 273,770	$ 5,249,325	$ 60,430	$ —	$ 5,309,755

(1) Intersegment eliminations reported as operating revenues and resource costs represent intercompany purchases and sales of electric capacity and energy. Intersegment eliminations reported as interest expense and net income (loss) attributable to Avista Corp. shareholders represent intercompany interest.

(2) Including interest expense to affiliated trusts.

(3) The capital expenditures for the other businesses are included as other capital expenditures on the Condensed Consolidated Statements of Cash Flows.

UNAUDITED PRO FORMA CONDENSED CONSOLIDATED FINANCIAL STATEMENTS OF HYDRO ONE LIMITED

Hydro One Limited ("Hydro One" or the "Corporation"), Olympus Holding Corp., Olympus Corp. and Avista Corporation ("Avista") entered into an agreement and plan of merger dated as of July 19, 2017 (the "Merger Agreement"). Pursuant to the Merger Agreement, Hydro One will directly or indirectly acquire Avista (the "Merger") for US$53 (approximately C$67 using the exchange rate of C$1.264 = US$1.00 on July 18, 2017) per Avista common share for an aggregate purchase price of approximately US$5,315 million (approximately C$6,720 million using the exchange rate of C$1.264 = US$1.00 on July 18, 2017), comprised of an equity purchase of approximately US$3,446 million (approximately C$4,357 million using the exchange rate of C$1.264 = US$1.00 on July 18, 2017) and the assumption of approximately US$1,869 million of Avista's outstanding debt (approximately C$2,363 million using the exchange rate of C$1.264 = US$1.00 on July 18, 2017).

The accompanying unaudited *pro forma* condensed consolidated financial statements give effect to the proposed acquisition by Hydro One of Avista under the acquisition method of accounting. The unaudited *pro forma* condensed consolidated balance sheet gives effect to the Merger as if it had closed on March 31, 2017. The unaudited *pro forma* consolidated statements of operations for the year ended December 31, 2016 and the three months ended March 31, 2017 give effect to the Merger as if had closed on January 1, 2016.

The following unaudited *pro forma* condensed consolidated financial statements are based on Avista's historical unaudited consolidated financial statements as at and for the three months ended March 31, 2017 and audited consolidated financial statements for the year ended December 31, 2016 and Hydro One's historical unaudited consolidated financial statements as at and for the three months ended March 31, 2017 and audited consolidated financial statements for the year ended December 31, 2016 and present the effects of the Merger on the combined historical financial statements of Hydro One and Avista. The unaudited *pro forma* condensed consolidated financial statements should be read together with the notes to the unaudited *pro forma* condensed consolidated financial statements and the historical financial statements of Hydro One and Avista.

The unaudited *pro forma* condensed consolidated financial statements (referred to herein as the *pro forma* financial information) are presented for illustrative purposes only and do not include, among other things, estimated cost synergies, adjustments related to restructuring or integration activities and further acquisitions or disposals not yet known or probable. The *pro forma* adjustments are based upon available information and certain assumptions that Hydro One believes are reasonable in the circumstances, as described in the notes to the unaudited pro forma condensed consolidated financial statements.

At the date of preparation of this *pro forma* financial information, certain *pro forma* adjustments have been made as identified herein; however, the fair values of Avista's identifiable assets and liabilities to be assumed and the full impact of applying acquisition accounting have not been fully determined. After reflecting the *pro forma* adjustments made herein, the excess of the purchase consideration over the adjusted book values of Avista's net assets has been presented as goodwill. It is expected that following closing of the Merger and once detailed valuations are completed, a portion of the amount allocated to goodwill may be attributable to property, plant and equipment, intangible assets, other assets and liabilities and related deferred income tax balances. Some property, plant and equipment and intangible assets are expected to be finite-lived and accordingly eventual fair values adjustments will be subject to amortization. As such, the actual amount assigned to the fair values of the identifiable assets and liabilities acquired will result in changes to earnings in periods subsequent to the Merger, and those changes could be material.

The *pro forma* financial information is presented for informational purposes only and is not necessarily indicative of what Hydro One's actual financial condition or results of operations would have been had the Merger been completed on the date indicated, nor does it purport to project Hydro One's future financial position or results of operations for any future periods or as of any future date. Accordingly, the combined business, assets, results of operations and financial condition may differ significantly from those indicated.

Please note that the *pro forma* financial information uses foreign exchange rates in effect at March 31, 2017 and the average foreign exchange rate for the 12 and 3 month periods ending December 31, 2016 and March 31, 2017 (see Note 5). Certain number quoted elsewhere and in the Prospectus may not use these same exchange rates which may result in different numbers quoted.

1. DESCRIPTION OF THE ACQUISITION

Hydro One Limited ("Hydro One" or the "Corporation"), Olympus Holding Corp., Olympus Corp. and Avista Corporation ("Avista") entered into an agreement and plan of merger dated as of July 19, 2017 (the "Merger Agreement"). Pursuant to the Merger Agreement, Hydro One will directly or indirectly acquire Avista (the "Merger") for US$53 (approximately C$67 at the exchange rate of C$1.264 = US$1.00 on July 18, 2017) per Avista common share for an aggregate purchase price of approximately US$5,315 million (approximately C$6,720 million at the exchange rate C$1.264 = US$1.00 on July 18, 2017), comprised of an equity purchase of approximately US$3,446 million (approximately C$4,357 million at the exchange rate of C$1.264 = US$1.00 on July 18, 2017) and the assumption of approximately US$1,869 million of Avista's outstanding debt (approximately C$2,363 million at the exchange rate of C$1.264 = US$1.00 on July 18, 2017). Since the purchase price is denominated in US dollars, the actual Canadian dollar purchase price paid on closing will be based on exchange rates on that date.

The accompanying *pro forma* financial information assumes that at closing, the Merger will be financed through the net proceeds from issuance of $C1,400 million of 4% convertible unsecured subordinated debentures (the "Debentures") which are assumed to be converted to shares on closing of the Merger at C$21.40 per share. The balance of the purchase price is expected to be funded through medium and long-term debt (as defined and described below). These *pro-forma* condensed consolidated financial statements assume that the over-allotment option granted in connection with the common equity issuance will not be exercised

Hydro One proposes to issue US dollar denominated medium and long term debt in the amount of US$2,650 million (approximately C$3,350 million at the exchange rate on July 18, 2017) maturing over 5, 10 and 30 years respectively.

The accompanying *pro forma* financial information assumes that the Debentures will be issued and immediately fully converted into Hydro One common shares at the assumed closing date of the Merger. Therefore, the accompanying *pro forma* financial information does not recognize interest costs associated with the Debentures. Hydro One anticipates that the closing will occur in the second half of 2018. As a result the Corporation has included the cost of interest on the Debentures for an estimated 12 month period from issuance to their conversion on an assumed Merger closing date in August 2018 as a *pro-forma* adjustment. Due to many factors, including the timing of regulatory approvals, the estimated Merger closing period is subject to change which may change the amount of interest expense incurred on the Debentures and the related income tax recovery. Interest costs associated with the Debentures are expected to be funded through operating cash flows.

2. BASIS OF PRESENTATION

The accompanying *pro forma* financial information gives effect to the proposed Merger by Hydro One of Avista as described in the short form prospectus dated August 1, 2017 (the "Prospectus"). The accompanying *pro forma* financial information has been prepared by management of Hydro One and are derived from the unaudited and audited consolidated financial statements of Hydro One as at and for the three months ended March 31, 2017 and for the year ended December 31, 2016, respectively, and the unaudited and audited consolidated financial statements of Avista as at and for the three months ended March 31, 2017 and for the year ended December 31, 2016, respectively.

The *pro forma* financial information utilizes accounting policies that are consistent with those disclosed in Hydro One's and Avista's audited consolidated financial statements as at and for the year ended December 31, 2016 and unaudited consolidated financial statements as at and for the three months ended March 31, 2017 and were prepared in accordance with accounting principles generally accepted in the United States ("US GAAP").

The unaudited *pro forma* consolidated balance sheet is prepared to reflect the Merger assuming it had closed on March 31, 2017. The unaudited *pro forma* consolidated statements of operations for the three months ended March 31, 2017 and for the year ended December 31, 2017 are prepared to reflect the Merger as if it had closed on January 1, 2016. The unaudited pro forma consolidated financial statements may not be indicative of the results that would have been achieved if the transactions reflected therein had been completed on the dates indicated or the results which may be obtained in the future. For instance, the purchase price paid will be based on the exchange rates on the date of closing of the Merger, and the actual purchase price allocation will reflect the fair value, at the purchase date, of the assets acquired and liabilities assumed based upon Hydro One's evaluation of such assets and liabilities following the closing of the Merger. Accordingly, the final purchase price allocation may differ materially from the preliminary allocation reflected herein.

The accompanying *pro forma* financial information should be read in conjunction with the description of the Merger and the financing thereof provided in the Prospectus; the audited and unaudited consolidated financial statements of Avista, including the notes thereto, included in the Prospectus; and the audited and unaudited consolidated financial statements of Hydro One, including the notes thereto, incorporated by reference in the Prospectus.

Certain amounts in the historical financial statements of Avista have been reclassified in the unaudited *pro forma* balance sheet and statements of operations to reflect the presentation classifications in Hydro One's consolidated financial statements. In addition the historical financial statements of Avista have been converted from U.S. dollars to Canadian dollars to conform to the reporting and reporting currency of Hydro One.

Management believes the underlying assumptions for the *pro forma* adjustments provide a reasonable basis for presenting the significant financial effect directly attributable to the Merger. These *pro forma* adjustments are tentative and are based on currently available financial information and certain estimates and assumptions. The actual adjustments to the consolidated financial statements will depend on a number of factors. Therefore, it is expected that the actual adjustments will differ from the *pro forma* adjustments shown in the *pro forma* financial information, and the differences may be material.

The *pro forma* financial information presents the combined effect on the historical statements and provides the following resulting information:

Historical Information of Hydro One and Avista	**Historical Dates and Giving Effect**	**Resulting Information**
Unaudited consolidated balance sheet	As of March 31, 2017	Unaudited *pro forma* condensed consolidated balance sheet, referred to as the unaudited *pro forma* balance sheet
Audited consolidated statement of operations for the year ended December 31, 2016 and unaudited consolidated statement of operations for the three months ended March 31, 2017	For the year ended December 31, 2016; and for the three months ended March 31, 2017	Unaudited *pro forma* condensed consolidated statement of operations, referred to as the unaudited *pro forma* statements of operations. Limited fair value adjustments to net assets acquired at March 31, 2017 have been applied to the assumed merger date of January 1, 2016 for purposes of the unaudited *pro forma* statements of operations (see note 3).

Amounts in the notes to the unaudited *pro forma* consolidated financial statements are stated in Canadian dollars, unless otherwise indicated. Please note that the *pro forma* financial information uses foreign exchange rates in effect at March 31, 2017 and the average foreign exchange rate for the 12 and 3 month periods ending December 31, 2016 and March 31, 2017. Certain numbers quoted elsewhere and in the Prospectus may not use these same exchange rates which may result in different numbers quoted. The accompanying *pro forma* financial information may not be indicative of the results that would have been achieved if the transactions reflected herein had been completed on the dates indicated or the results which may be obtained in the future.

3. PRO FORMA ASSUMPTIONS AND ADJUSTMENTS

A. *Pro forma* Purchase Price and Purchase Price Allocation

At the date of preparation of this *pro forma* financial information, certain *pro forma* adjustments have been made as identified herein; however, the purchase price paid fair values of Avista's identifiable assets and liabilities to be assumed and the full impact of applying acquisition accounting have not been fully determined. After reflecting the *pro forma* adjustments made herein, the excess of the purchase price consideration over the adjusted book values of Avista's net assets has been presented as goodwill offset by an adjustment to eliminate Avista's historical goodwill.

The Merger consideration in the unaudited *pro forma* financial information is based on the agreed price of US$53 per share. For purpose of the *pro forma* balance sheet at March 31, 2017, the purchase price has been measured at the exchange rate of C$1.33=US$1.00. The pro forma statements of operations are prepared based on the assumption the Merger occurred on January 1, 2016, on which date the exchange rate was approximately C$1.34=US$1.00.

Avista is a public utility subject to regulation by state utility commissions. The retail electric and natural gas operations are subject to the jurisdiction of various regulatory bodies, including FERC for licensing of hydroelectric generation resources, and for electric transmission services and wholesale sales. The revenues and earnings approved by the utility commissions are based on regulated rates of return that are applied to historic values of the regulated assets. Therefore, no fair value adjustments are expected to be made to property, plant and equipment and intangible assets with respect to the regulated entities of Avista because all economic benefits and obligations associated with regulated assets beyond regulated thresholds accrue to Avista's customers.

The following is the estimated net purchase price, estimated net funding requirements and assumed financing structure for the Merger. These estimates have been reflected in the accompanying unaudited *pro forma* financial information.

		Using exchange rates in effect on July 18, 2017 (*in millions of Canadian dollars*)	Using exchange rates in effect on March 31, 2017 (*in millions of Canadian dollars*)
Estimated Net Purchase Price			
Estimated net purchase price, before assumed debt*	$	4,357	4,583
Assumed debt of Avista		2,363	2,486
Estimated purchase price	$	6,720	7,069
Estimated Net Funding Requirements			
Estimated net purchase price before assumed long-term debt	$	4,357	4,583
Assumed debt of Avista		2,363	2,486
Common share issuance costs (Note 3(B))		49	49
Long term debt issuance costs (Note 3(C))		25	25
Estimated transaction costs (Note 3(D),(E))		161	164

Interest on debentures, net of tax (Note 3(B))		41	41
Estimated net funding requirements	$	6,996	7,348
Assumed Financing Structure			
Assumed debt of Avista	$	2,363	2,486
Gross proceeds from Debenture issuance, subsequently converted to common shares (Note 3(B))		1,400	1,400
Issuance of long term debt (Note 3(C))		3,350	3,350
Shortfall (excess) from term financing		(117)	112
	$	6,996	7,348

*This purchase price is based on Avista's outstanding shares valued at a foreign exchange rate of C$1.264 on July 18, 2017. The purchase price used for the purposes of caluclating *proforma* adjustments is based an exchange rate at March 31, 2017 described in section 5 below.

B. Assumed financing for the Merger contemplates the issuance, through the exercise of conversion rights under the Debentures, of approximately 65 million common shares at C$21.40 per share for gross proceeds of approximately C$1,400 million. The Debentures include an over-allotment option to purchase additional Debentures represented by Instalment Receipts equal to up to 10% of the aggregate principal amount of Debentures represented by Instalment Receipts sold on the Closing Date which if exercised would result in the issuance of an additional 7 million common shares for gross proceeds of C$140 million. The pro forma condensed consolidated financial statements assume that the over-allotment will not be exercised.

Underwriting costs are estimated at 3.5% of gross proceeds in the aggregate of approximately C$49 million (or C$54 million if the over-allotment option is exercised in full) and will result in a corresponding deferred tax asset of approximately C$13 million based on Hydro One's Canadian statutory income tax rate of 26.5%.

Interests costs associated with the Debentures at 4.0% are expected to be approximately C$56 million (or approximately C$62 million if the over-allotment option is exercised in full) for a 12 month period following issuance of the Debentures and prior to closing and will result in a corresponding deferred income tax asset of approximately C$15 million based on Hydro One's Canadian statutory income tax rate of 26.5%. These unaudited *pro forma* financial statements assume the Debentures will be issued and fully converted into Hydro One common shares at the assumed closing date of the Merger. As this incremental interest is directly related to the acquisition and is non-recurring, the accompanying unaudited *pro forma* consolidated statements of operations do not include interest costs associated with the Debentures. However, estimated interest costs for the 12 month period and the related tax effect have been reflected as a pro forma adjustment to retained earnings in the unaudited *pro forma* consolidated balance sheet. The Debentures provide for a make-whole interest payment to Debenture Holders if the Merger closes earlier than 12 months from the date of the Debenture issuance as more fully described in the Prospectus. No make-whole payments have been reflected in these *pro forma* financial statements on the basis that the *pro forma* adjustments assume that the Merger closes 12 months from the date of the Debenture issuance.

C. Issuance of US denominated medium and long term debt. Hydro One proposes to issue US denominated medium and long term debt that would be equivalent to approximately C$3,350 million over terms ranging from 5, 10 and 30 years bearing interest at a weighted average rate of 4%. Debt issuance costs are estimated at C$25 million. The terms of the debt outlined above are current estimates only. The terms of the actual debt issued will not be known until the time of issuance and could vary significantly from what is proposed based on many factors including market conditions.

D. Transactions costs are estimated at approximately C$114 million and are composed of estimated investment banking, advisory, accounting and legal fees and real estate transfer taxes. Change in control payments are estimated at approximately C$50 million and represent estimated change in control liabilities payable as a result of the Merger. Transaction costs and change in control payments of C$164 million were assumed to be paid in cash based on estimates by Hydro One management. These costs have been included as a *pro forma* adjustment to retained earnings on the unaudited *pro forma* balance sheet as opposed to being reflected in the unaudited *pro forma* statement of earnings on the basis that these expenses are directly attributable to the Merger of Avista and are non-recurring in nature.

E. Elimination of Avista's historical outstanding common shares C$1,427 million, retained earnings C$824 million and accumulated other comprehensive loss C$10 million as of March 31, 2017.

F. Interest expense on the Company's medium and long-term Notes described in Note 3(C) of C$34 million and C$134 million for the 3 months ended March 31, 2017 and the year ended December 31, 2016, respectively.

G. Adjustment to deferred income tax assets relates to the tax saving earned from the deduction of interest expense incurred on the convertible debentures and medium and long term notes described in Note (B) and Note (C).

H. Cash shortfall will be funded from Hydro One's revolving standby credit facility described in the notes of the financial statements of Hydro One.

I. Hydro One has recorded an adjustment to the fair value of Avista's long term debt and recorded a regulatory offset of $126 million in Regulatory Assets for the portion of the fair value adjustment to long-term debt held within regulated operations. Hydro One views the regulatory offset upon consummation of the acquisition as a proxy for the regulatory asset that would be recorded in the event such debt was extinguished at an amount higher than the carrying value.

4. PRO FORMA SHARES OUTSTANDING

Earnings per common share is calculated by dividing earnings attributable to common shareholders by the weighted average number of common shares outstanding.

The calculation of the *pro forma* earnings per common share, for the three months ended March 31, 2017 and for the year ended December 31, 2016, reflect the dilutive effects of the Debentures and the assumed issuance of approximately 2 million of Hydro One's common shares estimated at C$43 million, as if the issuance of the outstanding stock based compensation awards had taken place on January 1, 2016. The basic and diluted earnings per common share and basic and diluted weighted average number of common shares outstanding for the *pro forma* reporting period is determined as follows:

(unaudited; Canadian dollars; number of shares in millions)	For the year ended December 31, 2016	For the three months ended March 31, 2017
Earnings per common share	$1.23	$0.34
Diluted earnings per common share	$1.23	$0.34
Shares outstanding		
Weighted average shares of Hydro One Limited - basic	595	595
Debenture converted common shares outstanding - basic	65	65
Pro forma weighted average shares outstanding – basic	660	660
Effect of dilutive options and other stock based compensation awards	2	2
Pro forma diluted weighted average shares of Hydro One Limited	662	662

5. CURRENCY TRANSLATION AND CLASSIFICATION ADJUSTMENTS

In the pro forma balance sheet at March 31, 2017 the assets and liabilities of Avista, which has a US$ reporting and functional currency, are translated at the exchange rate of 1.3299 which was the closing rate published by the Bank of Canada for March 31, 2017. Revenues and expenses in Avista's statement of operations are translated to Canadian dollars at average exchange rates of 1.3238 for the three months ended March 31, 2017 and 1.3245 for the year ended December 31, 2016.

Reclassifications were made to align the presentation of Avista's financial statement amounts with Hydro One's financial statement amounts in the accompanying unaudited *pro forma* financial information. No differences in accounting policies under US GAAP have been identified; however, a more detailed analysis will be completed after the Merger.

APPENDIX A – INVESTOR PRESENTATION

hydro One
Hydro One To Acquire Avista Creating a North American Utility Leader
July 19, 2017
One of North America's Largest Electric Utilities
TSX: H

Disclaimers and cautionary statements

Unless otherwise specified, all references to "$" or "C$" in this presentation are to Canadian dollars and all references to "US$" in this presentation are references to United States dollars. Any graphs, tables or other information in this presentation demonstrating the historical performance of Hydro One Limited or Hydro One Inc. or any other entity contained in this presentation are intended only to illustrate past performance of such entities and are not necessarily indicative of future performance of Hydro One Limited, Hydro One Inc. or such entities. In this presentation, "Hydro One" refers to Hydro One Limited and its subsidiaries and other investments, taken together as a whole.

Additional Information and Where to Find It: This presentation may be deemed to be solicitation material in respect of the proposed merger transaction. Avista Corporation ("Avista") intends to file with the U.S. Securities and Exchange Commission (the "SEC") and mail to its shareholders a proxy statement in connection with the proposed merger transaction and this presentation is not a substitute for the proxy statement or any other document that Avista may send to its shareholders in connection with the proposed merger transaction. THE INVESTORS AND SECURITY HOLDERS OF AVISTA ARE URGED TO READ THE PROXY STATEMENT AND OTHER RELEVANT DOCUMENTS WHEN THEY BECOME AVAILABLE, BECAUSE THEY WILL CONTAIN IMPORTANT INFORMATION about Avista, Hydro One and the proposed merger transaction. Investors and security holders will be able to obtain these materials (when they are available) and other documents filed with the SEC free of charge at the SEC's website, www.sec.gov. In addition, a copy of Avista's proxy statement (when it becomes available) may be obtained free of charge upon request by contacting AVISTA Corporation, Avista Corp. 1411 East Mission Avenue P.O. Box 3727. Spokane, WA 99220. Avista's filings with the SEC are also available on Avista's website at: http://www.avistacorp.com. Investors and security holders may also read and copy any reports, statements and other information filed by Avista with the SEC, at the SEC public reference room at 100 F Street, N.E., Washington, D.C. 20549. Please call the SEC at 1-800-SEC-0330 or visit the SEC's website for further information on its public reference room.

Participants in the Solicitation of Proxies: This presentation is not a solicitation of proxies in connection with the proposed merger transaction. However, Avista, Hydro One and certain of their respective directors, executive officers and other persons may be deemed under SEC rules to be participants in the solicitation of Avista shareholder proxies in respect of the proposed merger transaction. Information about Hydro One directors and executive officers is available in Hydro One's management information circular, filed with Canadian securities regulators on March 23, 2017, in connection with its 2017 annual meeting of shareholders and is available on its website at http://www.hydroone.com and also under its profile on SEDAR and www.sedar.com. Information regarding Avista's directors and executive officers is available in Avista's proxy statement filed with the SEC on March 31, 2017 in connection with its 2017 annual meeting of shareholders, and its Annual Report on Form 10-K for the fiscal year ended December 31, 2016 filed with the SEC on February 22, 2017, each of which may be obtained from the sources indicated in Additional Information and Where to Find It. Other information regarding persons who may be deemed participants in the proxy solicitation and a description of their direct and indirect interests (which may be different than those of Avista's investors and security holders), by security holdings or otherwise, will be contained in the proxy statement and other relevant materials filed or to be filed with the SEC when they become available.

Disclaimers and cautionary statements (continued)

hydroOne

Forward-Looking Information: This presentation contains "forward-looking statements" and "forward-looking information" within the meaning of applicable securities laws of the U.S. and Canada, respectively. Statements that are not historical facts, including statements about beliefs, expectations, estimates, projections, goals, forecasts, assumptions, risks and uncertainties, are forward looking statements and forward looking information. Forward looking statements and forward looking information are often characterized by the use of words such as "believes," "estimates," "expects," "projects," "may," "intends," "plans," "anticipates," "pro forma," "predicts," "seeks," "could," "would," "will," "can," "continue" or "potential" and the negative of these terms or other comparable or similar terminology or expressions. The forward looking statements and forward looking information in this presentation include, without limitation, statements relating to Hydro One's proposed merger transaction with Avista and expectations regarding timing and benefits thereof, earnings per share accretion, increases in regulated assets and earnings, financing intentions, strength of credit metrics, scale and diversification, capital expenditures, rate base growth, industry and geographic trends and forecasts, financing plans, stakeholder commitments, stockholder and regulatory approvals, and the completion of the proposed merger transaction. These statements reflect Hydro One and Avista's management's current beliefs and are based on information currently available to the management teams. Forward looking statements and forward looking information involve significant risk, uncertainties and assumptions. Certain factors or assumptions have been applied in drawing the conclusions contained in the forward looking statements and forward looking information. Hydro One and Avista caution readers that a number of factors could cause actual results, performance or achievement to differ materially from the results discussed or implied in the forward looking statements and forward looking information. Important factors that could cause actual results, performance and results to differ materially from those indicated by any such forward looking statements and forward looking information include risks and uncertainties relating to the following: (i) the risk that Avista may be unable to obtain shareholder approval for the proposed merger transaction or that Hydro One or Avista may be unable to obtain governmental and regulatory approvals required for the proposed merger transaction, or may be unable to obtain those approvals on favorable terms; (ii) the risk that the required shareholder, governmental or regulatory approvals may delay the proposed merger transaction; (iii) the risk that a condition to the closing of the proposed merger transaction may not be satisfied or the merger agreement may be terminated prior to closing; (iv) the timing to consummate the proposed transaction; (v) disruption from the proposed merger transaction making it more difficult to maintain relationships with customers, employees, regulators or suppliers; (vi) risks associated with the loss and ongoing replacement of key personnel; (vii) the diversion of management time and attention on the transaction; (viii) general worldwide economic conditions and related uncertainties; (ix) the effect and timing of changes in laws or in governmental regulations (including environmental and tax laws and regulations); (x) the risk that financing necessary to fund the proposed merger transaction may not be obtained or may be more difficult and costly to obtain than anticipated; (xi) the impact of acquisition-related expenses; (xii) the ability to maintain an investment grade credit rating; (xiii) the ability to maintain dividend payout ratios; and (xiv) other factors discussed or referred to in the "Risk Factors" section of Hydro One's most recent annual management's discussion and analysis of financial results filed with securities regulators in Canada and available under Hydro One's profile at www.sedar.com. The foregoing list is not exhaustive and other unknown or unpredictable factors could also have a material adverse effect on the performance or results of Hydro One or Avista. Additional risks and uncertainties will be discussed in the proxy statement and other materials that Avista will file with the SEC in connection with the proposed merger transaction, or in material Hydro One will file with securities regulatory authorities in Canada. There can be no assurance that the proposed merger transaction will be completed, or if it is completed, that it will close within the anticipated time period or that the expected benefits of the proposed merger transaction will be realized. These factors should be considered carefully and undue reliance should not be placed on the forward looking statements or forward looking information, and actual outcomes and results may differ materially from what is expressed, implied or forecasted in these forward-looking statements and forward looking information. For additional information with respect to certain of the risks or factors, reference should be made to Hydro One's continuous disclosure materials filed from time to time with Canadian securities regulatory authorities, available at www.sedar.com and Avista's filings with the SEC available at www.sec.gov. Except as required by law, each of Hydro One and Avista disclaims any intention or obligation to update or revise any forward looking statements, whether as a result of new information, future events or otherwise.

Non-GAAP Measures: Hydro One Limited and Hydro One Inc. prepare and present financial statements in accordance with U.S. GAAP. This presentation refers financial measures, such as Adjusted EPS, EBITDA and "FFO" or "Funds from Operations", which are not recognized under U.S. GAAP and which may not be comparable to similar measures presented by other companies. Funds from Operations should not be considered in isolation nor as a substitute for analysis of Hydro One's financial information reported under U.S. GAAP. For more information, see "Non-GAAP Measures" in Hydro One's annual and interim Management Discussion and Analysis.

Agenda

hydroOne

1. Executive Summary of Transaction
2. Avista Overview
3. Strategic Rationale
4. Commitment to Customers, Communities and Employees
5. Indicative Timeline

Highlights of the transaction

hydroOne

1

Establishes one of North America's largest regulated utilities with over C$32 billion (US$25 billion) in assets (pro forma)

2

Significant increases in stable earnings through fully regulated utility operations in constructive regulatory jurisdictions

3

Increased growth profile through expansion of Hydro One into complementary and diversified regulated assets, including natural gas LDCs

4

Accretive to earnings per share and cash flow for Hydro One in the first full year post closing

5

Combined entity expected to maintain strong investment-grade credit ratings

6

Efficiencies through enhanced scale, innovation, shared IT systems and increased purchasing power provide cost savings opportunities

Transaction brings together two industry-leading regulated utilities with over 230 years of collective operational experience, similar corporate cultures and shared values

Transaction details

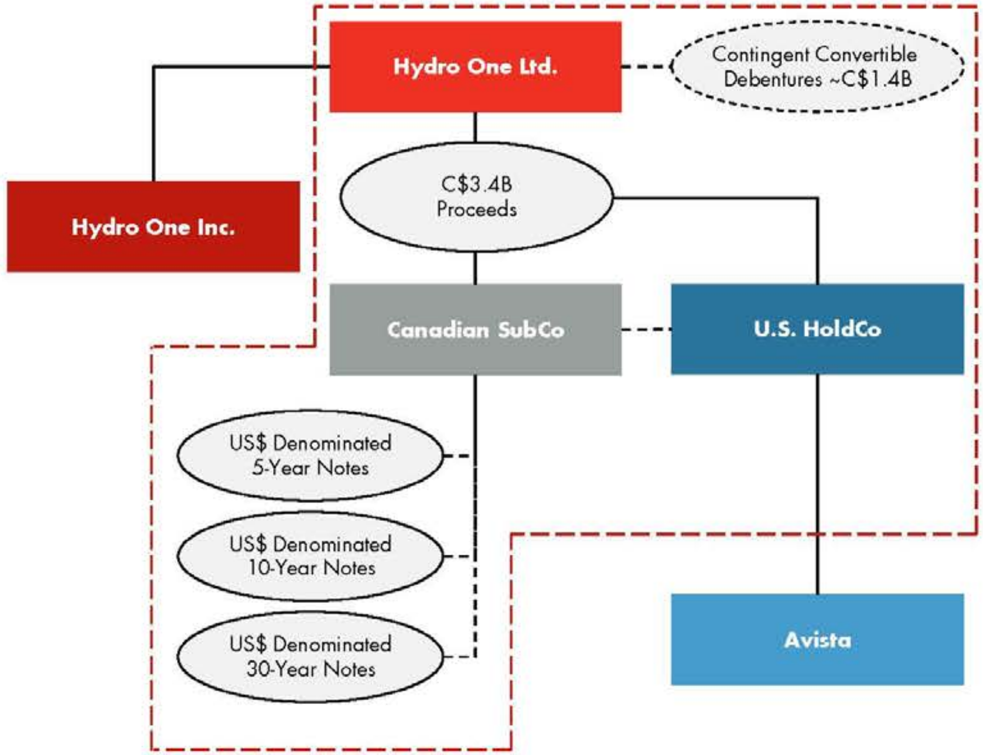
hydroOne

Key transaction terms	• Offer price of US$53.00 per Avista common share in cash – Represents a 24% premium to Avista's closing price on 18 July, 2017 of US$42.74 • Equity purchase price of US$3.4 billion (C$4.4 billion) • Total enterprise value of US$5.3 billion (C$6.7 billion), including Avista debt assumed
Financing plan	• All cash transaction • Proposed transaction contemplates use of short, medium, and long term U.S. denominated debt totaling US$2.6 billion (C$3.4 billion), as well as C$1.4 billion in Contingent Convertible Debentures to fulfill equity component requirement
Governance	• Avista management will remain in place • Formation of a subsidiary board which will represent the interests of Avista's service territories and the communities it serves • No changes in Hydro One management
Timing and approvals	• Will seek approvals from all five state regulators and FERC prior to closing • All regulatory requests for approvals will be filed concurrently • Expected closing date in the second half of 2018

Financing plan

hydroOne

Planned Transaction Financing Structure



- Transaction structure intended to provide clarity and minimize execution risk
- Planned financing contemplates a combination of 5-year, 10-year and 30-year US$ denominated notes in order to balance maturities and create a natural currency hedge
  - US$ denominated debt issued in the US by the Canadian Sub Co.
- Hydro One and Avista expected to maintain a strong investment grade status
- Contingent convertible debenture component fulfills 100% of Hydro One's equity financing requirements for the transaction

All cash transaction with a financing structure that allows Hydro One to maintain a strong investment grade status

Avista overview

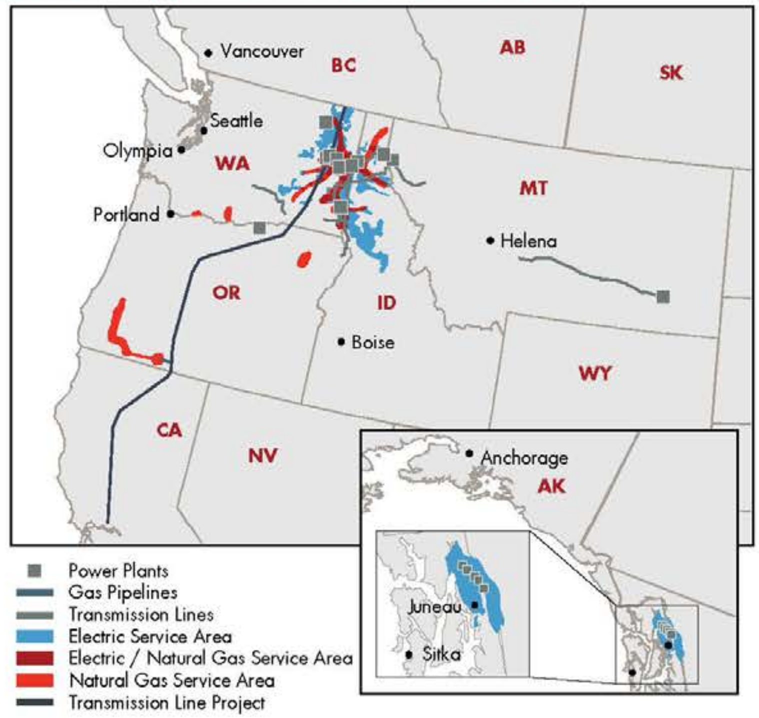
hydroOne

AVISTA Corp. Business Overview

- Avista is a regulated utility headquartered in Spokane, WA
  - Avista Utilities, an operating division of Avista supplying retail electric and natural gas service to customers in Washington, Idaho, Oregon and Montana service territories
    - 30,000 square miles and population of 1.6 million
    - Avista Utilities owns 2,072 MW of regulated electric generation
  - Alaska Electric Light & Power (AEL&P), serving customers in the Juneau, Alaska area
    - 16,482 electric customers
    - AEL&P owns and operates 119 MW of regulated generation capacity
- Employs ~2,000 people
- Regulated and primarily clean, renewable generation fleet

Avista Service Area

Service territories across WA, OR, ID, AK, and MT



Growing regulated business with a geographically diverse customer base, supported by one of the lowest electricity rates in the US

Note: Avista has de minimis retail operations in Montana

Avista financial & operating overview

hydroOne

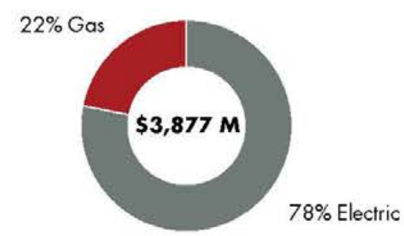
(C$ in mm)

Financial Highlights

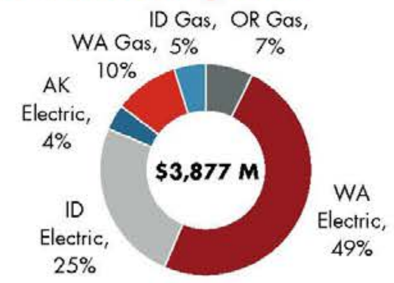
	2016A
Revenue	$1,824
EBITDA	$570
Net Income	$174

Allowed ROE		Electric	
	WA	9.50%	9.50%
	ID	9.50%	9.50%
	OR	-	9.40%
	AK	12.88%	-

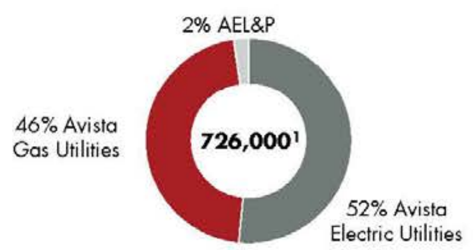
2016 Rate Base



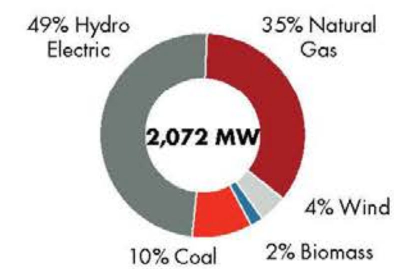
2016 Rate Base by State



2016 Customers



2016 Electric Generation[2]



Strong financial profile together with a diverse and growing regulated rate base

1. Includes combined electric and gas customers
2. Based on maximum capacity and excludes Alaska generation

Strategic rationale

hydroOne

1	**Building quality regulated asset scale**	• Maintains revenue base as nearly all regulated • Earnings and cash flow accretion in the first full year following close, excluding transaction costs • Increases Hydro One's total assets pro forma by C$6.8B (26.6%) • Establishes top tier North American utility profile • Hydro One expected to continue growing dividend and to maintain 70-80% dividend payout ratio
2	**Diversification**	• Increases geographic, economic, regulatory and asset diversification • Adds complementary and growing gas distribution • Provides exposure to regulated and predominantly clean generation
3	**Shared cultures and values**	• Strong, experienced management team with proven track record • Common and long-established history between the Companies (over 230 years of collective operational experience) • Management teams enjoy a deep cultural fit and strong dedication to their respective communities
4	**Innovation and knowledge transfer**	• Leadership position in innovation in the utility sector • Cost savings and sharing of research and development initiatives • Leveraging of technology and sharing of best practices

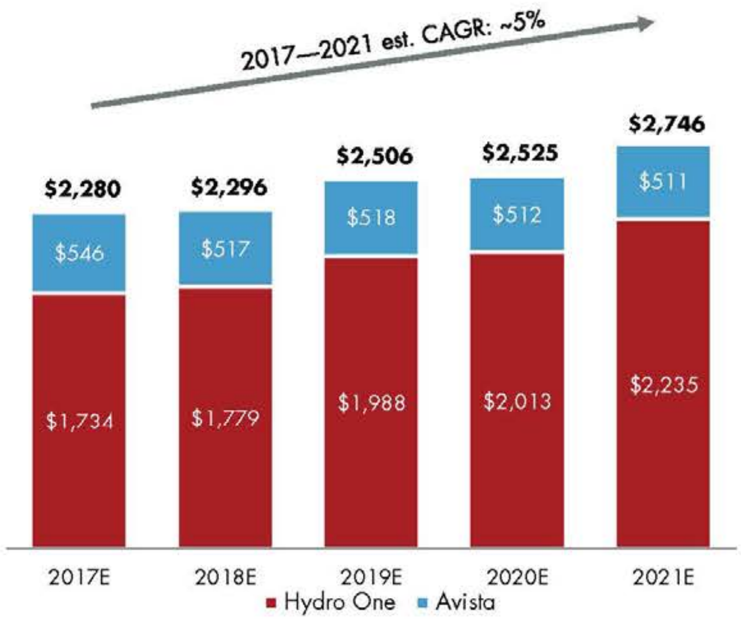
Increased scale reinforces top tier status

In accordance with Section 7.6(4) of National Instrument 44-101- *Short Form Prospectus Distributions*, all the information relating to Hydro One's comparables, and any disclosure relating to the comparables, which is contained in the presentation to be provided to potential investors, has been removed from this template version for purposes of its filing on the System for Electronic Document Analysis and Retrieval (SEDAR).

