Single Line Diagrams for LDC Projects Less Than or Equal to 500 Kilowatts

We have recently updated our Single Line Diagrams (SLD) requirements for LDC Projects and would like to notify you of an important change to our process.

Effective immediately, for proposed projects that are **less than or equal to 500 kW**, and are LDC owned or connected to express feeders, we now require an SLD and a Protection Description Matrix. This new requirement ensures we are properly documenting telemetry while also properly planning for the future needs of our distribution system.

Similar to other projects, the SLD and Protection Matrix must be provided to Hydro One no later than 8-weeks prior to the In-service Date of the project.

If you have any questions regarding this new requirement, please do not hesitate to contact your Hydro One Account Executive.

Sincerely,

Hydro One Networks Inc.
