

► **Table 7**

**DEPTH OF SETTING IN ROCK**

Type of Rock		
Pole Length	Class 1 (Solid Rock)	Class 2 or 3 (Poor Rock Shale or Blasted Rock)
	Minimum Setting Depth	
10.7 m (35')	1.2 m (4'-0")	1.8 m (6'-0")
12.2 m (40')	1.2 m (4'-0")	1.8 m (6'-0")
13.7 m (45')	1.4 m (4'-6")	2.0 m (6'-6")
15.2 m (50')	1.5 m (5'-0")	2.1 m (7'-0")
16.8 m (55')	1.7 m (5'-6")	2.3 m (7'-6")
18.3 m (60')	1.8 m (6'-0")	2.4 m (8'-0")
19.8 m (65')	2.0 m (6'-6")	2.6 m (8'-6")
21.3 m (70')	2.1 m (7'-0")	2.7 m (9'-0")
22.9 m (75')	2.3 m (7'-6")	2.9 m (9'-6")

Rock settings may only be used if a rock auger is used to produce a closely augured hole in the rock to the full depth as shown in *Table 7* above. Where the hole is blasted, the full soil setting depth (Class 2 or 3 column above) must be used.