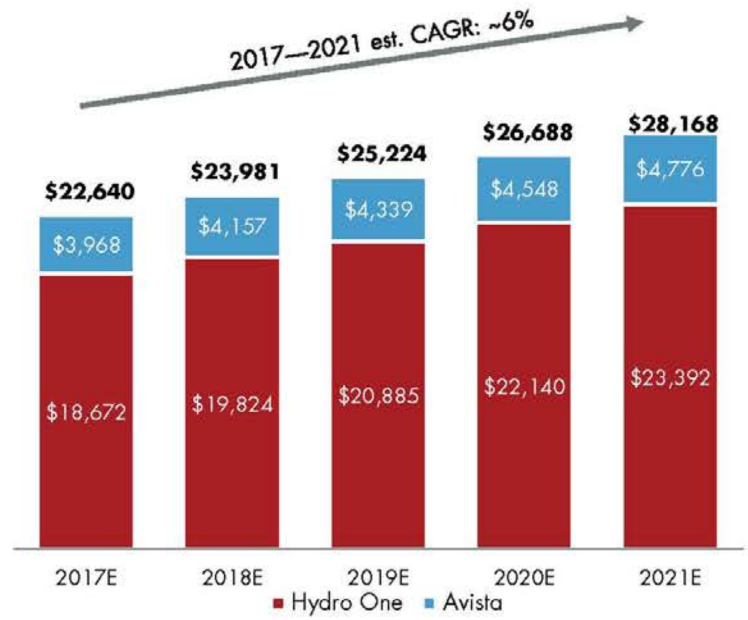
Sizeable increases in stable regulated earnings

- **Planned pro forma investments of over C$10 billion in T&D through 2021**

Pro Forma Capital Expenditures ('17E-'21E)
C$ in millions



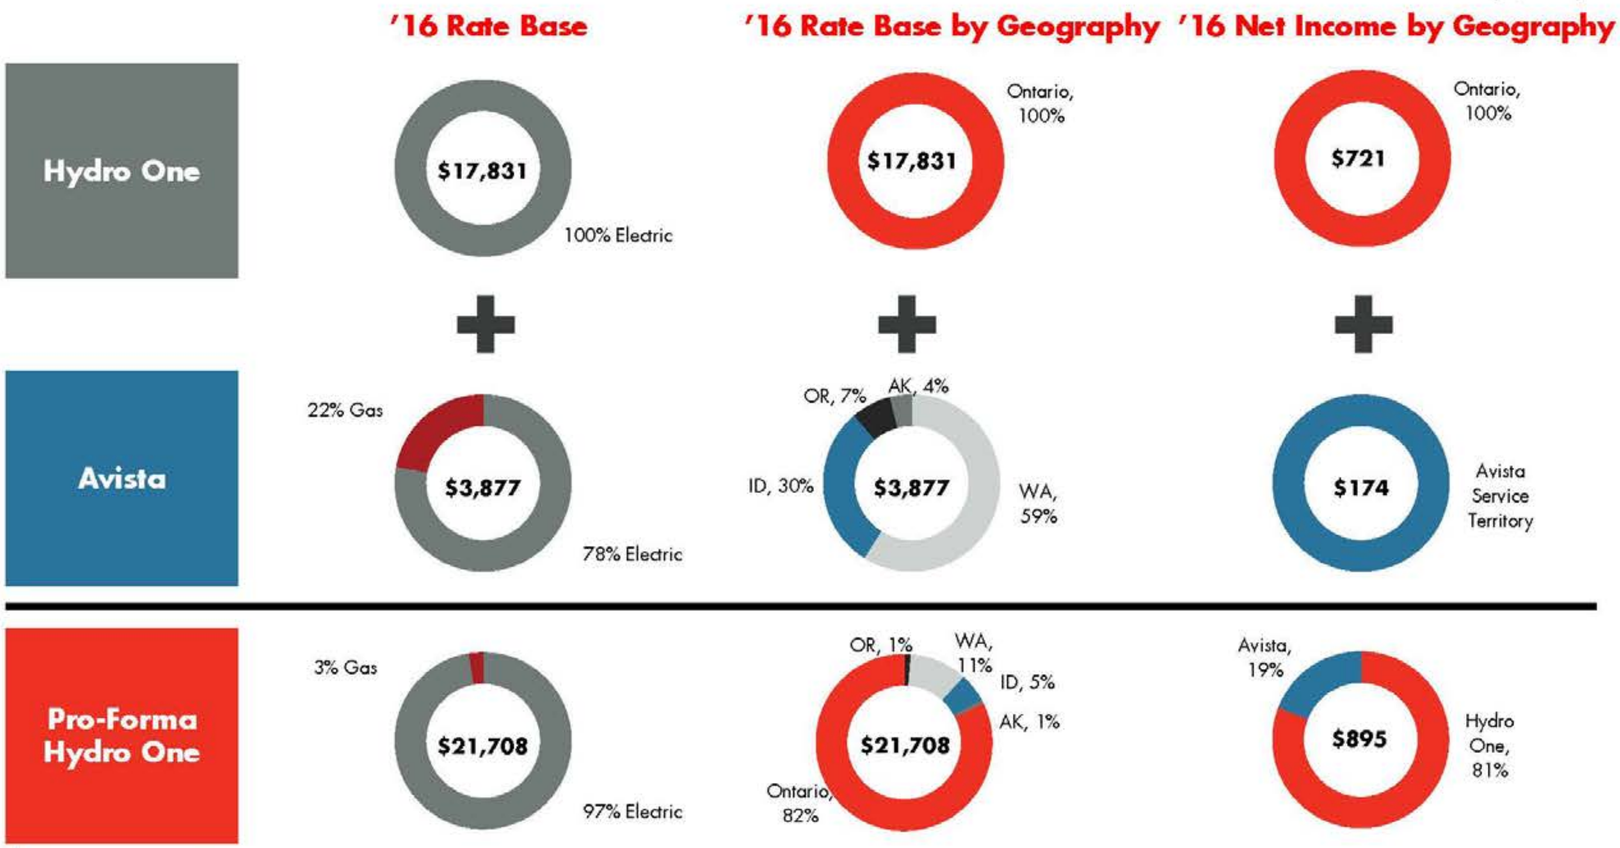
Pro Forma Rate Base ('17E-'21E)
C$ in millions



Avista's capital program will further enhance scale, strengthen quality of asset mix and reinforce Hydro One's growth profile

Diversification

(C$ in mm)



Diversification across multiple geographies, economies, regulatory jurisdictions and utility businesses enhances stability and strategic positioning

Note: Combination of Avista and Hydro One numbers as reported using an exchange rate of C$ / US$ 1.264

Regulatory diversity

(C$)

	ON	WA	ID	OR	AK
Current Rate Base[1]	$ 17,831 M	$ 2,286.6 M	$ 1,155.5 M	$ 277.6 M	$ 157.4 M
Allowed ROE	8.78%	9.50%	9.50%	9.40%	12.88%
Equity Capitalization	40.00%	48.50%	50.00%	50.00%	53.80%

Avista's assets provide an opportunity to expand and diversify the footprint to new regulatory jurisdictions with higher ROEs and attractive allowed capital structures

Note: Avista has de minimis retail operations in Montana and will seek approval from Montana regulators
1. Exchange rate of C$ / US$ 1.264

Shared culture and values

Scott Morris

- Chairman, President and CEO
- Scott is an experienced utility executive who has served in a variety of leadership positions since joining Avista in 1981
- He began his career in the company's utility marketing division and has served in leadership positions throughout the company
- Scott currently chairs the Federal Reserve Bank of San Francisco, Seattle branch, and the Board of Trustees for Gonzaga University. He also serves on the boards of Greater Spokane Incorporated, Edison Electric Institute, Washington Round Table and the American Gas Association

- Hydro One will benefit from the team assembled by Scott of well respected industry leaders who have delivered consistent shareholder value
- Seasoned leadership team at Avista with an average service of 18 years for the 13 officers
- Hydro One and Avista management teams enjoy a similar cultural fit and strong dedication to their respective communities with many volunteering on city, region and state committees/initiatives
- Both companies share a common heritage of over 100 years rooted in hydro generated electric power

Exceptional cultural fit will allow for a low risk transition and an enhanced ability to quickly find and address areas of mutual benefit that don't compromise either entities' values

Innovation and knowledge transfer

- **Avista is a proven leader in utility innovation with a deep track record of investments in advanced technologies, including energy management solutions**

Itron

- Avista is the founder of **Itron**, now a global supplier of smart meters with revenues of ~US$2 billion and total enterprise value of ~US$2.9 billion
- Sold 24.8 million units in 2016

ReliOn

- Started a fuel cell system business, **ReliOn**
- Sold to Plug Power in 2014

ecova

- Grew an energy management services company, **Ecova**, into one of the leaders in the space
- Acquired by Cofely USA, a subsidiary of ENGIE, for more than US$325 million in 2014

- Providing 272 EV charging stations as part of a 2-year pilot project
- Testing an energy storage system using battery technology

urbanova
rethinking cities

- Developing a "living laboratory for smart city innovation" in collaboration with the City of Spokane and Washington State University and others, called **Urbanova**
  - New technology development focusing in areas such as: a microgrid, solar generation, storage, energy efficient building technology, and advanced metering for electricity/gas/water

Opportunity to reduce operating costs and gain strategic benefits by leveraging and sharing innovation and best practices

Commitment to customers, communities and employees

hydroOne

Customers

- Customer rates in the markets served by Hydro One and Avista will be unaffected by transaction costs
- An enhanced transmission and distribution system will achieve operational excellence leading to cost savings over time
- Greater financial capacity will support needed additional investments in energy infrastructure and technology to provide for safe, high quality and reliable service

Communities

- Both companies will continue to take their responsibility as good corporate citizens very seriously
- This transaction will preserve and in some cases increase the commitment to philanthropy and economic development in the communities served
- Hydro One has committed to do even more, doubling Avista's current levels of community contribution

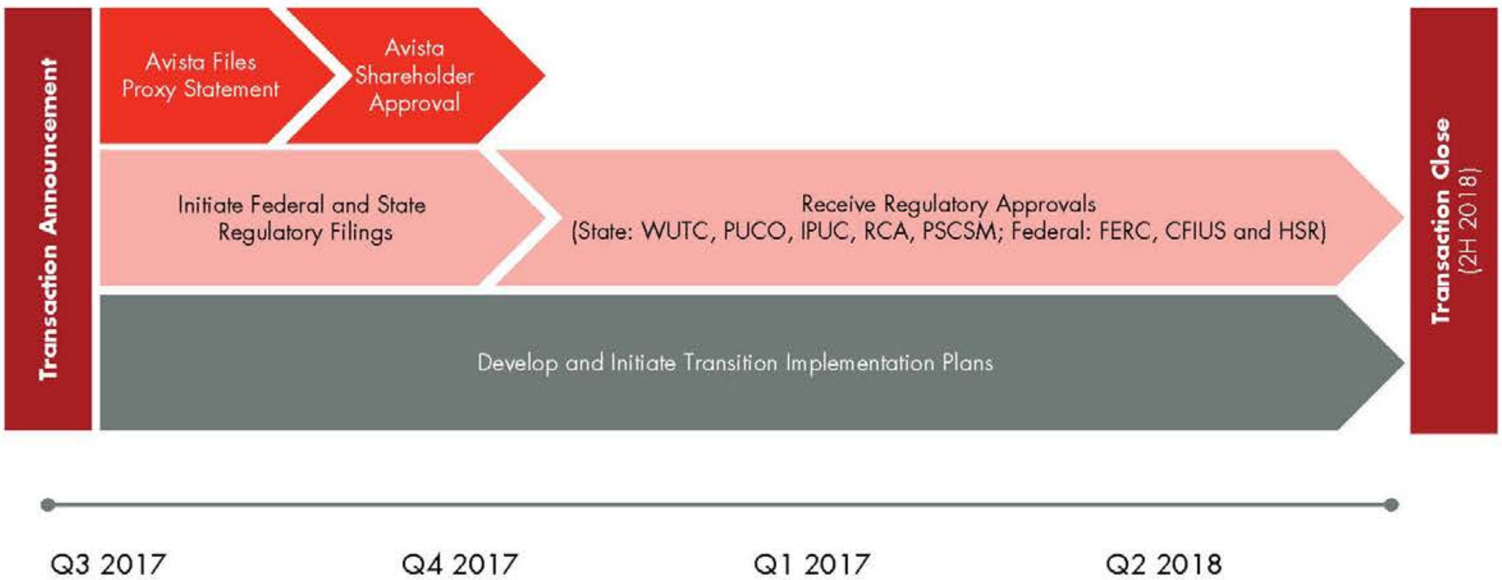
Employees

- Hydro One and Avista will maintain existing brands, headquarters and employee bases
- Avista's Board of Directors will continue to have significant Pacific Northwest representation
- Scott Morris will be CEO and Chairman of Avista, Mayo Schmidt will continue to be CEO of Hydro One

Committed to maintaining high quality, increasing efficiencies, preserving jobs, and supporting communities and regional economic development

Indicative timeline to transaction close

hydroOne



Transaction expected to close in the second half of 2018 with federal and state regulatory approval filings expected to occur concurrently for all jurisdictions

Note: WUTC (Washington Utilities and Transportation Commission), OPUC (Oregon Public Utility Commission), IPUC (Idaho Public Utilities Commission), RCA (Regulatory Commission of Alaska), PSCSM (Public Service Commission of the State of Montana), FERC (U.S. Federal Energy Regulatory Commission), CFIUS (Committee on Foreign Investment in the United States) and HSR (U.S. Hart-Scott-Rodino Antitrust Improvements Act of 1976)

Energy Probe Research Foundation Interrogatory # 3

Issue:

Issue 4: Are the rate and bill impacts in each customer class in each year in the 2018 to 2022 period reasonable?

Reference:

N/A

Interrogatory:

Please file the bill impacts on the various rate classes if the Board were to approve Hydro One's application as is, with an effective date of January 2019. Energy Probe is most interested in seeing the bill impacts in 2019 that will include a rate rider for the collection of 2018 rates. Please do not include any bill mitigation measures or Fair Hydro Plan rebates.

For R2 customers, please do include the recent increase to the Rural or Remote Rate Protection program.

Response:

If the application was approved as is, but with an effective date of January 1, 2019, the 2019 bill impacts including a rider for recovery of the foregone 2018 revenue requirement would consist of i) the combined 2018 and 2019 bill impacts plus ii) the impact of recovering the forgone revenue in 2019. The 2019 bill impacts for a typical customer in each rate class, consistent with Hydro One's December 17, 2017 update to the evidence would be approximately as shown in the table below. The bill impacts in other years would remain largely unchanged, except for the small impact associated with recovering regulatory asset balances over 4 years instead of 5 years.

2019 bill impacts assuming 2018 rates are approved as filed, but implemented on January 1, 2019						
Rate Class	**Monthly Consumption (kWh)**	**Monthly Peak (kW)**	**Change in DX Bill ($)**	**Change in DX Bill (%)**	**Change in Total Bill ($)**	**Change in Total Bill (%)**

Energy Probe Research Foundation Interrogatory # 4

Issue:

Issue 4: Are the rate and bill impacts in each customer class in each year in the 2018 to 2022 period reasonable?

Reference:

C1-01-05 Page: 7-8

Interrogatory:

Has Hydro One's forecast of LEAP spending changed as a result of the recently passed Fair Hydro Plan?

Response:

Hydro One's forecast of LEAP spending has not changed as a result of the recently passed Fair Hydro Plan. In the eight months after implementation, demand for LEAP funding has remained consistent relative to prior years.

Power Workers' Union Interrogatory # 2

Issue:

Issue 4: Are the rate and bill impacts in each customer class in each year in the 2018 to 2022 period reasonable?

Reference:

N/A

Interrogatory:

Assuming that the Board approves the application as requested:

a) What bill impact does Hydro One forecast for a customer in the R1 rate class consuming 750 kWh per month for each of the years of the application following 2018, taking account of the effects of the FHP?

b) What is the forecast of the bill impact for these customers in each of the years, if the inflation assumption is 0% for each year?

Response:

a) The 2018 bill impact for a typical R1 customer taking into account the FHP is provided in the response to I-04-PWU-004.

b) It is Hydro One's understanding that the government of Ontario's commitment to keep bill impacts to the "rate of inflation" would be implemented by making adjustments to the price of electricity. Assuming that inflation was at 0% for each year, this would mean that electricity prices would stay constant. The bill impacts calculated in this application also assume that electricity prices (and all other non-distribution related charges) are held constant, consistent with Board policy for calculating bill impacts, and therefore the forecast of bill impacts for these customers would be as currently presented in the application.

Power Workers' Union Interrogatory # 3

Issue:

Issue 4: Are the rate and bill impacts in each customer class in each year in the 2018 to 2022 period reasonable?

Reference:

N/A

Interrogatory:

a) Does Hydro One agree that the Board prescribed Bill Impact calculations do not accurately reflect the actual impact that the application will have on the bills received by customers of Hydro One who are subject to the FHP?

g) In particular, does Hydro One agree that adjustment to the commodity price from year to year is an intrinsic element of the operation of the FHP for each year of the application?

Response:

a) Hydro One believes that the Board prescribed calculation of bill impacts does accurately reflect the impact of the changes in distribution rates proposed in the application, however, we agree that the calculated bill impacts do not reflect the actual impact on the bills received by residential customers that are subject to distribution charge reductions under the FHP. The bill impacts including the impact of the FHP are provided in the response to Exhibit I-4-PWU-4.

g) It is Hydro One's understanding that commodity prices may be adjusted until 2022 to keep bill increases in line with inflation.

Power Workers' Union Interrogatory # 4

Issue:

Issue 4: Are the rate and bill impacts in each customer class in each year in the 2018 to 2022 period reasonable?

Reference:

N/A

Interrogatory:

a) Please re-file Exhibit H1, Tab 4, Schedule 1, including attachments thereto, and Exhibit A Tab 3 Schedule 1, Table 17, reflecting the bill impacts after the effects of the FHP are accounted for. Provide illustrative examples of the calculation of the bill impacts for each year of the application. Please indicate what assumptions have been made, and the basis for those assumptions.

Response:

a) The bill impact tables and attachments in Exhibit H1, Tab 4, Schedule 1 apply the Fair Hydro Plan elements that were in effect at the time of filing in June 2017. This consists of a partial reduction to commodity charges, the removal of the Ontario Electricity Support Program (OESP) regulatory charge, and the Ontario Rebate for Electricity Consumers (OREC) on eligible bills. A revision of these tables are provided as attachments to this response which include the remaining Fair Hydro Plan elements that are now in effect; fully reduced Regulated Price Protection (RPP) commodity charges, Distribution Rate Protection (DRP) on R1 and R2 bills, and reduced Rural Rate Protection regulatory charges. The Fair Hydro Plan also includes a First Nations Delivery credit, which is not illustrated in the attachments since Exhibit H1, Tab 4, Schedule 1 does not include First Nations bill simulations.

The attachments to this response are as follows:

- Attachment 1: Revision of Bill Impact Tables in H1-04-01
- Attachment 2: Bill Impact 2018 with Fair Hydro Plan
- Attachment 3: Bill Impact 2019 with Fair Hydro Plan
- Attachment 4: Bill Impact 2020 with Fair Hydro Plan
- Attachment 5: Bill Impact 2021 with Fair Hydro Plan
- Attachment 6: Bill Impact 2022 with Fair Hydro Plan

Bill Impacts with FHP

TABLE 1 - DISTRIBUTION AND TOTAL BILL IMPACTS BY RATE CLASS FOR HYDRO ONE CUSTOMERS

Power Workers' Union Interrogatory # 5

Issue:

Issue 4: Are the rate and bill impacts in each customer class in each year in the 2018 to 2022 period reasonable?

Reference:

Q-01-01-01 Page: 21

Interrogatory:

a) Do the Total Bill Impacts reflected on the table take account of the FHP?

b) If not, why not?

c) If so, what is the basis of the bill impacts listed for 2019-22? Provide illustrative examples of the calculation of the bill impacts for each year of the application. Please indicate what assumptions have been made, and the basis for those assumptions.

Response:

a) No, the Total Bill impacts shown in the referenced table do not take account of the FHP.

b) The bill impacts provided in the referenced table are intended to show the impact of Hydro One's proposed increase in its distribution revenue requirement and the proposed changes in its load forecast. This is consistent with how Hydro One expects the OEB to assess the impact of its rate application. The OEB requires distributors to show the impact of their proposed rate increases holding all other bill components such as electricity and regulatory charges constant.

c) See response to b). Illustrative calculations of bill impacts are provided in Exhibit H1, Tab 4, Schedule 1, Attachments 2 through 5.

Power Workers' Union Interrogatory # 6

Issue:
Issue 4: Are the rate and bill impacts in each customer class in each year in the 2018 to 2022 period reasonable?

Reference:
Ref (a): The June 15, 2017 Hydro One presentation materials at the OEB Townhall (https://www.hydroone.com/abouthydroone/RegulatoryInformation/AboutOurRateApplication/Documents/OEB_Townhall_Presentation_June_15.pdf) address the bill impacts of the application in light of the FHP. At Slide 8, there is a reference to $1.95 in monthly charges to a representative customer in respect of "Flow through transmission costs not covered by FHP".

Interrogatory:
a) What are these costs, and why are they not covered by the FHP?

b) Are the bill impacts referenced in the evidence inclusive of these costs?

c) What would the bill impacts be, if these costs were covered by the FHP?

Response:
a) Flow through transmission costs refers to Retail Transmission Service Rates ("RTSR"), which are variable charges that appear on distribution customers' bills for the costs of transmitters to operate and maintain the high-voltage transmission system that carries electricity from generating stations to the distributor.

   Ontario Regulation 198/17, which describes the Distribution Rate Protection component of the FHP, only provides a subsidy to limit customers' base distribution charges to a capped amount (currently at $36.43 per month). Flow through transmission costs, or RTSR, are not affected by this Regulation.

b) Yes, the bill impact tables in the evidence include RTSR charges.

c) The scope of the Fair Hydro Plan, as set out in the Fair Hydro Act and associated regulations, does not allow for subsidizing flow through transmission costs.

Power Workers' Union Interrogatory # 7

Issue:

Issue 4: Are the rate and bill impacts in each customer class in each year in the 2018 to 2022 period reasonable?

Reference:

B1-01-01 Section 1.3 Page: 4-15 (Customer engagement process)

Interrogatory:

a) Please confirm that this process was undertaken prior to the FHP coming into effect?

b) Did Hydro One undertake any additional customer engagement activities (in particular regarding the bill impact of the application) after the implementation of the FHP? If so:

   i. describe the initiatives that were undertaken;
   ii. describe the feedback received; and
   iii. describe the manner in which any feedback was incorporated into the application in its current form.

Response:

a) The Customer Engagement process was undertaken prior to the Fair Hydro Plan coming into effect.

b) Hydro One did not undertake additional customer engagement activities after the implementation of the Fair Hydro Plan.

Balsam Lake Coalition Interrogatory # 4

Issue:

Issue 5: Are Hydro One's proposed rate impact mitigation measures appropriate and do any of the proposed rate increases require rate smoothing or mitigation beyond what Hydro One has proposed?

Reference:

https://www.hydroone.com/rates-and-billing/fair-hydro-plan

Interrogatory:

Hydro One's website asserts the following:

> Under the Fair Hydro Plan, the majority of our customers will see an average reduction of 31 per cent on their monthly bills, meaning an annual savings of about $600*.
>
> We also advocated for Distribution Rate Protection for our rural customers who will now see delivery charges fall in line with urban delivery rates. This relief will be long-lasting.

a) Please confirm that Distribution Rate Protection is not and will not be extended to customers that Hydro One includes in the Seasonal Rate Class.

b) Please provide any documentation submitted by Hydro One to the provincial government with respect to Hydro One's advocacy for Distribution Rate Protection for its rural customers. Please confirm whether or not Hydro One's advocacy included advocating for Distribution Rate Protection (or any other relief) for Hydro One's Seasonal Customers (i.e. customers currently identified by Hydro One as Seasonal Customers and included as members in the Seasonal Rate Class), either in the context of those customers continuing to be included in the existing Seasonal Rate Class, or in the context of those customers migrating to the existing R1 and R2 classes upon the elimination of the Seasonal Class pursuant to the Board's direction in EB-2013-0416.

c) Whether or not Hydro One advocated for Distribution Rate Protection or any other relief for Seasonal Customers, please provide any documentation exchanged between Hydro One and the provincial government that demonstrates that the provincial government considered any proposals to extend Distribution Rate Protection or other relief to Seasonal Customers.

d) To the extent Hydro One advocated on behalf of Seasonal Customers and/or to the extent the issue of Distribution Rate Protection (or any other relief) for Seasonal Customers was considered by the provincial government, please provide the rationale provided to Hydro One by the provincial government for excluding Seasonal Customers from Distribution Rate Protection and the lack of any other form of relief for seasonal customers. To the extent any such rationale was communicated in writing please provide copies of any documentation of that rationale.

Response:

a) Confirmed.

b) Please see the attached white paper on "Addressing Affordability" provided by Hydro One to the government of Ontario. Hydro One did not specifically reference our Seasonal customers but many of the proposals in the attached white paper also benefit Seasonal customers.

c) Hydro One advocated for rate reductions and affordable electricity for all customers (as outlined in Part b).

d) Hydro One was part of the Ministry of Energy working group that provided input to the ministry staff that developed the Distribution Rate Protection component of the Fair Hydro Plan. Hydro One informed ministry staff of the OEB's decisions with respect to the elimination of the Seasonal class and potential for seasonal customers being included in Hydro One's R1 and R2 year round residential rate classes.

ADDRESSING AFFORDABILITY

JANUARY 30, 2017

hydro one

INTRODUCTION

Transitioning from a Crown corporation to a publically traded company, the focus at Hydro One is on continuous improvement of all aspects of the business. While customer service is paramount at Hydro One, these improvements also include finding ways to drive further efficiencies in the utilization of transmission and distribution assets, reducing costs and improving reliability. This focus will invariably deliver value to customers, employees, communities and shareholders alike. There are, however, broader issues related to the affordability of electricity which need to be addressed in order to fully realize the benefits of this transition.

We know our customers are struggling; we have been visiting communities across the province and listening to their concerns face-to-face. As a Company that maintains a direct relationship with over 25% of electricity customers in Ontario, Hydro One continues to witness firsthand the effects of rising electricity rates. Initially, these concerns were predominately high bill complaints that were resolved by providing explanations and education. Today, an unfortunate trend has developed where electricity charges have exceeded customers' means of payment, and explanations and education cannot resolve issues of affordability. This is especially apparent within Hydro One's customer base wherein rural and Northern residential, including First Nations, customers and small businesses consume electricity at proportionally higher rates than in urban environments and, in many cases, use electricity for heating. Unfortunately, after exhausting all options, the Company is often required by regulation to make the difficult decision to disconnect service. This "final" conclusion, however, is not final for Hydro One, as we must continue to adapt our business, and advocate for our customers until all have access to programs and rates that make our essential service affordable.

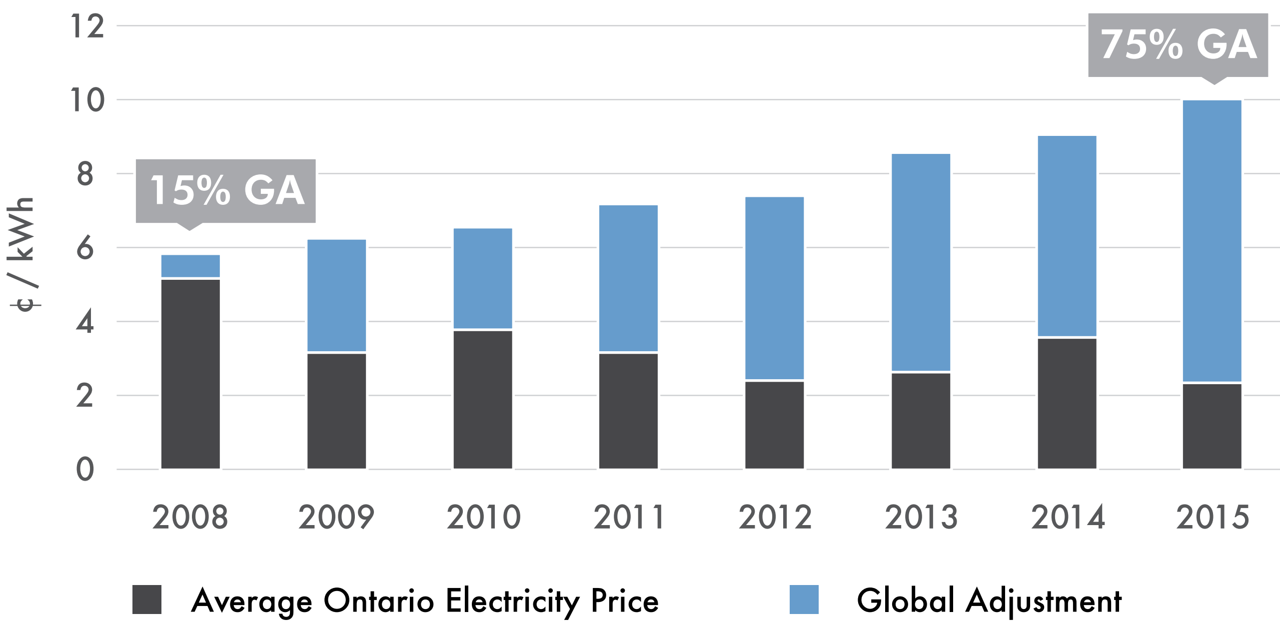
The most obvious sign of our commitment to serve and advocate for our customers was the introduction of our Winter Relief Program. Winter Relief got the lights back on in time for winter for those who had been disconnected. Our focus now turns towards determining what it would take to keep the lights on for those customers – in a sustainable and affordable manner. For these reasons, the Government of Ontario's intention to take bold measures to bring rate relief to our customers is highly supported by Hydro One.

Hydro One recognizes that reducing rates is a highly complex matter especially within a system where most of the costs are determined through contracts and regulation. The affordability challenge resides with those who manage and participate in the electricity sector. This report contains Hydro One's recommendations to the Government of Ontario on how to reduce electricity costs, remove systemic inequities for rural and Northern customers, and provide additional measures to assist customers on an individual basis. These recommendations reflect the voices of many of our customers struggling to afford their monthly electricity bills, and who are often put in a position to make a decision between heat and food.

GLOBAL ADJUSTMENT

Since 2008, the market price for electricity has dramatically declined due to a drop in demand, but also an increase in supply through new generation contracts. The effect of the low market price has, consequently, resulted in a dramatic increase of Global Adjustment (GA), which is now the dominant and fastest-growing component of electricity rates. The GA has risen from $3.8 billion in 2010 to nearly $11 billion in 2016. Today, the GA accounts for 76% of the average residential customer's electricity charges. Figure 1 illustrates this escalation in the GA.

FIGURE 1: CURRENT ELECTRICITY PRICING TRENDS



Source: IESO

> With respect to the affordability of electricity, the Global Adjustment cannot be ignored in terms of cost drivers, appropriation of costs and government policy.

Power purchase agreements, or generation contracts, are the primary cost driver for the GA. The vast majority of these contracts were signed for a 20 year period, which means that prices should not begin to decline for at least another 15 years. Amortizing these costs over a longer period of time, 30 or 40 years, would create a rate smoothing effect. While renegotiating contracts is not advisable, other financial instruments could be created to facilitate this amortization.

Another important consideration is the composition of expenses in the GA, and the question of whether or not some of these expenses are more appropriately funded by tax payers. For example, the strategy to transition Ontario's electricity supply mix to more carbon neutral alternatives, such as wind and solar, had many benefits to all Ontarians beyond the supply of electricity – notably, environmental, social and economic development. As such, an argument could reasonably be made that tax payers should fund elements of the GA related to green energy contracts. There are other similar broadly beneficial initiatives that are being funded by electricity consumers, such as conservation and demand management, and it is recommended that the Government consider re-appropriating these costs through other means, such as through general accounts and the proceeds of cap and trade.

The final consideration with respect to the GA relates to government policy; specifically the Industrial Conservation Initiative (ICI) that is placing substantial upward pressure on residential and small business electricity prices. The ICI is a program that allows large power consumers to reduce their GA payments by conserving electricity. The ICI program measures a participant's level of consumption at five peak hours throughout the year. The IESO determines the five peak hours based on system demand and the participants are not informed of the system peak until after it has been declared. A participants average consumption during the five peak periods determines the amount of GA they will pay the following year. Companies that are able to predict the peaks and either curtail their consumption, or generate their own electricity during a peak time can save millions in GA payments. While Hydro One fully supports our largest customers and the significant role they play as the economic engine of Ontario, we have observed many ICI participants substantially reducing their GA contributions by an average of 40%, and some by as much as 97%. The direct results of these ICI GA savings result in further costs being absorbed by residential and small business customers through rates increases. In 2010, prior to the ICI program, Regulated Rate Plan consumers (predominately residential and small business) were funding 39% of the total GA. Today, RPP consumers are funding 46% of the total GA, which is equivalent to an additional $800M annually.

Due to increasing active participation by industry in the ICI program, and a recent expansion of program eligibility by the government, **Hydro One's ICI-eligible customers will climb from 50 to 200**. It is anticipated there will be an increasing trend in GA cost shifting from industry that will place a higher burden on residential customers and small businesses. We recommend that the Government of Ontario re-examine the ICI program and consider placing reasonable limits on how much residential and small business consumers contribute to this program.

SUMMARY OF SOLUTIONS TO REDUCE THE GLOBAL ADJUSTMENT INCLUDE:

- Increasing the amortization of generation contract payments by way of financial instruments;
- Conducting a detailed analysis of rate-payer funded policies that benefit the province as a whole and appropriate a portion of those costs back to the tax base; and
- Placing reasonable limits on Regulated Price Plan consumers' contribution toward the Industrial Conservation Initiative.

Depending on the type of tactics employed, potential savings are illustrated in Figure 2.

FIGURE 2: TRANSLATING GLOBAL ADJUSTMENT SAVINGS INTO POTENTIAL BILL SAVINGS FOR AVERAGE RPP CONSUMERS

Reduction in Global Adjustment	Monthly Savings for Residential Customers	Reduction in Monthly Bill For Hydro One R2 Customer
15%	$9.45	5.7%
30%	$18.97	11.5%
50%	$31.68	19.2%
100%	$63.37	38.4%

Note: The Regulated Price Plan (residential and small business consumers) share of the total Global Adjustment is estimated to cost $5 billion, or $84.50/MWH. The monthly savings for residential and small business customers is based on an average usage of 750kWh/month.

SYSTEM COSTS

Electricity rates are designed and set with the purpose of recovering system costs. System costs are large¬ly fixed either by contract or regulation. For instance, Hydro One is regulated by the Ontario Energy Board (OEB) and our delivery charges are set according to their cost-to-serve model. The dominating factor in the cost-to-serve model is ratebase, which represents an accumulation of capital investments in the system over time and cannot be changed if the system is to oper¬ate reliably. As a result, the existing regulatory model leaves little flexibility to reduce delivery charges, however, it does provide a significant level of oversight to ensure the rates represent the cost to serve.

The broader electricity system, however, does have great opportunities for cost savings through the consolidation of local distribution companies (LDCs). In the 2012 Report of the Ontario Distribution Sector Review Panel, *"Renewing Ontario's Electricity Distribution Sector: Putting the Consumer First"*, the Panel recommended that Ontario's 73 LDCs "should be consolidated into 8-12 larger regional distributors that are large enough to deliver improved efficiency and enhanced customer focus, while at the same time maintaining a strong connection with their local communities". In the first ten years after consolidation, the Panel estimated that $1.7 billion in costs could be removed from the electricity distribution sector which would be equivalent to approximately $70/annum for every electricity customer by the end of the tenth year.

A similar report in 2012, the *Commission on the Reform of Ontario's Public Services*, authored by Don Drummond, also recommended that the government "Consolidate Ontario's 80 local distribution companies (LDCs) along regional lines to create economies of scale. Reducing the $1.35 billion spent on operations, maintenance and administrative costs for Ontario's LDCs would result in direct savings on the delivery portion of the electricity bill".

Unfortunately, voluntary consolidation has been limited since 2012 and these potential savings remain locked up by municipally-owned utilities. It is likely that these savings can only be unlocked for consumers with the help of government. It is our recommendation that the Government of Ontario revisit options at its disposal to facilitate further consolidation to achieve maximum savings for electricity consumers.

CUSTOMER CONCERNS

RURAL DELIVERY RATES

Hydro One's customers pay considerably higher delivery charges as a result of the OEB's cost allocation principles. The principles have created an obvious urban-rural divide over delivery charges. The delivery charge is predominately comprised of two components, transmission charges and distribution charges. The distribution charges vary between LDCs and are the driver of the rate inequity between urban and rural consumers. For example, some LDCs can charge their customers $15/month for distribution charges, while Hydro One must charge its average residential customer $58/month based on the cost-to-serve model. Hydro One's costs are driven by servicing rural and remote Ontario, where our customer density is very low compared to other LDCs, which serve regions with higher customer densities. If distribution charges were applied equally among all consumers in Ontario, the average charge would be approximately $38/month, which would require many consumers to pay more; clearly not the intent of the Government of Ontario at this time. Recognizing that $38/month is the average distribution charge, Hydro One recommends provid¬ing additional rate relief to rural and Northern customers to bring their distribution charges in line with the average in Ontario. This would require an additional $200M in rate subsidy for Hydro One's rural non-seasonal customers.

In addition to introducing fair and reasonable rates for rural customers, it is also recommended that Hydro One expedite the transition to fixed distribution charges. The OEB has mandated that all LDCs remove the variable (volumetric) components of the distribution charge and transition to a fixed distribution charge. Fixed charges will benefit higher energy consumers, such as those who heat with electricity; however, it will also cause lower volume consumers to pay more. The transition to a fixed rate will occur incrementally until 2023 in order to avoid rate shock for the many consumers who will end up paying more. Hydro One proposes that additional rate relief could be provided to allow higher consumers to have their distribution charges 100% fixed immediately. We know that many low income families heat with electricity and would greatly benefit from this early transition. The estimated cost of advancing fixed rates would be approximately $90M/year and ultimately decline to $0 by 2023.

In total, Hydro One proposes that approximately $290M in rate relief from the Government of Ontario would not only make delivery rates more affordable, but also introduce rate fairness to rural consumers.

STRUGGLING CUSTOMERS

Electricity bills for low-density customers can represent up to 18% of household net income. Similar to other LDCs, Hydro One is limited in its ability to offer relief to customers who cannot afford to pay their electricity bills. The Company is able to waive security deposits and allow longer payment times but due to regulatory limitations we cannot forgive overdue accounts until a disconnection has taken place. Hydro One proposes that it be given the flexibility and autonomy to quickly respond to these customers' needs for support ahead of taking the drastic step of disconnection, which is itself a costly measure for the Company. Disconnection and reconnection, which can cost upward of $2000, can be avoided.

Hydro One has several highly effective conservation programs that are only available to customers who meet the mandated definition of "low income consumers". Allowing Hydro One to offer these programs at its discretion to struggling consumers who do not or cannot qualify as low income would allow the Company to resolve acute cases of hardship and in many cases avoid disconnection. Examples of programs to be offered include whole home weatherization and appliance replacement ranging from $3,500-5,500/customer or installing cold climate air source heat pump for homes heated with electricity ranging from $7,000-$13,000/customer. It is recommended that the Government of Ontario consider establishing an Affordability Fund for LDCs to access as a means to help struggling consumers who cannot qualify for low income programs and cannot upgrade their homes without financial assistance. Over time this program would save on disconnection costs, and help struggling customers get back on track.

A final consideration for struggling consumers relates to opportunities for the Ontario Electricity Support Program (OESP). Presently the OESP is undersubscribed with approximately 30% of eligible families participating. Hydro One recommends changes to the program requirements such as removing the number of occupants, to allow more consumers to qualify. Alternatively, surpluses could be directed to the Affordability Fund described above.

RECOMMENDATIONS

1

The Government of Ontario should aggressively reduce the GA and give consideration to applying reductions to residential and small business consumers' portion of the GA. It should also consider re-appropriating GA costs to the tax base for programs which have broader social benefit. Finally, it should consider limiting the funding of the ICI program by residential and small business consumers.

2

After four years of facilitating voluntary consolidation, the Government of Ontario should eliminate barriers and stimulate consolidation of LDCs to remove $1.7 billion costs from the distribution sector.

3

The Government of Ontario should remove delivery charge rate inequity by providing additional rate relief to rural customers by bringing their distribution charges in line with the provincial average.

4

The Government of Ontario should establish an Affordability Fund (potentially funded from surpluses collected under the OESP) for LDCs to access so that Hydro One can provide relief to customers suffering from acute hardship who do not qualify as low income assistance.

STACKING THE BENEFITS OF PROPOSED RATE RELIEF MEASURES

TARGET AUDIENCE	ALL RESIDENTIAL AND SMALL BUSINESS CONSUMERS IN ONTARIO	RURAL AND NORTHERN HYDRO ONE CUSTOMERS	HYDRO ONE CUSTOMERS WITH ELECTRIC HEAT	STRUGGLING CUSTOMERS
HYDRO ONE'S RECOMMENDATIONS	30% reduction in Global Adjustment applied to residential and small business customers *50% RPP savings = $2.5B 100% RPP savings = $5B	Provide rural and Northern customers with a fair delivery rate, closer to the provincial average	Expedite the transition to fixed distribution charges	Expand eligibility requirements for the Ontario Electricity Support Program
ESTIMATED ANNUAL PROGRAM COST	$1.5B	$200M	$90M in 2017 to $0 in 2023	$0
STACKING THE BENEFITS	$19/mo	$18/mo	$30/mo* *declining to $0 in 2023	$75/mo* *electrically heated
TOTAL SAVINGS PER MONTH	$19	$37	$66	$142

hydro one

CONCLUSION

Taken as a whole, the recommendations provided by Hydro One will increase affordability both over the short and long term for consumers, meaningfully addressing affordability of electricity. By putting our customers first and advocating on their behalf, the Company presents compelling advice, backed with evidence and rationale to make a difference for our customers. From addressing the inequities associated with the GA and delivery charges, to identifying potential cost savings in the distribution system and providing additional targeted support for struggling customers, these realistic and tangible recommendations address customer concerns and, if implemented, will ensure that no one in Ontario has to choose between heat and food.

hydro one

Anwaatin Inc. Interrogatory # 1

Issue:

Issue 6: Does Hydro One's First Nation and Métis Strategy sufficiently address the unique rights and concerns of Indigenous customers with respect to Hydro One's distribution service?

Issue 23: Was the customer consultation adequate and does the Distribution System Plan adequately address customer needs and preferences?

Issue 24: Does Hydro One's investment planning process consider appropriate planning criteria? Does it adequately address the condition of distribution assets, service quality and system reliability?

Reference:

A-04
A-04-02

Preamble:

Hydro One's distribution business serves the majority of the First Nations and Métis communities in Ontario.

