## COMMUNITY NOTICE

### Wood Pole Replacement

Dear Resident,

November 8, 2021

I am writing you to let you know that Hydro One Networks Inc. (Hydro One) is planning to refurbish structures along the existing 230 kilovolt (kV) transmission line in your area. The maps provided show an overview of the entire project and a local view of the structures areas to be replaced in your community.

#### Project Description

The Wood Pole Replacement Program is an annual routine maintenance program that determines the need to replace end-of-life wood pole structures due to aging infrastructure or are degraded due to insect activity, decomposition, weather damage, or woodpecker activity. Replacement of these wood pole structures, and their associated components, will ensure the continued reliability and integrity of the Ontario transmission system and the electricity supply to communities.

#### Class Environmental Assessment Process

This project is subject to the Class Environmental Assessment for Minor Transmission Facilities (Class EA for MTF) in accordance with the Ontario *Environmental Assessment Act*. The Class EA for MTF is a streamlined process for planning transmission projects that have a predictable range of environmental effects and feasible mitigation measures that can be applied (<http://www.hydroone.com/ClassEA>).

Within the Class EA for MTF there are two tiers of assessment (levels) designed to be commensurate with project scale and associated potential for environmental effects. These include: i) Screening Process, and ii) Full Class EA Process. The Screening Process is a further streamlined process for smaller scale projects with minimal environmental effects (confirmed upon satisfying 16 screening criteria). This project is similar to examples provided within the Class EA document where the Screening Process would typically apply. As such, contingent upon consultation activities and satisfaction of the applicable criteria, it is anticipated that this project will follow the Screening Process. Once the Class EA process is successfully completed, construction could commence as early as January 2022.

We welcome your comments and feedback regarding this project. Should there be any update to the project information provided, I will ensure that you are promptly informed. Your input on this project is valued and would be appreciated by December 7, 2021.

If you have any questions, or would like additional information regarding this project, please feel free to contact:
