

# Power Downtown Toronto – Spring 2024 Project Update

Greetings,

We're sharing an update on the progress of our Power Downtown Toronto project, which includes upgrading underground cables between our Esplanade Transformer Station (TS) and Terauley TS. As part of these upgrades, we're building an underground tunnel which is approximately 2.5 km in length and 25m underground for the new cables along with entry/access points at each TS ([click here for the route](#)).

## What's new

*Front view of the tunnel boring machine within Terauley TS*

The tunnel boring machine has completed its underground journey and will be removed from within Terauley TS with the use of a crane. As we prepare for the removal and for the safety of the public and our crews, intermittent restrictions are required on Foster Pl. and Elizabeth St. due to the size of the equipment assisting in the removal. Crews will re-direct traffic and pedestrians as needed during this time. Additional details can be found in the attached notice that was mailed to properties near Terauley TS.

## What's next

Crews will continue work inside the underground tunnel over the next year, followed by cable installation and completion of the tunnel entry/access points. We anticipate the upgrades will be complete and in-service in 2026.

## Stay in touch

If you have any questions during construction, please reach out to our on-site **Construction Ambassador** who is available to meet with residents:

Rick Parnell