In the Application, Hydro One states that it will be implementing a three-pronged strategy that is intended to increase system reliability within First Nations communities (increasing capital investments and replacing equipment that affects reliability; leveraging technology to allow Hydro One to better detect, limit the scope, and remotely respond to certain types of outages; and reducing planned outages by bundling work).

Hydro One indicates that, through its First Nations and Métis Strategy (Exhibit A, Tab 4, Schedule 2), communities would like to see an increase in procurement, investment/ownership opportunities, and other business partnership opportunities for Aboriginal businesses. Hydro One further indicates that First Nations communities have raised concerns about the high frequency and duration of power outages, particularly in Northern Ontario. Some communities have also indicated that the electricity supply is not sufficiently reliable to serve businesses on reserve and are concerned about degrading Hydro One asset conditions on reserve.

Hydro One also notes that First Nations communities and customers feel they are disproportionately impacted by high electricity costs. Many have raised concerns that their delivery charge is higher than their electricity consumption. In addition, First Nations customers are most sensitive to cost and place the greatest importance on cost over improvements in the service they receive.

Hydro One indicates that it hopes to address many of the Indigenous concerns with reliability and distributed energy resources, including Indigenous investment and ownership, and is developing a consolidated framework to guide First Nations and Métis relations and engagement across all lines of business.

Interrogatory:

a) Please describe how Hydro One consulted First Nations on any and all investment/ownership opportunities and other business partnership opportunities related to DERs in grid-connected communities, and what resulted from these consultation efforts.

b) Please describe in detail and provide all reports, notes, memos and documents related to:

   i. all processes Hydro One undertook to consult with Indigenous communities on this distribution rate application; and
   ii. the outcome of those consultations.

c) Please list each and all distributed energy resources that:

   i. Hydro One considered for Indigenous communities;
   ii. Hydro One consulted with First Nations on;
   iii. Hydro One implemented or intends to implement for Indigenous communities;
   iv. the Hydro One actions that result from them; and
   v. the quantified improvements in reliability and service that result from them.

d) Since First Nations in Ontario have now acquired or will soon acquire more than 14 million shares of Hydro One (representing 2.4% of the outstanding common shares of Hydro One), please describe how Hydro One will address the significant concerns of Indigenous shareholders relating to the high frequency and duration of power outages in Indigenous communities and the disparate reliability afforded to this class of shareholder.

Response:

a) Hydro One engages First Nations on investment/ownership opportunities on a project by project basis such as the Bruce to Milton Transmission Project and the Niagara Reinforcement Project. At this time, Hydro One has not yet engaged First Nations on any investment/ownership opportunities and other business partnership opportunities related to distributed energy resources (DERs) in grid-connected communities. Hydro One has recently begun exploring opportunities to partner with interested First Nation communities and to leverage federal and provincial government funding to support green energy and greenhouse gas reducing energy projects.

b)

i) Hydro One regularly engages with First Nations and Métis communities about various issues of concern.

As part of its review of customer needs and preferences, Hydro One conducted a telephone survey in August 2016 of a random and representative sample of 300 First Nations customers. A key finding was that First Nations customers are most sensitive to cost and place the greatest importance on cost over improvements in the service they receive. A copy of the telephone survey results with First Nations customers can be found EB-2017-0049, Exhibit B1-1-1, Section 1.3, Attachment 1, pages 1562 to 1570.

In addition, Hydro One also held engagement sessions with (a) the 88 First Nation communities it serves on February 9 and 10, 2017, the session reports for which are provided as Attachment 4 to section 1.3 of the DSP (Exhibit B1, Tab 1, Schedule 1) and (b) the 29 Métis Councils represented by the Métis Nation of Ontario on May 13, 2017. The purpose of the sessions was to engage on Application as well as to share information on various programs and initiatives benefiting Indigenous communities and to hear about issues and concerns expressed by participants as they related to Hydro One. Please find enclosed reports, presentations, and notes related to these engagement sessions as Attachments 1 to 9.

Hydro One will be hosting a second First Nations Engagement Session on February 21, 2018 which will be open to representatives of the 88 First Nations communities it serves. A similar engagement session will be offered to the Métis Nation of Ontario in 2018.

ii) For the most part, Hydro One had existing initiatives in place to address the concerns raised in these engagement sessions. Hydro One made 35 specific commitments at the

February 9 and 10, 2017 First Nation engagement session and 95% of these commitments were addressed throughout the year. Hydro One made 10 specific commitments at the May 13, 2017 engagement session with the Métis Nation of Ontario. Attachment 10 lists the 10 questions asked by the Métis Nation of Ontario and includes Hydro One responses.

The outcomes of these engagement sessions was the development of additional strategies and plans responsive to the key issues and concerns expressed by participants as they related to the transmission and distribution system.

To improve affordability, Hydro One implemented an outreach plan to ensure all eligible First Nation customers benefit from the First Nations Delivery Credit announced as part of the Ontario Fair Hydro Plan and which came into effect on July 1, 2017. Hydro One also adjusted a plan to implement the First Nations Conservation Program (FNCP) in new First Nation communities in 2018. The FNCP is a follow-up program to the Aboriginal Conservation Program which was implemented by the Independent Electricity System Operator (IESO) and ended in 2015 after providing services to 39 communities. The FNCP is designed to serve the communities not served by the IESO's earlier program**.**

In addition, Hydro One also implemented the Get Local Initiative to help customers by providing information about conservation programs and resources that may assist low-income customers and ensuring that qualifying customers are aware of and accessing the Province of Ontario's Ontario Electricity Support Program. Finally, in 2018 Hydro One started to roll-out the Affordability Fund to improve First Nations' home energy efficiency by providing free energy-saving upgrades, which can lower home energy use and, correspondingly, a customer's electricity bill over the long term.

In order to improve reliability and in response to complaints raised at the engagement sessions, Hydro One has revised its vegetation management policy whereby it will increase the frequency of forestry maintenance work on reserve. In addition, on measures to improve reliability, please see parts c) i), ii), and iii) of Exhibit I-6-Anwaatin-2.

On liability and access, Hydro One responded to feed-back committing to notify or seek permission as applicable from First Nation communities when conducting reconnection work on reserve in the context of its distribution business.

c) Hydro One has not yet considered distributed energy resources related to Indigenous communities. Hydro One has recently begun exploring opportunities to partner with interested First Nation communities and to leverage federal and provincial government funding to support green energy and greenhouse gas reducing energy projects.

d) Hydro One will continue to invest in its assets according to asset condition assessments without regard to preferences of specific shareholders.

Hydro One and First Nations Engagement Session

February 9th & 10th, 2017

DISCLAIMERS

In this presentation, all amounts are in Canadian dollars, unless otherwise indicated. Any graphs, tables or other information in this presentation demonstrating the historical performance of the Company or any other entity contained in this presentation are intended only to illustrate past performance of such entitles and are not necessarily indicative of future performance of Hydro One. In this presentation, "Hydro One" refers to Hydro One Limited and its subsidiaries and other investments, taken together as a whole.

Forward-Looking Information

This presentation contains "forward-looking information" within the meaning of applicable Canadian securities laws. Forward-looking information in this presentation is based on current expectations, estimates, forecasts and projections about Hydro One's business and the industry in which Hydro One operates and includes beliefs of and assumptions made by management. Such statements include, but are not limited to: statements related to project costs; statements related to continued consolidation of the electric utility market; statements related to dividends, including expectations regarding the ability of continued rate base expansion through capital investments to drive growth in dividends; statements regarding future equity issuances; expectations regarding funding for planned capital investments; statements related to rate applications and models; statements regarding rate base and cash flows; and statements regarding productivity improvements.

Words such as "aim", "could", "would", "expect", "anticipate", "intend", "attempt", "may", "plan", "will", "believe", "seek", "estimate", "goal", "target", and variations of such words and similar expressions are intended to identify such forward-looking information. These statements are not guarantees of future performance and involve assumptions and risks and uncertainties that are difficult to predict. Therefore, actual outcomes and results may differ materially from what is expressed, implied or forecasted in such forward-looking information. Hydro One does not intend, and it disclaims any obligation to update any forward-looking information, except as required by law.

The forward-looking information in this presentation is based on a variety of factors and assumptions, as described in the financial statements and management's discussion and analysis. Actual results may differ materially from those predicted by such forward-looking information. While Hydro One does not know what impact any of these differences may have, Hydro One's business, results of operations and financial condition may be materially adversely affected if any such differences occur. Factors that could cause actual results or outcomes to differ materially from the results expressed or implied by forward-looking information are described in the financial statements and management's discussion and analysis.

Non-GAAP Measures

Hydro One prepares and presents its financial statements in accordance with U.S. GAAP. "Funds from Operations" or "FFO" and "Adjusted Earnings Per Share" are not recognized measures under U.S. GAAP and do not have standardized meanings prescribed by U.S. GAAP. These are therefore unlikely to be comparable to similar measures presented by other companies. Funds from Operations should not be considered in isolation nor as a substitute for analysis of Hydro One's financial information reported under U.S. GAAP. "Funds from Operations" or "FFO" is defined as net cash from operating activities, adjusted for the following: (i) changes in non-cash balances related to operations, (ii) dividends paid on preferred shares, and (iii) non-controlling interest distributions. Management believes that these measures will be helpful as a supplemental measure of the Company's operating cash flows and earnings. For more information, see "Non-GAAP Measures" in Hydro One's 2016 full year MD&A.

Thursday, February 9th 2017 - Agenda

Hydro One and First Nations Engagement Session
Thursday, February 9, 2017
8:30 a.m. - 4:30 p.m.

Session Objectives: We would like to come together to share mutual aspirations and hear from you about the issues that matter to your community. We will also be pleased to share our current thinking and solicit feedback on the application for Distribution Rates and the distribution system plan that we are preparing for submission to the Ontario Energy Board

Item	Speaker	Start Time	Duration
Welcome • Introduction to Today's Session • Introduction of First Nations' Elder (Andrew Wesley) • Prayer from Elder	Phil Goulais & Elder	8:30am	30 mins
Introductory Remarks • Hydro One's Commitment to First Nations (including recent success stories)	Mayo Schmidt	9:00am	30 mins
Individual Introductions • Introduction of each Chief or Delegate • Open Discussion "What would you like to get out of today's session?"	Phil Goulais	9:30am	60 mins
BREAK		**10:30am**	**15 mins**
Customer Service • Customer Vision, Strategy, & Key Initiatives • Faciliated Dialogue: Exercise at each table. "What does great Customer Service mean to you"	Ferio Pugliese	10:45am	90 mins
NETWORKING LUNCH		**12:15pm**	**45 mins**
Distribution Rate Filing (2018-2022) • Key Findings from Customer Consultation • Revenue Requirement and Distribution Rate Profile • Cost Allocation Methodology, Rate Design	Oded Hubert & Henry Andre	1:00pm	90 mins
BREAK		**2:30pm**	**15 mins**
System Investments • Education about why the power goes out • Reliability statistics on FN communities (either a few sample communities or in aggregiate) • Investments in the Dx Rate Filing which will help to improve reliability (i.e. worst feeder)	Greg Kiraly	2:45pm	60 mins
Wrap Up • Feedback • Protocol for Future Discussions	Phil Goulais	3:45pm	30 mins

Friday, Feb 10th 2017 - Agenda

Hydro One and First Nations Engagement Session
Friday February 10, 2017
8:30 a.m. - 4:30 p.m.

First Nations Reliability Performance Overview

Greg Kiraly and Mike Penstone

Hydro One and First Nations Engagement Session

February 9 & 10, 2017

11

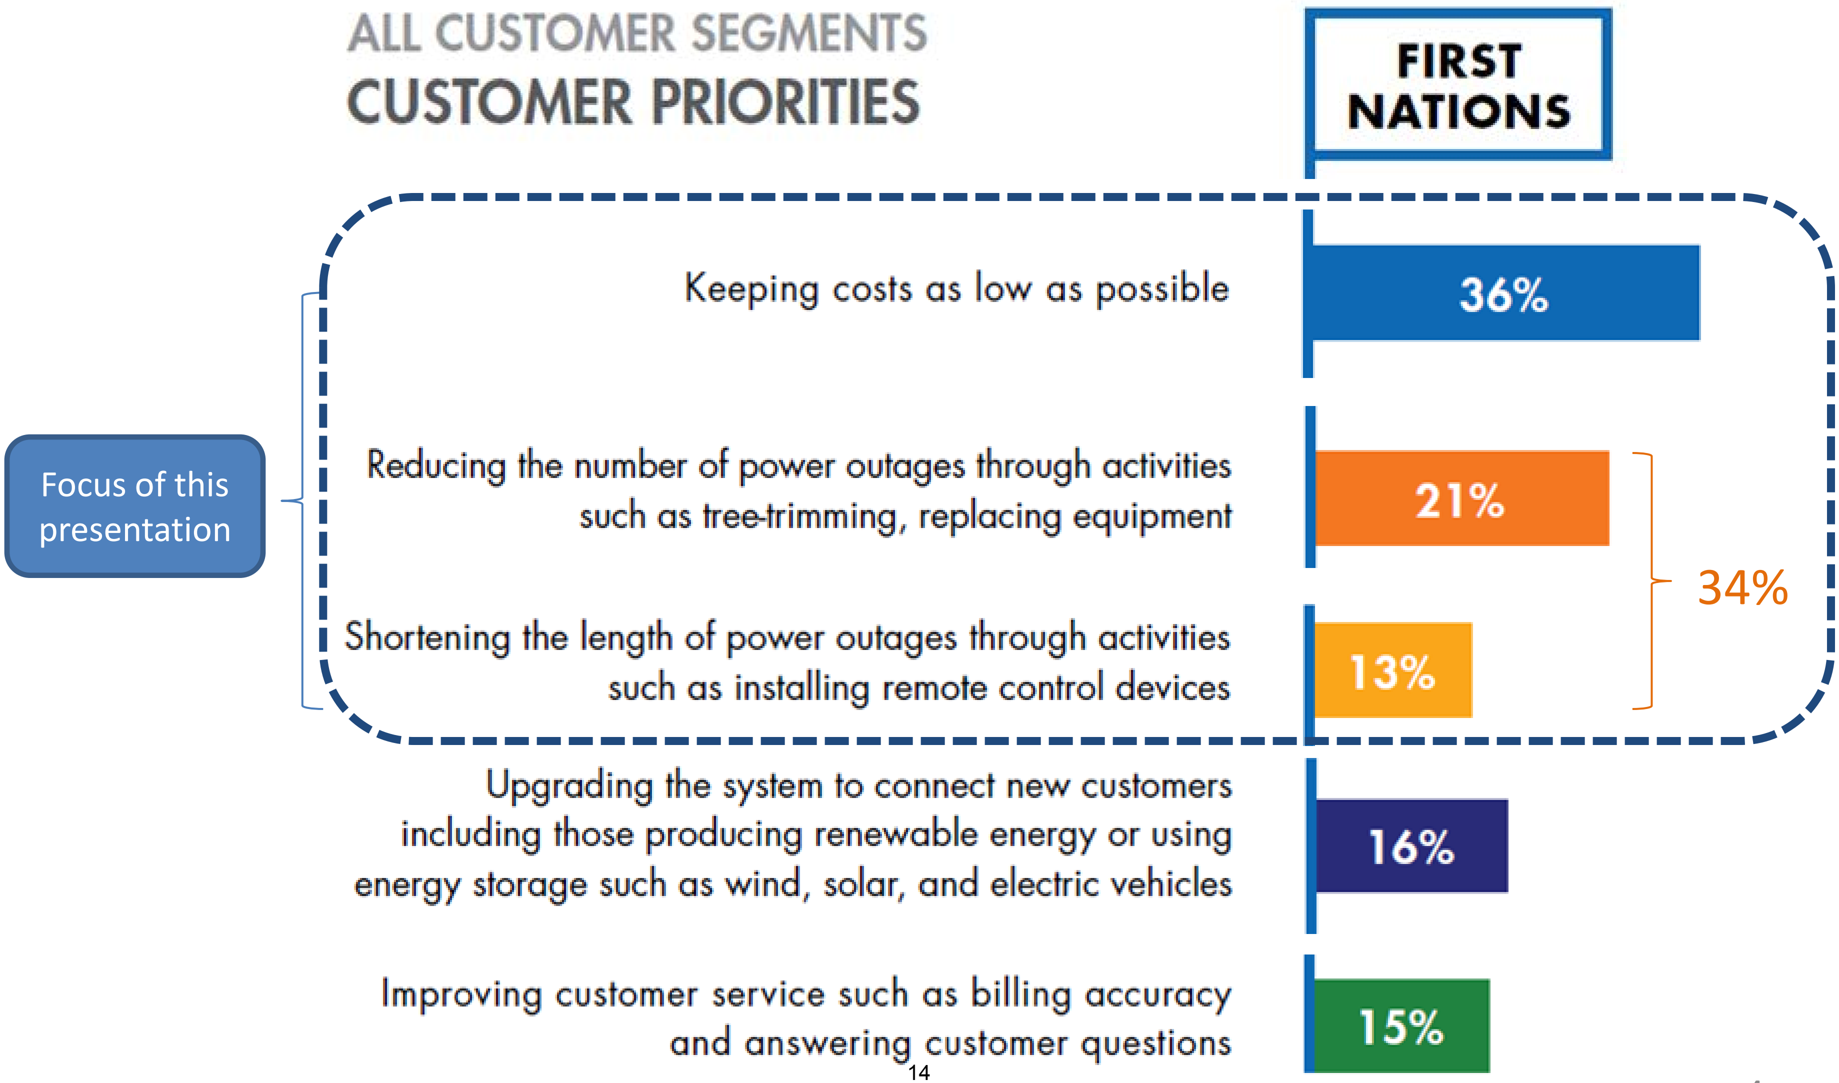
Today's Presentation

- Customer Engagement Initiative
- Reliability to First Nations Communities
- Managing Costs

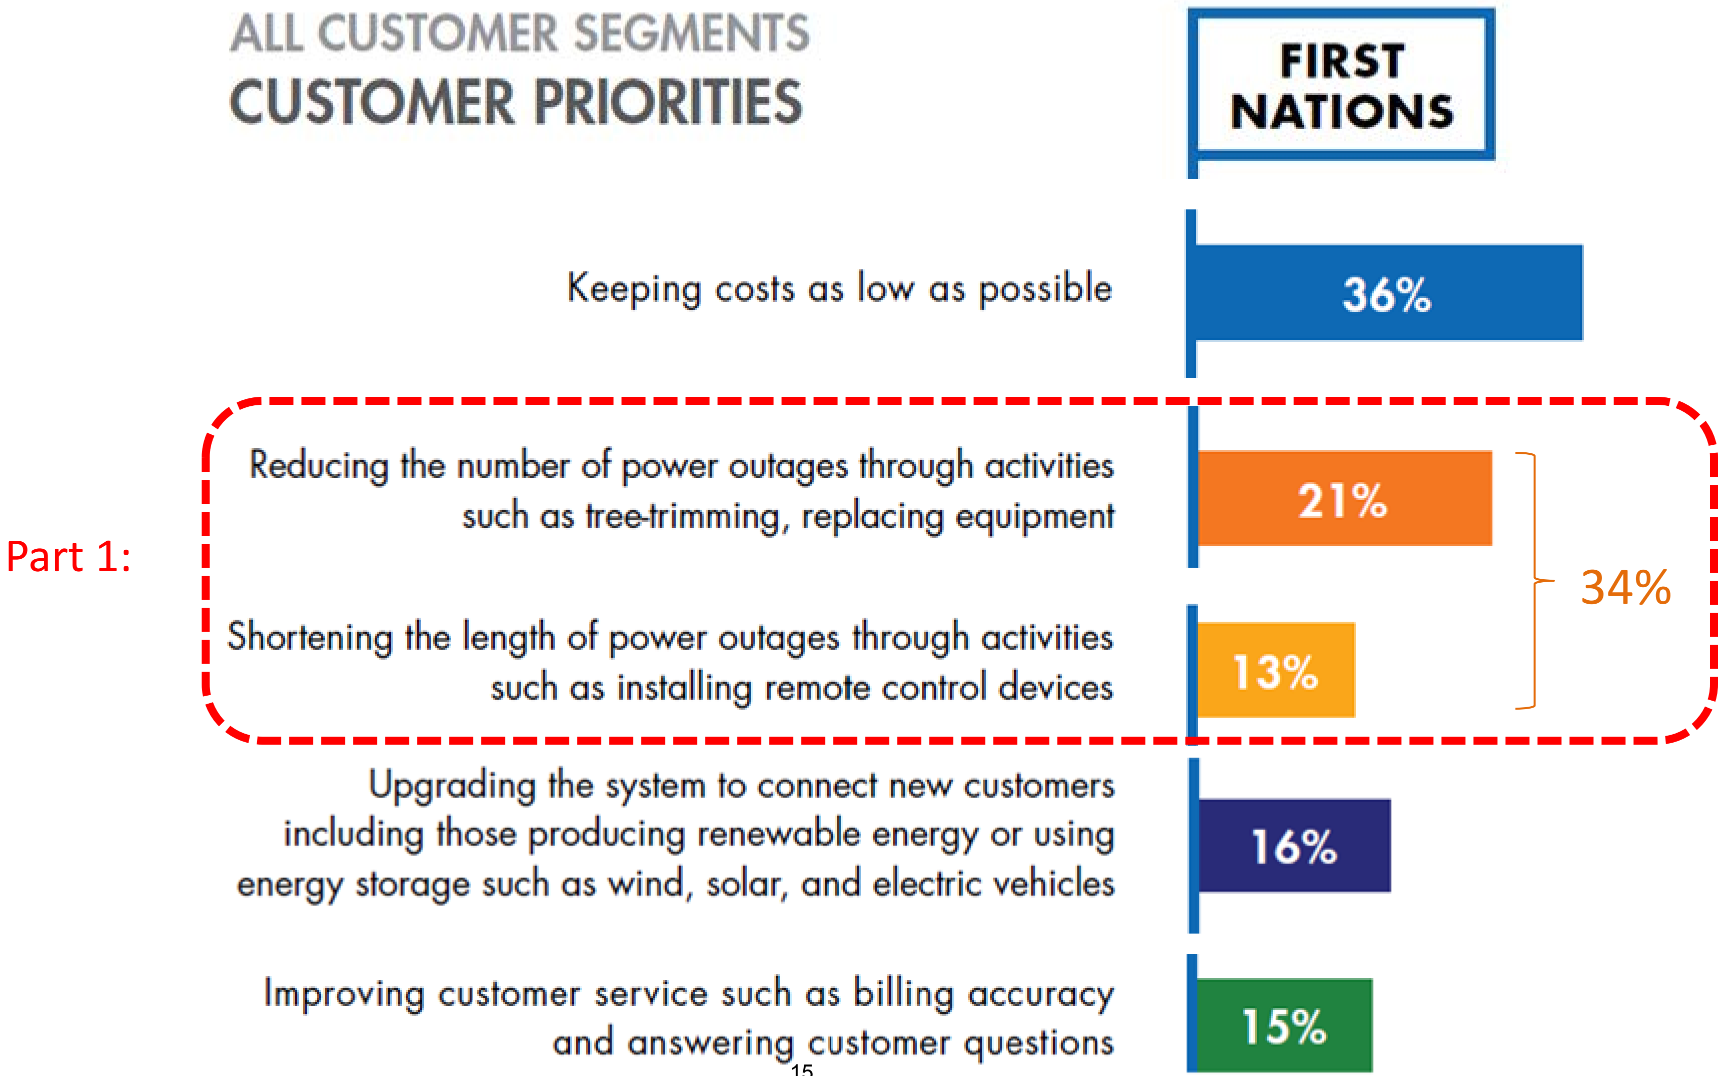
Customer Engagement Initiative

- Occurred in Q2 2016
- A 3rd party facilitated the initiative
- Input received from 300 First Nations Customers

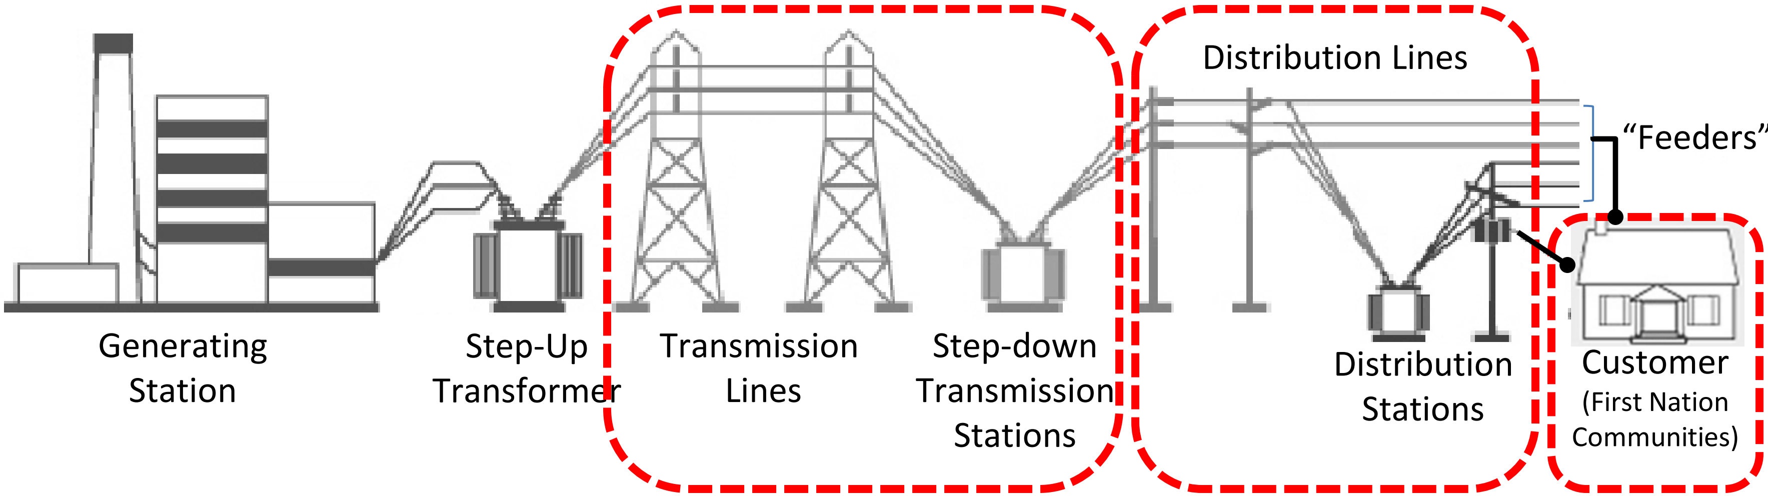
Customer Engagement Results



Customer Engagement Results



Generation → Customer

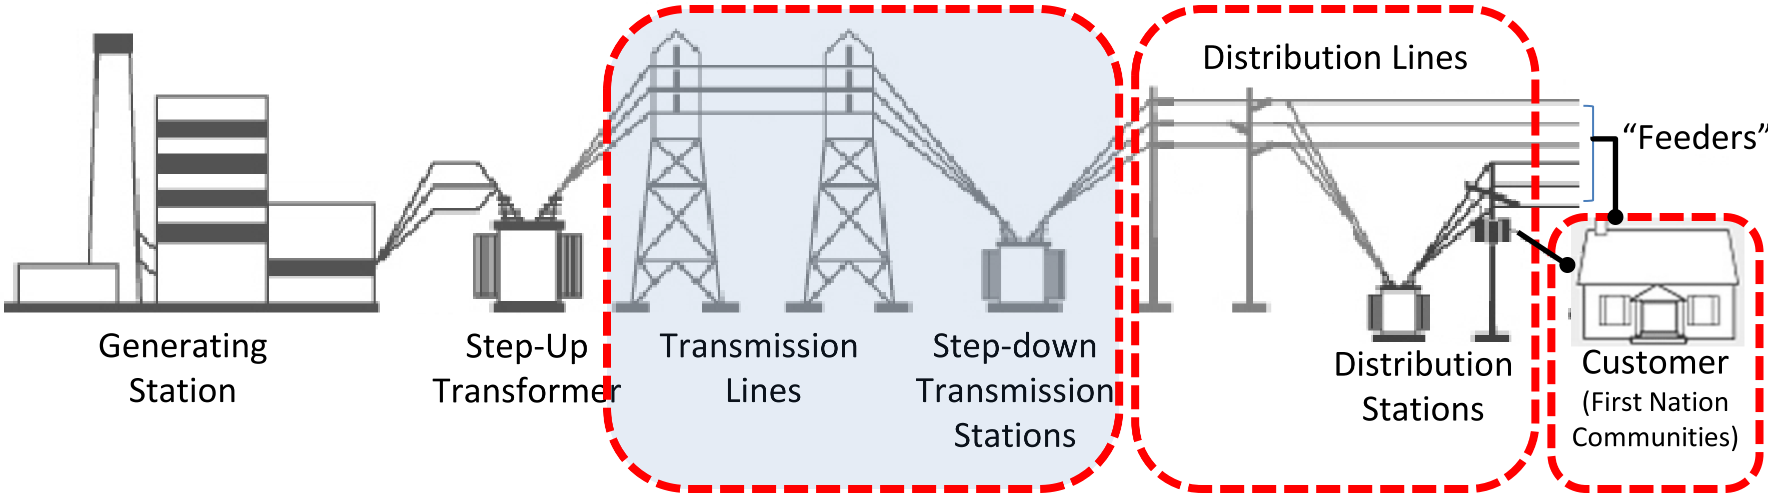


1 **Transmission System:** ~490 Transmission Lines, ~340 Transmission Stations, 29,000 km of Transmission Lines

2 **Distribution System:** ~3200 Distribution Lines, ~1000 Distribution Stations, 130,000 km of Distribution Lines

3 **First Nation Communities:** Supplied from 55 Transmission Lines and from 89 Distribution Lines

Transmission System



1 **Transmission System:** ~490 Transmission Lines, ~340 Transmission Stations, 29,000 km of Transmission Lines

2 **Distribution System:** ~3200 Distribution Lines, ~1000 Distribution Stations, 130,000 km of Distribution Lines

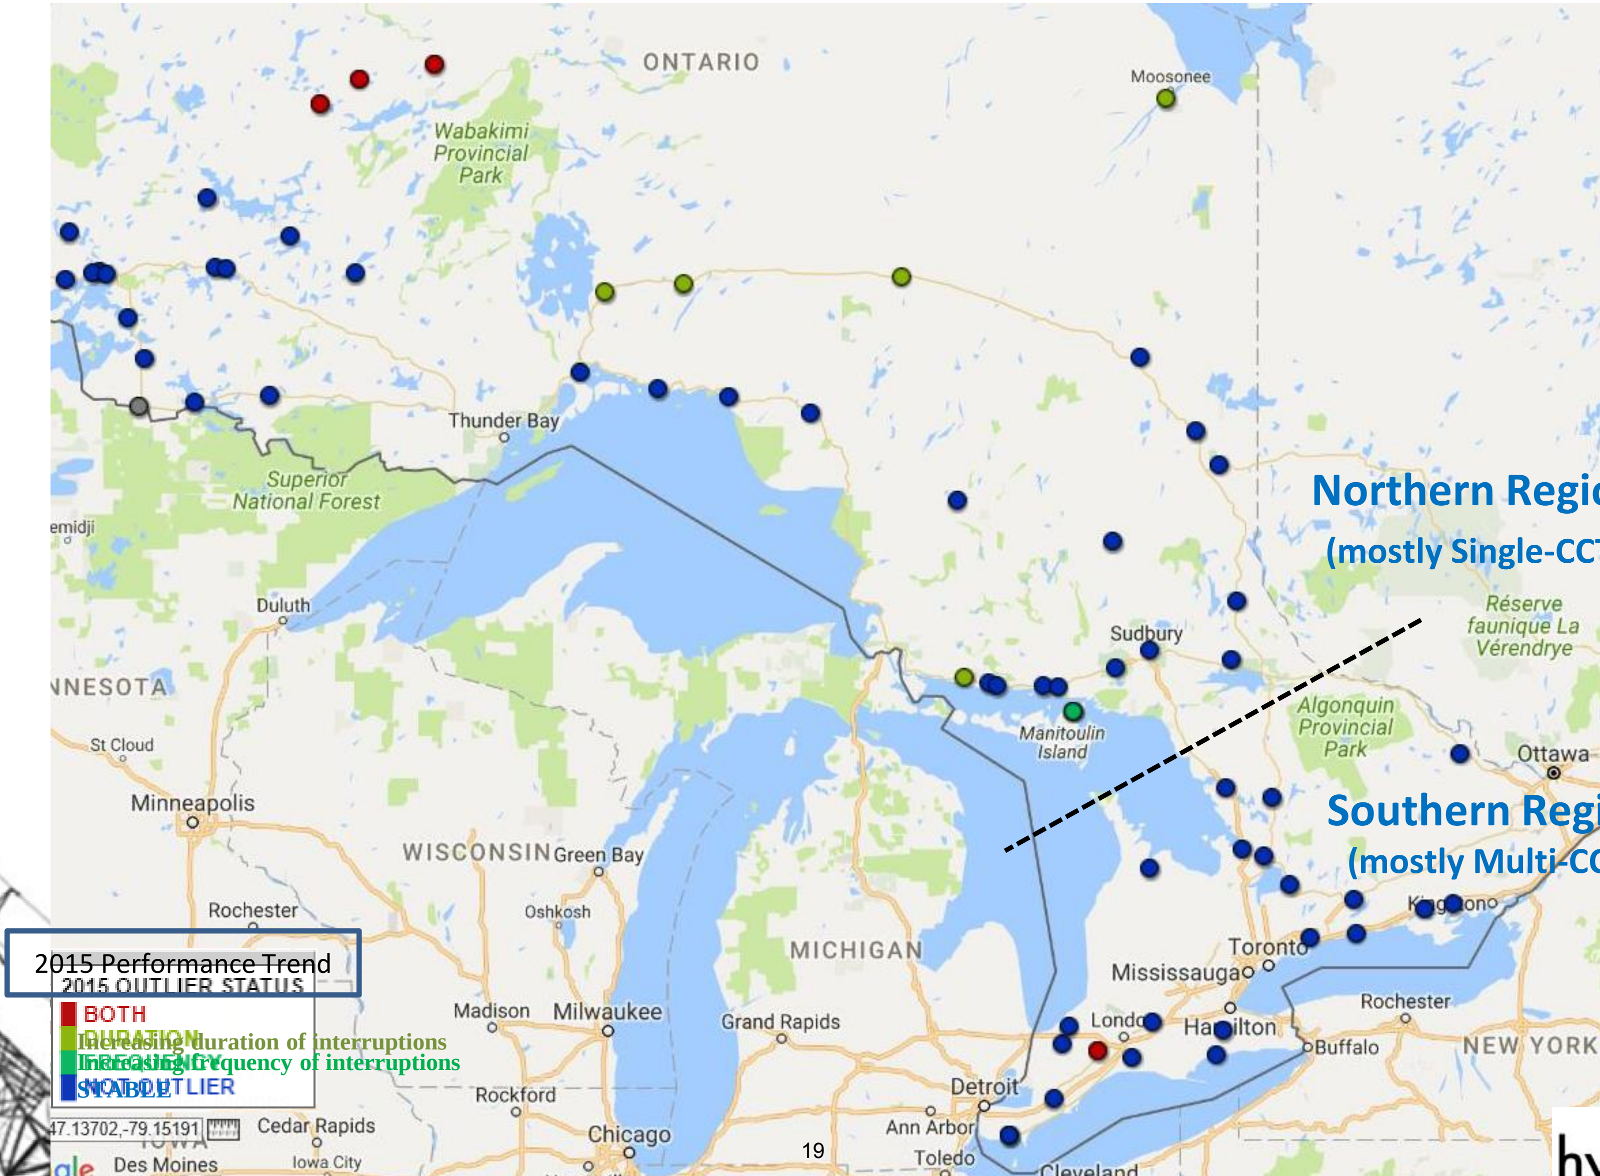
3 **First Nation Communities:** Supplied from 55 Transmission Lines and from 89 Distribution Lines

Tx System – Primary Causes of Interruptions:
(~67% occurs from Weather & Equipment Failures)

Power outage causes (2012-2016)

Equipment failure	**49%**	Majority of failures have occurred on Lines assets (Insulators, Wood Poles, Conductor, etc)
Weather	**18%**	Adverse weather (freezing rain, ice, lightning)
Environment	**15%**	Occasionally, Hydro One experiences tornados, forest fires, major environmental events
Animal/vehicle or Tree Contacts	**14%**	Animal contacts with Hydro One's equipment and off-corridor tree-felling events
Configuration	**2%**	Issues relating to the configuration of the system at the time of the event.
Unconfirmed causes	**1%**	Sometimes Hydro One crews can't determine the exact cause of an outage.

First Nations: Transmission Connections



Transmission Connections Performance: By Geographic Region (First Nations Only)

Transmission System - Northern Sub-System (2016 YE Performance)			
Tx Reliability Index	# of Transmission Connections	Duration of Interruptions (interruption minutes/ Tx Connection)	Frequency of Interruptions (# of interruptions /Tx Connection)
[1]First Nations	44	216.4 (68.4)	4.48

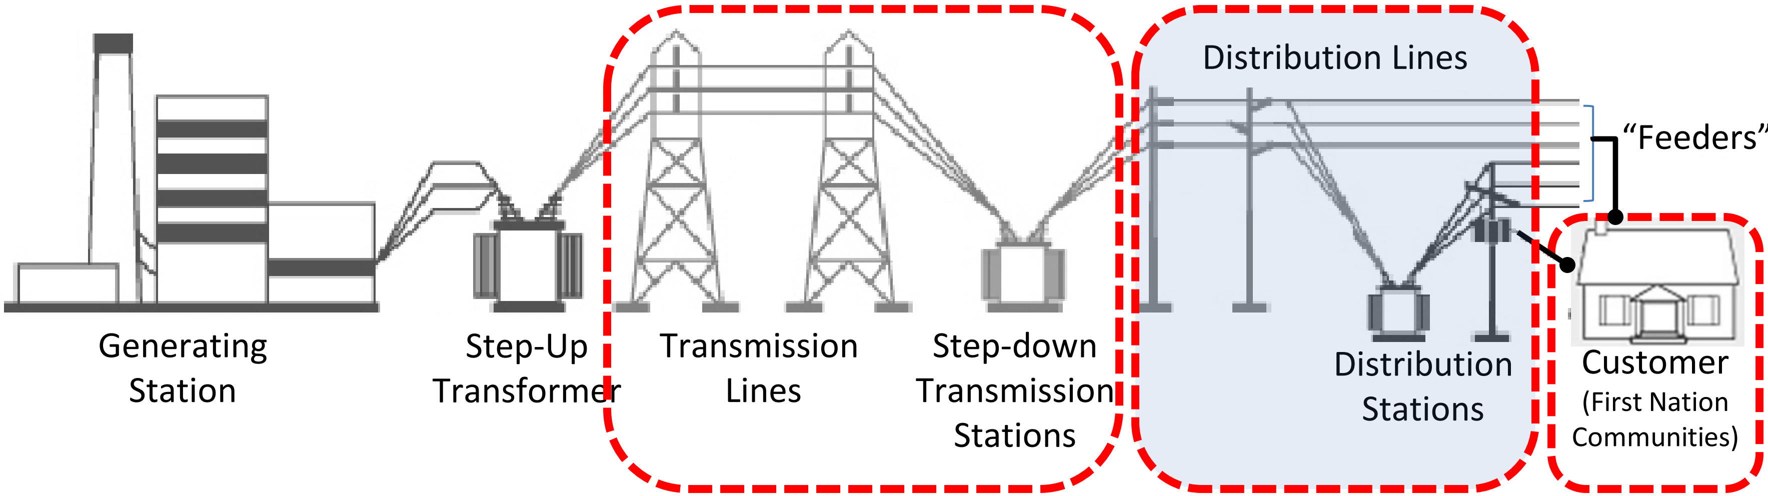
Transmission System - Southern Sub-System (2016 YE Performance)			
Tx Reliability Index	# of Transmission Connections	Duration of Interruptions (interruption minutes /Tx Connection)	Frequency of Interruptions (# of interruptions /Tx Connection)
First Nations	25	25.1	1.20

[1] *Two lines account for 58% of total interruption minutes for entire year*

How is Hydro One maintaining Reliability in the Transmission System?

- **Increasing Capital Investments (Lines)**
- **Leveraging Technology (Distance-to-Fault)**
- **Reducing Planned Outages (Bundling Work)**

Distribution System



1 **Transmission System:** ~490 Transmission Lines, ~340 Transmission Stations, 29,000 km of Transmission Lines

2 **Distribution System:** ~3200 Distribution Lines, ~1000 Distribution Stations, 130,000 km of Distribution Lines

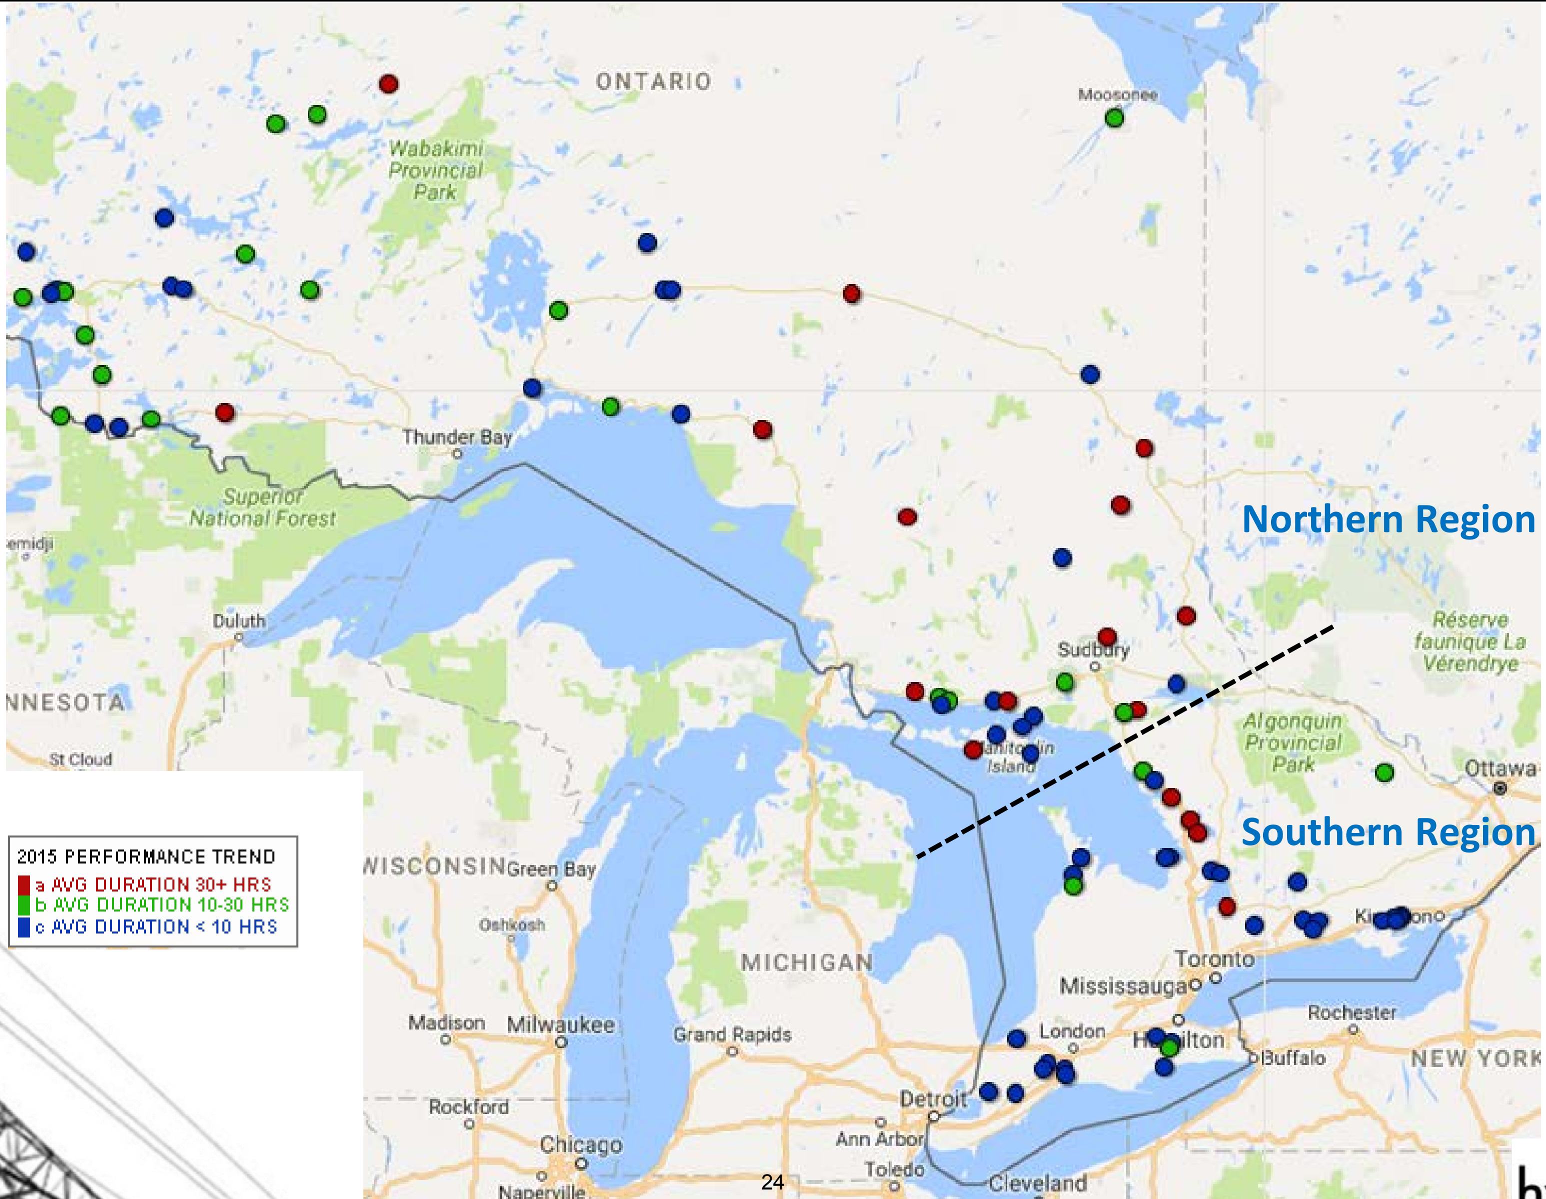
3 **First Nation Communities:** Supplied from 55 Transmission Lines and from 89 Distribution Lines

Dx System – Primary Causes of Interruptions:
(~50% occurs from Tree Contacts & Equipment Failures)

Power outage causes (2013-2015)

Tree damage	**24%**	Trees fall on lines during storms.
Equipment failure	**24%**	Poles, transformers, lines failures can cause an outage.
Unconfirmed causes	**19%**	Sometimes Hydro One crews can't determine the exact cause of an outage.
Scheduled outages	**16%**	Occasionally, Hydro One needs to schedule power outages to safely replace or update equipment.
Transmission Outage	**12%**	Issues relating to the larger grid, like damage to transmission lines.
Animal or vehicle damage to equipment	**5%**	Animal contacts with Hydro One's equipment and car accidents that damage poles.

First Nations: Distribution Connections



hydro one

Dx Performance: By Customer Segmentation (& First Nations Only)

Distribution System - Overall (2016 YE Performance)

Distribution System Reliability Index	Interruption Hours/Customer (SAIDI)	# of Interruptions/Customer (SAIFI)
Hydro One	13.3	3.4
[1]First Nations	13.5	3.6

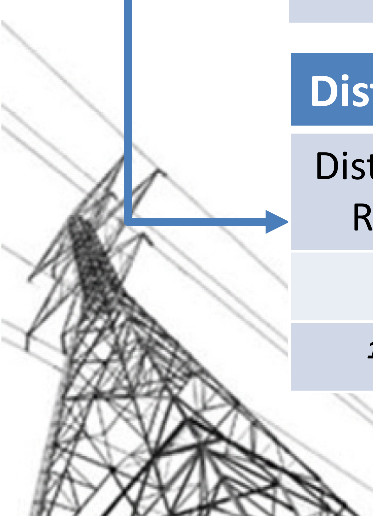
Note: *Includes Force Majeure and Loss of Supply (i.e. interruptions due to Transmission events)*

Distribution System - Rural (2016 YE Performance)

Distribution System Reliability Index	Interruption Hours/Customer (SAIDI)	# of Interruptions/Customer (SAIFI)
Hydro One	14.6	3.7
[1]First Nations	13.5	3.6

Distribution System - Urban (2016 YE Performance)

Distribution System Reliability Index	Interruption Hours/Customer (SAIDI)	# of Interruptions/Customer (SAIFI)
Hydro One	3.0	1.7
[1]First Nations	Mostly Rural	Mostly Rural



[1] First Nations results are for 2015 year. When available, 2016 numbers will be inserted. Only a small portion of First Nations are in an Urban area (<10% estimated)

How is Hydro One maintaining Reliability in the Distribution System?

Reducing the number of outages per year

Renewal program
Replace equipment that's affecting reliability

Tree trimming
Targeting tree trimming in areas with high tree contacts

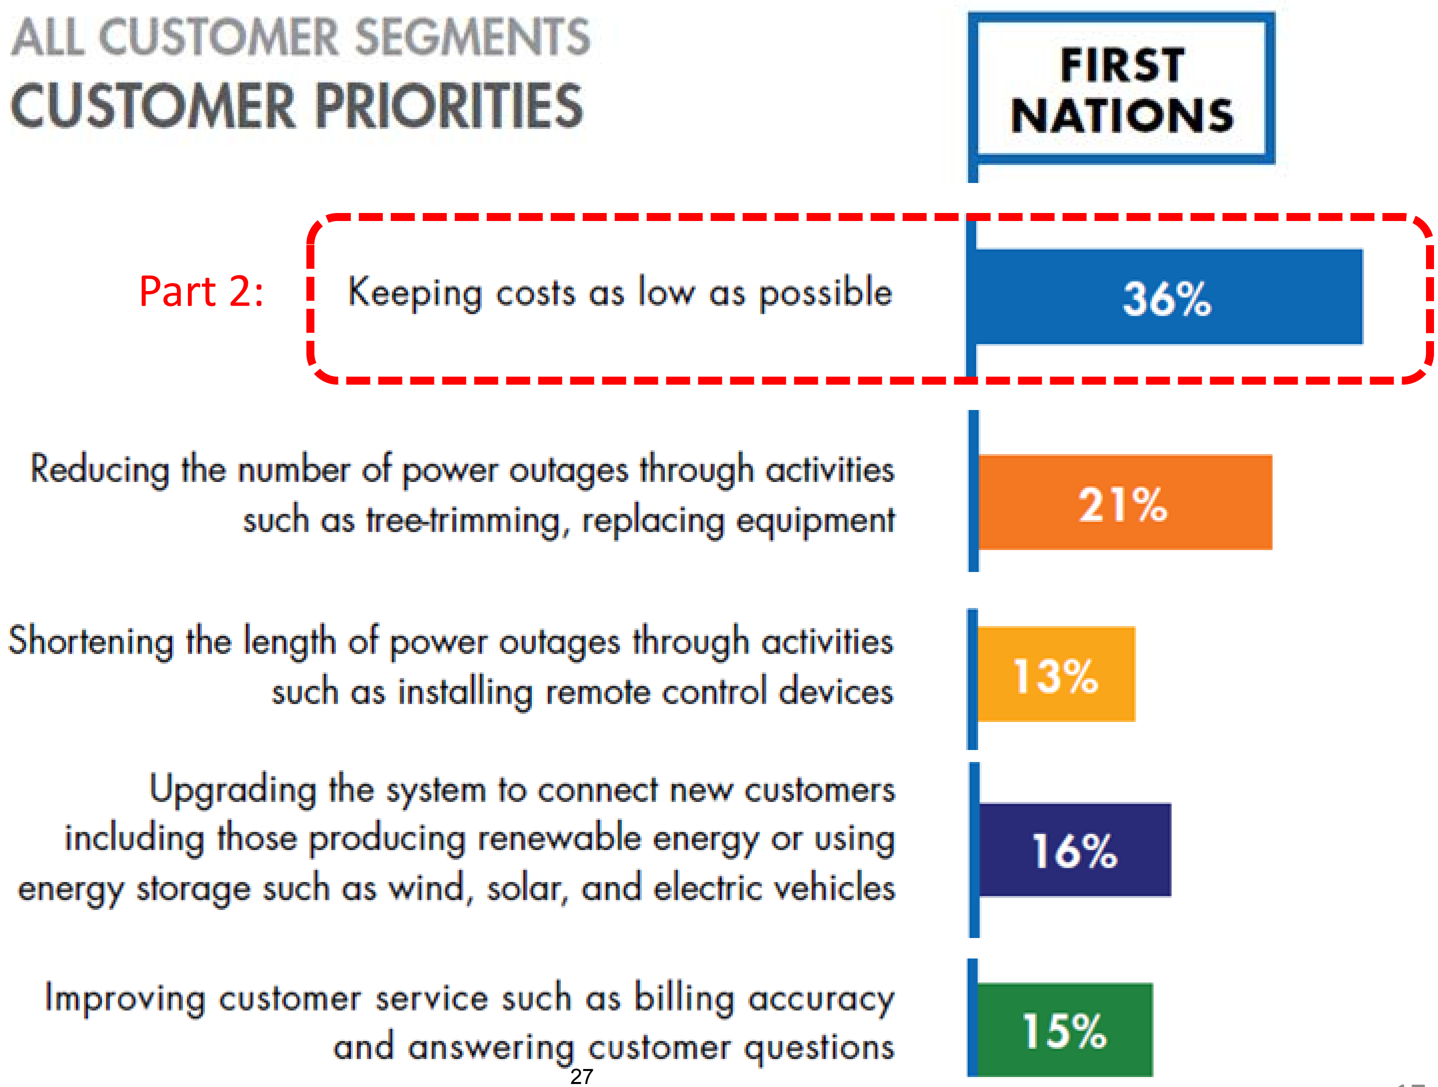
Smart Grid
Adding more protective devices & remote control to reduce chance of outages

Shortening the length of power outages

Improved Outage Response
Detects outages, limits size, dispatches repair crews

Monitoring and control
Use technology that lets Hydro One remotely respond to outages

Customer Engagement Results



Controlling Costs:

- **Pacing Expenditures**
- **Vegetation Management**
- **Move-to-Mobile**

Questions & Answers

HYDRO ONE'S DISTRIBUTION RATES APPLICATION (2018-2022)

Oded Hubert

Vice President – Regulatory Affairs

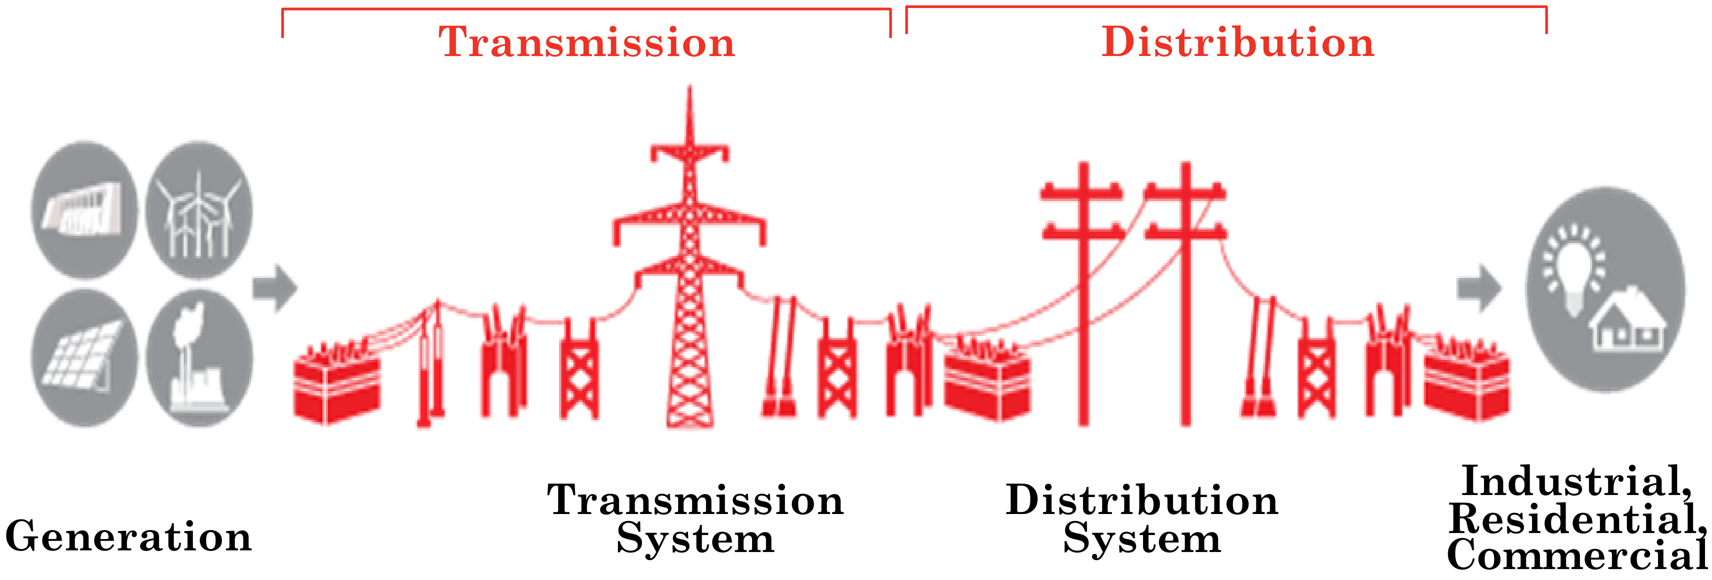
Hydro One and First Nations Engagement Session

February 9 and 10, 2017 30

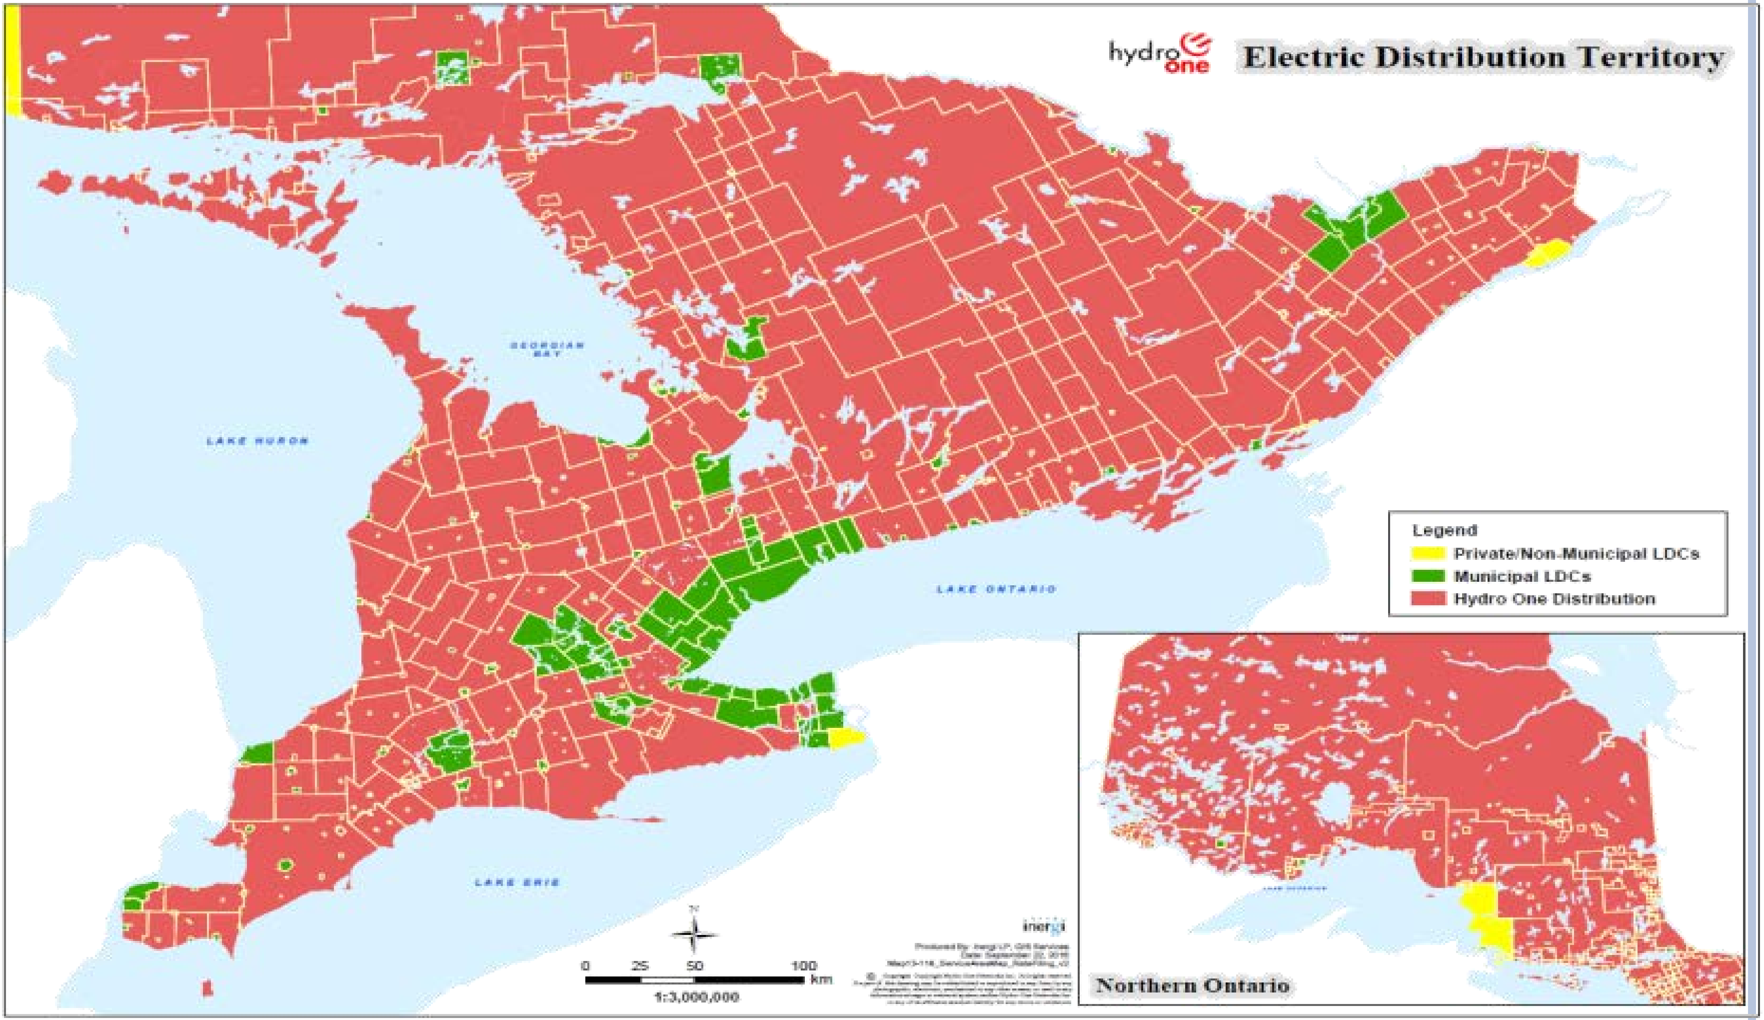
Hydro One Limited (Hydro One)

- Hydro One is Ontario's largest electricity delivery company
- We are owned 70% by the province of Ontario and 30% by public shareholders
- We have three businesses:
  - Transmission;
  - Distribution; and
  - Telecommunications

Hydro One's Role in the Ontario Electricity System



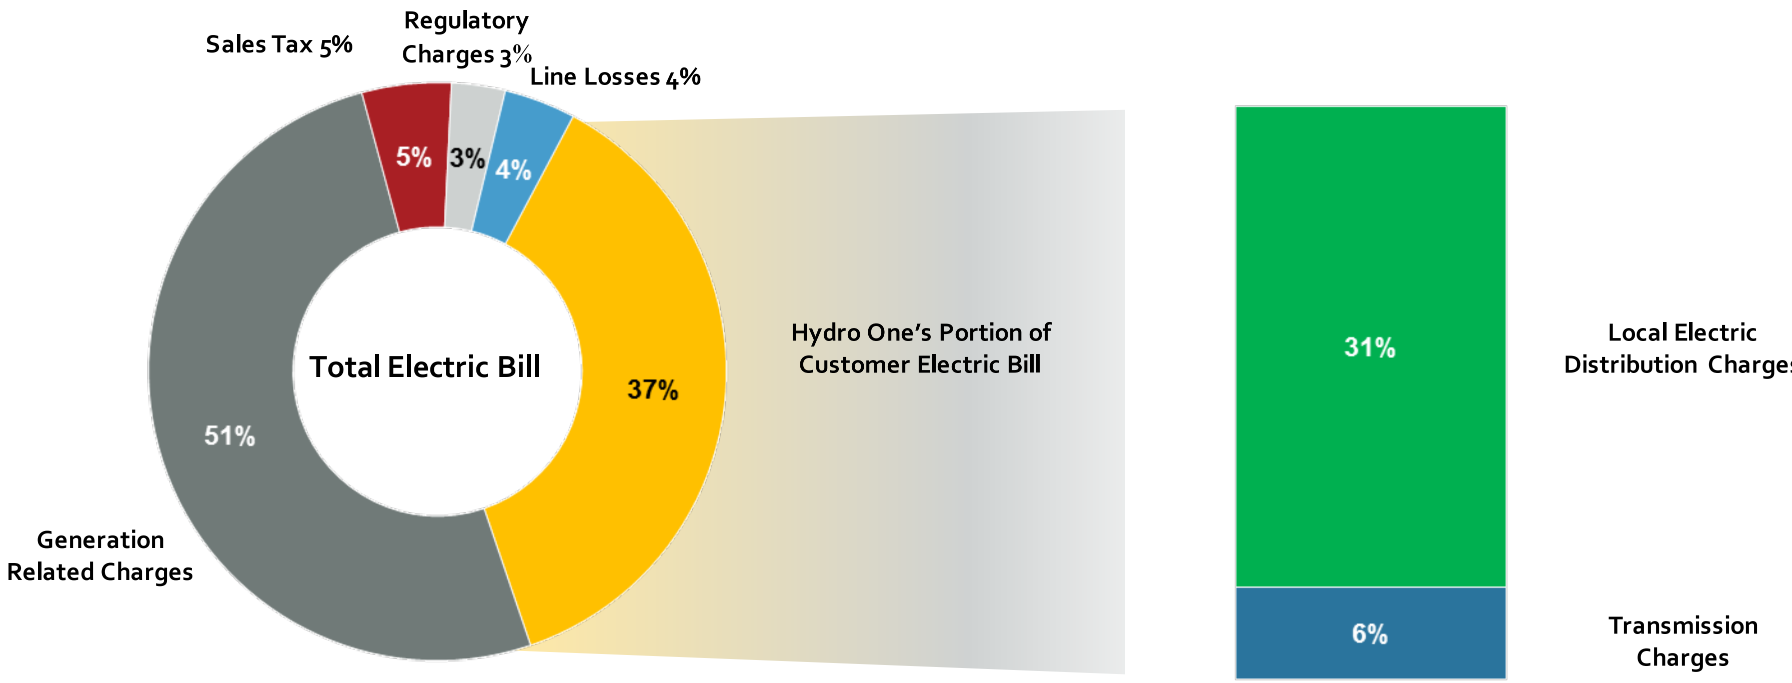
Distribution System Map



Distribution System Stats

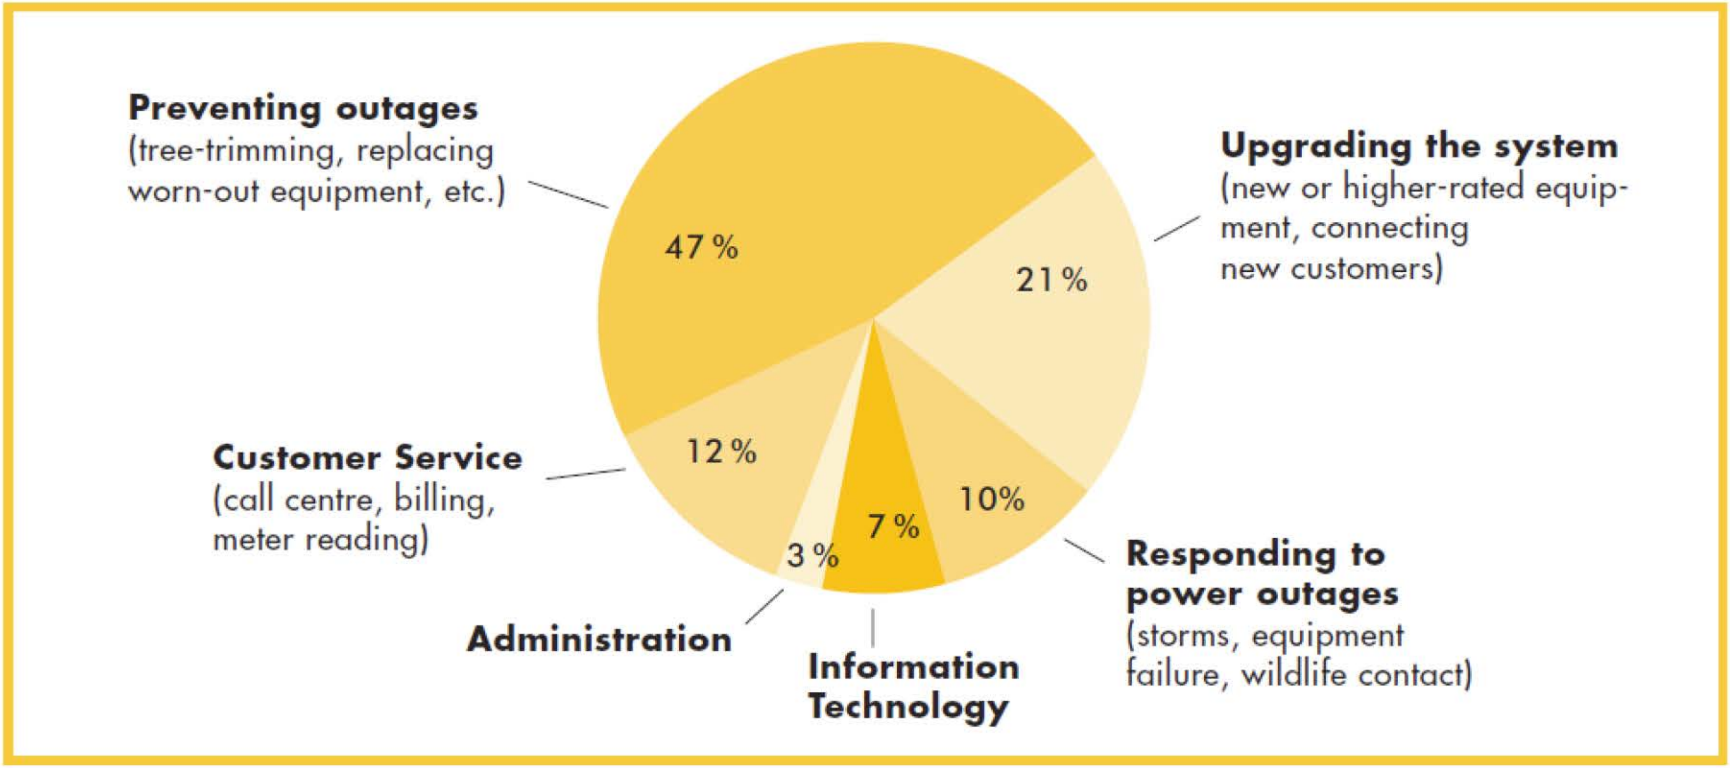
Service Territory	Rural Service Area - 960,123 sq. km Urban Service Area - 677 sq. km
Customers	1.3 million residential and business customers as well as 55 local distribution companies
Distributed Generation	Approximately 13,400 small, mid-size and large embedded generators connected to Hydro One's distribution network, including approximately 12,600 generators with capacities of up to 10 kW and 1,600 generators pending connection
Stations	Approximately 1,000 distribution and regulating stations
Circuit Length	123,000 kilometres of primary low voltage distribution lines

Breakdown of Electricity Costs to Customers



How Distribution Charges are Spent by Hydro One

- Hydro One receives a distribution charge which pays for a broad range of distribution system costs:



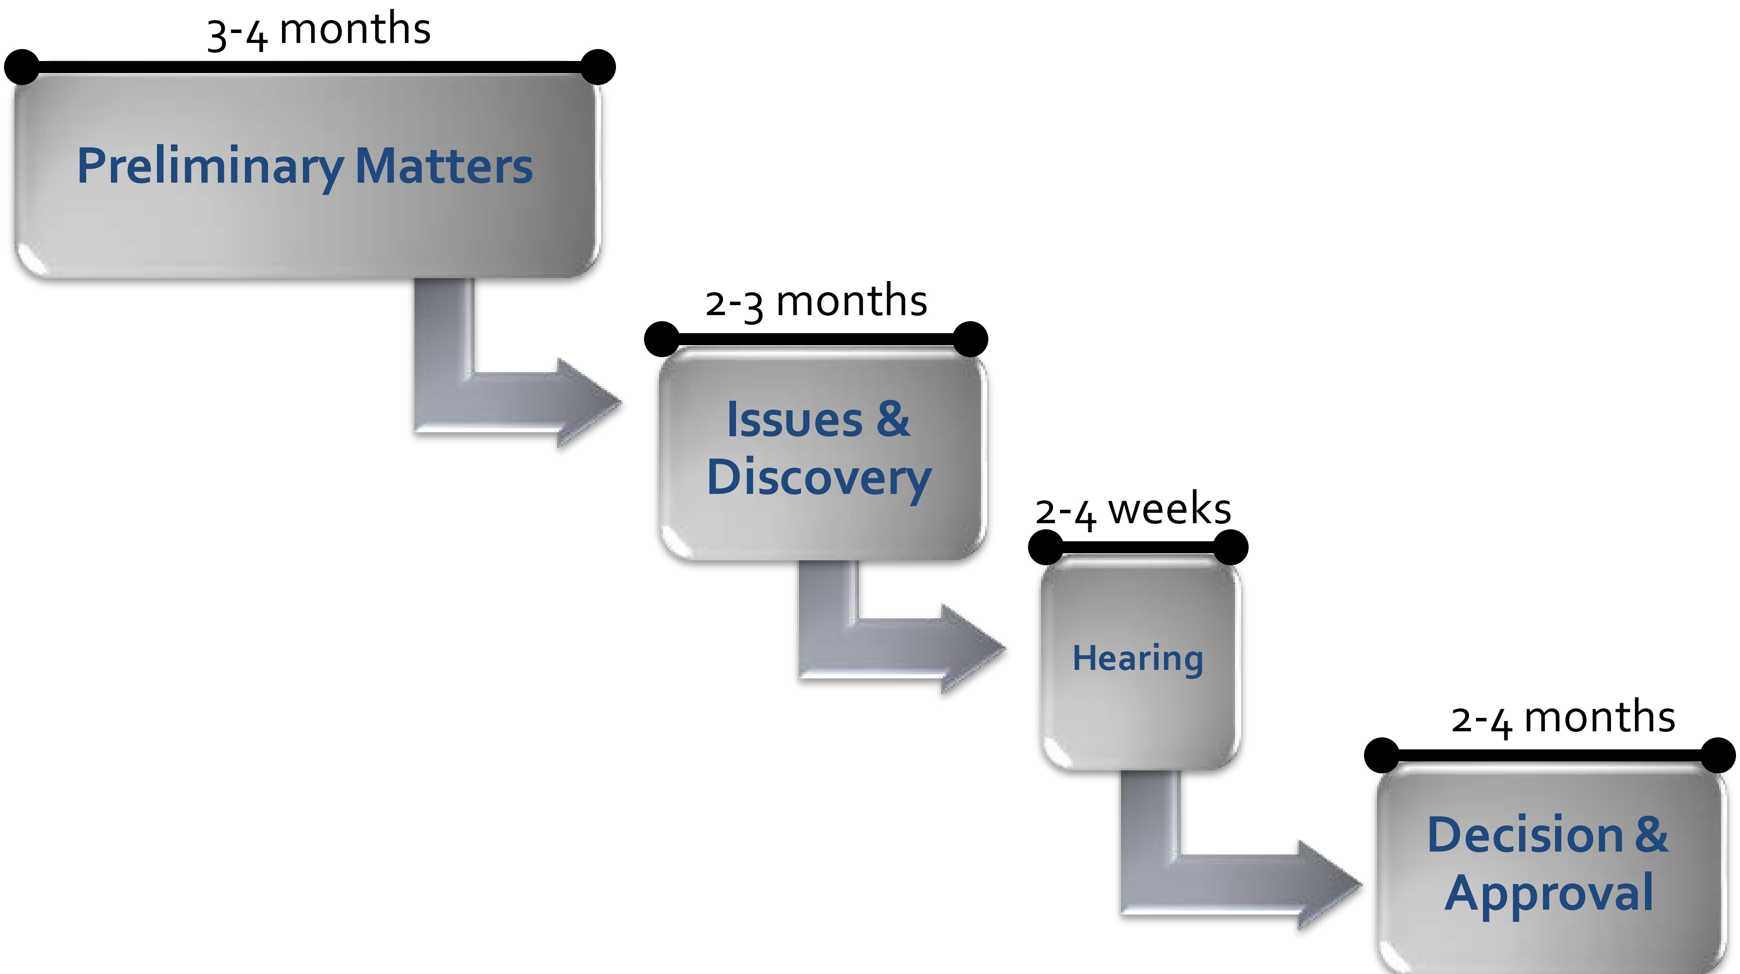
How Distribution Rates are Set

- Electricity distribution rates are set by the Ontario Energy Board (OEB), an independent public agency.
- The OEB sets rates following a public hearing based on evidence.
- Hydro One will be applying to the OEB to set our distribution rates for the period 2018-2022 in March 2017.

Objectives of the OEB

1. Protect the interests of consumers
2. Promote economic efficiency and cost effectiveness… maintain a financially viable electricity industry
3. Promote conservation & demand management
4. Facilitate the smart grid
5. Promote generation from renewable energy sources:
   - consistent with the policies of Government; and
   - expansion or reinforcement of transmission and distribution systems.

Stages of an Application



Usually takes 8 – 12 months

Balancing Key Considerations

Hydro One's Application

Our proposal is focused on addressing customer needs and preferences including:

- **Keeping Costs Low**

  Keep costs as low as possible is customers' top priority
- **Maintain Reliable Service**

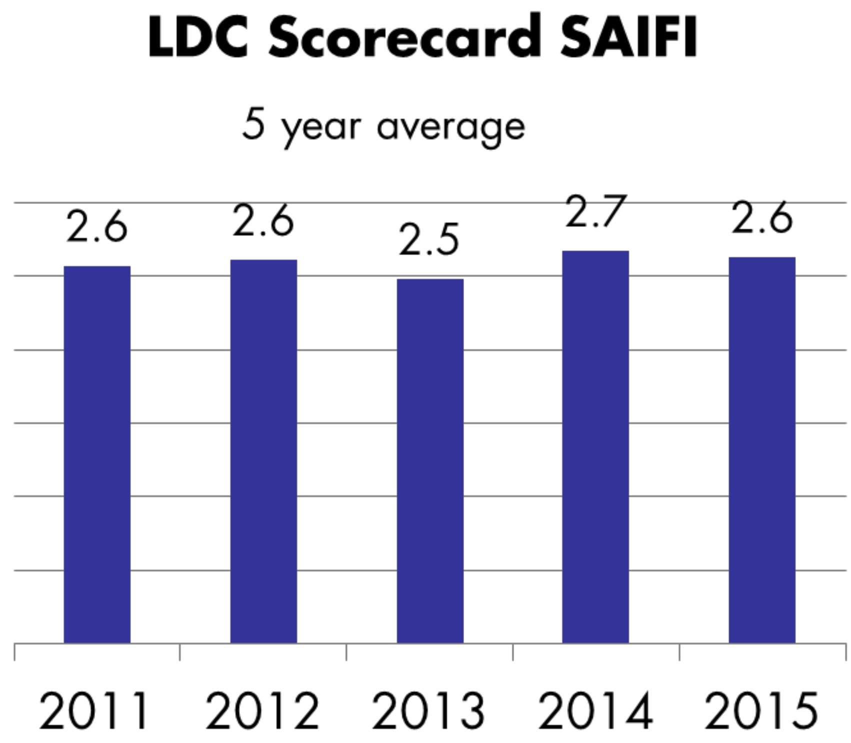
  Maintaining reliable electricity service is consistently second priority to cost
- **Large Customers**

  Large customers are more concerned with reliability and capacity
- **Manage Rate Impacts**

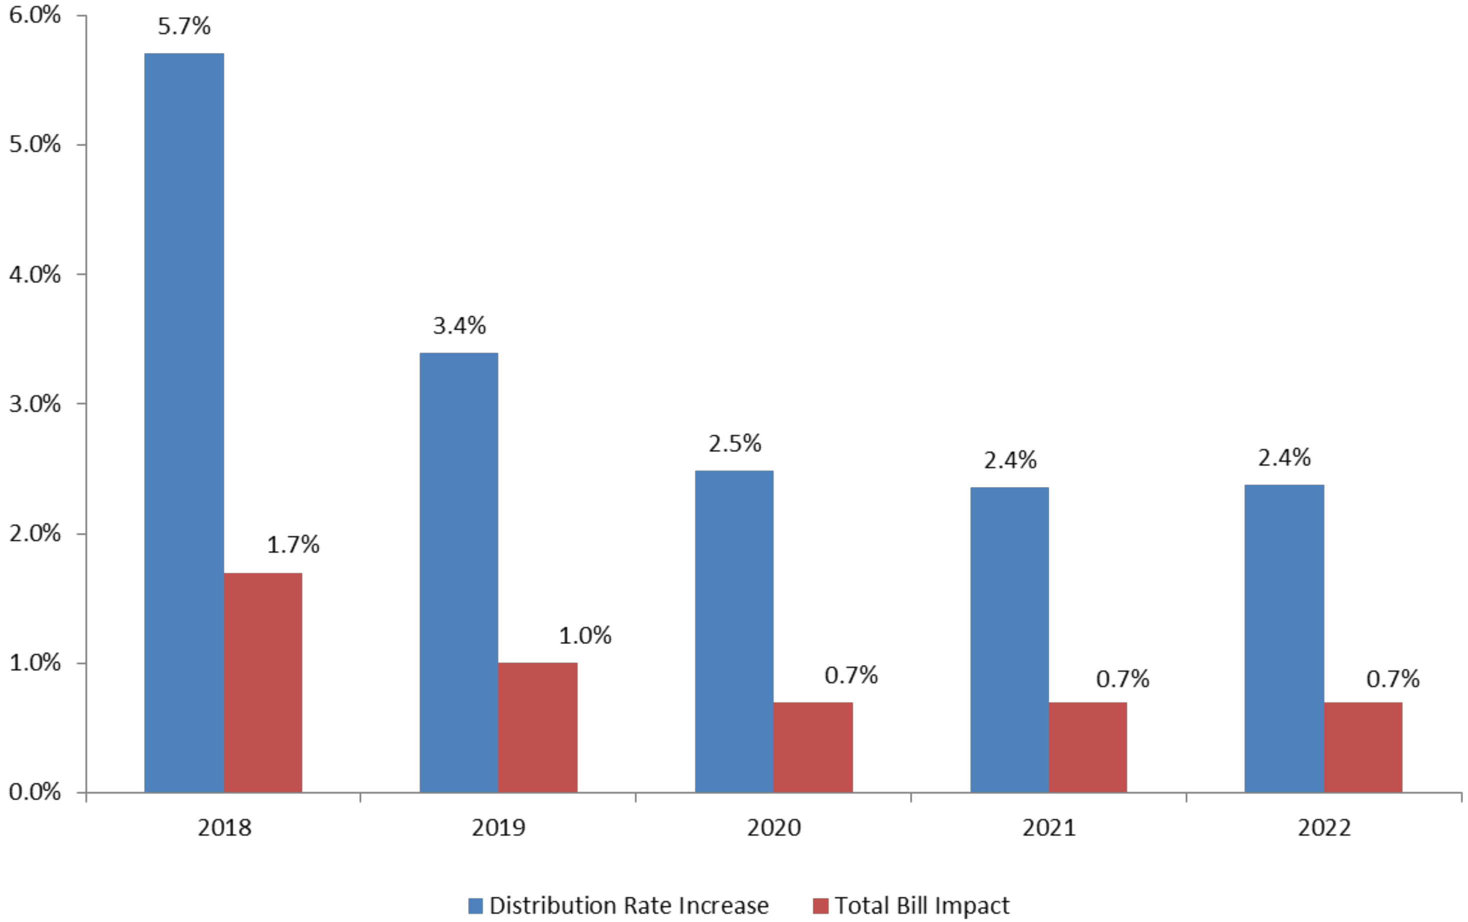
  Willingness to accept a rate increase to improve service level is limited

Service Enhancements Hydro One Will Deliver

Hydro One's overall business plan was optimized such that asset condition and reliability will not deteriorate



Proposed Distribution Rate Increases And Total Bill Impact



Main Areas of Hydro One Rate Increases

Cost Drivers	2018	2019	2020	2021	2022
Operations, Maintenance and Administration	-0.1%	0.5%	0.5%	1.2%	0.5%
Capital Related (e.g., poles, wires and transformers)	2.0%	2.9%	2.6%	3.3%	2.5%
Taxes	0.7%	0.2%	0.1%	0.4%	0.1%
Load Impact	2.0%	-0.2%	-0.7%	-2.5%	-0.6%
Other Revenue and Rate Riders	1.1%	0.0%	0.0%	-0.1%	0.0%
Total	5.7%	3.4%	2.5%	2.4%	2.4%

Additional Cost from Declining Electricity Use (Load Impact)

- The cost of distribution services is spread out among all Hydro One customers based on total electricity consumption.
- Total electricity consumption has been decreasing since rates were last set, so the cost of serving each individual customer will increase by 2% in 2018.
- This is a one-time adjustment and will not lead to increases in 2019-2022.

On-Reserve First Nations Electricity Customers

- Minister of Energy asked the OEB to examine and provide advice for an appropriate electricity rate or rate assistance program
- Hydro One has been supportive of this initiative and has provided input to the OEB
- January 1, 2017 OEB submitted its report to the Minister of Energy and now waiting for next steps to be announced.

Aboriginal Procurement: Doing Business with Hydro One

2017 Métis Nation of Ontario Engagement Session

Aboriginal Procurement Procedure

- Procedure supports the First Nations & Métis Relations policy through procurement opportunities for qualified Aboriginal businesses
- Goals:
  - Promote business and workforce development for Aboriginal Businesses
  - Diversify supplier base
  - Increase access to Procurement opportunities for Aboriginal Businesses

Aboriginal Procurement Procedure

- There are 3 approaches to provide opportunities to Aboriginal businesses:

  1. Aboriginal Participation is preferred
  2. Competition is limited to qualified Aboriginal businesses
  3. Direct Award to qualified Aboriginal businesses

Procurement at Hydro One

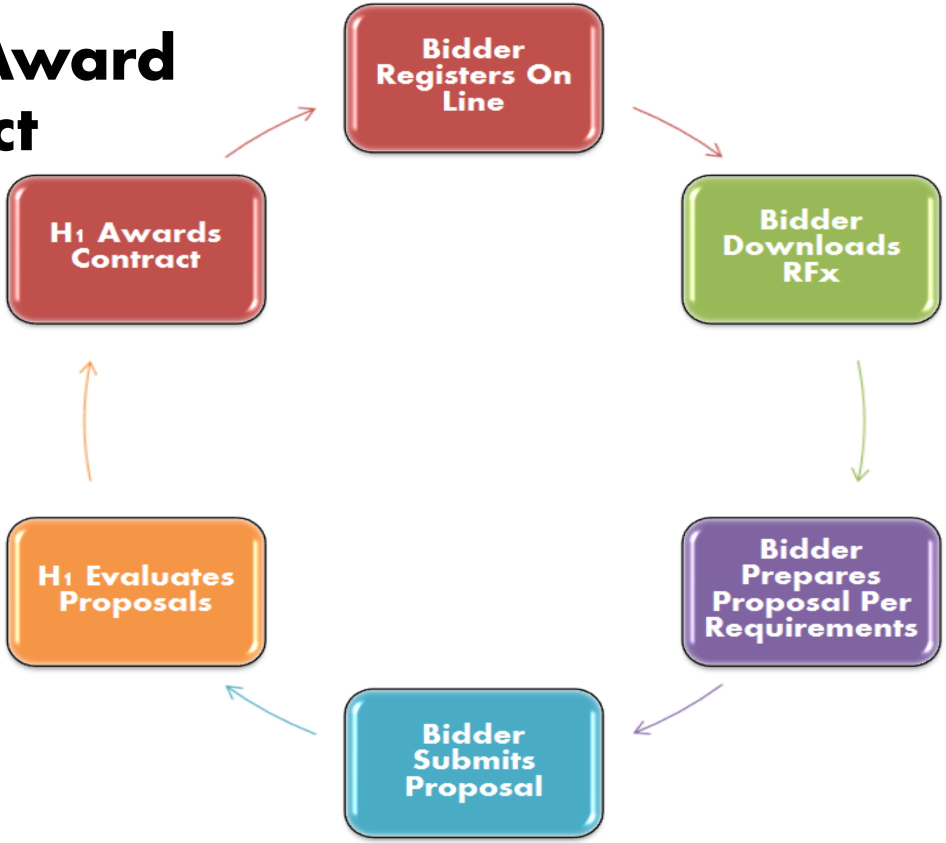
hydro one

Types of materials and services purchased

- Heavy duty equipment (floats, trucks, backhoes, cranes, etc.)
- Road construction services
- Aggregate and concrete
- Fencing
- Forestry/vegetation management services
- Pole digging and rock drilling services

Procurement at Hydro One

6 Steps to Award Contract



BID System - Key Concepts

- Bidders can retrieve all RFx types from the BID System
- Only RFQs are submitted in the BID System
- All other RFx (RFP, RFPQ, RFI) will be submitted as directed in the individual RFx

BID System - Online Registration

- To register for the BID System, go to

  http://www.HydroOne.com/doingbusiness

- Select **Bidder Registration**
- Complete all required fields (*) such as company name, email address, etc.
- During registration, the option to self-identify as an Aboriginal Business is available

BID System - Reference and Contact Information

- A complete guide on using the Bid System entitled **How to Instructions** can be found on the Doing Business with Hydro One webpage:

  http://www.HydroOne.com/doingbusiness

- For inquiries related to registration or access to the Bid System, please contact:

  BidderRegistrationHelp@HydroOne.com

- For all other general inquiries, please contact:

  NewVendorInquiries@HydroOne.com

Bidding Documents – Process & Qualifications

- RFP Process Requirements
  - RFP schedule and submission process
  - Evaluation considerations
  - Key commercial terms
- Qualifications
  - Labour Requirements as applicable
  - Insurance Requirements/WSIB
  - Health and Safety

Aboriginal Participation

- RFQs include Aboriginal business declaration
- All RFPs include Aboriginal Participation
  - Evaluation Criteria are:
    - Ownership of bidder or partners
    - Subcontractors
    - Aboriginal community/personnel involvement in the delivery of the materials/services
      - Focus on local Aboriginal persons and businesses
    - Active diversity programs and policies

Aboriginal Participation - Self-Identifying

- Hydro One considers an Aboriginal business:
  - One which is at least 51% owned and controlled by an Aboriginal business(es) or person(s) and
  - If the firm has six or more full-time staff, at least 33% of the employees are of Aboriginal descent
- Joint Ventures or Partnerships:
  - Must be at least 51% owned and controlled by an Aboriginal business(es) or person(s)
  - 33% of the value of the work must be performed by an Aboriginal business (e.g. partner, subcontractor)

Aboriginal Participation - Self-Identifying

- Addition to Hydro One's Aboriginal Business Directory must be requested. Email:

  NewVendorInquiries@HydroOne.com

- A **Consent to Disclose Contact Information** form must be completed and returned to Hydro One for verification.
- Suppliers can search for Aboriginal businesses for sub-contracting or to partner

Opportunities – Upcoming RFPs

- Construction Materials – Aggregate & Concrete
- Office Trailers – RFP scheduled for 2018
- Printing Services – June/July
- Uniform and Laundry Services
- Pest Control
- Health Assessments
- Meter Replacements
- Directional Road Boring

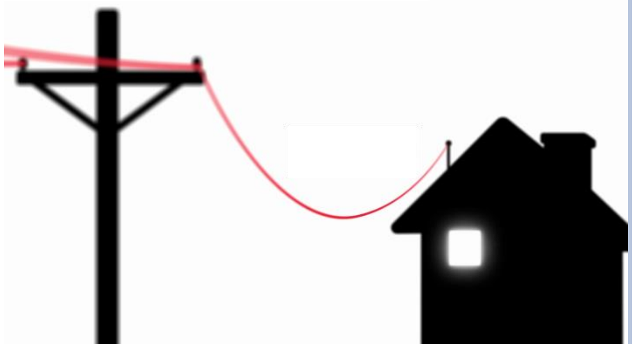
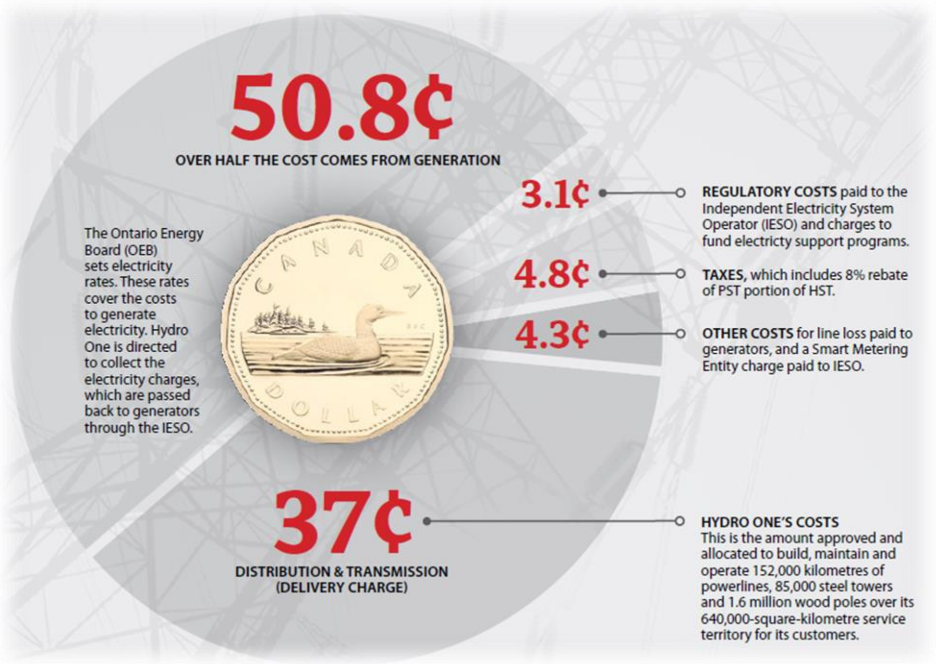
Customer Service Vision

- We are easy to do business with
- We are there when customers need us
- We are always connected



We Are Easy To Do Business With

- Education
- Advocacy
- Responsiveness



Fair Hydro Plan

- On March 2, the government announced changes that will provide significant electricity bill relief. As a result, Hydro One customers will start to see lower monthly bills as early as this summer. We advocated for these changes because we heard your concerns. That's the new Hydro One.

- The Province has introduced plans to bring relief and fairness to electricity bills by:
  - Reducing the Global Adjustment charge
  - Lowering the Delivery charge for residential customers with a low or medium density service type
  - Eliminating the Delivery charge for customers living on a reserve
  - Introducing an Affordability Fund to help those customers in need
  - Enhancing the Ontario Electricity Support Program

Fair Hydro Plan CON'T

- Customers will start to feel the relief as early as this summer.
- The average Hydro One customer will start to see their monthly bills drop by an average of 33 per cent.

Average Residential Medium Density (1,000 kWh per month)

	2017 Charges		
	Charges before Fair Hydro Plan	New charges with Fair Hydro Plan	Savings
Electricity	$111.39	$80.54	$30.85
Delivery	$78.59	$57.47	$21.12
Regulatory Charges	$7.57	$4.55	$3.02
Taxes	$25.68	$7.13	$18.55
Total Monthly Savings			$73.54 (33%)

Average Residential Low Density with electric heat (2,400 kWh per month)

	2017 Charges		
	Charges before Fair Hydro Plan	New charges with Fair Hydro Plan	Savings
Electricity	$267.34	$193.30	$74.04
Delivery	$167.92	$88.56	$79.36
Regulatory Charges	$18.28	$10.86	$7.42
Taxes	$58.96	$14.64	$44.32
Total Monthly Savings			$205.14 (40%)

Customer Relief Program

- Effective April 25th, Hydro One is providing additional relief to assist customers that accumulated significant balances on their accounts over the winter .
- These measures aim to help customers better manage their electricity usage to get back on track and avoid future disruption to their electricity service.
- The policy changes include:
  - Eliminating Residential Security Deposits
  - Reducing Deposit Requirements for Businesses
  - New Customer Relief Measures
  - Additional Low Income Funding
  - Extending our Winter Moratorium until June 1, 2017

If We Miss Our Appointment With You, We Will Credit Your Account $75

If We Don't Connect Your New Service Within 5 Business Days of All Connection Requirements Being Met, We Will Credit Your Account $75.

If We Don't Return Your Phone Call Within 1 Business Day, We Will Credit Your Account $75

Billing

- Billing Accuracy continues to surpass Ontario Energy Board requirements and is the **highest in company history** at 99%.
- Hydro One is also introducing a newly designed bill in the fourth quarter of 2017 (pictured).

Employment and Training

hydro one

Overview

- Objective
- Our Commitment
- Apprenticeships
- Co-ops and Internships
- New Grad Program
- Summer Student Outreach Program
- Scholarships
- Reminders and Contact Information

Objective

Hydro One will strive to become a workplace of choice for First Nations and Métis people in Ontario, through active recruitment, retention, and promotion

Our Commitment

Commit resources for recruiting, retaining and developing Aboriginal talent to achieve equitable representation of Aboriginal persons in the workplace including supporting cross cultural awareness/sensitivity training.

Apprenticeships

- Hydro One typically hires four trades:
  - Powerline Technician
  - Utility Arborist/Forester
  - Construction & Maintenance Electrician
  - Coach & Truck Technician
- Detailed information can be found at: www.HydroOne.com/Careers and www.TradeUp.ca
- Hiring for each apprenticeship normally occurs in the fall

Powerline Technician (Lines)

Working Conditions

- Outdoors
- All weather conditions
- Physically Demanding
- Confined spaces
- Different locations throughout Ontario
- 5 days @ 8 hours or 4 days @ 10 hours

Apprenticeship Process:

- Hydro One has an apprenticeship program which is jointly offered through Hydro One and the PWU.
- Applications are accepted through the www.PWU.ca website and Aboriginal.Recruitment@HydroOne.com
- Include resume and cover letter
- Interview

Co-ops and Internships

- College or University Students
  - Must be enrolled in an eligible co-op or internship program
- Co-op: 4 to 8 month work terms
- Internship: 8 to 12 month work terms
- Positions posted every 4 months (winter, summer, fall)
- Positions offered across Ontario
- Students selected via interview
- Lunch and Learns/ Tours

New Grad Training Program

- Two year training program for university graduates from engineering and business programs
- Rotations to different departments and business units in the company across Ontario
- Continuous learning and opportunities to upgrade your skills over two years
- Positions are posted each September
- Lunch and Learns/Tours/Training

Summer Student Outreach Program

- Requirements:
  - Must be of First Nation, Métis or Inuit ancestry
  - Attending a post-secondary institution and scheduled to return
- General Clerical or Labourer positions offered across Ontario
- Positions posted in February
- 4-month summer term (May-August), two term maximum

Scholarships

- Leonard S. (Tony) Mandamin scholarship annual award
  - Awarded to students enrolled in electricity industry related programs at a recognized Ontario college or university
- Includes both a financial award and developmental work term

- **Deadline: October 1st**

- Guidelines and application available at: www.HydroOne.com/OurCommitment/AwardsScholarships

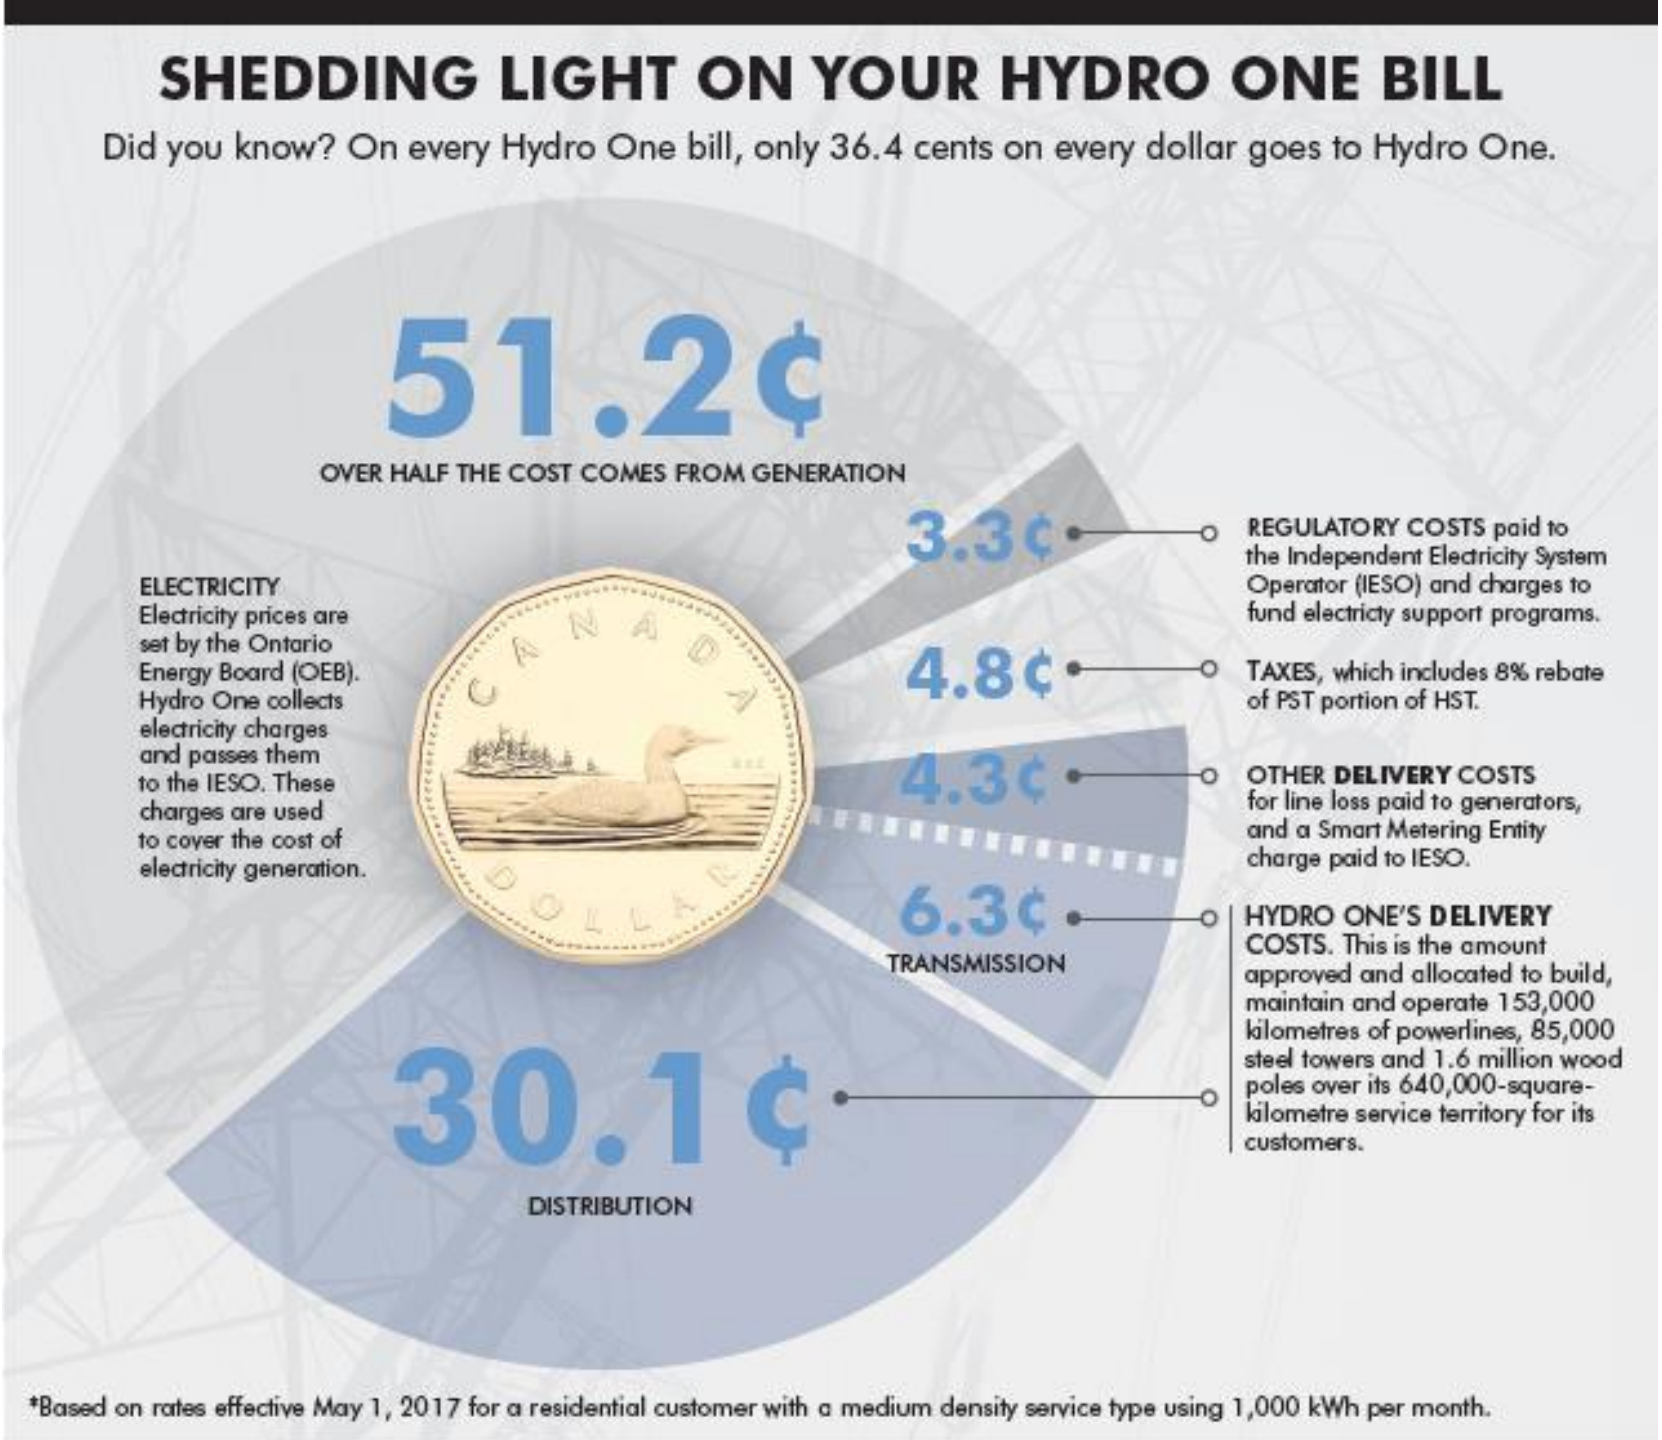
2018-2022 Distribution Rates Application

- Filed with the OEB March 31, 2017
- 5-year Incentive Rate-setting Application
- Includes a proposal for sharing earnings with customers
- Public hearing process about to start



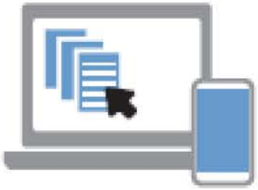
SHEDDING LIGHT ON YOUR HYDRO ONE BILL
Did you know? On every Hydro One bill, only 36.4 cents on every dollar goes to Hydro One.
51.2¢
OVER HALF THE COST COMES FROM GENERATION
ELECTRICITY
Electricity prices are set by the Ontario Energy Board (OEB). Hydro One collects electricity charges and passes them to the IESO. These charges are used to cover the cost of electricity generation.
3.3¢
REGULATORY COSTS paid to the Independent Electricity System Operator (IESO) and charges to fund electricty support programs.
4.8¢
TAXES, which includes 8% rebate of PST portion of HST.
4.3¢
OTHER DELIVERY COSTS for line loss paid to generators, and a Smart Metering Entity charge paid to IESO.
6.3¢
TRANSMISSION
HYDRO ONE'S DELIVERY COSTS. This is the amount approved and allocated to build, maintain and operate 153,000 kilometres of powerlines, 85,000 steel towers and 1.6 million wood poles over its 640,000-square-kilometre service territory for its customers.
30.1¢
DISTRIBUTION
*Based on rates effective May 1, 2017 for a residential customer with a medium density service type using 1,000 kWh per month.

Where your Distribution Charges go…

15%
OUTAGE RESTORATION

70%
KEEPING THE SYSTEM RELIABLE

Replacing worn out equipment and trimming trees to keep power lines clear, maintaining a modern, reliable system.



15%
CUSTOMER SERVICE

Providing customer service by phone or online, providing tools so you can manage your energy use, ensuring accurate and timely statements.

What our customers told us

Our Application focuses on customer needs and preferences:

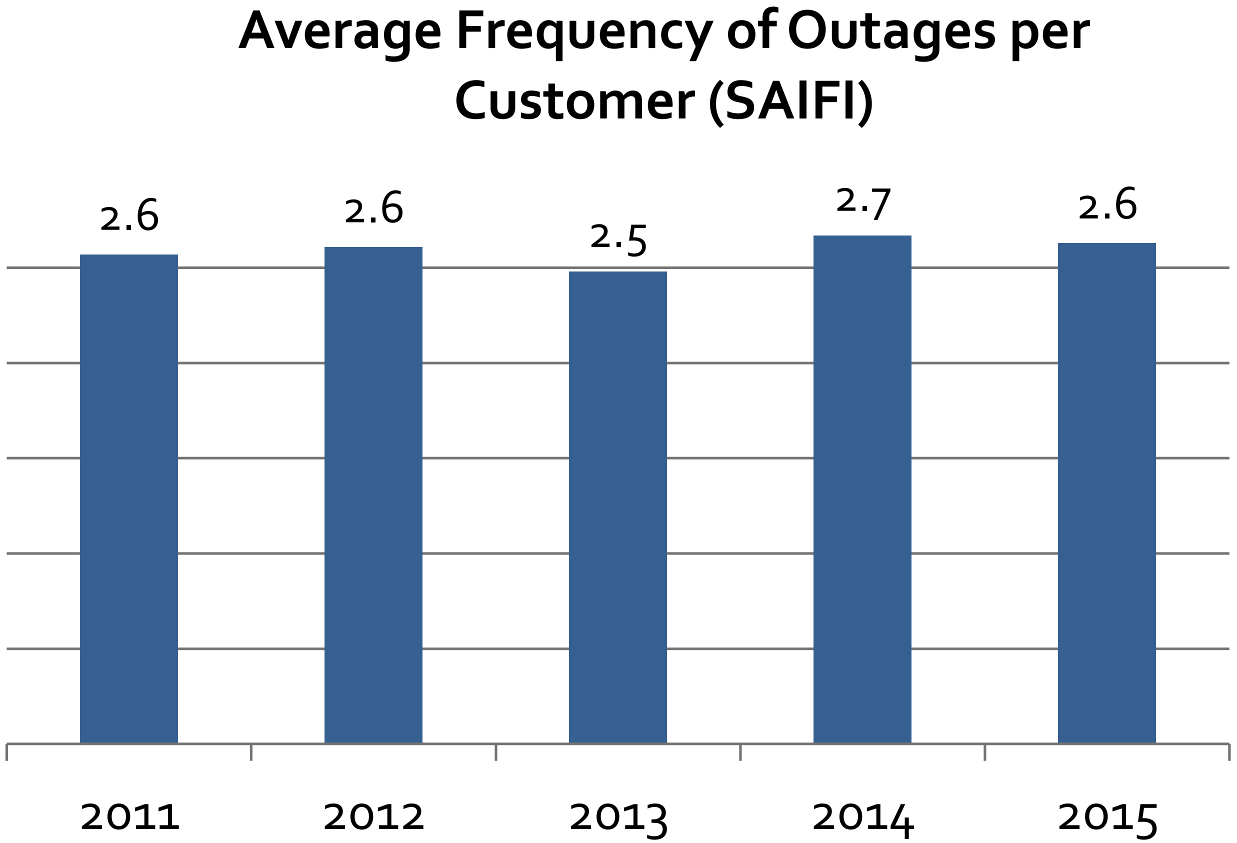
- **Keeping Costs Low**
  - *Keep costs as low as possible is customers' top priority.*
- **Maintain Reliable Service**
  - *Maintaining reliable electricity service is consistently second priority to cost.*
- **Large Customers**
  - *Large customers are more concerned with reliability and capacity.*
- **Manage Rate Impacts**
  - *Willingness to accept a rate increase to improve service level is limited.*

Hydro One's Rate ApplicationG

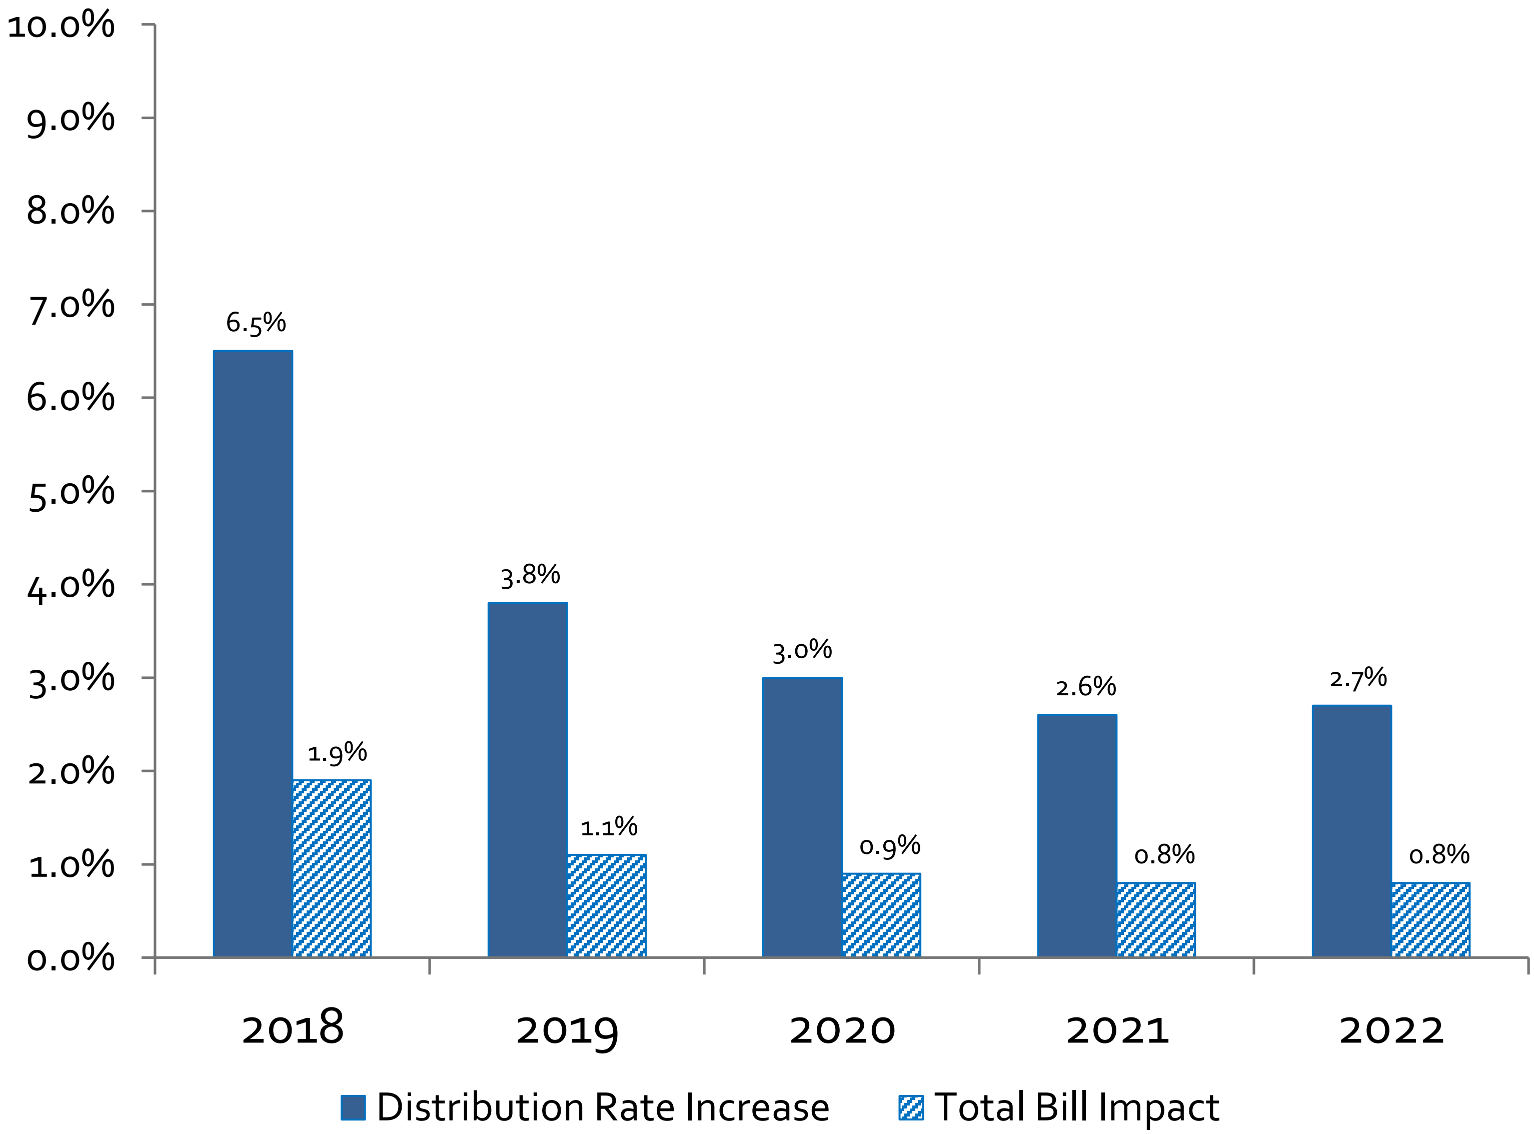
- Hydro One's rate application balances three considerations.

Hydro One's Rate Application – Asset Focus

- Hydro One's investment plan aims to maintain historic system reliability



Hydro One's Rate Application – Rate Impacts



Main Areas of Hydro One' Distribution Rate IncreaseG

Cost Drivers	2018	2019	2020	2021	2022
Operations, Maintenance and Administration	-0.1%	0.5%	0.5%	0.5%	0.5%
Capital Related *(e.g., poles, wires, and transformers)*	2.0%	2.9%	2.6%	3.4%	2.5%
Taxes	0.7%	0.2%	0.1%	0.4%	0.1%
Load Impact	3.0%	0.2%	-0.2%	-2.3%	-0.3%
Other Revenue and Rate Riders	0.8%	0.0%	0.0%	0.6%	0.0%
Total	**6.5%**	**3.8%**	**3.0%**	**2.6%**	**2.7%**

About Load Impact…

- Cost of distribution services is spread out among all Hydro One customers.
- Total electricity consumption has declined since rates were last set.
- This contributes 3% to the average distribution rate increase in 2018.

Next Steps

- OEB to issue a Notice of Application and Procedural Order outlining the provisions in the proceeding.
- The OEB plans to hold some community engagement meetings about our Application.
- Individual customers or groups that represent Hydro One's customers can become an active participant (*Intervenor*) or an observer in the proceeding by applying to the OEB.
- Hydro One to submit an update to its Distribution Rate Application in June 2017 to reflect its audited 2016 actual costs.

WELCOME

[redacted], **Session Chair**, called the meeting to order and introduced Métis Nation of Ontario Senator Larry Duval, Moon River Métis Council. Senator Duval provided the opening prayer.

INTRODUCTIONS

The following individuals introduced themselves, and in some cases expressed an area of interest or concern:

Regional Councilor [redacted] Region #2:

President [redacted] MNO Northern Lights Métis Council: mentioned that he was looking for more information on Hydro One.

President [redacted] MNO Greenstone Métis Council: mentioned that he was looking for more information on Hydro One.

President [redacted] MNO Thunder Bay Métis Council: personal introduction

Oded Hubert, Vice President, Regulatory Affairs, Hydro One: personal introduction

Sara Jane Souliere, First Nations and Métis Relations, Hydro One: personal introduction

President [redacted] MNO Ottawa Métis Council: stated that she was in attendance to listen and learn more about Hydro One.

Ms. [redacted] MNO North Channel Métis Council: personal introduction

President [redacted] MNO North Channel Métis Council: stated that she wanted to bring information on Hydro One back to the citizens of her Council.

Rhode Thomas, First Nation and Métis Relations, Hydro One

President [redacted] MNO Clear Waters Métis Council: mentioned that he looked forward to learning more about Hydro One and sharing that information with the MNO citizens.

President [redacted] MNO Peterborough and District Wapiti Métis Council: added at that he wanted more information on the work of Hydro One. He also wanted to identify ways that Hydro One could further include the Métis in the work that they were doing.

Chair [redacted] MNO Peterborough and District Wapiti Métis Council: added that she was here to listen and learn more about the work of Hydro One.

President [redacted] MNO Niagara Region Métis Council: stated that he wanted to learn more about the changes that were coming at Hydro One.

President [redacted], MNO Grand River Métis Council: stated that she wanted to learn more about Hydro One, any upcoming changes and to be able to share that with the citizens.

President [redacted] MNO Oshawa and Durham Region Métis Council: added that there were concerns about the costs of delivery to northern communities. She was at the session to learn more and bring that information back to the community.

Senator [redacted] MNO High Land Waters Métis Council: personal Introduction.

Tausha Esquega, First Nations and Métis Relations Team, Hydro One: personal introduction.

Ferio Pugliese, Executive Vice President, Customer and Corporate Affairs, Hydro One: stated that it was a pleasure to welcome all to the session. His department, he explained, had the responsibility of First Nations and Métis Affairs and he looked forward to renewing those relationships.

Senator [redacted] MNO Moon River Métis Council: mentioned that he looked forward to learning more about Hydro One.

Regional Councilor [redacted] Region #7: mentioned that they were looking to advocate for lower hydro rates for their citizens as well and lessening the environmental impacts of tree cutting by Hydro One in their region. She also added that they are interested in obtaining information on procurement opportunities with Hydro One and that there is also a need to clarify the costs around Hydro delivery charges for cottages.

[redacted] **MNO Veterans Council and Captain of the Hunt, Region #7:** personal introduction.

Regional Councilor [redacted] Region #5: stated that he wanted to learn more about Hydro One and take this information back to his communities.

Denis Tremblay, MNO North Bay Métis Council: personal introduction.

Chair [redacted], MNO Matawa Métis Council: personal introduction.

President [redacted], MNO Sudbury Métis Council: personal introduction.

Rob Berardi, A/VP, Shared Services, Hydro One: personal introduction.

Kyla Thistle, Contract Officer, Supply Chain, Hydro One: personal introduction.

Bruno Jesus, Director, Strategy and Integrated Planning, Hydro One: personal introduction.

[redacted] **Treasurer, MNO Sunset Country Métis Council:** personal introduction.

President [redacted] MNO Kenora Métis Council: mentioned they had a municipal hydro supplier in Kenora but many of his citizens were Hydro One customers.

President [redacted], MNO Superior North Shore Métis Council: mentioned that he had concerns around hydro costs as well electromagnetic fields. He also had some questions about the sale of Hydro One shares to First Nations and if this same opportunity was going to be provided to the Métis in the province.

President [redacted] MNO Credit River Métis Council: she introduced herself and mentioned that she hoped to learn more about new developments at Hydro One.

Regional Councilor [redacted] Region #4: stated that he was here to listen and provide input on Hydro One issues as they affect the citizens of Region 4.

Regional Councilor [redacted] Region ##3: personal introduction.

Daniel Charbonneau, First Nations and Métis Relations, Hydro One: personal introduction.

[redacted] Director, Intergovernmental Affairs, Métis Nation of Ontario: stated that the MNO has had a relationship with Hydro one for a number of years but not at this level. She stated that they could work together to make a difference and mentioned a forum that had been held to talk about procurement. Mr. Scott Patles Richardson was also working directly with Hydro One to address procurement initiatives.

Imran Merali, Interim Director, First Nation and Métis Relations, Hydro One: personal introduction.

Devi Shantilal, First Nations and Métis Relations, Hydro One: personal introduction.

MNO Vice-Chair [redacted] Provincial Council of the Métis Nation of Ontario: added that it would have been helpful to have the members of all their Consultation Committees here to learn and contribute to the conversations and maybe this could be considered for the future. There were also different Councils that could contribute such as the MNO Youth Council, the MNO Veterans Council and the Women's Secretariat of the Métis Nation of Ontario.

INTRODUCTORY REMARKS

Mr. Pugliese welcomed all the participants to the session on behalf of Mr. Mayo Schmidt, President and CEO of Hydro One, and also his colleagues present at the session. He thanked Senator [redacted] for his prayer and acknowledged the traditional territory of the Mississaugas of the New Credit First Naiton. He mentioned that this was an opportunity for dialogue and that they were here to listen and take that information back to Hydro One. He explained that this was not the last gathering but rather they would like to do this on an annual basis. They also hoped that they would have the opportunity to meet with the councils as well. He introduced himself with some background information.

Mr. Pugliese continued by providing some background information on Hydro One including an overview of how Hydro One interacts with First Nations and Métis communities across Ontario. He said that there were many misconceptions of the work of Hydro One and there was a need to communicate more with Ontarians around this. They were not responsible for power generation or for rate setting; however they were responsible for power distribution. He said that they have been undertaking this education piece.

In terms of privatisation, he explained that one year ago the government decided to sell the assets of Hydro One and now Ontario holds about 49.9% of the shares; Hydro One had transitioned to a private company.

As the company changed direction from a Crown corporation to a public company, there was an opportunity. In this shift there were two (2) things they had embarked on:

- The first was education, to help explain Ontario's complicated electrical system including the regulators, etc. Hydro One has started to uncover what can be addressed and asked for the opportunity to first understand and then work on the things that they can change.
- The second task was related to advocacy. Hydro One owned the hydro bills and maintained relationships with communities and customers. Hydro One had an impactful voice in advocating of behalf of its customers.

Mr. Pugliese reiterated that the session was not designed to be a consultation rather it was the first step in a series of discussions that would lead to change. He also recognized that change is indeed required, particularly in the area of affordability.

Hydro One staff here at this session would be providing presentations that focused on customers and communities. Hydro One wanted to hear how people thought Hydro One could make Hydro One a better company, as this would give them an opportunity to grow Hydro One. He said that Hydro One was hoping to be a good model for privatisation in this country. Hydro One hoped that they could build their strength on how they interact with Indigenous people everywhere.

In terms of First Nations and Métis relations, Hydro One viewed them as more than partners, he explained, as they were integral to their business relationships. He stated Hydro One would like to see the corporation at the forefront on these types of relationships; he understood that they did this well in some cases but there was room for improvement. Partnerships meant procurement opportunities, employment opportunities and capacity building.

Hydro One has assembled a new executive team and launched a number of cost saving initiatives. Hydro One was also looking at growing the business in the area of advocacy and education as well. In terms of education initiatives, Hydro One wanted to inform the public about the mandate of the Hydro One in terms of power delivery versus generation and the issues around the rates. He stated that 37 cents on each dollar could be attributed to Hydro One's transmission and distribution system while more than 50 cents on the dollar came from power generation. The 37 cents is an average, and it is for each dollar collected on the bill. In terms of advocacy, they were looking at opportunities for advocacy on behalf of all communities to the regulators and mentioned the example of addressing the distribution rates. He explained that the rates are impacted by population density and infrastructure costs in rural areas. He also explained that they would be looking at rate reduction coming into effect in September this year. Hydro One played an advocacy role on the First Nation shares and provided information to the Ontario Energy Board on this matter.

They have made a number of changes over the past two years, Mr. Pugliese explained, including changing the winter moratorium to June 1. Hydro One has also reconnected a number of customers while waiving the reconnection fee. For those in arrears, they have been working on building a new collections program and currently 60% of those who have been disconnected or were in arrears are in new affordable payment plans. Hydro One has been working with community members to identify any issues with their bills and establishing payment plans and Hydro One was working with administrators on supporting community capacity building. Hydro One was shifting their view as a company and reaching out to customers to address their concerns, solve problems and be more accessible. Hydro One was looking at new approaches and this session was an example of that. Hydro One is looking for feedback on updating Hydro One policies going forward.

Senator [redacted] asked if the hydro rates would be lowered for rural areas. Mr. Pugliese stated that they were always looking for the best ways to use their assets and their customers would see significant reduction starting in July or September this year upon implementation of the Fair Hydro Plan

Regional Councilor [redacted] stated that they would like to see more procurement and employment opportunities for their citizens. One of the issues with employment related to housing in her region; individuals could not move to an area to work for Hydro One if there was no housing available in those communities. Mr. Pugliese noted that this was a complex issue and they needed to think this through with their procurement unit. He acknowledged that they could not solve all the issues but they needed to look at what opportunities could be identified.

President [redacted] asked if this new hydro distribution reduction plan meant that there was one flat rate for the province. Mr. Pugliese stated that essentially this was true - 2/3rds of the province was rural and paying higher rates but now this will be equalize, but those paying lower rates will not be seeing higher rates. He stated that the rural rate will be lowered to match the urban rate and they will do this using the existing tax base; this was a policy decision.

Regional Council [redacted] asked for a definition of "rural" and "urban". Mr. Pugliese stated that an upcoming presentation will provide this information in detail.

[redacted] referred to Mr. Pugliese's update on the future expansion of Hydro One and asked if this meant delivery to the United States. She also asked how they would look at servicing areas in Northern Ontario that did not yet have service. Mr. Pugliese stated that in terms of expansion, there was wide spread potential across Canada, North America and across the world but they understood that there was still work to be done here in Ontario. He explained that they had bid on the work for the East-West Tie but were not successful; they were looking for opportunities to partner in order to expand. They were also looking for these kinds of partnerships with First Nation and Métis communities. He stated that Hydro One saw the need to build up more in Ontario and they were committed to doing that.

President [redacted] asked if they would be talking about Hydro One employment. She stated that they had citizens that have graduated and were having trouble entering Hydro One's employment programs, such as the apprenticeship programs. She asked if there was an employment coordinator that could assist them with the process. Mr. Pugliese said that they would discuss this in more detail later on in the day but he realized that they still had a lot to do in this area. They have to work with Unions to increase the number of apprenticeships. They are working with their Human Resources group to make those changes. He said that they have not done particularly well in this area but they needed to track and report on any progress in this area. President [redacted] stated that it was disappointing to hear that this process was just starting. Mr. Pugliese stated that there were parts of Hydro One where this had been done well and there were a lot of students and apprentices but there were areas that still needed to be addressed.

[redacted] stated that he was concerned that the reductions in bills now may mean a big increase in the future to make up for it. Mr. Pugliese stated that they were not here to defend this policy change, but that he would say that the increases in green energy generation have caused changes, which have meant there had to be cost adjustments as this system was a cost recovery system. He said that they had spread the costs related to the rate reductions over the life of the assets and depending on how those contract renewals were negotiated, he did not believe that there would be an escalation. He explained that if the contract remained unchanged, the consumer would likely see those escalators. It was important, he added, that they asked those questions and understand the facts.

President [redacted] asked about recouping those losses of funds with those reductions, as Hydro One was a business now. She also asked if the northern consumers have been overcharged all this time and if there would be a retroactive rebate for that. Mr. Pugliese stated that Hydro One did not set the rates; those rates were established by the Ontario Energy Board. He explained Hydro One prepared a submission to the OEB to outline what their costs would be to provide the distribution of the energy; this was what they needed in order to do their work. The OEB could approve this work plan and then Hydro One started spending to get the work done. The rate reduction was a result of the government decision and this was being funded by the government, not Hydro One. The costs to cover this reduction would come out of the Ontario tax base. In terms of an overcharge to northern consumers, Mr. Pugliese stated that they did not look at the rates this way, it was a policy maker's decision and it was not seen as an overcharge; it was a cost recovery system.

Regional Councilor [redacted] stated that, in terms of the East-West Tie, there were eleven Métis communities impacted by that work. He suggested that the Hydro One bid to undertake this work should have included the Métis and that Hydro One should have a Métis Relations person on staff that was familiar with their governance structure and processes. Mr. Pugliese thanked him for his comments and stated that their submission for the East-West Tie was submitted in 2014 and he realized that they should have included others; they intended to change that approach as they went forward.

President [redacted] asked about the possibility of using more non-wood poles for the lines, as this would save more trees. Mr. Pugliese stated that Mr. Jesus would speak to this later today but he understood that non-wood poles were significantly more expensive than wood.

[redacted] stated that Mr. Pugliese had mentioned that they needed to inform themselves with the facts regarding energy in Ontario and she asked where they could go for this information. Mr. Pugliese responded that they could call Hydro One at any time or consult their website where there was a lot of information on energy policies in Ontario. He added that they had a lot of experts that could come to the community and spend some time providing the information they required. Hydro One, he explained, was a neutral party and could provide impartial information, advocate as required, but they needed partners in that advocacy role.

Senator [redacted] stated that they received a 10% discount from province for their hydro bill and he asked if this would be removed because of the upcoming rate reductions. Mr. Pugliese said that this sounded like the R1 adjustment and the HST and he said that this would be unaffected by the upcoming rate reductions.

Mr. Pugliese ended this part of the presentation with a video outlining the changes in Hydro One and their purpose of "turning on the power of possibility". It was noted that Hydro One welcomed feedback on the video.

CUSTOMER SERVICE

Mr. Imran Merali, Hydro One, provided an overview of his PowerPoint presentation entitled "Customer Service". He asked for views on Hydro One customer service.

The following comments were provided by the participants:

- [redacted] mentioned that when she has had to call Hydro One, she was transferred a number of times to different people. She suggested that they need to have a better idea who to direct which calls to.
- **Regional Councilor** [redacted] agreed stating that he has called about his hydro bill and the person answering the phone was unable to answer his questions. He stated he had a question about usage when he was not in residence.
- **Regional Councilor** [redacted] mentioned that she had began her inquiry in French and mentioned that the French provided was not Canadian French but rather Parisian French. She also mentioned that she had shut off everything at her cottage and then was told she should have shut off her breaker and since she was six hours from her cottage, she had to get someone to go there to shut it off. She never received a follow up call from Hydro One to say it was shut off.
- **President** [redacted] had issues with how much power was used in a residence that had everything shut off. When she called about this, she was told to wrap her hot water heater but the hydro costs continued to rise. She was not sure why her hydro bill would be higher than her neighbours and could not get a satisfactory answer on that from Hydro One.
- [redacted] asked how often Hydro One conducted house calls. Mr. Merali noted that these were frequent and Mr. Jesus could provide more detailed information. Ms. Clarke suggested sending an email with a photo of the technician, as she had seen this done with some other companies and it was a useful tool.

Mr. Merali thanked them for their comments and stated that, at Hydro One, all staff were responsible for customer service. Hydro One was anxious to hear the feedback of their customers and looked forward to improving their practices. He provided an overview of the Flip the Switch campaign, which was designed to solicit the views of their customers and make the policy changes to address their issues. One of the actions they have taken was inviting all their Executives to take calls in their call centre so they could learn more about customer concerns and then to go back to their sections and make the necessary changes. He provided a video to show this.

He provided an overview of the some of the transformational changes they were already making and provided an overview of the vision of Hydro One. Some changes included opening their call centre on Saturdays and increasing the support electronically as not all issues needed a verbal exchange. They want to be easy to do business with and increase their work on education, advocacy and responsiveness. He spoke to the importance of education and ensuring that their customers knew what Hydro One was responsible for and what was not their responsibility. Mr. Merali provided an overview of the Fair Hydro plan, which meant significant rate reductions through the reducing of the global adjustment charge and lowering the delivery charge for rural customers including eliminating the delivery charge for on-reserve customers. He stated that they would see a reduction of their hydro bills this summer with the average bill being reduced by 33%.

Regional Councilor [redacted] noted that they had not had a discussion on eliminating the delivery charge for those customers on-reserve. Mr. Merali explained that the First Nations leadership, through the Chiefs of Ontario, advocated for the elimination of this charge and Hydro One had supported that. He said that nothing similar existed for the Métis in Ontario. The Regional Councilor stated that they had not even had an opportunity to have that discussion. Mr. Merali explained that this discussion was not initiated by Hydro One and if the Métis wanted to lobby Ontario for something similar, Hydro One would support that as well. When asked why it did not automatically apply to the Métis, Mr. Merali explained that it currently only applies to residential properties on-reserve. Regional Councilor [redacted] stated that they would need to follow up with the province on this issue.

Mr. Merali continued with his presentation providing an example of a customer bill explaining that there would be significant saving on bills such as this one, which was rural density and high consumption.

President [redacted] asked if these reductions were for individuals only or also for businesses. Mr. Merali clarified that this applied to individuals and small businesses but the delivery charge reduction was only for residential customers. The most significant was for rural residential customers who would see a reduction of approximately 40% on their hydro bill.

Regional Councilor [redacted] asked about how they defined “rural” versus “urban” and what the formulas were in figuring out rates. Mr. Merali explained that this was defined by the OEB and more information could be found on their website. Essentially it involves how many people lived in a geographic area and the number of customers per km of line.

President Trent [redacted] asked about distance from power generation facilities mentioning that he lived approximately 400 yards from a 4500Mw hydro plant and he was paying very high delivery rates. Mr. Merali stated that when the OEB set the rates, it was the same no matter where they lived within a certain geographic area and, until now, rural residents paid more no matter where they lived. Mr. Oded Hubert, VP, Regulatory Affairs, stated that North America has a very large power grid and the hydro any individual might receive, might not come from close to them; they needed to depend on the entire structure for reliability.

Regional Councilor[redacted] asked how he would describe the density zone and how defining those areas were arrived at. Mr. Hubert stated that this was defined in a manual way previously by Hydro One staff (counting houses, kilometres of line, etc.) but now Hydro One was using a geographic information system to assess density and male these determinations. "

Mr. Merali continued on with his presentation providing an overview of the revised customer relief program. He explained that effective April 25, 2017, Hydro One was providing additional relief to assist customers that had accumulated significant balances on their accounts during the winter. He provided an explanation of a number of policy changes in this area. Hydro One was also making a number of customer commitments including the introduction of service guarantees. One of these was an automatic $75 credit for missing appointments they had booked in residences and also if they did not hook up their hydro by the time five days had passed. Hydro One was also introduced a new hydro bill and maintaining their record of very high bill accuracy.

Senator [redacted] asked about the estimate that is sometimes part of his bill, which caused some issues when the bill estimate was very low and then very high. Mr. Merali stated that they wanted to read the meters on a monthly basis to avoid these estimates and they could also set up budget billing, which meant they could set the bill based on a monthly estimate and this would be reconciled at the year's end. There were a number of new tools and technology for their customers to use to report their meter reading.

Mr. Merali provided an overview of all the ways they communicate with their customers including increased use of e-billing, high usage alerts, new website with customer portal and the redesigned bills.

[redacted] asked if Hydro One had looked at an incentive for customers to sign up for e-billing such as an eliminated administrative fee. Mr. Merali stated that they did not charge for paper billing so there was no change for e-billing but they were looking at a campaign to increase the use of e-billing. Ms. Clarke noted that incentives could give people a little more money in their pocket that could applied during the winter months.

President [redacted] asked about the effectiveness and quality of the smart meters that were installed, as some in the Sudbury area felt their hydro costs went up at this time. Mr. Merali said that the consumption was unchanged with the arrival of the new smart meters; he suggested that this may have coincided with government change of pricing for hydro during this same time.

[redacted] suggested that Hydro One had cut down a number of trees in the North Bay area to avoid interruptions due to weather but they had not cut down the right trees. Mr. Merali stated that he would be happy to follow up on this off line and check into this. In addition, Mr. Jesus would be adding additional information on hydro reliability later in the day.

[redacted] asked if Hydro One played any role in addressing the issue with door to door energy contract sales persons. He also asked if those locked into those contracts would see any rate reductions. Mr. Merali stated that Hydro One has no role to play with those outside companies but the Hydro One website has information on how to compare costs. He did not know if there were rate reductions on retail contracts but he agreed to follow upon on that.

HYDRO ONE DISTRIBUTION RATE FILING (2018-22)

Mr. Oded Hubert, Vice-President, Regulatory Affairs, Hydro One Mr. Hubert described how Hydro One is seeking approval from the OEB with a distribution rate application that will provide the revenue required to operate the system for the next five years (2018-2022). This is the standard application that Hydro One now has to complete every five years. Hydro One has filed with the OEB a significant amount of information to make their determination, including the proposed rate increase and total bill impact. The Premier asked Hydro One, among others, for advice on providing relief to rural customers, given that the delivery charge is often higher than the usage charge. Mr. Hubert provided an overview of Ontario's Electricity system including how the electricity flowed from the generators to the customers in Ontario. President Yvonne Jensen asked why a transformer would ever blow up.

Mr. Hubert stated that this could be caused by an electrical fault, lightning, a manufacturing flaw or a malfunction within the system. Mr. Jesus explained that some assets were getting older and there could be some insulation defects internally. Transformers had a 40-50 year life span with poles lasting a little longer. Mr. Hubert added that asset monitoring took place over the life of the asset. When asked if this was dangerous and about PCBs, Mr. Hubert explained that there might be a small oil spill and there were fewer transformers with PCBs because they are being replaced. In accordance with federal legislation, these would be all removed by 2025.

[redacted] asked if she was buying a home and this type of oil spill had happened from a transformer, would she be informed of that. Mr. Jesus said that this would have to be reported to the federal government but the information might not necessarily get to her as the homeowner. Mr. Hubert explained that regulations are in place around who had to be informed. Ms. [redacted] asked if she was selling her house, she would need information on how the cleanup was done. Mr. Hubert stated that this was out of his area of expertise but they could follow up on that question and get back to the MNO on that.

Mr. Hubert continued with his presentation providing an overview of the Hydro One distribution system and Ontario regulatory framework. Distribution rates are set by the OEB and he explained that their application was filed with the OEB on March 31, 2017. The public hearing process was about to begin. He provided an overview of the breakdown of the electricity costs to customers.

Christa [redacted] asked if environmental costs were included in the 51% of the bill that covers commodity costs and Mr. Hubert stated that it was and the generators are accountable for the costs in this portion of the bill. This includes costs to provide the service today but it may also include a provision in consideration of the implications for the future.

President [redacted] asked for an explanation for the reference of loss of power on his hydro bill. Mr. Hubert mentioned that this was covered in the "Line Losses" at 4% on the graphic and this was in reference to power that was lost in transit. Generators have produced the power and therefore must be paid for it, and Hydro One has to account for any power loss and as long as the transmission and distribution were done as efficiently as economically possible, they could expect to recoup this loss. Mr. Hubert was asked where they would get the incentive to make efficiency improvements when they received compensation for their losses. He responded that this came in up in the OEB hearing as well and that Hydro One seeks to reduce losses where it is economic for it to do so in the areas under its jurisdiction.

Senator [redacted] asked about the forestry work that needed to be done to cut back trees from the lines and if this work would be undertaken by contract workers or Hydro One workers. Mr. Hubert said that they would use a mix of external and internal workers for that.

[redacted] asked about the new rate application and if there would be increased costs related to security. Mr. Hubert stated that they do take this into consideration and there were international standards for reliability and this included critical infrastructure protection. This also included protecting the copper in their equipment.

Regional Councilor [redacted] asked about species at risk legislation when it comes to cutting trees down to protect the lines. In the past, they were told that there was no budget for mitigation in these cases. Mr. Hubert mentioned that he was not sure in that case; for larger projects they needed to undertake an environment assessment. He said that he would have to follow up with MNO on this particular question.

[redacted] asked about options for putting their lines underground in the future. Mr. Hubert stated that the main issue was costs; this might be economically possible in urban areas but cost prohibitive in rural areas. Mr. Jesus stated that this would cost 10-20 times more than the construction of overhead lines.

Mr. Hubert continued with his presentation outlining where the revenues collected for distribution are spent and invested. He said that 70% went to keeping the distribution system reliable, 15% went to outage restoration and 15% went to customer service. Customers had told Hydro One that keeping costs low was the top priority and maintaining reliable service was the 2nd priority. He stated that this means “maintaining” the current level of reliability, as improvements would involve raising the current costs. He asked for the participant’s feedback on these priorities.

Regional Councilor [redacted] stated that this was a challenging situation in terms of costs as the Metis would likely agree to lowering costs as a priority but would not want this to impact on their traditional way of life. She felt that this was something they, as Metis people, would likely want to discuss in more detail.

Mr. Hubert continued with his presentation explaining the rationale of their rate application to the OEB considering customer needs, asset needs and rate impact among others. While the government's Fair Hydro Plan may result in bill reductions of approximately 30-40, it was Hydro One’s job to complete the submission ensuring that they received enough funds to keep up the needs of the distribution system. He provided an overview of the costs that were included as part of the application for 2018-22 which showed an increase in the areas of operations, maintenance, capital related costs, taxes, load impact and other revenues and rate riders. The largest increases were in the areas of capital infrastructure costs and load impact adjustment over the next four years.

[redacted] asked about the impact of the changes to alternative power within the province. Mr. Hubert said that many that were producing alternative power for the grid are not using this in their own homes but were selling it back to the grid. These individuals were still accessing power from the grid. He said, when looking at their rates, the customers wanted

Hydro One to look for increased productivity and efficiencies before coming to the customer with higher rates to cover the costs and they did this before hydro one make their rate application to the OEB.

Regional Councilor [redacted] asked if there was anything in the five-year rate plan that addressed the ring of fire development with the Province of Ontario. Mr. Hubert stated that this was not part of this proposal as Watay Power was working on this; this application is specific to distribution rates.

[redacted] asked about possible escalated costs in the future (post 2022) based on the budget here on the distribution side. He asked if this could have an effect on individual bills. Mr. Hubert stated that this could have an impact depending on the commodity price; a government initiative would have to be sought to offset those costs.

Mr. Hubert continued outlining the next steps in the OEB application process. The OEB would issue a public notice about the application and then there would be public hearings. Individual customers or groups representing Hydro One's customers could become intervenors in that process or they could be observers.

Regional Councilor [redacted] asked what their status as Metis people would be within the hearing process. She asked if they would return to this process to feed into those OEB hearings. Mr. Hubert stated that this session was not part of that consultation process; it was an engagement initiative. He also said that the intervenor process completely handled by the OEB. He suggested that if MNO wanted to participate in the OEB hearings, they needed to register with the OEB. Regional Councilor Richardson made it clear that they had Aboriginal rights that did not fall under OEB regulations. She said that they told their people not to participate in those processes as they were a right bearing people and they had a process for consultation already in place through their internal structures. Mr. Hubert stated that he would defer to the First Nations and Metis Relations section of Hydro One to comment on that. Mr. Charbonneau stated that this was not their process but rather OEB's and Regional Councilor [redacted] asked if the OEB was the Crown in this case. Mr. Charbonneau was not sure as he could not speak on behalf of the OEB; he was unsure if the OEB could trigger the duty of consult. It was suggested that the MNO would have to go to the Minister of Energy to address this, as this has not been delegated to Hydro One. Regional Councilor Richardson stressed that she needed some information on where she should go to follow up on this important question.

OPERATIONS – HYDRO ONE RELIABILITY MEASURES

Mr. Bruno Jesus, Director, Strategy and Integrated Planning, Hydro One, provided an overview of his PowerPoint presentation entitled "Reliability Performance Overview". He said that he would be looking at the distribution and transmission systems and how Hydro One was directing investments to maintain reliability. He provided an overview of the customer engagement initiative which took place in 2016 and conducted by a third party. The focus of response had asked Hydro One to keep the hydro costs as low as possible with the second priority being reducing the number of outages.

Mr. Jesus provided an overview of the process to get the electricity from the generator to the customer. He mentioned, in response to the question earlier in the day regarding non-wood poles and he stated that these poles were very costly compared to wood poles, from 10 to 20 times the cost. His presentation concentrated on the transmission and the distribution systems and addressing reliability within those systems. In terms of the transmission system, the primary cause of interruption was weather and equipment failure. There was a marked difference in the reliability of the system in the north and the south. Hydro One was maintaining reliability in the transmission system by increasing capacity investments (lines), leveraging technology and reducing planned outages by bundling work among other initiatives.

[redacted] asked about the impact of solar flares on hydro reliability and also if they would be able to access power from other jurisdictions (other provinces or the United States) if needed. Mr. Jesus replied that they had built a system to address the possibility of geomagnetic outages. He said that they did have those connections to other jurisdictions but Hydro One was really seen a leader in terms of hydro transmission and distribution.

President [redacted] said that they had many power surges in their area and she asked about the cause of this. Mr. Jesus said that he could not speak specifically to her situation so they could talk offline about that but generally there were a number of possible causes including weather, an issue with the line among others.

Regional Councilor [redacted] asked how often Hydro One flew over their lines. Mr. Jesus said that there were regulations they had to adhere which stated that they had to every two or three years. Regional Councilor [redacted] also asked about AC and DC lines. Mr. Jesus explained that DC lines were normally used for great distances but they did not have DC lines anymore; they had a DC connection with Hydro Quebec and they were proposing a DC connection to Pennsylvania. To convert lines from AC to DC was costly and it was not seen as necessary in the distances they were talking about.

Mr. Jesus continued with his presentation stating that the primary causes of interruption in the distribution system were from tree contacts and equipment failure.

President [redacted] asked if new research has gone into non-wood poles. Mr. Jesus stated that the poles were mostly wood still as it was more expensive to use non-wood poles. He did say that they were looking into other technologies in some areas but steel was cost prohibitive.

Regional Councilor [redacted] asked what the wood poles were treated with and it this could negatively affect vegetation in the area. Mr. Jesus was not sure and he stated that he could follow up on that and get back to the MNO.

[redacted] asked who owned the poles in rural areas. Mr. Jesus said that Hydro One owned these poles up to the property line of the individual; the owner was responsible for the poles on their own land. Mr. Hubert noted that if a customer had to bring in the electricity to their own home, they do get some credit for distribution and do not necessarily have to pay the full costs of installing the lines to serve their property. These stipulations were all laid out by the OEB.

Regional Councilor [redacted] asked what would be the reasons for interruption if the copper was stolen by a thief. Mr. Jesus stated that this would likely be under equipment failure or possibly unconfirmed cause.

[redacted] asked if Mr. Jesus has ever heard of smart meters catching on fire. Mr. Jesus did not think this could happen. Mr. Pugliese mentioned that there was a story in the news where the face of the meter caught on fire but the fire itself was not caused by the meter. If, in the future, there was an issue with the meter, Hydro One would address that.

Mr. Jesus continued with his explanation of the distribution system stating that there were longer outages reported by customers in rural areas but it was difficult to find the outage. For this system, it was not a smart response system as they depended on customers notifying them of where the outage had occurred. Hydro One recognized that the reliability in these areas was not very good and they were working towards improve that by leveraging the meters to show the outages so the crews find the outage cause and location. This was all being done to minimize the impact of the outage on the customer. He outlined some programs they were undertaking to maintain reliability in the distribution system such as the renewal programs to replace aging equipment.

President [redacted] asked if power outages were identified by the length of time the power was out, as some were just out for a few seconds. Mr. Jesus said that those less than one minute was a momentary outage and sustained outage was more than one minute.

EMPLOYMENT – OVERVIEW OF HYDRO ONE ABORIGINAL EMPLOYMENT AND TRAINING

Devi Shantilal, First Nations and Métis Relations, Hydro One provided an overview of the Employment and Training presentation. She explained that no one Hydro One Human Resources was in attendance at the meeting and that if she could not answer questions raised, she would follow up after the meeting. She explained that Hydro One was committed to providing employment and training opportunities through apprenticeships, co-ops and internships.

[redacted] asked for information on the percentage Métis employees at Hydro One, including the percentage in management or senior positions. Ms. Shantilal indicated that the numbers are based on voluntary identification and committed to follow up on finding this information. She added that there were on-going diversity support systems for example was an internal women's network within Hydro One and that Hydro One was looking at launching additional initiatives to support various diversity groups to focus on awareness training and other issues. She further noted that that Hydro One has a diversity consultant and there are ongoing efforts at the senior management level and they were looking at initiatives for supporting Aboriginal employees. Ms. [redacted] suggested using the terms "First Nation, Inuit and Métis" rather then "Indigenous" or "Aboriginal" as people generally did not like the umbrella terms. Ms. Shantilal acknowledged this request and added that Hydro One used the phrase "First Nations and Métis Relations training" and they sometimes use the terms "Indigenous" or "Aboriginal" in existing material but they would look changing this terminology. Ms. [redacted] asked if the Hydro One was addressing the recommendations of the Truth and Reconciliation Commission recommendations. Mr. Pugliese stated that they did and they were looking at taking this further to ensure that all leaders in Hydro One had an enhanced level of cultural awareness. There are 50 plus leaders to go through this training, which would immerse them in all issues.

[redacted] asked about the interview techniques of Hydro One, as many First Nation, Inuit and Métis persons were more visual in terms of a communication style. She recommended using different interview techniques and not just the standard format in order to be responsive to different ways of learning. Ms. Shantilal indicated that when she went through the process, there were a number of different styles used that would allow individuals with different strengths to use that opportunity to showcase their strengths but she would follow up with Human Resources to find out more on this.

[redacted] asked what was involved in Hydro One's Aboriginal cultural awareness training and where did the information come from. Ms. Shantilal stated that the information used in the training comes from various sources, including the MNO website. The request was made by MNO representatives to see the material used in the Aboriginal awareness training. Mr. Merali indicated that Hydro One was in the process of refreshing their training and they welcomed feedback on the new training package. Ms. [redacted] indicated that MNO would be pleased to review the training package and they could also provide training and perhaps make it more interactive. Ms. Shantilal stated that they could discuss this.

Regional Councilor [redacted] stated that any region could provide this cultural awareness information and that they could work in partnership; he invited Hydro One to come meet with them and their knowledge holders in the regions. He also asked how their hired for promotions and if they focused their efforts on this from within their organizations. He also asked where their training facilities were. Ms. Shantilal indicated that she did not have the information regarding promotions and that she will follow up with their Human Resources section at Hydro One. In terms of training facilities, she indicated that she will put together a list of training facilities and forward that to Ms.[redacted] for distribution.

Regional Councilor [redacted] asked if Hydro One had any Métis employed in the First Nation and Métis Relations. She noted that Hydro One leadership recognized the territory of the Mississaugas of New Credit but did not recognize that this was also the territory of the Metis. She stated that the Aboriginal awareness training they were providing needed to specifically recognize the Métis, as well as the First Nations. She made the point that if they were building a relationship, Hydro One needed to recognize the perspectives of the Métis of that particular territory. She stated that MNO Employment and Training (MNO-ET) was obtaining funding to help them develop their training/awareness programs and that MNO-ET staff should be part of this discussion. She added that when Hydro One went into a particular region they need to realize that it was not only what could you give the Métis but they also had something to offer. Ms. Shantilal thanked the Regional Councilor for her comments and recognized that this meeting was also on the Métis homeland and that Hydro One recognized the need to be more inclusive. She further stated that this was a relationship building meeting and they appreciated these comments.

[redacted] suggested that Hydro One be mindful that most Métis communities do not have a land base and that eligibility for PowerPlay projects should be open to Metis communities; most eligibility requirements are not inclusive to Métis communities. Ms. Shantilal indicated that, when designing or renewing their programs, they would keep this in mind. Mr. Pugliese further stated that there was a lot of programs that were under review and that Hydro One would be acting on the feedback provided.

[redacted] stated that Union Gas had goal for First Nations, Inuit and Métis recruitment and Hydro One should have a goal if they did not have this in place already. Mr. Pugliese responded that Hydro One will establish a goal and they will be tracking it.

President [redacted] asked about the updating of the Aboriginal awareness training modules, and if, once completed, the Hydro One staff will be retrained on newly updated information and the response was in the affirmative.

[redacted] reiterated some of the things that have been mentioned to potentially increase employment targets such as posting jobs on the MNO website, involve the MNO-ET in discussions involving scholarships, among others. Ms. [redacted] also stated that the MNO did a lot of training and they could also assist Hydro One in this regard. She indicated that the MNO had been working with Hydro One on procurement issues such as hosting an event for Métis businesses to learn more about procurement opportunities that might exist.

In closing, Ms. Shantilal thanked all participants for their feedback and for the offer to help Hydro One with the Aboriginal awareness training and looked forward to more discussion on that.

PROCUREMENT – OVERVIEW OF HYDRO ONE ABORIGINAL PROCUREMENT PROCEDURE

Rob Berardi, A/VP, Shared Services, Hydro One, provided an overview of his presentation entitled “Aboriginal Procurement: Doing Business with Hydro One”. Mr. Berardi opened his presentation by thanking everyone for attending this session and also introduced Kyla Thistle, Contract Officer, Supply Chair, Hydro One, as his co-presenter. He provided a review of current Hydro One procurement procedures. He also stated that they could attend MNO regional meetings to discuss how to navigate the Hydro One system on procurement.

[redacted] asked if Hydro One identified a certain percentage of money aside for First Nation, Métis and Inuit procurement. Mr. Berardi responded that Hydro One did not put a specific percentage aside right now but they could look at doing that. Hydro One did about $15M per annum in Aboriginal procurement right now and they wanted to increase that by 20% each year.

Mr. Berardi explained that Aboriginal participation was preferred and they had information on their external website and competition was limited to qualified aboriginal business. Some contracts could be directly awarded to qualified Aboriginal business. Hydro One could do things differently than when they were a crown corporation.

Regional Councilor [redacted] made the point that a lot of the focus was on supply and purchasing but what about when they were decommissioning assets. Mr. Berardi responded that Hydro One bought things but they also bought services. In terms of decommissioning assets, a supplier could review the asset and then provide the services required for that.

Regional Councilor [redacted] noted that a lot of the issues around Union positions and contract work. He explained that many Métis businesses were small businesses and did not involve unions. Mr. Berardi indicated that it was a difficult question as labour relations have jurisdictions in certain areas such as construction zones or transmission stations. He acknowledged that Hydro One and MNO needed to have those discussions and that Hydro One was open to that. Regional Councilor [redacted] indicated that Union Gas had a stipulation that if they are going to work there, the reserve could provide their own non-union workers. Mr. Berardi stated that those were issues for discussion with labour relations but that there are a lot of services that were non-unionized and these contracts could be filled by Métis businesses.

Mr. Berardi continued his presentation by provided information on the types of materials and services purchased, including heavy-duty equipment, road construction, aggregate and concrete, etc. He explained that there were six steps to award contracts. He suggested that they might want to focus on getting businesses registered and then look what was available. He stated that they could come to the regions to show business owners and others how to get registered and go from there.

[redacted] asked if Hydro One purchased food services. Mr. Berardi responded in the affirmative; Métis food services companies could register and Hydro One procurement could direct the Hydro One staff to use that. This area was a good opportunity.

Mr. Berardi continued stating that the bid system was an online registration and admittedly it was somewhat cumbersome. It was suggested that it needed to be clearer or more support was needed to be able to navigate it.

[redacted] asked how many First Nation and Métis businesses were registered with Hydro One procurement. Mr. Berardi stated there are about 180 to 200 business registered that were First Nation or Metis. He looked forward to looking at ways to increase this number and raise the profile of their system. Ms. Thistle pointed out that they did not have to be an Aboriginal business to register; they could be a First Nation or Métis individual who could provide a service.

CLOSING REMARKS

Ferio Pugliese thanked all participants for their feedback and the candid conversation. He emphasized that that was what this day was designed for and expressed the intention to get out to Métis communities, as Hydro One recognized the regional diversity that existed. He also stated that Hydro One would take MNO up on the offer in regards to the training program. He also encouraged all participants to contact Hydro One if there were any questions resulting from this session. He also stated that they recognized that electricity in Ontario was a complex environment and they were open to working with the MNO and Métis citizens to support them with information and advocacy.

[redacted] stated that, on behalf of MNO, expressed appreciation to all the Métis community representatives for their participation and also thanked Hydro One for providing this information. She stated that this was a relationship building exercise and was not a consultation. She also indicated that participants will be receiving meetings notes and photos from this meeting.

Senator [redacted] closed the meeting with a prayer.

Indigenous Relations – Executive Summary

January 2018

Chief of Ontario Provincial Engagement Session

Hydro One will host its second First Nations Engagement Session on February 21, 2018 at Casino Rama. The purpose of the engagement session is to strengthen our relationships with the 88 First Nation communities we serve, listen to key energy transmission and distribution related issues and concerns they may have and together find solutions moving forward.

Hydro One had a very open and constructive dialog last year that allowed us to learn from each other and at that time we reaffirmed our commitment to continue advancing our relationship with First Nation communities. Many Chiefs expressed frustration at the pace of activity when dealing with Hydro One in the past. We assured them that Hydro One's management team places an enormous importance on First Nations and told them they can expect to see swift action going forward. Appendix A attached hereto highlights the issues raised at last year's engagement session along with the progress made by Hydro One on these matters.

This year the engagement session will focus on: Customer Service; Procurement & Business Partnerships; Employment and Training; and Transmission and Distribution Planning & Reliability Performance.

Treaty #3 Regional Engagement Sessions

Hydro One hosted three engagement sessions on Treaty #3 Territory in Q4 of 2017. Host communities included Wabigoon Lake Ojibway Nation, Ochiichagwe'Babigo'Ining Ojibway Nation (Dalles) First Nation, and Couchiching First Nation. Of the 25 First Nation communities located in Treaty #3, Indigenous Relations staff met with 15 communities.

The Hydro One team reinforced working relationships between Treaty #3 First Nation communities and Hydro One; shared information on Hydro One's initiatives benefiting First Nation communities; and discussed challenges and opportunities in moving forward. Hydro One provided additional information on procurement and customer service, including the new First Nations Delivery Credit and employment and training. Common issues and concerns related to: three phase power to support infrastructure development, growth of the communities, and consideration for the new First Nations Delivery Credit to apply to on reserve commercial accounts (i.e., band offices, schools, arenas, etc.) where high costs remain a burden.

A long term strategy needs to be considered on matters related to power quality/reliability in these communities, and their interest in converting from single phase to three phase power to support community energy plans and infrastructure development.

November 2017

Engagement Sessions

Hydro One has hosted and participated in several engagement sessions throughout the year. A summary of issues rose at these engagement sessions, along with results and progress achieved to-date, is provided below.

Top Five Issues February to September 2017 [1]		Results and Progress Achieved
 Affordability	• Communities feel disproportionately impacted by high electricity costs and that delivery charges are higher than consumption both at the individual costumer level and band level.	• Implemented Ontario Fair Hydro Plan reducing bills by as much as 40 to 50%. • Implemented Get Local Initiative reducing arrears. • Implemented First Nations Conservation program reducing energy consumptions and indirectly bills. • Preparing to roll-out the Affordability Fund.
 Reliability	• Communities are impacted by several lengthy power outages, resulting in insufficient electricity supply to serve businesses. • Existing power loads becoming an impediment to implementing community growth plans.	• Increased capital investments replacing aging assets and reducing outages. • Leveraged technology (Distance-to-Fault) to monitor unplanned outages. • Reduced planned outages by bundling renewal work where applicable. • Targeted tree trimming.
 Liability and Access	• Outdated access rights/permits with insufficient compensation, or the lack thereof, for transmission and distribution assets on and off reserve land. • Improper notification protocols for planned and non-planned disconnection related work.	• Progressed with negotiations to settle outstanding real estate agreements. • Initiated discussions to develop an Indigenous Integration Plan with Real Estate which will include strategies and plans to seek certainty on access rights. • Initiated discussions to develop an Indigenous Integration Plan with Provincial Lines and Forestry which will include communication

[1] Chiefs of Ontario First Nations Feb. 9 & 10; Métis Nation of Ontario May 13; Grand Council of Treaty 3 Fort Frances May 18; Anishinabek Nation August 17; Treaty 3 Wabigoon Lake Ojibway Nation September 12.

		protocols.
Partnership	• First Nation communities seek an increase in procurement, investment, ownership opportunities, and other business partnerships.	• Increased procurement opportunities. • Developed set-aside strategy for an RFP. • Progressed with negotiations to reach equity partnership agreement on Tx project (Niagara Reinforcement Project)
Employment	• First Nation communities are interested in more employment opportunities and training.	• Increased employment with new permanent hires. • Participated in career fairs and workshops promoting employment and training.

Chippewas of Rama First Nation

Hydro One held an information session at the Chippewas of Rama First Nation for the Anishinabek Nation on Agust 17, 2017. The goal and objectives were to: reinforce working relationships between Anishinabek Nation First Nation communities and Hydro One; share information on Hydro One's initiatives benefiting First Nation communities; and to discuss challenges and opportunities in moving forward. 30 Anishinabek Nation representatives attended the session.

Treaty #3 Regional Engagement Sessions

Hydro One participated in a Treaty #3 Regional Engagement Session on September 12, 2017 in Wabigoon Lake Ojibway Nation which was attended by members of Wabigoon Lake Ojibway Nation and Eagle Lake First Nation Chief and Council. Additional Dryden region communities invitees included: Lac des Mille Lacs First Nation, Lac Seul First Nation and Wabauskang First Nation. In total 7 First Nation representatives attended the session.

The goal and objectives were to: reinforce working relationships between Treaty #3 First Nation communities and Hydro One; share information on Hydro One's initiatives benefiting First Nation communities; and discuss challenges and opportunities in moving forward. Hydro One presented information on Indigenous Procurement, Customer Service including the new Delivery Charge Credit and Employment and Training. Common issues and concerns related to: 3 phase power to support infrastructure development and growth of the communities, and consideration for the new delivery charge credit to apply to on reserve commercial accounts (i.e., band offices, schools, arenas, etc.) where high costs remain a burden.

It was agreed that Hydro One's Indigenous Relations team would follow up on all action items in a timely manner. Plans are moving forward to host two more engagement session in the Treaty #3 territory with First Nations in the Kenora and Fort Frances areas. The next session will be in Kenora on November 22 and 23 and the host community is Ochiichagwe'Babigo'Ining Ojibway Nation (Dalles) First Nation – 11 First Nation communities have been invited. The second session will be in Fort Frances on November 29 and 30 and the host community is Couchiching First Nation – 8 First Nations communities have been invited.

Chiefs of Ontario First Nations

As a follow-up to a commitment made at the February 9 and 10, 2017 engagement session, Hydro One is planning a second annual gathering with the Chiefs of Ontario First Nations on February 21, 2018 at Casino Rama. The purpose of this gathering is to share progress made on most common issues raised at the February 2017 session and to discuss plans to resolve outstanding common issues. The most common issues raised at the February 2017 session were: community visits and outreach; outstanding real estate agreements; customer service programs; increasing Indigenous employment, procurement, partnerships; disconnections; establish emergency and community protocols; and address tax exemptions for First Nations customers living off-reserve.

May 2017

On February 9th and 10th, 2017 the HONI's Board Committee Members participated in an engagement session with First Nation Chiefs in Ontario. All First Nation Chiefs from communities served by HONI, 88 in total, and the Ontario First Nations Regional Organizations were invited to attend the engagement session with the HONI's Board Members, President and CEO and numerous Senior Executive.

The purpose and objective of the engagement session were to hear the Chiefs' thoughts and goals to achieve meaningful progress and build a new vision for HONI's and First Nation communities' collective futures. The Métis Nation of Ontario communities was also invited to a similar session which will be held in May 2017. In addition, the engagement session was a great opportunity to share HONI's thinking and solicit feedback on the application for Distribution

Rates and the distribution system plan that HONI's was preparing for submission to the Ontario Energy Board.

HONI held an engagement session in February 2017 with the First Nation of Ontario communities and the Ontario First Nations Regional Organizations. The purpose of the engagement sessions was to discuss with First Nation communities HONI's distribution rate filling with the OEB. The OEB rate filling document covers the following elements:

- Customer Focus: Services are provided in a manner that responds to identified customer preferences.
- Operational Effectiveness: Continuous improvement in productivity and cost performance is achieved; and utilities deliver on system reliability and quality objectives.
- Public Policy Responsiveness: Utilities deliver on obligations mandated by government (e.g., in legislation and in regulatory requirements imposed further to Ministerial directives to the Board).
- Financial Performance: Financial viability is maintained; and savings from operational effectiveness are sustainable.

Where issues do fall within HONI's authority, jurisdiction, and mandate and there are no existing responsive initiatives, HONI will work in collaboration with affected communities to explore, define, and prioritize additional strategies and processes to effectively address these concerns.

Where there are existing initiatives, HONI will continue to work to make meaningful progress in addressing these concerns and consider new initiatives that may assist HONI in this effort. The development of such strategies and processes with First Nations and Métis communities will proceed on the basis of the following principles: action oriented, collaborative, transparent, cost effective and efficient.

Appendix A

Follow-Ups to Chiefs of Ontario First Nations' February 9 & 10, 2017 Engagement Session

	STATEMENT	COMMITMENT	FOLLOW-UP
1.	Mr. Schmidt lists three (3) things he is hopeful will come out of this session: 1. To listen and learn; 2. Provide some education on who is responsible for what, what we each do, how can we as a company can to advocate for you and your community; and, 3. Commit to action. The hope is to move this conversation to an outcome (educate/advocate/action).	Committed to action.	See below
2.	Mr. Schmidt suggests that the feedback that they get from the engagement sessions will go into their upcoming distribution rates submission to the OEB. The information will be collected as part of the application and the First Nations participants' voices will be heard there.	Committed to include FNs feedback into OEB submission.	Included FNs feed-back see Hydro One Networks' Distribution Rate Application (EB-2017-0049) to the OEB Exhibit A Tab 4 Schedule 2 - First Nations and Métis Strategy
3.	Hydro One has met with many First Nations over the last 8 years, including over 200 community visits. Mr. Schmidt suggested that communities interested in inviting Hydro One to visit, attendees should introduce themselves to Ms. Cameron and she will get a team out there.	Committed to community visits when invited.	Completed over 10 new community relationship building visits/outreach since February 2017.
4.	Hydro One is committed to making a change as demonstrated by offering additional regional outreach on procurement, by participating in First Nations employment, training and career fairs and through the First Nations Conservation Program.	Committed to change through additional outreach.	Implemented Get Local Initiative reducing arrears by visiting 19 communities and holding 1282 one-on-one sessions.
5.	Mr. Schmidt noted that it is important for Hydro One to hear from the participants and focus on things that can be changed. He committed to listen, but also committed to meeting again in the future to work on some of the things we want to accomplish together. It will take bold action by all of us to effect change.	Committed to meet again.	Completed the following regional engagement sessions: Grand Council of Treaty 3 May 2017; Anishinabek Nation August 2017 and Fall/Winter 2017 hosted three engagement sessions in Treaty #3 Territory - Wabigoon Lake Ojibway Nation, Ochiichagwe'Babigo'Ining Ojibway Nation (Dalles First Nation), and Couchiching First Nation.
6.	Mr. Schmidt shared that he cannot speak to what has happened in the past, but going forward, the focus is on getting people connected rather than disconnected. He also committed to dealing with the issue of cut-offs himself, along with Hydro One legal counsel. The time frames will be addressed, but in general there is no gain for anyone by cutting people off. The larger issue is that we need the cost of power to be reasonable.	Committed to deal with issue of cut-offs.	Extended the Winter Relief Program until June 2017. Reinforced our service level commitment for new connections within five business days with a $75 guarantee.
7.	Mr. Schmidt stated that he agreed with Councillor White, that Hydro One needed to be reasonable and to rethink previous behaviours that were practiced. He notes that there are a lot of attitudes to change	Committed to rethink behaviours and change attitude throughout the	Implemented an internal Leadership Learning Program on Indigenous Relations (On Line & In Class) with over

	throughout the organization and hopes to do better.	organizations.	125 leaders. Conducted 5 Indigenous Cultural Awareness Employees Workshops (Who's Who in the Electricity Sector & Supply Chain).
8.	Chief Patricia Faries said there are power lines going through her land that are intrusive. She expected a response on how her community would be engaged and compensated. Mr. Schmidt introduced Jamie Scarlett and Gary Schneider who can sit and meet with communities to work through their issues. Jamie Scarlett, Hydro One, provided his email address (Jscarlett@hydroone.com) in order to set up future conversations.	Committed to meet with communities to work through real estate issues.	Hydro One Real Estate sent an email to Chief Fairies on September 27, 2017 with no reply yet. Also Hydro One delivered to the Moose Cree First Nation community its Home Assistance Program in August 2017 including support for internal community liaison capacity.
9.	On the question of how do we keep the costs down, Hydro One intends to have a customer presence in local offices; the customer bill was redesigned because customers need to understand the bills; Hydro One has reinforced the commitment to service and of responding in a timely manner.	Committed to reinforce customer service and to respond in a timely manner.	Implemented Get Local Initiative reducing arrears by visiting 19 communities and holding 1282 one-on-one sessions.
10.	Mr. Schneider shared that he works on procurement as well as land matters. When it comes to the issue of land he has heard the frustration in the room and agrees that agreements with First Nations need to move forward.	Committed to move forward on real estate agreements.	Completed discussion and negotiations on 4 of 8 outstanding real estate agreements. Engaged with Real Estate to develop an Indigenous Relations Integration Plan which will include strategies and plans to settle outstanding agreements.
11.	Mr. Lister introduced himself as a new member of the Hydro One team and shared his commitment to changing the way they do business. He stated that he intended to listen and welcomed the opportunity to dialogue.	Committed to changing customer service.	Implemented Get Local Initiative reducing arrears by visiting 19 communities and holding 1282 one-on-one sessions.
12.	Mr. Pugliese said they committed to visiting First Nations communities, reconnect those who are disconnected, and waive the fees. He asked that the participants let them know which of their community members need this assistance.	Committed to visit communities, reconnect those who are disconnected, and waive the fees.	Followed up with a number of communities e.g., Cat Lake, Pic Mobert and Six Nations
13.	Mr. Lister indicated that they had solutions and ideas to give to the Minister. Many of the short-term solutions that are needed in the communities can be acted on immediately. Hydro One is willing to visit communities that they have not yet visited. For people having difficulty with payments, there can be new payment plans set up.	Committed to visit communities to set up new payment plans.	Implemented Get Local Initiative reducing arrears by visiting 19 communities and holding 1282 one-on-one sessions.
14.	Mr. Pugliese noted that Hydro One has launched "Get Local" and written letters to all customers. They are in the process of re-establishing regional or community business offices. They are currently building plans to reinstate regional/community offices to resolve customer issues. In addition, Hydro One is putting a great deal more emphasis on Indigenous Affairs and building more of a strategy around that builds on the good work of Mr. Cameron. This engagement session is the beginning of how Hydro One wants to move forward in doing business. They want to go to the community and regional level on a regular basis.	Committed to meet at community and regional levels on a regular basis.	Completed the following regional engagement sessions: Grand Council of Treaty 3 May 2017; Anishinabek Nation August 2017 and Fall/Winter 2017 hosted three engagement sessions in Treaty #3 Territory - Wabigoon Lake Ojibway Nation, Ochiichagwe'Babigo'Ining Ojibway Nation (Dalles First Nation), and Couchiching First Nation.

15.	In response, Mr. Hubert notes that forums such as this are intended to drive change. He also committed to finding out about the Ontario Energy Board process when it comes to the discussions that the OEB held on the First Nations Rate.	Committed to find out what were OEB discussions held on the FNs rate.	See Report to the Minister Options for an Appropriate Rate Assistance Program for On-Reserve First Nations Electricity Consumers December 29, 2016.
16.	Mr. Hubert explained that there is a delivery charge in both, but the majority of the delivery charge is for distribution. Mr. Hubert referred to his PowerPoint [Slide 6] and noted that electricity makes up the majority of the charge. He also committed to provide both hard and electronic copies of the presentation to the attendees.	Committed to provide both hard and electronic copies of Mr. Hubert's presentation.	Presentations and session reports provided to all participants – see https://www.hydroone.com/about/indigenous-relations/first-nations-engagement-sessions
17.	Chief Brian Perrault recounts an incident last spring where there was a Hydro One crew in his community clearing trees around the lines. The crew came right into his yard where he had 5 trees. Instead of trimming the trees, they cut them all down. The Chief's wife's grandfather planted those trees and he felt like he should have been spoken to about it before they were cut. Mr. Penstone said that Hydro One has not trimmed in a long time. There are OEB standards related to dying and diseased trees. However, Mr. Penstone felt that he could not comment any further because he did not know about the specific situation. In addition, he committed to following up.	Committed to follow-up on Chief Perrault's tree cutting issue.	Couchiching First Nation Chief Perrault talked to Ferio when he was up in the area in May and Ferio asked the Chief to send the pictures to him. In late July Chief said he still hadn't sent the pictures to Ferio. IRD followed up in late Fall and met with Chief Perrault at his house to take the photos. Internal follow-ups undertaken.
18.	Mr. Kiraly mentioned that related to emergency planning, there are some relationships with communities around that, but he recognized that there is certainly not enough of that going on. He continued that they are open to any protocol that the Chiefs feel is most appropriate, for example, Hydro One workers stopping at the band office to let the leadership know what is going on. Mr. Kiraly concluded by saying that many of the items that Chief White-Eye mentioned were possible to achieve.	Commit to discuss emergency planning including protocol with communities.	Engaged with Provincial Lines and Forestry to develop an Indigenous Relations Integration Plan which will include communication protocols with FN communities.
19.	Mr. Pugliese on Longer term issues: There is a need to address longer term issues including outstanding agreements around access, rights, land use, assets on the land. There have been fruitful agreements in the past and Hydro One will continue to work on agreements with First Nations.	Commit to address outstanding real estate agreements.	Continued discussion and negotiations on the 8 outstanding real estate agreements. Engaged with Real Estate to develop an Indigenous Relations Integration Plan which will include strategies and plans to settle outstanding agreements.
20.	Mr. Scarlett noted that the executive team members see working with First Nations as an overlapping mandate across their areas of focus. He noted that they understand it is critical to deal with costs and rates and Hydro One needs help from the government on that. Senior management understands how acute the issue is for First Nations. Regarding land use and resources, the team learned about how long negotiations have gone on and how this has been unacceptable for First Nations. They do not want these kinds of delays to continue. In order to achieve this, he encouraged direct, open and energized conversations. He encouraged a principled and fact-based method of moving forward. Thirdly, he noted the need to move forward on partnerships and co-ventures and working with First Nations more in the area of procurement.	Committed to open up discussions on real estate agreements and move forward on partnerships, co-ventures and procurement.	Completed discussion and negotiations on 4 of 8 outstanding real estate agreements. Engaged with Real Estate to develop an Indigenous Relations Integration Plan which will include strategies and plans to settle outstanding agreements. Signed MOUs with 2 First Nations which contemplates equity ownership on a Tx line. Increased Indigenous Procurement with total spends of $24.06M (surpassed 2017 target of $19.8M by 27%). Delivered 5 Indigenous Interactive Procurement Workshops with both Indigenous and non-Indigenous

			businesses.
21.	Mr. Pugliese noted that he wants to be back here celebrating success in one year. The comments will be shared with board members. He concluded by noting that the meeting will end but the conversation will not. He encouraged participants to reach out to Hydro One if there is something you would like to add, and Hydro One will be happy to come to your communities for similar meeting. Thank you.	Committed to meet in one year and to community visits when invited.	Letter sent on October 30 inviting Ontario Chiefs to the second annual gathering on February 21, 2018 in Rama. Completed over 10 new community relationship building visits/outreach since February 2017.
22.	He admitted that the new team at Hydro One recognizes that things had happened in the past when it came to First Nations land and communities. While they cannot change what happened in the past, the new Hydro One team is making a commitment to work differently, in partnership with First Nations. He asked the attendees to judge the new team on their actions. He noted that in a year from now, or sooner, Hydro One will be able to share insights and progress on closing out past grievances, in helping community members with bills, and making movement on affordability.	Committed to work in partnerships with communities and to share progress on closing out past grievances, helping customers with bills and making movement on affordability.	Completed discussion and negotiations on 4 of 8 outstanding real estate agreements. Engaged with Real Estate to develop an Indigenous Relations Integration Plan which will include strategies and plans to settle outstanding agreements. Implemented Get Local Initiative reducing arrears by visiting 19 communities and holding 1282 one-on-one sessions. Implemented First Nations Delivery Credit under Fair Hydro Plan.
23.	Related to improving Hydro One's responsiveness, Mr. Pugliese noted that they have heard First Nations speak about empty promises from the past. The new team at Hydro One will improve on this performance.	Committed to improve performance on following up on commitments made.	See all follow-ups above and below and letter sent on October 30, 2017 inviting Ontario Chiefs to the second annual gathering on February 21, 2018.
24.	Mr. Pugliese asked participants to let Hydro One know what they wanted in terms of training programs for communities. They are willing to go to communities to work on individual bills, explain the bills, and get clients on plans; however, these activities take many visits. Another option is training people within communities to host these meetings and provide this service within the community. These programs are just getting started, but Hydro One will continue to work with communities in this area.	Committed to visit communities to work on bills and plans and offered community training to support customer services.	Implemented Get Local Initiative reducing arrears by visiting 19 communities and holding 1282 one-on-one sessions and offered community liaison capacity to 6 First Nations.
25.	Chief R. Donald Maracle noted that some councils loan monies to community members for bills in arrears. He asked what Hydro One could do for communities in this situation. Some people have had to go to high interest rate companies to borrow, which is a hard cycle for people to get out of. Mr. Pugliese responded that people would generally have to rely on social service agencies and that Hydro One does not have a policy on this issue, but can potentially look into it. In addition, he noted that they spoke with the Premier on affordability funding. The current program qualifiers are stringent but perhaps Hydro One can use the surpluses in cases such as this. The Chief noted that in smaller communities there are no service agencies and have to depend on the band council. Mr. Martinez noted that when they come to the community in March they will bring the United Way with them. Community members can apply for relief from the United Way. He has done this with First Nations communities before. Mr. Pugliese noted that this issue has come up before and is something that they want to look at. They are looking to support an adjudication process in order to address it. This is a potential suggestion for action going forward.	Committed to consider alternate affordability support program.	Currently implementing the new Affordability Fund which can help improve home's energy efficiency with free energy-saving upgrades, which can lower home energy use and electricity bill. Also advocating on delivery credit for First Nations owned buildings.
26.	Mr. Pugliese commented that Hydro One cannot address poverty in a general sense. It is a very broad,	Committed to address poverty and	Implemented Get Local Initiative reducing arrears by

	complex social issue. However, Hydro One can focus on the bills as part of their own social responsibility. Also related to community social services, perhaps Hydro One can support those through Hydro One's community giving program.	social issues through bills and sponsorship and grant programs.	visiting 19 communities and holding 1282 one-on-one sessions and approved over $3.5M in Indigenous sponsorships over last 10 years. In 2017 alone reviewed and approved a total of $745,750 in grant/sponsorship proposals supporting healthy Indigenous communities.
27.	Mr. Pugliese responded that Hydro One supports Councillor Archibald's position on the delivery charge; however, it is not Hydro One that controls that. Regarding Hydro One staff entering the community, Hydro One has heard this concern previously and believes that their staff must respect the community protocols. They should first visit the band office. Finally, with respect to the disconnection and whether there could be load limiters, Mr. Pugliese noted that there are resources on this that Hydro One is willing to share through their outreach activities.	Committed to respect community protocols when entering communities and to offer load limiters to address disconnections.	Engaged with Provincial Lines and Forestry to develop an Indigenous Relations Integration Plan which will include communication protocols with FN communities.
28.	Mr. Pugliese responded that he is sure there must be information on the revenues generated through those agreements. He noted that he and the Chief Legal Officer had been going through all of the agreements to identify what had gone wrong in the past and where there are fixable issues. Hydro One wants to re-evaluate all of those agreements and resolve outstand issues. Regarding submersibles, Mr. Pugliese noted that they are happy to sit and meet to have a discussion. In addition, the Chief Operations Officer would be presenting later and would be better suited for that discussion.	Committed to address outstanding real estate agreements and to discuss submersible lines.	Completed discussion and negotiations on 4 of 8 outstanding real estate agreements. Engaged with Real Estate to develop an Indigenous Relations Integration Plan which will include strategies and plans to settle outstanding agreements.
29.	Mr. Schmidt shared that Hydro One met with the majority of the First Nations communities that they serve, which included over 200 community visits. He noted that they are looking to expand community visits and welcomed the participants to let Hydro One know if they were interested in a community visit. He appreciated the goals and aspirations, as well as the needs of First Nations rights-holders and landowners, in terms of business development and community relationships.	Committed to expand community visits when invited.	Completed over 10 new community relationship building visits/outreach since February 2017.
30.	Chief Sayers asked if Hydro One would be willing to honour the point of sales tax exemption for all Indigenous people in Ontario no matter where they live. This was his formal request. The Chief's second point is on working for mutual benefit; he wondered how working together would look, and what would be the benefits, in general. Mr. Schmidt asked his staff member, Ms. Cameron to make a note on the issue of taxes. He stated that given the complexity of the tax system there would have to do some analysis on that. He committed to going back to Chief Sayers on that topic. Ms. Cameron sought to clarify Chief Sayers' statement; that the tax can be removed for customers on reserve once Hydro One receives a status number, but she believes what Chief Sayers is referring to is eliminating the taxes even for those First Nations who are not living on reserve. Chief Sayers: The Chief clarified that at the time the agreement was made, there was no differentiation between on-reserve or off-reserve. Ms. Cameron said that Hydro One would go back to their tax group to discuss as well as talk to the province. She noted that they had been audited several times by the Canadian Revenue Agency related to tax collection. She also noted	Committed to follow-up on tax exemption for customer residing off reserve.	No follow-up made.

	that, on a personal level, she agreed with Chief Sayers.		
31.	Chief McLeod shared that his band council had to issue 220 cheques to Elders to assist them in paying their hydro bills. That is $88,000 in one month. He notes that it is not just the financial burden; they view it as insulting and immoral. The Chief shared that there are two major lines running through his First Nation, and yet leadership has to explain why citizens who are struggling are getting delivery charges. He noted that his community members are outraged, particularly because Hydro One does not pay anything to the community for the lines running through their territory and then Hydro One turns around and charges outrageous rates. They view this as money that is owed to them, and they need a conversation about that. Mr. Schmidt noted that Hydro One staff needed to meet with Chief McLeod on this issue and wondered if the contract lapsed or was ever renewed? He committed to reviewing these agreements. Ms. Cameron suggested that Mr. Gary Schneider, Hydro One, can talk with the Chief on this issue.	Committed to address real estate agreement.	Completed discussion and negotiations on 4 of 8 outstanding real estate agreements. Engaged with Real Estate to develop an Indigenous Relations Integration Plan which will include strategies and plans to settle outstanding agreements.
32.	Councillor Archibald noted that when it comes to projects in their area, the First Nations should be contacted for employment. He noted the case of Otter Rapids specifically. They had sent permits for the band council to review, and when the band signed off, the contractor said “oh sorry, no jobs.” Councillor Archibald’s second point is related to disconnections. He does not believe that Hydro One staffs are aware of the new policies around working with people one-on-one to avoid disconnections because in his community they just cut people off. He noted that he sent a letter to Mr. Schmidt’s office and received no response. Mr. Schmidt assured Councillor Archibald that he responds to every note that comes into his office. He asked that he resend a copy and he will respond. In terms of employment, Mr. Schmidt stated that he could not agree more and wants First Nations employees to participate in projects. He committed to putting people in touch with Ms. Judy McKellar, Executive Vice President, Chief Human Resources Officer. In regards to disconnection, Mr. Schmidt asked participants to let Hydro One know of anyone living without power. Hydro One wants to get them connected. If any community has people headed in that direction, Mr. Schmidt asked them to let Hydro One know and they will try and find a way to manage. In addition, if your community would like Hydro One to make a community visit, just ask.	Committed to connect with HR on project employment opportunities to connect customers and to community visits when requested.	Participated in 8 Indigenous employment outreach sessions in 2017 reaching approximately 200 Indigenous student participants.
33.	Chief Maracle reminded the room that land was never surrendered to the Crown, yet the Crown gave letters of patent to others for some of his reserve land. Some members of his community live on that land part time. He wondered if their bills could be tax exempt, as their rights are being infringed on. Mr. Schmidt offered to talk to legal counsel on the issue and help investigate the situation. He noted that, if necessary, Hydro One could advocate the community’s position with the provincial and federal governments as well. Mr. Penstone suggested that what the Chief was describing was a federal jurisdictional issue. The land was not surrendered. Secondly, the status of First Nations as it relates to tax is also a federal issue that would have to be determined by the Canadian Revenue Agency.	Committed to discuss with legal and governments to address tax exemptions for non-reserve lands.	No follow-up made.
34.	Chief Pamajewon began by describing an issue his community had related to a road. The province was	Committed to consider, with the	Initiated internal discussions IRD & Provincial Lines.

	involved, and the First Nations took them to task on that. Cottagers were pushing the province to build a road west of his community. The community knew that those lands were still theirs. All the blasting required to build that road affected the aquifer and wells dried up. The community had to fight INAC on that issue. His community drilled the well and successfully negotiated with the Ministry of Transportation. Now the community has a water station, which requires power to operate. The Chief noted that there are many power outages and as a result, the community had to purchase generators for the well and the facility. There are a number of outstanding expenses related to power failures. Mr. Schmidt commented that Hydro One formed a group specifically to deal with water station outages. On occasion they have supplied the province with generators and fuel in the past. Mr. Schmidt suggested that perhaps Hydro One could support First Nations in this way, with the support of the province and the OEB.	support of the province and OEB, offering generators to communities for water stations during outages.	
35.	Chief Paul Eshkakogan would like to see a table developed to move this work around contracts and employment/training forward. As an example of his frustration, the Chief noted that even on the issue of vegetation management, they could not get anyone on the project because of a union issue. He reiterated that they need jobs in his community to pay the bills. The Chief expressed a desire to come to an agreement to continue the dialogue related to unlocking job and contracting opportunities for First Nations. Mr. Penstone agreed with the Chief and noted that there have been instances where First Nations communities provided material and services for projects. Mr. Penstone directed the comment to his colleagues in procurement. A Hydro One representative agreed with the Chief and suggested that they do a workshop with the community and their businesses in order to participate in the Hydro One sourcing events. He also commented that he supported the idea of a table for dialogue and is considering what that would look like from a strategic perspective. He agreed that they needed to start those discussions.	Committed to offer a procurement workshop and to consider a dialogue table on employment/training/procurement.	Procurement workshops offered when requested. No follow-up made on dialogue table. Increased Indigenous Procurement with total spends of $24.06M (surpassed 2017 target of $19.8M by 27%). Delivered 5 Indigenous Interactive Procurement Workshops with both Indigenous and non-Indigenous businesses.

Hydro One Métis Nation of Ontario Engagement Session- May 13th

Responses to follow-up questions

A participant noted that Hydro One had cut down a number of trees in the North Bay area to avoid interruptions due to weather but they had not cut down the right trees.

For us to be able to follow up internally we need to know (i) the location of the "wrong trees"- and what are the trees that should have been cut down but weren't? Additionally, it may be helpful to know the timeframe (when/how long ago) did this occur. Hydro One Forestry followed up directly with the meeting guests to address this comment

If there is oil spill from a Hydro one transformer on residential property, how do we clean it up?

Hydro One dispatches a crew to investigate all potential spills that are reported by customers/property owners. The responding crew is trained to do initial containment, complete small cleanups and report internally. A 24X7 On-Call Environment Contact is notified and an Emergency Response Contractor and an Environment & Health Technician are mobilized to complete the larger cleanups, excavating impacted areas. All spills are reported internally in our EHSM data base (Internal reporting system) and external reporting is completed as legally required.

Do we notify the home owner regarding the same and provide them with details as to how we cleaned it up?

Yes, the customer/property owner is informed and the clean-up method is often discussed. Depending on the type of material spilt (pre-1985 electrical insulating oil) the property owner is sent a follow up letter with oil analysis and potentially soil confirmation analysis.

Can potential home buyer access information regarding such oil spills that may have occurred at a residential property they are considering buying?

Hydro One does not provide access to this information. We treat these types of queries on a case-by-case basis. Potential purchasers should be asking the seller for this information, the seller should disclose. For this reason, we provide letters & lab analysis reports on potential PCB spills. Purchasers can also go down the road of a Freedom of Information request to the Ministry Of Environment and Climate Change.

What about Species at Risk legislation when it comes to cutting trees down to protect the lines?

Hydro One takes its responsibility with respect to Species at Risk (SAR) very seriously. During the planning of vegetation management on rights-of-way or line maintenance projects, Hydro One works with the Ministry of Natural Resources and Forestry (MNRF) and other stakeholders to identify if there are any SAR in the work location. If a SAR is identified, we will try to avoid any effects on the species. This may be able to be done with the scheduling of work to a time of year when the work will not affect the species, avoiding accessing the area that the species is in or changing vegetation management technique. If it is not possible to avoid the impact, we will develop a plan to minimize or mitigate the effect. The plan will be registered with MNRF as required in Ontario Regulation 242/08 under the Ontario Endangered Species Act (OESA).

On larger projects, we work with MNRF, stakeholders and often hire a consultant to identify SAR or SAR habitat in the vicinity of the project. This information is taken into account during the design of the project. We will apply for any permits required under the OESA. We will also comply with the Federal Species at Risk Act, where it applies. For larger projects, we usually develop a restoration plan for post construction with biodiversity in mind depending on the surrounding land uses. Currently, we are working with OMAFRA, MNRF, the David Suzuki Foundation and other stakeholders on the creation of pollinator habitat on some of the transmission Right of Way and station sites.

We have developed materials to train our staff in the identification of Species at Risk and the processes to follow if they are identified in the work area. We have several biologists that are employed by Hydro One that advise on SAR mitigation and habitat creation.

What are wood poles treated with and could this negatively affect vegetation in the area?

The types of chemical used to treat our wood poles depend on the type of wood. Hydro One uses Copper Chromated Arsenate (CCA) for treating Cedar poles and CCA-PEG

(Polyethylene glycol) for treating Pine poles. Hydro One's poles go through a treatment fixation process which affixes the treatment to the wood and limits any leaching. There may be some minor surface leaching, but this will typically take place while the poles are still in storage, prior to installation. There are no concerns with our treatment negatively affecting vegetation in the area of where the pole is installed.

Does Hydro One have an employment coordinator that could assist them with the process of applying to apprenticeships?

All applications must be submitted online via the www.PWU.ca website. For any issues, the Power Workers Union (PWU) can be reached at: Toll Free: 1-800-958-8798. They can also email Aboriginal.Recruitment@HydroOne.com

What are some of the interview techniques used by Hydro One?

Hydro One uses a number of interview techniques – behavioural questions, scenario based questions, presentations where candidates are asked to develop and deliver a presentation on a particular topic as well as some testing for things like Excel. As part of the interview process we also conduct psychometric assessments where candidates are asked to answer a number of questions on their computer.

How does Hydro One hire for promotions- are efforts focused on internal promotions?

Hydro One must abide by the collective agreement with regards to vacancies or promotions. For all management positions, Hydro One has a robust development and performance plan that all employees are asked to participate in.

Where are Hydro One's training facilities located?

Hydro One has training facilities in Kleinberg and Orangeville.

Anwaatin Inc. Interrogatory # 2

Issue:

Issue 6: Does Hydro One's First Nation and Métis Strategy sufficiently address the unique rights and concerns of Indigenous customers with respect to Hydro One's distribution service?

Issue 23: Was the customer consultation adequate and does the Distribution System Plan adequately address customer needs and preferences?

Issue 24: Does Hydro One's investment planning process consider appropriate planning criteria? Does it adequately address the condition of distribution assets, service quality and system reliability?

Issue 29: Are the proposed capital expenditures resulting from the Distribution System Plan appropriate, and have they been adequately planned and paced?

Reference:

B1-01-01 Section 3.5

Interrogatory:

Preamble:

In 2015, the North American Electric Reliability Corporation (NERC) Essential Reliability Services Task Force (ERSTF) recognized that the power system resource mix is changing from the use of larger synchronous sources to the use of a more diverse fleet of smaller sized resources with varying characteristics[1]. NERC defines distributed energy resources (DERs) as any resource on the distribution system that produces electricity and is not otherwise included in the formal NERC definition of the Bulk Electricity System (BES). DERs can include distributed generation (DG), behind the meter generation (BTMG), energy storage facilities (EFS), DER aggregation (DERA - aggregating multiple DG, BTMG, or ES devices at different points of interconnection on the distribution system), micro-grids, cogeneration, and emergency, stand-by and back-up generation (BUG).

Energy consumer demand for DERs is growing as customers are able to access or benefit from DERs in response to unexpected utility power outages, planned rolling blackouts, power quality

[1] North American Electric Reliability Corporation (NERC), 2017 – Distributed Energy Resources, February 2017, online: < http://www.nerc.com/comm/Other/essntlrlbltysrvcstskfrcDL/Distributed_Energy_ Resources_ Report.pdf >.

problems, and increases in power costs. With the availability and increasing cost-effectiveness of DERs, distribution customers are seeking to take advantage of technologies for power generation, storage and back-up supply.

a) Please describe how Hydro One consulted First Nations on increasing Hydro One capital investments in DERs to improve system reliability for First Nation customers in grid-connected communities and what resulted from these consultation efforts.
b) Please describe how Hydro One's consolidated framework to guide its First Nations and Métis relations and engagement is inclusive of DERs and responsive to the growth in the application of DERs.

c) Given Hydro One's findings that some First Nation communities indicate that the electricity supply is not sufficiently reliable to serve businesses on reserve and are concerned about degrading Hydro One asset conditions on reserve, please describe and provide any and all of Hydro One's plans, timing and cost to:

   i. effectively address reliability on all reserves;
   ii. facilitate businesses on reserves; and
   iii. integrate DERs into areas of Northern Ontario that experience high frequency and duration of power outages to improve system reliability.

d) Given: (i) Hydro One's process of developing a consolidated framework to guide First Nations and Métis relations and engagement across all lines of business, and (ii) Hydro One's expansion into US markets, please provide a detailed listing of each and all Hydro One efforts to obtain, consider and integrate information, experience and knowledge from tribal utilities in the U.S. and U.S. electricity distributors that serve Native American tribes into Hydro One's First Nations and Métis Strategy, Framework and Guidance. Please highlight any and all information and initiatives relating to DERs.

e) Please describe how Hydro One's investment planning process considers appropriate planning criteria for the increasing scale of demand for DERs, especially for rural and First Nation customers seeking relief from reliability issues and increasing costs.

f) Please describe how Hydro One is accommodating the demand for DERs connected to the distribution system in terms of making its distribution network and customer services "DER-friendly", especially in areas where system reliability is a significant issue, such as northern Ontario.

Response:

a) See part c) of Exhibit I-6-Anwaatin-1.

b) One of the objectives of Hydro One's First Nations and Métis Strategy is to develop opportunities to collaborate with First Nations and Métis communities in Ontario through the development of business, technical, knowledge and advocacy partnerships and this is inclusive of exploring with First Nation communities potential distributed energy resource projects. Hydro One has recently begun exploring opportunities to partner with interested First Nation communities and to leverage federal and provincial government funding to support green energy and greenhouse gas reducing energy projects. These partnerships could include providing technical expertise/support to Indigenous communities in the development/ implementation of energy plans, purchasing services or goods from Indigenous businesses where they can provide goods and services to Hydro One, and developing energy literacy.

c)

i. Hydro One has several capital and OM&A expenditures reflected in this Application that, in part, fund work that will improve reliability for First Nations communities. The expenditures that are expected to have the largest positive impact for First Nations communities are listed below and explained in the following evidentiary references:

- Worst Performing Feeders investment described in section 3.8 of the DSP (ISD SS-06); and
- Hydro One's new vegetation management strategy, explained in Exhibit Q-01-01 section 2.1 "Change in Vegetation Management Strategy".

ii. In addition to the reliability improvement expenditures discussed above, Hydro One has several capital expenditures proposed reflected in this Application that, in part, fund work that enables additional capacity on assets that directly supply First Nations communities and facilitate new connections. The expenditures that are expected to impact supply for First Nations communities are listed below and explained in the corresponding evidence references found in section 3.8 of the DSP:

- Life Cycle Optimization & Operational Efficiency Projects, ISD SR-13;
- System Upgrades Driven by Load Growth, ISD SS-02; and
- Demand Investments, SS-04.

iii. Hydro One is examining opportunities to implement DER technologies to improve reliability of supply for all its customers, including those that live in First Nations communities. This work is funded as part of Development OM&A explained in section 3.4 of Exhibit C1, Tab 1, Schedule 3 under the heading "Microgrids" on page 8 of 12.

d)

i. Hydro One is enhancing reliability for customers, including First Nation communities, particularly for electrical loads supplied by single circuit distribution lines. In Northern Ontario, the distribution lines traverse long distances and generally carry small electrical loads. Any forced outage of a single circuit ("radial") line would result in some (or all of the load) supplied by the line to be interrupted.

ii. Hydro One has work focused on the distribution line feeders, distribution stations and distribution operating facilities to enhance distribution system reliability. Examples of specific actions include, but are not limited to, installing reclosers, circuit switches, in line switches, fault locators, surge arrestors, focused vegetation management, as well as ensuring major equipment replacements under the sustainment work programs as outlined in the DSP.

iii. Hydro One is examining opportunities and DER technologies for potential installation, including First Nations communities to enhance reliability, particularly on single circuit lines.

Before such solutions are implemented, determining technical and economic feasibility is crucial. Hydro One has partnered with EPRI (Electric Power Research Institute) to undertake a study for a Northern Ontario single circuit line, to assess the technical and financial suitability of installing DER technologies to address reliability concerns. This joint work with EPRI is still underway, and Hydro One has an application filed with the Government of Canada's NRCan to seek funding from NRCan's Smart Grid Program. Following successful completion of this project, the DER technologies could be applied at various parts in Northern Ontario to address reliability problems where technically and economically feasible.

The transaction for the purchase of Avista by Hydro One has not yet closed. Hydro One has not undertaken any efforts to obtain, consider and integrate information, experience and knowledge from tribal utilities nor from any electricity distributor in the United States that serves Native American tribes.

e) Hydro One’s investment planning process ensures that when assets are replaced as part of renewal programs, distribution automation assets are deployed as replacements. This enables the advanced functionalities of the distribution management system that can result in improved reliability and efficiencies. In addition, the Demand Response for Operations project (see section 3.8 of the DSP, ISD SS-07) will help optimize system use and apply to eligible communities.

f) Please see response to e) above. Based on “lessons” from the need to rapidly connect DER technologies (mainly solar and wind) generation under the previous FIT and microFIT (Feed in-tariff) programs, Hydro One has “standardized” the DER connections process to Hydro One’s grid. This process allows for technically consistent and timely completion of customer requests for DER connection.

Hydro One also participates in joint research with utilities and organizations, such as EPRI and CEATI, to keep a watching brief on emerging technologies and better ways to enable DER technology grid connections. Further, Hydro One strives to keep aware and, as appropriate, participate in developing or updating technical standards (e.g. IEEE, CSA) that would more effectively enable DER connections to the grid.

Anwaatin Inc. Interrogatory # 3

Issue:

Issue 6: Does Hydro One's First Nation and Métis Strategy sufficiently address the unique rights and concerns of Indigenous customers with respect to Hydro One's distribution service?

Issue 23: Was the customer consultation adequate and does the Distribution System Plan adequately address customer needs and preferences?

Issue 24: Does Hydro One's investment planning process consider appropriate planning criteria? Does it adequately address the condition of distribution assets, service quality and system reliability?

Issue 29: Are the proposed capital expenditures resulting from the Distribution System Plan appropriate, and have they been adequately planned and paced?

Reference:

B1-01-01 Section 3.5

Interrogatory:

a) Please list any and all First Nation communities that are concerned about historical, present and future compensation (or the lack thereof), for Hydro One assets on reserve land and/or within traditional territories and treaty lands.

b) Please list and describe in detail any and all measures that Hydro One has taken with respect to DERs and business partnerships with DERs as a means of accommodating First Nation communities that are concerned about historical, present and future compensation (or the lack thereof), for Hydro One assets on reserve land and/or within traditional territories and treaty lands.

c) Please list any and all DER assets, projects or initiatives that Hydro One has:
   i. in its rural distribution networks in non-First Nation communities in Ontario;
   ii. in its urban distribution networks in Ontario; and
   iii. in its rural distribution networks in Washington, Oregon, Idaho, Alaska and Montana.

d) Please provide all power quality and reliability metrics and results for the Hydro One distribution system for:
   i. all Ontario;
   ii. Northern Ontario; and
   iii. The Anwaatin communities.

e) Please provide a complete list, and the cost, of any and all distribution system upgrades in:
   i. Northern Ontario; and
   ii. the Anwaatin communities.

f) Please describe how Hydro One plans to adopt and/or scale any and all DER projects, or other lesson from Avista related to Indigenous communities, in rural Ontario and for First Nation communities.

g) Has Hydro One sought information from other North American regulated electricity distributers on their applications and experiences where DERs may be solutions for customers are dealing with rural power quality problems, and increases in power costs? Please describe any and all applications and experiences that Hydro One is investigating further or seeking to apply to its distribution networks. Please provide any information that Hydro One has received from other entities regarding same.

Response:

a) Hydro One is currently in the process of addressing reserve access issues for assets with the following First Nations communities:

Table 1

First Nation	Issue	Progress
1. Algonquins of Pikwakanagan	Determining proper form of "Sub-transmission" (not transmission) agreement and proper approach to administer payments to locatees.	Confirming with INAC/OEFC who approves agreement.
2. Wabaseemoong	Outdated MOU, Payment In Lieu of Taxes (PIL) Agreement and Annual Land Rental Payment.	Legal drafting of the final agreements pending agreement on fundamental terms of agreement.
3. Nipissing	Requiring new memorandum of understanding (MOU), PIL and distribution and transmission agreements under a *First Nation Land*	Legal drafting of the final agreements.

	Management Act regime.	
4. Serpent River	Need to secure new MOU, outdated PIL Agreement and Annual Land Rental Payment.	Legal drafting of the final agreements.
5. Munsee-Delaware	Need to complete appraisal for the beneficiary/estate trustee of a deceased Certificate of Possession (CP) Holder's interest under the *Indian Act* re: transmission overhanging rights occupation.	Ongoing discussions with the deceased CP Holder's beneficiary and lawyer to complete appraisal and to accept new permit.
6. Chippewas of the Thames	Unclear transmission occupation rights, outdated value of PIL Agreement and Annual Land Payment and outstanding locatees' interests impacted by the transmission overhanging rights occupation.	Finalizing budget discussions to negotiate a Framework Agreement encompassing real estate matters.

The First Nations listed in Table 1 are the key communities who have raised concerns about historic, present and future compensation for Hydro One assets on reserve and within their respective traditional territories. Similar concerns related to compensation have been raised as a general concerns throughout various engagement sessions over the last few years. Hydro One does not have a list of specific First Nations that have raised this concern as Hydro One does not provide compensation for distribution assets on reserve, since the distribution facilities serve the First Nation communities, as it does for all of Hydro One's customers in Ontario.

b) There are no active distributed energy resource (DER) projects related to Indigenous communities, however, it is expected that DER lessons and opportunities are transferable to all communities.

c) The requested list follows below.

i. DER assets in rural distribution networks in non-First Nation communities in Ontario:

- Demand Response for Operations Project
  - Please see Investment Summary Document SS-07 Advanced Distribution System "ADS" for details.
- Flywheel Energy Storage System - Tillsonburg, Ontario
  - 500 kWh / 5 MW flywheel
- Springbank Project - Woodstock, Ontario
  - Acquired as part of Woodstock Hydro acquisition
  - 10 kW photovoltaic system

ii. DER assets in urban distribution networks in Ontario:

- Whites Lane Microgrid Project - Woodstock, Ontario
  - Acquired as part of Woodstock Hydro acquisition
  - 3.5 kW photovoltaic system (net metered)

- 20 kW photovoltaic system
- 20 kWh/ 10 kW lead acid battery
- 20 kWh/ 8 kW lithium ion battery

iii. Hydro One Networks does not own any DER facilities in Washington, Oregon, Idaho, Alaska or Montana. Avista is a stand-alone utility, operated independently from Hydro One.

d) Reliability metrics are constant across Ontario. Reliability is measured in terms of duration of outages (SAIDI) and frequency of outages (SAIFI). Please see section 1.4.2.1 of the DSP (Exhibit B1, Tab 1, Schedule 1) for a more detailed explanation. The reliability results for Ontario, Northern Ontario, and Anwaatin Communities are provided below:

- 2012-2016 Average SAIDI, including LOS and FM
  - Hydro One (All Ontario): 14.9
  - Hydro One Northern Ontario:15.7
  - Anwaatin Communities: 15.3

- 2012-2016 Average SAIFI, including LOS and FM
  - Hydro One (All Ontario): 3.8
  - Hydro One Northern Ontario: 4.7
  - Anwaatin Communities: 4.2

Hydro Ones does not have any power quality metrics. However, Hydro One follows the standards and guidelines for power quality as per Hydro One's Conditions of Service (see section 2.3.2 Power Quality for details). Hydro One addresses power quality customer concerns when they arise.

e) Hydro One has the following distribution system upgrades in Northern Ontario. None of these upgrades are in the Anwaatin communities.

Planned Year	Distribution System Upgrade	Cost ($M)	DSP Reference
2018	Margach DS F3 - SD 3676 Voltage Conversion	1.4	ISD SR-13 (LC-3)
2018	Devlin DS F1 3 Phase Upgrade	1.0	ISD SS-02 (LG-2)
2018	Sowerby DS Station Refurbishment	2.5	ISD SR-06
2019	Crilly DS Replacement and Transformer Upgrade	6.7	ISD SS-02 (LG-20)
2019	Margach DS F3 Voltage Conversion - SW 676	1.4	ISD SS-02 (LG-23)
2019	Whitedog DS Station Refurbishment	2.5	ISD SR-06
2019	Birch island DS Station Refurbishment	2.5	ISD SR-06
2019	Dack DS Station Refurbishment	2.5	ISD SR-06
2019	Kirkland Lake Voltage Conversion - Part 2	2.0	ISD SS-02 (LG-21)
2020	Devlin DS Rebuild and Voltage Conversion	4.0	ISD SR-13 (LC-20)
2020	Kenora DS Station Refurbishment	2.6	ISD SR-06
2020	Cobalt DS Station Refurbishment	2.6	ISD SR-06
2020	Blind River Voltage Conversion	1.0	ISD SR-13 (LC-21)
2020	Kirkland Lake Voltage Conversion - Part 3	2.8	ISD SS-02 (LG-33)
2021	Emo DS Station Refurbishment	2.8	ISD SR-06
2021	Wolsey Lake DS Station Refurbishment	2.8	ISD SR-06
2021	Town of Elliot Lake Station Upgrades	2.2	ISD SR-13 (LC-28)
2021	Fairbanks Lake Line Upgrade	2.5	ISD SS-02 (LG-40)
2021	Lively DS F2 SW 142 Upgrade Black Lake Road	1.4	ISD SS-02 (LG-42)
2022	Schreiber Winnipeg DS Station Refurbishment	2.9	ISD SR-06
2022	Sleeman DS Rebuild and Voltage Conversion	4.2	ISD SR-13 (LC-37)
2022	Rutherglen DS Station Refurbishment	2.9	ISD SR-06
2018-2019	Coniston Voltage Conversion	3.9	ISD SR-13 (LC-8)
2018-2019	Hanmer TS Feeder Development	4.9	ISD SR-13 (LC-10)
2018-2019	Kirkland Lake Voltage Conversion - Part 1	4.8	ISD SS-02 (LG-13)
2020-2021	Wikwemikong DS & Line Work	6.5	ISD SS-02 (LG-38)
2021-2022	Manitoulin TS - Add Third 44 kV Feeder	4.6	ISD SS-02 (LG-46)
2018	Worst Performing Feeder Modernization - Murillo DS F1	0.3	ISD SS-06
2018	Worst Performing Feeder Modernization - Murillo DS F3	0.5	ISD SS-06

Planned Year	Distribution System Upgrade	Cost ($M)	DSP Reference
2018	Worst Performing Feeder Modernization - Port Arthur TS M6	0.4	ISD SS-06
2018	Worst Performing Feeder Modernization - Trout Creek DS F1	0.1	ISD SS-06
2018	Worst Performing Feeder Modernization - Manitoulin TS M25	0.6	ISD SS-06
2018	Worst Performing Feeder Modernization - Manitoulin TS M26	0.1	ISD SS-06
2018	Worst Performing Feeder Modernization - Trout Lake TS M7	0.3	ISD SS-06
2018	Worst Performing Feeder Modernization - Shiningtree DS F1	0.3	ISD SS-06
2018	Worst Performing Feeder Modernization - Clarabelle TS M8	0.4	ISD SS-06
2018	Worst Performing Feeder Modernization - Martindale M5	0.3	ISD SS-06

f) Hydro One has developed positive relationships with Indigenous communities and customers across the Province of Ontario. Helping communities realize their aspirations is central to Hydro One's integrated Indigenous Relations approach with respect to partnership, integration, and leadership. Please see part c) of Exhibit I-6-Anwaatin-1.

As part of the work highlighted in section 3.8 of the DSP (Exhibit B1, Tab 1, Schedule 1) ISD SS-07 (Advanced Distribution Management System), Hydro One is building a Distributed Energy Resource Management System as part of its Demand Response for Operations project. One of the objectives of the project is to use DERs to accommodate connection requests using existing assets. Hydro One is also seeking federal government funding to pilot the use of DERs to improve reliability in rural Ontario and First Nation communities.

g) In addition to the work discussed in Exhibit I-6-Anwaatin-2, Hydro One has partnered with utility research organizations including EPRI (Electric Power Research Institute) and CEATI (Centre for Energy Advancement through Technological Innovation) to undertake research with other utilities on issues including, reliability, power quality, cost concerns and other issues related to application of DERs. Through these research organizations' working groups, Hydro One gains insight into DER practices of other utilities across North America including understanding DER grid integration challenges from the technical and economic feasibility view point.

Hydro One also chairs a committee of large Ontario Local Distribution Companies specifically for the purpose of sharing experience related to the integration of DERs.

Anwaatin Inc. Interrogatory # 4

Issue:
Issue 6: Does Hydro One's First Nation and Métis Strategy sufficiently address the unique rights and concerns of Indigenous customers with respect to Hydro One's distribution service?

Issue 23: Was the customer consultation adequate and does the Distribution System Plan adequately address customer needs and preferences?

Reference:
A-04-02 Page: 3

Interrogatory:
a) Please provide the presentation, all notes, memos, reports and related documents from Hydro One's First Nations engagement session, including any and all reports to the Board of Directors.

b) Please provide any and all communications between Hydro One Transmission and Hydro One Distribution relating to:

(i) the needs of Indigenous communities;
(ii) reliability in Indigenous communities; and
(iii)any other matter relating to Indigenous communities.

Response:
Please see Exhibit I-6-Anwaatin-1 and Attachment 1 to this response. Communications between Hydro One Transmission and Hydro One Distribution are not relevant to issues 6 or 23 as it does not provide information that the OEB may require to determine whether Hydro One Distribution's First Nation and Metis Strategy sufficiently addresses the unique rights and concerns of Indigenous customers with respect to Hydro One's distribution service or the adequacy of Hydro One Distribution's customer consultations generally.

Witness: CHUM Derek

January 2018

Chief of Ontario Provincial Engagement Session

Hydro One will host its second First Nations Engagement Session on February 21, 2018 at Casino Rama. The purpose of the engagement session is to strengthen our relationships with the 88 First Nation communities we serve, listen to key energy transmission and distribution related issues and concerns they may have and together find solutions moving forward.

Hydro One had a very open and constructive dialog last year that allowed us to learn from each other and at that time we reaffirmed our commitment to continue advancing our relationship with First Nation communities. Many Chiefs expressed frustration at the pace of activity when dealing with Hydro One in the past. We assured them that Hydro One's management team places an enormous importance on First Nations and told them they can expect to see swift action going forward. Appendix A attached hereto highlights the issues raised at last year's engagement session along with the progress made by Hydro One on these matters.

This year the engagement session will focus on: Customer Service; Procurement & Business Partnerships; Employment and Training; and Transmission and Distribution Planning & Reliability Performance.

Treaty #3 Regional Engagement Sessions

Hydro One hosted three engagement sessions on Treaty #3 Territory in Q4 of 2017. Host communities included Wabigoon Lake Ojibway Nation, Ochiichagwe'Babigo'Ining Ojibway Nation (Dalles) First Nation, and Couchiching First Nation. Of the 25 First Nation communities located in Treaty #3, Indigenous Relations staff met with 15 communities.

The Hydro One team reinforced working relationships between Treaty #3 First Nation communities and Hydro One; shared information on Hydro One's initiatives benefiting First Nation communities; and discussed challenges and opportunities in moving forward. Hydro One provided additional information on procurement and customer service, including the new First Nations Delivery Credit and employment and training. Common issues and concerns related to: three phase power to support infrastructure development, growth of the communities, and consideration for the new First Nations Delivery Credit to apply to on reserve commercial accounts (i.e., band offices, schools, arenas, etc.) where high costs remain a burden.

A long term strategy needs to be considered on matters related to power quality/reliability in these communities, and their interest in converting from single phase to three phase power to support community energy plans and infrastructure development.

November 2017

Engagement Sessions

Hydro One has hosted and participated in several engagement sessions throughout the year. A summary of issues rose at these engagement sessions, along with results and progress achieved to-date, is provided below.

Top Five Issues February to September 2017 [1]		Results and Progress Achieved
Affordability	• Communities feel disproportionately impacted by high electricity costs and that delivery charges are higher than consumption both at the individual costumer level and band level.	• Implemented Ontario Fair Hydro Plan reducing bills by as much as 40 to 50%. • Implemented Get Local Initiative reducing arrears. • Implemented First Nations Conservation program reducing energy consumptions and indirectly bills. • Preparing to roll-out the Affordability Fund.
Reliability	• Communities are impacted by several lengthy power outages, resulting in insufficient electricity supply to serve businesses. • Existing power loads becoming an impediment to implementing community growth plans.	• Increased capital investments replacing aging assets and reducing outages. • Leveraged technology (Distance-to-Fault) to monitor unplanned outages. • Reduced planned outages by bundling renewal work where applicable. • Targeted tree trimming.
Liability and Access	• Outdated access rights/permits with insufficient compensation, or the lack thereof, for transmission and distribution assets on and off reserve land. • Improper notification protocols for planned and non-planned disconnection related work.	• Progressed with negotiations to settle outstanding real estate agreements. • Initiated discussions to develop an Indigenous Integration Plan with Real Estate which will include strategies and plans to seek certainty on access rights. • Initiated discussions to develop an Indigenous Integration Plan with Provincial Lines and Forestry which will include communication protocols.
Partnership	• First Nation communities seek an increase in procurement, investment, ownership opportunities, and other business partnerships.	• Increased procurement opportunities. • Developed set-aside strategy for an RFP. • Progressed with negotiations to reach equity partnership agreement on Tx project (Niagara Reinforcement Project)
Employment	• First Nation communities are interested in more employment opportunities and training.	• Increased employment with new permanent hires. • Participated in career fairs and workshops promoting employment and training.

Chippewas of Rama First Nation

Hydro One held an information session at the Chippewas of Rama First Nation for the Anishinabek Nation on Agust 17, 2017. The goal and objectives were to: reinforce working relationships between Anishinabek Nation First Nation communities and Hydro One; share information on Hydro One's initiatives benefiting First Nation communities; and to discuss challenges and opportunities in moving forward. 30 Anishinabek Nation representatives attended the session.

[1] Chiefs of Ontario First Nations Feb. 9 & 10; Métis Nation of Ontario May 13; Grand Council of Treaty 3 Fort Frances May 18; Anishinabek Nation August 17; Treaty 3 Wabigoon Lake Ojibway Nation September 12.

Treaty #3 Regional Engagement Sessions

Hydro One participated in a Treaty #3 Regional Engagement Session on September 12, 2017 in Wabigoon Lake Ojibway Nation which was attended by members of Wabigoon Lake Ojibway Nation and Eagle Lake First Nation Chief and Council. Additional Dryden region communities invitees included: Lac des Mille Lacs First Nation, Lac Seul First Nation and Wabauskang First Nation. In total 7 First Nation representatives attended the session.

The goal and objectives were to: reinforce working relationships between Treaty #3 First Nation communities and Hydro One; share information on Hydro One's initiatives benefiting First Nation communities; and discuss challenges and opportunities in moving forward. Hydro One presented information on Indigenous Procurement, Customer Service including the new Delivery Charge Credit and Employment and Training. Common issues and concerns related to: 3 phase power to support infrastructure development and growth of the communities, and consideration for the new delivery charge credit to apply to on reserve commercial accounts (i.e., band offices, schools, arenas, etc.) where high costs remain a burden.

It was agreed that Hydro One's Indigenous Relations team would follow up on all action items in a timely manner. Plans are moving forward to host two more engagement session in the Treaty #3 territory with First Nations in the Kenora and Fort Frances areas. The next session will be in Kenora on November 22 and 23 and the host community is Ochiichagwe'Babigo'Ining Ojibway Nation (Dalles) First Nation – 11 First Nation communities have been invited. The second session will be in Fort Frances on November 29 and 30 and the host community is Couchiching First Nation – 8 First Nations communities have been invited.

Chiefs of Ontario First Nations

As a follow-up to a commitment made at the February 9 and 10, 2017 engagement session, Hydro One is planning a second annual gathering with the Chiefs of Ontario First Nations on February 21, 2018 at Casino Rama. The purpose of this gathering is to share progress made on most common issues raised at the February 2017 session and to discuss plans to resolve outstanding common issues. The most common issues raised at the February 2017 session were: community visits and outreach; outstanding real estate agreements; customer service programs; increasing Indigenous employment, procurement, partnerships; disconnections; establish emergency and community protocols; and address tax exemptions for First Nations customers living off-reserve.

May 2017

On February 9th and 10th, 2017 the HONI's Board Committee Members participated in an engagement session with First Nation Chiefs in Ontario. All First Nation Chiefs from communities served by HONI, 88 in total, and the Ontario First Nations Regional Organizations were invited to attend the engagement session with the HONI's Board Members, President and CEO and numerous Senior Executive.

The purpose and objective of the engagement session were to hear the Chiefs' thoughts and goals to achieve meaningful progress and build a new vision for HONI's and First Nation communities' collective futures. The Métis Nation of Ontario communities was also invited to a similar session which will be held in May 2017. In addition, the engagement session was a great opportunity to share HONI's thinking and solicit feedback on the application for Distribution Rates and the distribution system plan that HONI's was preparing for submission to the Ontario Energy Board.

HONI held an engagement session in February 2017 with the First Nation of Ontario communities and the Ontario First Nations Regional Organizations. The purpose of the engagement sessions was to discuss with First Nation communities HONI's distribution rate filling with the OEB. The OEB rate filling document covers the following elements:

- Customer Focus: Services are provided in a manner that responds to identified customer preferences.
- Operational Effectiveness: Continuous improvement in productivity and cost performance is achieved; and utilities deliver on system reliability and quality objectives.
- Public Policy Responsiveness: Utilities deliver on obligations mandated by government (e.g., in legislation and in regulatory requirements imposed further to Ministerial directives to the Board).
- Financial Performance: Financial viability is maintained; and savings from operational effectiveness are sustainable.

Where issues do fall within HONI's authority, jurisdiction, and mandate and there are no existing responsive initiatives, HONI will work in collaboration with affected communities to explore, define, and prioritize additional strategies and processes to effectively address these concerns.

Where there are existing initiatives, HONI will continue to work to make meaningful progress in addressing these concerns and consider new initiatives that may assist HONI in this effort. The development of such strategies and processes with First Nations and Métis communities will proceed on the basis of the following principles: action oriented, collaborative, transparent, cost effective and efficient.

Anwaatin Inc. Interrogatory # 5

Issue:

Issue 6: Does Hydro One's First Nation and Métis Strategy sufficiently address the unique rights and concerns of Indigenous customers with respect to Hydro One's distribution service?

Issue 23: Was the customer consultation adequate and does the Distribution System Plan adequately address customer needs and preferences?

Reference:

A-04-02 Page: 5

Interrogatory:

a) Please identify precisely which of the issues identified Hydro One considers to be beyond Hydro One's authority, jurisdiction and mandate and the rationale for that determination in chart format.

Response:

a) The chart below details provides further information on issues that have been raised by Indigenous communities that are beyond Hydro One's authority, jurisdiction, and mandate as a publicly-traded utility and require or depend upon broader action by the provincial and federal governments.

Issue	Definition	Rationale
Paying for high delivery rates	Will Hydro One address the delivery rates from a Treaty Rights basis which could include entering into resource revenue sharing agreements?	• Hydro One is not responsible for generating electricity in Ontario. It distributes electricity to customers that is generated by Ontario Power Generation and other third-parties. • Like all electricity distributors in Ontario, Hydro One is regulated by the Ontario Energy Board (OEB). As such, Hydro One's delivery rates are based on the cost-to-serve model and are approved by the OEB through a fair, transparent and participatory process. • Any discussion with respect to revenue sharing relating to electricity generated from resources in Ontario should be held between First Nations, the Crown, and other third parties involved in such electricity generation.

Issue	Definition	Rationale
Paying for electricity losses	Why First Nations must pay for electricity lost during transmission, and before it reaches my home or business?	• All electricity customers in Ontario pay for this as it is how rates are designed. • Electricity line losses are an unavoidable part of the electricity distribution business. When electricity is transmitted over long distances and passes through wires and transformers, it is normal for a small amount of power to be used or lost as heat. For example, if we deliver 1,000 kWh to you, we must purchase a small amount more than what you use. To determine the amount of electricity we need to buy for you, we use a calculation called an "adjustment factor."
Compensating for distribution assets	Will Hydro One provide compensation for its distribution assets on reserve? If not why not?	• Hydro One does not provide compensation for distribution assets on reserve, since the distribution facilities serve the First Nation communities, as it does for all of our customers in Ontario. • The only instance where this varies is when a distribution line passes through a First Nation community and out the other side with no "off ramps" to serve the community (often referred to as a sub-transmission line). These are treated like transmission occupations. • Hydro One also does not provide compensation for occupations on road allowances.
Addressing historical grievances	Will Hydro One agree to a process to address historical grievances related to distribution assets on reserve?	• The Ministry of Energy Ontario has agreed to and commenced past grievance process related to energy matters.

Issue	Definition	Rationale
Acquiring proper access rights for assets on reserve	Why are Hydro One distribution assets located on reserve lands without proper rights or with questionable rights acquired many decades ago without proper First Nation's consultation and consent?	• The transfer orders by which Hydro One acquired certain of Ontario Hydro's businesses as of April 1, 1999 did not transfer title to assets located on Reserves. The transfer of title to these assets did not occur because authorizations originally granted by the federal government for the construction and operation of these assets on Reserves could not be transferred without required consent. In several cases, the authorizations had either expired or had never been issued. • Currently, the Ontario Electricity Financial Corporation holds legal title to these assets and it is expected that Hydro One will manage them until it has obtained permits to complete the title transfer. • To occupy Reserves with transmission assets, Hydro One must have valid permits issued by Her Majesty the Queen in the Right of Canada. For each permit, Hydro One must negotiate an agreement (in the form of a memorandum of understanding) with the First Nation, the Ontario Electricity Financial Corporation and any members of the First Nation who have occupancy rights.

BY COURIER

December 2, 2016

Ms. Kirsten Walli
Board Secretary
Ontario Energy Board
Suite 2700, 2300 Yonge Street
P.O. Box 2319
Toronto, ON
M4P 1E4

Dear Ms. Walli,

EB-2016-0274 – Options for an Appropriate Rate Assistance Program for On-Reserve First Nations Electricity Consumers

On June 27, 2016, the Minister of Energy Minister asked the Ontario Energy Board to examine options for developing a First Nations Rate and to report back by January 1, 2017. Hydro One Networks Inc. and Hydro One Remote Communities Inc. are pleased to provide comments on the presentation made by Ontario Energy Board Staff at a recent meeting on developing a First Nations rate for on-reserve First Nations customers.

This submission consists of the following five sections:

1. Consideration of the Options;
2. Billing System Impacts;
3. Qualification;
4. Funding Mechanism; and
5. Hydro One's on-reserve Customer Service initiatives.

Hydro One appreciates the opportunity to participate in these discussions and to provide comments on this important initiative.

Sincerely,

ORIGINAL SIGNED BY ODED HUBERT

Oded Hubert

HYDRO ONE NETWORKS INC. & HYDRO ONE REMOTE COMMUNITIES INC. COMMENTS ON DEVELOPING A FIRST NATIONS RATE FOR ON-RESERVE FIRST NATIONS ELECTRICIY CUSTOMERS

Hydro One Networks Inc. and Hydro One Remote Communities Inc. (in this submission, jointly referred to as "Hydro One") are pleased to provide comments on the presentation made by Ontario Energy Board Staff (Board Staff) at a recent meeting on developing a First Nations rate for on-reserve First Nations customers. Hydro One was an active participant in this meeting, which was held for affected distributors on November 8, 2016.

On June 27, 2016, the Minister of Energy asked the Ontario Energy Board (the Board) to examine options for developing a First Nations Rate and to report back by January 1, 2017. Board Staff has advised that the Board will be guided by the following principles in developing its report for the Minister:

- Maximizing benefits for on-reserve First Nations customers at the lowest cost to other ratepayers;
- Ease of program implementation for First Nations customers and utilities;
- Fairness to all customers; and
- Accountability to First Nations customers by demonstrating how their views and perspectives have informed the Board's report.

This submission consists of the following five sections:

1. Consideration of the Options;
2. Billing System Impacts;
3. Qualification;
4. Funding Mechanism; and
5. Hydro One's on-reserve Customer Service initiatives.

1. CONSIDERATION OF THE OPTIONS

Hydro One is aware that Board Staff has conducted research on potential options and rate impacts and has held engagement sessions with First Nations groups and affected distributors. Based on this research and input from these engagement sessions, Board Staff has indicated that two options are being considered for providing a First Nations Rate:

1. an on-bill credit (percentage or dollar amount) to the Delivery charge; and
2. a total bill reduction (percentage or dollar amount).

It is Hydro One's view that a percentage credit to the Delivery charge (or a credit to the monthly service charge, in the case of Hydro One Remote Communities Inc.) is the most prudent option.

Hydro One believes that a credit to the Delivery charge would be easier to explain to customers because it would relate to a specific line item on their electricity bill. It is anticipated that the bill would also show the Delivery charge prior to application of the credit, and the amount of the credit, to help explain the bill calculation.

It is also Hydro One's view that a percentage credit, rather than a fixed dollar amount, should be implemented, as the Delivery charge varies with consumption. This approach would allow the credit to vary in line with the Delivery charge.

If the decision is made to vary the credit amount or percentage based on the season, Hydro One suggests that the changes should be made at the same time as changes are made for the Regulated Price Plan (RPP), i.e. May 1st and November 1st of each year. This would reduce implementation and administration costs, as it would allow distributors to combine the system modifications and testing for both the RPP changes and the First Nations rate changes.

2. BILLING SYSTEM IMPACTS

There is no material difference in the cost or ease of implementing a credit to the Delivery charge, as opposed to a total bill reduction. Based on preliminary estimates, the approximate one-time cost to implement either option is $1.0 to $1.3 million. Additional program details would be required to refine this estimate.

It is anticipated that either option would take up to 6 months to implement. Sufficient time is required to: define and implement a process for identifying customers who would qualify for the First Nations rate; modify Hydro One's customer information system for the chosen option; test the modifications to ensure accuracy; and develop and implement a plan to communicate the changes to qualifying customers.

It should be noted that Hydro One has initiated a bill redesign project. The timeline for implementing Hydro One's redesigned bill may conflict with the implementation of the First Nations rate. Hydro One is not aware of the anticipated timing for implementing a First Nations rate. However, to implement the First Nations rate by mid-2017, Hydro One would need to know the selected option by mid-January of 2017, although the amount of the credit could be finalized later. This prior knowledge would allow sufficient time for the required changes to be architected before the billing system "freeze" which is required for Hydro One's bill redesign project.

It would be helpful for distributors to be provided more detailed program information as early as possible. Early information, as it becomes available, would allow Hydro One to start planning for and completing the preliminary work required to change customer and billing processes.

Hydro One proposes that a variance account would need to be established to capture the difference between the actual credits that are provided to on-reserve First Nations customers and the amounts collected from all Ontario customers to support the program. This variance account would be disposed of at future rates proceedings.

3. QUALIFICATION

Hydro One believes that qualification for the program should not be administratively cumbersome. To the extent possible, automatic enrollment should occur for customers residing on-reserve who have already provided information to Hydro One on their First Nations status. Partial identification of on-reserve First Nations customers can be achieved within Hydro One's customer information system by combining address information (to confirm that a customer is located on a reserve) and tax exempt status (to confirm that the customer is a First Nations customer).

Hydro One notes that this approach will not capture all on-reserve First Nations customers, as some customers may not have provided Hydro One with their tax exempt status. Processes would need to be put in place to capture the remaining customers who would be entitled to the First Nations rate. This could be accomplished through communications programs and working with Band Councils to encourage qualifying customers to provide Hydro One with their First Nations status.

It is Hydro One's view that, ultimately, the onus should rest with customers to self-identify if they qualify for the First Nations rate. As part of the program communications to customers, it should be made clear that self-identification and qualification for the proposed rate is accomplished by customers providing Hydro One with information on their tax exempt status.

Hydro One further recommends that customer bills would reflect the proposed First Nation rate on a going-forward basis only after they have identified to Hydro One that they qualify for that rate. Hydro One is not supportive of any retroactive application of the First Nations rate, as such an approach would be very difficult to apply and administratively burdensome, and could lead to customer confusion in understanding their bills.

4. FUNDING MECHANISM

Board Staff indicated that a provincial charge is being considered for the funding mechanism to recover program costs. The options for this provincial funding mechanism, as identified by Board Staff, are: use of the current Rural or Remote Rate Protection (RRRP); or a new separate regulatory charge, charged only to those customers who are not recipients of the First Nations rate.

Hydro One believes that the fairest and most expedient way to fund the program is through the RRRP. This will ensure that the cost of the program is shared by all Ontario electricity customers. The RRRP is already in place and could be increased to provide the required funding for the First Nations rate. A new funding mechanism is not recommended, as this would require more time for any necessary government approvals and would increase costs for setting up and administering this new funding mechanism. If a new funding mechanism is adopted, Hydro One recommends that the regulatory charge apply to all customers in Ontario, in a similar manner to how the RRRP charge is applied.

5. HYDRO ONE'S ON-RESERVE CUSTOMER SERVICE INITIATIVES

Board staff shared with Hydro One that Six Nations of the Grand River (Six Nations) is happy with the approach that Hydro One has taken related to customer care on their reserve. Specifically, Hydro One has; initiated contact with Chiefs and Councils to build consensus and approval for the initiative; conducted town hall sessions with local residents for educational purposes related to understanding the bill and conducted one-on-one sessions with local residents to discuss programs such as budget billing and payments plans to address arrears, thereby providing a "one-stop shop" to address all of their needs, including information on low income programs (OESP and LEAP programs). Hydro One is also aware that other First Nations customers would like to see this approach expanded to their communities.

Hydro One is pleased to hear about the positive feedback from Six Nations. Hydro One is expanding this approach to other First Nations communities, and plans to visit other communities to provide similar information to help customers understand and manage their electricity usage and bills.

Hydro One appreciates the opportunity to participate in these discussions and to provide comments on this important initiative.

Building Owners and Managers Association Toronto Interrogatory # 146

Issue:

Issue 6: Does Hydro One's First Nation and Métis Strategy sufficiently address the unique rights and concerns of Indigenous customers with respect to Hydro One's distribution service?

Issue 42: Is the updated executive compensation information filed by Hydro One in the distribution proceeding on December 21, 2017 consistent with the OEB's findings on executive compensation in the EB-2016-0160 Transmission Decision?

Issue 8: Is the proposed industry-specific inflation factor, and the proposed custom productivity factor, appropriate?

Issue 56: Do the costs allocated to acquired utilities appropriately reflect the OEB's decisions in related Hydro One acquisition proceedings?

Issue 17: Does the application adequately incorporate and reflect the four outcomes identified in the Rate Handbook: customer focus, operational effectiveness, public policy responsiveness, and financial performance?

Issue 15: Is the proposed Earnings/Sharing mechanism appropriate?

Reference:

A-03-02 Page: 2

Interrogatory:

a) Please explain fully why the proposed revenue cap provides more flexibility than a price cap IR to introduce new rate classes in 2021 to integrate recent acquisitions.

b) Please explain fully why the proposed "revenue cap" would permit the continued transition to a fully-fixed rate for residential customers while a price cap IR would not.

c) ines 27-29 – Please explain, given that the OEB has already decided to eliminate seasonal rates, the point is included.

d) line 30 – Why does the proposed revenue cap provide more flexibility than price capex to meet customer commercial and industrial customer rates if the OEB decides that changes in rate design should be made?

e) p3 - Why would the proposed revenue cap, but not a price cap regime, allow HONI to update its billing determination to reflect estimated charges in its load forecast when it integrated the acquired utilities?

f) p9 – Please explain the derivation of the 2021 revenue requirement outlined at lines 6-8.

g) p10 – Given the design of the CCSA, why would any unit credited to the deferral account not be dead at the end of each year to ratepayers?

h) Capital Factor (General) – Question with the capital factor, is there any cap on the actual level of capital expenditures in a given year, other than the capacity of the utility to finance the additions?

i) p10 – Why is the threshold level for making entries in the proposed CISVA be 98% of the OEB-approved account, rather than the OEB-approved account?

j) How will verifiable productivity gain be determined? What constitutes verification and who will ultimately determine whether a reduction in capital expenditure is due to a productivity gain? Please discuss.

k) p11– What is meant by the reference to "regional planning" as an "event" that would qualify for Z-factor treatment?

l) Please explain why "regional planning" would meet Z-factor criteria.

Response:

a) See Hydro One's response to Exhibit I-7-VECC-3.

b) See response to part (a).

c) A summary of the current status of the elimination of the Seasonal class is provided in pages 2 and 3 of Exhibit G1, Tab 2, Schedule 1.

d) See response to part (a).

e) Under Price Cap IR, distribution rates are adjusted directly by an index each year. The underlying load forecast underpinning those rates remains unchanged therefore, Price Cap does not consider or allow for a change in billing determinants.

f) The incremental rate base and OM&A associated with the Acquired Utilities is detailed in Exhibit A, Tab 7, Schedule 1. The incremental rate base associated with the Acquired Utilities in 2021 is reflected in the rate base on line 1 and the incremental OM&A is shown in line 10 of Table 1 of Exhibit A, Tab 3, Schedule 2.

g) Hydro One does not understand the question.

h) The Revenue Cap Index only provides for funding of the planned level of capital expenditures outlined in Hydro One's Distribution System Plan (Exhibit B1, Tab 1, Schedule 1). Hydro One will not receive revenues during the rate term for any spending above these amounts.

i) See Hydro One's response to Exhibit I-17-EnergyProbe-14.

j) See Hydro One's response to Exhibit I-10-EnergyProbe-11.

k) Regional Planning is referenced as an example of an investment that is government-mandated or otherwise outside of management's control. An investment requirement outside of management's control that would materially impact the operation of Hydro One and was outside of the base upon which rates were based would meet the criteria for Z-factor treatment.

l) See above.

Ontario Sustainable Energy Association Interrogatory # 3

Issue:

Issue 6: Does Hydro One's First Nation and Métis Strategy sufficiently address the unique rights and concerns of Indigenous customers with respect to Hydro One's distribution service?

Reference:

A-04-02 Page: 3

Preamble: "In 2016, Hydro One developed a new First Nations Conservation Program. This program offers on-reserve residents the opportunity to improve the energy efficiency of their homes and manage their energy use more effectively."

Interrogatory:

a) What is Hydro One offering to on-reserve residents as part of the First Nations Conservation Program?

b) Does Hydro One have any past, current or forecasted results on the savings resulting from the First Nations Conservation Program? If so, please provide.

Response:

a) Eligible First Nation customers who participate in the program receive a home assessment and the provision and installation of applicable energy-efficient equipment, at no cost to the customer or the community. This is being offered to the First Nation communities served by Hydro One Networks which were not already served by the IESO's Aboriginal Conservation Program. The assessment evaluates the energy use in the home and determines which measures the customer may be eligible for. Additional information can be found on Hydro One's website:

   https://www.hydroone.com/saving-money-and-energy/residential/first-nations-conservation-program

b) In the first year of the program (2017), Hydro One served 2,100 First Nation customers. 41 additional communities are being targeted for participation between 2018 and 2020. The total forecasted energy savings from the program by 2020 are approximately 10 GWh.

Witness: CHUM Derek

Issue:

Issue 6: Does Hydro One's First Nation and Métis Strategy sufficiently address the unique rights and concerns of Indigenous customers with respect to Hydro One's distribution service?

Reference:

Hydro One Networks Inc. 2018 - 2022 Distribution Rate Application, Community Meeting Report 1. OEB File No. EB-2017-0049

Interrogatory:

a) Did Hydro One's presentation at the community meetings include information about the rate relief for some of Ontario's Indigenous customers? If not, why?

Response:

Hydro One's presentations at the community meetings provided an overview of Hydro One's Distribution Rate Application and the associated impact on the customer's bill after Fair Hydro Plan, which includes the First Nations Delivery Credit.

OEB Staff Interrogatory # 14

Issue:

Issue 6: Does Hydro One's First Nation and Métis Strategy sufficiently address the unique rights and concerns of Indigenous customers with respect to Hydro One's distribution service?

Reference:

Executive Presentation Day Transcript, page 47

Interrogatory:

At this reference, Mr. Pugliese indicated that Hydro One has met with over 1,500 First Nations customers in their communities and has helped decrease customer arrears in those communities by 24 percent year over year.

a) Does Hydro One have a special collections program for customers in the First Nations Communities? If yes, please provide the details of this program and how it differs from the standard program.

b) Does Hydro One forecast further improvement in customer arrears reductions?

Response:

a) Hydro One implemented a "Get Local" First Nations program in 2016, which focuses on meeting with First Nations communities and customers across the province. The initiative was part of a company-wide effort to focus on enhanced customer service and offer customers choice to speak with Hydro One in person and one-on-one, potentially overcoming some language and/or cultural barriers. Hydro One visits numerous communities throughout the year, meeting with customers one-on-one to explain bills, assist with payment plans, and help customers enroll in certain programs (such an the First Nations Delivery Credit, the Low-Income Energy Assistance Program, and the Ontario Electricity Support Program). As a result of these one-on-one sessions, the number of First Nation customers in arrears decreased by 2,100 in 2017.

b) Hydro One will continue to promote the Get Local First Nations program in an effort to help customers who are struggling to remain current.

Witness: MERALI Imran

OEB Staff Interrogatory # 15

Issue:

Issue 6: Does Hydro One's First Nation and Métis Strategy sufficiently address the unique rights and concerns of Indigenous customers with respect to Hydro One's distribution service?

Reference:

A-04-02/C1-01-07 Page 16-17
At this reference, Hydro One summarizes its First Nations and Metis Strategy and lists a number of initiatives and undertakings with First Nations.

Interrogatory:

a) Has Hydro One instituted a specific scorecard that measures its success in its dealings with First Nations on a general level and also with regard to specific initiatives? If so, please provide this scorecard or report.

b) With regard to the new customer service offerings mentioned, please provide a summary of these programs.

Response:

a) Hydro One received Bronze level certification under the Canadian Council for Aboriginal Business (CCAB) Progressive Aboriginal Relations Program (PAR) in August 2017.

   This certification program assesses corporate performance in Aboriginal relations in four areas (leadership actions, employment, business development, and community relationships) and includes an independent verification process that involves gathering information from the Company as well as Indigenous communities that interact with the Company. The certification program validates Hydro One's performance and confirms the Company's commitment, success, and impact to Aboriginal Relations.

   The CCAB describes PAR Bronze companies as follows:

   PAR Bronze companies are distinguishable among thousands of Canadian businesses because they recognize the business case for working with Aboriginal businesses and communities. Their strategic planning recognizes the mutually-beneficial impact of business development with Aboriginal-owned businesses, the value that Aboriginal people bring to the workplace, and the potential of Aboriginal communities. PAR Bronze companies are beginning a journey, developing the goals and action plans that position them to work with the Aboriginal community.

Hydro One will continue to measure its success in these same four areas (leadership actions, employment, business development, and community relationships), using the PAR criteria.

b) Hydro One offers the following programs to help First Nation customers manage their electricity bills:

i. Get Local First Nations – Please refer to Exhibit I-6-Staff -14.

ii. First Nation Conservation Program – The program, which was introduced in 2016, assess a home's energy efficiency and provides energy efficient upgrades.

iii. First Nations Delivery Credit (Fair Hydro Plan) – As of July 1, 2017, First Nation customers residing on reserve and paying for electricity are entitled to a credit equal to the Delivery Charge on their monthly bill.

OEB Staff Interrogatory # 16

Issue:

Issue 6: Does Hydro One’s First Nation and Métis Strategy sufficiently address the unique rights and concerns of Indigenous customers with respect to Hydro One’s distribution service?

Reference:

A-04-02
In the last Hydro One transmission rate hearing (EB-2016-0160), First Nations concerns were an important part of the proceeding.

Interrogatory:

Has Hydro One changed or amended any of its First Nations and Metis strategies or practices in its distribution business as a result of the EB-2016-0160 experience?

Response:

During the Hydro One transmission rate hearing (EB-2016-0160), there were concerns raised by First Nations with respect to affordability and reliability. Hydro One has undertaken additional work in both of these areas since the transmission rate hearing which respond to these concerns as well as concerns raised in the engagement sessions relating to the Application.

This includes:

- Implementing an outreach plan to ensure all eligible First Nations customers benefit from the First Nations Delivery Credit announced as part of the Ontario Fair Hydro Plan which came into effect on July 1, 2017

- Commencing implementation of the First Nations Conservation Program (FNCP) which is a follow-up program to the Aboriginal Conservation Program and designed to help First Nations customers to decrease their hydro bills by increasing their conservation efforts

- Implementing the Get Local Initiative to help customers by providing information about conservation programs and resources that may assist low-income customers and ensuring that qualifying customers are aware of and accessing the Province of Ontario's Ontario Electricity Support Program.

- Commencing the roll-out of the Affordability Fund to improve First Nations' home energy efficiency by providing free energy-saving upgrades, which can lower home energy use and, correspondingly, a customer's electricity bill over the long term.

- Revising Hydro One's vegetation management policy to increase the frequency of forestry maintenance work on reserve.

For measures that improve reliability, please see part c) i), ii), and iii) in Exhibit I-6-Anwaatin-2.
